a. The configuration (risk, timing, and amount)[1] of the future cash flows of the asset(s) received differs significantly from the configuration of the future cash flows of the asset(s) transferred.

b. The entity-specific value[2] of the asset(s) received differs from the entity-specific value of the asset(s) transferred, and the difference is significant in relation to the fair values of the assets exchanged.

A qualitative assessment will, in some cases, be conclusive in determining that the estimated cash flows of the entity are expected to significantly change as a result of the exchange.

9. In the United States and some other tax jurisdictions, a transaction is not given effect for tax purposes unless it serves a legitimate business purpose other than tax avoidance. In assessing the commercial substance of an exchange, tax cash flows that arise solely because the tax business purpose is based on achieving a specified financial reporting result shall not be considered.

Additional Guidance

10. Stock received in the form of a stock dividend or stock split shall not result in the recognition of income. The cost basis of stock held shall be reallocated ratably to the total shares held after receipt of the stock dividend or stock split.

---

[1] The configuration of future cash flows is composed of the risk, timing, and amount of the cash flows. A change in any one of those elements would be a change in configuration.

[2] An entity-specific value (referred to as an entity-specific measurement in Concepts Statement 7) is different from a fair value measurement. As described in paragraph 24.b. of Concepts Statement 7, an entity-specific value attempts to capture the value of an asset or liability in the context of a particular entity. For example, an entity computing an entity-specific value of an asset would use its expectations about its use of that asset rather than the use assumed by marketplace participants. If it is determined that the transaction has commercial substance, the exchange would be measured at fair value, rather than at the entity-specific value.

© 1999-2023 National Association of Insurance Commissioners

11. The exchanges of nonmonetary assets that would otherwise be based on recorded amounts (paragraphs 7 and 8) may include an amount of monetary consideration. The recipient of the monetary consideration has realized gain on the exchange to the extent that the amount of the monetary receipt exceeds a proportionate share of the recorded amount of the asset surrendered. The portion of the cost applicable to the realized amount should be based on the ratio of the monetary consideration to the total consideration received (monetary consideration plus the estimated fair value of the nonmonetary asset received) or, if more clearly evident, the fair value of the nonmonetary asset transferred. However, the entity paying the monetary consideration should not recognize any gain on a transaction covered in paragraphs 7 and 8, but should record the asset received at the amount of the monetary consideration paid plus the recorded amount of the nonmonetary asset surrendered. If a loss is indicated by the terms of a transaction described in this paragraph or in paragraphs 7 and 8, the entire indicated loss on the exchange should be recognized.

12. *Nonreciprocal Transfers to Owners*. Accounting for the distribution of nonmonetary assets to owners of an enterprise in a spin-off [INT 06-13 and INT 08-05] or other form of reorganization or liquidation or in a plan that is in substance the rescission of a prior business combination should be based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) (An indicated impairment of value of a long-lived asset covered by SSAP No. 90 shall be determined in accordance with paragraph 4 of SSAP No. 90) of the nonmonetary assets distributed. A pro rata distribution to owners of an enterprise of shares of a subsidiary or other investee company that has been or is being controlled or that has been or is being accounted for under the equity method is to be considered to be equivalent to a spin-off. Other nonreciprocal transfers of nonmonetary assets to owners should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of the distribution

Applying the Basic Principle

13. Fair value of a nonmonetary asset transferred to or from a reporting entity in a nonmonetary transaction should be determined in accordance with *SSAP No. 100R—Fair Value*. If one of the parties in a nonmonetary transaction could have elected to receive cash instead of the nonmonetary asset, the amount of cash that could have been received may be evidence of the fair value of the nonmonetary assets exchanged.

14. Fair value should be regarded as not determinable within reasonable limits if major uncertainties exist about the realizability of the value that would be assigned to an asset received in a nonmonetary transaction accounted for at fair value. An exchange involving parties with essentially opposing interests is not considered a prerequisite to determining a fair value of a nonmonetary asset transferred; nor does an exchange insure that a fair value for accounting purposes can be ascertained within reasonable limits. If neither the fair value of a nonmonetary asset transferred nor the fair value of a nonmonetary asset received in exchange is determinable within reasonable limits, the book adjusted carrying value of the nonmonetary asset transferred from the enterprise may be the only available measure of the transaction.

15. A difference between the amount of gain or loss recognized for tax purposes and that recognized for accounting purposes may constitute a temporary difference to be accounted for according to *SSAP No. 101—Income Taxes*.

16. Involuntary conversions of nonmonetary assets to monetary assets (for example, as a result of total or partial destruction, theft, seizure, or condemnation) are monetary transactions for which gain or loss shall be recognized even though a reporting entity reinvests or is obligated to reinvest the monetary assets in replacement nonmonetary assets. In some cases, a nonmonetary asset may be destroyed or damaged in one accounting period, and the amount of monetary assets to be received is not determinable until a subsequent accounting period. In those cases, gain or loss shall be recognized in accordance with the conclusions in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. Gain or loss resulting from an involuntary conversion of a nonmonetary asset to monetary assets shall be reported

© 1999-2023 National Association of Insurance Commissioners

consistently with the reporting entity's reporting of continuing operations and disclosed in the notes to financial statements in accordance with *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*.

Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or a Combination of Goods or Services and Cash

17. The guidance in paragraph 18 addresses a convertible instrument that is issued or granted to a nonemployee in exchange for goods or services or a combination of goods or services and cash. The convertible instrument contains a nondetachable conversion option that permits the holder to convert the instrument into the issuer's stock.

18. Once an instrument is considered "issued" for accounting purposes, pursuant to SSAP No. 104R, distributions paid or payable should be characterized as financing costs (that is, as interest or dividends). Before that time, distributions paid or payable under the instrument should be characterized as a cost of the underlying goods or services. If the convertible instrument is issued for cash proceeds that indicate that the instrument includes a beneficial conversion feature and the purchaser of the instrument also provides (receives) goods or services to (from) the issuer that are the subject of a separate contract, the convertible instrument shall be recognized with a corresponding increase or decrease in the purchase or sales price of the goods or services.

19. To determine the fair value of a convertible instrument granted as part of a share-based payment transaction to a nonemployee in exchange for goods or services that is equity in form or, if debt in form, that can be converted into equity instruments of the issuer, the entity shall first apply SSAP No. 104R.

20. The requirements of this statement shall then be applied such that the fair value determined pursuant to SSAP No. 104R is considered the proceeds from issuing the instrument for purposes of determining whether a beneficial conversion option exists. The measurement of the intrinsic value, if any, of the conversion option (for separate recognition as additional paid-in capital) shall then be computed by comparing the proceeds received for the instrument (the instrument's fair value under SSAP No. 104R) to the fair value of the common stock that the grantee would receive upon exercising the conversion option. For purposes of determining whether a convertible instrument contains a beneficial conversion feature for separate recognition as additional paid-in capital, an entity shall use the effective conversion price based on the proceeds allocated to the convertible instrument to compute the intrinsic value, if any, of the embedded conversion option.

21. SSAP No. 104R shall be used to measure the fair value of the convertible instrument and to measure the intrinsic value, if any, of the conversion option as of the date the convertible instrument granted as part of the share-based payment award becomes fully vested. That is, in measuring the intrinsic value of the conversion option for separate recognition as additional paid-in capital, the fair value of the issuer’s equity securities into which the instrument can be converted shall be determined as of the date the convertible instrument granted as part of a share-based payment award becomes fully vested, and not on the commitment date. Both of the following guidelines for determining the fair value of convertible instruments shall be used:

a. Recent issuances of similar convertible instruments for cash to parties that only have an investor relationship with the issuer may provide the best evidence of fair value of the convertible instrument.

b. If reliable information about paragraph 21.a. is not available, the fair value of the convertible instrument should be deemed to be no less than the fair value of the equity shares into which it can be converted.

© 1999-2023 National Association of Insurance Commissioners

22. In cases where a reporting entity issues a convertible instrument for cash proceeds that indicate that the instrument includes a beneficial conversion option, and the purchaser of the instrument provides (receives) goods or services to (from) the issuer that are the subject of a separate contract, the terms of both the agreement for goods or services and the convertible instrument shall be evaluated to determine whether their separately stated pricing is equal to the fair value of the goods or services and convertible instrument. If that is not the situation, the terms of the respective transactions should be adjusted by measuring the convertible instrument initially at its fair value with a corresponding increase or decrease in the purchase or sales price of the goods or services. It may be difficult to evaluate whether the separately stated pricing of a convertible instrument is equal to its fair value. If an instrument issued to a goods or services provider (or purchaser) is part of a larger issuance, a substantive investment in the issuance by unrelated investors (who are not also providers or purchasers of goods or services) may provide evidence that the price charged to the goods or services provider represents the fair value of the convertible instrument.

Disclosures

23. A reporting entity that engages in a nonmonetary transaction during a period shall disclose the following in the financial statements:

a. The nature of the transaction;

b. The basis of accounting for the assets transferred; and

c. Gains or losses recognized on transfers.

24. Refer to the Preamble for further discussion regarding disclosure requirements. The disclosure in paragraph 23 shall be included in the annual audited statutory financial reports only.

25. Entities shall disclose the amount of revenue and expense recognized from advertising barter transactions for each income statement period presented. In addition, if an entity engages in advertising barter transactions for which the fair value is not determinable within the limits of this Issue, information regarding the volume and type of advertising surrendered and received (such as the number of equivalent pages, the number of minutes, or the overall percentage of advertising volume) shall be disclosed for each income statement period presented.

Relevant Literature

26. Although not meant to be all inclusive, accounting for specific nonmonetary transactions and unique circumstances is addressed in the following statements of statutory accounting principles:

- *SSAP No. 12—Employee Stock Ownership Plans*
- *SSAP No. 25—Affiliates and Other Related Parties*
- *SSAP No. 68—Business Combinations and Goodwill*
- *SSAP No. 72—Surplus and Quasi-Reorganizations*
- *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*
- *SSAP No. 104R—Share-Based Payments*
- *INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transactions Involves Receipt of Productive Assets or of a Business*

© 1999-2023 National Association of Insurance Commissioners

27. This statement updates general statutory guidance for accounting for nonmonetary transactions not specifically addressed in the statements of statutory accounting principles noted above and carries forward current statutory guidance for stock dividends and stock splits received, other types of nonmonetary transactions and involuntary conversions of nonmonetary assets to monetary assets. The guidance in this statement remains consistent with the guidance provided in SSAP No. 30R, which addresses cash dividends and requires that dividends on common stock be recorded as investment income when declared with a corresponding receivable to be extinguished upon receipt of cash. This statement carries forward the disclosure requirements related to nonmonetary transactions from SSAP No. 28.

28. This statement adopts *Accounting Principles Board Opinion No. 29, Accounting for Nonmonetary Transactions* (APB 29) as modified by *FASB No. 153: Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (FAS 153).

29. This statement adopts FAS 153 with modifications for references to statements of statutory accounting principles.

30. This statement continues the adoption of *Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins* (ARB 43), Chapter 7, Section B, *Stock Dividends and Stock Split-ups* paragraphs 1-9 as such relates to the receipt of stock in the form of a stock in the form of a stock dividend or stock split. This conclusion is consistent with the recognition concept included in the Statement of Concepts, which states, "Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed".

31. This statement continues the adoption of *FASB Interpretation No. 30, Accounting for Involuntary Conversions of Nonmonetary Assets to Monetary Assets* (FIN 30) with modification to provide that gain or loss contingencies be recognized in accordance with the conclusion in SSAP No. 5R and that gain or loss resulting from an involuntary conversion of nonmonetary assets to monetary assets be accounted for in continuing operations and disclosed in accordance with SSAP No. 24.

32. This statement continues the adoption of *FASB Emerging Issues Task Force Issue No. 86-29: Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value* (EITF 86-29) and *FASB Emerging Issues Task Force Issue No. 93-11: Accounting for Barter Transactions Involving Barter Credits* (EITF 93-11) consistent with the general rule discussed in paragraph 27 of this statement. This statement also adopts with modification *FASB Emerging Issues Task Force Issue No. 99-17, Accounting for Advertising Barter Transactions*.

33. This statement nullifies *INT 99-21: EITF No. 98-7, Accounting for Exchanges of Similar Equity Method Investments*.

34. This statement continues the rejection of paragraph 16 of *Accounting Principles Board Opinion No. 6, Status of Accounting Research Bulletins* and *Emerging Issues Task Force No. 96-4, Accounting for Reorganizations Involving a Non-Pro Rata Split-off of Certain Nonmonetary Assets to Owners*.

Effective Date and Transition

35. The provisions of this statement shall be effective for nonmonetary asset exchanges occurring in fiscal periods beginning after January 1, 2007. Earlier application is permitted for nonmonetary asset exchanges occurring in fiscal periods beginning after the date this statement is issued. The provisions of this statement shall be applied prospectively. The guidance in paragraph 21 related to long-lived assets to be disposed of other than by sale was previously included within *SSAP No. 90—Impairment or Disposal of Real Estate Investments*. In 2012, the guidance from SSAP No. 95 was incorporated within SSAP No. 90, with those paragraphs in SSAP No. 95 being nullified. The original guidance included in this statement, as well as the original guidance adopted in SSAP No. 90 for long-lived assets to be disposed of other than by sale, are retained for historical purposes in Issue Paper No. 127.

© 1999-2023 National Association of Insurance Commissioners

36. This statement adopts the consensus positions of *EITF 01-1: Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or a Combination of Goods or Services and Cash* with certain modifications to incorporate guidance in EITF 96-18 regarding the measurement date. EITF 96-18 was previously rejected by the working group in *INT 99-13: EITF 96-18: Accounting for Equity Instruments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services* in the context of *SSAP No. 13—Stock Options and Stock Purchase Plans*; however, the measurement guidance included in Issue 1 of EITF 96-18 is adopted in this statement. The reference in paragraph 4 to *INT 03-16: Contribution of Stock*, was deleted as guidance was incorporated into SSAP No. 25 and SSAP No. 68. The guidance in paragraph 25 of this statement was originally contained within *INT 00-29: EITF 99-17: Accounting for Advertising Barter Transactions* and was effective June 12, 2000. The guidance in paragraphs 21-22 was originally contained within *INT 02-19: EITF 01-1: Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or a Combination of Goods or Services and Cash* and was effective December 8, 2002.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for investments in subsidiaries, controlled and affiliated entities, hereinafter referred to as SCA entities.

2. This statement supersedes the conclusions reached in *SSAP No. 88—Investments in Subsidiary, Controlled, and Affiliated Entities*.

SUMMARY CONCLUSION

Definitions

3. Parent and subsidiary are defined as follows:

   a. Parent—An entity that directly or indirectly owns and controls the reporting entity;

   b. Subsidiary—An entity that is, directly or indirectly, owned and controlled by the reporting entity.

4. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments.

5. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity[1].

---

[1] Investments in an exchange traded fund (ETF), ~~or~~ a mutual fund (as defined by the SEC) or a foreign open-end investment fund governed and authorized in accordance with regulation established by the applicable foreign jurisdiction does not reflect ownership in an underlying entity, regardless of the ownership percentage the reporting entity (or the holding company group) has of the ETF, ~~or~~ mutual fund or foreign open-end investment fund unless ownership of the ~~ETF~~fund actually results in "control" with the power to direct or cause the direction of management of an underlying company. ETFs, ~~and~~ mutual funds and foreign open-end investment funds are comprised of portfolios of securities subject to the regulatory requirements of the federal securities laws or the applicable foreign jurisdictions laws. ETFs, ~~and~~ mutual funds and foreign open-end investment funds held by a reporting entity shall be reported as common stock, unless the ~~ETF~~fund qualifies for bond or preferred stock treatment per the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. Reporting entities are not required to verify that SCAs (subject to SSAP No. 97) are represented in the portfolio of securities held in ETFs, ~~or~~ mutual funds or foreign open-end investment funds or to adjust the value of SCAs as a result of investments in ETFs, ~~or~~ mutual funds or foreign open-end investment funds.

© 1999-2023 National Association of Insurance Commissioners

6. Control as defined in paragraph 5 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18.* The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. An investment in an SCA entity may fall below the level of ownership described in paragraph 5, in which case, the reporting entity would discontinue the use of the equity method, as prescribed in paragraph 13.g. Additionally, through an increase in the level of ownership, a reporting entity may become qualified to use the equity method of accounting (paragraph 8.b.), in which case, the reporting entity shall add the cost of acquiring additional interest to the current basis of the previously held interest and shall apply the equity method prospectively, as of the date the investment becomes qualified for equity method accounting. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participating rights[2] as a shareholder to the investee.

7. Investments in SCA entities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

Applying the Market Valuation, Audited Statutory Equity and Audited GAAP Equity Methods

8. The admitted investments in SCA entities shall be valued using either the market valuation approach (as described in paragraph 8.a.), or one of the equity methods (as described in paragraph 8.b.) adjusted as appropriate in accordance with the guidance in *SSAP No. 25—Affiliates and Other Related Parties*, paragraph 18.d.

a. In order to use the market valuation approach for SCA entities, the following requirements apply:

i. The subsidiary must be traded on one of the following major exchanges: (1) the New York Stock Exchange, (2) the NASDAQ, or (3) the Japan Exchange Group;

ii. The reporting entity must submit subsidiary information to the NAIC SCA analysts for calculation of the subsidiary's market value. Such calculation could result in further discounts in market value above the established base discounts based on ownership percentages detailed below;

---

[2] The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as "protective rights". Refer to the sections entitled: "Protective Rights" and "Substantive Participating Rights" in *EITF 96-16, Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term "participating rights" shall be used consistent with the discussion of substantive participating rights in this EITF.

© 1999-2023 National Association of Insurance Commissioners

iii. Ownership percentages for determining the discount rate shall be measured at the holding company level;

iv. If an investment in a SCA results in an ownership percentage between 10% and 50%, a base discount percentage between 0% and 20% on a sliding scale basis is required;

v. If an investment in a SCA results in an ownership percentage greater than 50% up to and including 80%, a base discount percentage between 20% and 30% on a sliding scale basis is required;

vi. If an investment in a SCA results in an ownership percentage greater than 80% up to and including 85%, a minimum base discount percentage of 30% is required.

vii. Further, the SCA must have at least two million shares outstanding, with a total market value of at least $50 million in the public's control; and

viii. Any ownership percentages exceeding 85% will result in the SCA being recorded on an equity method.

b. If a SCA investment does not meet the requirements for the market valuation approach in paragraph 8.a. or, if the requirements are met, but a reporting entity elects not to use that approach, the reporting entity's proportionate share of its investments in SCAs shall be recorded as follows:

i. Investments in U.S. insurance SCA entities shall be recorded based on either 1) the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in *SSAP No. 68—Business Combinations and Goodwill*[3] or 2) the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill, modified to remove the impact of any permitted or prescribed accounting practices that depart from the NAIC *Accounting Practices and Procedures Manual*. Reporting entities shall record investments in U.S. insurance SCA entities on at least a quarterly basis, and shall base the investment value on the most recent quarterly information available from the SCA. Entities may recognize their investment in U.S. insurance SCA entities based on the unaudited statutory equity in the SCAs year-end annual statement if the annual SCA audited financial statements are not complete as of the filing deadline. The recorded statutory equity shall be adjusted for audit adjustments, if any, as soon as the annual audited financial statements have been completed. Annual consolidated or combined audits are allowed if completed in accordance with the Model Regulation Requiring Annual Audited Financial Reports as adopted by the SCA's domiciliary state;

ii. Investments in both U.S. and foreign noninsurance SCA entities that are engaged in the following transactions or activities:

---

[3] If the insurance SCA employs accounting practices that depart from the NAIC accounting practices and procedures, and the reporting insurance entity has not adjusted the valuation of the insurance SCA to be consistent with the NAIC accounting practices and procedures, (i.e., retains the effect of the permitted or prescribed practice in its valuation), disclosure about those accounting practices that affect the insurance SCA's net income and surplus shall be made pursuant to paragraph 37. If the reporting entity has adjusted the investment in the insurance SCA with the resulting valuation being consistent with the accounting principles of the AP&P Manual, the disclosures in paragraph 37 are not required.

© 1999-2023 National Association of Insurance Commissioners

(a) Collection of balances as described in *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*

(b) Sale/lease or rental of EDP Equipment and Software as described in *SSAP No. 16R—Electronic Data Processing Equipment and Software*

(c) Sale/lease or rental of furniture, fixtures, equipment or leasehold improvements as described in *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements*

(d) Loans to employees, agents, brokers, representatives of the reporting entity or SCA as described in *SSAP No. 20—Nonadmitted Assets*

(e) Sale/lease or rental of automobiles, airplanes and other vehicles as described in *SSAP No. 20—Nonadmitted Assets*

(f) Providing insurance services on behalf of the reporting entity including but not limited to accounting, actuarial, auditing, data processing, underwriting, collection of premiums, payment of claims and benefits, policyowner services

(g) Acting as an insurance or administrative agent or an agent for a government instrumentality performing an insurance function (e.g. processing of state workers compensations plans, managing assigned risk plans, Medicaid processing etc).

(h) Purchase or securitization of acquisition costs

and if 20% or more of the SCA's revenue is generated from the reporting entity and its affiliates, then the underlying equity of the respective entity's audited U.S. Generally Accepted Accounting Principles (GAAP) financial statements shall be adjusted to a limited statutory basis of accounting in accordance with paragraph 9. For purposes of this section, revenue means GAAP revenue reported in the audited U.S. GAAP financial statements excluding realized and unrealized capital gains/losses. Foreign SCA entities are defined as those entities incorporated or otherwise legally formed under the laws of a foreign country. Paragraphs 22-27 provide guidance for investments in holding companies;

iii. Investments in both U.S. and foreign noninsurance SCA entities that do not qualify under paragraph 8.b.ii., shall be recorded based on the audited U.S. GAAP equity of the investee. Foreign SCA entities are defined as those entities incorporated or otherwise legally formed under the laws of a foreign country. Additional guidance on investments in downstream holding companies is included in paragraphs 22-27. Additional guidance on the use of audited foreign GAAP basis financial statements for the U.S. GAAP equity valuation amount is included in paragraph 23.b.

iv. Investments in foreign insurance SCA entities shall be recorded based on the underlying U.S. GAAP equity from the audited U.S. GAAP basis financial statements, adjusted to a limited statutory basis of accounting in accordance with paragraph 9, if available. If the audited U.S. GAAP basis financial statements are not available, the investment can be recorded on the audited foreign statutory basis financial statements of the respective entity adjusted to a limited statutory basis of accounting in accordance with paragraph 9 and adjusted for reserves of the foreign

insurance SCA with respect to the business it assumes directly and indirectly from a U.S. insurer using the statutory accounting principles promulgated by the NAIC in the *Accounting Practices and Procedures Manual*. The audited foreign statutory basis financial statements must include an audited footnote that reconciles net income and equity on the foreign statutory basis of accounting to the U.S. GAAP basis. Foreign insurance SCA entities are defined as alien insurers formed according to the legal requirements of a foreign country.

c. The following provides guidance regarding the audits for entities covered under paragraph 8.b.:

i. The investment in the SCA shall be nonadmitted if the audited financial statements include substantial doubt about the entity's ability to continue as a going concern. Additionally, the investment shall be nonadmitted on the basis/contents of the audit opinion as detailed in paragraph 21.

ii. The recorded GAAP equity shall be adjusted for any audit adjustments resulting from either the annual audited GAAP financial statements of the respective entity or, if the entity is a member of a consolidated or combined group of insurers, the annual audited GAAP financial statements of the consolidated or combined group of companies, as soon as determined. GAAP is defined as those pronouncements included in the FASB codification.

iii. Annual consolidated or combined audits are allowed for the valuation of U.S. insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.

iv. Consolidated or combined financial statements are allowed for the valuation of downstream SCA entities, including downstream SCA entities, that directly or indirectly own U.S. insurance entities, provided that the statutory financial statements of such U.S. insurance entities are audited. The audited financial statements of the downstream SCA entities shall include, as other financial information, consolidating or combining balance sheet schedule(s) showing the equity of all relevant SCA entities, non-SCA SSAP No. 48 entities, and any required intercompany eliminations. The consolidating or combining balance sheet of the downstream SCA entities shall then be adjusted for GAAP to SAP differences of the insurance entities and paragraph 8.b.ii. and 8.b.iv. entities owned directly and indirectly by the downstream SCA entities.

v. Investments in foreign SCA entities shall follow the guidance in paragraphs 8.b.ii., 8.b.iii. and 8.b.iv. based upon the nature of the SCA as described in the respective paragraphs. To fulfill the requirement for audited U.S. GAAP basis financial statements, the value of foreign SCA investments may be based on the GAAP equity from audited financial statements prepared on a foreign GAAP basis. The audited foreign GAAP basis financial statements must include an audited footnote that reconciles net income and equity on the foreign GAAP basis of accounting to the U.S. GAAP basis. The statutory carrying value of foreign insurance SCA entities (i.e., paragraph 8.b.iv. entities) and foreign noninsurance paragraph 8.b.ii. SCA entities shall include the additional adjustments as described in paragraph 9.

9. The limited statutory basis of accounting for investments in noninsurance SCA entities, subject to paragraph 8.b.ii. and foreign insurance SCA entities, subject to paragraph 8.b.iv., shall be adjusted for the following:

© 1999-2023 National Association of Insurance Commissioners

a. Nonadmit assets pursuant to the following statutory accounting principles as promulgated by the NAIC in the *Accounting Practices and Procedures Manual*;

i. *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*

ii. *SSAP No. 16R—Electronic Data Processing Equipment and Software*

iii. *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements*

iv. *SSAP No. 20—Nonadmitted Assets*

v. *SSAP No. 21R—Other Admitted Assets* (e.g., collateral loans secured by assets that do not qualify as investments are nonadmitted under SAP)

vi. *SSAP No. 29—Prepaid Expenses*

vii. *SSAP No. 105R—Working Capital Finance Investments*

b. Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the *Accounting Practices and Procedures Manual* (e.g., deferred policy acquisition costs, preoperating, development and research costs, etc.);

c. Adjust depreciation for certain assets in accordance with the following statutory accounting principles:

i. *SSAP No. 16R—Electronic Data Processing Equipment and Software*

ii. *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements*

iii. *SSAP No. 68—Business Combinations and Goodwill*

d. Nonadmit the amount of goodwill of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA's last audited financial statements.

e. Nonadmit amount of the net deferred tax assets (DTAs) of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA's last audited financial statements.

f. Nonadmit any surplus notes held by the SCA issued by the reporting entity.

g. Adjust the U.S. GAAP annuity account value reserves of a foreign insurance SCA, with respect to the business it wrote directly, using the commissioners' annuity reserve valuation method (CARVM) as defined in paragraphs 14 and 15 of Appendix A-820 (including the reserving provisions in the various Actuarial Guidelines which support CARVM). The valuation interest rate and mortality tables to be used in applying CARVM should be that prescribed by the foreign insurance SCA's country of domicile. If the Foreign SCA's country of domicile does not prescribe the necessary tables and/or rates, no reserve adjustment shall be made.

Note that the outcome of these adjustments can result in a negative equity valuation of the investment for all paragraph 8.b.ii. entities. For a paragraph 8.b.iv. entity, the application of these adjustments will stop at zero, and will not result in negative equity valuation unless the paragraph 8.b.iv. entity provides services to the reporting entity or its affiliates or holds assets on behalf of the reporting entity. If such services, including reinsurance transactions, are occurring, the adjustments required in this paragraph can result in a

negative equity valuation. (See additional equity method application guidance in paragraph 13.e. regarding guarantees and financial support.)

10. For investments in entities recorded on an equity method (paragraph 8.b.i. through 8.b.iv.), the amount to be recorded at acquisition shall be defined as the initial investment in an investee at cost as defined in SSAP No. 68, paragraph 3, adjusted to exclude any investments in an investee's preferred stock and/or surplus notes[4]. This guidance shall be followed for initial investments as well as subsequent investments in the investee.

11. For investments in entities recorded on an equity method (paragraph 8.b.i. through 8.b.iv.) after the date of acquisition, the investment amount shall be 1) adjusted for the amortization of statutory goodwill as defined in SSAP No. 68, and 2) adjusted, with a corresponding unrealized gain or loss, for the reporting entity's share of undistributed earnings and losses of the investee (net of dividends declared[5]). (This results in a reduction of the investment amount when dividends declared are in excess of the undistributed accumulated earnings attributable to the investee.) The following additional adjustment, based on the equity method applied for the investment, shall also be made:

a. For investments in scope of paragraph 8.b.i. (based on audited statutory equity) the investment amount shall be adjusted for the reporting entity's share of the change in special surplus funds, other than special surplus funds and unassigned funds (surplus), as defined in *SSAP No. 72—Surplus and Quasi-Reorganizations*. Additionally, the investment amount shall be adjusted, with a corresponding unrealized gain or loss, for the reporting entity's share of other changes in the investee's surplus (e.g., the change in the investee's nonadmitted assets);

b. For investments in scope of paragraphs 8.b.ii., 8.b.iii. and 8.b.iv. (underlying audited GAAP equity), the investment amount shall be adjusted for the reporting entity's share of adjustments recorded directly to the investee's stockholder's equity under GAAP, with a corresponding entry to unrealized gain or loss. For investments in scope of paragraphs 8.b.ii. and 8.b.iv. (underlying audited GAAP with limited statutory adjustments), the investment amount shall also be adjusted in accordance with paragraph 9.

12. If the reporting entity uses the market valuation approach outlined in paragraph 8.a., changes in that valuation after initial acquisition shall be included in unrealized gains and losses

13. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

a. A difference between the cost of an investment and the underlying equity in the statutory or GAAP book value, as applicable, of the acquired company at the date of acquisition shall be accounted for in accordance with SSAP No. 68 however, positive goodwill for noninsurance SCA entities subject to paragraph 8.b.ii. and foreign insurance SCA entities subject to paragraph 8.b.iv. shall be subject to the admissibility criteria in paragraph 9.d. rather than the admissibility criteria of paragraph 7 of SSAP No. 68.

b. A transaction of an investee of a capital nature that affects the reporting entity's share of stockholders' equity of the investee shall be reflected as an unrealized gain or loss (e.g., where the investee issues additional stock or a new class of stock that impacts the reporting

---

[4] The guidance in paragraphs 28-32 shall be applied for the separate reporting of preferred stock and surplus notes.

[5] Dividends are recognized in investment income when declared.

© 1999-2023 National Association of Insurance Commissioners

entity's equity ownership in the investee, the reporting entity's recorded investment shall be adjusted to reflect the transaction);

c. Realized gains or losses on the sale of an investment in a SCA entity shall be recorded in an amount equal to the difference at the time of sale between the selling price and carrying amount of the investment plus any previously recorded unrealized gain or loss;

d. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting shall be consistent from period to period. This paragraph does not apply to a SCA valued under paragraph 8.b.i.;

e. For entities subject to paragraphs 8.b.i., 8.b.ii., 8.b.iii. and 8.b.iv., a reporting entity's share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero[6] and shall not provide for additional losses, while still continuing to track the amount of unreported equity method losses, until any future equity method income can be reported. If the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee, the provisions of *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* shall be followed. As the entire equity method loss (subject to the financial guarantee/commitment) shall be recognized under SSAP No. 5R, it does not also need to be recognized under SSAP No. 97. If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

f. When an investee has outstanding cumulative preferred stock, the reporting entity shall compute its share of earnings (losses) after deducting the investee's preferred dividends, whether or not such dividends are declared;

g. An investment in a SCA entity may fall below the level of ownership described in paragraph 5 from the sale of a portion of an investment by the reporting entity, the sale of additional interests by an investee, or other transactions. The reporting entity shall discontinue accruing its share of the earnings or losses of the investee for an investment that no longer qualifies for an equity method. The earnings or losses that relate to the investment interests retained by the reporting entity and that were previously accrued shall remain as a part of the carrying amount of the investment. The investment account shall not be adjusted retroactively under the conditions described in this subparagraph. However, dividends received by the investor in subsequent periods which exceed the reporting entity's share of earnings for such periods shall be applied as a reduction of the carrying amount of the investment.

14. Once the reporting entity elects to use a valuation approach for a particular subsidiary, the reporting entity may not change the valuation method to another method without the approval of the domiciliary commissioner. For instance, if an entity selects the market valuation method, it may not change to an equity

---

[6] Although the SCA is reported at zero in the investment schedule, a guarantee liability (either contingent or noncontingent) may be required to be reported under SSAP No. 5R. Additionally, refer to the guidance related to discontinuance of an equity method in paragraphs 15-17 and *INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee* and *EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses*. As detailed in INT 00-24, a reporting entity's share of losses in an SCA shall be applied to other investments held in the SCA once the SCA (common stock) investment has been reduced to zero.

© 1999-2023 National Association of Insurance Commissioners

method or vice versa without approval from the domiciliary commissioner. Further, in order for an entity to transfer from a paragraph 8.a. or 8.b.ii. valuation to a paragraph 8.b.iii. valuation, the SCA shall not exceed the 20% threshold (as defined in paragraph 8.b.ii.) for three consecutive years prior to making the change. When an investment qualifies for use of another method of accounting, the reporting entity shall adopt the new method of accounting and the investment shall be adjusted to reflect the reporting entity's equity interest in the SCA entity under the new method. A corresponding amount shall be recorded as an unrealized gain or loss.

15. If an additional investment, in whole or in part, represents, in substance, the funding of prior losses, the entity should recognize previously suspended losses only up to the amount of the additional investment determined to represent the funding of prior losses. Whether the investment represents the funding of prior losses depends on the facts and circumstances.

16. Judgment is required in determining whether prior losses are being funded and that all available information should be considered in performing the related analysis. The following are certain factors to consider in that regard. However, no one factor should be considered presumptive or determinative.

a. Whether the additional investment is acquired from a third party or directly from the investee. When the additional investment is purchased from a third party and the investee does not obtain additional funds either from the investor or the third party, it is unlikely that, in the absence of other factors, prior losses are being funded.

b. The fair value of the consideration received in relation to the value of the consideration paid for the additional investment. For example, if the fair value of the consideration received is less than the fair value of the consideration paid, it may indicate that prior losses are being funded to the extent that there is disparity in the value of the exchange.

c. Whether the additional investment results in an increase in ownership percentage of the investee. In instances in which the investment is made directly with the investee, the investor should consider the form of the investment and whether other investors are making simultaneous investments proportionate to their interests. Investments made without a corresponding increase in ownership or other interests, or a pro rata equity investment made by all existing investors, may indicate that prior losses are being funded.

d. The seniority of the additional investment relative to existing equity of the investee. An investment in an instrument that is subordinate to other equity of the investee may indicate that prior losses are being funded.

17. Upon making the additional investment, the investor should evaluate whether it has become otherwise committed to provide financial support to the investee.

18. A reporting entity that owns an interest in itself via direct ownership of shares of an upstream intermediate or ultimate parent shall reduce the value of such shares for the reciprocal ownership. If the shares of the parent are owned indirectly by a reporting entity, via a downstream SCA entity, the directly held entity, which owns the parent's shares, shall have its value reduced for the reciprocal ownership.

19. Any parent reporting entity that owns an interest in itself via either direct or indirect ownership of a down-stream affiliate, which in turn owns shares of the parent reporting entity, shall eliminate its interest in these shares from the valuation of such affiliate.

Investment in Parent-Issued Surplus Notes

20. Any parent reporting entity that has issued a surplus note, which has been acquired by an SCA (held directly or indirectly) shall adjust the investment in the SCA to eliminate the issued surplus note to prevent double counting of the surplus note at the parent reporting entity. Without adjustment, the issued

© 1999-2023 National Association of Insurance Commissioners

surplus note would be reported both as an increase in surplus by the parent reporting entity, as well as an admitted asset of the parent through the "investment in an SCA." The surplus note shall also be eliminated for instances in which the SCA acquires any portion of outstanding surplus notes issued by the parent through any means (e.g., directly acquired from the parent, acquired through a third-party broker, or via the market).

Qualified Versus Unqualified Opinions

21. Various opinions can be issued in which an entity can record certain investments under the GAAP Equity method of accounting. The reporting entity shall record investments that require audited GAAP equity in the manner described below when the audit opinion on the GAAP financial statements contains the following language:

a. The investment shall be nonadmitted if the audit opinion contains a disclaimer of opinion for the most recent statement of financial position presented in the financial statements.

b. The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a scope limitation that impacts the most recent statement of financial position presented in the financial statements and the impact of the scope limitation cannot be quantified. However, if the impact of the scope limitation is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified scope limitation.

c. The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a departure from GAAP that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor's report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. EXCEPTION: There is no need to quantify the impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if a qualified audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

d. The investment shall be nonadmitted if the audit opinion contains an adverse opinion due to a departure from GAAP that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor's report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. EXCEPTION: There is no need to quantify the impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if an adverse audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory

accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

e. The investment shall be nonadmitted if the audit report or accompanying financial statements/notes contains explanatory language indicating there is an unalleviated substantial doubt about the investee's ability to continue as a going concern.

Valuation of Investments in Downstream Holding Companies

22. SSAP No. 48 requires the financial statements of joint ventures, partnerships, and/or limited liability companies in which the downstream noninsurance holding company has a minor ownership interest or otherwise lacks control, i.e., ownership interest is less than 10% (hereinafter referred to as "non-SCA SSAP No. 48 entities"), to be valued using U.S. GAAP basis financial statements. Valuation of a downstream holding company, including its investments in SCA entities, depends upon the nature of the SCA entities and non-SCA SSAP No. 48 entities it holds in accordance with paragraph 8 of this statement. All liabilities, commitments, contingencies, guarantees or obligations of the downstream noninsurance holding company, which are required to be recorded under applicable statutory accounting guidance, shall be reflected in the parent insurance reporting entity's determination of the carrying value of the investment in the downstream noninsurance holding company, if not already recorded in the financial statements of the downstream noninsurance holding company. If an SCA investment of the downstream holding company does not meet the provisions of paragraph 8.a. or if it elects not to use the guidance in paragraph 8.a., and instead uses the guidance in paragraph 8.b., the downstream holding company would be valued as the sum of the following (if applicable):

a. Investments by a downstream holding company in U.S. insurance SCA entities are recorded based upon the guidance in paragraph 8.b.i.;

b. Investments by a downstream holding company in noninsurance SCA entities that are engaged in transactions or activities described in paragraph 8.b.ii., are recorded based upon the guidance in paragraph 8.b.ii.;

c. Investments by a downstream holding company in noninsurance SCA entities that do not qualify under paragraph 22.b. shall be recorded based upon the guidance in paragraph 8.b.iii.;

d. Investments by a downstream holding company in foreign insurance SCA entities shall be recorded based upon the guidance in paragraph 8.b.iv.; and

e. Any other assets and/or liabilities of the downstream holding company (not addressed in paragraphs 22.a. through 22.d.) shall be valued in accordance with the applicable SSAP.

For purposes of applying paragraphs 22-27 of this statement, a downstream holding company shall be considered to be the parent reporting entity's investment in a SCA entity. See paragraphs 26 and 27 for a limited exception to the audited financial statements requirement for downstream noninsurance holding companies which meet specified conditions.

Admissibility Requirements of Investments in Downstream Holding Companies

23. To meet the admissibility requirements of this statement, unless the limited exception to the audited financial statements requirement discussed in paragraphs 26 and 27 applies, an annual audit of the financial statements of SCA entities, including the downstream holding company valued under paragraphs 8.b.i through 8.b.iv. must be obtained. The requirement for audited financial statements may be met by utilizing any one of the following methods:

© 1999-2023 National Association of Insurance Commissioners

a. Audited US GAAP financial statements of the downstream SCA holding company. (Consolidated or combined financial statements are allowed encompassing one or more downstream holding companies, including such holding companies that directly own U.S. insurance entities, provided that the statutory financial statements of such U.S. insurance entities are audited. Annual consolidated or combined audits are allowed for insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.) The audited financial statements of the downstream holding company shall include as other financial information, consolidating or combining balance sheet schedule(s) showing the equity of all relevant SCA entities and non-SCA SSAP No. 48 entities, and any required intercompany eliminations. The consolidating or combining balance sheet schedule shall separately present those entities owned directly by the downstream holding company. The consolidating or combining balance sheet shall then be adjusted for GAAP to SAP differences for paragraph 8.b.i., 8.b.ii. and 8.b.iv. entities owned directly or indirectly by the downstream holding company. The adjusted amount would then be the reported value of the investment in the downstream holding company at the higher-level reporting entity; or

b. Audited foreign GAAP-basis financial statements of the downstream SCA holding company. (Consolidated or combined financial statements are allowed encompassing one or more downstream holding companies, including such holding companies that directly own U.S. insurance entities, provided that the statutory financial statements of such U.S. insurance entities are audited. Annual consolidated or combined audits are allowed for insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.) The audited foreign GAAP basis financial statements shall include an audited footnote disclosure within the financial statements that reconciles each consolidated entity's net income and equity on a foreign basis of accounting to a U.S. GAAP basis. The audited financial statements of the downstream holding company shall include as other financial information, consolidating or combining balance sheet schedule(s) showing the equity of all relevant SCA entities non-SCA SSAP No. 48 entities, and any required intercompany eliminations. The consolidating or combining balance sheet schedule shall separately present those entities owned directly by the downstream holding company. The consolidating or combining balance sheet shall then be adjusted for GAAP to SAP differences of the insurance entities and paragraph 8.b.ii. and paragraph 8.b.iv. entities owned directly or indirectly by the downstream holding company. The adjusted amount would then be the reported value of the investment in the downstream holding company at the higher-level reporting entity; or

c. Individual audits of the downstream holding company and the downstream holding company's investments in individual SCA entities.

24. If the downstream noninsurance holding company does not meet the requirements of paragraph 26, audited GAAP financial statements, as described in paragraph 23, are required for the downstream noninsurance holding company and its SCA and non-SCA investments in order for the investment in the downstream noninsurance holding company to be classified as an admitted asset.

25. A purchased downstream holding company is valued in accordance with the provisions of paragraphs 22-25 and the provisions of SSAP No. 68.

Limited Exceptions to the Audit Requirements for Downstream Noninsurance Holding Companies

26. This statement requires that investments in SCA entities be recorded using one of the valuation methods described in paragraph 8 in order to be admitted assets. Each of the paragraph 8.b. valuation methods require the financial statements of SCA entities, including downstream noninsurance holding

© 1999-2023 National Association of Insurance Commissioners

companies, to be audited in order for the investments in SCA entities to be admitted assets. Likewise, SSAP No. 48 requires the financial statements of joint ventures, partnerships, and/or limited liability companies in which the downstream noninsurance holding company has a minor ownership interest or otherwise lacks control, i.e., ownership interest is less than 10% to be audited (U.S. GAAP) in order to be admitted assets. There is a limited exception to the requirement to have audited financial statements of a downstream noninsurance holding company, provided that the entities owned by the downstream noninsurance holding company (paragraph 8.b.iii. entity) have audited financial statements as described in paragraphs 26 and 27.

27. The process of admitting audited investments in entities owned by an unaudited downstream noninsurance holding company SCA entity will be known as a "look through." In order to admit the investments in audited SCAs or the audited non-SCA SSAP No. 48 entities owned by an unaudited downstream noninsurance holding company, a reporting entity may apply the look through approach, provided all of the following conditions are met:

a. The downstream noninsurance holding company is an 8.b.iii entity, and

b. The downstream noninsurance holding company does not own any other assets which are material to the downstream holding company other than the audited SCA entities and/or audited non-SCA SSAP No. 48 entities, and

c. The downstream noninsurance holding company is not subject to liabilities, commitments, contingencies, guarantees or obligations which are material to the downstream noninsurance holding company.

If an investment in a downstream noninsurance holding company meets the requirements set forth above, the reporting entity can admit the individual audited SCA entities and/or audited non-SCA SSAP No. 48 entities; however, unaudited immaterial assets of the downstream noninsurance holding company are to be carried at the lesser of the paragraph 8 valuation or nonadmitted (e.g. some equity method investments are required to be carried at a negative value due to either statutory adjustments or to parental obligations to keep funding the subsidiary). If a holding company structure has more than one downstream non-insurance holding company, each downstream non-insurance holding company may be looked through, provided each downstream non-insurance holding company meets all of the conditions in paragraph 27.

Investment in Preferred Stock or Surplus Notes of a Subsidiary, Controlled and Affiliated Entity

28. Investments in common stock, preferred stock and surplus notes are reported separately. Care should be taken to avoid double counting of the separate investments. When the SCA investee has issued multiple equity components such as common stock, preferred stock and/or surplus note(s) the total reported equity of the SCA investee must be separated into the respective components in order to determine the equity attributable to each class.

29. In order to establish the equity value of the common stock investment in an SCA, the reporting entity reduces the total equity of the SCA by the SCA's (issuer's) value of the preferred stock and/or surplus notes on the issuer's balance sheet (not the reporting entity's book/adjusted carrying value for the SCA's preferred stock and/or surplus notes held).

30. Investments in the preferred stock of an SCA shall be accounted for and reported in accordance with the provisions of *SSAP No. 32R—Preferred Stock*.

31. Investments in the surplus notes of an SCA shall be accounted for and reported in accordance with the provisions of *SSAP No. 41R—Surplus Notes*.

32. The following example is provided to illustrate the accounting and reporting. The reporting entity holds 100% of the preferred stock. The SCA issued the preferred stock for $50,000. The investment in the SCA, measured in accordance with this statement is $250,000 including the preferred stock of the SCA.

The investment in the SCA is $200,000 ($250,000-50,000) and the preferred stock is measured and reported in accordance with SSAP No. 32R.

Impairment

33. For any decline in the fair value of an investment in a SCA entity that is other than temporary[INT 06-07], the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary shall be recorded as realized losses. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings, which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value, however, they are not necessarily indicative of a loss in value that is other than temporary.

Consolidation

34. Majority-owned subsidiaries shall not be consolidated for individual entity statutory reporting. This does not exempt certain reporting entities that are members of an affiliated group from the requirement to issue consolidated or combined annual statements as supplemental information in accordance with NAIC guidelines.

Disclosures

35. All SCA investments within the scope of this statement (except paragraph 8.b.i. entities) shall include disclosure of the SCA balance sheet value (admitted and nonadmitted) as well as information received from the NAIC in response to the SCA filing (e.g., date and type of filing, NAIC valuation amount, whether resubmission of filing is required). This disclosure shall include an aggregate total of all SCAs (except paragraph 8.b.i. entities) with detail of the aggregate gross value under this statement with the admitted and nonadmitted amounts reflected on the balance sheet. (As noted in paragraph 4, joint ventures, partnerships and limited liability companies are accounted for under the guidance in SSAP No. 48. As such, those entities are not subject to the disclosures in this statement, unless specifically directed by SSAP No. 48.)

a. For all periods presented, a reporting entity whose shares of losses in an SCA exceeds its investment in the SCA shall disclose its share of losses. (This is required regardless of a guarantee or commitment of future financial support to the SCA.) This disclosure shall include the following:

    i. The reporting entity’s accumulated share of the SCA losses not recognized during the period that the equity method was suspended;

    ii. The reporting entity’s share of the SCA’s equity, including negative equity;

    iii. Whether a guaranteed obligation or commitment for financial support exists; and

    iv. The amount of the recognized guarantee under SSAP No. 5R.

This disclosure shall apply beginning in the period the SCA’s equity initially falls below zero and shall continue to be disclosed as long as the SCA investment is in a deficit position. Additionally, the reporting entity shall detail in a narrative disclosure whether losses in the SCA have impacted other investments as required by *INT 00-24: EITF 98-13: Accounting by an Equity Method Investor*

for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and *EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses.*

36. The significance of an investment to the reporting entity's financial position and results of operations shall be considered in evaluating the extent of disclosures of the financial position and results of operations of an investee. The following disclosures shall be made for all investments in SCA entities that exceed 10% of the total admitted assets of the reporting entity:

a. Financial statements of a reporting entity shall disclose (i) the name of each SCA entity and percentage of ownership of common stock, (ii) the accounting policies of the reporting entity with respect to investments in SCA entities, and (iii) the difference, if any, between the amount at which the investment is carried and the amount of underlying equity in net assets (i.e., goodwill, other nonadmitted assets, fair value or discounted fair value adjustments, adjustments pursuant to SSAP No. 25, paragraph ~~18~~19.d.) and the accounting treatment of the difference;

b. For those SCA entities for which a quoted market price is available, the aggregate value of each SCA investment based on the quoted price and the difference, if any, between the amount at which the investment is carried and the quoted price shall be disclosed;

c. Summarized information as to assets, liabilities and results of operations shall be presented for SCA entities, either individually or in groups;

d. Conversion of outstanding convertible securities, exercise of outstanding options and warrants and other contingent issuances of an investee may have a significant effect on an investor's share of reported earnings or losses. Accordingly, material effects of possible conversions, exercises or contingent issuances shall be disclosed in notes to the financial statements of the reporting entity; and

e. For those SCA entities in which the reporting entity elected, or was required, to change its valuation method as described in paragraph 14, a description of the reason for the change and the amount of adjustment recorded as unrealized gains or losses shall be disclosed. The entity shall also disclose whether commissioner approval was obtained in accordance with paragraph 14.

37. A reporting entity that reports an investment in an insurance SCA (per paragraph 8.b.i.) for which the audited statutory equity reflects a departure from the NAIC statutory accounting practices and procedures (e.g., permitted or prescribed practices) shall disclose the following:

a. A description of the accounting practice, with a statement that the practice differs from the NAIC statutory accounting practices and procedures.

b. The monetary effect on net income and surplus reflected by the insurance SCA as a result of using an accounting practice that differed from NAIC statutory accounting practices and procedures.

c. Whether the RBC of the insurance SCA would have triggered a regulatory event had it not used a prescribed or permitted practice.

d. The reported entity's investment in the insurance SCA per the audited statutory equity, and the investment in the insurance SCA the reporting entity would have reported if the insurance SCA had completed statutory financial statements in accordance with the NAIC statutory accounting practices and procedures.

© 1999-2023 National Association of Insurance Commissioners

38. A reporting entity that calculates its investment in a foreign insurance subsidiary by adjusting annuity GAAP account value reserves using CARVM and the related Actuarial Guidelines shall disclose the interest rates and mortality assumptions used in the calculation as prescribed by the insurance department of the foreign country.

39. Any commitment or contingent commitment to a SCA entity shall be disclosed (e.g., guarantees or commitments to provide additional capital contributions).

40. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write down:

   a. A description of the impaired assets and the facts and circumstances leading to the impairment; and

   b. The amount of the impairment and how fair value was determined.

41. If a reporting entity holds an investment in a downstream noninsurance holding company, the reporting entity may look-through the downstream noninsurance holding company to the value of (i) SCA entities having audited financial statements and/or (ii) joint ventures, partnerships, and/or limited liability companies having audited financial statements in which the downstream noninsurance holding company has a minor ownership interest or otherwise lacks control, i.e., ownership interest is less than 10% in lieu of obtaining an audit of the financial statements of the downstream noninsurance holding company (provided the limited exception to the audited financial statements requirement contained in paragraphs 26-27 applies).

42. If a reporting entity utilizes the look-through approach for the valuation of the downstream noninsurance holding company instead of obtaining audited financial statements of the downstream noninsurance holding company, the financial statements of the reporting entity shall include the following disclosures:

   a. The name of the downstream noninsurance holding company;

   b. The carrying value of the investment in the downstream non insurance holding company;

   c. The fact that the financial statements of the downstream noninsurance company are not audited;

   d. The fact that the reporting entity has limited the value of its investment in the downstream noninsurance holding company to the value contained in the audited financial statements, including adjustments required by this statement, of SCA entities and/or non-SCA SSAP No. 48 entities owned by the downstream noninsurance holding company and valued in accordance with paragraphs 22-25;

   e. The fact that all liabilities, commitments, contingencies, guarantees or obligations of the downstream noninsurance holding company, which are required to be recorded as liabilities, commitments, contingencies, guarantees or obligations under applicable accounting guidance, are reflected in the reporting entity's determination of the carrying value of the investment in the downstream noninsurance holding company, if not already recorded in the financial statements of the downstream noninsurance holding company.

43. Investments reported using an equity method from paragraph 8.b.ii. through 8.b.iv. may have fiscal year ends, not calendar year ends. To recognize a change to the reporting year-end of an equity method investee, including changes in, or the elimination of, previously existing differences (lag period) due to the reporting entity's ability to obtain financial results from a reporting period that is more consistent with, or the same as, that of the reporting entity, the guidance included in *FASB Emerging Issues Task Force 06-9:*

© 1999-2023 National Association of Insurance Commissioners

Reporting a Change in (or the elimination of) a Previously Existing Difference between the fiscal Year-End of a Parent Company and That of a Consolidated Entity or between the Reporting Period of an Investor and That of an Equity Method Investee that defines such reporting period changes as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* shall be followed. For instances in which this change in accounting principle occurs, disclosure requirements of SSAP No. 3 shall be followed.

44. Refer to the Preamble for further discussion regarding disclosure requirements. The disclosures in paragraph 36.d. shall be included in the annual audited statutory financial reports only.

Relevant Literature

45. This statement adopts the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*.

46. This statement adopts *ASU 2016-07, Investments—Equity and Joint Ventures*, modified to reflect statutory terms, including the definition of control and statutory reporting concepts. This statement adopts *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18* as guidance to be considered in determining the existence of control.

47. This statement adopts with modification EITF 06-9 to include:

a. Adopt the guidance that defines such reporting period changes as a change in accounting principle in accordance with SSAP No. 3, modified to apply only to equity method investments. For instances in which this change in accounting principle occurs, disclosure requirements of SSAP No. 3 shall be followed.

b. The consolidation guidance in EITF 06-9 is rejected.

c. Changes affecting companies reporting investments in SCA entities using the equity method: Investments in paragraph 8.b.i. entities are required to be calendar year-end. Investments in paragraphs 8.b.ii. through 8.b.iv. entities may have other fiscal year ends, thus this issue could apply to equity method investments under paragraphs 8.b.ii. through 8.b.iv. or under equity method valued investments that fall within the scope of SSAP No. 48.

48. This statement rejects *ASU 2020-01, Investments—Equity Securities (Topic 321), Investments—Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815), Clarifying the Interactions between Topic 321, Topic 323 and Topic 815, ASU 2019-06, Intangibles—Goodwill and Other Business Combinations, and Non-for-Profit Entities, ASU 2011-10, Derecognition of in Substance Real Estate, APB Opinion No. 18, The Equity Method of Accounting for Investments in Common Stock, AICPA Accounting Interpretations APB 18, The Equity Method of Accounting for Investments in Common Stock:* Accounting Interpretations of *APB Opinion No. 18, FASB Technical Bulletin No. 79-19, Investor's Accounting for Unrealized Losses on Marketable Securities Owned by an Equity Method Investee, FASB Emerging Issues Task Force No. 87-21, Change of Accounting Basis in Master Limited Partnership Transactions, FASB Emerging Issues Task Force No. 96-16, Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*, *FASB Emerging Issues Task Force No. 98-2: Accounting by a Subsidiary or Joint Venture for an Investment in the stock of Its Parent Company or Joint Venture Partner* and *FASB Staff Position No. APB 18-1*, *Accounting by an Investor for Its Proportionate Share of Accumulated Other Comprehensive Income of an Investee Accounted for under the Equity Method in Accordance with APB Opinion No. 18 upon a Loss of Significant Influence.*

Effective Date and Transition

49. This statement is effective for reporting periods ending on and after December 31, 2007. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Detail of 2011 amendments that relocated guidance from this statement to SSAP No. 32R and SSAP No. 68 is provided in those statements respectively. Guidance reflected in paragraph 21, incorporated from *INT 03-03: Admissibility of Investments Recorded Based on the Audited GAAP Equity of the Investee when a Qualified Opinion is Provided* was originally effective December 7, 2003. Guidance reflected in paragraphs 15-17 incorporated from *INT 04-10: Accounting for Subsequent Investments in an Investee after Suspension of Equity Method Loss Recognition* was originally effective December 5, 2004. Guidance in paragraph 43 was previously included within *INT 08-03: EITF 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference between the fiscal Year-End of a Parent Company and That of a Consolidated Entity or between the Reporting Period of an Investor and That of an Equity Method Investee* and was effective for periods beginning May 31, 2008.

EXHIBIT A – SCA REPORTING PROCESS

50. SCA entities, except for domestic SCA insurance company investments accounted for under paragraph 8.b.i of this statement, in which the reporting entity has an equity interest (common or preferred stock), are required to be filed with the NAIC. Nonadmitted assets are not required to be filed in a Sub 2 as long as they were nonadmitted, or had a zero value, for the full reporting period (all interim and annual reporting). Immaterial asset SCAs do not have an automatic exclusion from filing, as immateriality of an SCA will be ascertained by the state of domicile of the insurance reporting entity, but companies are allowed to request an exemption from the domiciliary state to not file an SCA on the basis that it is immaterial. The filing process does not include investments within the scope of SSAP No. 48.

51. Except for domestic SCA insurance company investments accounted for under paragraph 8.b.i., all SCA investments within the scope of this statement, purchased during any one calendar year, shall be reported to the NAIC on a Sub 1 form within 90 days of the acquisition or formation of the investment; this includes nonadmitted, zero-valued and immaterial SCAs. The NAIC will process that filing in the same year but will not at that time approve or disapprove a value for the SCA investment. By August 31 of each year, the insurance company shall submit a Sub 2 filing for the previously purchased SCA investment reported on a Sub 1 form and later that year, the NAIC will approve a value for the transaction. For SCAs that routinely receive their audit reports after the August 31 deadline, a filing deadline of one month after the audit date shall be applied. Filers must provide previous years' audit reports to verify an audit report dated after August 31 in order to not be charged a late fee for a Sub 2 filing that is filed after the August 31 deadline. The value approved by the NAIC at the conclusion of the Sub 2 form filing is reported by the insurance company on its financial statement blank. If the insurance company has reported a value for the SCA investment on its financial statement blank that differs from the value approved by the NAIC, the insurer is required to adjust the reported value in its next quarterly financial statement blank unless otherwise directed by the insurer's state of domicile.

52. Insurance companies shall use one of the valuation methods described in paragraph 8 to calculate the value of their investments in insurance and non-insurance SCA companies. An insurance company shall calculate the value of its investments in foreign insurance and all non-insurance company SCA entities and report the value to the NAIC no later than August 31, or one month after the audit report date for SCAs that routinely receive their audits after August 31 for existing SCA investments, and within 90 days of the acquisition or formation of a new SCA investment.

Initial Reporting of SCA Investments

53. Reporting the acquisition or formation of a new investment is accomplished by submitting a completed Sub 1 form for each investment disclosing, (i) the valuation reported or to be reported by the insurance company on its latest or next quarterly financial statement blank, (ii) which method of those described in paragraph 8 was used to arrive at the valuation, (iii) the factual context of the transaction, and (iv) economic and business motivations for the transaction. The submission will be processed by the NAIC only if the NAIC determines it has been provided with all material information with respect to all SCA companies of the reporting insurance company that require valuation.

54. The purpose of a Sub 1 filing is to gather basic information about the SCA. If the NAIC determines that the reported transaction meets the tests specified, it will complete the filing in the VISION database. If the NAIC determines that the transaction does not meet the tests specified, it will not complete the filing in the VISION database and instead shall notify the reporting insurance company and the state of domicile in writing of its determination.

Subsequent Reporting of SCA Investments

55. By August 31 or one month after the audit report date of each year and subsequent to the reporting of an SCA investment on the Sub 1 form, the insurance company shall submit a Sub 2 form filing, with all supporting documentation for foreign SCAs provided in English, for the same SCA investment.

© 1999-2023 National Association of Insurance Commissioners

Additionally, by August 31 or one month after the audit report date of each year, any insurance company that has made a Sub 2 form filing in a previous year must update the information by filing an updated Sub 2 form filing.

56. Each year the NAIC shall compile a list of all SCA investments (excluding insurance company SCAs (paragraph 8.b.i.) nonadmitted and zero-value SCAs) reported as Sub 1 form filings for which a Sub 2 form filing has not yet been received. For these transactions, the NAIC will notify the responsible reporting insurance company and its state of domicile that it has not received a Sub 2 filing for the SCA investment.

57. The purpose of the Sub 2 filing is to determine whether the value calculated by the reporting insurance company for the SCA investment is appropriate and to approve that or some other value for reporting on the insurer's financial statement blank.

58. An insurance company that concludes an SCA transaction at year-end may be unable to file a Sub 1 form prior to the time it would be required to file a Sub 2 form. Where this is the case, the NAIC is authorized to accept and review a Sub 1 filing from such an insurance company and to accept and review the Sub 2 filing after the Sub 1 filing review has been completed.

59. No filing of an investment in a domestic SCA insurance company valued under paragraph 8.b.i. shall be required to be made with the NAIC.

Consistency in Application of Chosen Valuation Method

60. The valuation method used for a specific SCA company shall be determined by the guidance in paragraph 8. If a reporting insurance company previously selected the Market Valuation Method and wished to change to an Equity Method (or vice versa), they may only do so with the approval of the domiciliary commissioner. Once the approval of the domiciliary commissioner has been obtained, the reporting insurance company shall provide the NAIC with evidence of that approval as part of the Sub 1 or Sub 2 filing.

61. For reporting insurance companies that use the Market Valuation Method, the reporting insurance company shall obtain the discount rate to be applied from the NAIC. The discounts identified in Exhibit E are minimum discounts. The NAIC calculation may result in discounts in market value higher than those shown in Exhibit E.

Assessment and Review of Sub 1 Form

62. Upon receipt of the reporting insurance company's Sub 1 filing, the NAIC shall conduct an assessment in the following manner:

a. If the NAIC is aware of any broad regulatory concerns or issues affecting the reporting insurance company or the reported SCA investment, it shall determine whether such concerns or issues are relevant to valuation of the SCA investment. If so, the NAIC shall take such action as seems appropriate under the circumstances.

b. The NAIC shall ensure that the value reported by the insurance company on a Sub 1 form has been arrived at by application of one of the permitted valuation methods described in paragraph 8. If a reporting insurance company submits a Sub 1 form filing that reports a value calculated under an inappropriate method, the NAIC shall contact the insurer to resolve the discrepancy or it shall recalculate the value of the SCA investment under the most appropriate valuation method and notify the reporting insurance company of such action.

c. The NAIC shall review the factual, business and economic context of the transaction to determine whether, (i) the SCA investment appears to be an arms-length business arrangement with a reasonable economic value to the reporting insurance company, (ii) the valuation method chosen is reasonable in view of the factual, business and economic context of the transaction, (iii) the transaction is reasonable in the context of all the known facts surrounding the insurance company and its operations, and (iv) the value reported appropriately reflects economic value to the insurance company. The NAIC may consider other factors that appear relevant from the context of the transaction including:

i. The specific tax, accounting or other regulatory treatment sought.

ii. Whether the transaction effects a legally effective, binding and permanent transfer of the risks and rewards of ownership.

iii. The effect of the SCA valuation on the solvency of the insurer.

iv. The degree of affiliation between the insurer and the party from whom such company was acquired, the form of the consideration (cash, property or the exchange of stock), evidence of ability to recover cost and whether the acquisition price represented the result of arms-length dealing between economic equals.

v. The right to dividends or other payments from the SCA and any limitations thereto.

vi. The nature, extent and demonstrable financial value of the business operations of the SCA.

vii. The value of the assets owned by the SCA.

If the NAIC determines that the transaction does not seem to present economic value to the insurance company, or that the transaction tends to obscure issues that might be relevant to an NAIC member or that the information provided is insufficient or unreliable as a basis upon which to make a determination, then the NAIC shall notify the reporting insurance company and the NAIC member of the reporting insurance company's state of domicile and request guidance.

d. The NAIC shall review whether the reporting insurance company has correctly applied the correct valuation guidance under paragraph 8 and made adjustments, if applicable, under paragraph 9.

63. If the SCA investment reported on the Sub 1 form filing is deemed to meet the assessment and reviews described in paragraph 62, the NAIC shall complete the filing in the VISION database. A completed filing will be a Sub 1 filing where the reported SCA investment meets the tests described above. The completed filing will be revised to a value if and when the filer submits a Sub 2 form on the same transaction and the NAIC approves a final value based on the information provided. (Assignment of completion to an SCA investment does not mean, and shall not be interpreted to mean, that the NAIC is expressing an opinion as to the value claimed by the reporting insurance company for the reported SCA investment. The completion implies only that, based on the information provided, the NAIC has determined that the SCA investment meets the tests described in paragraph 62.)

Assessment and Review of Sub 2 Form

64. By August 31 or one month after the audit report date of each year, the NAIC shall initiate a review of all SCA investments for which new Sub 2 form filings have been received as well as an annual update review of Sub 2 SCA investments already logged in the VISION database. The NAIC review shall encompass a review of the most recent annual statutory reporting by the parent insurance company's

Schedule Y (to ascertain the identity of the members of the holding company system and to ensure that information for all SCA companies has been submitted), a review of the parent's financial statement blank to review the last reported value for the SCA investments and a review of the VISION database to determine whether SCA debt and SCA preferred securities have been assigned NAIC designations. As part of its analysis, the NAIC shall review the portion of the bond investments carried by the parent or a subsidiary insurer with a **Z** notation. If the NAIC determines that the portion of the **Z** bonds shown on the documentation is significant, the NAIC shall not process the Sub 2 filing until the insurance company reports the bonds to permit removal of the **Z** notation. Beginning with year-end 2019, two new suffixes will apply: **YE** and **IF**. YE means that the security is a properly filed annual update that the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol YE is assigned by the SVO pursuant to the carryover administrative procedure described in Part Two~~One, Section 3 f) (iii)~~ of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. When the SVO assigns the symbol YE it also assigns the NAIC designation in effect for the previous reporting year. IF means that the security is an initial filing that has been properly filed with the SVO but which the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol IF is assigned by the SVO and communicates that the insurer should self-designate the security for year-end and identify it with the symbol IF. IF, therefore, also communicates to the regulator that the NAIC designation reported by the insurance company was not derived by or obtained from the SVO, but has been determined analytically by a reporting insurance company.

65. Upon completion of the procedures described above, the NAIC will determine whether the value reported by the insurance company on the current SCA filing was calculated in accordance with the instructions for the valuation method chosen and verify that the filed value reflects the adjustments required by paragraph 9.

66. Upon approval of a value (including making necessary adjustments), the NAIC will complete the Sub 2 filing with the approved value in the status field of the VISION database.

67. The NAIC shall report its determination to the insurance company. If a significant discrepancy exists between the value claimed by the reporting insurance company and the value approved by the NAIC, the NAIC shall communicate the discrepancy with the company. If the NAIC cannot come to a conclusion based on the support provided, the filing can be rejected in VISION, and written notification will be provided to the reporting insurance company and the company's state of domicile of this action. This correspondence will be sent to the domiciliary state. Filers are able to download their review information from the NAIC filing system.

Additional Reporting Instructions

68. A reporting entity that has direct ownership of shares of an upstream intermediate or ultimate parent owns an interest in itself and is required to reduce the value of those shares from the value of the reporting entity. This is referred to as elimination of reciprocal ownership.

69. If the shares of the parent are owned indirectly by a reporting entity, for example, because the reporting entity owns a downstream SCA entity that directly owns shares in the parent, the entity that owns the parent’s shares must reduce its value by the value of the shares in the parent. This is referred to as elimination of the reciprocal ownership.

70. Any parent reporting entity that owns an interest in itself via either direct or indirect ownership of a down-stream affiliate, which in turn owns shares of the parent reporting entity, shall eliminate its proportionate interest in these shares from the valuation of such affiliate.

71. Pursuant to paragraph 22, in lieu of separate GAAP audits of SCA entities of the downstream holding company, the insurer can choose to have a GAAP audit performed at the holding company level with a consolidating balance sheet showing GAAP equity of all the SCA entities. The consolidating balance

© 1999-2023 National Association of Insurance Commissioners

sheet shall then be adjusted for GAAP to SAP differences of the insurance entities as described in this statement. This adjusted amount would then be the reported value of the investment in downstream holding company at the higher-level insurance company.

72. Investments in the surplus notes of an SCA shall be accounted for in accordance with the provisions of SSAP No. 41R. If the reporting entity also holds an investment in preferred stock or surplus notes, refer to paragraphs 28-32 of this statement.

© 1999-2023 National Association of Insurance Commissioners

EXHIBIT B – ILLUSTRATIONS

Accounting for SCAs

This illustration is intended to provide an example of the application of paragraphs 8.b.ii. and 8.b.iii. of this statement. Where an SCA meets the criteria of paragraph 8.b.ii., the illustration further demonstrates the necessary adjustments described in paragraph 9. While not all inclusive, the illustration is representative of the process and adjustments necessary to comply with this statement. That is, the reporting entity must, first, determine which sub-section of paragraph 8 applies with respect to each SCA. Secondly, where the reporting entity has determined that an SCA meets the criteria of paragraph 8.b.ii. or 8.b.iv., then the carrying amount is adjusted in accordance with the sub-section, which includes adjustments contained in the provisions of paragraph 9.

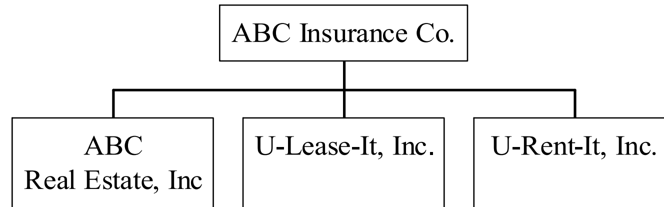
The ABC Insurance Company owns 100% of three subsidiaries:

1. ABC Real Estate, Inc. – owns and manages real estate properties and has no inter-company transactions

2. U-Lease-It, Inc. – leases furniture and equipment to local businesses including the insurance company. Lease fees received from ABC were $10 million each in 20x2 and 20x1.

3. U-Rent-It, Inc. – leases EDP equipment to local businesses including the insurance company. Lease fees received from ABC were $2 million each in 20x2 and 20x1.

ABC Insurance Company



Determination and application of adjustments to audited GAAP equity methods (paragraph 8.b. of this statement)

ABC Real Estate, Inc. – the company is not engaged in any activities described in paragraph 8.b.ii. No adjustments are made, and ABC Insurance Company records its investment based upon audited GAAP equity in accordance with 8b.iii.

U-Lease-It, Inc. – the company is engaged in activities described in paragraph 8.b.ii., leasing furniture and equipment. The fees paid by ABC and reflected in income of U-Lease-It, Inc. exceed 20% of GAAP revenue calculated as follows:

U-Lease-It, Inc.	(Millions)	
	20x1	**20x2**
GAAP revenue	46.5	46.4
Less:		
Realized capital gains/(losses)	6	(.2)
Adjusted GAAP revenue	45.9	46.6
Lease fees from ABC	10.0	10.0
Fees/adjusted GAAP revenue	21.8%	21.5%

U-Rent-It, Inc. – the company is engaged in activities described in paragraph 8.b.ii., leasing EDP equipment. The fees paid by ABC and reflected in income of U-Rent-It, Inc. do not exceed 20% of GAAP revenue. No adjustments are made, and ABC Insurance Company records its investment based upon audited GAAP equity in accordance with 8b.iii. The calculation test is as follows:

U-Rent-It, Inc.	(Millions)	
	20x2	**20x1**
GAAP revenue	32.6	30.5
Lease fees from ABC	2.0	2.0
Fees/GAAP revenue	6.1%	6.6%

Adjustments to audited GAAP equity for U-Lease-It, Inc.

	(Millions)	
	20x2	**20x1**
Audited GAAP equity	129	130
Nonadmit furniture & equipment	(250)	(260)
Nonadmit excess goodwill *	(2)	(2)
Adjusted GAAP equity	(123)	(132)

*Goodwill adjustment - 20x2=$15- (10% x $130[20x1GAAP equity] and 20x1=$15-(10% x $129.9 [20x0 GAAP equity])

Note: No DTA adjustment since the amount is less than 10% of GAAP equity

Schedule D Affiliated Common Stocks for ABC Insurance Company

	(Millions)	
	20x2	**20x1**
ABC Real Estate Inc.	223	219
U-Lease-It, Inc.	(123)	(132)
U-Rent-It, Inc.	30	27
Total	130	114

Note: The change in carrying value between years of $16 million is reported as an unrealized gain in 20x2.

EXHIBIT C – IMPLEMENTATION QUESTIONS AND ANSWERS

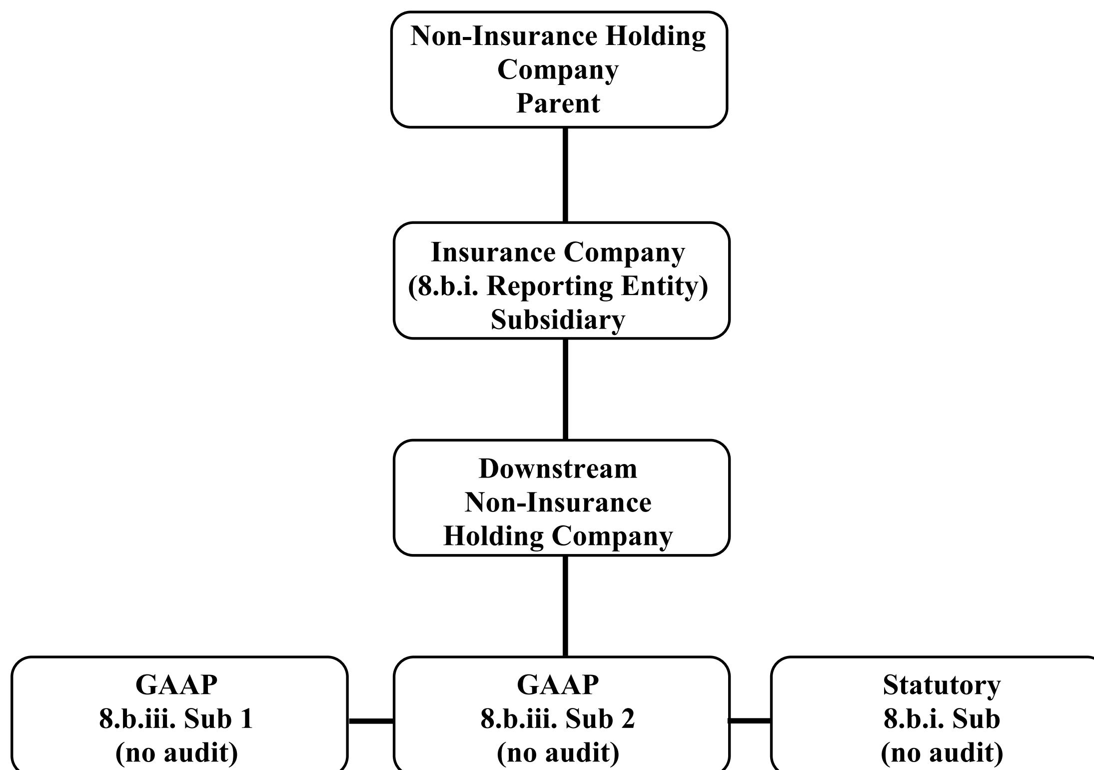
1. **Q – Is the list of activities listed in paragraph 8.b.ii.(f) of SSAP No. 97 meant to be all-inclusive? The guidance is as follows:**

> 8.b.ii.(f) Providing insurance services on behalf of the reporting entity including but not limited to accounting, actuarial, auditing, data processing, underwriting, collection of premiums, payment of claims and benefits, policyowner services

1.1 **A –** No, the Working Group did not intend for this list to be all-inclusive, but rather to be used as examples of the types of functions that can be performed by non-insurance companies. The purpose of the list is to set forth examples of activities that are often performed by an insurer directly that can result in less conservative values if performed by an entity that is not required to utilize statutory accounting as defined within the NAIC *Accounting Practices and Procedures Manual*. Therefore, the reporting entity, the auditor, and the regulator should consider whether the purpose of having the subsidiary is to avoid statutory accounting principles as discussed in *SSAP No. 25—Affiliates and Other Related Parties*, paragraph 18.d., and adjust the value of the SCA as appropriate. SSAP No. 25, paragraph ~~18~~19.d. reads as follows:

> Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

2. **Q – As illustrated below, would an audit of the upstream holding company with consolidating balance sheets of the insurance company meet the requirements for auditing the subsidiaries under SSAP No. 97?**



2.1 **A –** No, SSAP No. 97 is specific in that it only allows audited GAAP financial statements of the downstream holding company level (See paragraph 23).

© 1999-2023 National Association of Insurance Commissioners

2.2 So, in the example provided above, the reporting entity cannot use an audit of the upstream holding company as the basis for complying with the audit requirements of SSAP No. 97. The primary purpose of the audit is to provide assurance that the valuation of the entity being considered is not materially misstated. Although assurance of this type would be provided for within an unqualified opinion of an upstream holding company, it would only be provided for in the context of the entity being audited. Since the materiality level for an upstream holding company is likely to be set at a higher level, the potential for material misstatement for the reporting entity's subsidiary(ies) could still exist within that unqualified opinion. It should also be noted, however, that individual state insurance holding company laws would still require an audit of the ultimate controlling entity.

3. **Q – Are consolidated, consolidating or combined audited financial statements allowed to meet the requirements for SSAP No. 97? Definitions of these types of audited financial statements are presented below:**

- Consolidated Audited Financial Statements (*ARB 51: Consolidated Financial Statements*, paragraph 1)

1. The purpose of consolidated statements is to present, primarily for the benefit of the shareholders and creditors of the parent company, the results of operations and the financial position of a parent company and its subsidiaries essentially as if the group were a single company with one or more branches or divisions. There is a presumption that consolidated statements are more meaningful than separate statements and that they are usually necessary for a fair presentation when one of the companies in the group directly or indirectly has a controlling financial interest in the other companies.

- Consolidating Audited Financial Statements (*ARB 51: Consolidated Financial Statements*, paragraph 24)

24. In some cases, parent-company statements may be needed, in addition to consolidated statements, to indicate adequately the position of bondholders and other creditors or preferred stockholders of the parent. Consolidating statements, in which one column is used for the parent company and other columns for particular subsidiaries or groups of subsidiaries, often are an effective means of presenting the pertinent information.

- Combined Audited Financial Statements (*ARB 51: Consolidated Financial Statements*, paragraphs 22 and 23)

23. To justify the preparation of consolidated statements, the controlling financial interest should rest directly or indirectly in one of the companies included in the consolidation. There are circumstances, however, where combined financial statements (as distinguished from consolidated statements) of commonly controlled companies are likely to be more meaningful than their separate statements. For example, combined financial statements would be useful where one individual owns a controlling interest in several corporations which are related in their operations. Combined statements would also be used to present the financial position and the results of operations of a group of unconsolidated subsidiaries. They might also be used to combine the financial statements of companies under common management.

24. Where combined statements are prepared for a group of related companies, such as a group of unconsolidated subsidiaries or a group of commonly controlled companies, intercompany transactions and profits or losses should be eliminated, and if there are problems in connection with such matters as minority interests, foreign operations, different fiscal periods, or income taxes, they should be treated in the same manner as in consolidated statements.

3.1 **A –** In this example, only consolidating and combined financial statements are allowed under SSAP No. 97. Combined audited financial statements are used to present the financial position and results of operations of a group of unconsolidated commonly controlled enterprises. Although U.S. Generally Accepted Auditing Standards requirements for combined statements are similar to those

© 1999-2023 National Association of Insurance Commissioners

required for consolidated financial statements, combined statements are allowed for purposes of meeting the requirements of this statement. (Consolidated or combined financial statements are allowed encompassing one or more downstream SCA entities, including downstream SCA entities that directly or indirectly own U.S. insurance entities provided that the statutory financial statements of such U.S. insurance entities are audited. Annual consolidated or combined audits are allowed for insurance entities if completed in accordance with the Model Regulation Requiring Annual Audited Reports as adopted by the SCA's domiciliary state.)

4. **Q – Does a balance sheet audit meet the admissibility test within SSAP No. 97, or would a full audit be required?**

4.1 **A –** The Working Group intended for a full financial statement audit to be performed, rather than a limited reporting engagement, in accordance with AU Section 508, paragraph 33 which states:

> ***Limited reporting engagements.*** The auditor may be asked to report on one basic financial statement and not on the others. For example, he or she may be asked to report on the balance sheet and not on the statements of income, retained earnings or cash flows. These engagements do not involve scope limitations if the auditor's access to information underlying the basic financial statements is not limited and if the auditor applies all the procedures he considers necessary in the circumstances; rather, such engagements involve limited reporting objectives. [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

4.2 In addition, within SSAP No. 97, paragraph 8.c.ii. (line 1), there is a reference to the "annual GAAP audit," which indicates a full audit. A limited engagement audit was not the intent when SSAP No. 97 or its predecessors, were developed.

4.3 Therefore, SSAP No. 97 requires the presentation of the balance sheet, income statement, statement of surplus and cash flows of each admitted entity to be presented, along with the corresponding notes to the financial statements (which can be accomplished as a whole).

5. **Q – Does the audit opinion provided on the subsidiaries financial statements have to be clean or unqualified in order for the SCA investment to be admitted?**

5.1 **A –** Paragraph 21 addresses various opinions that can be issued in which an entity can record certain investments under the GAAP Equity method of accounting. In certain cases, such as when the audit opinion is a disclaimer of opinion or there is indication that there is substantial doubt about the entity's ability to continue as a going concern, the guidance states the investment shall be nonadmitted. In instances where there is an unalleviated substantial doubt about the entity's ability to continue as a going concern listed in any part of the audit report or accompanying financial statements/notes, the investment shall be nonadmitted. In addition, if there is a qualified opinion due to a departure from GAAP (or an adverse opinion) or due to a scope limitation, the investment shall be nonadmitted unless the impact of the departure is quantified within the audit opinion (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). In cases where the departure is quantified, the reporting entity would admit the amount after adjusting for the quantified departure from GAAP. An audit report that contains a qualified or adverse opinion for any other reason than for what is stated within paragraph 21 would result in the nonadmissibility of the investment within that subsidiary. There is no need to quantify the impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if a qualified audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

© 1999-2023 National Association of Insurance Commissioners

6. **Q – Do GAAP audits for non-insurance entities need to be completed before the annual statement or audited financial statements are filed? They are required to be completed annually, but should there be clarification on when the audits are due?**

6.1 **A –** Paragraph 13.d. of SSAP No. 97 allows for a lag time if the audits of the investees are not completed as of the reporting date, as long as the lag is on a consistent annual basis and the SCA is not valued under paragraph 8.b.i. The following is an excerpt from paragraph 13.d. (bolded for emphasis). The SCA entity is still required to be audited annually.

> 13.d. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the **most recent available financial statements. A lag in reporting shall be consistent from period to period**. This paragraph does not apply to a SCA valued under paragraph 8.b.i.

7. **Q – Is it possible for an SCA investment valued using an equity method to be reported as a negative value?**

7.1 **A –** Yes, the equity method noninsurance SCA could have a negative equity. For example, SSAP No. 97, paragraph 8.b.ii., relating to noninsurance SCA entities may require some assets to be reported as a negative value (nonadmitted) in paragraph 9. In this example, a paragraph 8.b.ii. SCA subsidiary that is only holding furniture, which is nonadmitted, would be reflected with negative equity to the extent the value of the nonadmitted asset(s) exceed(s) reported equity. It should be noted that although SSAP No. 97, paragraph 13.e., discusses some situations in which the equity method should be discontinued, this does not apply to SCA entities, which meet the requirements of paragraph 8.b.ii. In addition, SSAP No. 97, paragraph 13.e., lists some situations where the equity method for paragraph 8.b.ii. and paragraph 8.b.iv. entities would result in a valuation that is less than zero.

8. **Q – Paragraph 13.e. of SSAP No. 97 lists some situations where the equity method should be discontinued. If the equity method is discontinued, does the reporting entity cease tracking equity losses?**

8.1 **A –** No, the reporting entity does not cease tracking losses related to the investment in the SCA if an equity method is discontinued. If the equity method is discontinued, follow the guidance in paragraphs 15-17 and *INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses*.

8.2 INT 00-24 lists situations that might require the reporting entity to write down other investments in the SCA subsidiary, such as loans, because of continuing losses in the SCA investment. Paragraphs 15-17 provides guidance to assist in determining whether prior losses are being funded if the reporting entity purchases additional stock, etc. after suspending the equity method. Paragraphs 15-17 in INT 00-24 note that even if the equity method is not being applied, the investment should be tracked to determine if additional losses have to be applied to other items and to determine if the investment in the SCA has a future recovery.

9. **Q – SSAP No. 97, paragraphs 28-32, provides guidance on segregating the equity from common stock from the equity in the form of preferred stock and surplus notes. This guidance is required for reporting reasons and to prevent double counting of these items in the SCA equity. This section indicates that preferred stock is deducted from the total equity. The guidance notes that reporting entities report their investments in preferred stock in accordance with *SSAP No. 32R—Preferred Stock*, which requires reporting at book value, fair value, or the lower of book value or fair value. When deducting the preferred stock from the equity of the SCA, which measure of preferred stock is to be utilized; the investor's reporting valuation or the Issuer's value in the equity section of their balance sheet?**

© 1999-2023 National Association of Insurance Commissioners

9.1 **A –** In order to establish the equity value of the common stock investment in an SCA, the reporting entity reduces the total equity of the SCA by the SCA's (Issuer's) value of the preferred stock on the issuer's balance sheet (not the reporting entity's Book/Adjusted Carrying Value for the SCA's preferred stock held). Continuing from the example in paragraph 32, if the reporting entity's Book/Adjusted Carrying Value for the SCA preferred stock is currently $40,000, the SCA's issuing value of the preferred stock ($50,000) would still be used to calculate the total equity of the SCA ($250,000 - $50,000 = $200,000). It should be noted this calculation does not affect the preferred stock valuation of $40,000 on the books of the investor.

10. **Q – If a parent reporting entity owns another insurance company that has obtained a permitted practice, or exemption or waiver from its state of domicile from the annual statutory audit requirement, would the parent be automatically allowed to admit the investment in the unaudited subsidiary?**

10.1 **A –** No, the parent would need to obtain a permitted practice allowing the parent reporting entity to admit the non-audited insurance company due to the admissibility requirements of SSAP No. 97.

EXHIBIT F – ILLUSTRATION OF THE APPLICATION OF INT 00-24

XYZ Investment in ABC Company

1. ABC Company is a life insurance company, formed January 2, 20X1, to sell health insurance in the state of New York. On January 2, 20X1, XYZ Insurance Company invested $500,000 in ABC, and purchased 100,000 shares of common stock at par, and 40,000 shares of preferred stock at par. ABC Preferred stock is non-voting, 5% cumulative.

2. XYZ determined it has obtained a controlling interest in ABC as XYZ owns 50% of the voting interests of ABC. XYZ accounted for its investment in ABC Insurance Company under the statutory equity method of accounting. The following table is selected information from the financial statements of ABC Insurance Company.

20X1 – 20X4

	1/2/20X1	12/31/20X1	12/31/20X2	12/31/20X3	12/31/20X4
Capital and Surplus:					
Common stock, $1 par, 200,000 shares issued and outstanding	$200,000	$200,000	$200,000	$200,000	$200,000
Preferred stock, $10 par, 100,000 shares issued and outstanding	$1,000,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Surplus Notes			$500,000	$500,000	$500,000
Unassigned Funds (Surplus)		$130,000	($180,000)	($630,000)	($1,430,000)
Total Capital and Surplus	$1,200,000	$1,330,000	$1,520,000	$1,070,000	$270,000

20X5 – 20X9

	12/31/20X5	12/31/20X6	12/31/20X7	12/31/20X8	12/31/20X9
Capital and Surplus:					
Common stock, $1 par, 200,000 shares issued and outstanding	$200,000	$200,000	$200,000	$200,000	$200,000
Preferred stock, $10 par, 100,000 shares issued and outstanding	$1,000,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Surplus Notes	$500,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Unassigned Funds (Surplus)	($1,980,000)	($1,830,000)	($1,280,000)	($430,000)	$820,000
Total Capital and Surplus	($280,000)	$370,000	$920,000	$1,770,000	$3,020,000

© 1999-2023 National Association of Insurance Commissioners

3. At 1/2/20X1, XYZ recorded the following entry to record its investment in ABC:

Account	Debit	Credit
Investment in ABC Common stock	$100,000	
Investment in ABC Preferred stock	$400,000	
Cash		$500,000

To record initial investment in ABC Insurance Company

4. During the year ended 12/31/20X1, ABC had statutory net income before dividends of $200,000. At 12/31/20X1, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.10 per share. XYZ recorded the following entries:

Account	Debit	Credit
Cash	$20,000	
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X1.

Account	Debit	Credit
Investment in ABC Common stock	$75,000	
Unrealized Gain/Loss		$75,000

To record 20X1 unrealized gain on investment in ABC Common. (($200,000 - $50,000) * 50%)

Account	Debit	Credit
Cash	$10,000	
Unrealized Gain/Loss	$10,000	
Dividend Income		$10,000
Investment in ABC Common stock		$10,000

To record 20X1 dividend on ABC Common. (100,000 shares * $.10)

5. During the year ended 12/31/20X2, ABC issued an 8% surplus note of $500,000. XYZ purchased 100% of the surplus note. During that same year, ABC incurred a statutory net loss before dividends of $250,000. At 12/31/20X2, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.05 per share. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Account	Debit	Credit
Investment in ABC Surplus Notes	$500,000	
Cash		$500,000

To record investment in ABC Insurance Company surplus notes.

Account	Debit	Credit
Cash	$20,000	
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X2.

Unrealized Gain/Loss	$150,000	
Investment in ABC Common stock		$150,000

To record 20X2 unrealized loss on investment in ABC Common. (($-250,000 - $50,000) * 50%)

Cash	$5,000	
Unrealized Gain/Loss	$5,000	
Dividend Income		$5,000
Investment in ABC Common stock		$5,000

To record 20X2 dividend on ABC Common. (100,000 shares * $.05)

6. During the year ended 12/31/20X3, ABC Insurance Company incurred a statutory net loss before dividends of $400,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$20,000	
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X3.

Unrealized Gain/Loss	$182,000	
Investment in ABC Preferred stock		$172,000
Investment in ABC Common stock		$10,000

To record 20X3 unrealized loss on investment in ABC Common and Preferred.

Total net loss and preferred stock dividend ($450,000).

Common stock component reduces the Investment in ABC Common stock component to $0. (20,000 * 50%)

Total net loss and preferred dividend (-$400,000 - $50,000)	$450,000
Less amount used to reduce common stock investment to $0	20,000
Amount remaining to be allocated to investment in preferred	430,000
XYZ ownership % of preferred	40%
XYZ reduction in investment in preferred	$172,000

7. During the year ended 12/31/20X4, ABC Insurance Company incurred a statutory net loss before dividends of $750,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$20,000	
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X4.

Unrealized Gain/Loss	$458,000	
Investment in ABC Preferred stock		$228,000
Investment in ABC Surplus note		$230,000

To record 20X4 unrealized loss on investment in ABC Preferred and Surplus Notes.

Total net loss and preferred stock dividend ($800,000).

Common stock component reduces the Investment in ABC Preferred stock component to $0. (570,000 * 40%)

Preferred stock component calculated as:

Total net loss and preferred dividend (-$750,000 - $50,000)	$800,000
Less amount used to reduce preferred stock investment to $0	570,000
Amount remaining to be allocated to investment in surplus note	230,000
XYZ ownership % of surplus note	100%
XYZ reduction in investment in ABC Surplus Notes	$230,000

8. During the year ended 12/31/20X5, ABC Insurance Company incurred a statutory net loss before dividends of $500,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$20,000	
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X5.

Unrealized Gain/Loss	$270,000	
Investment in ABC Surplus note		$270,000

To record 20X5 unrealized loss on investment in ABC Surplus Notes.

Total ABC net loss and preferred stock dividend (-$500,000 - $50,000).

Surplus Note component calculated as:

Total net loss and preferred dividend (-$500,000 - $50,000)	$550,000
XYZ ownership % of ABC Surplus Note	100%
	$550,000
Amount of unrealized loss recognized in 20X5	$270,000
Amount of unrealized loss suspended	$280,000

9. Since XYZ had not guaranteed any liabilities of ABC, the reduction they would recognize is limited to their remaining investment in ABC Surplus Notes. Therefore, they would only recognize a 20X5 unrealized loss on their investment in ABC of $270,000.

10. During the year ended 12/31/20X6, ABC Insurance Company realigned their marketing efforts and modified the products they were selling. ABC also issued an additional 8% surplus note of $500,000. This surplus note was purchased by an unaffiliated third party. During the year ended 12/31/X6, ABC Insurance

© 1999-2023 National Association of Insurance Commissioners

Company had statutory net income before dividends of $200,000. ABC Insurance Company did not declare any dividends on common stock but declared and paid current and dividends in arrears on preferred. XYZ recorded the following entries:

Cash	$80,000	
Dividends Receivable		$60,000
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X6, and receipt of preferred dividends receivable for 20X3, 20X4 and 20X5.

11. XYZ did not record any change in their investment in ABC Surplus Notes, ABC Preferred or ABC Common, since ABCs' net income after preferred dividends did not exceed the losses accumulated during the period that XYZ suspended recording unrealized losses.

12. The following amounts were tracked:

Total ABC net income and preferred stock dividend ($200,000 - $50,000).	
Surplus Note component calculated as:	
Total net income and preferred dividend ($200,000 - $50,000)	$150,000
XYZ ownership % of ABC Surplus Note	50%
	$75,000
Amount of unrealized loss suspended in 20X5	$280,000
Remaining amount of unrealized loss suspended	$205,000

13. During the year ended 12/31/20X7, ABC Insurance Company had statutory net income before dividends of $600,000. At 12/31/20X7, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Cash	$20,000	
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X7.

Investment in ABC Surplus Notes	$70,000	
Unrealized Gain/Loss		$70,000

© 1999-2023 National Association of Insurance Commissioners

To record 20X7 unrealized gain on investment in ABC Surplus Notes.

Total ABC net income and preferred stock dividend ($600,000 - $50,000).

Surplus Note component calculated as:

Total net income and preferred dividend ($600,000 - $50,000)	$550,000
XYZ ownership % of ABC Surplus Note	50%
	$275,000
Remaining amount of unrealized loss suspended in 20X5	$205,000
20X7 amount of unrealized gain on investment in ABC Surplus Note	$ 70,000

14. During the year ended 12/31/20X8, ABC Insurance Company had statutory net income before dividends of $900,000. At 12/31/20X8, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Cash	$20,000	
Dividend Income		$20,000

To record preferred dividend income from ABC Insurance Company for 20X8.

Total ABC net income and preferred stock dividend ($900,000 - $50,000).

Surplus Note component calculated as:

Total net income and preferred dividend ($900,000 - $50,000)		$850,000
XYZ ownership % of ABC Surplus Note		50%
20X8 amount of unrealized gain on investment in ABC Surplus Note		$425,000
Investment in ABC Surplus Notes	$425,000	
Unrealized Gain/Loss		$ 425,000

To record 20X8 unrealized gain on investment in ABC Surplus Notes.

15. During the year ended 12/31/20X9, ABC Insurance Company had statutory net income, before interest on surplus notes and dividends, of $1,400,000. The commissioner approved one year’s interest payment on the surplus notes. At 12/31/20X9, ABC declared and paid a 5% preferred dividend, and a $.10 dividend per share on Common stock. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X9.

Cash	$ 40,000	
Interest Income		$ 40,000

To record surplus notes interest income from ABC Insurance Company for 20X9. ($500,000 * 8%)

Investment in ABC Surplus Notes	$ 5,000	
Investment in ABC Preferred Stock	$ 400,000	
Investment in ABC Common Stock	$ 130,000	
Unrealized Gain/Loss		$ 535,000

To record 20X9 unrealized gain on investment in ABC Common, Preferred and Surplus Notes. Components computed as follows:

Total Net Income net of preferred stock dividend and interest on surplus notes ($1,400,000 - $50,000 - $80,000)	$ 1,270,000
Less amount needed to restore investment in surplus notes	($ 10,000)
Amount available for preferred stock and common stock investment restoration	$ 1,260,000
Amount needed to restore preferred stock component	($ 1,000,000)
Amount available to restore common stock component	$ 260,000

Surplus Notes Component ($10,000 * 50%)	$ 5,000
Preferred Stock Component ($1,000,000 * 40%)	$ 400,000
Common Stock Component ($260,000 * 50%)	$ 130,000

Cash	$ 10,000	
Unrealized Gain/Loss	$ 10,000	
Dividend Income		$ 10,000
Investment in ABC Common Stock		$ 10,000

To record 20X9 dividend on ABC Common. (100,000 shares * $.10)

Statement of Statutory Accounting Principles No. 100 – Revised

Fair Value

STATUS

Type of Issue	Common Area
Issued	December 5, 2009; Substantively revised November 6, 2017
Effective Date	December 31, 2010; Substantive revisions detailed in Issue Paper No. 157 effective January 1, 2018
Affects	Nullifies INT 09-04
Affected by	No other pronouncements

SCOPE OF STATEMENT

1. This statement defines fair value, establishes a framework for measuring fair value and establishes disclosure requirements about fair value.

SUMMARY CONCLUSION

2. This standard applies under other accounting pronouncements that require or permit fair value measurements, but this standard does not require any new fair value amendments. However, the application of this standard may change current practice. This standard does not eliminate the practicability exceptions to fair value measurements in accounting pronouncements within the scope of this standard.

© 1999-2023 National Association of Insurance Commissioners

3. This standard applies under other statutory accounting pronouncements that require or permit fair value measurements, except as follows:

a. This standard does not eliminate the practicality exceptions to fair value measurements in accounting pronouncements within the scope of this standard.

b. This standard does not apply under *SSAP No. 22R—Leases* and other accounting pronouncements that address fair value measurements for purposes of lease classification to measurement under SSAP No. 22R. This scope exception does not apply to assets acquired or liabilities assumed in a business combination that are required to be measured at fair value under *SSAP No. 68—Business Combinations and Goodwill*, regardless of whether those assets and liabilities are related to leases. This standard does not apply to share-based payment transactions captured within *SSAP No. 104R—Share-Based Payments*.

Definition of Fair Value

4. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Components of the Fair Value Definition

5. Asset/Liability – A fair value measurement is for a particular asset or liability. Therefore, the measurement should consider attributes specific to the asset or liability, for example, the condition and/or location of the asset or liability and restrictions, if any, on the sale or use of the asset at the measurement date. The asset or liability might be a standalone asset or liability (for example, a financial instrument or an operating asset) or a group of assets and/or liabilities (for example, an asset group, a reporting unit, or a business).

6. Price – A fair value measurement assumes that the asset or liability is exchanged in an orderly transaction between market participants to sell the asset or transfer the liability at the measurement date. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced transaction (for example, a forced liquidation or distress sale). The transaction to sell the asset or transfer the liability is a hypothetical transaction at the measurement date, considered from the perspective of a market participant that holds the asset or owes the liability. Therefore, the objective of a fair value measurement is to determine the price that would be received to sell the asset or paid to transfer the liability at the measurement date (an exit price).

7. Principal (or Most Advantageous) Market – A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability. The principal market is the market in which the reporting entity would sell the asset or transfer the liability with the greatest volume and level of activity for the asset or liability. The most advantageous market is the market in which the reporting entity would sell the asset or transfer the liability with the price that maximizes the amount that would be received for the asset or minimizes the amount that would be paid to transfer the liability, considering transaction costs in the respective market(s). In either case, the principal (or most advantageous) market (and thus, market participants) should be considered from the perspective of the reporting entity, thereby allowing for differences between and among entities with different activities. If there is a principal market for the asset or liability, the fair value measurement shall represent the price in that market (whether that price is directly observable or otherwise determined using a valuation technique), even if the price in a different market is potentially more advantageous at the measurement date.

© 1999-2023 National Association of Insurance Commissioners

8. The price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. Transaction costs represent the incremental direct costs to sell the asset or transfer the liability in the principal (or most advantageous) market for the asset or liability. Transaction costs are not an attribute of the asset or liability; rather, they are specific to the transaction and will differ depending on how the reporting entity transacts. However, transaction costs do not include the costs that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market. If location is an attribute of the asset or liability (as might be the case for a commodity), the price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall be adjusted for the costs, if any, that would be incurred to transport the asset or liability to (or from) its principal (or most advantageous) market.

9. Market Participants – Market participants are buyers and sellers in the principal (or most advantageous) market for the asset or liability that are:

a. Independent of the reporting entity; that is, they are not related parties;

b. Knowledgeable, having a reasonable understanding about the asset or liability and the transaction based on all available information, including information that might be obtained through due diligence efforts that are usual and customary;

c. Able to transact for the asset or liability; and

d. Willing to transact for the asset or liability; that is, they are motivated but not forced or otherwise compelled to do so.

10. The fair value of the asset or liability shall be determined based on the assumptions that market participants would use in pricing the asset or liability. In developing those assumptions, the reporting entity need not identify specific market participants. Rather, the reporting entity should identify characteristics that distinguish market participants generally, considering factors specific to (a) the asset or liability, (b) the principal (or most advantageous) market for the asset or liability, and (c) market participants with whom the reporting entity would transact in that market.

11. Application to Assets – A fair value measurement assumes the highest and best use of the asset by market participants, considering the use of the asset that is physically possible, legally permissible, and financially feasible at the measurement date. In broad terms, highest and best use refers to the use of an asset by market participants that would maximize the value of the asset or the group of assets within which the asset would be used. Highest and best use is determined based on the use of the asset by market participants, even if the intended use of the asset by the reporting entity is different.

12. The highest and best use of the asset establishes the valuation premise used to measure the fair value of the asset. Specifically:

a. In-use – The highest and best use of the asset is in-use if the asset would provide maximum value to market participants principally through its use in combination with other assets as a group (as installed or otherwise configured for use). For example, that might be the case for certain nonfinancial assets. If the highest and best use of the asset is in-use, the fair value of the asset shall be measured using an in-use valuation premise. When using an in-use valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset assuming that the asset would be used with other assets as a group and that those assets would be available to market participants. Generally, assumptions about the highest and best use of the asset should be consistent for all of the assets of the group within which it would be used.

© 1999-2023 National Association of Insurance Commissioners

b. In-exchange – The highest and best use of the asset is in-exchange if the asset would provide maximum value to market participants principally on a standalone basis. For example, that might be the case for a financial asset. If the highest and best use of the asset is in-exchange, the fair value of the asset shall be measured using an in-exchange valuation premise. When using an in-exchange valuation premise, the fair value of the asset is determined based on the price that would be received in a current transaction to sell the asset standalone.

13. Because the highest and best use of the asset is determined based on its use by market participants, the fair value measurement considers the assumptions that market participants would use in pricing the asset, whether using an in-use or an in-exchange valuation premise.

14. Application to Liabilities – Consideration of non-performance risk (own credit-risk) should not be reflected in the fair value calculation for liabilities (including derivative liabilities) at subsequent measurement. At initial recognition, it is perceived that the consideration of own-credit risk may be inherent in the contractual negotiations resulting in the liability. The consideration of non-performance risk for subsequent measurement is inconsistent with the conservatism and recognition concepts as well as the assessment of financial solvency for insurers, as a decrease in credit standing would effectively decrease reported liabilities and thus seemingly increase the appearance of solvency. Furthermore, liabilities reported or disclosed at "fair value" shall not reflect any third-party credit guarantee of debt.

Fair Value at Initial Recognition

15. When an asset is acquired or a liability is assumed in an exchange transaction for that asset or liability, the transaction price represents the price paid to acquire the asset or received to assume the liability (an entry price). In contrast, the fair value of the asset or liability represents the price that would be received to sell the asset or paid to transfer the liability (an exit price). Conceptually, entry prices and exit prices are different. Entities do not necessarily sell assets at the prices paid to acquire them. Similarly, entities do not necessarily transfer liabilities at the prices received to assume them.

16. In many cases, the transaction price will equal the exit price and, therefore, represent the fair value of the asset or liability at initial recognition. In determining whether a transaction price represents the fair value of the asset or liability at initial recognition, the reporting entity shall consider factors specific to the transaction and the asset or liability. For example, a transaction price might not represent the fair value of an asset or liability at initial recognition if:

a. The transaction is between related parties.

b. The transaction occurs under duress or the seller is forced to accept the price in the transaction. For example, that might be the case if the seller is experiencing financial difficulty.

c. The market in which the transaction occurs is different from the market in which the reporting entity would sell the asset or transfer the liability, that is, the principal or most advantageous market. For example, those markets might be different if the reporting entity is a securities dealer that transacts in different markets, depending on whether the counterparty is a retail customer (retail market) or another securities dealer (inter-dealer market).

d. For liabilities, differences may exist as non-performance risk (own credit risk) is not reflected in the fair value (i.e., exit price) determination of all liabilities (including derivatives).

© 1999-2023 National Association of Insurance Commissioners

Valuation Techniques

17. Valuation techniques consistent with the market approach, income approach, and/or cost approach shall be used to measure fair value. Key aspects of those approaches are summarized below:

a. Market approach. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities (including a business). For example, valuation techniques consistent with the market approach often use market multiples derived from a set of comparables. Multiples might lie in ranges with a different multiple for each comparable. The selection of where within the range the appropriate multiple falls requires judgment, considering factors specific to the measurement (qualitative and quantitative). Valuation techniques consistent with the market approach include matrix pricing. Matrix pricing is a mathematical technique used principally to value debt securities without relying exclusively on quoted prices for the specific securities, but rather by relying on the securities' relationship to other benchmark quoted securities.

b. Income approach. The income approach uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present amount (discounted). The measurement is based on the value indicated by current market expectations about those future amounts. Those valuation techniques include present value techniques; option-pricing models, such as the Black-Scholes-Merton formula (a closed-form model) and a binomial model (a lattice model), which incorporate present value techniques; and the multiperiod excess earnings method, which is used to measure the fair value of certain intangible assets.

c. Cost approach. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset (often referred to as current replacement cost). From the perspective of a market participant (seller), the price that would be received for the asset is determined based on the cost to a market participant (buyer) to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence. Obsolescence encompasses physical deterioration, functional (technological) obsolescence, and economic (external) obsolescence and is broader than depreciation for financial reporting purposes (an allocation of historical cost) or tax purposes (based on specified service lives).

18. Valuation techniques that are appropriate in the circumstances and for which sufficient data are available shall be used to measure fair value. In some cases, a single valuation technique will be appropriate (for example, when valuing an asset or liability using quoted prices in an active market for identical assets or liabilities). In other cases, multiple valuation techniques will be appropriate (for example, as might be the case when valuing a reporting unit). If multiple valuation techniques are used to measure fair value, the results (respective indications of fair value) shall be evaluated and weighted, as appropriate, considering the reasonableness of the range indicated by those results. A fair value measurement is the point within that range that is most representative of fair value in the circumstances.

19. Valuation techniques used to measure fair value shall be consistently applied. However, a change in a valuation technique or its application (for example, a change in its weighting when multiple valuation techniques are used) is appropriate if the change results in a measurement that is equally or more representative of fair value in the circumstances. That might be the case if, for example, new markets develop, new information becomes available, information previously used is no longer available, or valuation techniques improve. Revisions resulting from a change in the valuation technique or its application shall be accounted for as a change in accounting estimate pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors*. The disclosure provisions of SSAP No. 3 for a change in

accounting estimate are not required for revisions resulting from a change in a valuation technique or its application.

Inputs to Valuation Techniques

20. In this standard, inputs refer broadly to the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk, for example, the risk inherent in a particular valuation technique used to measure fair value (such as a pricing model) and/or the risk inherent in the inputs to the valuation technique. Inputs may be observable or unobservable:

a. Observable inputs are inputs that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from sources independent of the reporting entity.

b. Unobservable inputs are inputs that reflect the reporting entity's own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances.

Valuation techniques used to measure fair value shall maximize the use of observable inputs and minimize the use of unobservable inputs.

Fair Value Hierarchy

21. To increase consistency and comparability in fair value measurements and related disclosures, the fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The fair value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

22. The availability of inputs relevant to the asset or liability and the relative reliability of the inputs might affect the selection of appropriate valuation techniques. However, the fair value hierarchy prioritizes the inputs to valuation techniques, not the valuation techniques. For example, a fair value measurement using a present value technique might fall within Level 2 or Level 3, depending on the inputs that are significant to the measurement in its entirety and the level in the fair value hierarchy within which those inputs fall.

Level 1 Inputs

23. Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis. A quoted price in an active market provides the most reliable evidence of fair value and shall be used to measure fair value whenever available, except as discussed in paragraphs 24 and 25.

24. If the reporting entity holds a large number of similar assets or liabilities (for example, debt securities) that are required to be measured at fair value, a quoted price in an active market might be available but not readily accessible for each of those assets or liabilities individually. In that case, fair value may be measured using an alternative pricing method that does not rely exclusively on quoted

© 1999-2023 National Association of Insurance Commissioners

prices (for example, matrix pricing) as a practical expedient. However, the use of an alternative pricing method renders the fair value measurement a lower level measurement.

25. In some situations, a quoted price in an active market might not represent fair value at the measurement date. That might be the case if, for example, significant events (principal-to-principal transactions, brokered trades, or announcements) occur after the close of a market but before the measurement date. The reporting entity should establish and consistently apply a policy for identifying those events that might affect fair value measurements. However, if the quoted price is adjusted for new information, the adjustment renders the fair value measurement a lower level measurement.

26. If the reporting entity holds a position in a single financial instrument (including a block) and the instrument is traded in an active market, the fair value of the position shall be measured within Level 1 as the product of the quoted price for the individual instrument times the quantity held. The quoted price shall not be adjusted because of the size of the position relative to trading volume (blockage factor). The use of a blockage factor is prohibited, even if a market's normal daily trading volume is not sufficient to absorb the quantity held and placing orders to sell the position in a single transaction might affect the quoted price.

Level 2 Inputs

27. Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. If the asset or liability has a specified (contractual) term, a Level 2 input must be observable for substantially the full term of the asset or liability. Level 2 inputs include the following:

a. Quoted prices for similar assets or liabilities in active markets

b. Quoted prices for identical or similar assets or liabilities in markets that are not active, that is, markets in which there are few transactions for the asset or liability, the prices are not current, or price quotations vary substantially either over time or among market makers (for example, some brokered markets), or in which little information is released publicly (for example, a principal-to-principal market)

c. Inputs other than quoted prices that are observable for the asset or liability (for example, interest rates and yield curves observable at commonly quoted intervals, volatilities, prepayment speeds, loss severities, credit risks, and default rates)

d. Inputs that are derived principally from or corroborated by observable market data by correlation or other means (market-corroborated inputs).

28. Adjustments to Level 2 inputs will vary depending on factors specific to the asset or liability. Those factors include the condition and/or location of the asset or liability, the extent to which the inputs relate to items that are comparable to the asset or liability, and the volume and level of activity in the markets within which the inputs are observed. An adjustment that is significant to the fair value measurement in its entirety might render the measurement a Level 3 measurement, depending on the level in the fair value hierarchy within which the inputs used to determine the adjustment fall.

29. The reporting entity should evaluate the following factors to determine whether there has been a significant decrease in the volume and level of activity for the asset or liability when compared with normal market activity for the asset or liability (or similar assets or liabilities). The factors include, but are not limited to:

a. There are few recent transactions.

b. Price quotations are not based on current information.

© 1999-2023 National Association of Insurance Commissioners

c. Price quotations vary substantially either over time or among market makers (for example, some brokered markets).

d. Indexes that previously were highly correlated with the fair values of the asset or liability are demonstrably uncorrelated with recent indications of fair value for that asset or liability.

e. There is a significant increase in implied liquidity risk premiums, yields, or performance indicators (such as delinquency rates or loss severities) for observed transactions or quoted prices when compared with the reporting entity's estimate of expected cash flows, considering all available market data about credit and other nonperformance risk for the asset or liability.

f. There is a wide bid-ask spread or significant increase in the bid-ask spread.

g. There is a significant decline or absence of a market for new issuances (that is, a primary market) for the asset or liability or similar assets or liabilities.

h. Little information is released publicly (for example, a principal-to-principal market).

The reporting entity shall evaluate the significance and relevance of the factors to determine whether, based on the weight of the evidence, there has been a significant decrease in the volume and level of activity for the asset or liability.

30. If the reporting entity concludes there has been a significant decrease in the volume and level of activity for the asset or liability in relation to normal market activity for the asset or liability (or similar assets or liabilities), transactions or quoted prices may not be determinative of fair value (for example, there may be increased instances of transactions that are not orderly). Further analysis of the transactions or quoted prices is needed, and a significant adjustment to the transactions or quoted prices may be necessary to estimate fair value in accordance with this standard. Significant adjustments also may be necessary in other circumstances (for example, when a price for a similar asset requires significant adjustment to make it more comparable to the asset being measured or when the price is stale).

31. This standard does not prescribe a methodology for making significant adjustments to transactions or quoted prices when estimating fair value. Paragraphs 17-19 discuss the use of valuation techniques in estimating fair value. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate (for example, the use of a market approach and a present value technique). When weighting indications of fair value resulting from the use of multiple valuation techniques, the reporting entity shall consider the reasonableness of the range of fair value estimates. The objective is to determine the point within that range that is most representative of fair value under current market conditions. A wide range of fair value estimates may be an indication that further analysis is needed.

32. Even in circumstances where there has been a significant decrease in the volume and level of activity for the asset or liability and regardless of the valuation technique(s) used, the objective of a fair value measurement remains the same. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. Determining the price at which willing market participants would transact at the measurement date under current market conditions if there has been a significant decrease in the volume and level of activity for the asset or liability depends on the facts and circumstances and requires the use of significant judgment. However, the reporting entity's intention to hold the asset or liability is not relevant in estimating fair value. Fair value is a market-based measurement, not an entity-specific measurement.

© 1999-2023 National Association of Insurance Commissioners

33. Even if there has been a significant decrease in the volume and level of activity for the asset or liability, it is not appropriate to conclude that all transactions are not orderly (that is, distressed or forced). Circumstances that may indicate that a transaction is not orderly include, but are not limited to:

a. There was not adequate exposure to the market for a period before the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities under current market conditions.

b. There was a usual and customary marketing period, but the seller marketed the asset or liability to a single market participant.

c. The seller is in or near bankruptcy or receivership (that is, distressed), or the seller was required to sell to meet regulatory or legal requirements (that is, forced).

d. The transaction price is an outlier when compared with other recent transactions for the same or similar asset or liability.

The reporting entity shall evaluate the circumstances to determine whether the transaction is orderly based on the weight of the evidence.

34. The determination of whether a transaction is orderly (or not orderly) is more difficult if there has been a significant decrease in the volume and level of activity for the asset or liability. Accordingly, the reporting entity shall consider the following guidance:

a. If the weight of the evidence indicates the transaction is not orderly, the reporting entity shall place little, if any, weight (compared with other indications of fair value) on that transaction price when estimating fair value or market risk premiums.

b. If the weight of the evidence indicates the transaction is orderly, the reporting entity shall consider that transaction price when estimating fair value or market risk premiums. The amount of weight placed on that transaction price when compared with other indications of fair value will depend on the facts and circumstances such as the volume of the transaction, the comparability of the transaction to the asset or liability being measured at fair value, and the proximity of the transaction to the measurement date.

c. If the reporting entity does not have sufficient information to conclude that the transaction is orderly or that the transaction is not orderly, it shall consider that transaction price when estimating fair value or market risk premiums. However, that transaction price may not be determinative of fair value (that is, that transaction price may not be the sole or primary basis for estimating fair value or market risk premiums). The reporting entity shall place less weight on transactions on which the reporting entity does not have sufficient information to conclude whether the transaction is orderly when compared with other transactions that are known to be orderly.

In its determinations, the reporting entity need not undertake all possible efforts, but shall not ignore information that is available without undue cost and effort. The reporting entity would be expected to have sufficient information to conclude whether a transaction is orderly when it is party to the transaction.

35. Regardless of the valuation technique(s) used, the reporting entity shall include appropriate risk adjustments. Risk-averse market participants generally seek compensation for bearing the uncertainty inherent in the cash flows of an asset or liability (risk premium). A fair value measurement should include a risk premium reflecting the amount market participants would demand because of the risk (uncertainty) in the cash flows. Otherwise, the measurement would not faithfully represent fair value. In some cases, determining the appropriate risk premium might be difficult. However, the degree of difficulty alone is

© 1999-2023 National Association of Insurance Commissioners

not a sufficient basis on which to exclude a risk adjustment. Risk premiums should be reflective of an orderly transaction (that is, not a forced or distressed sale) between market participants at the measurement date under current market conditions.

36. When estimating fair value, this standard does not preclude the use of quoted prices provided by third parties, such as pricing services or brokers, when the reporting entity has determined that the quoted prices provided by those parties are determined in accordance with this standard. However, when there has been a significant decrease in the Volume or level of activity for the asset or liability, the reporting entity should evaluate whether those quoted prices are based on current information that reflects orderly transactions or a valuation technique that reflects market participant assumptions (including assumptions about risks). In weighting a quoted price as an input to a fair value measurement, the reporting entity should place less weight (when compared with other indications of fair value that are based on transactions) on quotes that do not reflect the result of transactions. Furthermore, the nature of the quote (for example, whether the quote is an indicative price or a binding offer) should be considered when weighting the available evidence, with more weight given to quotes based on binding offers.

Level 3 Inputs

37. Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, that is, an exit price from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs shall reflect the reporting entity's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). Unobservable inputs shall be developed based on the best information available in the circumstances, which might include the reporting entity's own data. In developing unobservable inputs, the reporting entity need not undertake all possible efforts to obtain information about market participant assumptions. However, the reporting entity shall not ignore information about market participant assumptions that is reasonably available without undue cost and effort. Therefore, the reporting entity's own data used to develop unobservable inputs shall be adjusted if information is reasonably available without undue cost and effort that indicates that market participants would use different assumptions.

Inputs Based on Bid and Ask Prices

38. If an input used to measure fair value is based on bid and ask prices (for example, in a dealer market), the price within the bid-ask spread that is most representative of fair value in the circumstances shall be used to measure fair value, regardless of where in the fair value hierarchy the input falls (Level 1, 2, or 3). This standard does not preclude the use of mid-market pricing or other pricing conventions as a practical expedient for fair value measurements within a bid-ask spread.

Utilizing Net Asset Value Per Share as a Practical Expedient to Fair Value

39. A reporting entity may utilize net asset value per share (NAV)[1] as a practical expedient to fair value in either of the following situations, unless, as prescribed in paragraph 44, it is probable that the reporting entity will sell the investment for an amount different from the net asset value per share (or its equivalent):

a. When a SSAP specifically identifies NAV as a permitted practical expedient.

[1] Net asset value per share is the amount of net assets attributable to each share of capital stock (other than senior equity securities, that is, preferred stock) outstanding at the close of the period. It excludes the effects of assuming conversion of outstanding convertible securities, whether or not their conversion would have a diluting effect. *(This footnote reflects the definition of Net Asset Value Per Share from the FASB Codification Master Glossary.)*

© 1999-2023 National Association of Insurance Commissioners

b. When the conditions specified in paragraph 40 are met.

40. Pursuant to paragraph 39, a reporting entity is permitted to utilize NAV as a practical expedient to fair value when the investment meets both of the following criteria:

a. The investment does not have a readily determinable fair value as defined in paragraph 41.

b. The investment is in an investment company or is an investment in a real estate fund for which it is industry practice to measure investment assets at fair value on a recurring basis and to issue financial statements consistent with the measurement principles of an investment company.

41. An equity security has a readily determinable fair value if it meets any of the following conditions:

a. The fair value of an equity security is readily determinable if sales prices or bid-and-asked quotations are currently available on a securities exchange registered with the U.S. Securities and Exchange Commission (SEC) or in the over-the-counter market, provided that those prices or quotations for the over-the-counter market are publicly reported by the National Association of Securities Dealers Automated Quotations systems or by OTC Markets Group Inc. Restricted stock meets that definition if the restriction terminates within one year[2].

b. The fair value of an equity security traded only in a foreign market is readily determinable if that foreign market is of a breadth and scope comparable to one of the U.S. markets identified in paragraph 41.a.

c. The fair value of an equity security that is an investment in a mutual fund or in a structure similar to a mutual fund (that is, a limited partnership or a venture capital entity) is readily determinable if the fair value per share (unit) is determined and published and is the basis for current transactions.

42. An entity is considered an investment company if it qualifies under the following assessments:

a. An entity regulated under the Investment Company Act of 1940.

b. An entity that is not regulated under the Investment Company Act of 1940, but that possesses all of the following fundamental characteristics:

i. The entity, 1) obtains funds from one or more investors and provides the investors with investment management services, and 2) commits to its investors that its business purpose and only substantive activities are investing the funds solely for returns from capital appreciation, investment income, or both.

ii. The entity or its affiliates do not obtain or have the objective of obtaining returns or benefits from an investee or its affiliates that are not normally attributable to ownership interests or that are other than capital appreciation or investment income.

c. The following characteristics are not required, but are typically found in an investment company. If the entity does not possess one or more of these typical characteristics, the

[2] If an investment would otherwise have a readily determinable fair value, except that the investment has a restriction expiring in more than one year, the reporting entity is not permitted to use NAV for that investment.

© 1999-2023 National Association of Insurance Commissioners

reporting entity shall conduct further assessments to determine whether the entity's activities are consistent with those of an investment company:

i. The entity has more than one investment.

ii. The entity has more than one investor.

iii. The entity has investors that are not related parties of the parent or the investment manager.

iv. The entity has ownership interests in the form of equity or partnership interests.

v. The entity manages substantially all of its investments on a fair value basis.

43. If a reporting entity is permitted under paragraph 39 to utilize NAV as a practical expedient, the reporting entity shall identify whether the holdings of the investment company, in determining NAV, are measured at fair value as of the reporting entity's measurement date. If the NAV of the investment obtained from the entity is not as of the reporting entity's measurement date, or is not based on a fair value measurement of the underlying investments, the reporting entity shall consider whether an adjustment to the most recent NAV is necessary. The objective of any adjustment is to estimate a net asset value per share for the investment that is calculated on the basis of underlying investments held at fair value.

44. A reporting entity shall decide on an investment-by-investment basis whether to apply the practical expedient in paragraph 39 and shall apply that practical expedient consistently to the fair value measurement of the reporting entity's entire position in a particular investment, unless it is probable at the measurement date that the reporting entity will sell a portion of an investment at an amount different from NAV. In those situations, the reporting entity shall account for the portion of the investment that is being sold at fair value, as defined in paragraph 4, without use of the NAV practical expedient.

45. A reporting entity is not permitted to estimate the fair value of an investment (or a portion of the investment) using the NAV of the investment (or its equivalent) as a practical expedient if, as of the reporting entity's measurement date, it is probable that the reporting entity will sell the investment for an amount different from the net asset value per share (or its equivalent). A sale is considered probable only if all of the following criteria have been met as of the reporting entity's measurement date:

a. Management having the authority to approve the action commits to a plan to sell the investment.

b. An active program to locate a buyer and other actions required to complete the plan to sell the investment have been initiated.

c. The investment is available for immediate sale subject only to terms that are usual and customary for sales of such investments (for example, a requirement to obtain approval of the sale from the investee or a buyer's due diligence procedures).

d. Actions required to complete the plan indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn.

46. An investment reported at NAV as a practical expedient pursuant to paragraph 39, shall not be categorized within the fair value hierarchy. Although the investment is not categorized within the fair value hierarchy, a reporting entity shall separately identify NAV (or its equivalent) as required under paragraphs 48.a. and 48.b. to permit reconciliations.

© 1999-2023 National Association of Insurance Commissioners

Disclosures

47. The objective of the disclosure requirements is to provide information about assets and liabilities measured at fair value in the financial statements as well as fair value amounts disclosed in the notes to financial statements or reporting schedules. To meet these objectives, the reporting entity shall disclose the information in paragraphs 48 through 57.

48. For each class of assets and liabilities measured and reported[3] at fair value or NAV in the statement of financial position after initial recognition. The reporting entity shall determine appropriate classes of assets and liabilities in accordance with the annual statement instructions.

a. The fair value/NAV measurements at the reporting date.

b. The level of the fair value hierarchy within which the fair value measurements are categorized in their entirety (Level 1, 2 or 3). Investments reported at NAV shall not be captured within the fair value hierarchy, but shall be separately identified.

c. For fair value measurements categorized within Level 2 and Level 3 of the fair value hierarchy, a description of the valuation technique(s) and the inputs used in the fair value measurement. If there has been a change in the valuation technique (for example, changing from a market approach to an income approach or the use of an additional valuation technique), the reporting entity shall disclose that change and the reason(s) for making it.

d. For fair value measurements categorized within Level 3 of the fair value hierarchy a reconciliation from the opening balances to the closing balances disclosing separately changes during the period attributable to the following:

i. Total gains or losses for the period recognized in income or surplus.

ii. Purchases, sales, issues, and settlements (each type disclosed separately).

iii. The amounts of any transfers into or out of Level 3 and the reasons for those transfers. Transfers into Level 3 shall be disclosed and discussed separately from transfers out of Level 3.

e. A reporting entity shall consistently follow its policy for determining when transfers between levels are recognized. The policy about the timing of recognizing transfers shall be the same for transfers into Level 3 as that for transfers out of Level 3. Examples of policies for when to recognize the transfers are as follows:

i. The actual date of the event or change in circumstances that caused the transfer.

ii. The beginning of the reporting period.

iii. The end of the reporting period.

---

[3] The term "reported" is intended to reflect the measurement basis for which the asset or liability is classified within its underlying SSAP. For example, a bond with an NAIC designation of 2 is considered an amortized cost measurement and is not included within this disclosure even if the amortized cost and fair value measurement are the same. An example of when such a situation may occur includes a bond that is written down as other-then-temporarily impaired as of the date of financial position. The amortized cost of the bond after the recognition of the other-than-temporary impairment may agree to fair value, but under SSAP No. 26R this security is considered to still be reported at amortized cost.

© 1999-2023 National Association of Insurance Commissioners

49. For derivative assets and liabilities, the reporting entity shall present both of the following:

a. The disclosures required by paragraphs 48.a. and 48.b. on a gross basis.

b. The reconciliation disclosures required by paragraph 48.c., 48.d. and 48.e. on either a gross or net basis.

50. The quantitative disclosures required in paragraphs 48-49 of this standard shall be presented using a tabular format.

51. The reporting entity shall disclose the fair value hierarchy and the method used to obtain the fair value measurement, or the use of NAV, for all items in which fair value is disclosed within the annual statement investment schedules. This disclosure is satisfied by the completion of the investment schedules in the Annual statement and is not required quarterly.

52. For investments measured using the NAV practical expedient pursuant to paragraph 39, a reporting entity shall disclose information that helps users of its financial statements to understand the nature and risks of the investments and whether the investments, if sold, are probable of being sold at amounts different from net asset value per share. A reporting entity shall disclose the following information for instances in which the investment may be sold below NAV, or if there are significant restrictions in the liquidation of an investment held at NAV:

a. The NAV along with a description of the investment/investment strategy of the investee.

b. If the investment that can never be redeemed with the investees, but the reporting entity receives distributions through the liquidation of the underlying assets of the investees, the period of time over which the underlying assets are expected to be liquidated by the investees if the investee has communicated the timing to the reporting entity or announced the timing publicly. If the timing is unknown, the reporting entity shall disclose that fact.

c. The amount of the reporting entity's unfunded commitments related to investments in the class.

d. A general description of the terms and conditions upon which the investor may redeem the investment.

e. The circumstances in which an otherwise redeemable investment in the class (or a portion thereof) might not be redeemable (for example, investments subject to a lockup or gate). Also, for those otherwise redeemable investments that are restricted from redemption as of the reporting entity's measurement date, the reporting entity shall disclose when the restriction from redemption might lapse if the investee has communicated that timing to the reporting entity or announced the timing publicly. If the timing is unknown, the reporting entity shall disclose that fact and how long the restriction has been in effect.

f. Any other significant restriction on the ability to sell investments in the class at the measurement date.

g. If a group of investments would otherwise meet the criteria in paragraph 45 but the individual investments to be sold have not been identified (for example, if a reporting entity decides to sell 20 percent of its investments in private equity funds but the individual investments to be sold have not been identified), so the investments continue to qualify for the practical expedient in paragraph 39, the reporting entity shall disclose its plans to sell and any remaining actions required to complete the sale(s).

© 1999-2023 National Association of Insurance Commissioners

53. The reporting entity is encouraged, but not required, to combine the fair value information disclosed under this standard with the fair value information disclosed under other accounting pronouncements (for example, disclosures about fair value of financial instruments) in the periods in which those disclosures are required, if practicable. The reporting entity also is encouraged, but not required, to disclose information about other similar measurements, if practicable.

Disclosures about Fair Value of Financial Instruments

54. A reporting entity shall disclose in the notes to the financial statements, as of each date for which a statement of financial position is presented in the quarterly or annual financial statements, the aggregate fair value or NAV for all financial instruments and the level within the fair value hierarchy in which the fair value measurements in their entirety fall. This disclosure shall be summarized by type of financial instrument, for which it is practicable to estimate fair value, except for certain financial instruments identified in paragraph 55. Fair value disclosed in the notes shall be presented together with the related admitted values in a form that makes it clear whether the fair values and admitted values represent assets or liabilities and to which line items in the Statement of Assets, Liabilities, Surplus and Other Funds they relate. Unless specified otherwise in another SSAP, the disclosures may be made net of encumbrances, if the asset or liability is so reported. A reporting entity shall also disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments. If it is not practicable for an entity to estimate the fair value of the financial instrument or a class of financial instruments, and the investment does not qualify for the NAV practical expedient, the aggregate carrying amount for those items shall be reported as "not practicable" with additional disclosure as required in paragraph 48.

55. The disclosures about fair value prescribed in paragraph 54 are not required for the following:

a. Employers' and plans' obligations for pension benefits, other postretirement benefits including health care and life insurance benefits, postemployment benefits, employee stock option and stock purchase plans, and other forms of deferred compensation arrangements, as defined in *SSAP No. 12—Employee Stock Ownership Plans*, *SSAP No. 92—Postretirement Benefits Other Than Pensions*, *SSAP No. 102—Pensions* and *SSAP No. 104R—Share-Based Payments*.

b. Substantively extinguished debt subject to the disclosure requirements of *SSAP No. 103R—Transfer and Servicing of Financial Assets and Extinguishments of Liabilities*.

c. Insurance contracts, other than financial guarantees and deposit-type contracts .

d. Lease contracts as defined in *SSAP No. 22R—Leases.*

e. Warranty obligations and rights.

f. Investments accounted for under the equity method.

g. Equity instruments issued by the entity.

h. Deposit liabilities with no defined or contractual maturities.

56. If it is not practicable for an entity to estimate the fair value of a financial instrument or a class of financial instruments, and the investment does not qualify for the NAV practical expedient, the following shall be disclosed:

a. Information pertinent to estimating the fair value of that financial instrument or class of financial instruments, such as the carrying amount, effective interest rate, and maturity; and

© 1999-2023 National Association of Insurance Commissioners

b. The reasons why it is not practicable to estimate fair value.

57. In the context of this standard, practicable means that an estimate of fair value can be made without incurring excessive costs. It is a dynamic concept: what is practicable for one entity might not be for another; what is not practicable in one year might be in another. For example, it might not be practicable for an entity to estimate the fair value of a class of financial instruments for which a quoted market price is not available because it has not yet obtained or developed the valuation model necessary to make the estimate, and the cost of obtaining an independent valuation appears excessive considering the materiality of the instruments to the entity. Practicability, that is, cost considerations, also may affect the required precision of the estimate; for example, while in many cases it might seem impracticable to estimate fair value on an individual instrument basis, it may be practicable for a class of financial instruments in a portfolio or on a portfolio basis. In those cases, the fair value of that class or of the portfolio should be disclosed. Finally, it might be practicable for an entity to estimate the fair value only of a subset of a class of financial instruments; the fair value of that subset should be disclosed.

Relevant Literature

58. This standard adopts with modification *FAS 157, Fair Value Measurements*; (FAS 157) *FSP FAS 157-1, Application of FASB Statement No. 157 to FASB Statement No. 13 and Other Accounting Pronouncements That Address Fair Value Measurements for Purposes of Lease Classification or Measurement Under Statement 13*, (FSP FAS 157-1) and *FSP FAS 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly* (FSP FAS 157-4). Modifications from FAS 157, FSP FAS 157-1 and FSP FAS 157-4 include:

a. This standard does not adopt the scope exclusions within paragraph 3 of FAS 157 for accounting pronouncements that require or permit measurements that are similar to fair value but that are not intended to measure fair value, including (a) accounting pronouncements that permit measurements that are based on, or otherwise use, vendor-specific objective evidence of fair value and (b) inventory pricing. These items are excluded as they are not prevalent within statutory accounting.

b. This standard does not adopt guidance from FAS 157 regarding the consideration of non-performance risk (own credit risk) in determining the fair value measurement of liabilities. The consideration of own credit-risk in the measurement of fair value liabilities is inconsistent with the statutory accounting concept of conservatism and the assessment of financial solvency for insurers. The fair value determination for liabilities should follow the guidance adopted from FAS 157, with the exception of the consideration of own-performance risk.

c. This standard includes revisions to reference statutory standards or terms instead of GAAP standards or terms.

d. This standard incorporates the guidance from SSAP No. 27 regarding disclosures about fair value of financial instruments. This incorporated SSAP No. 27 guidance was adopted from *FAS 107, Disclosures about Fair Value of Financial Instruments* (FAS 107) and was revised to adopt *FSP FAS 107-1 and APB-1, Interim Disclosures about Fair Value of Financial Instruments* (FSP FAS 107-1 and APB-1). For statutory purposes, the incorporation of this guidance within one standard results in having one comprehensive standard addressing fair value measurements and disclosures.

59. In August 2010, this statement adopted with modification the new and revised disclosure requirements within *ASU 2010-06, Fair Value Measurements and Disclosures – (Topic 820): Improving Disclosures about Fair Value Measurements* (ASU 2010-06). GAAP revisions within ASU 2010-06 that

© 1999-2023 National Association of Insurance Commissioners

modify the FASB Codification on aspects originally added by *ASU 2009-05, Fair Value Measurements and Disclosures, Measuring Liabilities at Fair Value* (ASU 2009-05). These revisions are not adopted, as the underlying GAAP guidance within ASU 2009-05 has not been considered for statutory accounting. When ASU 2009-05 is reviewed for statutory accounting, the GAAP guidance considered will reflect the revisions from ASU 2010-06. Subsequent nonsubstantive revisions to the guidance adopted from ASU 2010-06 were incorporated within this statement in November 2010 to clarify the disclosure requirements for statutory accounting. These revisions removed the distinction between recurring and non-recurring fair value measurements and clarified disclosure requirements for assets and liabilities measured and reported at fair value in the statement of financial position. In April 2019 this statement adopted with modification disclosure revisions from *ASU 2018-13, Changes to the Disclosure Requirements for Fair Value Measurement.* Modifications to ASU 2018-13 incorporate revisions to previously adopted GAAP disclosures, and do not incorporate revisions related to disclosures not previously reflected for statutory accounting.

60. In November 2017, substantive revisions, as detailed in Issue Paper No. 157, were incorporated to this statement to adopt *ASU 2009-12, Investments in Certain Entities That Calculate Net Asset Value per Share (or Its* Equivalent*)* and *ASU 2015-07, Disclosures for Investments in Certain Entities that Calculate Net Asset Value per Share (or Its Equivalent)*. These substantive revisions incorporated new guidance allowing reporting entities to utilize net asset value per share as a practical expedient to fair value when certain conditions are met.

61. Paragraphs 54-57 of this statement adopt FAS 107 as amended by *FASB Statement No. 119, Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments* (FAS 119), except that paragraph 15(c) of FAS 119 relating to disclosure of financial instruments held or issued for trading is rejected and *FASB Emerging Issues Task Force No. 85-20, Recognition of Fees for Guaranteeing a Loan*. Financial instruments named within paragraph 8 of FAS 107 that are exempt from disclosure are adopted to the extent applicable for statutory accounting and are reflected in paragraph 55 of this statement. This standard also adopts revisions to FAS 107 reflected in *FSP FAS 107-1 and APB-1, Interim Disclosures about Fair Value of Financial Instruments* (FSP FAS 107-1 and APB-1), and thus requires disclosure in both annual and quarterly financial statements. In addition, this standard rejects FASB Statement No. 126, Exemptions from Certain Required Disclosures about Financial Instruments for Certain Nonpublic Entities, an amendment of FAS 107. FAS 119 is addressed in SSAP No. 31.

62. This standard rejects *ASU 2019-05, Financial Instruments—Credit Losses: Targeted Transition Relief, ASU 2018-03, Recognition and Measurement of Financial Assets and Financial Liabilities, ASU 2013-03, Financial Instruments – Clarifying the Scope and Applicability of a Particular Disclosure to Nonpublic Entities* (ASU 2013-03), *ASU 2016-01, Financial Instruments – Overall* (ASU 2016-01), *FSP FAS 157-2: Effective Date of FASB Statement No. 157* (FSP FAS 157-2) and *FSP FAS 157-3: Determining the Fair Value of a Financial Asset When the Market for That Asset is Not Active* (FSP FAS 157-3).

Effective Date and Transition

63. This standard shall be effective for December 31, 2010, annual financial statements, with interim and annual financial statement reporting thereafter. Early adoption is permitted for December 31, 2009, annual financial statements, with interim and annual reporting thereafter. Nonsubstantive disclosure revisions adopted in August and November 2010 to paragraphs 48-49 and the corresponding disclosure illustrations are initially effective for year-end 2010 financial statements, with interim and annual reporting thereafter. Nonsubstantive revisions adopted March 2011 to paragraphs 48.a., 48.d.ii., 51 and 54 of this statement are effective January 1, 2012, with interim and annual reporting thereafter as required in this statement. (Paragraph 51 is satisfied by the annual statement investment schedules and is not required quarterly.) Revisions to adopt ASU 2009-12 and ASU 2015-07, and provide guidance for allowing net asset value per share as a practical expedient to fair value when certain conditions are met as detailed in Issue Paper No. 157, is effective January 1, 2018, with early adoption permitted.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes. This statement supersedes conclusions reached in *SSAP No. 10—Income Taxes* and *SSAP No. 10R—Income Taxes, A Temporary Replacement of SSAP No. 10.*

SUMMARY CONCLUSION

2. For purposes of accounting for federal and foreign income taxes, reporting entities shall adopt *FASB Statement No. 109, Accounting for Income Taxes* (FAS 109) with modifications for state income taxes[INT 18-03], the realization criteria for deferred tax assets, and the recording of the impact of changes in deferred tax balances. One objective of accounting for income taxes is to recognize the estimated amount of taxes payable or refundable for the current year as a tax liability or asset. A second objective is to recognize deferred tax liabilities and assets for the future tax consequences of events that have been recognized in a reporting entity's statutory financial statements or tax returns. However, the second objective is realistically constrained because (a) the tax payment or refund that results from a particular tax return is a joint result of all the items included in that return, (b) taxes that will be paid or refunded in future years are the joint result of events of the current or prior years and events of future years, and (c) information available about the future is limited. As a result, financial statements will recognize current and deferred income tax assets and liabilities in accordance with the provisions of this statement based upon estimates and approximations. For purposes of this statement, only adjusted gross deferred tax assets that are more likely than not (a likelihood of more than 50 percent) to be realized shall be considered in determining admitted adjusted gross deferred tax assets.

Current Income Taxes

3. "Income taxes incurred" shall include current income taxes, the amount of federal and foreign income taxes paid (recovered) or payable (recoverable) for the current year. Current income taxes are defined as:

a. Current year estimates (including quarterly estimates) of federal and foreign income taxes payable or refundable, based on tax returns for the current and prior years, except as addressed in paragraph 3.b., and tax loss contingencies (including related interest and penalties) for current and all prior years, computed in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* with the following modifications:

i. The term "probable" as used in SSAP No. 5R shall be replaced by the term "more likely than not (a likelihood of more than 50 percent)" for federal and foreign income tax loss contingencies only.

ii. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.

iii. If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized.

b. Amounts incurred or received during the current year relating to prior periods, to the extent not previously provided, as such amounts are deemed to be changes in accounting estimates as defined in *SSAP No. 3—Accounting Changes and Corrections of Errors*.

c. In determining when tax loss contingencies associated with temporary differences should be included in current income taxes under paragraph 3.a., and therefore included in deferred taxes under paragraph 7, a reporting entity is not required to "gross-up" its current and deferred taxes until such time as an event has occurred that would cause a re-evaluation of the contingency and its probability of assessment, e.g., the IRS has identified the item as one which may be adjusted upon audit. Such an event could be the reporting entity's (or its affiliate or parent in a consolidated income tax return) receipt of a Form 5701, Proposed Audit Adjustment, or could occur earlier upon receipt of an

© 1999-2023 National Association of Insurance Commissioners

Information Document Request. At such time, the company must reassess the probability of an adjustment, reasonably re-estimate the amount of tax contingency as determined in accordance with paragraph 3.a., make any necessary adjustment to deferred taxes, and re-determine the admissibility of any adjusted gross deferred tax asset as provided in paragraph 11.

4. State taxes (including premium, income and franchise taxes) shall be computed in accordance with SSAP No. 5R and shall be limited to (a) taxes due as a result of the current year's taxable basis calculated in accordance with state laws and regulations and (b) amounts incurred or received during the current year relating to prior periods, to the extent not previously provided as such amounts are deemed to be changes in accounting estimates. Property and casualty insurance companies shall report state taxes as other underwriting expenses under the caption "Taxes, licenses, and fees." Life and accident and health insurance companies shall report such amounts as general expenses under the caption "Insurance taxes, licenses, and fees, excluding federal income taxes." Other health entities shall report such amounts as general administration expenses under the caption "Taxes, licenses, and fees." State tax recoverables that are reasonably expected to be recovered in a subsequent accounting period are admitted assets. State taxes are reasonably expected to be recovered if the refund is attributable to overpayment of estimated tax payments, errors, carrybacks, or items for which the reporting entity has authority to recover under a state regulation or statute.

Deferred Income Taxes

5. Because tax laws and statutory accounting principles differ in their recognition and measurement of assets, liabilities, equity, revenues, expenses, gains, and losses, differences arise between:

a. The amount of taxable income and pretax statutory financial income for a year, and

b. The tax bases of assets or liabilities and their reported amounts in statutory financial statements.

6. A reporting entity's balance sheet shall include deferred income tax assets (DTAs) and liabilities (DTLs) related to the estimated future tax consequences of temporary differences and carryforwards, generated by statutory accounting, as defined in paragraph 11 of FAS 109.

7. A reporting entity's deferred tax assets and liabilities are computed as follows:

a. Temporary differences are identified and measured using a "balance sheet" approach whereby statutory and tax basis balance sheets are compared;

b. Temporary differences include unrealized gains and losses and nonadmitted assets but do not include asset valuation reserve (AVR), interest maintenance reserve (IMR), Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased;

c. Total DTAs and DTLs are computed using enacted tax rates;

d. A DTL is not recognized for amounts described in paragraph 31 of FAS 109; and

e. Gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50 percent) that some portion or all of the gross DTAs will not be realized. The statutory

© 1999-2023 National Association of Insurance Commissioners

valuation allowance adjustment[1], determined in a manner consistent with paragraphs 20-25 of FAS 109[2], shall reduce the gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets).

8. Changes in DTAs and DTLs, including changes attributable to changes in tax rates and changes in tax status, if any, shall be recognized as a separate component of gains and losses in unassigned funds (surplus)[3]. Admitted adjusted gross DTAs and DTLs shall be offset and presented as a single amount on the statement of financial position.

Admissibility of Income Tax Assets

9. Current income tax recoverables shall include all current income taxes, including interest, reasonably expected to be recovered in a subsequent accounting period, whether or not a return or claim has been filed with the taxing authorities. Current income tax recoverables are reasonably expected to be recovered if the refund is attributable to overpayment of estimated tax payments, errors, carrybacks, as defined in paragraph 289 of FAS 109, or items for which the reporting entity has substantial authority, as that term is defined in Federal Income Tax Regulations.[INT 06-12]

10. Current income tax recoverables meet the definition of assets as specified in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

11. The net admitted DTA shall not exceed the excess of the adjusted gross DTA, as determined under paragraph 7.e., over gross DTL. Adjusted gross DTAs shall be admitted based upon the three-component admission calculation at an amount equal to the sum of paragraphs 11.a., 11.b., and 11.c.:

a. Federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse during a timeframe corresponding with IRS

---

[1] The statutory valuation allowance adjustment is utilized strictly to calculate the "adjusted gross DTA". (Admittance criteria in paragraph 11 are applied to the "adjusted gross DTA".) In determining the amount of adjusted gross DTA, the reporting entity shall consider reversal patterns of temporary differences to the extent necessary to support establishing or not establishing a valuation allowance adjustment, determined in accordance with paragraphs 228 and 229 of FAS 109. For purposes of this accounting statement, consideration of reversal patterns does not require scheduling beyond that necessary to support establishing or not establishing a valuation allowance adjustment. The application of the statutory valuation allowance adjustment in this statement shall not result in a statutory valuation allowance reserve within the statutory financial statements, but rather should result in a reduction of the gross DTA.

[2] For purposes of determining the amount of adjusted gross DTA and the amount admitted under paragraph 11, the admission calculation shall be made on a separate company, reporting entity basis. A reporting entity that files a consolidated federal income tax return with its parent should look to the amount of taxes it paid (or were allocated to it) as a separate legal entity in determining the admitted DTA under paragraph 11.a. Furthermore, the DTA under this paragraph may not exceed the amount that the reporting entity could reasonably expect to have refunded by its parent. The taxes paid by the reporting entity represent the maximum DTA that may be admitted under paragraph 11.a., although the amount could be reduced pursuant to the group's tax allocation agreement. The amount of admitted adjusted gross DTA under paragraph 11.b.i. is limited to the amount that the reporting entity expects to realize within the applicable realization period, on a separate company basis. The reporting entity must estimate its separate company taxable income and the tax benefit that it expects to receive from reversing deductible temporary differences in the form of lower tax payments to its parent. A reporting entity that projects a tax loss in the applicable realization period cannot admit a DTA related to the loss under paragraph 11.b., even if the loss could offset taxable income of other members in the consolidated group and the reporting entity could expect to be paid for the tax benefit pursuant to its tax allocation agreement.

[3] Changes in DTAs and DTLs due to changes to tax rates and tax status shall be recorded as a "change in net deferred income tax," excluding any change reflected in unrealized capital gains. Tax effects previously reflected in unrealized capital gains (to present unrealized gains and losses "net of tax") shall be re-measured for the change in the tax rate in the same reporting line. Changes in net deferred tax shall not include changes in nonadmitted DTAs, as changes in nonadmittance are reported on a separate reporting line.

© 1999-2023 National Association of Insurance Commissioners

tax loss carryback provisions[4], not to exceed three years, including any amounts established in accordance with the provision of SSAP No. 5R as described in paragraph 3.a. of this statement related to those periods.

b. If the reporting entity is subject to risk-based capital requirements or is required to file a Risk-Based Capital Report with the domiciliary state, the reporting entity shall use the *Realization Threshold Limitation Table – RBC Reporting Entities* (RBC Reporting Entity Table) in this component of the admission calculation. The RBC Reporting Entity Table's threshold limitations are contingent upon the ExDTA ACL RBC Ratio[5].

If the reporting entity is either a mortgage guaranty insurer or financial guaranty insurer that is not subject to risk-based capital requirements and is not required to file a Risk-Based Capital Report with the domiciliary state and the reporting entity meets the minimum capital and reserve requirements for the state of domicile, then the reporting entity shall use the *Realization Threshold Limitation Table – Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entities* (Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table) in this component of the admission calculation. The Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table's threshold limitations are contingent upon the following ratio: the numerator is equal to the sum of 1) surplus to policyholders, 2) less the amount of the admitted DTA in paragraph 11.a. (ExDTA Surplus) plus, 3) contingency reserves. The denominator is equal to the required amount of minimum aggregate capital required to be maintained under the applicable NAIC model law or state variation thereof based on the risk characteristics and the amount of insurance in force (Required Aggregate Risk Capital)[6].

If the reporting entity (1) is not subject to risk-based capital requirements, (2) is not required to file a Risk-Based Capital Report with the domiciliary state, (3) is not a mortgage guaranty or financial guaranty insurer, and (4) meets the minimum capital and reserve requirements, then the reporting entity shall use the *Realization Threshold Limitation Table – Other Non-RBC Reporting Entities* (Other Non-RBC Reporting Entity Table). The Other Non-RBC Reporting Entity Table's threshold limitations are contingent upon the ratio of adjusted gross DTA (Adjusted gross DTA less the amount of DTA admitted in paragraph 11.a.) to adjusted capital and surplus[7].

---

[4] For example, under the Federal Internal Revenue Code, ordinary losses can be carried back two years for entities taxed as nonlife insurance companies, while capital losses for entities taxed both as nonlife and life insurance companies can be carried back three years. For losses arising in tax years after 2017, entities taxed as life insurance companies are not permitted to carryback ordinary losses.

[5] The December 31 Risk-Based Capital ratio is calculated based on the Authorized Control Level RBC for the current reporting period, which is in the process of being filed with the state of domicile, and computed without net deferred tax assets (ExDTA ACL RBC). The interim period (March 31, June 30, and September 30) ExDTA ACL RBC ratio numerator shall use the Total Adjusted Capital (TAC) with current quarter surplus ExDTA and current quarter TAC adjustments. The interim period denominator shall use the Authorized Control Level RBC as filed for the most recent calendar year.

[6] If the reporting entity is a mortgage guaranty insurer, this ratio is based on the requirements of Section 12 of the NAIC Mortgage Guaranty Insurance Model Law and state laws that, based on the risk characteristics and amount of insurance in force, require aggregate capital to be maintained in a risk-to-capital ratio of not less than 25 to 1. If the reporting entity is a financial guaranty insurer, this ratio is based on the requirements of Section 4C of the NAIC Financial Guaranty Insurance Model Guideline 1626 and state laws that require aggregate capital to be maintained based on the risk characteristics and amount of insurance in force.

[7] Consistent with the requirements of paragraph 11.b.ii., adjusted statutory capital and surplus used in this calculation component is based on statutory capital and surplus for the current reporting period excluding any net DTA, EDP equipment and operating system software and any net positive goodwill.

Realization Threshold Limitation Table – RBC Reporting Entities

ExDTA ACL RBC (%)	11.b.i.	11.b.ii.
Greater than 300%	3 years	15%
200 – 300%	1 year	10%
Less than 200%	0 years	0%

Realization Threshold Limitation Table – Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entities

(See paragraph 11.b.) Ex DTA Surplus plus Contingency Reserves/Required Aggregate Risk Capital (%)	11.b.i.	11.b.ii.
Greater than 115%	3 years	15%
100% to 115%	1 year	10%
Less than 100%	0 years	0%

Realization Threshold Limitation Table – Other Non-RBC Reporting Entities

Adjusted Gross DTA / Adjusted Capital & Surplus (%)	11.b.i.	11.b.ii.
Less than 50%	3 years	15%
50% to 75%	1 year	10%
Greater than 75%	0 years	0%

The reporting entity shall admit:

i. The amount of adjusted gross DTAs, after the application of paragraph 11.a.[8], expected to be realized within the applicable period (refer to the 11.b.i. column of the applicable Realization Threshold Limitation Table above; the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) following the balance sheet date limited to the amount determined in paragraph 11.b.ii.

ii. An amount that is no greater than the applicable percentage (refer to the 11.b.ii. column of the applicable Realization Threshold Limitation Table above: the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) of statutory capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for the current reporting period's statement filed with the domiciliary state commissioner adjusted to exclude any net DTAs, EDP equipment and operating system software and any net positive goodwill.(INT 01-18) For financial guaranty or mortgage guaranty non-RBC reporting entities, the amount of statutory capital and surplus utilized for this part of the calculation does not include contingency reserves.

[8] Under the Federal Internal Revenue Code, entities taxed as life insurance companies are not permitted to carryback ordinary losses arising in tax years after 2017. As such, admittance of ordinary DTAs for such entities will be limited to paragraph 11.b. and paragraph 11.c. for reporting periods ending with and subsequent to December 31, 2017.

© 1999-2023 National Association of Insurance Commissioners

c. The amount of adjusted gross DTAs, after application of paragraphs 11.a. and 11.b. that can be offset against existing gross DTLs. The reporting entity shall consider the character (i.e., ordinary versus capital) of the DTAs and DTLs such that offsetting would be permitted in the tax return under existing enacted federal income tax laws and regulations. Additionally, for purposes of this component, the reporting entity shall consider the reversal patterns of temporary differences; however, this consideration does not require scheduling beyond that required in paragraph 7.e.

12. In computing a reporting entity's admitted adjusted gross DTA pursuant to paragraph 11;

a. For purposes of paragraph 11.a., existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years, shall be determined in accordance with paragraphs 228 and 229 of FAS 109;

b. In determining the amount of federal income taxes that can be recovered through loss carrybacks, the amount and character (i.e., ordinary versus capital) of the loss carrybacks and the impact, if any, of the Alternative Minimum Tax shall be determined in accordance with the provisions of the Internal Revenue Code, and regulations thereunder;

c. The amount of carryback potential that may be considered in calculating the admitted adjusted gross DTAs of a reporting entity in paragraph 11.a. that files a consolidated income tax return with one or more affiliates, may not exceed the amount that the reporting entity could reasonably expect to have refunded by its parent; and

d. The phrases "reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years," "realized within one year of the balance sheet date" and "realized within three years of the balance sheet date" are intended to accommodate interim reporting dates and reporting entities that file on an other than calendar year basis for federal income tax purposes.

Realization of Tax Benefits and Tax Planning Strategies

13. Future realization of the tax benefit of an existing deductible temporary difference or carryforward ultimately depends on the existence of sufficient taxable income of the appropriate character (for example, ordinary income or capital gain) within the carryback, carryforward period available under the tax law. The following four possible sources of taxable income may be available under the tax law to realize a tax benefit for deductible temporary differences and carryforwards:

a. Future reversals of existing taxable temporary differences.

b. Future taxable income exclusive of reversing temporary differences and carryforwards.

c. Taxable income in prior carryback year(s) if carryback is permitted under the tax law.

d. Tax-planning strategies in paragraph 14 that would, if necessary, be implemented to, for example:

i. Accelerate taxable amounts to utilize expiring carryforwards;

ii. Change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss; and

iii. Switch from tax-exempt to taxable investments.

© 1999-2023 National Association of Insurance Commissioners

Evidence available about each of those possible sources of taxable income will vary for different tax jurisdictions and, and possibly, from year to year. To the extent evidence about one or more sources of taxable income is sufficient to support a conclusion that the reporting entity will realize the full or a partial amount of its adjusted gross deferred tax assets, other sources need not be considered. Consideration of each source is required, however, to determine the amount of the statutory valuation allowance adjustment that is recognized for gross deferred tax assets under paragraph 7.e.

14. In some circumstances, there are tax-planning strategies (including elections for tax purposes) that (a) are prudent and feasible, (b) a reporting entity ordinarily might not take, but would take to prevent an operating loss or tax credit carryforward from expiring unused, and (c) would result in realization of deferred tax assets. A reporting entity shall consider tax-planning strategies in determining the amount of the statutory valuation allowance adjustment necessary under paragraph 7.e. Consideration of tax planning strategies for the realization of deferred tax assets when determining admission under paragraph 11 is not required; however, such strategies shall not conflict with the tax planning strategies used when computing the statutory valuation allowance. Any significant potential expenses to implement a tax-planning strategy or any significant losses that would be recognized if that strategy were implemented (net of any recognizable tax benefits associated with those expenses or losses) shall reduce the amount of admission under paragraph 11.

15. When a prudent and feasible tax-planning strategy is contemplated, and management determines this strategy would more likely than not enable the reporting entity to realize the full or a partial amount of its adjusted gross deferred tax assets, paragraph 3 of this statement related to tax loss contingencies shall be applied in determining admissibility of deferred tax assets under paragraph 11 of this statement.

Intercompany Income Tax Transactions

16. In the case of a reporting entity that files a consolidated income tax return with one or more affiliates, income tax transactions (including payment of tax contingencies to its parent) between the affiliated parties shall be recognized if:

a. Such transactions are economic transactions as defined in *SSAP No. 25—Affiliates and Other Related Parties*;

b. Are pursuant to a written income tax allocation agreement; and

c. Income taxes incurred are accounted for in a manner consistent with the principles of FAS 109, as modified by this statement.

17. Amounts owed to a reporting entity pursuant to a recognized transaction shall be treated as a loan or advance, and nonadmitted, pursuant to SSAP No. 25, to the extent that the recoverable is not settled within 90 days of the filing of a consolidated income tax return, or where a refund is due the reporting entity's parent, within 90 days of the receipt of such refund.

Intraperiod Tax Allocation

18. In accordance with paragraph 35 of FAS 109, a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL. The amount allocated shall be computed in a manner consistent with paragraph 38 of FAS 109.

19. Income taxes incurred shall be allocated to net income and realized capital gains or losses in a manner consistent with paragraph 38 of FAS 109. Furthermore, income taxes incurred or received during the current year attributable to prior years shall be allocated, to the extent not previously provided, to net income in accordance with SSAP No. 3 unless attributable, in whole or in part, to realized capital gains or losses, in which case, such amounts shall be apportioned between net income and realized capital gains and losses, as appropriate.

© 1999-2023 National Association of Insurance Commissioners

Interim Periods

20. Income taxes incurred in interim periods shall be computed using an estimated annual effective current tax rate for the annual period in accordance with the methodology described in paragraphs 19 and 20 of *Accounting Principles Board Opinion No. 28, Interim Financial Reporting*. Estimates of the annual effective tax rate at the end of interim periods are, of necessity, based on estimates and are subject to subsequent refinement or revision. If a reliable estimate cannot be made, the actual effective tax rate for the year-to-date may be the best estimate of the annual effective tax rate. If a reporting entity is unable to estimate a part of its "ordinary" income (or loss) or the related tax (or benefit) but is otherwise able to make a reliable estimate, the tax (or benefit) applicable to the item that cannot be estimated shall be reported in the interim period in which the item is reported.

Disclosures

21. Statutory financial statement disclosures shall be made in a manner consistent with the provisions of paragraphs 43-45 and 48 of FAS 109. However, required disclosures with regard to a reporting entity's GAAP valuation allowance shall be replaced with disclosures relating to the statutory valuation allowance adjustment and the nonadmittance of some portion or all of a reporting entity's DTAs. The financial statements shall include the disclosures required by paragraph 47 of FAS 109 for non-public companies. Paragraphs 22-28 describe the disclosure requirements as modified for the difference between the requirements of FAS 109 and those prescribed by this statement.

22. The components of the net DTA or DTL recognized in a reporting entity's financial statements shall be disclosed as follows:

a. The total of all DTAs (gross, adjusted gross, admitted and nonadmitted) by tax character;

b. The total of all DTLs by tax character;

c. The total DTAs nonadmitted as the result of the application of paragraph 11;

d. The net change during the year in the total DTAs nonadmitted;

e. The amount of each result or component of the calculation, by tax character of paragraphs 11.a., 11.b.i., 11.b.ii., and 11.c., and the ExDTA ACL RBC Ratio, the ExDTA Surplus plus Contingency Reserves/Required Aggregate Risk Capital Ratio, or the Adjusted Gross DTA/Adjusted Capital and Surplus Ratio used in the applicable *Realization Threshold Limitation Table* (the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) in paragraph 11.b., as applicable; and

f. The impact of tax-planning strategies on the determination of adjusted gross DTAs and the determination of net admitted DTAs, by percentage and by tax character, and whether the tax-planning strategies include the use of reinsurance-related tax planning strategies.

23. To the extent that DTLs are not recognized for amounts described in paragraph 31 of FAS 109, the following shall be disclosed:

a. A description of the types of temporary differences for which a DTL has not been recognized and the types of events that would cause those temporary differences to become taxable;

b. The cumulative amount of each type of temporary difference;

© 1999-2023 National Association of Insurance Commissioners

c. The amount of the unrecognized DTL for temporary differences related to investments in foreign subsidiaries and foreign corporate joint ventures that are essentially permanent in duration if determination of that liability is practicable or a statement that determination is not practicable; and

d. The amount of the DTL for temporary differences other than those in paragraph 23.c. that is not recognized in accordance with the provisions of paragraphs 31 of FAS 109.

24. The significant components of income taxes incurred (i.e., current income tax expense) and the changes in DTAs and DTLs shall be disclosed. Those components would include, for example:

a. Current tax expense or benefit;

b. The change in DTAs and DTLs (exclusive of the effects of other components listed below);

c. Investment tax credits;

d. The benefits of operating loss carryforwards;

e. Adjustments of a DTA or DTL for enacted changes in tax laws or rates or a change in the tax status of the reporting entity; and

f. Adjustments to gross deferred tax assets because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset, and the reason for the adjustment and change in judgment.

25. Additionally, to the extent that the sum of a reporting entity's income taxes incurred and the change in its DTAs and DTLs is different from the result obtained by applying the federal statutory rate to its pretax net income, a reporting entity shall disclose the nature of the significant reconciling items.

26. A reporting entity shall also disclose the following:

a. The amounts, origination dates and expiration dates of operating loss and tax credit carryforwards available for tax purposes;

b. The amount of federal income taxes incurred in the current year and each preceding year, which are available for recoupment in the event of future net losses; and

c. The aggregate amount of deposits admitted under Section 6603 of the Internal Revenue Service Code.

27. For any federal or foreign income tax loss contingencies as determined in accordance with paragraph 3.a. for which it is reasonably possible that the total liability will significantly increase within 12 months of the reporting date, the reporting entity shall disclose an estimate of the range of the reasonably possible increase or a statement that an estimate of the range cannot be made.

28. If a reporting entity's federal income tax return is consolidated with those of any other entity or entities, the following shall be disclosed:

a. A list of names of the entities with whom the reporting entity's federal income tax return is consolidated for the current year; and

b. The substance of the written agreement, approved by the reporting entity's Board of Directors, which sets forth the manner in which the total combined federal income tax for

© 1999-2023 National Association of Insurance Commissioners

all entities is allocated to each entity which is a party to the consolidation. (If no written agreement has been executed, explain why such an agreement has not been executed.) Additionally, the disclosure shall include the manner in which the entity has an enforceable right to recoup federal income taxes in the event of future net losses which it may incur or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

29. Refer to the Preamble for further discussion regarding disclosure requirements.

EXHIBIT A – IMPLEMENTATION QUESTIONS AND ANSWERS

The National Association of Insurance Commissioners issued *SSAP No. 101—Income Taxes*, with a corresponding implementation question and answer exhibit, with an effective date of January 1, 2012. Further nonsubstantive revisions were developed to update the Q&A for the revised corporate federal income tax rate and certain other federal tax law changes primarily under the Tax Cuts and Jobs Act enacted in December 2017 and to clarify deferred tax asset and deferred tax liability offsetting under SSAP No. 101, paragraph 11.c. These revisions to the implementation guidance are effective for financial accounting years ending December 31, 2019. Any change in income tax balances resulting from the August 2019 revisions are accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

13	How are tax-planning strategies to be considered in determining adjusted gross DTAs and admitted adjusted gross DTAs?	11.a., 11.b.i., 14 and 15	68

1. Q – What are the primary differences between the accounting for income taxes pursuant to FAS 109 and SSAP No. 101? [No specific paragraph reference]

1.1 A – SSAP No. 101 establishes statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes. In general, SSAP No. 101 adopts the concepts of FAS 109, with modifications. The primary differences and modifications are summarized below:

1.2 State Income Tax

- FAS 109 – State income taxes should be included as "income taxes incurred." Deferred state income taxes are recognized.

- SSAP No. 101 – State income taxes should be included as "Taxes, Licenses, and Fees" by property and casualty insurers and as "Insurance taxes, licenses, and fees, excluding federal income taxes" by life and accident and health insurers. No deferred state income taxes are recognized.

1.3 Valuation Allowance

- FAS 109 – Gross deferred tax assets (DTAs) are reduced by a valuation allowance if it is more likely than not that some portion or all of the DTAs will not be realized. The valuation allowance should be sufficient to reduce the DTA to the amount that is more likely than not to be realized.

- SSAP No. 101 – Gross DTAs are reduced by a statutory valuation allowance adjustment that is determined on a separate company, reporting entity basis. Pursuant to paragraphs 2 and 7.e. of SSAP No. 101, gross DTAs are adjusted to an amount that is more likely than not to be realized (a likelihood of more than 50 percent). Only adjusted gross DTAs shall be considered in determining admitted adjusted gross DTAs. See Question 2 for further discussion of the statutory valuation allowance adjustment. See Question 4 for a further discussion of the admissibility test. See Question 12 for further discussion of presentation and disclosure of the statutory valuation allowance adjustment.

1.4 Unique Statutory Accounting Items

- FAS 109 – In general, the effects of all temporary differences must be reflected with limited exceptions provided in FAS 109 paragraphs 31-34 (relating to items specified in Accounting Principles Board Opinion No. 23) and for temporary differences related to goodwill for which amortization is not deductible for tax purposes.

- SSAP No. 101 – In addition to the exceptions provided in FAS 109, temporary differences do not include asset valuation reserve (AVR), interest maintenance reserve (IMR), Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased.

© 1999-2023 National Association of Insurance Commissioners

1.5 Changes in Deferred Tax Assets and Liabilities

- FAS 109 – Changes in DTAs and deferred tax liabilities (DTLs) are included in income tax expense or benefit and are allocated to continuing operations, discontinued operations, extraordinary items and items charged directly to shareholders' equity.

- SSAP No. 101 – Changes in DTAs and DTLs are recognized as a separate component of gains and losses in surplus, except to the extent allocated to changes in unrealized gains and losses.

1.6 Regulated Enterprises

- FAS 109 – Regulated enterprises that meet the criteria for application of FAS 71, *Accounting for* the *Effects of Certain Types of Regulation*, are not exempt from the requirements of FAS 109. However, assets are reported on a net-of-tax basis (see paragraphs 29, 57, 58 and 59 of FAS 109).

- SSAP No. 101 – These special paragraphs do not apply pursuant to paragraph 30 of SSAP No. 101.

1.7 Business Combinations

- FAS 109 – Paragraphs 30 and 53-56 of FAS 109 provide certain guidance regarding the treatment of business combinations. In general, a deferred tax asset or liability is recognized for the differences between the assigned values and the tax bases of the assets and liabilities recognized in a purchased business combination. If financial statements for prior years are restated, all purchase business combinations that were consummated in those prior years shall be remeasured in accordance with FAS 109.

- SSAP No. 101 – These special paragraphs do not apply pursuant to paragraph 30 of SSAP No. 101.

1.8 Intraperiod Tax Allocation

- FAS 109 – Income tax expense or benefit is allocated among continuing operations, discontinued operations, extraordinary items, and items charged or credited directly to shareholders' equity pursuant to paragraphs 36 and 37 of FAS 109.

- SSAP No. 101 – These paragraphs of FAS 109 do not apply pursuant to paragraph 30 of SSAP No. 101. Instead, paragraphs 18 and 19 of SSAP No. 101 provide special rules for statutory accounting. See Question 10 for a further discussion of these rules.

1.9 Certain Quasi-Reorganizations

- FAS 109 – Paragraph 39 provides special rules relating to the treatment of deductible temporary differences and carryforwards as of the date of a quasi-reorganization.

- SSAP No. 101 – Paragraph 39 of FAS 109 does not apply pursuant to paragraph 30 of SSAP No. 101.

1.10 Financial Statement Classification of DTAs and DTLs

- FAS 109 – Pursuant to paragraphs 41 and 42 of FAS 109, DTAs and DTLs are to be classified separately as either current or noncurrent, depending on the classification of the

© 1999-2023 National Association of Insurance Commissioners

related asset or liability. Furthermore, current DTAs and DTLs and noncurrent DTAs and DTLs are netted within the classification and with the net amount reported.

- SSAP No. 101 – These paragraphs do not apply to statutory accounting pursuant to paragraph 30 of SSAP No. 101. The net admitted DTA, or the net DTL, should be reported in the statutory financial statements.

1.11 Accounting for Uncertainty in Income Taxes

- FAS 109 – Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109 (FIN 48) provides accounting and reporting guidance for uncertain tax positions under GAAP.

- SSAP No. 101 – FIN 48 is rejected for statutory accounting pursuant to paragraph 31 of SSAP No. 101. *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* provides guidance in determining the amount of federal and foreign income tax loss contingencies with the following modifications. The term "probable" as used in SSAP No. 5R is replaced by the term "more likely than not (a likelihood of more than 50 percent)". In determining the amount of a federal or foreign income tax loss contingency, it shall be assumed that the reporting entity will be examined by the tax authority that has full knowledge of all relevant information. If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized. See Question 9 for further discussion of income tax loss contingencies.

1.12 Classification of Interest and Penalties

- FAS 109 – FIN 48 allows interest on tax assessments to be reported as either income taxes or interest expense and penalties to be reported as either income taxes or another expense classification, based on the accounting policy election of the enterprise.

- SSAP No. 101 – Interest and penalties related to foreign or federal income tax are included in income taxes pursuant to paragraph 3.a. of SSAP No. 101.

1.13 Financial Statement Disclosures

- FAS 109 – Paragraphs 43-45 and 47-48 of FAS 109 provide various requirements for providing information in the financial statements regarding the income taxes of the reporting entity. In general, the reporting entity is to provide certain information regarding the components of its DTAs and DTLs, the amount of and changes in its valuation allowance, significant components of income tax expense, differences between the expected amount of income tax expense using current tax rates and the amount of reported income tax expense, and tax attributes being carried over. In addition, FIN 48 includes specific disclosures related to uncertain tax positions.

- SSAP No. 101 – In general, paragraphs 21-29 of SSAP No. 101 follow the disclosure requirements provided by FAS 109, but with the following modifications and additions:

  - The disclosures regarding valuation allowance are replaced with disclosures relating to the statutory valuation allowance adjustment and the nonadmitted portion of the DTA.

  - The amount of the gross DTA, adjusted gross DTA, DTL, admitted and nonadmitted DTA is required to be separately disclosed, by tax character (ordinary or capital).

© 1999-2023 National Association of Insurance Commissioners

- o Disclose the amount of each result or component of the admission calculation, by tax character, for paragraphs 11.a, 11.b.i, 11.b.ii, and 11.c. In addition, disclose the ExDTA Authorized Control Level (ACL) RBC Ratio, the ExDTA Surplus plus Contingency Reserves/Required Aggregate Risk Capital Ratio (see paragraph 11.b.), or the Adjusted Gross DTA/Adjusted Capital and Surplus Ratio used in the applicable Realization Threshold Limitation Table (the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table, or the Other Non-RBC Reporting Entity Table) in paragraph 11.b., as applicable.

- o The impact of tax-planning strategies on the determination of adjusted gross DTAs and the determination of net admitted adjusted gross DTAs, by percentage and by tax character, must be disclosed. In addition, disclose whether tax-planning strategies include the use of reinsurance-related tax planning strategies.

- o FIN 48 and the associated disclosure requirements are rejected for statutory accounting purposes and replaced with the following disclosure. For any federal or foreign income tax loss contingencies for which it is reasonably possible that the total liability will significantly increase within 12 months of the reporting date, a disclosure of an estimate of the range of the reasonably possible increase is required. If determination of a reasonable range of the significant increase is not possible, the reporting entity is to provide a statement that an estimate cannot be made.

- o The disclosures relating to deferred income tax expense or benefit are replaced with certain disclosures relating to the reporting entity's "change in DTAs and DTLs."

- o Only the nature of significant reconciling items between the reported amount and "expected" amount of income tax expense and change in DTAs and DTLs are to be disclosed. This generally follows the disclosure requirements of FAS 109 for nonpublic entities.

- o See Question 12 for a more detailed discussion of the disclosure requirements of SSAP No. 101.

2. Q – How should an entity measure its adjusted gross deferred tax assets and its gross deferred tax liabilities? [Paragraph 7]

2.1 A – An enterprise shall record a gross deferred tax liability or asset for all temporary differences and operating loss, capital loss and tax credit carryforwards. Temporary differences include unrealized gains and losses and nonadmitted assets but do not include AVR, IMR, Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased. In general, temporary differences produce taxable income or result in tax deductions when the related asset is recovered or the related liability is settled. A deferred tax asset or liability represents the increase or decrease in taxes payable or refundable in future years as a result of temporary differences and carryforwards at the end of the current year. Additionally, gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50 percent) that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment, determined in a manner consistent with paragraphs 20-25 of FAS 109, shall reduce gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets).[9] This answer only addresses the recognition of adjusted gross DTAs and gross DTLs and does not address the admissibility of such amounts. See Question 4 for a discussion of the admissibility criteria of SSAP No. 101.

---

[9] SSAP No. 101 requires the statutory valuation allowance adjustment to be presented in the annual statement as a direct reduction in the gross DTA. It is not included in non-admitted DTA.

© 1999-2023 National Association of Insurance Commissioners

2.2 Paragraph 7 of SSAP No. 101 states that temporary differences are identified and measured using a "balance sheet" approach whereby the statutory balance sheet and the tax basis balance sheet are compared. Operating loss, capital loss and tax credit carryforwards are computed in accordance with the applicable Internal Revenue Code.

2.3 The following illustrates the recognition and measurement of a typical book to tax difference for an insurance company:

Illustration

Assumptions:

1/1/X2 Purchase 100 shares of Darby/Allyn Corp. stock for $25 a share
3/31/X2 Fair Value of Darby/Allyn Corp. stock has increased to $35 a share
3/31/X2 Tax basis reserves are computed and determined to be 80% of the statutory basis reserves

Balance Sheet at 3/31/X2:

	Statutory Basis	**Tax Basis**	**Basis Difference**	**Tax Effect DTA (DTL) (21%)[10]**
Common Stock	$3,500	$2,500	($1,000) [11]	($210)
Reserves	$100,000	$80,000	$20,000 [12]	$4,200

Journal Entries:

1/1/X2	DR	Common stock	$2,500
	CR	Cash	($2,500)
		Acquisition of common stock at $25 per share	

3/31/X2	DR	Common stock	$1,000
	CR	Change in unrealized capital gains and losses	($1,000)
		Adjust carrying value to FV of $35 per share at end of quarter	

3/31/X2	DR	Change in reserves or unpaid losses	$100,000
	CR	Reserves or Unpaid losses	($100,000)
		Recognition of reserves computed on a statutory basis	
3/31/X2	DR	Deferred tax asset	$4,200
	CR	Change in deferred income taxes	($3,990)
	CR	Deferred tax liability	($210)
		Recognition of deferred taxes	

[10] See Question 3 for a discussion of "enacted rates."

[11] The carrying value of the stock on the statutory balance sheet reflects the fair value of the common stock per *SSAP No. 30R—Unaffiliated Common Stock* whereas the carrying value of the stock for tax purposes is its original cost. This difference is defined as temporary in that the $1,000 appreciation in value will be recognized in the tax return when the stock is disposed of. The difference is a deferred tax liability in that the reversal of this temporary difference will increase future taxable income.

[12] The reserve difference arises because, even though tax reserves are based on statutory reserves, they generally are reduced below statutory reserves pursuant to various provisions of the Internal Revenue Code. This amount is a temporary difference in that the entity will recognize the difference between statutory and tax carrying values over the life of the reserve or upon settlement of the claim or payment of the reserve. The difference is a deferred tax asset in that the reversal of this temporary difference will decrease future taxable income.

© 1999-2023 National Association of Insurance Commissioners

NOTE: Presentation of deferred tax amounts and unrealized gain or losses net of tax is addressed in Question 12.

2.4 As depicted in the Illustration, the deferred tax assets and liabilities are tracked gross in the entity's ledger and not netted until after consideration of the statutory valuation allowance adjustment, if any (see below), and the admissibility of deferred tax assets.

Statutory Valuation Allowance Adjustment

2.5 SSAP No. 101 paragraph 7.e., provides that gross DTAs are reduced by a statutory valuation allowance *adjustment* if, based on the weight of available evidence, it is more likely than not that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment is determined on a separate company, reporting entity basis. The determination of whether gross DTAs will be realized is based on the existence of sufficient taxable income of the appropriate character (ordinary income or capital gain) within the carryback, carryover period available under the tax law. Paragraph 13.a. through 13.d. of SSAP No. 101 identifies four sources of taxable income to be considered in evaluating the existence of sufficient taxable income. These sources are identical to those to be considered under FAS 109 paragraph 21. FAS 109 paragraph 20 provides that "all available evidence, both positive and negative, should be considered to determine whether, based on the weight of that evidence, a valuation allowance is needed. Information about an enterprise's current financial position and its results of operations for the current and preceding years ordinarily is readily available. That historical information is supplemented by all currently available information about future years. Sometimes, however, historical information may not be available (for example, start-up operations) or it may not be as relevant (for example, if there has been a significant, recent change in circumstances) and special attention is required." A reporting entity is not required to consider all four sources of taxable income in determining the need for a statutory valuation allowance adjustment if one or more sources are alone sufficient to support the conclusion that the entity will realize the tax benefits of its gross deferred tax assets (i.e., a conclusion that no valuation allowance is necessary). However, the reporting entity is required to consider all of the potential sources of taxable income to determine the amount of the adjustment if a conclusion is reached that a statutory valuation allowance adjustment is necessary. SSAP No. 101 modifies FAS 109 related to admission of DTAs. Admission of DTAs is calculated irrespective of the conclusion reached in establishing or not establishing a statutory valuation allowance adjustment. See Question 4.13 for discussion regarding consideration of reversal patterns specific to paragraph 11.c. of the admissibility test.

2.6 Footnote 1 to paragraph 7.e. of SSAP No. 101 indicates that a reporting entity shall consider reversal patterns of temporary differences, and might be required to schedule such differences:

> …to the extent necessary to support establishing or not establishing a valuation allowance adjustment, determined in accordance with paragraphs 228 and 229 of FAS 109. For purposes of this accounting statement, consideration of reversal patterns does not require scheduling beyond that necessary to support establishing or not establishing a valuation allowance adjustment.

Paragraph 228 of FAS 109 generally holds that a company may need to schedule its temporary differences to determine the particular years in which the reversal of temporary differences is expected to occur. As discussed in Question 5b, paragraph 229 of FAS 109 indicates that future originating temporary differences and their subsequent reversal should be considered in determining the existence of future taxable income.

2.7 Although a reporting entity may need to consider the reversal pattern of temporary differences in evaluating the need for a statutory valuation allowance adjustment, scheduling the reversal pattern of such differences is not required in every instance. Under SSAP No. 101 and consistent with FAS 109, a general understanding of reversal patterns is, in many cases, relevant in assessing the need for a valuation allowance. Judgment is crucial in making this assessment. The amount of scheduling, if any, that will be

© 1999-2023 National Association of Insurance Commissioners

required will depend on the facts and circumstances of each situation. For example, a reporting entity which relies upon future taxable income exclusive of reversing temporary differences and carryforwards[13] for realization of DTAs is not required to schedule the reversal pattern of its existing temporary differences. This is consistent with guidance provided by the Financial Accounting Standards Board (FASB) in its answer to question 2 of *A Guide to Implementation of Statement 109 on Accounting for Income Taxes: Question and Answers* (Special Report on Statement 109) which states that scheduling of existing temporary differences is unnecessary for purposes of determining the need for a valuation allowance "where it can be easily demonstrated that future taxable income will more likely than not be adequate to realize future tax benefits of existing deferred tax assets." In contrast, a reporting entity which relies upon the future reversal of existing taxable temporary differences to realize the tax benefits of its deductible temporary differences and carryforwards may be required to consider the reversal patterns of its taxable temporary differences.[14] The degree of scheduling required, however, depends on the facts and circumstances of each situation and the relative magnitude of the taxable and deductible temporary differences. In certain situations, the ability to reasonably conclude that reversing taxable temporary differences will more likely than not create sufficient taxable income to realize reversing deductible temporary differences can be done without detailed scheduling.[15]

2.8 If scheduling is considered necessary, the amount of scheduling required will depend on the particular facts and circumstances and be subject to judgment. There may be more than one acceptable approach. The FASB's answer to question 1 of the Special Report on Statement 109 indicates that the following concepts underlie the determination of reversal patterns under Statement 109:

a. The particular years in which temporary differences result in taxable or deductible amounts generally are determined by the timing of the recovery of the related asset or settlement of the related liability' (paragraph 228).

b. The tax law determines whether future reversals of temporary differences will result in taxable and deductible amounts that offset each other in future years' (paragraph 227).

In addition, the FASB noted that "minimizing complexity is an appropriate consideration in selecting a method for determining reversal patterns"[16], but that the methods used must be systematic and logical and should be consistently applied for all similarly categorized temporary differences and from year to year. Furthermore, the same method should be utilized in determining the reversal patterns in every taxing jurisdiction for which the temporary difference exists.

---

[13] One of the four possible sources of taxable income that can be used to realize a tax benefit. See paragraph 13.b. of SSAP No. 101.

[14] For example, due to the relatively short loss carryback periods (or, in the case of entities taxed as life insurance companies, no carryback of operating losses) under current tax law, such consideration may be appropriate when taxable temporary differences are expected to reverse in a short number of future years while the deductible temporary differences are expected to reverse over a long number of future years. In addition, for "indefinite-lived" intangible assets (i.e., intangible assets like those discussed in paragraph 11 of FAS 142 for which no legal, regulatory, contractual, competitive, economic, or other factors limit their useful lives), predicting reversal of temporary differences related to such assets would be inconsistent with financial reporting assertions that the assets are indefinite-lived. In such a case, the reversal of taxable temporary differences with respect to such indefinite-lived intangible assets should not be considered a source of future taxable income when determining the statutory valuation allowance adjustment for entities taxed as non-life insurance companies. On the other hand, entities taxed as life insurance companies may, under current tax law, carry forward operating losses with no expiration period, subject to a utilization limit of 80% of taxable income (before the loss carry forward) in the carry forward year. In such case, the reversal of taxable temporary differences with respect to indefinite-lived intangible assets may be considered a source of taxable income, subject to the applicable tax law limitations.

[15] Q&A 2 from the Special Report on Statement 109 published by the FASB.

[16] Q&A 1 from the Special Report on Statement 109 published by the FASB.

© 1999-2023 National Association of Insurance Commissioners

Grouping of Assets and Liabilities for Measurement

2.9 The manner in which an entity groups its assets and liabilities for measurement shall be conducted in a reasonable and consistent manner. For instance, an entity may group its invested assets into annual statement classifications (stocks, bonds, preferred stocks, etc.) or other reasonable groupings (lines of business for grouping its reserves). Entities have the option of recognizing the DTA and DTL within each grouping on a net or gross basis. For instance, a portfolio of common stocks will have both unrealized gain and unrealized losses associated with them. The reporting entity may elect to combine the unrealized gains and losses and compute a single DTA or DTL or it may elect to segregate the unrealized gains from the unrealized losses and compute separate DTAs and DTLs. This option might also arise with respect to depreciable assets. Regardless of which method an entity elects, it is crucial that consistency is maintained to and within each grouping from period to period. An entity shall retain internal documentation to support its grouping in addition to the methodologies employed to arrive at such. An entity is permitted to modify its groupings should events or circumstances change from a previous period. Examples include a change in materiality of underlying assets and liabilities, administrative costs associated with detailing groupings increases or changes in the computer systems that allow more specificity. Entities that modify their groupings should be prepared to rationalize these changes. These entities should also disclose that a modification was made and general reason for such in the notes to the financial statements.

Measurement of Nonadmitted Assets

2.10 As noted in paragraph 7.b. of SSAP No. 101, temporary differences include nonadmitted assets. The measurement of these types of assets is not addressed in FAS 109 in that the concept of nonadmission is unique to statutory accounting. For assets that are nonadmitted for statutory accounting purposes, DTAs and DTLs should be measured after nonadmission.

Illustration:

	Statutory Before Nonadmit (Info Purpose)	**Statutory After Nonadmit**	**Tax**	**Basis Difference**[17]	**Tax Effect DTA (DTL) (21%)**
Furniture Fixtures and Equipment	$1,000	0	$1,000		
Accumulated Depreciation	200	0	400		
Basis	$800	0	$600	$600	$126

2.11 The effect of this illustration is a reduction of surplus by $674 ($800 decrease for nonadmitted asset and $126 increase for DTA), provided the resulting DTA meets the admissibility test in paragraph 11 of SSAP No. 101.

3. Q – A reporting entity's deferred tax assets and liabilities are computed using "enacted tax rates." What is **the meaning of the term "enacted tax rates"*?* [Paragraph 7.c.]**

3.1 A – Paragraph 7.c. of SSAP No.101 provides that total DTAs and DTLs are computed using enacted tax rates.

3.2 Consistent with FAS 109, SSAP No. 101 further requires that deferred tax assets and liabilities be measured using the enacted tax rate that is expected to apply to taxable income in the periods in which the

[17] Difference is computed from the "Statutory After Nonadmit" balance.

© 1999-2023 National Association of Insurance Commissioners

deferred tax asset or liability is expected to be settled or realized. The effects of future changes in tax rates are not anticipated in the measurement of deferred tax assets and liabilities. Deferred tax assets and liabilities are adjusted for changes in tax rates and other changes in the tax law, and the effects of those changes are recognized at the time the change is enacted.

3.3 Tax laws may apply different tax rates to ordinary income and capital gains. In instances where the enacted tax law provides for different rates on income of different character, deferred tax assets and liabilities should be measured by applying the appropriate enacted tax rate based on the type of taxable or deductible amounts expected to be realized from the reversal of existing temporary differences.

4a. Q – How should a reporting entity calculate the amount of its admitted adjusted gross DTAs? [Paragraph 11]

4.1 A – After a reporting entity has calculated the amount of its adjusted gross DTAs and gross DTLs pursuant to paragraph 7, it must determine the amount of its adjusted gross DTAs that can be admitted under paragraph 11, not to exceed the amount of total adjusted gross DTAs. The amount of adjusted gross DTAs is not recalculated under paragraph 11; rather, some or all of the adjusted gross DTA may not be currently admitted. As noted in paragraph 11, the net admitted DTA shall not exceed the excess of the adjusted gross DTAs over gross DTLs.

4.2 Paragraphs 11.a., 11.b. and 11.c. require three interdependent calculations or components that when added together equal the amount of the reporting entity's admitted adjusted gross DTAs. Each of the calculations starts with the total of the reporting entity's adjusted gross DTAs, and determines the amount of such adjusted gross DTAs that can be admitted under that part. For example, the consideration of existing temporary differences in the calculation of admitted adjusted gross DTAs under paragraph 11.a., does not prevent the reconsideration of the same temporary differences in the paragraph 11.b.i. calculation. However, to avoid duplication of admitted adjusted gross DTAs when adding the three parts together, the amount of admitted adjusted gross DTAs under paragraph 11.a. must be subtracted from the amount of adjusted gross DTAs in the paragraph 11.b.i. calculation. Similarly, the amount of admitted adjusted gross DTAs under paragraphs 11.a. and 11.b. must be subtracted from the total adjusted gross DTAs in the paragraph 11.c. calculation. For illustrations of the paragraph 11 DTA admission calculations, see Question 4.16 through Question 4.25.

First Component – Admission Based on Previously Paid Taxes [Paragraph 11.a.]

4.3 Under paragraphs 11.a. and 12.b., a reporting entity can admit adjusted gross DTAs to the extent that it would be able to recover federal income taxes paid in the carryback period, by treating existing temporary differences that reverse during a timeframe corresponding with Internal Revenue Code tax loss carryback provisions[18], not to exceed three years as ordinary or capital losses that originated in each such subsequent year. The reversing temporary differences are specific to each year in which they reverse, and in turn, to the specific year(s) to which they can be carried back corresponding with tax loss carryback provisions. Reversing temporary differences for unrealized losses and nonadmitted assets are treated as capital or ordinary losses depending on their character for tax purposes. The entity is not required to project an actual net operating loss in future periods. This first component of admission is available to all entities, regardless of whether they meet any of the threshold limitations in paragraph 11.b. for reversals expected to be realized against future taxable income.

4.4 Paragraph 12.b. limits the amount of federal income taxes recoverable under paragraph 11.a. to the amount that would be refunded to the reporting entity if a carryback claim was filed with the Internal

[18] For example, under the Federal Internal Revenue Code, ordinary losses can be carried back two years for entities taxed as nonlife insurance companies, while capital losses for entities taxed both as nonlife and life insurance companies can be carried back three years. For losses arising in tax years after 2017, entities taxed as life insurance companies are not permitted to carryback ordinary losses.

© 1999-2023 National Association of Insurance Commissioners

Revenue Service (IRS). If some amount of taxes paid in the carryback period is not recovered because of limitations imposed by the Alternative Minimum Tax system in effect in taxable years prior to 2018, the resulting AMT credit is not treated as a newly created DTA. Paragraph 12.c. further limits the amount of federal income taxes recoverable under paragraph 11.a. for a reporting entity that files a consolidated income tax return with one or more affiliates, to the amount that the reporting entity could reasonably expect to have refunded by its parent. See Question 8 for a further discussion of the impact of filing a consolidated federal income tax return.

Second Component – Admission Based On Projected Future Tax Savings [Paragraph 11.b.]

4.5 The amount of a reporting entity's adjusted gross DTAs that can be admitted pursuant to paragraph 11.b. is in part, dependent on the amount of the reporting entity's adjusted capital and surplus. Accordingly, a reporting entity must determine which Realization Threshold Limitation Table set forth in paragraph 11.b. is applicable to the reporting entity and then, based on its respective facts, determine what applicable period to apply under paragraph 11.b.i. and applicable percentage to use under paragraph 11.b.ii.

4.6 If the reporting entity is subject to risk-based capital requirements or is required to file a Risk-Based Capital Report with the domiciliary state, it should use the RBC Reporting Entity Table set forth in paragraph 11.b. Threshold limitations for this table are contingent upon the ExDTA ACL RBC ratio. See Question 4b for a discussion on the ExDTA ACL RBC ratio.

4.7 If the reporting entity is (1) either a mortgage guaranty insurer or financial guaranty insurer that is not subject to risk-based capital requirements, (2) is not required to file a Risk-Based Capital Report with the domiciliary state, and (3) the reporting entity meets the minimum capital and reserve requirements[19] for the state of domicile, then it should use the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table set forth in paragraph 11.b. Threshold limitations for this table are contingent upon the ratio of ExDTA Surplus plus contingency reserves divided by the minimum aggregate capital required (see further detail in paragraph 11.b.).

4.8 If the reporting entity (1) is not subject to risk-based capital requirements, (2) is not required to file a Risk-Based Capital Report with the domiciliary state, (3) is not a mortgage guaranty or financial guaranty insurer, and (4) meets the minimum capital and reserve requirements[19], it should use the Other Non-RBC Reporting Entity Table set forth in paragraph 11.b. Threshold limitations for this table are contingent upon the ratio of adjusted gross DTA less the amount of adjusted gross DTA admitted in paragraph 11.a. to adjusted capital and surplus.

4.9 The amount of admitted adjusted gross DTAs under paragraph 11.b.i., is limited to the amount that the reporting entity expects to realize within the applicable period as determined using the applicable Realization Threshold Limitation Table following the balance sheet date. See Question 6 for a further discussion of the meaning of "expected to be realized." See Question 4.2 regarding the amount of adjusted gross DTAs considered in the paragraph 11.b.i. calculation. The amount of admitted adjusted gross DTAs under the paragraph 11.a. calculation is subtracted from the amount of adjusted gross DTAs under paragraph 11.b.i., to prevent the counting of the same admitted adjusted gross DTAs more than once. If the reporting entity expects to realize an amount of adjusted gross DTAs under paragraph 11.b.i. that is equal to or less than the admitted adjusted gross DTAs calculated under paragraph 11.a., then the resulting admitted adjusted gross DTAs under paragraph 11.b.i. will be zero.

4.10 The reference to applicable period following the balance sheet date in 4.9 refers to the paragraph 11.b.i. column of the applicable Realization Threshold Limitation Table, the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table or the Other Non-RBC Reporting Entity Table.

---

[19] If a reporting entity is not at the minimum capital and reserve requirements, the admitted adjusted gross DTA for this component is zero.

© 1999-2023 National Association of Insurance Commissioners

4.11 The amount of admitted adjusted gross DTAs under paragraph 11.b.i. is also limited to an amount that is no greater than the applicable percentage of adjusted statutory capital and surplus specified in paragraph 11.b.ii. See Question 4c for a discussion of the meaning of "an amount that is no greater than".

4.12 The reference to an amount no greater than the applicable percentage of statutory capital and surplus in 4.11 refers to the 11.b.ii. column of the applicable Realization Threshold Limitation Table; the RBC Reporting Entity Table, the Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Table or the Other Non-RBC Reporting Entity Table.

Third Component – Admission Based On Offset Against DTL [Paragraph 11.c.]

4.13 Under paragraph 11.c., a reporting entity can admit adjusted gross DTAs as an offset against gross DTLs in an amount equal to the lesser of: (1) its adjusted gross DTAs, after subtracting the amount of admitted adjusted gross DTAs under paragraphs 11.a. and 11.b., or (2) its gross DTLs. See Question 4.2 regarding the amount of adjusted gross DTAs considered in the paragraph 11.c. calculation. In determining the amount of adjusted gross DTAs that can be offset against existing gross DTLs in the paragraph 11.c. calculation, the character (i.e., ordinary versus capital) of the DTAs and DTLs must be taken into consideration such that offsetting would be permitted in the tax return under existing enacted federal income tax laws and regulations. For example, an adjusted gross DTA related to unrealized capital losses could not be offset against an ordinary income DTL. Ordinary DTAs can be admitted by offset with ordinary DTLs and/or capital DTLs. However, capital DTAs can only be admitted by offset with capital DTLs. In addition, for reporting entities that consider reversal of existing temporary differences in determining the need for a statutory valuation allowance adjustment, significant and relevant historical and/or currently available information may exist specific to the remaining amount of total adjusted gross DTAs and gross DTLs must also be taken into consideration in the determination of the admission of adjusted gross DTAs under paragraph 11.c. However, for those reporting entities, no scheduling is required beyond that necessary in determining the need for a statutory valuation allowance adjustment. As stated in paragraph 11.c., "for purposes of this component, the reporting entity shall consider the reversal patterns of temporary differences; however, this consideration does not require scheduling beyond that required in paragraph 7.e." See Question 2.5 through Question 2.8 for further discussion of scheduling for purposes of determining the reporting entity's statutory valuation allowance adjustment.) This consideration requires a scheduling exercise if scheduling is needed for determination of the statutory valuation allowance adjustment and, as a result, should be consistent with the determination of any statutory valuation allowance adjustment, which occurs prior to performing the admissibility calculations.[20] However, as noted in Question 2.7, scheduling reversal patterns of temporary differences in evaluating the need for a statutory valuation allowance adjustment where a reporting entity relies on sources of future taxable income, exclusive of reversals of temporary differences, is not required. In such case, that reporting entity is not required to schedule reversal patterns of temporary differences for purposes of paragraph 11.c. of SSAP No. 101. This is the case even if the reversal pattern of the temporary difference is readily determinable, such as straight-line amortization of a fixed amount. It also is the case if, for example, the reporting entity in determining its statutory valuation allowance adjustment has considered a source of future income reversal of existing temporary differences that are capital in character, but not those that are ordinary in character. In such case, the reporting entity is not required to schedule reversal patterns of ordinary temporary differences for purposes of paragraph 11.c.

[20] Footnote 1 of SSAP No. 101 provides that a reporting entity "shall consider reversal patterns of temporary differences *to the extent necessary* to support establishing or not establishing a valuation allowance adjustment." (Emphasis added).

© 1999-2023 National Association of Insurance Commissioners

Other Considerations

4.14 In certain situations, a reporting entity's expected federal income tax rate on its reversing temporary differences are expected to be less than the enacted tax rate used in the determination of its gross DTAs and DTLs. Examples of such entities include: Blue Cross-Blue Shield Organizations with section 833(b) deductions, reporting entities projecting a tax loss, and entities that file in a consolidated federal income tax return that cannot realize the full amount of their adjusted gross DTAs under the existing intercompany tax sharing or tax allocation agreement. Pursuant to paragraphs 231, 232 and 238 of FAS 109, such entities are required to report their gross DTLs at the enacted tax rate, and cannot take into consideration the impact of other adjustments such as the section 833(b) deduction to reduce their gross DTLs.

4.15 For those entities, the amount of admitted adjusted gross DTAs calculated under paragraph 11.a. will reflect the actual tax rate in the carryback period under paragraph 11.a. which takes into consideration the impact in the carryback years of the AMT and special deductions, as well as the provisions of the intercompany tax sharing or allocation agreement. Likewise, the amount of admitted adjusted gross DTAs calculated under paragraph 11.b. will reflect the expected tax rate in the applicable period as discussed in paragraph 4.14, which takes into consideration the impact of special deductions and the provisions of the intercompany tax sharing or allocation agreement. See Question 6 for further discussion of this issue. As such, the entity's admitted adjusted gross DTAs under paragraphs 11.a. and 11.b. may be less than its adjusted gross DTAs on temporary differences at the enacted rate. Any unused amount of DTAs resulting from this differential under paragraphs 11.a. and 11.b. can be used under paragraph 11.c. to offset existing DTLs.

4.16 The above principles can be illustrated by the following examples:

4.17 Facts:

RBC Reporting Entity Example

1. Life Insurance Company ABC[21] has $9,500,000 of deductible temporary differences ($6,000,000 ordinary and $3,500,000 capital) at 12-31-20X2 that generate $1,995,000 of gross DTAs ($1,260,000 ordinary, $735,000 capital), at the enacted federal income tax rate of 21%%. ABC has sufficient evidence of projected future taxable income exclusive of reversing temporary differences and carryforwards to support a conclusion that it will realize the full amount of its ordinary gross DTAs, and it was unnecessary in reaching that conclusion (i.e., that no valuation allowance adjustment need be established for ordinary DTAs) to consider reversal patterns of temporary differences. However, management has concluded, after considering all four sources of taxable income described in paragraph 13 of SSAP No. 101, that a statutory valuation allowance adjustment should be recognized for $168,000 of capital DTAs, reducing capital DTAs from $735,000 to $567,000. Thus, in total, management has concluded that ABC will more likely than not realize gross DTAs of $1,827,000 ($1,260,000 ordinary, $567,000 capital) related to its $9,500,000 of deductible temporary differences. ABC also has $4,000,000 of taxable temporary differences ($2,800,000 ordinary and $1,200,000 capital) resulting in $840,000 ($588,000 ordinary, $252,000 capital) of gross DTLs.

2. ABC has determined that $2,000,000 of its $6,000,000 existing deductible ordinary temporary differences will reverse in 20X3, another $1,500,000 will reverse in 20X4, and another $2,000,000 will reverse in 20X5. The remaining $500,000 of ABC's existing deductible ordinary temporary differences will reverse in years 20X6 or later. ABC has determined that $200,000, $300,000, and $400,000 of its $3,500,000 deductible capital

[21] Please note the results in this example may be different due to differences in the applicable carryback periods if ABC was taxed as a non-life insurance company.

© 1999-2023 National Association of Insurance Commissioners

temporary differences are expected to reverse in 20X3, 20X4, and 20X5, respectively, and the remaining $2,600,000 will reverse in years 20X6 or later.

3. ABC reported $400,000 ($300,000 ordinary, $100,000 capital) and $1,000,000 ($800,000 ordinary, $200,000 capital) of taxable income in 20X0 and 20X1, respectively. ABC reported $84,000 ($63,000 ordinary, $21,000 capital) and $210,000 ($168,000 ordinary, $42,000 capital) of tax expense on its 20X0 and 20X1 federal income tax returns, respectively. It has also projected taxable income of $1,500,000 ($1,200,000 ordinary, $300,000 capital) and $315,000 ($252,000 ordinary, $63,000 capital) of federal income taxes for 20X2 that have been reflected in its current statutory income tax provision calculation.

4. ABC expects to realize[22] a federal income tax benefit of 21% from 20X3 through 20X5 related to reversing ordinary temporary differences. ABC does not anticipate any capital gain income in 20X3 through 20X5.

5. ABC has an ExDTA ACL RBC Ratio at 12-31-20X2 of 600%. Adjusted statutory capital and surplus under paragraph 11.b.ii. is $7,000,000 at 12-31-20X2, and was computed by subtracting the admitted balances of net DTA's, goodwill and EDP from the current period statutory surplus. Statutory surplus is defined in paragraph 2 of SSAP No. 72.

6. The above facts are summarized in the following table:

	Ordinary	Capital	Total
20X2 – Current Year Taxable Income & Tax:			
Taxable Income in CY	$ 1,200,000	$ 300,000	$ 1,500,000
Tax Provision @ 21%	$ 252,000	$ 63,000	$ 315,000
Deductible Temporary Differences	$ 6,000,000	$ 3,500,000	$ 9,500,000
DTA @21%	$ 1,260,000	$ 735,000	$ 1,995,000
Taxable Temporary Differences	$ 2,800,000	$ 1,200,000	$ 4,000,000
DTL @21%	$ 588,000	$ 252,000	$ 840,000
Valuation Allowance		$ 168,000	$ 168,000
Carryback Taxable Income & Tax:			
20X0 Taxable Income	$ 300,000	$ 100,000	$ 400,000
Tax	$ 63,000	$ 21,000	$ 84,000
20X1 Taxable Income	$ 800,000	$ 200,000	$ 1,000,000
Tax	$ 168,000	$ 42,000	$ 210,000
Reversal of Deductible Temp Differences:			
20X3	$ 2,000,000	$ 200,000	$ 2,200,000
20X4	$ 1,500,000	$ 300,000	$ 1,800,000
20X5	$ 2,000,000	$ 400,000	$ 2,400,000
20X6 and later	$ 500,000	$ 2,600,000	$ 3,100,000
Total (before valuation allowance)	$ 6,000,000	$ 3,500,000	$ 9,500,000

4.18 Calculation of ABC's Admitted Adjusted Gross DTAs:

1. Paragraph 11.a. calculation. ABC cannot admit any ordinary adjusted gross DTAs under paragraph 11.a., because entities taxed as life insurance companies are not permitted to carry back ordinary tax losses under existing Federal income tax law. However, ABC can admit

[22] See Question 6 for discussion on the admittance calculation under paragraph 11.b.i. and what is meant by the phrase: "expected to be realized."

capital adjusted gross DTAs of $126,000 under paragraph 11.a. because all capital losses are permitted a 3-year carryback under existing Federal income tax law and ABC paid taxes on capital gains in each year 20X0-20X2.

a. ABC first carries $100,000 of the hypothetical capital loss[23] of $200,000 from 20X3 back to 20X0 recovering $21,000 in taxes paid. The remaining $100,000 of the 20X3 hypothetical capital loss ($200,000 – $100,000) is available for utilization in years 20X1 and 20X2.

b. ABC would carry the remaining $100,000 of the hypothetical capital loss from 20X3 back to 20X1 recovering $21,000 in taxes paid. In addition, ABC would carry back $100,000 of hypothetical capital loss from 20X4 to 20X1 to recover another $21,000 of taxes paid.[24]

c. ABC would carry the remaining $200,000 of the hypothetical capital loss from 20X4 plus an additional $100,000 of the hypothetical capital loss from 20X5 back to 20X2, recovering $63,000 in taxes projected to be paid.

2. Paragraph 11.b. calculation. ABC can admit $1,050,000 of adjusted gross DTAs under paragraph 11.b. Since ABC has an ExDTA ACL RBC ratio of 600%, the Realization Threshold Limitation Table provides that the company can use the thresholds of 3 years for projected realization and 15% of adjusted capital and surplus. The company expects to realize a federal income tax benefit of $1,155,000 ($5,500,000 X 21%) in 20X3 through 20X5 related to its reversing ordinary deductible temporary differences and $126,000 ($600,000 X 21%) in 20X3 through 20X5 related to its reversing capital deductible temporary differences (through carryback to 20X0-20X2).[25] The $1,281,000 amount ($1,155,000 + $126,000) must be reduced by the $126,000 of admitted adjusted gross DTAs under paragraph 11.a. to prevent double counting of the same income tax benefit. As a result, ABC has projected adjusted gross DTAs available for admission under this component of $1,155,000 ($1,281,000 – $126,000), all of which are ordinary in tax character. However, 15% of adjusted capital and surplus is a limiting factor in this example. As such, even though ABC has sufficient sources of future taxable income exclusive of reversing taxable temporary differences to realize a federal income tax benefit of $1,155,000 in 20X3 through 20X5 related to its reversing ordinary deductible temporary differences, admission of those temporary differences is limited to $1,050,000 ($7,000,000 X 15%).

3. Paragraph 11.c. calculation. ABC can admit $462,000 ($210,000 ordinary, $252,000 capital) of adjusted gross DTAs under paragraph 11.c. ABC has $1,827,000 of total adjusted gross DTAs available for admission under paragraph 11. These DTAs are made up of $1,260,000 ordinary DTAs and $567,000 of capital DTAs. To prevent double counting of admitted adjusted gross DTAs, the $1,260,000 of ordinary DTAs must be reduced by the $1,050,000 admitted under paragraph 11.b., leaving $210,000 for admission under paragraph 11.c. Likewise, the $567,000 of capital DTAs must be reduced by the $126,000 admitted under paragraph 11.a., leaving $441,000 for admission under paragraph 11.c. There are $588,000 of ordinary DTLs available to offset against the $210,000 of ordinary DTAs. There are $252,000 of

[23] It should be noted that if ABC's hypothetical 20X3 carryback was insufficient to fully offset all capital gain income in 20X0, the company would not be allowed to carryback any of the hypothetical loss from 20X4 or 20X5 to 20X0 per paragraph 11.a., as 20X0 is outside of the timeframe corresponding with capital loss carryback provisions for an insurance company.

[24] If ABC would not have had sufficient hypothetical capital loss from 20X4 to carryback to 20X1, the company would not have been able to carryback its hypothetical capital loss of $400,000 from 20X5 back to 20X1 pursuant to the applicable tax loss carryback provisions.

[25] Because ABC projects no capital gain income in 20X3 through 20X5, it is not able to realize a federal income tax benefit on the remaining $300,000 of capital temporary differences reversing in that 3-year period.

capital DTLs available to offset against the $441,000 capital DTAs. However, the tax character of the DTAs and DTLs becomes a limiting factor for this component. While ordinary DTAs can be offset against both ordinary and capital DTLs, the reverse is not allowed in the tax return (see Question 4.13). Because ABC did not consider reversal of existing temporary differences in determining that no valuation allowance was necessary for gross ordinary DTAs, it need not consider reversal patterns of temporary differences for admission of ordinary DTAs in its paragraph 11.c. calculation. On the other hand, because ABC was required to consider all four sources of taxable income specified in paragraph 13 of SSAP No. 101(including future reversals of existing taxable capital temporary differences) in establishing a valuation allowance for gross capital DTAs, it is required to consider reversal patterns of temporary differences for admission of capital DTAs in its paragraph 11.c. calculation, but this consideration does not require scheduling beyond that required by paragraph 7.e. of SSAP No. 101 (again see Question 4.13). In this situation, after the required consideration, ABC can admit $210,000 and $252,000 of its ordinary and capital DTAs, respectively.

4.19 Summary of ABC's Admitted Gross DTA Calculation:

	Ordinary	**Capital**	**Total**
Gross DTAs at Enacted Tax Rate	$1,260,000	$735,000	$1,995,000
Less: Statutory Valuation Allowance		$168,000	$168,000
Adjusted Gross DTAs at Enacted Tax Rate	$1,260,000	$567,000	$1,827,000
Admitted Gross DTAs (paragraph 11.a.)	0	$126,000	$126,000
Admitted Gross DTAs (paragraph 11.b.)	$1,050,000	0	$1,050,000
Admitted Gross DTAs (paragraph 11.c.)	$210,000	$252,000	$462,000
Total Admitted Adjusted Gross DTAs (sum of 11.a, 11.b., and 11.c)	$1,260,000	$378,000	$1,638,000
Nonadmitted Adjusted Gross DTAs	0	$239,000	$239,000
Admitted DTA	$1,260,000	$378,000	$1,638,000
Gross DTL	$(588,000)	$(252,000)	$(840,000)
Net Admitted DTA/DTL	$672,000	$126,000	$798,000

4.20 Facts:

Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Example

1. Financial Guaranty Insurance Company DEF has the same facts as Life Insurance Company ABC except:

a. DEF is not an RBC reporting entity and therefore does not calculate an RBC percentage. DEF is a financial guaranty insurer and has an ExDTA Surplus plus Contingency Reserve/Required Aggregate Risk Capital ratio of 105%. This ratio represents the sum of surplus to policyholders (excluding any admitted DTA from 11.a.) plus contingency reserves divided by the minimum aggregate capital required.

b. DEF reported $1,000,000 of taxable income and $210,000 of tax expense on its 20X1 federal income tax return. It has also projected taxable income of $1,500,000 and $315,000 of federal income taxes for 20X2 that has been reflected in its current statutory income tax provision calculation. DEF recognized no capital gain income in 20X1 or 20X2, so all of its taxable income in those years was ordinary in character. But DEF has $1,000,000 less deductible capital temporary differences than ABC and so, after considering all four sources

© 1999-2023 National Association of Insurance Commissioners

of taxable income specified in paragraph 13 of SSAP No. 101, DEF establishes the same valuation allowance against gross capital DTAs as ABC. After the valuation allowance, DEF has $357,000 ($2,500,000 gross capital DTAs x 21% = $525,000 less $168,000 valuation allowance = $357,000) of adjusted gross capital DTAs.

4.21 Calculation of DEF's Admitted Adjusted Gross DTAs:

1. Paragraph 11.a. calculation. DEF can admit $525,000 ($210,000 + $315,000) of adjusted gross DTAs under paragraph 11.a, all of which are ordinary in tax character.

a. As an entity taxed as a nonlife insurance company, DEF, unlike ABC, is permitted to carry back ordinary tax losses. DEF first carries $1,000,000 of the hypothetical net operating loss[26] of $2,000,000 from 20X3 back to 20X1 recovering $210,000 in taxes paid. The remaining $1,000,000 of the hypothetical net operating loss ($2,000,000 – $1,000,000) is available for utilization in 20X2.

b. DEF would carry the remaining $1,000,000 of the hypothetical net operating loss from 20X3 plus an additional $500,000 of the hypothetical net operating loss from 20X4 back to 20X2 recovering $315,000 in taxes projected to be paid.[27]

2. Paragraph 11.b. calculation. DEF cannot admit any additional adjusted gross DTAs under paragraph 11.b. Since DEF has an ExDTA Surplus/Policyholders and Contingency Reserves ratio of 105%, the Realization Threshold Limitation Table provides that the company can use the thresholds of 1 year for projected realization and 10% of adjusted capital and surplus. The company expects to realize a federal income tax benefit of $420,000 ($2,000,000 X 21%) in 20X3 related to its reversing deductible temporary differences. The $420,000 amount must be reduced by the $525,000 of admitted adjusted gross DTAs under paragraph 11.a. to prevent double counting of the same income tax benefit. DEF admitted $105,000 ($525,000 - $420,000) more adjusted gross DTAs based on carryback of hypothetical net operating losses under paragraph 11.a. than is projected to be realized within the 1- year applicable threshold limitation. As a result, there is $0 of expected additional reversing deductible differences available for admission under paragraph 11.b.

3. Paragraph 11.c. calculation. DEF can admit $840,000 ($588,000 ordinary, $252,000 capital) of adjusted gross DTAs under paragraph 11.c. DEF has $1,617,000 of total adjusted gross DTAs available for admission under paragraph 11. These DTAs are made up of $1,260,000 ordinary DTAs and $357,000 of capital DTAs. To prevent double counting of admitted adjusted gross DTAs, the $1,260,000 of ordinary adjusted gross DTAs must be reduced by the $525,000 admitted under paragraph 11.a., leaving $735,000 for admission under paragraph 11.c. There are $588,000 of ordinary DTLs to offset against the $735,000 of ordinary DTAs. There are $252,000 of capital DTLs to offset against the $357,000 capital DTAs. However, the tax character of the DTAs and DTLs must be considered as a potential limiting factor for this component because while ordinary DTAs can be offset against both ordinary and capital DTLs, the reverse is not allowed in the tax return (see Question 4.13). In this situation, DEF can admit $588,000 and $252,000 of its ordinary and capital DTAs,

---

[26] It should be noted that if DEF's hypothetical 20X3 carryback was insufficient to fully offset all positive taxable income in 20X1, the company would not be allowed to carryback any of the hypothetical loss from 20X4 or 20X5 to 20X1 per paragraph 11.a., as 20X1 is outside of the timeframe corresponding with the tax loss carryback provisions for a non-life insurance company.

[27] If DEF would not have had sufficient hypothetical NOL from 20X4 to carryback to 20X2, the company would not have been able to carryback is hypothetical NOL of $2,000,000 from 20X5 back to 20X2 as 20X2 is outside of the timeframe corresponding with the tax loss carryback provisions for a nonlife insurance company.

respectively.28 If DEF's adjusted gross DTAs, after reduction for the amount of adjusted gross DTAs admitted under paragraphs 11.a. and 11.b., were less than $840,000 in this example, DEF would be limited to the balance of its adjusted gross DTAs in the paragraph 11.c. calculation, subject to the rules of offset under existing enacted federal income tax laws and regulations.

4.22 Summary of DEF's Admitted Gross DTA Calculation:

	Ordinary	Capital	Total
Gross DTAs at Enacted Tax Rate	$1,260,000	$525,000	$1,785,000
Less: Statutory Valuation Allowance		$168,000	$168,000
Adjusted Gross DTAs at Enacted Tax Rate	$1,260,000	$357,000	$1,617,000
Admitted Gross DTAs (paragraph 11.a.)	$525,000	$0	$525,000
Admitted Gross DTAs (paragraph 11.b.)	$0	0	$0
Admitted Gross DTAs (paragraph 11.c.)	$588,000	$252,000	$840,000
Total Admitted Adjusted Gross DTAs (sum of 11.a, 11.b., and 11.c)	$1,113,000	$252,000	$1,365,000
Nonadmitted Adjusted Gross DTAs	$147,000	$105,000	$352,000
Admitted DTA	$1,113,000	$252,000	$1,365,000
Gross DTL	$(588,000)	$(252,000)	$(840,000)
Net Admitted DTA/DTL	$525,000	$0	$525,000

4.23 Facts:

Other Non-RBC Reporting Entity Example

1. Title Insurance Company GHI has the same facts as Life Insurance Company ABC except:

a. GHI is not a RBC reporting entity and therefore does not calculate a RBC percentage. GHI is also not a financial guaranty or mortgage guaranty insurer. As such, GHI must use the Other Non-RBC Reporting Entity Threshold Limitation Table under paragraph 11.b.

b. GHI reported $1,000,000 of taxable income and $210,000 of tax expense on its 20X1 federal income tax return. It has also projected taxable income of $1,500,000 and $315,000 of federal income taxes for 20X2 that has been reflected in its current statutory income tax provision calculation. GHI recognized no capital gain income in 20X1 or 20X2, so all of its taxable income in those years was ordinary in character. But GHI has $1,000,000 less deductible capital temporary differences than ABC and so, after considering all four sources of taxable income specified in paragraph 13 of SSAP No. 101, GHI establishes the same valuation allowance against gross capital DTAs as ABC. After the valuation allowance, DEF has $357,000 ($2,500,000 gross capital DTAs x 21% = $525,000 less $168,000 valuation allowance = $357,000) of adjusted gross capital DTAs.

[28] DEF's required consideration of reversal patterns of temporary differences is the same as ABC's. See Question 4.18.3.

© 1999-2023 National Association of Insurance Commissioners

4.24 Calculation of GHI's Admitted Adjusted Gross DTAs:

1. Paragraph 11.a. calculation. GHI can admit $525,000 ($210,000 + $315,000) of adjusted gross DTAs under paragraph 11.a, all of which are ordinary in tax character.

a. As an entity taxed as a nonlife insurance company, GHI, unlike ABC, is permitted to carry back ordinary tax losses. GHI first carries $1,000,000 of the hypothetical net operating loss[29] of $2,000,000 from 20X3 back to 20X1 recovering $210,000 in taxes paid. The remaining $1,000,000 of the hypothetical net operating loss ($2,000,000 – $1,000,000) is available for utilization in 20X2.

b. GHI would carry the remaining $1,000,000 of the hypothetical net operating loss from 20X3 plus an additional $500,000 of the hypothetical net operating loss from 20X4 back to 20X2 recovering $315,000 in taxes projected to be paid.[30]

2. Paragraph 11.b. calculation. GHI can admit $630,000 of adjusted gross DTAs under paragraph 11.b. Since GHI has an Adjusted Gross DTA to Adjusted Capital and Surplus ratio of 15.6% ($1,092,000/$7,000,000), the Realization Threshold Limitation Table provides that the company can use the thresholds of 3 years for projected realization and 15% of adjusted capital and surplus. The company expects to realize a federal income tax benefit of $1,155,000 ($5,500,000 X 21%) in 20X3 through 20X5 related to its reversing deductible temporary differences. The $1,155,000 amount must be reduced by the $525,000 of admitted adjusted gross DTAs under paragraph 11.a. to prevent double counting of the same income tax benefit. As a result, GHI has projected adjusted gross DTAs available for admission under this component of $630,000 ($1,155,000 – $525,000), all of which is ordinary in tax character. 15% of adjusted capital and surplus ($7,000,000 X 15% = $1,050,000) is not a limiting factor in this example. As such, admission of reversing deductible temporary differences that are projected to be realized during 20X3 through 20X5 is $630,000.

3. Paragraph 11.c. calculation. GHI can admit $357,000 ($105,000 ordinary, $252,000 capital) of adjusted gross DTAs under paragraph 11.c. GHI has $1,617,000 of total adjusted gross DTAs available for admission under paragraph 11. These DTAs are made up of 1,260$,000 ordinary DTAs and $357,000 of capital DTAs. To prevent double counting of admitted adjusted gross DTAs, the $1,260,000 of ordinary adjusted gross DTAs must be reduced by the $525,000 admitted under paragraph 11.a. and the $630,00 admitted under paragraph 11.b., leaving $105,000 for admission under paragraph 11.c. There is $588,000 of ordinary DTLs available to offset against the $105,000 of ordinary DTAs. There is $252,000 of capital DTLs to offset against the $357,000 capital DTAs. Accordingly, the tax character of the DTAs and DTLs becomes a limiting factor for this component. While ordinary DTAs can be offset against both ordinary and capital DTLs, the reverse is not allowed in the tax return (see Question 4.13). In this situation, GHI can admit $105,000 and $252,000 of its ordinary and capital DTAs, respectively[31].

[29] It should be noted that if GHI's hypothetical 20X3 carryback was insufficient to fully offset all positive taxable income in 20X1, the company would not be allowed to carryback any of the hypothetical loss from 20X4 or 20X5 to 20X1 per paragraph 11.a., as 20X1 is outside of the timeframe corresponding with the tax loss carryback provisions for a non-life insurance company.

[30] If GHI would not have had sufficient hypothetical NOL from 20X4 to carryback to 20X2, the company would not have been able to carryback is hypothetical NOL of $2,000,000 from 20X5 back to 20X2 as 20X2 is outside of the timeframe corresponding with the tax loss carryback provisions for a nonlife insurance company.

[31] GHI's required consideration of reversal patterns of temporary differences is the same as ABC's. See Question 4.18.3.

4.25 Summary of GHI's Admitted Gross DTA Calculation:

	Ordinary	Capital	Total
Gross DTAs at Enacted Tax Rate	$1,260,000	$525,000	$1,785,000
Less: Statutory Valuation Allowance		$168,000	$168,000
Adjusted Gross DTAs at Enacted Tax Rate	$1,260,000	$357,000	$1,617,000
Admitted Gross DTAs (paragraph 11.a.)	$525,000	$0	$525,000
Admitted Gross DTAs (paragraph 11.b.)	$630,000	0	$630,000
Admitted Gross DTAs (paragraph 11.c.)	$105,000	$252,000	$357,000
Total Admitted Adjusted Gross DTAs (sum of 11.a, 11.b., and 11.c)	$1,260,000	$252,000	$1,512,000
Nonadmitted Adjusted Gross DTAs	$0	$105,000	$352,000
Admitted DTA	$1,260,000	$252,000	$1,512,000
Gross DTL	$(588,000)	$(252,000)	$(840,000)
Net Admitted DTA/DTL	$ 672,000	$0	$672,000

4b. Q – How is the ExDTA ACL RBC ratio calculated? [Paragraph 11.b.i.]

4.26 A – The December 31 ExDTA ACL RBC ratio is calculated in the same manner as in the ACL RBC Ratio computed in the Annual RBC Report, where Total Adjusted Capital (TAC) is divided by ACL RBC. However, for purposes of paragraph 11.b.i., TAC does not include any DTAs of the reporting entity. The ACL RBC would be the amount calculated in the Annual RBC Report.

4.27 The interim period (March 31, June 30, and September 30) ExDTA ACL RBC ratio calculation is discussed in 4.29-4.33.

4.28 For all companies, the TAC will include current period capital and surplus, excluding any DTAs of the reporting entity. Other TAC adjustments are dependent on whether the company is a Life, P&C or Health insurer.

4.29 For life companies, the AVR adjustment is calculated as a required part of the development of capital and surplus each quarter and is one of the major adjustments to TAC (added back to surplus). As noted on the illustrative interim TAC calculation in 4.33 for life companies, there are other TAC adjustments such as subsidiaries' dividend liabilities, etc., that are drawn from the quarterly statement.

4.30 For P&C and Health companies, except for the AVR and life subsidiaries' dividend liability amounts (both of which are only applicable to P&C companies with life subsidiaries), which are readily available on the quarter, the prior year's annual TAC adjustments should be used in the current quarter's TAC calculation. The P&C and Health interim TAC illustrations in 4.33 provide example details of various interim RBC TAC adjustments.

4.31 The ACL RBC used for the interim RBC calculation is the ACL RBC from the most recently filed annual statement for the most recent calendar year. For example, for June 30, 20X3, the ACL for the interim RBC calculation is taken from the 20X2 RBC Report based on the 20X2 annual statement.

4.32 In most instances, the prior year's annual ACL RBC will suffice. A company should only revise its interim ACL RBC for a material change in its risk profile when requested to do so by its domiciliary state or subject to domiciliary state approval.

4c. Q – What is meant by the phrase "an amount that is no greater than"? [Paragraph 11.b.ii.]

4.34 A – As discussed in question 4.11 the amount of admitted adjusted gross DTAs under paragraph 11.b.i. is also limited to an amount that is no greater than the applicable percentage of statutory capital and surplus test specified in paragraph 11.b.ii. For purposes of this test, statutory capital and surplus as shown on the statutory balance sheet of the reporting entity for the current period's statement filed with the domiciliary state commissioner is adjusted to exclude any net DTAs, EDP equipment and operating system software and any net positive goodwill.

4.35 The phrase "an amount that is no greater than" in paragraph 11.b.ii. allows an entity to utilize an amount lower (e.g., from the reporting entity's most recently filed statement) than what would be allowed if it utilized the amount of statutory capital and surplus adjusted to exclude any net DTAs, EDP equipment and operating system software and any net positive goodwill as required to be shown on the statutory balance sheet of the reporting entity for the current period's statement filed with the domiciliary state commissioner. This ability to utilize a lower amount is for administrative ease if a reporting entity's surplus is increasing.

4.36 For example, at 12/31/20X2 if adjusted capital and surplus is $100M and at 9/30/20X2 it was $80M, the entity may utilize the $80M amount from the prior quarter.

4.37 If instead 12/31/20X2 adjusted capital and surplus were $60M, the entity may not utilize the $80M amount from the prior quarter as that would overstate the limitation under paragraph 11.b.ii.

4.38 If at 12/31/20X2 an entity's adjusted capital and surplus was initially determined to be $150M, the entity can still utilize that amount under paragraph 11.b.ii., if there is a late accounting adjustment that increases that amount to $160M.

5a. Q – How is the timing of reversals of temporary differences and carryforwards determined for SSAP No. 101 purposes? [Paragraphs 7, 11.a., 11.b.i. and 12.a.]

© 1999-2023 National Association of Insurance Commissioners

5.1 A – The timing of temporary difference reversals is critical in determining the amount of admitted adjusted gross DTAs. Determining the reversal of temporary differences impacts the adjusted gross DTA admitted pursuant to paragraphs 11.a., 11.b.i. and potentially 11.c. of SSAP No. 101. For purposes of paragraph 11.c., determining the reversal of temporary differences is necessary only to the extent required by paragraph 7.e. as discussed in Question 4.13.

5.2 Paragraph 12.a. of SSAP No. 101 states that “For purposes of paragraph 11.a., existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years, shall be determined in accordance with paragraphs 228 and 229 of FAS 109.” The timing of reversals of temporary differences and carryforwards for purposes of paragraph 11.b. of SSAP No. 101 shall be determined under similar principles.

5.3 Paragraph 228 of FAS 109 states, in pertinent part, that “[t]he particular years in which temporary differences result in taxable or deductible amounts generally are determined by the timing of the recovery of the related asset or settlement of the related liability.” Question 1 of the FASB’s Special Report on Statement 109 provides additional guidance on scheduling. It defines “scheduling” as the analysis performed to determine the pattern and timing of the reversal of temporary differences. The FASB’s Special Report also provides certain scheduling guidelines to be followed, including the need for the method employed to be systematic and logical, that a consistent method be used for each category of temporary differences, and that a change in the method used be considered a change in accounting principle.

5.4 Assume Company A purchases its only asset for $1,000, an asset that is admissible for statutory accounting purposes and depreciated over five years on a straight-line basis. Assume also that the asset is depreciated over seven years for tax purposes using the Modified Accelerated Cost Recovery System (MACRS). The following table summarizes the statutory and tax basis of the asset at the end of each year.

Year	Cost	Statutory Depreciation	Statutory Basis	Tax Depreciation	Tax Basis	Deductible/ (Taxable) Temporary Difference
1	$1,000	$200	$800	$143	$857	$57
2	-	200	600	245	612	12
3	-	200	400	175	437	37
4	-	200	200	125	312	112
5	-	200	-	89	223	223
6	-	-	-	89	134	134
7	-	-	-	89	45	45
8	-	-	-	45[32]	-	-

5.5 At the end of year one, the Company would conclude that $45 ($57 - $12) of the $57 outstanding deductible temporary difference would reverse within one year, leaving a temporary difference of $12 at the end of year two. However, for computing a two or three-year reversal, the Company would not project a reversal of the temporary difference by the end of year three or four as the deductible temporary difference is scheduled to increase (from $12 to $37 and from $37 to $112, respectively). If the Company had decided to sell the asset in year two, it may be appropriate to conclude that the outstanding deductible temporary difference of $57 would reverse in year two.

[32] Due to the mid-year convention applicable to most asset acquisitions for tax purposes, the asset is treated as acquired in mid-year, meaning that a seven (7) year asset is depreciated over eight (8) tax years.

© 1999-2023 National Association of Insurance Commissioners

5.6 A similar rationale would apply in the instance of a nonadmitted asset. Assume the same facts as aforementioned, except that the asset is nonadmitted for statutory accounting purposes. The results are summarized in tabular form below.

Year	Cost	Statutory Charge to Surplus	Statutory Basis	Tax Depreciation	Tax Basis	Deductible/ (Taxable) Temporary Difference
1	$1,000	$1,000	-	$143	$857	$857
2	-	-	-	245	612	612
3	-	-	-	175	437	437
4	-	-	-	125	312	312
5	-	-	-	89	223	223
6	-	-	-	89	134	134
7	-	-	-	89	45	45
8	-	-	-	45	-	-

5.7 In this example, the Company has a steady decline in the deductible temporary difference that is not complicated by competing depreciation regimes. This is due to the fact that the Company took the large surplus charge when the asset was nonadmitted, thereby creating a significant deductible temporary difference. The Company would project a $245 temporary difference reversal in year two (from $857 to $612), a $175 temporary difference reversal in year three (from $612 to $437), and a $125 temporary difference reversal in year four (from $437 to $312). Although the Company will take income statement charges for depreciation on the nonadmitted asset, the statutory basis is nonetheless zero from the moment the asset was nonadmitted. Future statutory depreciation deductions will not impact the statutory basis and have no impact on the analysis.

5.8 The above examples assume a single asset. However, the analysis becomes more complicated when the Company has hundreds or thousands of assets within its fixed asset pool. In this instance, it is expected that management will make its best estimate of the expected reversal pattern determined in a manner consistent with the grouping for measurement (see question 2 for more discussion about grouping).

5.9 As indicated above, the timing of the reversal of a particular balance sheet item will depend on the expected recovery of the related asset and liability. For example, the temporary difference associated with property & casualty loss reserves would be expected to reverse in a manner consistent with the payout pattern ("development") of the underlying loss reserves. Historical loss development triangles may be useful in substantiating a reversal pattern. For instance, assume Company A writes two types of property and casualty policies: auto liability and workers' compensation. The following table details the components of the statutory and tax reserves for Company A as of December 31, 20X2.[33]

Private Passenger Auto Liability	Statutory Reserves	Tax Reserves	Temporary Difference
AY + 0	$1,000	$900	$100
AY + 1	850	690	160
AY + 2	700	580	120
AY + 3	550	490	60
AY + 4	400	385	15
AY + 5	300	275	25
AY + 6	200	175	25
AY + 7	100	90	10

[33] Under current tax law, the loss payment period extends for more years, but the concepts illustrated herein are unchanged.

© 1999-2023 National Association of Insurance Commissioners

AY + 8	80	75	5
AY + 9	70	65	5
Prior	50	45	5
Total	$4,300	$3,770	$530

Workers' Compensation	Statutory Reserves	Tax Reserves	Temporary Difference
AY + 0	$1,000	$825	$175
AY + 1	900	800	100
AY + 2	850	770	80
AY + 3	790	695	95
AY + 4	725	610	115
AY + 5	695	600	95
AY + 6	655	575	80
AY + 7	605	545	60
AY + 8	575	505	70
AY + 9	550	495	55
Prior	505	450	55
Total	$7,850	$6,870	$980

5.10 One option in analyzing the reversal of the temporary difference would be to calculate the historical loss development patterns for the two lines of business by accident year for each year in the applicable reversal period. By applying these development patterns to the individual temporary differences, the Company could estimate the expected reversal of the temporary difference as a whole for each year in the applicable reversal period.

5.11 Another option would be to apply the average development factor by line of business to each reserve for each year in the applicable reversal period. If the average one-year development factor for all accident years for auto liability and workers' compensation were 70% and 35%, respectively, the one-year temporary difference reversal would be $371 ($530 x 70%) for auto liability and $343 ($980 x 35%) for workers' compensation. The same approach could be used in determining the reversal for any other year in the applicable reversal period.

5.12 The temporary difference related to property and casualty unearned premiums is typically twenty percent (20%) of the outstanding statutory unearned premium reserve. If a company issues only one-year policies, it is reasonable to assume that the entire temporary difference will reverse in one year. If a company writes multi-year contracts, management will be required to estimate the percentage of the unearned premium that will be earned within each year of the applicable reversal period and apply these percentages to the outstanding temporary difference.

5.13 The reversal of the temporary difference related to life insurance reserves may require actuarial assistance, normally involving anticipated development of the statutory and tax reserves for policies issued prior to the end of the current reporting year. In computing the anticipated development, it would be expected that reasonable assumptions be used, which may include cash-flow modeling of the entity's reserves. Deferred acquisition costs on life insurance policies are amortized over prescribed periods pursuant to federal tax law. The amortization schedules should provide management with the ability to estimate the reversal for each year in the applicable reversal period with reasonable accuracy.

5.14 For those temporary differences that do not have a defined reversal period, such as unrealized losses on common stock or deferred compensation liabilities, management will need to determine when the temporary difference is "expected" to reverse. For instance, assume a company has an unrealized loss

© 1999-2023 National Association of Insurance Commissioners

of $200 in its equity portfolio and that, on average, the portfolio turns over twenty percent (20%) per year. It would be appropriate for the company to conclude that $40 of the temporary difference will reverse in each year in the applicable reversal period. When determining when the temporary difference would be "expected" to reverse, management should normally consider events that are likely to occur using information, facts and circumstances in existence as of the reporting date. The estimates used in this circumstance should not be extended to other tests of impairment. For instance, when the entity assumed a 20% turnover in its equity portfolio, it is not involuntarily required to record an impairment in accordance with paragraph 10 of *SSAP No. 30R—Unaffiliated Common Stock*.

5.15 In summary, the methodology used to develop the reversal pattern should be consistent, systematic, and rational. Although consistency is encouraged, business conditions may dictate that certain factors be given more or less weight than in previous periods. Factors to be considered include historical patterns, recent trends, and the likely impact of future initiatives (without regard to future originating temporary differences). For instance, if a company has migrated to a more efficient claims management system, outstanding reserves may be settled more quickly than historical payment patterns may indicate. A company that expects to enter into a loss portfolio transfer reinsurance transaction should consider the implications of that treaty in determining the reversal of the loss reserve temporary difference.

5b. Q – How should future originating differences impact the scheduling of temporary difference reversals during the applicable period? [Paragraphs 11.a., 11.b.i., 11.c. and 12.a]

5.16 A – Future originating differences, and their subsequent reversals, are considered in assessing the existence of future taxable income. However, they should not impact the scheduling of existing temporary difference reversals during the applicable period. Paragraph 229 of FAS 109 provides the following:

> 229. For some assets or liabilities, temporary differences may accumulate over several years and then reverse over several years. That pattern is common for depreciable assets. Future originating differences for existing depreciable assets and their subsequent reversals are a factor to be considered when assessing the likelihood of future taxable income (paragraph 21(b)) for realization of a tax benefit for existing deductible temporary differences and carryforwards.

6. Q – What is meant by the phrase "expected to be realized"? [Paragraph 11.b.i.]

6.1 A – A reporting entity calculates the amount of its adjusted gross DTAs and gross DTLs under paragraph 7 using the enacted tax rate. The amount of adjusted gross DTAs and gross DTLs is not recalculated under paragraph 11. The purpose of paragraph 11 is to determine the amount of adjusted gross DTAs that can be admitted in the reporting period.

6.2 An excerpt of SSAP No. 4 – *Assets and Nonadmitted Assets* indicates:

> 2. For purposes of statutory accounting, an asset shall be defined as: probable[34] future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

6.3 The phrase "expected to be realized" encompasses a reasonable expectation as to the value of the DTAs consistent with SSAP No. 4. This means that if a reporting entity's management expects that deductible temporary differences that reverse in the applicable period will produce a federal income tax benefit at a rate that is lower than the enacted rate, the expected rate should be taken into consideration in the determination of the amount of admitted adjusted gross DTAs under paragraph 11.b.i. In other words, available evidence causes the reporting entity to expect the asset to be realized at less than the enacted

[34] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements* (CON 6) states, "Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, Accounting for Contingencies, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved."

© 1999-2023 National Association of Insurance Commissioners

rate. In such cases, it would not be appropriate to calculate the amount of admitted adjusted gross DTAs under paragraph 11.b.i. on the basis of reversing deductible temporary differences at the enacted tax rate.

6.4 The following examples illustrate situations where the amount of admitted adjusted gross DTAs under paragraph 11.b.i. would be less than the adjusted gross DTAs calculated using deductible temporary differences reversing in the applicable period at the enacted income tax rate. The approach in these examples is to determine the tax savings that the company would expect to realize from its reversing deductible temporary differences. This is accomplished through a calculation of the company's income tax liability "with and without" these temporary differences. It is assumed that in these examples there are no prudent and feasible tax-planning strategies that would cause the entity to expect the asset to be realized at a rate different than that presented in the examples.

Example 1:

6.5 BCBS is a Blue Cross/Blue Shield Organization that expects to fully offset its regular taxable income with available section 833 (b) deductions in 20X2. Prior to considering the section 833 (b) deduction, BCBS projects $8,000,000 of taxable income in 20X3, which includes $3,000,000 of reversing deductible temporary differences that were part of its def erred inventory at 12/31/X2. The Company's ExDTA ACL RBC percentage is 250% and therefore it is required to use the one-year applicable period under paragraph 11.b.i.

20X3	Without Reversing Temporary Differences	With Reversing Temporary Differences
Taxable Income Before 833(b)	$11,000,000	$11,000,000
Reversing Temporary Differences		(3,000,000)
Net	11,000,000	8,000,000
Section 833 (b) Deduction	(11,000,000)	(8,000,000)
Taxable Income	C 0	0
Tax	0	0

6.6 BCBS has a 0% effective tax rate on taxable income in 20X3Its regular taxable income is $0, both "with and without" the $3,000,000 reversing deductible temporary differences since the section 833 (b) deduction changes by an equal amount. Therefore, BCBS would admit zero adjusted gross DTAs under paragraph 11.b.i., before reduction for any adjusted gross DTAs admitted under paragraph 11.a. The unused amount of adjusted gross DTAs related to the 21% rate differential under paragraph 11.b.i. would be taken into account under paragraph 11.c. as part of the amount of adjusted gross DTAs, after reduction for adjusted gross DTAs admitted under paragraphs 11.a. and 11.b., that can be offset against existing gross DTLs. The same approach would be used in 20X4 and 20X5 if the Company instead qualified for the three-year applicable period under paragraph 11.b.i.

Example 2:

6.7 ABC, a company taxed as a nonlife insurance company, is projecting an income tax loss in 20X3 of $20,000,000, which includes $5,000,000 of reversing deductible temporary differences that were part of its deferred inventory at 12/31/X2. ABC expects to pay $0 federal income taxes in 20X3 as a result of its tax loss. The Company's ExDTA ACL RBC percentage is 250% and therefore, it is required to use the one-year applicable period under paragraph 11.b.i.

© 1999-2023 National Association of Insurance Commissioners

20X3	Without Reversing Temporary Differences	With Reversing Temporary Differences
Taxable Income (Loss)	($15,000,000)	($15,000,000)
Reversing Temporary Differences		(5,000,000)
Taxable Income (Loss)	(15,000,000)	(20,000,000)
Tax	0	0

6.8 In 20X3, ABC expects to realize no tax benefit related to the $5,000,000 of reversing deductible temporary differences since they simply increase the amount of an NOL. Its expected income tax rate for 20X3 would be 0% and ABC would have $0 admitted adjusted gross DTAs under paragraph 11.b.i. However, if some or all of the reversing temporary differences could be absorbed in the carryback period, ABC would have an admitted adjusted gross DTA under paragraph 11.a.[35] The adjusted gross DTAs of $1,050,000 ($5,000,000 x 21%), related to ABC's reversing temporary differences, would also be available as part of its total adjusted gross DTAs, after reduction for adjusted gross DTAs admitted under paragraphs 11.a. and 11.b., that can be offset against gross DTLs in the paragraph 11.c. calculation.

6.9 If a company qualified to utilize the three-year applicable period under paragraph 11.b.i. and within that applicable period forecasted a taxable loss in one or more of the years and taxable income in the other years, the loss may be utilized in determining the with and without calculation. This loss utilization must be within the applicable period and would be limited to the amount allowed to be carried back or carried forward under applicable tax law.

7. Q – SSAP No. 101 provides that a reporting entity may admit deferred tax assets in an amount equal to federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years, including any amounts established in accordance with the provisions of SSAP No. 5R as described in paragraph 3.a. of this statement related to those periods. What is the meaning of the term "taxes paid"? [Paragraph 11.a.]

7.1 A – Under paragraph 11.a. of SSAP No. 101, the term "taxes paid" means the total tax (not including interest and penalties), that was or will be reported on the reporting entity's federal income tax returns for the applicable carryback period including any amounts established in accordance with the provision of SSAP No. 5R as described in paragraph 3.a. of SSAP No. 101 related to those periods. If a federal income tax return in the applicable carryback period has been amended, or adjusted by the IRS, "taxes paid" would reflect the impact of the amended tax return, or settlement with the IRS.

7.2 In applying the term "taxes paid" to a reporting entity that is party to a consolidated federal income tax return, the term "taxes paid" means the total federal income tax that was paid, or is expected to be paid to the common parent of the reporting entity's affiliated group, in accordance with the intercompany tax sharing agreement, with respect to the income tax years included in the applicable carryback period. "Taxes paid" includes amounts established in accordance with the provision of SSAP No. 5R as described in paragraph 3.a. of SSAP No. 101 related to those periods, including current federal income taxes payable (i.e., accrued in the entity's financial statements) related to the applicable carryback period. The ability of the reporting entity to recover (through loss or credit carrybacks) taxes that were paid to its common parent is generally governed by the terms and provisions of the affiliated group's intercompany tax sharing or tax allocation agreement.

7.3 For purposes of paragraphs 7.1 and 7.2, "taxes paid" includes both regular tax and alternative minimum tax for taxable years beginning before January 1, 2018. For taxable years beginning after

---

[35] For purposes of determining the amount of admitted adjusted gross DTAs under paragraph 11.a., ABC would look to the amount of existing temporary differences that reverse during a timeframe corresponding with the tax loss carryback provisions allowed by the applicable tax law, in this case 2 years, notwithstanding that it is limited to a one-year applicable period for purposes of paragraph 11.b.i.

© 1999-2023 National Association of Insurance Commissioners

December 31, 2017, the applicable carryback periods are two years for ordinary losses for entities taxed as nonlife insurance companies, and three years for capital losses for entities taxed both as nonlife and life insurance companies. Entities taxed as life insurance companies are not permitted to carryback ordinary losses arising in tax years after 2017.

8. Q – How is a company's computation of adjusted gross and admitted adjusted gross deferred tax assets impacted if it joins in the filing of a consolidated federal income tax return? [paragraphs 7, 11, 12 and 16]

8.1 A – For purposes of determining the amount of DTAs and the amount admitted under paragraph 11, the calculation should be made on a separate company, reporting entity basis. Under paragraph 7, a reporting entity's gross deferred tax assets and liabilities are determined by identifying its temporary differences. These temporary differences are measured using a "balance sheet" approach by comparing statutory and tax basis balance sheets for that entity. Once a reporting entity determines its gross DTAs, they are reduced for any statutory valuation allowance adjustment that may be necessary to determine the adjusted gross DTAs. The amount of adjusted gross DTAs that are admitted is determined in accordance with paragraph 11.

8.2 Under paragraph 11.a., an entity shall determine the amount of "federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years." Such amount shall include any amounts established for tax loss contingencies in accordance with paragraph 3.a. Consistent with guidance promulgated in other EAIWG interpretations, a reporting entity that files a consolidated federal income tax return with its parent should look to the amount of taxes it paid (or were allocable to it) as a separate legal entity in determining the admitted adjusted gross DTAs under paragraph 11.a. Furthermore, the admitted adjusted gross DTAs under paragraph 11.a. may not exceed the amount that the entity could reasonably expect to have refunded by its parent (paragraph 12.c.). The taxes paid by the reporting entity represent the maximum DTAs that may be admitted under paragraph 11.a., although the amount could be reduced pursuant to the group's tax allocation agreement.

8.3 The amount of admitted adjusted gross DTAs under paragraph 11.b.i. is limited to the amount that the reporting entity expects to realize within the applicable period (refer to the 11.b.i. column of the applicable Realization Threshold Limitation Table in paragraph 11.b.) following the balance sheet date on a separate company basis. The entity must estimate its separate company taxable income and the tax benefit that it expects to receive from reversing deductible temporary differences in the form of lower tax payments to its parent. If the reporting entity has reversing adjusted gross DTAs during the applicable period for which it does not expect to realize a benefit under paragraph 11.b. on a separate company basis, the reporting entity cannot admit an amount related to such DTAs under paragraph 11,b., even though the reporting entity may be paid a tax benefit for such items pursuant to its tax allocation agreement.

8.4 The following examples reflect this analysis and assume that the surplus limitation of paragraph 11.b.ii. is not applicable:

Example 1:

8.5 Assume Company A, an entity taxed as a nonlife insurance company, joins in the filing of a consolidated federal income tax return. Consolidated taxes paid in prior carryback years total $150, of which Company A paid $100. Company A has existing temporary differences that reverse by the end of the second calendar year following the balance sheet date[36] that, on a separate company reporting entity

[36] Corresponds to the timeframe permitted by the Internal Revenue Code for carrybacks of tax losses for a nonlife insurance company. For tax years beginning after 2017, entities taxed as life insurance companies are not permitted to carry back ordinary tax losses. However, entities taxed both as life insurance and nonlife insurance companies are permitted to carry back capital losses three taxable years. Accordingly, if this example involved a capital loss, it could apply either to an entity taxed as a life insurance company or as a nonlife insurance company.

© 1999-2023 National Association of Insurance Commissioners

basis and following the applicable carryback provisions of the Internal Revenue Code for each year in which temporary differences reverse, would give rise to a tax recovery of $125.

8.6 Under paragraph 11.a., Company A could record an admitted DTA of $100, equal to the taxes it paid. Due to the consolidated return filing, the $100 admitted under paragraph 11.a. could only be admitted provided this amount could reasonably be expected to be refunded by the parent [paragraph 12.c.] and would be available pursuant to a written income tax allocation agreement [paragraph 16.b.]. Additionally, assume Company A's ExDTA ACL RBC exceeds 300%, and that it expects to realize $175 from 3 years of DTA reversals, based on its separate company analysis. A 3-year period is applicable for paragraph 11.b.i., notwithstanding that only 2 years of DTA reversals may be taken int account under paragraph 11.a. due to tax limitations on operating loss carrybacks. In such case, Company A could admit an additional $75 under paragraph 11.b.i. ($175 less the $100 admitted under paragraph 11.a.).

Example 2:

8.7 Assume the same facts as in Example 1, except consolidated taxes paid in prior carryback years that could be recovered are $70 and, pursuant to a written income tax allocation agreement, taxes recoverable through loss carrybacks may not exceed consolidated taxes paid in prior carryback years.

8.8 In this situation, Company A would admit a DTA of $70 under paragraph 11.a. (recoverable taxes limited to consolidated taxes paid which could be refunded by the parent). In addition, $105 ($175-$70) of DTA may be admitted under paragraph 11.b.i., on the basis of Company A's separate company estimated taxable income and temporary differences that are expected to be realized within the applicable 3-year period following the balance sheet date.

Example 3:

8.9 Parent Company P files a consolidated federal income tax return with its nonlife insurance subsidiaries, R, S and T. Assume consolidated taxes that could be recovered through loss carryback total $450. However, in the prior carryback years $200 was paid by each of the subsidiaries, R, S and T. The difference between the amount paid by the subsidiaries ($600) and the amount available through loss carryback ($150) is attributable to interest expense incurred by Company P. Pursuant to the group's written income tax allocation agreement, in the case of loss carrybacks, taxes recoverable are limited to the consolidated taxes paid in the carryback years.

8.10 Because the adjusted gross DTA admitted under paragraph 11.a. for each reporting entity cannot exceed what each entity paid and could reasonably be expected to be refunded by P, no more than $450 in total may be admitted by the subsidiaries (under paragraph 11.a.). If the adjusted gross DTA associated with the subsidiaries' temporary differences that reverse in the 11.a. period exceed the $450 of taxes recoverable through loss carryback on a consolidated basis, the adjusted gross DTA admitted by the insurance subsidiaries under paragraph 11.a. should be allocated among the subsidiaries, consistent with the principles of its written income tax allocation agreement. This allocation would, in most instances, be based on each subsidiary's share of reversing temporary differences.

8.11 Under paragraph 11.c., an entity may admit its adjusted gross DTAs, after application of paragraphs 11.a. and 11.b., based upon offset against its own existing gross DTLs and not against gross DTLs of other members of the affiliated or consolidated group.

9a. Q – Current income taxes are defined by paragraph 3.a. to include tax loss contingencies for current and all prior years, computed in accordance with SSAP No. 5R, including the modifications in paragraphs 3.a.i, 3.a.ii. and 3.a.iii. How does the modification provided in paragraph 3.a.iii. impact the calculation of the tax contingencies recorded?

© 1999-2023 National Association of Insurance Commissioners

9.1 A – Paragraph 3.a.iii. provides the following rule: If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized.

9.2 For example, assume that a company claimed a deduction in its current year federal income tax return that resulted in a $100 permanent tax benefit37. Management must assume that the tax position will be examined by a taxing authority that has full knowledge of all relevant information (paragraph 3.a.ii.). In addition, management has determined that the probability of a liability is more likely than not (a likelihood of more than 50% pursuant to paragraph 3.a.i.) and that the liability can be reasonably estimated. Management's best estimate of the loss of the tax benefit is $40 (an amount not greater than 50% of the tax benefit originally recognized). Under these facts, the company would establish a current tax liability in the amount of $40, increasing its current income tax expense by $40.

DR	Current income tax expense	$40	
CR	Liability for current income tax		$40

9.3 Assume the same facts as 9.2, except that management determines the best estimate of the liability to be $60 (an amount greater than 50% of the tax benefit originally recorded). Under paragraph 3.a.iii., the company would be required to record a tax contingency of $100 offsetting the entire original tax benefit recorded. Under these facts, the company would establish a current tax liability in the amount of $100, increasing its current income tax expense by $100.

DR	Current income tax expense	$100	
CR	Liability for current income tax		$100

9b. Q – What impact, if any, does the inclusion of tax contingencies as a component of current income taxes have on the determination of deferred income taxes? [Paragraph 3.c.]

9.4 A – The purpose of this interpretation is to address when such contingencies should be "grossed-up" and reflected in the calculation of both statutory current and deferred federal income taxes.

9.5 Gross deferred tax assets and liabilities are determined in accordance with paragraph 7 of SSAP No. 101 and reflect the changes in temporary differences considered in estimating taxes currently payable and are manifested in the enterprise's tax basis balance sheet. If gross tax loss contingencies associated with temporary differences have been included in taxes currently payable, a corresponding adjustment must be made to the tax basis balance sheet used in the determination of gross deferred tax assets and liabilities. Deferred tax assets and liabilities are not adjusted for tax contingencies not associated with temporary differences (i.e. permanent differences).

9.6 For example, assume that a company determines, in accordance with SSAP No. 5R, including the modifications in paragraph 3.a. of SSAP No. 101, a tax loss contingency is required to be established for a $100 deduction claimed in a prior year federal income tax return. Assuming a 21% tax rate, the company would establish a current tax liability in the amount of $21, increasing its current income tax expense by $21.

DR	Current income tax expense	$21	
CR	Liability for current income tax		$21

[37] The treatment of tax contingencies related to temporary differences is discussed in Question 9b.

© 1999-2023 National Association of Insurance Commissioners

9.7 If the $100 deduction was associated with a temporary difference such as reserves, the company would make a corresponding adjustment to deferred taxes. The company would increase its gross deferred tax asset for reserves by $21 to reflect the future tax benefit associated with that reserve deduction. Any gross deferred tax asset recorded would still be subject to the admissibility requirements of paragraph 11.

DR	Gross deferred tax asset	$21	
CR	Change in net deferred tax (surplus)		$21

9.8 If the $100 deduction was associated with a permanent item such as meals and entertainment expenses, the company would make no corresponding adjustment to the deferred tax assets.

9.9 In determining the timing of when a tax loss contingency for a temporary item should be grossed up, paragraph 3.c. of SSAP No. 101 provides the following guidance:

> 3.c. In determining when tax loss contingencies associated with temporary differences should be included in current income taxes under Paragraph 3.a., and therefore included in deferred taxes under paragraph 7, a reporting entity is not required to "gross-up" its current and deferred taxes until such time as an event has occurred that would cause a re-evaluation of the contingency and its probability of assessment, e.g., the IRS has identified the item as one which may be adjusted upon audit. Such an event could be the reporting entity's (or its affiliate or parent in a consolidated income tax return) receipt of a Form 5701, Proposed Audit Adjustment, or could occur earlier upon receipt of an Information Document Request. At such time, the company must reassess the probability of an adjustment, reasonably re-estimate the amount of tax contingency as determined in accordance with paragraph 3.a., make any necessary adjustment to deferred taxes, and re-determine the admissibility of any adjusted gross deferred tax asset as provided in paragraph 11.

10a. Q – If the reporting entity adjusts the amount of regular taxable income and capital gains reported on a prior year income tax return from the amount originally determined for financial reporting purposes, how is the effect of the change reported in the current year? [Paragraph 19]

10.1 A – Paragraph 19 of SSAP No. 101 indicates that "income taxes incurred or received during the current year attributable to prior years shall be allocated, to the extent not previously provided, to net income in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* unless attributable, in whole or in part, to realized capital gains or losses, in which case, such amounts shall be apportioned between net income and realized capital gains and losses, as appropriate". Paragraph 19 also indicates that income taxes incurred are to be allocated to ordinary income and realized capital gains consistent with paragraph 38 of FAS 109. Paragraph 38 of FAS 109 provides, in general, that the portion of the total income tax expense remaining after allocation to ordinary income would be allocated to realized capital gains or losses.

10.2 In accordance with paragraph 19, the amount of additional federal income taxes incurred in the current year with respect to the prior year would be allocated between ordinary income and realized capital gain items. The amount of additional federal income tax expense allocated to ordinary income should be determined by comparing the amount of additional tax expense actually incurred to the amount of tax expense that would have been incurred had the adjustment to ordinary income been zero (a "with and without" computation). The remaining amount of additional federal income tax expense would then be allocated to realized capital gains. The amounts of additional federal income tax expense allocated to ordinary income and realized capital gains would be included in the current period's federal income tax expense and not as a direct adjustment to surplus.

10.3 As an example, assume Company X files its 20X1 federal income tax return and reports $1,000,000 of taxable income comprised of $800,000 of ordinary income and $200,000 of capital gain

© 1999-2023 National Association of Insurance Commissioners

income. Since the company is subject to taxation at a 21 percent tax rate on all its income, it incurred federal income tax expense of $210,000. In preparing its 20X1 statutory income tax provision, the company estimated that its liability for 20X1 federal income tax would be $147,000 based on $600,000 of ordinary income and $100,000 realized capital gains.

10.4 In determining the amount of "income taxes incurred" for its 20X2 financial statement, Company X must include the additional $63,000 of income tax expense incurred on its 20X1 federal income tax return ($210,000 actual tax incurred less $147,000 originally reported) in net income for 20X2 pursuant to paragraph 19 of SSAP No. 101 and not as a surplus adjustment. The $63,000 additional expense would be allocated to federal income taxes on net income and realized capital gains and losses as follows:

Total additional income tax expense	$63,000
Tax expense allocated to operations ($200,000 additional income x 34%)	42,000
Tax expense allocated to realized gains	$21,000

The tax expense allocated to operations was determined as follows:

Total recomputed tax expense	$210,000
Tax expense with only capital gain changes	168,000
Tax expense allocated to operations	$42,000

10.5 For all purposes of computing and allocating federal income taxes between operations and capital gains and losses, the character of the income or loss item as determined for statutory accounting purposes should be followed. Thus, if an income item is treated as a capital gain for statutory accounting purposes but as ordinary income for tax purposes, the federal income tax allocable to such income would be considered tax expense attributable to capital gains.

10b. Q – What is meant by the phrase in paragraph 18 "a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL"? [Paragraph 18]

10.6 A – Pursuant to Paragraph 18 of SSAP No. 101, a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL in accordance with paragraph 35 of FAS 109. Paragraph 35 of FAS 109 indicates that income taxes incurred are to be allocated between various items, including gains from operations and items charged or credited directly to shareholders' equity, such as the change in unrealized gains and losses.

10.7 To the extent a reporting entity's admitted DTA or its DTL changes during the year, the portion of such change allocable to changes in unrealized gains and losses during the year should be determined. The portion so allocable would be reported with, and netted against, the related change in unrealized gains and losses reported as a component of changes in surplus. The remaining portion of the change in DTA or DTL allocable to other temporary differences should be reported as a separate component of changes in surplus and/or change in nonadmitted assets.

10.8 For example, assume the reporting entity has DTAs of $1,000 relating to temporary differences other than unrealized losses, and a $100 DTL relating to unrealized gains as of the beginning of the year. Since the entity is subject to tax at 21 percent and all of its DTAs are expected to reverse within one year, the entity recorded a $900 net admitted DTA as of the beginning of the year.

10.9 During the current year, the DTAs relating to temporary differences other than unrealized losses did not change, but the DTL relating to the entity's unrealized gains increased by $100 (unrealized gains increased by $476 during the year). As a result, the amount of the entity's net admitted DTAs decreased by $100.

© 1999-2023 National Association of Insurance Commissioners

10.10 Pursuant to paragraph 18 of SSAP No. 101, the $100 decrease in the DTA during the year is to be allocated between changes attributable to temporary differences other than unrealized gains and losses and those attributable to unrealized gains and losses. Since the DTA relating to temporary differences other than unrealized gains and losses did not change during the year, the entire decrease is allocable to the change in unrealized gains. Therefore, the $100 decrease is to be allocated and netted against the $476 change in unrealized gains reported in change in surplus, resulting in a $376 net increase in surplus relating to its unrealized gains. If a portion of the unrealized loss DTA is determined to be nonadmitted, that amount is not recorded separately from the operating differences DTA. The change in the total nonadmitted DTA from period to period is recorded in surplus as a Change in Nonadmitted Assets.

11. Q – How are current and deferred income taxes to be accounted for in interim periods? [Paragraphs 12.d. and 20]

11.1 A – In setting forth the methodology for the computation of current income taxes (income taxes incurred) in interim periods, paragraph 20 states:

> 20. Income taxes incurred in interim periods shall be computed using an estimated annual effective current tax rate for the annual period in accordance with the methodology described in paragraphs 19 and 20 of *Accounting Principles Board Opinion No. 28, Interim Financial Reporting*. Estimates of the annual effective tax rate at the end of interim periods are, of necessity, based on estimates and are subject to subsequent refinement or revision. If a reliable estimate cannot be made, the actual effective tax rate for the year-to-date may be the best estimate of the annual effective tax rate. If an insurer is unable to estimate a part of its "ordinary" income (or loss) or the related tax (or benefit) but is otherwise able to make a reliable estimate, the tax (or benefit) applicable to the item that cannot be estimated shall be reported in the interim period in which the item is reported.

11.2 As a result, to the extent a reliable estimate can be made of an expected annual effective tax rate, reporting entities should apply this rate to net income before federal and foreign income taxes, in the case of property and casualty insurers and health insurers, and net income and realized capital gains before federal and foreign income taxes in the case of life insurers. If a reliable estimate of the expected annual effective tax rate cannot be made, reporting entities should compute current and deferred taxes at interim reporting dates using the most reliable information that is available.

11.3 The following examples illustrate the estimation process for income taxes incurred using the estimated annual effective rate:

Projected statutory net income[38] for current year		$10,000,000
Estimated annual permanent differences		(2,800,000)
Estimated annual temporary differences:		2,000,000
Projected taxable income for current year		$9,200,000
Projected federal tax for current year (at 21%)		$1,932,000
Estimated annual effective tax rate		19.322%

[38] For all examples in Question 11, statutory net income represents operating and capital gain income before federal and foreign income taxes.

© 1999-2023 National Association of Insurance Commissioners

11.4 As a result, assuming that during the calendar year the reporting entity's expectations as to its statutory and taxable income do not change, income tax incurred will be recorded on a quarterly basis as follows:

Quarter	Statutory Income (Loss)	Income Taxes Incurred
1	$(2,000,000)	$(386,400)
2	4,000,000	772,800
3	6,000,000	1,159,200
4	2,000,000	386,400
Total	$10,000,000	$1,932,000

11.5 If the reporting entity's expectations as to its statutory and taxable income change in the second quarter so that it expects that its annual effective rate will increase from 19.32% to 20%, it will record income taxes incurred in the second quarter of $786,400 (cumulative statutory income at end of the second quarter of $2,000,000 at 20% or $400,000 less $386,400 tax benefit recorded in first quarter).

11.6 As noted above, life insurers must estimate their annual effective tax rate and record income taxes incurred based on net income and realized capital gains before federal and foreign income taxes. With regard to intraperiod tax allocation, paragraph 19 states in relevant part:

> 19. Income taxes incurred shall be allocated to net income and realized capital gains or losses in a manner consistent with paragraph 38 of FAS 109.

11.7 As a result of the above and where the reporting entity expects realized capital gains or losses for the annual period, income taxes incurred must be allocated using a "with and without" methodology to net income before taxes and realized capital gains (see Question 10.4 for further discussion).

11.8 An example of this "with and without" methodology is as follows:

Projected statutory net income for current year		$10,000,000
Realized gains included above		(1,000,000)
		9,000,000
Estimated annual permanent differences:		(2,800,000)
Estimated annual temporary differences:		2,000,000
Projected ordinary taxable income for current year		$8,200,000
Projected ordinary federal tax for current year (at 21%)		$1,722,000
Projected capital gain federal tax for current year (at 21%)		210,000
Projected total federal tax for current year		$1,932,000
Estimated ordinary annual effective tax rate ($1,722,000 / $9,000,000)		19.13%
Estimated capital gain annual effective tax rate ($210,000 / $1,000,000)		21.0%
Estimated total annual effective tax rate ($1,932,000 / $10,000,000)		19.32%

11.9 As a result, assuming that during the calendar year the reporting entity's expectations as to its statutory and taxable income (including the amounts of ordinary and capital income) do not change, income tax incurred will be recorded on a quarterly basis as follows:

Quarter	Ordinary Income (Loss)	Capital Income (Loss)	Ordinary Taxes Incurred	Capital Taxes Incurred
1	$(1,000,000)	$(1,000,000)	$(191,333)	$(210,000)
2	3,000,000	1,000,000	573,999	210,000
3	5,000,000	1,000,000	956,667	210,000
4	2,000,000	0	383,667	0
Total	$9,000,000	$1,000,000	$1,722,000	$210,000

© 1999-2023 National Association of Insurance Commissioners

11.10 With respect to the recording of deferred taxes on an interim basis paragraph 12.d. states:

> 12.d. The phrases "reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years," "realized within one year of the balance sheet date" and "realized within three years of the balance sheet date" are intended to accommodate interim reporting dates and reporting entities that file on an other than calendar year basis for federal income tax purposes.

11.11 When considered in the context of paragraph 20, this paragraph requires the use of the annual effective rate when determining deferred taxes at an interim reporting date. As such, a reporting entity's admitted adjusted gross DTAs are determined in accordance with paragraph 11 by reference to the adjusted gross DTAs that will reverse each year in the applicable period. Note however, that due to the inherent unpredictability, and general inability to project changes in capital gains and losses on a quarter by quarter basis, the deferred tax implications of the changes in unrealized gains and losses should be recorded on a discrete period basis (i.e., based on the change in the amounts on a quarter by quarter basis). For example, in determining its admitted adjusted gross DTAs at March 31, 20X2, the reversal period referred to above is calendar years 20X3, 20X4 and 20X5 (i.e., expected adjusted gross DTAs at December 31, 20X2 that are expected to reverse in 20X3, 20X4 and 20X5).

11.12 This methodology is illustrated by the following example:

In this example, XYZ Co. is a nonlife insurance company[39] that has a two-year carryback potential and also has an ExDTA ACL RBC percentage of 700%.

Projected statutory net income for 20X3			$10,000,000
Estimated annual permanent differences:			(2,800,000)
Estimated annual temporary differences:			2,000,000
Projected ordinary taxable income for current year			$9,200,000
Temporary differences at December 31, 20X2:			$5,000,000
Estimated temporary differences at December 31, 20X3:			$7,000,000
Taxable income in carryback period (taxes paid at 21%):			
	Year ended December 31, 20X1	2,000,000	(420,000)
	Year ended December 31, 20X2	3,000,000	(630,000)
	Year ended December 31, 20X3	$9,200,000	($1,932,000)

Note: Year ended December 31, 20X3 taxable income and taxes paid considered in the calculation of its interim tax accruals are based on the reporting entity's estimate of its annual taxable income and taxes to be paid. This amount may differ from the quarterly federal income tax estimates it expects to make during the year.

	Reversing Period		
	20X3	**20X4**	**20X5**
December 31, 20X2 Temporary difference reversals:	$2,000,000	$1,500,000	$1,500,000
	20X4	20X5	20X6
December 31, 20X3 Temporary difference reversals:	$3,000,000	$2,000,000	$2,000,000

[39] Please note the results in this example could be different if XYZ Co. was a life insurance company because, under current Federal income tax law, life insurance companies are not permitted to carry back net operating losses. In such case, XYZ would not admit any deferred tax assets under paragraph 11.a. However, if XYZ were able to admit deferred tax assets for all of its 20X3-20X5 temporary difference reversals at December 31, 20X2 and for all of its 20X4-20X6 temporary difference reversals at December 31, 20X3 under paragraph 11.b. (based on adequate sources of projected taxable income in those reversal periods), then the results in this example would be unchanged.

© 1999-2023 National Association of Insurance Commissioners

Admitted deferred tax assets at December 31, 20X2:				
	Paragraph 11.a.			
		20X1	$2,000,000	
		20X2	1,500,000	
			3,500,000	
		Taxes paid at 21%		$735,000
	Paragraph 11.b.			315,000
	Paragraph 11.c.			0
	Total admitted			$1,050,000

Note: The recovery of federal income taxes paid in prior years under paragraph 11.a. is calculated in this example by carrying back 20X3's temporary difference reversals of $2,000,000 to offset 20X1's taxable income of $2,000,000; then carrying back 20X4's temporary difference reversals of $1,500,000 to offset $1,500,000 of 20X2's taxable income of $3,000,000 XYZ's projected taxable income for 20X3 ($9,200,000) is more than adequate to allow the remaining $315,000 of the $1,050,000 expected to be realized from temporary difference reversals in 20X3-20X5 ($5,000,000 x 21% = $1,050,000) to be recognized under paragraph 11.b.

Admitted deferred tax assets at December 31, 20X3:				
	Paragraph 11.a.			
		20X2	$3,000,000	
		20X3	2,000,000	
			5,000,000	
		Taxes paid at 21%		$1,050,000
	Paragraph 11.b.			420,000
	Paragraph 11.c.			0
	Total admitted			$1,470,000

Note: The recovery of federal income taxes paid in prior years under paragraph 11.a. is calculated in this example by carrying back 20X4's temporary difference reversals of $3,000,000 to offset 20X2's taxable income of $3,000,000; then carrying back 20X5's temporary difference reversals of $2,000,00 to offset $2,000,000 of 20X3's taxable income. It is assumed for this example that XYZ has more than adequate amounts of projected income for 20X4-20X6 to allow the remaining $420,000 of the $1,470,000 expected to be realized from temporary difference reversals in 20X4-20X6 ($7,000,000 x 21% = $1,470,000) to be recognized under paragraph 11.b.

Total estimated federal taxes for 20X3:		
	Income taxes incurred (current tax) ($9,200,000 X 21%)	$1,932,000
	Change in deferred tax ($1,050,000 – $1,470,000)	(420,000)
		$1,512,000

11.13 As a result of the above, the annual effective tax rate for current and deferred income taxes is as follows:

Current ($3,220,000/$10,000,000)	19.32%
Deferred (($700,000)/$10,000,000)	(4.2)%
Total annual effective rate	15.12%

© 1999-2023 National Association of Insurance Commissioners

Quarter	Statutory Income (Loss)	Income Taxes Incurred	Deferred Taxes
1	$(2,000,000)	$(386,400)	$84,000
2	4,000,000	772,800	(168,000)
3	6,000,000	1,159,200	(252,000)
4	2,000,000	386,400	(84,000)
Total	$10,000,000	$1,932,000	$(420,000)

11.14 To the extent that a reporting entity's estimated year end[40] admitted adjusted gross deferred tax assets are limited by its surplus pursuant to paragraph 11.b.ii., the annual effective deferred tax rate must be adjusted to consider the impact of this limitation on a quarterly basis.

12. Q – How do you present deferred taxes in the Annual Statement? [Paragraphs 8, 18, 21-28 and 36]

12.1 A – This answer is divided into three different parts.

Unrealized Capital Gains and Losses

12.2 SSAP No. 101 paragraph 18 states:

> 14. In accordance with paragraph 35 of FAS 109, a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL. The amount allocated shall be computed in a manner consistent with paragraph 38 of FAS 109.

12.3 The following illustrates the presentation of such requirement in the annual statement:

Illustration A Assumptions:

12.4 Entity grouped its investments in a reasonable and consistent manner and calculated the following gross amounts attributable to appreciation and depreciation in the fair value of its common stocks during 20X2 (see question 2 regarding grouping of assets and liabilities for measurement):

	Gross	Carrying Value	Rate	Tax Effected DTA (DTL)
Common stock carrying value 1/1/X2		$800,000		
Unrealized (loss)	($714,286)		21%	$150,000
Unrealized gain	571,429		21%	(120,000)
Net (loss) gain		(142,857)		$30,000
Common stock carrying value 12/31/X2		$657,143		

12.5 The journal entries need to present unrealized losses and gains net of tax are:

12/31/X2	DR	Change in unrealized capital gains and losses	$142,857
	CR	Common stock	($142,857)
	Recognition of net depreciation in FV of common stock		

12/31/X2	DR	Deferred tax asset	$150,000
	CR	Deferred tax liability	($120,000)
	CR	Change in deferred income taxes	($30,000)
	Recognition of gross deferred tax amounts		

[40] In the previous example, year-end is December 31, 20X3.

12/31/X2	DR	Change in deferred income taxes	$30,000
	CR	Change in unrealized capital gains and losses	($30,000)
	Reclass tax effect of net unrealized loss per paragraph 18 of SSAP No. 101		

12.6 Condensed 12/31/X2 Balance Sheet:

ASSETS	20X2	20X1		LIABILITIES, SURPLUS AND OTHER FUNDS	20X2	20X1
Common Stock	$657,143	$800,000		Surplus:		
Net deferred tax asset	30,000			Beginning of year	$800,000	
				Change in UNL	(112,857)[41]	
Total Assets	$687,143	$800,000		**Liabilities & Surplus**	$687,143	$800,000

Annual Statement Presentation

12.7 In accordance with SSAP No. 101, DTAs and DTLs shall be offset and presented as a single amount on the statement of financial position. The following illustrates this requirement:

Illustration B Assumptions:

12.8 The entity had the following balances:

	1/1/X2	12/31/X2	Change
Gross DTA	$200,000	$510,000	$310,000
Statutory Valuation Allowance Adjustment	0	10,000	10,000
Adjusted Gross DTA	200,000	500,000	300,000[42]
DTA Nonadmitted	25,000	150,000	125,000
Admitted Adjusted Gross DTA	175,000	350,000	175,000
Gross DTL	100,000	200,000	100,000
Net Admitted Adjusted Gross DTA	$75,000	$150,000	$75,000
Current FIT Recoverable	**$18,000**	**$20,000**	**$2,000**

12.9 Illustrative 12/31/X2 Balance Sheet for Illustration B:

ASSETS	Current Year			Prior Year
	1 Assets	2 Nonadmitted Assets	3 Net Admitted Assets (Cols. 1 - 2)	4 Net Admitted Assets
Current Federal and foreign income tax recoverable and interest thereon	$20,000	$0	$20,000	$18,000
Net deferred tax asset	$300,000	$150,000	$150,000	$75,000

[41] Computed at $142,857 (total change in UNG/UNL) - $30,000 tax effect.

[42] Includes $30,000 resulting from net unrealized losses as shown in Illustration A. As such the change in net deferred income taxes at 12/31/X2 is $170,000 ($300,000 (gross change in DTA) – $100,000 (gross change in DTL) – $30,000 reclass to net unrealized capital gains (losses)).

12.10 Illustrative 12/31/X2 Income Statement for Illustration B:

STATEMENT OF INCOME (P/C) SUMMARY OF OPERATIONS (Life & Health) STATEMENT OF REVENUES AND EXPENSES (Health)	1 Current Year	2 Prior Year
Gains and (losses) in surplus		
Change in net unrealized capital gains (losses) less capital gains tax of $30,000	$112,857	0
Change in net deferred income tax	$170,000	0
Change in nonadmitted assets	($125,000)	0

12.11 Illustrative 12/31/X2 Exhibit of Nonadmitted Assets for Illustration B:

	1 End of Current Year	2 End of Prior Year	3 Changes for Year (Increase) Decrease
Net deferred tax asset	$150,000	$25,000	($125,000)
Total	$150,000	$25,000	($125,000)

Illustration C Assumptions:

12.12 The entity had the following balances (1/1/X2 balances carried forward from Illustration B):

	1/1/X2	**12/31/X2**	**Change**
Gross DTA	$200,000	$510,000	$310,000
Statutory Valuation Allowance Adjustment	0	10,000	10,000
Adjusted Gross DTA	200,000	500,000	300,000[43]
DTA Nonadmitted	25,000	150,000	125,000
Net Admitted Adjusted Gross DTA	175,000	350,000	175,000
Gross DTL	100,000	200,000	100,000
Net Admitted Adjusted Gross DTA	$75,000	$150,000	$75,000
Current FIT Liability	**$7,000**	**$12,000**	**$5,000**

12.13 Illustrative 12/31/X2 Balance Sheet for Illustration C:

ASSETS	Current Year			Prior Year
	1 Assets	2 Nonadmitted Assets	3 Net Admitted Assets (Cols. 1 - 2)	4 Net Admitted Assets
Net deferred tax asset	$300,000	$150,000	$150,000	75,000

LIABILITIES, SURPLUS AND OTHER FUNDS	1 Current Year	2 Prior Year
Current Federal and foreign income taxes (including $0 on realized capital gains (Losses))	$12,000	$7,000

[43] Includes $30,000 resulting from net unrealized losses as shown in Illustration A. As such the change in net deferred income taxes at 12/31/X2 is $170,000 ($300,000 (gross change in DTA) – $100,000 (gross change in DTL) – $30,000 reclass to net unrealized capital gains (losses)).

12.14 Illustrative 12/31/X2 Income Statement for Illustration C:

STATEMENT OF INCOME (P/C) **SUMMARY OF OPERATIONS (Life & Health)** **STATEMENT OF REVENUES AND EXPENSES (Health)**	1 Current Year	2 Prior Year
Gains and (losses) in surplus		
Change in net unrealized capital gains (losses) less capital gains tax of $30,000	$112,857	0
Change in net deferred income tax	$170,000	0
Change in nonadmitted assets	($125,000)	0

12.15 Illustrative 12/31/X2 Exhibit of Nonadmitted Assets for Illustration C:

	1 End of Current Year	2 End of Prior Year	3 Changes for Year (Increase) Decrease
Net deferred tax asset	$150,000	$25,000	($125,000)
Total	$150,000	$25,000	($125,000)

Notes to the Financial Statements Disclosures:

12.16 SSAP No. 101 paragraphs 21-28 include extensive disclosure requirements. Although some of these amounts are presented on the face of the financial statements or in schedules or exhibits to the annual statement, they will be included in the Notes to the Financial Statements both in the annual statement and in the annual audited financial statements.

12.17 This section provides specific examples that illustrate the disclosures required in SSAP No. 101. The formats in the illustrations are not requirements. Some of the disclosure paragraphs of SSAP No. 101 are not specific as to whether the entity should disclose the nature of certain items or whether the entity should disclose specific amounts. The illustrations included herein use a combination of each method. The NAIC encourages a format that provides the information in the most understandable manner in the specific circumstances. The following illustrations are for a single hypothetical insurance enterprise, referred to as AlphaBeta Property & Casualty Insurance Company. All of the disclosures would be completed in the year-end annual statement and audited statutory financial statements.

12.18 Selected AlphaBeta P/C Company Financial Data at December 31, 20X2 (Balance Sheet information carried forward from Illustration B):

ASSETS	Current Year			Prior Year
	1 Assets	2 Nonadmitted Assets	3 Net Admitted Assets (Cols. 1 - 2)	4 Net Admitted Assets
Current federal and foreign income tax recoverable and interest thereon	$20,000	$0	$20,000	$18,000
Net deferred tax asset	$300,000	$150,000	$150,000	$75,000

CAPITAL AND SURPLUS ACCOUNT	1 Current Year	2 Prior Year
Change in net unrealized capital gains (losses) less capital gains tax of $30,000	($112,857)	0
Change in net deferred income tax	$170,000	0
Change in nonadmitted assets	($125,000)	0

EXHIBIT OF NONADMITTED ASSETS	1 End of Current Year	2 End of Prior Year	3 Changes for Year (Increase) Decrease
Net deferred tax asset	$150,000	$25,000	($125,000)

STATEMENT OF INCOME	20X2
UNDERWRITING INCOME	
Premiums earned	$5,250,000
DEDUCTIONS:	
Losses incurred	3,550,000
Loss adjustment expenses incurred	1,750,000
Other underwriting expenses incurred	525,000
Net underwriting gain (loss)	(575,000)
INVESTMENT INCOME	
Net investment gain (loss)	1,350,000
OTHER INCOME	
Total other income	125,000
Net income before dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes	900,000
Dividends to policyholders	200,000
Net income, after dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes	700,000
Federal and foreign income taxes incurred	220,000
Net income	$480,000

Paragraph 22 Illustration:

12.19 The components of the net DTA recognized in the Company's Assets, Liabilities, Surplus and Other Funds are as follows:

	12/31/20X2			12/31/20X1			Change		
	Ordinary	Capital	Total	Ordinary	Capital	Total	Ordinary	Capital	Total
Gross Deferred Tax Assets	$375,000	$135,000	$510,000	$93,000	$107,000	$200,000	$282,000	$28,000	$310,000

Paragraph 23 Illustration:

12.20 The Company has not recognized a deferred tax liability of approximately $30,000 of foreign withholding taxes for the undistributed earnings of its 100 percent owned foreign subsidiaries that arose in 20X2 and prior years because the Company does not expect those unremitted earnings to reverse and

[44] Disclose the ratio used by the reporting entity from the applicable Realization Threshold Limitation Table in paragraph 11.b. of SSAP No. 101 to determine the appropriate limitations of paragraph 11.b. In the event that late immaterial modifications to a reporting entity's statutory financial statements occur subsequent to initial completion of the statutory financial statements but prior to filing or similar deadline, these immaterial changes do not need to be reflected in this ratio if such modifications do not cause the reporting entity to change the threshold limitation from the applicable Realization Threshold Limitation Table.

[45] Provide the amount of adjusted capital and surplus used to calculate the limitation under paragraph 11.b.ii.

[46] The total percentage should be separately calculated and is not intended to be a summation of the percentages by tax character.

© 1999-2023 National Association of Insurance Commissioners

become taxable to the Company in the foreseeable future. A deferred tax liability will be recognized when the Company expects that it will recover those undistributed earnings in a taxable manner, such as through receipt of dividends or sale of the investments. As of December 31, 20X2, the undistributed earnings of these subsidiaries were approximately $200,000.

Paragraph 24 Illustration:

12.21 The provisions for incurred taxes on earnings for the years ended December 31 are:

	20X2	**20X1**
Federal	$180,000	$135,000
Foreign	40,000	15,000
	220,000	150,000
Federal income tax on net capital gains	52,000	36,000
Utilization of capital loss carry-forwards	(52,000)	(36,000)
Federal and foreign income taxes incurred	$220,000	$150,000

12.22 The tax effects of temporary differences that give rise to significant[47] portions of the deferred tax assets and deferred tax liabilities are as follows:

	12/31/20X2	12/31/20X1	Change
Deferred Tax Assets:			
Ordinary			
Discounting of unpaid losses	30,000	10,000	20,000
Unearned premium reserve	235,000	50,000	185,000
Investments	25,000	15,000	10,000
Pension accrual	65,000	15,000	50,000
Other (including items <5% of total ordinary tax assets)	20,000	3,000	17,000
Subtotal	375,000	93,000	282,000
Statutory valuation allowance adjustment	0	0	0
Nonadmitted	150,000	20,000	130,000
Admitted ordinary deferred tax assets	225,000	73,000	152,000
Capital			
Investments	125,000	45,000	80,000
Net capital loss carry-forward	10,000	62,000	(52,000)
Other (including items <5% of total capital tax assets)	0	0	0
Subtotal	135,000	107,000	28,000
Statutory valuation allowance adjustment	10,000	0	10,000
Nonadmitted	0	5,000	(5,000)
Admitted capital deferred tax assets	125,000	102,000	23,000
Admitted deferred tax assets	350,000	175,000	175,000
Deferred Tax Liabilities:			
Ordinary			
Investments	10,000	5,000	5,000
Fixed assets	6,000	5,000	1,000
Other (including items <5% of total ordinary tax liabilities)	5,000	5,000	0
Subtotal	21,000	15,000	6,000

[47] Significant is defined as any amount in excess of 5% of the total applicable DTAs or DTLs.

Capital:			
Investments	110,000	55,000	55,000
Real estate	64,000	25,000	39,000
Other (including items <5% of total capital tax liabilities)	5,000	5,000	
Subtotal	179,000	85,000	94,000
Deferred tax liabilities	200,000	100,000	100,000
Net deferred tax assets/liabilities	150,000	75,000	75,000

12.23 The change in net deferred income taxes is comprised of the following (this analysis is exclusive of nonadmitted assets as the Change in Nonadmitted Assets is reported separately from the Change in Net Deferred Income Taxes in the surplus section of the annual statement):

	Dec. 31, 20X2	**Dec. 31, 20X1**	**Change**
Adjusted gross deferred tax assets	$500,000	$200,000	$300,000
Total deferred tax liabilities	200,000	100,000	100,000
Net deferred tax assets (liabilities)	$300,000	$100,000	200,000
Tax effect of unrealized gains (losses)			(30,000)
Change in net deferred income tax			$170,000

Paragraph 25 Illustration[48]:

12.24 The provision for federal and foreign income taxes incurred is different from that which would be obtained by applying the statutory Federal income tax rate to income before income taxes. The significant items causing this difference are as follows:

	Dec. 31, 20X2	**Effective Tax Rate**
Provision computed at statutory rate	$147,000	21.0%
Tax exempt income deduction	(61,000)	(8.7)
Dividends received deduction	(50,000)	(7.1)
Tax differentials on foreign earnings	(21,000)	(3.0)
Change in statutory valuation allowance adjustment	10,000	1.4
Nondeductible goodwill	8,000	1.1
Other	7,000	2.4
Total	$50,000	7.1%
Federal and foreign income taxes incurred	$220,000	31.4%
Change in net deferred income taxes[49]	(170,000)	(24.3)
Total statutory income taxes	$50,000	7.1%

Paragraph 26 Illustration:

12.25 The Company has net capital loss carryforwards which expire as follows: 20X5, $9,000; 20X6; $1,000.

[48] This illustration includes both the rate reconciliation and the tax effected amounts although only one of these is required to be disclosed under SSAP No. 101.

[49] As reported in the surplus section of the annual statement. The change in net deferred income taxes is before nonadmission of any DTA. The change in nonadmitted DTA is reported together with the total change in nonadmitted assets and presented as a separate component of surplus.

© 1999-2023 National Association of Insurance Commissioners

Paragraph 27 Illustration:

12.26 The Company believes it is reasonably possible that the liability related to any federal or foreign tax loss contingencies may significantly increase within the next 12 months. However, an estimate of the reasonably possible increase cannot be made at this time.

Paragraph 28 Illustration:

12.27 The Company is included in a consolidated federal income tax return with its parent company, Alpha Corporation. The Company has a written agreement, approved by the Company's Board of Directors, which sets forth the manner in which the total combined federal income tax is allocated to each entity which is a party to the consolidation. Pursuant to this agreement, the Company has the enforceable right to recoup federal income taxes paid in prior years in the event of future net losses, which it may incur, or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

13. Q – How are tax-planning strategies to be considered in determining adjusted gross DTAs [Paragraph 7.e.] and admitted adjusted gross DTAs [Paragraphs 11.a., 11.b.i., 14 and 15]?

Overview:

13.1 A – Paragraph 14 of SSAP No. 101 states:

> In some circumstances, there are tax-planning strategies (including elections for tax purposes) that (a) are prudent and feasible, (b) a reporting entity ordinarily might not take, but would take to prevent an operating loss or tax credit carryforward from expiring unused, and (c) would result in realization of deferred tax assets. A reporting entity shall consider tax-planning strategies in (1) determining the amount of the statutory valuation allowance adjustment necessary under paragraph 7.e. and (2) the realization of deferred tax assets when determining admission under paragraph 11…

13.2 Paragraph 248 of FAS 109 additionally states that:

> Tax-planning strategies also may shift the estimated pattern and timing of future reversals of temporary differences. A tax-planning strategy to accelerate the reversal of deductible temporary differences in time to offset taxable income that is expected in an early future year might be the only means to realize a tax benefit for those deductible temporary differences if they otherwise would reverse and provide no tax benefit in some later future year(s).

13.3 As also provided in paragraph 14 of SSAP No. 101, if a tax-planning strategy is used to accelerate the reversal or realization of an item, any significant net-of-tax potential costs or losses associated with the implementation of the strategy should reduce the adjusted gross or admitted DTA.

13.4 When considering a prudent and feasible tax-planning strategy that is more likely than not to enable realization of all or part of an adjusted gross DTA or admitted DTA, paragraph 15 of SSAP No. 101 states that "paragraph 3 of this statement related to tax loss contingencies shall be applied in determining admissibility of deferred tax assets under paragraph 11 of this statement." Accordingly, a reporting entity must evaluate the likelihood, if a tax-planning strategy were implemented, of whether a tax loss contingency would be required to be recorded under paragraph 3.a. If so, the admitted tax benefit of a tax-planning strategy must be reduced by the amount of tax loss contingency so required. For example, if a tax-planning strategy provided a $100 admitted DTA, but the reporting entity estimated that a tax loss contingency reserve of $40 would be required if the strategy was implemented, the admitted DTA resulting from the tax-planning strategy would be reduced by $40. Since the admitted DTA would be net of any applicable tax loss contingencies, no separate tax loss contingencies would actually be recorded for these items.

© 1999-2023 National Association of Insurance Commissioners

Statutory Valuation Allowance Adjustment:

13.5 As discussed in Question 2.5, future realization of gross DTAs ultimately depends on the existence of sufficient taxable income of the appropriate character within the carryback or carryforward period available under the tax law. In determining adjusted gross DTAs, a reporting entity shall consider the four sources of taxable income that may be available under the tax law, one of which is tax-planning strategies[50]. As noted in paragraph 13 of SSAP No. 101, a reporting entity is not required to consider all four sources of taxable income if one or more sources are alone sufficient to support the conclusion that the entity will realize the tax benefits of its adjusted gross DTAs (i.e., a conclusion that no statutory valuation allowance is necessary). Accordingly, tax-planning strategies need not be considered if the other sources of taxable income are sufficient to realize the benefits of reversing existing DTAs. However, the reporting entity is required to consider the impact of tax planning strategies to determine the amount of the adjustment if a conclusion is reached that a statutory valuation allowance adjustment is necessary.

Tax-Planning Strategies for Admission of DTAs:

13.6 In order for a tax-planning strategy to support admission of adjusted gross DTAs under paragraph 11, the reporting entity must demonstrate that (1) the admitted DTAs would be realized either within a period that would give rise to a carryback of tax losses under the Internal Revenue Code, not to exceed three years (for admission under paragraph 11.a.), or within the applicable period (refer to the 11.b.i. column of the applicable Realization Threshold Limitation Table in paragraph 11) and (2) it would have the ability to implement the strategy. In such circumstances an entity may recognize, as admitted assets, the related DTAs that are realizable as a result of the available tax-planning strategy in accordance with paragraphs 11.a., 11.b.i. and 11.c. of SSAP No. 101. Using tax-planning strategies in determining the admissible DTA is analogous to the use of tax-planning strategies in determining the amount of the statutory valuation allowance adjustment required under paragraph 7.e. of SSAP No. 101 and paragraph 22 of FAS 109. Although a reporting entity may use tax-planning strategies in determining the portion of its adjusted gross DTAs that are admissible, it is not required to do so.

13.7 The requirement in paragraph 11.a. and 11.b.i. of SSAP No. 101 to consider only those DTAs that reverse or are realized within a period that would give rise to a carryback of losses under the Internal Revenue Code not to exceed three years (paragraph 11.a.) or within the applicable period following the balance sheet date (paragraph 11.b.i.) causes those DTAs which would otherwise reverse beyond such period to potentially provide no tax benefit (unless admitted under paragraph 11.c.). The potential reversal beyond the appropriate period is comparable to an expiring operating loss or tax credit carryforward, in that the deduction would not provide a tax benefit under SSAP No. 101. Thus, to the extent prudent and feasible tax-planning strategies exist to accelerate the reversal or realization of these DTAs, these strategies are comparable to those contemplated in paragraph 248 of FAS 109 above.

13.8 An example of a prudent and feasible tax-planning strategy is as follows:

13.9 Company A, a property/casualty insurance company for federal income tax purposes, has paid federal income taxes of $500,000 in each of calendar years 20X1 and 20X2. The company has an ExDTA ACL RBC percentage of 250% and therefore is required to use the one-year applicable period under paragraph 11.b.i. of SSAP No. 101. It has capital and surplus for purposes of paragraph 11.b.ii. of SSAP No. 101 of $20,000,000. Company A has an obligation to provide post-retirement health benefits to its employees. At December 31, 20X2, Company A has included a liability for $1,000,000 on its statutory-basis financial statements for post-retirement health benefits. This liability is not currently deductible for federal income tax purposes, and only $25,000 reverses within each of the next two calendar years. This is Company A's only DTA under SSAP No. 101, and there are no DTLs. Company A, absent any tax-

[50] See paragraph 13 of SSAP No. 101 and paragraph 21 of FAS 109. Examples of tax-planning strategies as provided in paragraph 13.d. are (1) accelerate taxable amounts to utilize expiring carryforward, (2) change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss, and (3) switch from tax-exempt to taxable investments.

© 1999-2023 National Association of Insurance Commissioners

planning strategies, would compute a DTA of $210,000 ($1,000,000 X 21%), and would admit $10,500 ($50,000 X 21%) under paragraph 11.a., and has no additional admitted DTA under paragraph 11.b.

13.10 Company A could implement a welfare benefit fund for tax purposes and contribute assets to the fund to cover qualifying welfare benefits. The contribution, subject to limitations, would be deductible for federal income tax purposes, and would have the effect of accelerating the deduction for Company A's post-retirement health benefits. Company A has computed that $300,000 could be contributed during 20X3 to the welfare benefit fund, and to implement this strategy, it would cost $15,000 on an after-tax basis. Company A management believe that this strategy is prudent and feasible, and the Company would be able to implement this strategy if necessary. Company A would be able to admit an additional $48,000 of DTAs ($300,000 X 21%, or $63,000, less $15,000 in costs) under paragraph 11.a., with no additional admitted DTA under paragraph 11.b.

13.11 A tax-planning strategy would not be considered prudent or feasible if use of the strategy would be inconsistent with assumptions inherent in statutory or other accounting basis financial statements. For instance, a tax-planning strategy to sell securities identified as "held to maturity" for GAAP-basis financial statements at a loss would not be prudent or feasible. Additionally, if a potential tax planning strategy were to involve selling debt securities at a loss, it would not be prudent or feasible if the securities had not been identified as impaired and the loss recognized for statutory-basis financial statements. Additionally, a tax-planning strategy that could not be implemented to realize a tax benefit within the requisite period following the balance sheet date or is inconsistent with management's business plan objectives would not be prudent and/or feasible.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles and related reporting for employers' pension obligations.

2. This statement establishes financial accounting and reporting standards for an insurer that offers pension benefits to its employees. Ordinarily, such benefits are periodic pension payments to retired employees or their survivors, but they may also include benefits payable as a single lump sum and other types of benefits, such as death benefits provided through a pension plan. (This statement does not apply to life insurance benefits provided outside a pension plan or postretirement health and welfare benefits.) Arrangements to provide pension benefits may take a variety of forms and may be financed in different ways. This statement applies to any arrangement that is similar in substance to a pension plan regardless of form or financing. This statement applies to a written plan and to a plan whose existence may be implied from a well-defined, although perhaps unwritten, practice of paying postretirement benefits. This statement supersedes the guidance in *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8*, nullifies and incorporates the guidance in *INT 99-26: Offsetting Pension Assets and Liabilities,* and *INT 04-12: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan*, and nullifies *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations*, *INT 03-18: Accounting for a Change in the Additional Minimum Liability in SSAP No. 8—Pensions* and *INT 04-03: Clarification for Calculating the Additional Minimum Pension Liability under SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8, paragraph 16.f.*. This statement also modifies *INT 04-17: Impact of Medicare Modernization on Postretirement Benefits* to remove reference to pensions as this interpretation only addresses postretirement benefits other than pensions.

SUMMARY CONCLUSION

Defined Benefit Plans

Single-Employer Defined Benefit Pension Plans

3. A defined benefit pension plan is one that defines an amount of pension benefit to be provided, usually as a function of one or more factors such as age, years of service, or compensation. (Hybrid pension plans that refer to an account balance, rather than a monthly annuity at retirement (also known as cash balance plans) are considered defined benefit plans for purposes of applying this statement.) For defined benefit plans, reporting entities shall adopt *FAS 158: Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106, and 132(R)*

© 1999-2023 National Association of Insurance Commissioners

(FAS 158) and *FASB Staff Position FAS 136(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 136(R)-1) with modifications as discussed within paragraph 87.

4. A pension benefit is part of the compensation paid to an employee for services. In a defined benefit pension plan, the employer promises to provide, in addition to current wages, retirement income payments in future years after the employee retires or terminates service. Generally, the amount of benefit to be paid depends on a number of future events that are incorporated in the plan's benefit formula, often including how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation in the years immediately before retirement or termination. In most cases, services are rendered over a number of years before an employee retires and begins collecting the pension. Even though the services rendered by an employee are complete and the employee has retired, the total amount of benefit that the employer has promised and the cost to the employer of the services rendered are not precisely determinable but can only be estimated using the benefit formula and estimates of the relevant future events, many of which the employer cannot control.

Elements of Pension Accounting

5. Net periodic pension cost is made up of several components that reflect different aspects of the employer's financial arrangements as well as the cost of benefits earned by employees. The cost of a benefit can be determined without regard to how the employer decides to finance the plan. The service cost component of net periodic pension cost is the actuarial present value of benefits attributed by the plan's benefit formula to services rendered by employees during the period. The service cost component is conceptually the same for an unfunded plan, a plan with minimal funding, and a well-funded plan. The other components of net periodic pension cost are interest cost (interest on the projected benefit obligation, which is a discounted amount), actual[1] return on plan assets, amortization of any prior service cost or credit included in unassigned funds (surplus), and gain or loss, which includes, to the extent recognized, amortization of the net gain or loss included in unassigned funds (surplus) (refer to paragraph 24).

6. The projected benefit obligation is the actuarial present value of all benefits attributed by the plan's benefit formula to employee service rendered prior to that date. The projected benefit obligation is measured using an assumption as to future compensation levels if the pension benefit formula is based on those future compensation levels. The projected benefit obligation is a measure of benefits attributed to service to date assuming that the plan continues in effect and that estimated future events (including compensation increases, turnover, and mortality) occur.

7. The accumulated benefit obligation is the actuarial present value of benefits attributed by the pension benefit formula to employee service rendered prior to that date and based on current and past compensation levels. The accumulated benefit obligation differs from the projected benefit obligation in that it includes no assumption about future compensation levels. For plans with flat-benefit or non-pay-related pension benefit formulas, the accumulated benefit obligation and the projected benefit obligation are the same.

8. Plan assets are assets that have been segregated and restricted to provide for pension benefits. The amount of plan assets includes amounts contributed by the employer and amounts earned from investing

[1] To address a question on how the expected return on plan assets affects the determination of net periodic pension cost if the actual return on plan assets for a period is a component of net periodic pension cost, it is noted that the expected return on plan assets generally will be different from the actual return on plan assets for the year. This statement provides for recognition of that difference (a net gain or loss) in unassigned funds in the period it arises. The amount recognized in unassigned funds is also a component of net periodic pension cost for the current period. Thus, the amount recognized in unassigned funds and the actual return on plan assets, when aggregated, equal the expected return on plan assets. The amount recognized in unassigned funds affects future net periodic pension cost through subsequent amortization, if any, of the net gain or loss. (This footnote reflects guidance included in E12 of FSP FAS 158-1.)

© 1999-2023 National Association of Insurance Commissioners

the contributions, less benefits paid. Assets not segregated in a trust or otherwise effectively restricted so that they cannot be used by the employer for other purposes are not considered plan assets even though it may be intended that such assets be used to provide for pension benefits. Amounts accrued by the employer but not yet paid to the plan are also not considered plan assets. Securities of the employer held by the plan are includable in plan assets provided they are transferable.

Recognition of Net Periodic Pension Cost

9. The following components shall be included in the net pension cost for a period by an employer sponsoring a defined benefit pension plan: a) Service cost; b) Interest cost; c) Actual return on plan assets; d) Amortization of any prior service cost or credit included in unassigned funds (surplus); e) Gain or loss (including the effects of changes in assumptions) to the extent recognized; and f) Amortization of any net transition asset or obligation existing at the date of initial application of this statement and remaining in unassigned funds (surplus).

Service Cost

10. The service cost component recognized in a period shall be determined as the actuarial present value of benefits attributed by the pension benefit formula to employee service (including both vested and nonvested employees) during that period.

11. The prior service cost for nonvested employees not previously recognized[2] is not required to be included in net periodic pension cost entirely in the year this standard is adopted. Unrecognized prior service cost for nonvested employees shall be amortized as a component of net periodic pension cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized (refer to paragraphs 91-93 for transition guidance related to the recognition of the prior service cost for nonvested employees though unassigned surplus).

Interest Cost

12. The interest cost component recognized in a period shall be determined as the increase in the projected benefit obligation due to the passage of time. Measuring the projected benefit obligation as a present value requires accrual of an interest cost at rates equal to the assumed discount rates.

Actual Return on Plan Assets

13. For a funded plan, the actual return on plan assets shall be determined based on the fair value of plan assets at the beginning and the end of the period, adjusted for contributions and benefit payments.

Prior Service Cost

14. Plan amendments (including initiation of a plan) often include provisions that grant increased benefits based on services rendered in prior periods. Because plan amendments are granted with the expectation that the employer will realize economic benefits in future periods, the cost of providing such retroactive benefits (prior service cost) is not required to be included in net periodic pension cost entirely in the year of the amendment but provides for recognition during the future service periods of those employees active at the date of the amendment who are expected to receive benefits under the plan.

---

[2] The previous statutory accounting guidance in *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8* excluded nonvested employees from the service cost calculation. This exclusion has been eliminated with the issuance of this SSAP.

© 1999-2023 National Association of Insurance Commissioners

15. A plan amendment that retroactively increases benefits (including benefits that are granted to retirees) increases the projected benefit obligation. The cost of the benefit improvement shall be recognized as a charge to unassigned funds (surplus) at the date of the amendment. Except as specified in paragraphs 16-17, that prior service cost shall be amortized as a component of net periodic pension cost by assigning an equal amount to each future period of service of each employee active at the date of the amendment who is expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the cost of retroactive plan amendments affecting benefits of inactive participants shall be amortized based on the remaining life expectancy of those participants instead of based on the remaining service period. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized.

16. Consistent use of an alternative approach that more rapidly amortizes the cost of retroactive amendments is acceptable. For example, a straight-line amortization of the cost over the average remaining service period of employees expected to receive benefits under the plan is acceptable. The alternative method used shall be disclosed.

17. In some situations, a history of regular plan amendments and other evidence may indicate that the period during which the employer expects to realize economic benefits from an amendment granting retroactive benefits is shorter than the entire remaining service period of the active employees. Identification of such situations requires an assessment of the individual circumstances and the substance of the particular plan situation. In those circumstances, the amortization of prior service cost shall be accelerated to reflect the more rapid expiration of the employer's economic benefits and to recognize the cost in the periods benefited.

18. A plan amendment that retroactively reduces, rather than increases, benefits decreases the projected benefit obligation. The reduction in benefits shall be recognized as a credit (prior service credit) to unassigned funds (surplus) that shall be used first to reduce any remaining prior service cost included in unassigned funds (surplus). Any remaining prior service credit shall be amortized as a component of net periodic pension cost on the same basis as the cost of a benefit increase.

Gains and Losses

19. Gains and losses are changes in the amount of either the projected benefit obligation or plan assets resulting from experience different from that assumed and from changes in assumptions. This statement does not distinguish between those sources of gains and losses. Gains and losses include amounts that have been realized, as well as amounts that are unrealized. Because gains and losses may reflect refinements in estimates as well as real changes in economic values and because some gains in one period may be offset by losses in another or vice versa, recognition of gains and losses as components of net pension cost of the period in which they arise is not required. Gains and losses that are not recognized immediately as a component of net periodic pension cost shall be recognized as increases or decreases in unassigned funds (surplus) as they arise.

20. The expected return on plan assets shall be determined based on the expected long-term rate of return on plan assets and the fair value of plan assets.

21. Asset gains and losses are differences between the actual return on assets during a period and the expected return on assets for that period. Asset gains and losses include changes reflected in the fair value of assets.

22. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net pension cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10 percent of the greater of the projected benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active employees expected to receive benefits under the plan. If all or almost all of a

© 1999-2023 National Association of Insurance Commissioners

plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of average remaining service.

23. Any systematic method of amortizing gains or losses may be used in lieu of the minimum specified in paragraph 22 provided that (a) the minimum is used in any period in which the minimum amortization is greater (reduces the net balance included in unassigned funds (surplus) by more), (b) the method is applied consistently, (c) the method is applied similarly to both gains and losses, and (d) the method used is disclosed.

24. The gain or loss component of net periodic pension cost shall consist of (a) the difference between the actual return on plan assets and the expected return on plan assets and (b) amortization of the net gain or loss included in unassigned funds (surplus).

Recognition of Liabilities and Assets

25. If the projected benefit obligation (considering both vested and nonvested participants) exceeds the fair value of plan assets, the employer shall recognize in its statement of financial position a liability that equals the unfunded projected benefit obligation. If the fair value of plan assets exceeds the projected benefit obligation, the employer shall recognize in its statement of financial position an asset that equals the overfunded projected benefit obligation. This prepaid asset resulting from the excess of the fair value of plan assets over the projected benefit obligation shall be nonadmitted.

26. If multiple single-employer plans exist, the employer shall aggregate the statuses of all overfunded plans and recognize that amount as an asset in its statement of financial position. It also shall aggregate the statuses of all underfunded plans and recognize that amount as a liability in its statement of financial position. It is not acceptable statutory accounting practice to offset pension or postretirement benefits other than pensions liability generated by one plan against the prepaid assets of another plan.

27. The asset or liability that is recognized pursuant to paragraph 25 may result in a temporary difference, as defined in *SSAP No. 101—Income Taxes*. The deferred tax effects of any temporary differences shall be recognized in income tax expense or benefit for the year and shall be allocated pursuant to SSAP No. 101.

28. If a new determination of the funded status of a plan to be recognized as an asset or a liability in the employer’s statement of financial position is made, or when net gains or losses, prior service costs or credits, or the net transition asset or obligation existing at the date of initial application of this statement are amortized as components of net periodic pension cost, the related balances for those net gains or losses, prior service costs or credits, and transition asset or obligation in unassigned funds (surplus) shall be adjusted as necessary and reported in unassigned funds (surplus).

Measurement of Cost and Obligations

29. The service component of net periodic pension cost, the projected benefit obligation, and the accumulated benefit obligation are based on an attribution of pension benefits to periods of employee service and on the use of actuarial assumptions to calculate the actuarial present value of those benefits. Actuarial assumptions reflect the time value of money (discount rate) and the probability of payment (assumptions as to mortality, turnover, early retirement, and so forth).

Attribution

30. Pension benefits ordinarily shall be attributed to periods of employee service based on the plan's benefit formula to the extent that the formula states or implies an attribution. In some situations a history of regular increases and other evidence may indicate that an employer has a present commitment to make future amendments and that the substance of the plan is to provide benefits attributable to prior service

© 1999-2023 National Association of Insurance Commissioners

that are greater than the benefits defined by the written terms of the plan. In those situations, the substantive commitment shall be the basis for the accounting, and the existence and nature of the commitment to make future amendments shall be disclosed.

31. In some situations a history of regular increases in non-pay-related benefits or benefits under a career-average-pay plan and other evidence may indicate that an employer has a present commitment to make future amendments and that the substance of the plan is to provide benefits attributable to prior service that are greater than the benefits defined by the written terms of the plan. In those situations, the substantive commitment shall be the basis for the accounting, and the existence and nature of the commitment to make future amendments shall be disclosed.

32. Some plans may have benefit formulas that attribute all or a disproportionate share of the total benefits provided to later years of service, thereby achieving in substance a delayed vesting of benefits. For such plans the total projected benefit shall be considered to accumulate in proportion to the ratio of the number of completed years of service to the number that will have been completed when the benefit is first fully vested. If a plan's benefit formula does not specify how a particular benefit relates to services rendered, the benefit shall be considered to accumulate as follows:

a. For benefits of a type includable in vested benefits, in proportion to the ratio of the number of completed years of service to the number that will have been completed when the benefit is first fully vested.

b. For benefits of a type not includable in vested benefits, in proportion to the ratio of completed years of service to total projected years of service.

Assumptions

33. Each significant actuarial assumption used shall reflect the best estimate solely with respect to that individual assumption. All assumptions shall presume that the plan will continue in effect in the absence of evidence that it will not continue.

34. Assumed discount rates shall reflect the rates at which the pension benefits could be effectively settled. It is appropriate in estimating those rates to look to available information about rates implicit in current prices of annuity contracts that could be used to effect settlement of the obligation. In making those estimates, employers may also look to rates of return on high-quality fixed-income investments currently available and expected to be available during the period to maturity of the pension benefits. Assumed discount rates are used in measurements of the projected, accumulated, and vested benefit obligations and the service and interest cost components of net periodic pension cost.

35. The objective of selecting assumed discount rates using the method noted in paragraph 34 is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the pension benefits when due. Notionally, that single amount, the projected benefit obligation, would equal the fair value of a portfolio of high-quality zero-coupon bonds whose maturity dates and amounts would be the same as the timing and amount of the expected future benefit payments. Because cash inflows would equal cash outflows in timing and amount, there would be no reinvestment risk in the yields to maturity of the portfolio. However, in other than a zero coupon portfolio, such as a portfolio of long-term debt instruments that pay semiannual interest payments or whose maturities do not extend far enough into the future to meet expected benefit payments, the assumed discount rates (the yield to maturity) need to incorporate expected reinvestment rates available in the future. Those rates shall be extrapolated from the existing yield curve at the measurement date. The determination of the assumed discount rate is separate from the determination of the expected rate of return on plan assets whenever the actual portfolio differs from the hypothetical portfolio above. Assumed discount rates shall be reevaluated at each measurement date. If

© 1999-2023 National Association of Insurance Commissioners

the general level of interest rates rises or declines, the assumed discount rates shall change in a similar manner.

36. Interest rates vary depending on the duration of investments; for example, U.S. Treasury bills, 7-year bonds and 30-year bonds have different interest rates. Thus, the weighted-average discount rate (interest rate) inherent in the prices of annuities (or a dedicated bond portfolio) will vary depending on the length of time remaining until individual benefit payment dates. A plan covering only retired employees would be expected to have significantly different discount rates from one covering a work force of 30-year-olds. A properly weighted average rate can be used for aggregate computations such as the service cost and interest cost component of net pension cost for the period.

37. In addition to a properly weighted average rate, as stated in paragraph 36, an entity may elect to measure the service cost and interest cost components of net periodic benefit cost by using individual spot rates derived from an acceptable high-quality corporate bond yield curve and matched with separate cash flows for each future year (also known as the spot rate approach). If the election is made to switch from a weighted-average approach to the spot rate approach, this approach shall be consistently applied to all defined benefit plans and to the measurement of both service and interest cost. This change shall be reflected as a change in estimate as prescribed in *SSAP No. 3—Accounting Changes and Corrections of Errors* and once changed; the company should not revert back to the weighted-average discount rate in future periods. This change in estimate shall be appropriately disclosed in accordance with this statement, SSAP No. 3 and the Preamble.

38. An insurance company deciding on the price of an annuity contract will consider the rates of return available to it for investing the premium received and the rates of return expected to be available to it for reinvestment of future cash flows from the initial investment during the period until benefits are payable. That consideration is indicative of a relationship between rates inherent in the prices of annuity contracts and rates available in investment markets. It would be appropriate for employers to consider that relationship and information about investment rates in estimating the discount rates required for application of this statement.

39. The expected long-term rate of return on plan assets shall reflect the average rate of earnings expected on the funds invested or to be invested to provide for the benefits included in the projected benefit obligation. In estimating that rate, appropriate consideration should be given to the returns being earned by the plan assets in the fund and the rates of return expected to be available for reinvestment. The expected long-term rate of return on plan assets is used to compute the expected return on assets.

40. The service cost component of net periodic pension cost and the projected benefit obligation shall reflect future compensation levels to the extent that the pension benefit formula defines pension benefits wholly or partially as a function of future compensation levels. Future increases for which a present commitment exists shall be similarly considered. Assumed compensation levels shall reflect an estimate of the actual future compensation levels of the individual employees involved, including future changes attributed to general price levels, productivity, seniority, promotion, and other factors. All assumptions shall be consistent to the extent that each reflects expectations of the same future economic conditions, such as future rates of inflation. Measuring service cost and the projected benefit obligation based on estimated future compensation levels entails considering indirect effects, such as changes under existing law in social security benefits or benefit limitations that would affect benefits provided by the plan.

41. The accumulated benefit obligation shall be measured based on employees' history of service and compensation without an estimate of future compensation levels. Excluding estimated future compensation levels also means excluding indirect effects of future changes such as increases in the social security wage base. In measuring the accumulated benefit obligation, projected years of service shall be a factor only in determining employees' expected eligibility for particular benefits, such as:

© 1999-2023 National Association of Insurance Commissioners

a. Increased benefits that are granted provided a specified number of years of service are rendered

b. Early retirement benefits

c. Death benefits

d. Disability benefits

42. Automatic benefit increases specified by the plan (for example, automatic cost-of-living increases) that are expected to occur shall be included in measurements of the projected, accumulated, and vested benefit obligations, and the service cost component. Also, retroactive plan amendments shall be included in the computation of the projected and accumulated benefit obligations once they have been contractually agreed to, even if some provisions take effect only in future periods.

Measurement of Plan Assets

43. Plan investments, whether equity or debt securities, real estate, or other, shall be measured at their fair value as of the measurement date. The fair value of an investment shall be reduced by brokerage commissions and other costs normally incurred in a sale, if those costs are significant (similar to fair value less costs to sell).

44. Plan assets used in plan operations (for example, buildings, equipment, furniture and fixtures, and leasehold improvements) shall be measured at cost less accumulated depreciation or amortization for all purposes.

45. The measurements of plan assets and benefit obligations shall be as of the date of the employer's fiscal year-end statement of financial position. Requiring that the pension measurements be as of a particular date is not intended to require that all procedures be performed after that date. As with other financial statement items requiring estimates, much of the information can be prepared as of an earlier date and projected forward to account for subsequent events (for example, employee service). Unless a business entity remeasures both its plan assets and benefit obligations during the fiscal year, the funded status it reports in its interim-period statement of financial position shall be the same asset or liability recognized in the previous year-end statement of financial position adjusted for (1) subsequent accruals of net periodic pension cost that exclude the amortization of amounts previously recognized in other unassigned funds (surplus) (for example, subsequent accruals of service cost, interest cost, and return on plan assets) and (2) contributions to a funded plan, or benefit payments. Sometimes, a business entity remeasures both plan assets and benefit obligations during the fiscal year. That is the case, for example, when a significant event such as a plan amendment, settlement, or curtailment occurs that calls for a remeasurement. Upon remeasurement, a business entity shall adjust its statement of financial position in a subsequent interim period to reflect the overfunded or underfunded status of the plan consistent with that measurement date.

46. If a significant event caused by the employer (such as a plan amendment, settlement, or curtailment) that requires an employer to re-measure both plan assets and benefit obligations does not coincide with a month-end, the employer may elect to re-measure plan assets and benefit obligations using the month-end that is closest to the date of the significant event. This re-measurement would not eliminate the requirement for a year-end measurement of plan assets and benefit obligations required in paragraph 45.

47. If an employer re-measures plan assets and benefit obligations during the fiscal year in accordance with paragraph 46, the employer shall adjust the fair value of plan assets and the actuarial present value of benefit obligations for any effects of the significant event that may or may not be captured in the month-end measurement (for example, if the closest month-end is before the date of a

© 1999-2023 National Association of Insurance Commissioners

partial settlement, then the measurement of plan assets may include assets that are no longer part of the plan). An employer shall not adjust the fair value of plan assets and the actuarial present value of benefit obligations for other events occurring between the month-end date used to re-measure plan assets and benefit obligations and the employer's fiscal year-end that may be significant to the measurement of defined benefit plan assets and obligations, but are not caused by the employer (for example, changes in market prices or interest rates).

48. Measurements of net periodic pension cost for both interim and annual financial statements shall be based on the assumptions used for the previous year-end measurements unless more recent measurements of both plan assets and obligations are available or a significant event occurs, such as a plan amendment, that would ordinarily call for such measurements.

Employers with Two or More Plans

49. An employer that sponsors two or more separate defined benefit pension plans shall determine net periodic pension cost, liabilities, and assets by separately applying the provisions of this statement to each plan. In particular, unless an employer clearly has a right to use the assets of one plan to pay benefits of another, a liability required to be recognized for one plan shall not be reduced or eliminated because the employer has recognized an asset for another plan that has assets in excess of its projected benefit obligation. (As noted within paragraph 26, overfunded plans shall be aggregated for asset reporting (nonadmitted) and underfunded plans shall be aggregated for liability reporting.)

Annuity Contracts

50. An annuity contract is a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium. An annuity contract is irrevocable and involves the transfer of significant risk from the employer to the insurance company. Some annuity contracts (participating annuity contracts) provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser. If the substance of a participating contract is such that the employer remains subject to all or most of the risks and rewards associated with the benefit obligation covered and the assets transferred to the insurance company, that contract is not an annuity contract for purposes of this statement.

51. To the extent that benefits currently earned are covered by annuity contracts, the cost of those benefits shall be the cost of purchasing the contracts, except as provided in paragraph 54. That is, if all the benefits attributed by the plan's benefit formula to service in the current period are covered by nonparticipating annuity contracts, the cost of the contracts determines the service cost component of net pension cost for that period.

52. Benefits provided by the pension benefit formula beyond benefits provided by annuity contracts (for example, benefits related to future compensation levels) shall be accounted for according to the provisions of this statement applicable to plans not involving insurance contracts.

53. Benefits covered by annuity contracts shall be excluded from the projected benefit obligation and the accumulated benefit obligation. Except as provided in paragraph 54, annuity contracts shall be excluded from plan assets.

54. Some annuity contracts provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser, the effect of which is to reduce the cost of the plan. The purchase price of a participating annuity contract ordinarily is higher than the price of an equivalent contract without participation rights. The difference is the cost of the participation right. The cost of the participation right shall be recognized at the date of purchase as a nonadmitted asset. In subsequent

© 1999-2023 National Association of Insurance Commissioners

periods, the participation right shall be nonadmitted and measured at its fair value if the contract is such that fair value is reasonably estimable. Otherwise, the participation right shall be measured at its amortized cost (not in excess of its net realizable value), and the cost shall be amortized systematically over the expected dividend period under the contract.

Other Contracts with Insurance Companies

55. Insurance contracts that are in substance equivalent to the purchase of annuities shall be accounted for as such. Other contracts with insurance companies shall be accounted for as investments and measured at fair value. For some contracts, the best available evidence of fair value may be contract value. If a contract has a determinable cash surrender value or conversion value, that is presumed to be its fair value.

Defined Benefit Plans – Settlements and Curtailments

56. A settlement is defined as a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a pension benefit obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement. Examples of transactions that constitute a settlement include (a) making lump-sum cash payments to plan participants in exchange for their rights to receive specified pension benefits and (b) purchasing nonparticipating annuity contracts to cover vested benefits.

57. A transaction that does not meet all of the above three criteria does not constitute a settlement for purposes of this statement. For example, investing in a portfolio of high-quality fixed-income securities with principal and interest payment dates similar to the estimated payment dates of benefits may avoid or minimize certain risks. However, that does not constitute a settlement because the investment decision can be reversed, and such a strategy does not relieve the employer (or the plan) of primary responsibility for a pension obligation nor does it eliminate significant risks related to the obligation.

58. The definition of an annuity contract is included in paragraph 50. If the substance of a participating annuity contract is such that the employer remains subject to all or most of the risks and rewards associated with the benefit obligation covered or the assets transferred to the insurance company, the purchase of the contract does not constitute a settlement.

Curtailment

59. A curtailment is an event that significantly reduces the expected years of future service of present employees or eliminates for a significant number of employees the accrual of defined benefits for some or all of their future services. Curtailments include:

a. Termination of employees' services earlier than expected, which may or may not involve closing a facility or discontinuing a component of an entity.

b. Termination or suspension of a plan so that employees do not earn additional defined benefits for future services. In the latter situation, future service may be counted toward vesting of benefits accumulated based on past service.

Relationship of Settlements and Curtailments to Other Events

60. A settlement and a curtailment may occur separately or together. If benefits to be accumulated in future periods are reduced but the plan remains in existence and continues to pay benefits, to invest assets, and to receive contributions, a curtailment has occurred but not a settlement. If an employer purchases nonparticipating annuity contracts for vested benefits and continues to provide defined benefits for future

© 1999-2023 National Association of Insurance Commissioners

service, either in the same plan or in a successor plan, a settlement has occurred but not a curtailment. If a plan is terminated (that is, the obligation is settled and the plan ceases to exist) and not replaced by a successor defined benefit plan, both a settlement and a curtailment have occurred (whether or not the employees continue to work for the employer).

Accounting for Settlement of the Pension Obligation

61. The maximum gain or loss subject to recognition in earnings when a pension obligation is settled is the net gain or loss remaining in unassigned funds (surplus) plus any transition asset remaining in unassigned funds (surplus) from initial application of SSAP No. 89. That maximum amount includes any gain or loss first measured at the time of settlement. The maximum amount shall be recognized in earnings if the entire projected benefit obligation is settled. If only part of the projected benefit obligation is settled, the employer shall recognize in earnings a pro rata portion of the maximum amount equal to the percentage reduction in the projected benefit obligation.

62. If the purchase of a participating annuity contract constitutes a settlement, the maximum gain (but not the maximum loss) shall be reduced by the cost of the participation right before determining the amount to be recognized in earnings.

63. If the cost of all settlements in a year is less than or equal to the sum of the service cost and interest cost components of net periodic pension cost for the plan for the year, gain or loss recognition is permitted but not required for those settlements. However, the accounting policy adopted shall be applied consistently from year to year.

Accounting for a Plan Curtailment

64. The prior service cost included in unassigned funds (surplus) associated with years of service no longer expected to be rendered as the result of a curtailment is a loss. For example, if a curtailment eliminates half of the estimated remaining future years of service of those who were employed at the date of a prior plan amendment and were expected to receive benefits under the plan, then the loss associated with the curtailment is half of the prior service cost included in unassigned funds (surplus) related to that amendment that has not been amortized as a component of net periodic pension cost. For purposes of applying the provisions of this paragraph, prior service cost includes the cost of retroactive plan amendments and any transition obligation remaining in unassigned funds (surplus) from initial application of SSAP No. 89.

65. The projected benefit obligation may be decreased (a gain) or increased (a loss) by a curtailment.

a. To the extent that such a gain exceeds any net loss included in unassigned funds (surplus) (or the entire gain, if a net gain exists), it is a curtailment gain.

b. To the extent that such a loss exceeds any net gain included in unassigned funds (surplus) (or the entire loss, if a net loss exists), it is a curtailment loss.

For purposes of applying the provisions of this paragraph, any transition asset remaining in unassigned funds (surplus) from initial application of SSAP No. 89 shall be treated as a net gain and shall be combined with the net gain or loss arising subsequent to transition to SSAP No. 89.

66. If the sum of the effects identified in paragraphs 64 and 65 is a net loss, it shall be recognized in earnings when it is probable that a curtailment will occur, and the effects described are reasonably estimable. If the sum of those effects is a net gain, it shall be recognized in earnings when the related employees terminate, or the plan suspension or amendment is adopted.

Termination Benefits

67. An employer may provide benefits to employees in connection with their termination of employment. They may be either special termination benefits offered only for a short period of time or contractual termination benefits required by the terms of a plan only if a specified event, such as a plant closing, occurs. An employer that offers special termination benefits to employees shall recognize a liability and a loss when the employees accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and a loss when it is probable that employees will be entitled to benefits and the amount can be reasonably estimated. Termination benefits may take various forms including lump-sum payments, periodic future payments, or both. They may be paid directly from an employer's assets, an existing pension plan, a new employee benefit plan, or a combination of those means. The cost of termination benefits recognized as a liability and a loss shall include the amount of any lump-sum payments and the present value of any expected future payments. A situation involving termination benefits may also involve a curtailment to be accounted for under paragraphs 64-66.

Disclosures – Single-Employer Defined Benefit Plans

68. An employer that sponsors one or more defined benefit pension plans or one or more other defined benefit postretirement plans shall provide the following information, separately for pension plans and other postretirement benefit plans. Amounts related to the employer’s results of operations shall be disclosed for each period for which a statement of income is presented. Amounts related to the employer’s statement of financial position, shall be disclosed as of the date of each statement of financial position presented.

a. A reconciliation of beginning and ending balances of the benefit obligation showing separately, if applicable, the effects during the period attributable to each of the following: service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes, benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits.

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to each of the following: actual return on plan assets, foreign currency exchange rate changes, contributions by the employer, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements.

c. The funded status of the plans and the amounts recognized in the statement of financial position, showing separately the assets and liabilities recognized.

d. The objectives of the disclosures about postretirement benefit plan assets are to provide users of financial statements with an understanding of:

  i. How investment allocation decisions are made, including the factors that are pertinent to an understanding of investment policies and strategies

  ii. The classes of plan assets

  iii. The inputs and valuation techniques used to measure the fair value of plan assets

  iv. The effect of fair value measurements using significant unobservable inputs (Level 3) on changes in plan assets for the period

© 1999-2023 National Association of Insurance Commissioners

v. Significant concentrations of risk within plan assets.

An employer shall consider those overall objectives in providing the following information about plan assets:

(a) A narrative description of investment policies and strategies, including target allocation percentages or range of percentages considering the classes of plan assets disclosed pursuant to (b) below, as of the latest statement of financial position presented (on a weighted-average basis for employers with more than one plan), and other factors that are pertinent to an understanding of those policies and strategies such as investment goals, risk management practices, permitted and prohibited investments including the use of derivatives, diversification, and the relationship between plan assets and benefit obligations. For investment funds disclosed as classes as described in (b) below, a description of the significant investment strategies of those funds shall be provided.

(b) The fair value of each class of plan assets as of each date for which a statement of financial position is presented. Asset classes shall be based on the nature and risks of assets in an employer's plan(s). Examples of classes of assets could include, but are not limited to, the following: cash and cash equivalents; equity securities, (segregated by industry type, company size, or investment objective); debt securities, issued by national, state, and local governments; corporate debt securities; asset-backed securities; structured debt; derivatives on a gross basis (segregated by type of underlying risk in the contract, for example, interest rate contracts, foreign exchange contracts, equity contracts, commodity contracts, credit contracts, and other contracts); investment funds (segregated by type of fund); and real estate. Those examples are not meant to be all inclusive. An employer should consider the overall objectives in paragraph 68.d. in determining whether additional classes of plan assets or further disaggregation of classes should be disclosed.

(c) A narrative description of the basis used to determine the overall expected long-term rate-of-return-on-assets assumption, such as the general approach used, the extent to which the overall rate-of-return-on-assets assumption was based on historical returns, the extent to which adjustments were made to those historical returns in order to reflect expectations of future returns, and how those adjustments were determined. The description should consider the classes of assets described in (b) above, as appropriate.

(d) Information that enables users of financial statements to assess the inputs and valuation techniques used to develop fair value measurements of plan assets at the reporting date. For fair value measurements using significant unobservable inputs, an employer shall disclose the effect of the measurements on changes in plan assets for the period. To meet those objectives, the employer shall disclose the following information for each class of plan assets disclosed pursuant to (b) above for each annual period:

© 1999-2023 National Association of Insurance Commissioners

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall,[3] segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

(2) Information about the valuation technique(s) and inputs used to measure fair value and a discussion of changes in valuation techniques and inputs, if any, during the period.

e. For defined benefit pension plans, the accumulated benefit obligation.

f. The benefits (as of the date of the latest statement of financial position presented) expected to be paid in each of the next five fiscal years, and in the aggregate for the five fiscal years thereafter. The expected benefits should be estimated based on the same assumptions used to measure the company's benefit obligation at the end of the year and should include benefits attributable to estimated future employee service.

g. The employer's best estimate, as soon as it can reasonably be determined, of contributions expected to be paid to the plan during the next fiscal year beginning after the date of the latest statement of financial position presented. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

h. The amount of net benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to settlements or curtailments.

i. Separately the net gain or loss and net prior service cost or credit recognized in unassigned funds (surplus) for the period pursuant to paragraphs 15 and 19 and reclassification adjustments of unassigned funds (surplus) for the period, as those amounts, including amortization of the net transition asset or obligation, are recognized as components of net periodic benefit cost.

j. The amounts in unassigned funds (surplus) that have not yet been recognized as components of net periodic benefit cost, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

k. On a weighted-average basis, the following assumptions used in the accounting for the plans: discount rates, rates of compensation increase (for pay-related plans), expected long-term rates of return on plan assets specifying, in a tabular format, the assumptions used to determine the benefit obligation and the assumptions used to determine net benefit cost, and interest crediting rates (for cash balance plans and other plans with promised crediting rates).

---

[3] In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

© 1999-2023 National Association of Insurance Commissioners

l. If applicable, the amounts and types of securities of the employer and related parties included in plan assets.

m. If applicable, any alternative method used to amortize prior service amounts or net gains and losses pursuant to paragraphs 16 and 23.

n. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation.

o. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event.

p. An explanation of the following information:

   i. The reasons for significant gains and losses related to changes in the defined benefit obligation for the period.

   ii. Any other significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this statement.

Disclosures – Employers with Two or More Defined Benefit Plans

69. The disclosures required by this statement shall be aggregated for all of an employer's defined benefit pension plans and for all of an employer's other defined benefit postretirement plans unless disaggregating in groups is considered to provide useful information or is otherwise required by this paragraph and paragraph 70. Disclosures shall be as of the date of each statement of financial position presented. Disclosures about pension plans with assets in excess of the accumulated benefit obligation generally may be aggregated with disclosures about pension plans with accumulated benefit obligations in excess of assets. The same aggregation is permitted for other postretirement benefit plans. If aggregate disclosures are presented, an employer shall disclose, as of the date of each financial statement position presented:

a. The projected benefit obligation and fair value of plan assets for plans with projected benefit obligations in excess of plan assets.

b. The accumulated benefit obligation and fair value of plan assets for pension plans with accumulated benefit obligations in excess of plan assets.

70. A U.S. reporting entity may combine disclosures about pension plans or other postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions.

Interim Financial Disclosures –Defined Benefit Plans

71. The following shall be disclosed within interim financial statements that include a statement of income:

a. The amount of net periodic benefit cost recognized, for each period for which a statement of income is presented, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the amount of prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to a settlement or curtailment.

© 1999-2023 National Association of Insurance Commissioners

b. The total amount of the employer's contributions paid, and expected to be paid, during the current fiscal year, if significantly different from amounts previously disclosed pursuant to paragraph 68.g. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

Defined Contribution Plans

72. A defined contribution pension plan is a plan that provides pension benefits in return for services rendered, provides an individual account for each participant, and has terms that specify how contributions to the individual's account are to be determined rather than the amount of pension benefits the individual is to receive. Under a defined contribution plan, the pension benefits a participant will receive depend only on the amount contributed to the participant's account, the returns earned on investments of those contributions, and forfeitures of other participants' benefits that may be allocated to the participant's account.

73. To the extent that a plan's defined contributions to an individual's account are to be made for periods in which that individual renders services, the net pension cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires or terminates, the estimated cost shall be accrued during the employee's service period.

74. A pension plan having characteristics of both a defined benefit plan and a defined contribution plan requires careful analysis. If the substance of the plan is to provide a defined benefit, as may be the case with some "target benefit" plans, the accounting requirements shall be determined in accordance with the provisions applicable to a defined benefit plan and the disclosure requirements within paragraph 68 shall be followed.

Disclosures - Defined Contribution Plans

75. An employer shall disclose the amount of cost recognized for defined contribution pension plans and for other defined contribution postretirement benefit plans for all periods presented separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

Multiemployer Plans

76. A multiemployer plan is a pension plan to which two or more unrelated employers contribute, usually pursuant to one or more collective-bargaining agreements. A characteristic of multiemployer plans is that assets contributed by one participating employer may be used to provide benefits to employees of other participating employers since assets contributed by an employer are not segregated in a separate account or restricted to provide benefits only to employees of that employer.

77. A reporting entity participating in a multiemployer plan shall recognize as net pension cost the required contribution for the period and shall recognize as a liability any contributions due and unpaid.

78. In some situations, withdrawal from a multiemployer plan may result in a reporting entity having an obligation to the plan for a portion of its unfunded benefit obligations. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* shall apply.

© 1999-2023 National Association of Insurance Commissioners

Disclosures - Multiemployer Plans

79. A reporting entity shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. A reporting entity may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture. This disclosure shall identify whether the contributions represent more than 5 percent of total contributions to the plan as indicated in the plan's most recently available annual report.

80. In addition to the requirements of paragraph 79, the following information shall be disclosed:

a. Whether a funding improvement plan or rehabilitation plan had been implemented or is pending.

b. Whether the reporting entity paid a surcharge to the plan.

c. A description of minimum contributions required for future periods, if applicable.

d. A qualitative description of the extent to which the employer could be responsible for the obligations of the plan, including benefits earned by employees during employment with another employer.

81. In some situations, withdrawal from a multiemployer plan may result in a reporting entity having an obligation to the plan for a portion of the unfunded benefit obligation of the pension plans and other postretirement benefit plans. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of SSAP No. 5R shall apply. If it is either probable or reasonably possible that (a) an employer would withdraw from the plan under circumstances that would give rise to an obligation or (b) an employer's contribution to the fund would be increased during the remainder of the contract period to make up a shortfall in the funds necessary to maintain the negotiated level of benefit coverage (a "maintenance of benefits" clause), the employer shall apply the provisions and disclosures of SSAP No. 5R.

Multiple-Employer Plans

82. Some pension plans to which two or more unrelated employers contribute are not multiemployer plans. Rather, they are in substance aggregations of single-employer plans combined to allow participating employers to pool their assets for investment purposes and to reduce the costs of plan administration. Those plans ordinarily do not involve collective-bargaining agreements. They may also have features that allow participating employers to have different benefit formulas, with the employer's contributions to the plan based on the benefit formula selected by the employer. Such plans shall be considered single-employer plans rather than multiemployer plans, and each reporting entity's accounting shall be based on its respective interest in the plan.

Non-U.S. Pension Plans

83. Except for its effective date, this statement includes no special provisions applicable to pension arrangements outside the United States. To the extent that those arrangements are in substance similar to pension plans in the United States, they are subject to the provisions of this statement. The substance of an arrangement is determined by the nature of the obligation and by the terms or conditions that define the amount of benefits to be paid, not by whether (or how) a plan is funded, whether benefits are payable at intervals or as a single amount, or whether the benefits are required by law or custom or are provided under a plan the employer has elected to sponsor.

© 1999-2023 National Association of Insurance Commissioners

84. It is customary or required in some countries to provide benefits in the event of a voluntary or involuntary severance of employment (also called termination indemnities). If such an arrangement is in substance a pension plan (for example, if the benefits are paid for virtually all terminations), it is subject to the provisions of this statement.

Business Combinations

85. When an employer is acquired in a business combination and that employer sponsors a single-employer defined benefit pension plan, the assignment of the purchase price to individual assets acquired and liabilities assumed shall include a liability for the projected benefit obligation in excess of plan assets or an asset for plan assets in excess of the projected benefit obligation, thereby eliminating any previously existing net gain or loss, prior service cost or credit, or transition asset or obligation recognized in unassigned funds (surplus). If it is expected that the plan will be terminated or curtailed, the effects of those actions shall be considered in measuring the projected benefit obligation.

Consolidated/Holding Company Plans

86. The employees of many reporting entities are members of a plan sponsored by a parent company or holding company. A reporting entity who participates in these plans and is not directly liable for obligations under the plan shall recognize pension expense equal to its allocation from the holding company or parent company of the required contribution to the plan for the period. A liability shall be established for any such contributions due and unpaid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred, and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for obligations under the plan, then the requirements outlined above in paragraphs 1-85 and 90-101 of this statement shall be applied.

Relevant Literature

87. This statement adopts with modification paragraphs 1-7 and 16-17 as well as Appendix C – Amendments to Statements 87 and 88 and Appendix E – Amendments to Statement 132(R) of *FASB Statement No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)* (FAS 158). Paragraphs 8-10 providing specific guidance for not-for-profit organizations is rejected. Paragraphs 11-15 regarding the effective dates for FAS 158 is rejected and paragraph 19 providing an alternative method for remeasuring plan assets and benefits obligations as of the fiscal year the measurement date provisions are applied is also rejected. Appendix D – Amendments to Statement 106 has not been incorporated within this statutory statement as it will be considered in accordance with revisions to *SSAP No. 14—Postretirement Benefits Other Than Pensions*. Disclosures included within FAS 132(R), as amended by FAS 158, pertaining to health care (paragraphs 5.l. and 5.m.) have been rejected for inclusion within this standard, but will also be considered in accordance with revisions to SSAP No. 14. This statement adopts the revisions to paragraph 5.d. of FAS 132(R) as amended by *FASB Staff Position FAS 132(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 132(R)-1) and *ASU 2010-06, Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements* (ASU 2010-06). Other revisions to disclosures requirements as amended by FSP FAS 132(R)-1 relate to nonpublic entities and are rejected. This statement adopts by reference revisions to ASC 715-80 as detailed in *ASU 2011-09, Compensation – Retirement Benefits – Multiemployer Plans* with limited additional disclosures required within statutory financial statements. This statement adopts by reference *FSP FASB 158-1, Conforming Amendments to the Illustrations in FASB Statements No. 87, No. 88, and No. 106 and to the Related Staff Implementation Guides* (FSP FAS 158-1) to the extent that the examples and related implementation guides comply with the adopted GAAP guidance previously identified within this statement, as modified for statutory accounting. This statement adopts with modification the disclosure revisions reflected in *ASU 2018-14, Changes to the Disclosure Requirements for Defined*

Benefit Plans, consistent with the modifications from the adoption of FAS 158 and FAS 106. The following modifications from the adopted paragraphs of FAS 158 have been incorporated within this standard:

a. All references to 'other comprehensive income' or 'accumulated other comprehensive income' within FAS 158 have been revised to reflect unassigned funds (surplus).

b. Any prepaid asset resulting from the excess of the fair value of plan assets over the projected benefit obligation shall be nonadmitted. Furthermore, any asset recognized from the cost of a 'participation right' of an annuity contract per paragraph 54 shall also be nonadmitted.

c. Provisions within paragraph 30 of FAS 87, as amended by FAS 158, permitting a market-related value of plan assets have been eliminated with only the fair value measurement method for plan assets being retained.

d. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132(R), as amended by FAS 158, are rejected. All reporting entities shall follow the disclosure requirements included in paragraph 5 of FAS 132(R) as amended by FAS 158.

e. Clarification has been included within this standard to ensure both vested and nonvested employees are included within the recognition of net periodic pension cost and in the pension benefit obligation. Although this is consistent with GAAP, this is a change from previous statutory accounting. As nonvested employees were excluded from statutory accounting under SSAP No. 89, guidance has been included to indicate that the unrecognized prior service cost attributed to nonvested individuals is not required to be included in net periodic pension cost entirely in the year this standard is adopted. The unrecognized prior service cost for nonvested employees shall be amortized as a component of net periodic pension cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is then adjusted each period as prior service cost is amortized. (Guidance is included within the transition related to the recognition of the prior service cost for nonvested employees through unassigned funds (surplus).)

f. Conclusion of *Interpretation 04-12: EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* indicating that 'cash balance' plans are considered defined benefit plans has been incorporated within paragraph 3 of this statement.

g. Conclusion of *Interpretation 99-26: Offsetting Pension Assets and Liabilities* prohibiting the offset of defined benefit liabilities of one plan with prepaid assets of another plan has been incorporated within paragraph 26 of this statement.

h. Provisions within paragraph 36 of FAS 87, as amended by FAS 158, regarding the classification of underfunded liabilities as current or noncurrent liabilities and the classification of assets from overfunded plans as noncurrent assets has been rejected as inconsistent with statutory accounting.

i. Provisions within paragraph 49 of FAS 87, as amended by FAS 158, defining the fair value of investments have been rejected. Fair value definitions and measurement for investments shall be determined in accordance with statutory accounting guidance.

© 1999-2023 National Association of Insurance Commissioners

j. Provisions within paragraph 52 of FAS 87, as amended by FAS 158, regarding the plan assets measurement date for consolidating subsidiaries or entities utilizing the equity method under APB Opinion No. 18 has been rejected. For statutory accounting, all entities shall follow the measurement date guidance within paragraph 45 of this statement.

k. Transition under FAS 158 is different from this statement. FAS 158 requires entities with publicly traded equity securities to initially apply the requirement to recognize the funded status of a benefit plan; the gains/losses, prior service costs/credits and transition obligations/assets that have not yet been included in net periodic benefit cost; and the disclosure requirements as of the end of the fiscal year ending after December 15, 2006. Transition guidelines for statutory accounting are defined in paragraphs 90-101.

l. FAS 158 provided two approaches for an employer to transition to a fiscal year-end measurement date. For purposes of statutory accounting, the second approach permitting reporting entities to use earlier measurements determined for year-end reporting as of the fiscal year immediately preceding the year that the measurement date provisions is rejected. For consistency purposes, all reporting entities shall follow the first approach and remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied.

88. This statement adopts the revisions to ASC 715-30 as it relates to interim re-measurement due to a *significant* event as detailed in *ASU 2015-04, Practical Expedient for the Measurement Date of An Employer's Defined Benefit Obligation and Plan Assets*. Other revisions are rejected as statutory accounting requires the annual measurement of benefit obligations and plan assets to be measured as of a year-end measurement date.

89. This statement rejects *ASU 2017-07, Improving the Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost*. Existing statutory disclosures on the components of pension costs shall be completed.

Effective Date and Transition

90. Reporting entities are required to disclose the projected benefit obligation, the accumulated benefit obligation and the fair value of plan assets for defined benefit pension plans in the first reporting period after the effective date of this standard and in each subsequent reporting period. This disclosure shall specifically note the funded/underfunded status of the pension plan based on the projected benefit obligation. Reporting entities shall also specifically note the surplus impact necessary, at each reporting date, to reflect the full projected benefit obligation within the financial statements.

91. This statement is effective for quarterly and annual reporting periods beginning on or after January 1, 2013 (transition date) with early adoption permitted. Any unfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, is a liability under SSAP No. 5R and shall be reported in the first quarter statutory financial statements after the transition date with a corresponding entry to unassigned funds (surplus). If the fair value of plan assets exceeds the projected benefit obligation, the asset shall be considered a nonadmitted asset. Net periodic pension cost shall include a component for unrecognized prior service cost for nonvested employees beginning in 2013.

92. Gains or losses, prior service costs or credits (including prior service costs for non-vested participants pursuant to paragraph 11), and remaining transition assets or obligations from prior application of SSAP No. 89 (collectively referred to as "unrecognized items") that have not yet been

© 1999-2023 National Association of Insurance Commissioners

included in net periodic benefit cost as of December 31, 2012[4] shall be recognized as components of the balance of unassigned funds (surplus), net of tax, as of January 1, 2013 (provided that alternative transition is not elected per paragraph 93.b.). The offset to unassigned funds is reported separately as an "Aggregate Write-In for Other-Than-Invested Assets" or as an "Aggregate Write-In for Other Liabilities." After recognition, the full unfunded or overfunded status of the plan shall be reflected within the financial statements.[5] Any prepaid asset resulting from an overfunded plan shall be nonadmitted.

93. Due to the potential impact to surplus as a result of immediately applying the accounting guidance in paragraph 92, reporting entities may elect one of the following two methods, on an individual plan basis, to recognize the transition surplus impact:

a. Reporting entities may elect to recognize the entire transition surplus impact calculated from applying paragraph 92, on an individual plan basis, as of January 1, 2013.

b. Alternatively, reporting entities may elect to recognize the entire surplus impact from applying paragraph 92, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

i. Ten percent of the calculated surplus impact as of the transition date;

ii. Amortization[6] of the "unrecognized items" (defined in paragraph 92) into net periodic pension cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of all three components in paragraph 93.b.) is subsequently determined to be less than what is amortized for the year (paragraph 93.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds (surplus);

---

[4] The intent of the guidance is to recognize the unrecognized amounts as of December 31, 2012, annual statements, even if new actuarial projections (accumulated benefit obligation/projected benefit obligation amounts) are calculated as of January 1, 2013. (These projections would be considered in the recognition of the 2013 pension cost.)

[5] Upon the effective date of this statement, reporting entities are required to reflect the full unfunded or overfunded status of their defined benefit pension plans. As such, the concept of an "additional minimum liability" previously reflected in *SSAP No. 89—Pensions* is not incorporated within this statement. If an additional minimum liability (and a corresponding intangible asset) had been recognized under SSAP No. 89, such items shall be eliminated with the implementation of this statement, and the guidance in paragraph 93 shall be followed. The elimination of any additional minimum liability and corresponding intangible asset shall also occur if the entity elects the transition option reflected in paragraph 93.b.

[6] Unless otherwise impacted from the provisions within this statement or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date.

© 1999-2023 National Association of Insurance Commissioners

iii. Amount necessary to establish a total liability that is equal to any unfunded accumulated benefit obligation (the accumulated benefit obligation less the fair value of plan assets).[7]

94. If the surplus deferral (paragraph 93.b.) is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact (collectively referred to as the "transition liability"[8]) on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions within paragraph 93.b. Reporting entities that elect the transition option in paragraph 93.b. are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date.

95. Reporting entities that elect the transition option in paragraph 93.b. must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) The transition guidance in paragraph 93.b. is not intended (on a net basis for each plan) to result in more favorable, subsequent surplus pension positions when there are remaining unrecognized liabilities as a result of the reporting entity's initial election for surplus deferral. Therefore, if there is a plan curtailment, settlement, or other plan amendment resulting in a reduction of benefit obligations, or net benefit obligation gains due to revisions in assumptions (e.g., discount rates) or plan experience differing from assumptions, or plan asset gains due to the actual return on plan assets exceeding the expected return on plan assets, a corresponding amount of unrecognized liability from the surplus deferral shall be recognized. For this purpose, net gains, if any, are the net aggregation of all gains and losses (excluding plan amendments that increase benefit obligations) from factors such as those listed above, determined as of a measurement or remeasurement date. This shall occur regardless if the impact from the change results with the plan being in an overfunded state, or whether the gain is recognized in earnings. The transition guidance was to provide surplus relief from the immediate surplus impact from adopting SSAP No. 102, but in no instance should changes (on a net basis for each plan) attributed to pension plans result in more favorable, subsequent surplus positions when there are unrecognized liabilities remaining as a result of the reporting entity's initial election for surplus deferral. The guidance in this paragraph was originally contained within *INT 13-03: Clarification of Surplus Deferral in SSAP No. 92 & SSAP No. 102* and was effective December 15, 2013.

96. The transition guidance in paragraphs 92-95 is specific to the transition surplus impact from initially applying this statement on January 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the projected benefit obligation, or the impact of subsequent plan amendments.

97. Reporting entities electing to apply the transition guidance in paragraph 93.b. must disclose the full transition surplus impact calculated from applying paragraph 92 in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the

---

[7] The intent of this standard is to ensure that under the deferral option the liability initially recognized for an unfunded plan reflects the minimum liability previously recognized under SSAP No. 89. For any instances in which an additional minimum liability recognized under SSAP No. 89 is greater than the unfunded ABO at transition, an amount equal to the previously recognized additional minimum liability shall be used in determining this component of paragraph 93.b.iii. The deferral option under this standard is not intended to allow a surplus benefit to be recognized at initial transition for an unfunded plan.

[8] If the surplus deferral from paragraph 93.b. is elected, the deferred liability, although comprised of the previous "unrecognized items" shall be collectively referred to as the "transition liability." Although reporting entities will need to continue to track the unrecognized items for amortization into net periodic cost (offset through unassigned funds), reporting entities shall not allocate the recognized surplus impact from transition to these categories. As noted in paragraph 93.b.ii., the minimum amount of liability recognized under the deferral option must cover the annual amortization of the "unrecognized items" into net periodic pension cost to prevent a surplus benefit.

© 1999-2023 National Association of Insurance Commissioners

initial "transition liability" calculated under paragraph 92, the annual amortization amount of the "unrecognized items" into net periodic pension cost, the amount of the unfunded accumulated benefit obligation, and the remaining unrecognized transition impact. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

98. The requirement to measure plan assets and benefit obligations as of the date of the reporting entity's financial statement year-end is effective for financial statement years beginning January 1, 2014. (The measurement date change will be initially reflected in the December 31, 2014 financial statements.)

99. In order to transition to a fiscal year-end measurement date, the reporting entity shall remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. The reporting entity shall use those new measurements to determine the effects of the measurement date change as of the beginning of the fiscal year that the measurement date provisions are applied.

100. The reporting entity shall measure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. This would result with the following:

a. Net periodic benefit cost for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied, exclusive of any curtailment or settlement gain or loss, shall be recognized, net of tax, as a separate adjustment of the opening balance unassigned funds (surplus). That is, the pretax amount recognized as an adjustment to unassigned funds (surplus) is the net periodic benefit cost that without a change in measurement date otherwise would have been recognized on a delayed basis during the first interim period for the fiscal year that the measurement date provisions are applied.

b. Any gain or loss arising from a curtailment or settlement between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized in earnings in that period and not as an adjustment to unassigned funds (surplus). This provision prohibits a reporting entity from early application of the measurement date provisions when the reporting entity has issued financial statements for the prior year without recognition of such a settlement or curtailment.

c. Other changes in the fair value of plan assets and the benefit obligations (for example, gains or losses) for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus) for the fiscal year that the measurement date provisions are applied.

101. Earlier application of the recognition or measurement date provisions is encouraged, however, early applications must be for all of the reporting entity's benefit plans. If early application is elected, the transition date shall reflect the January 1st of the year in which this standard is initially applied. Retrospective application is not permitted.

EXHIBIT A - IMPLEMENTATION GUIDE

Note: After transition, new "unrecognized" amounts will be reflected in the year-end funded status, but not yet reflected in unassigned funds. Therefore, additional entries will be needed at the end of each year to recognize these new "unrecognized" amounts in unassigned funds. (An example includes gains and losses that will be included in unassigned funds (surplus), but not recognized in net periodic pension cost if they do not exceed 10% of the greater of the projected benefit obligation or the fair value of plan assets.) The entries in the implementation guide focus on the transition impact, and subsequent entries for "unrecognized" items have not been included within the illustrations.

Transition Implementation

1. Overfunded Plan with Prepaid Benefit Cost

Consideration of contributions or tax effects are not reflected in this example.

Example 1	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(6,240)	$(6,240)
Plus: Non-Vested Liability	(100)*	(100)
Total Accumulated Benefit Obligation	$(6,340)	$(6,340)
Projected Benefit Obligation	$(6,437)	$(6,437)
Plus: Non-Vested Liability	(100)	(100)
Total PBO	$(6,537)	$(6,537)
Plan Assets at Fair Value	$9,268	$9,268
Funded Status	$2,731	$2,731
Transition Obligation / (Asset)	$36	
Prior Service Cost	214	
Prior Service Cost (Non-Vested)	100	
Unrecognized Losses / (Gains)	2,465	
Total Unrecognized Items	$2,815	–
Net Overfunded Plan Asset / (Liability for Benefits)	$5,546	$2,731

*****The amount shown for December 31, 2012 reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and unfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.

1a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"

1.	Unassigned Funds – Transition Obligation	36
	Unassigned Funds – Prior Service Cost	214
	Unassigned Funds – Prior Service Cost (Nonvested)	100

© 1999-2023 National Association of Insurance Commissioners

Unassigned Funds – Unrecognized Losses 2,465
Overfunded Plan Asset 2,815
(Aggregate Write-Ins for Other-Than-Invested Assets)

For this plan, which is overfunded by more than the unrecognized liabilities, the entry at transition will be netted against the existing prepaid with an offset to unassigned funds.

2. Change in Nonadmitted - Overfunded Plan Asset 2,815
(Aggregate Write-Ins for Other-Than-Invested Assets)
Unassigned Funds 2,815

This entry illustrates the impact to the "change in nonadmitted" as a result of the decline in overfunded plan assets. For this particular example, with the transition entry to unassigned funds and the impact to nonadmitted assets, there is no surplus impact at transition.

1b. December 31, 2013 – Recognition of Periodic Pension Cost

After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.

(Per paragraph 93, if surplus deferral is elected at transition, beginning with 2014 annual financials, the entity shall recognize the remaining surplus impact on a systematic basis over a period not to exceed the remaining nine years. As, this illustration is in an overfunded status, there is no surplus deferral. Recognition of net periodic cost, including amortization of the "unrecognized items" will occur each year regardless if surplus deferral is elected.)

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	550
Interest Cost	150
Expected Return on Plan Assets	(250)
Total	*450*
Amortization of:	
o Transition Obligation	7.2
o Prior Service Cost	42.8
o Prior Service Cost (nonvested)	20
o Unrecognized Losses	493
Total	*563*
Total Net Periodic Pension Cost	**1,013**

1. Net Periodic Pension Cost 1,013
Prepaid Benefit Cost 1,013
(Aggregate Write-Ins for Other-Than-Invested Assets)

This entry recognizes the periodic pension cost with an offset to the prepaid pension asset. (A prepaid benefit cost is created when cumulative contributions to a pension plan exceed cumulative net periodic pension costs. Thus, a prepaid benefit cost can only be reduced through the recognition of pension cost.)

2. Overfunded Plan Asset 563
(Aggregate Write-Ins for Other-Than-Invested Assets)
Unassigned Funds – Transition Obligation 7.2
Unassigned Funds – Prior Service Cost 42.8
Unassigned Funds – Prior Service Cost (Nonvested) 20
Unassigned Funds – Unrecognized Losses 493

This entry recognizes the transition amounts amortized through net periodic pension cost. The offset is to unassigned funds (as unassigned funds was used for the initial recognition of the unrecognized items). As this plan continues to be overfunded, these amounts are offset to overfunded plan assets.

3. Change in Nonadmitted - Prepaid Benefit Cost 1,013
(Aggregate Write-Ins for Other-Than-Invested Assets)
Unassigned Funds 1,013

This entry illustrates the impact of the change in nonadmitted prepaid benefit cost to unassigned funds.

4. Unassigned Funds 563
Change in Nonadmitted – Overfunded Plan Asset 563
(Aggregate Write-Ins for Other-Than-Invested Assets)

This entry illustrates the impact of the change in nonadmitted overfunded plan asset to unassigned funds.

1c. December 31, 2014 – Recognition of Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	2500
Interest Cost	1000
Expected Return on Plan Assets	(500)
Total	*3000*
Amortization of:	
o Transition Obligation	7.2
o Prior Service Cost	42.8
o Prior Service Cost (nonvested)	20
o Unrecognized Losses	493
Total	*563*
Total Net Periodic Pension Cost	**3,563**

Note – This example was purposely completed to show a significant amount of periodic pension cost to create an underfunded plan status. This was done strictly for illustration purposes and is not intended to indicate that such significant changes would be expected, although they could occur.

1. Net Periodic Pension Cost 3,563
Prepaid Benefit Cost 3,563
(*Aggregate Write-In for Other-Than-Invested Assets)*

2. Overfunded Plan Asset 1,282
Unassigned Funds – Transition Obligation 7.2
Unassigned Funds – Prior Service Cost 42.8
Unassigned Funds – Prior Service Cost (Nonvested) 20

Unassigned Funds – Unrecognized Losses		493
Liability for Pension Benefits		719
(Aggregate Write-In for Other Liabilities)		

This entry recognizes the transition amounts that have been recognized through net periodic pension cost, with an offset to unassigned funds. The overfunded plan asset is initially offset, until the plan reaches an unfunded status, which is then reflected through a liability for pension benefits (aggregate write-in for other liabilities).

3. Change in Nonadmitted - Prepaid Benefit Cost	3,563	
Unassigned Funds		3,563
4. Unassigned Funds	1,282	
Change in Nonadmitted - Overfunded Plan Asset		1,282

These entries illustrate the impact of the change in nonadmitted to unassigned funds.

Illustration 1 – Example Paragraph 97 Note Disclosure:

SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. The adoption of SSAP No. 102 did not have a surplus impact on ABC entity as the pension plan was overfunded by more than the transition liabilities. At transition, ABC entity recognized $2,815 in unrecognized transition obligations, prior service costs, and unrecognized losses as components of the ending balance of unassigned funds as of January 1, 2013. This recognition resulted in a financial presentation which reflects the actual $2,731 overfunded status of the plan (fair value of plan assets exceeds the projected benefit obligation) as of January 1, 2013. As required under SSAP No. 102, overfunded plan assets are nonadmitted.

***For purposes of this example, tax effects are not reflected. However, the amount recognized at transition as components of the unassigned funds shall be net of tax.*

© 1999-2023 National Association of Insurance Commissioners

The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):

Example 1	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(6,240)	$(6,240)
Plus: Non-Vested Liability	(100)	(100)
Total Accumulated Benefit Obligation	$(6,340)	$(6,340)
Projected Benefit Obligation	$(6,437)	$(6,437)
Plus: Non-Vested liability	(100)	(100)
Total PBO	$(6,537)	$(6,537)
Plan Assets at Fair Value	$9,268	$9,268
Funded Status	$2,731	$2,731
Transition Obligation / (Asset)	$36	
Prior Service Cost	214	
Prior Service Cost (Non-Vested)	100	
Unrecognized Losses / (Gains)	2,465	
Total Unrecognized Items	$2,815	–
Net Overfunded Plan Asset / (Liability for Benefits)	$5,546	$2,731

In the March 31, 2013, financial statements, the $2,731 overfunded plan assets was reflected as follows:

- Prepaid Benefit Cost $5,546 (nonadmitted)
- Overfunded Plan Asset $(2,815) (nonadmitted)

These amounts are reported net in Aggregate Write-Ins for Other-Than-Invested Assets: $2,731

Illustration of Example 1 – Overfunded Plan with Prepaid Benefit Cost

	Aggregate Write-In for Other-Than-Invested Assets		Nonadmitted Assets	Unassigned Funds	Periodic Pension Cost	Aggregate Write-In for Other Liabilities
	Prepaid Benefit Cost	Overfunded Plan Asset				
Existing Balances 12/31/2012	5,546DR		5,546CR			
Transition Entries – 1/1/2013						
A		2,815CR		2,815DR		
B			2,815DR	2,815CR		
After Transition	**5,546DR**	**2,815CR**	**2,731CR**	–		
After Transition - Net	**2,731DR**		**2,731CR**	–		
A – Recognize “unrecognized items” existing at 1/1/13 transition date (gains or losses, prior service costs or credits, and transition assets or obligations). For this plan, which is overfunded by more than the unrecognized liabilities, the entry at transition will be netted against the existing overfunded plan asset with an offset to unassigned funds. B – Illustrates the impact to the “change in nonadmitted” as a result of the decline in overfunded plan assets. For this particular example, with the transition entry to unassigned funds and the impact to nonadmitted assets, there is no surplus impact at transition. At transition, the net balance in aggregate write-ins reflects the overfunded state of the plan.						
Recognition of Net Periodic Pension Cost – 12/31/2013						
C	1,013CR				1,013DR	
D		563DR		563CR		
E			1,013DR	1,013CR		
F			563CR	563DR		
Net Impact	450CR		450DR	1,013CR	1,013DR	
Ending Balances	**4,533 DR**	**2,252CR**	**2,281CR**	**1,013CR**	**1,013DR**	
Ending Balances-Net	**2,281DR**		**2,281CR**	**–**		
C – Reflects the periodic pension cost with an offset to the prepaid pension asset. D – Recognizes the transition amounts amortized through net periodic pension cost. The offset it to unassigned funds (as that was how the “unrecognized items” were recognized at transition). E/F – Reflects the change in nonadmitted assets to unassigned funds.						
Recognition of Net Periodic Pension Cost – 12/31/2014						
G	3,563CR				3,563DR	
H		1,282DR		563CR		719CR
I			3,563DR	3,563CR		
J			1,282CR	1,282DR		
Net Impact		2,281CR	2,281DR	2,844CR	3,563DR	719CR
Ending Balances	**970 DR**	**970 CR**	–	**2,844CR**	**3,563DR**	
Ending Balances - Net	–		–	**719DR**		**719CR**
G/H – Reflects the periodic pension cost with an offset to the prepaid pension asset. As no contributions have been made, the 2014 pension cost moves the plan from an overfunded to underfunded state. The overfunded plan asset credit is reduced to equally offset the remaining prepaid benefit cost of $970. The underfunded status is then reflected through a liability for pension benefits (aggregate write-in for other liabilities). I/J – Reflects the change in nonadmitted assets to unassigned funds.						

2. Underfunded Plan with Accrued Benefit Cost

Consideration of contributions or tax effects are not reflected in this example.

Example 2	Dec. 31, 2012	Jan. 1, 2013
Accumulated Benefit Obligation	$(2,015)	$(2,015)
Plus: Non-Vested Liability	(60)*	(60)
Total Accumulated Benefit Obligation	$(2,075)	$(2,075)
Projected Benefit Obligation	$(2,268)	$(2,268)
Plus: Non-Vested Liability	(60)	(60)
Total PBO	$(2,328)	$(2,328)
Plan Assets at Fair Value	$1,992	$1,992
Funded Status	$(336)	$(336)
Transition Obligation / (Asset)	$(544)	
Prior Service Cost / (Credit)	(494)	
Prior Service Cost (Non-Vested)	60	
Unrecognized Losses / (Gains)	926	
Total Unrecognized Items	$(52)	–
Net Overfunded Plan Asset / (Liability for Benefits)	$(388)	$(336)

*The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and underfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reported within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reported within Aggregate Write-Ins for Liabilities.

2a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"

	Debit	Credit
1. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	52	
Unassigned Funds – Prior Service Cost (Nonvested)	60	
Unassigned Funds – Unrecognized Losses	926	
Unassigned Funds – Transition Asset		544
Unassigned Funds – Prior Service Credit		494

For this plan, which is underfunded but has a net unrecognized asset, at transition the entity will improve their surplus presentation by $52 through a contra-liability. Use of the contra-liability is necessary, as if the item were recorded as an asset, it would be nonadmitted and result in a surplus reduction. Although there is a net unrecognized asset, this plan is in an underfunded state.

© 1999-2023 National Association of Insurance Commissioners

2b. December 31, 2013 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2012**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	*300*
Amortization of:	
o Transition Obligation (Asset)	(272)
o Prior Service Cost / (Credit)	(247)
o Prior Service Cost (nonvested)	30
o Unrecognized Losses	463
Total	*(26)*
Total Net Periodic Pension Cost	**274**

1. Unassigned Funds – Transition Asset 272
   Unassigned Funds – Prior Service Credit 247
   Unassigned Funds – Prior Service Cost (Nonvested) 30
   Unassigned Funds – Unrecognized Losses 463
   Liability for Pension Benefits 26
   (Aggregate Write-In for Liabilities)

This entry occurs to amortize the transition items. Due to the nature of the unrecognized items (net asset – recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost 274
   Accrued Benefit Cost 274

This entry recognizes the net periodic pension cost for the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.

Note: All references to "accrued benefit cost" represent an unpaid expense liability, these amounts wills be reflected within general expenses due and accrued (life) or LAE/Other Underwriting expenses (p/c).

Note: This example uses a 2-year amortization period of the "unrecognized items." In actuality, amortization periods of each item will vary. Disclosures shall continue to separately present these items.

2c. December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	2500
Interest Cost	1000
Expected Return on Plan Assets	(500)
Total	*3,000*
Amortization of:	
o Transition Obligation / (Asset)	(272)
o Prior Service Cost / (Credit)	(247)
o Prior Service Cost (nonvested)	30
o Unrecognized Losses	463
Total	*(26)*
Total Net Periodic Pension Cost	**2,974**

© 1999-2023 National Association of Insurance Commissioners

1. Unassigned Funds – Transition Asset	272	
Unassigned Funds – Prior Service Credit	247	
Unassigned Funds – Prior Service Cost (Nonvested)		30
Unassigned Funds – Unrecognized Losses		463
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		26

This entry occurs to amortize the transition items. Due to the nature of the unrecognized items (net asset – recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost	2,974	
Accrued Benefit Cost		2,974

This entry recognizes the net periodic pension cost for the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.

Illustration 2 – Paragraph 97 Example Note Disclosure:

SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. At transition, ABC entity recognized a net $52 asset from unrecognized transition obligations/assets, prior service costs/credits, and unrecognized gains/losses as a component of the ending balance of unassigned funds as of January 1, 2013. This net impact was reflected as a contra-liability as the plan is in an underfunded state.

***For purposes of this example, tax effects are not reflected. However, the amount recognized at transition as components of the unassigned funds shall be net of tax.*

The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):

Example 2	Dec. 31, 2012	Jan. 1, 2013
Accumulated Benefit Obligation	$(2,015)	$(2,015)
Plus: Non-Vested Liability	(60)	(60)
Total Accumulated Benefit Obligation	$(2,075)	$(2,075)
Projected Benefit Obligation	$(2,268)	$(2,268)
Plus: Non-Vested Liability	(60)	(60)
Total PBO	$(2,328)	$(2,328)
Plan Assets at Fair Value	$1,992	$1,992
Funded Status	$(336)	$(336)
Transition Obligation / (Asset)	$(544)	
Prior Service Cost / (Credit)	(494)	
Prior Service Cost (Non-Vested)	60	
Unrecognized Losses / (Gains)	926	
Total Unrecognized Items	$(52)	–
Net Overfunded Plan Asset / (Liability for Benefits)	$(388)	$(336)

© 1999-2023 National Association of Insurance Commissioners

In the March 31, 2013, financial statements, underfunded pension obligations were reflected as follows:

- Accrued Benefit Cost - $388
- Liability for Pension Benefits (Aggregate Write-In for Liabilities) - ($52)

Illustration of Example 2 – Underfunded Plan with Accrued Benefit Cost

	Net Periodic Cost (Expense Recognition)	Unassigned Funds	Aggregate Write-In for Liabilities	Accrued Benefit Cost
Existing Balance – 12/31/2012		388DR		388CR
Transition Entries – 1/1/2013				
A		52CR	52DR	
After Transition		**336DR**	**52DR**	**388CR**
A. Recognize "unrecognized" items at transition. The above entry reflects the "net" impact, resulting with an unrecognized net asset (contra-liability) and an increase to the surplus presentation. (This unrecognized net asset is reflected as a contra-liability as it does not reflect a prepaid for the overfunding of plan assets. If this was reflected as an asset, it would be nonadmitted.)				
Recognition of Net Periodic Pension Cost – 12/31/2013				
B		26 DR	26 CR	
C	274 DR			274 CR
B. Entry amortizes the transition items (entry is shown net.) Due to the nature of the unrecognized items, (net asset, recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into net periodic pension cost for the current period. C. Entry recognizes the net periodic pension cost, interest cost, expected return on plan assets, and the amortization of the unrecognized items.				
Recognition of Net Periodic Pension Cost – 12/31/2014				
D		26 DR	26 CR	
E	2,974 DR			2,974 CR
D. Entry occurs to amortize the transition items (entry is shown net). Due to the nature of the unrecognized items, (net asset, recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into net periodic pension cost for the current period. E. Entry recognizes net periodic pension cost the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.				

© 1999-2023 National Association of Insurance Commissioners

3. Underfunded Plan with Accrued Benefit Cost with Surplus Deferral Elected

Consideration of contributions or tax effects are not reflected in this example.

Example 3	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(1,819)	$(1,819)
Plus: Non-Vested Liability	(103)*	(103)
Total Accumulated Benefit Obligation	$(1,922)	$(1,922)
Projected Benefit Obligation	$(2,099)	$(2,099)
Plus: Non-Vested Liability	(103)	(103)
Total PBO as of January 1, 2012	$(2,202)	$(2,202)
Plan Assets at Fair Value	$0	$0
Funded Status	$(2,202)	$(2,202)
Transition Obligation / (Asset)	$0	
Prior Service Cost	0	
Prior Service Cost (Non-Vested)	103	
Unrecognized Losses / (Gains)	440	
Total Unrecognized Items	543	–
Net Overfunded Plan Asset / (Liability for Benefits)	$(1,659)	$(1,922)

* The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and underfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.

As illustrated above, the liability for pension benefits as of January 1, 2013, does not equal the underfunded plan status as the entity elected the transition deferral. Rather, the liability for pension benefits equals, at a minimum, the accumulated benefit obligation (ABO) less the plan asset at fair value. (Minimum transition liability that equals the ABO is required in accordance with paragraph 93.) After the transition period, the net overfunded plan asset / (liability for benefits) should equal the funded status of the plan.

3a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"

In accordance with paragraph 93, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the greater of:

© 1999-2023 National Association of Insurance Commissioners

	Minimum Transition Liability	
93.b.i.	10% of Calculated Surplus Impact	54.3
93.b.ii.	Anticipated Annual Amortization of "Unrecognized Items" (Assumes 5-year Uniform Amortization)	108.6
93.b.iii.	Difference Between ABO and Accrued Benefit Cost	263
	Transition Liability	**263**

Note: Amortization of the unrecognized items (paragraph 93.b.ii.) may not be determinable at transition. If the amortization amount that will be recognized year-end 2013 is unknown at the transition date, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for the component in paragraph 93.b.ii. of the minimum transition liability. If the amount recognized for transition (greater of all three components in paragraph 93.b.) is subsequently determined to be less than what is amortized for the year (paragraph 93.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.)

January 1, 2013 – Transition Date:

Reversal of Additional Minimum Liabilities/Intangible Plan Assets: As this plan has an unfunded ABO, following the guidance under SSAP No. 89, the entity had recognized an additional minimum liability and corresponding admitted intangible asset. As the concept of an additional minimum liability has been eliminated from SSAP No. 102, at transition these amounts are eliminated, with the determination of the overfunded/unfunded projected benefit obligation calculated subsequent to the elimination.

Balances as of 12/31/2012 under SSAP No. 89:
Accumulated Benefit Obligation: $1,819
Accrued Liability: $1,659
SSAP No. 89 Additional Minimum Liability: $160
SSAP No. 89 Admitted Intangible Asset: $160

	Debit	Credit
Unassigned Funds	160	
Intangible Asset		160
Additional Minimum Liability	160	
Unassigned Funds		160

Application of SSAP No. 102 – Recognition of Unfunded Status with Surplus Deferral:

	Debit	Credit
1. Unassigned Funds – Transition Liability	263	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		263

This entry represents the minimum transition liability required to be recognized at the transition date. As noted within the transition guidance, an entity may elect to transition the surplus impact over a period not to exceed 10 years. Paragraph 93 provides the specifications on the minimum liability recognized at transition. As this transition liability amount has yet to be recognized through expense (periodic cost), the liability is reflected through "aggregate write-ins for liabilities."

© 1999-2023 National Association of Insurance Commissioners

3b. December 31, 2013 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	*300*
Amortization of:	
o Prior Service Cost (nonvested)	20.6
o Unrecognized Losses	88
Total	*108.6*
Total Net Periodic Pension Cost	**408.6**

1. Liability for Pension Benefits 108.6
   (Aggregate Write-In for Liabilities)
   Unassigned Funds – Prior Service Cost (Nonvested) 20.6
   Unassigned Funds – Unrecognized Losses 88

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost 408.6
   Accrued Benefit Cost 408.6

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items.

Note: Although the entity elected the transition option for surplus deferral, and the guidance allows up to 10 years for deferral, an entity must continue to recognize a minimum amount of the transition liability as determined in accordance with paragraph 93.b. This requires the entity to recognize an amount that is at the greater of either 10% of the initial surplus impact or the amortization of the unrecognized items in effect at transition.

In this example, the entity will only receive a 3-year deferral – This illustration assumes 5-year uniform amortization of the transition amounts into expense for illustration purposes only. In practice, the minimum transition liability amounts may not be determinable until the expense is calculated in each future year:

Surplus Impact at Transition		**Prior Service Cost**	**Unrealized Losses**	
Transition Liability:	543	103	440	
Amount Recognized Jan. 1, 2013	(263)			
Remaining Transition Liability	**280**			
				Remaining Transition Liability
Minimum Transition Liability:		Anticipated Amortization:		
2014	**108.6**	20.6	88	171.4
2015	**108.6**	20.6	88	62.8
2016	**62.8**	12	50.8	–

© 1999-2023 National Association of Insurance Commissioners

3c. December 31, 2014 – Recognition of Transition Liability:

1. Unassigned Funds – Transition Liability 108.6
   Liability for Pension Benefits 108.6
   (Aggregate Write-In for Liabilities)

This entry represents the minimum transition liability required to be recognized at the subsequent date.

3d. December 31, 2014 – Recognition of Net Periodic Benefit Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	50
Interest Cost	30
Expected Return on Plan Assets	(35)
Total	*45*
Amortization of:	
o Prior Service Cost (nonvested)	20.6
o Unrecognized Losses	88
Total	*108.6*
Total Net Periodic Pension Cost	**153.6**

1. Liability for Pension Benefits 108.6
   (Aggregate Write-In for Liabilities)
   Unassigned Funds – Prior Service Cost (Nonvested) 20.6
   Unassigned Funds – Unrecognized Losses 88

2. Net Periodic Pension Cost 153.6
   Accrued Benefit Cost 153.6

This entry illustrates the December 2014 entries. The first removes the liability recognized for transition so that it could be recycled through expense, with the second recognizing net periodic cost (including the amortization of the unrecognized items.)

3e. December 31, 2015 – Activity within the pension plan has resulted with an overfunded plan.

As required under paragraph 93, if the fair value of plan assets had changed so that the plan was in an overfunded status, the transition liability would also be impacted with accelerated recognition to the extent the plan is in an overfunded status:

Components of Net Periodic Cost	**Dec. 31, 2015**
Service Cost	100
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	*125*
Amortization of:	
o Prior Service Cost (nonvested)	20.6
o Unrecognized Losses	88
Total	*108.6*
Total Net Periodic Pension Cost	**233.6**

© 1999-2023 National Association of Insurance Commissioners

Recognition of Remaining Transition Liability and Net Periodic Pension Cost:

	Account	Debit	Credit
1.	Unassigned Funds – Transition Liability	171.40	
	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		171.40

This entry illustrates the immediate recognition of the remaining transition liability

	Account	Debit	Credit
2.	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	108.6	
	Unassigned Funds – Prior Service Cost (Nonvested)		20.6
	Unassigned Funds – Unrecognized Losses		88

This entry reflects the amortization into net periodic pension cost of the "unrecognized items" within unassigned funds. Amortization has not changed with the recognition of the remaining transition liability.

	Account	Debit	Credit
3.	Net Periodic Pension Cost	233.60	
	Accrued Benefit Cost		233.60

Recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets, and the amortization of unrecognized items.

	Account	Debit	Credit
4.	Accrued Benefit Cost	2,456	
	Prepaid Benefit Cost *(Aggregate Write-In – Assets)*	844	
	Cash – Contribution		3,300

This entry recognizes the cash contribution, the elimination of the accrued benefit cost and the establishment of the prepaid benefit cost from the contribution.

	Account	Debit	Credit
5.	Liability for Pension Benefits	217	
	Overfunded Plan Asset		217

Since the plan is now in a net overfunded status, the liability for pension benefits is reduced to zero, and offset to the overfunded pension asset (contra-asset).

	Account	Debit	Credit
6.	Unassigned Funds (Change in Nonadmitted)	844	
	Prepaid Benefit Cost (Nonadmitted)		844

This entry recognizes the prepaid benefit cost that is nonadmitted and the underlying impact on unassigned funds.

	Account	Debit	Credit
7.	Overfunded Plan Asset (Nonadmitted)	217	
	Unassigned Funds (Change in Nonadmitted)		217

This entry illustrates the impact of the change in nonadmitted overfunded plan asset to unassigned funds.

Overfunded Plan Asset (Nonadmitted)	217	
Unassigned Funds (Change in Nonadmitted)		217

Illustration 3 – Paragraph 97 Example Note Disclosure – March 31, 2013:

SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. ABC entity elected to utilize the minimum transition option reflected in paragraph 93 of SSAP No. 102. The SSAP requires initial transition liability to be the greater of paragraphs 93.b.i, 93.b.ii., and 93.b.iii.:

© 1999-2023 National Association of Insurance Commissioners

	Minimum Transition Liability	
93.b.i.	10% of Calculated Surplus Impact	54.3
93.b.ii.	Annual Amortization of “Unrecognized Items” (Assumes 5-year Uniform Amortization)	108.6
93.b.iii.	Difference Between ABO and Accrued Benefit Cost	263
	Minimum Transition Liability	**263**

Note - Amortization of the unrecognized items (paragraph 93.b.ii.) may not be determinable at transition. If the amortization amount that will be recognized year-end 2013 is unknown at the transition date, at a minimum, the amount amortized for “unrecognized items” during the prior year shall be utilized for the component in paragraph 93.b.ii. of the minimum transition liability. If the amount recognized for transition (greater of all three components in paragraph 93.b.) is subsequently determined to be less than what is amortized for the year (paragraph 93.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.

Although the entity elected the transition option for surplus deferral, and SSAP No. 102 allows up to 10 years for deferral, an entity must continue to recognize a minimum amount of the transition liability as determined in accordance with paragraph 93.b. This requires the entity to recognize each year an amount that is at least equal to the amortization of the unrecognized items in effect at transition. Although the amortization of the transition items into future expenses (paragraph 93.b.ii.) may not be fully determinable at the time of transition (as they are dependent on the future expense calculations), the reporting entity anticipates that the remaining $280 surplus impact from the election of the transition deferral in SSAP No. 102 will be recognized over a 3-year* period.

* This is a reporting entity projection and may be revised based on future expenses and activity.

Recognized Surplus Impact at Transition & Remaining Transition Liability		**Prior Service Cost**	**Unrealized Losses**
Transition Liability:	543	103	440
Amount Recognized Jan. 1, 2013	(263)		
Remaining Transition Liability	**280**		

The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):

Example 3	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(1,922)	$(1,922)
Projected Benefit Obligation	$(2,099)	$(2,099)
Plus: Non-Vested Liability	(103)	(103)
Total PBO	$(2,202)	$(2,202)
Plan Assets at Fair Value	0	0
Funded Status	($2,202)	($2,202)

© 1999-2023 National Association of Insurance Commissioners

Transition Obligation / (Asset)	0	
Prior Service Cost	0	
Prior Service Cost (Non-Vested)	103	
Unrecognized Losses / (Gains)	440	
Total Unrecognized Items	543	–
Overfunded Plan Asset / (Liability for Benefits)	(1,659)	(1,922)

In the March 31, 2013, financial statements, the $1,922 liability for pension benefits was reflected in the financial statements as follows:

- Aggregate Write-Ins for Liabilities: $263
- Accrued Benefit Cost: $1,659
- Surplus Deferral - Unrecognized Transition Liability - $280

(Note – This disclosure shall be completed on a quarterly and annual basis, with updated financial information reflecting the current and prior reporting periods, until the plan is fully funded without any transition liability remaining.)

Illustration 3 – Paragraph 97 Example Note Disclosure – December 31, 2015 – After Overfunded Contribution:

At December 31, 2015, ABC entity contributed $3,300 towards the pension plan. This contribution resulted in the plan being in an overfunded status. Pursuant to the requirements of SSAP No. 102, ABC immediately recognized the remaining transition liability ($171.40). Although the transition liability has been fully-recognized to unassigned funds, the amortization of the liability into net periodic pension cost has not changed.

Although the entity elected the transition option for surplus deferral, and SSAP No. 102 allows up to 10 years for deferral, with the contribution resulting in an overfunded-plan status, ABC entity was restricted to a 3-year transition schedule as follows:

January 1, 2013 (Transition)	$263.00
December 31, 2014	$108.60
December 31, 2015	$171.40
Total Transition Liability	$543.00

In the December 31, 2015, annual financial statements, pension obligations were reflected as follows:

- Prepaid Benefit Cost - $844 (Nonadmitted)
- Overfunded Plan Asset - $(217) (Nonadmitted)

These amounts are both reported as Aggregate Write-Ins for Other-Than-Invested Assets resulting in a net $628.

© 1999-2023 National Association of Insurance Commissioners

4. Underfunded Plan with Prepaid Benefit Cost – No Surplus Deferral Elected

Consideration of contributions or tax effects are not reflected in this example.

Example 4	**Dec. 31, 2012**[9]	**Jan. 1, 2013**	**Dec. 31, 2013**	**Jan. 1, 2014**	**Dec. 31, 2014**
Accumulated Benefit Obligation	(1,532)	(1,532)	(1,732)	(1,732)	(1,957)
Plus: Non-Vested Liability	(100)	(100)	(100)	(100)	(100)
Total Accumulated Benefit Obligation	$ (1,632)	$ (1,632)	(1,832)	(1,832)	(2,057)
Projected Benefit Obligation	$(1,752)	$(1,752)	(2,052)	(2,052)	(2,277)
Plus: Non-Vested liability	(100)	(100)	(100)	(100)	(100)
Total PBO	$(1,852)	$(1,852)	(2,152)	(2,152)	(2,377)
Plan Assets at Fair Value	1,600	1,600	1,600	2,500	2,500
Funded Status	($252)	($252)	(552)	348	123
Transition Obligation / (Asset)	0	**0**	**0**	**0**	**0**
Prior Service Cost	48	**0**	**0**	**0**	**0**
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**
Unrecognized Losses / (Gains)	600	**0**	**0**	**0**	**0**
Total Unrecognized Items	748	**0**	**0**	**0**	**0**
Net Overfunded Plan Asset / (Liability for Benefits)	**496**	**(252)**	**(552)**	**348**	**123**

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and unfunded status of the plan. For the amounts shown as of December 31, 2012 immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.

January 1, 2013 – Transition Date, Recognize "Unrecognized Items"

		Debit	Credit
A.	Unassigned Funds – Prior Service Cost	48	
	Unassigned Funds – Prior Service Cost (Non-vested)	100	
	Unassigned Funds – Unrecognized Losses	600	
	Liability for Plan Benefits *(Aggregate Write-In for Liabilities)*		252
	Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*		496
B.	Change in Nonadmitted – Overfunded Plan Asset	496	
	Unassigned Funds		496

[9] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

© 1999-2023 National Association of Insurance Commissioners

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan and establishes the appropriate liability to reflect the unfunded status. (Reporting entities will need to continue to track these categories separately.)

December 31, 2013 – Recognition of Net Periodic Pension Cost
After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses and 6) amortization of any transition asset or obligation remaining in unassigned funds.

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	300
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**318.70**

C. Liability for Pension Benefits 18.70
(Aggregate Write-In for Liabilities)
Unassigned Funds – Transition Liability 18.70

This entry occurs prior to amortization of the items recognized at transition. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

D. Net Periodic Pension Cost 318.70
Prepaid Benefit Cost 318.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, the prepaid benefit cost will be reduced with the recognition of periodic cost.

E. Overfunded Plan Asset 318.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 318.70

Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.

F. Change in Nonadmitted – Prepaid Benefit Cost 318.70
Unassigned Funds 318.70

© 1999-2023 National Association of Insurance Commissioners

G. Unassigned Funds 318.70
Change in Nonadmitted – Overfunded Plan Asset 318.70

Entries to reflect the change in nonadmitted assets for both entries "D" and "E." These entries offset.

H. Unassigned Funds 318.70
Liability for Pension Benefits 318.70
(Aggregate Write-In for Liabilities)

Entry recognizes the unfunded liability from the 2013 net periodic costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is actual return on plan assets different from expected return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "H" at year-end.

January 1, 2014 – Contribution

	Jan. 1, 2014
Contribution	$900

I. Prepaid Benefit Cost 900
(Aggregate Write-In for Other-Than-Invested Assets)
Cash 900

J. Liability for Pension Benefits 552
(Aggregate Write-In for Liabilities)
Overfunded Plan Asset 552

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $348.

K. Unassigned Funds 900
Change in Nonadmitted - Prepaid Benefit Cost 900

L. Change in Nonadmitted- Overfunded Plan Asset 552
Unassigned Funds 552

Entries recognize the impact as a result of the nonadmitted overfunded plan asset from entry "I" and "J."

December 31, 2014 – Recognition of Net Periodic Pension Cost

After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.

© 1999-2023 National Association of Insurance Commissioners

Components of Net Periodic Cost	Dec. 31, 2014
Service Cost	200
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	225
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**243.70**

This example assumes no changes in the amortization timeframe. As noted in footnote 6 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date.

Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

	Debit	Credit
M. Overfunded Plan Assets *(Aggregate Write-In for Other-Than-Invested Assets)*	18.70	
Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry made to unassigned funds for the amount that will be amortized into periodic pension cost for the current period. Since the plan is currently overfunded, this is offset by overfunded plan asset.

	Debit	Credit
N. Unassigned Funds	18.70	
Change in Nonadmitted - Overfunded Plan Asset		18.70

This entry reflects the change in nonadmitted from entry "M."

	Debit	Credit
O. Net Periodic Pension Cost	243.70	
Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*		243.70

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost. Once that amount is exhausted, an accrued liability would be recorded.

© 1999-2023 National Association of Insurance Commissioners

P. Change in Nonadmitted - Prepaid Benefit Cost	243.70	
Unassigned Funds		243.70

Entries to reflect the change in nonadmitted assets for entry "O."

5. Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Funded ABO

Consideration of contributions or tax effects are not reflected in this example.

Example 5	**Dec. 31, 2012**[12]	**Jan. 1, 2013**	**Dec. 31, 2013**	**Dec. 31, 2014**	**Jan, 1, 2015**	**Dec. 31, 2015**
Accumulated Benefit Obligation	$(1,032)	$(1,032)	$(1,232)	$(1,457)	$(1,457)	$(1,657)
Plus: Non-Vested Liability	(100)	(100)	(100)	(100)	(100)	(100)
Total Accumulated Benefit Obligation	$(1,132)	$ (1,132)	(1,332)	(1,557)	(1,557)	(1,757)
Projected Benefit Obligation	$(1,752)	$(1,752)	(2,052)	(2,177)	(2,177)	(2,377)
Plus: Non-Vested liability	(100)	(100)	(100)	(100)	(100)	100
Total PBO	$(1,852)	$(1,852)	(2,152)	(2,277)	(2,277)	(2,477)
Plan Assets at Fair Value	1,600	1,600	1,600	1,600	2,500	2,500
Funded Status	($252)	($252)	(552)	(677)	223	23
Transition Obligation/(Asset)	0	**0**	**0**	**0**	**0**	
Prior Service Cost	48	**0**	**0**	**0**	**0**	
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**	
Unrecognized Losses/(Gains)	600	**0**	**0**	**0**	**0**	
Total Unrecognized Items	748	**0**	**0**	**0**	**0**	
Net Overfunded Plan Asset/ (Liability for Benefits)	**496**	**(25.20)**	**(325.20)**	**(475.40)**	**223**	**23**
Surplus Impact Deferred		**(226.80)**	**(226.80)**	**(201.60)**	**-**	**-**

Surplus Impact – The transition guidance in SSAP No. 92 and SSAP No. 102 requires a minimum of 10% of the surplus impact on the transition date. If a systematic 10-year allocation was applied to the total "unrecognized items" rather than the surplus impact, there would be a number of years in which a prepaid asset would still be reflected without any impact to surplus even though the plan is underfunded. This is because a reduction in overfunded plan assets alone has a corresponding change to nonadmitted assets, resulting in a net zero surplus impact.

Determine the initial transition surplus impact under the deferral election:

In accordance with paragraph 93.b. of SSAP No. 102, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the **greater of**:

[12] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

© 1999-2023 National Association of Insurance Commissioners

	Minimum Transition Liability	
93.b.i.	10% of Calculated Surplus Impact	25.20
93.b.ii.	Anticipated Annual Amortization of “Unrecognized Items” (Assume 40-year Uniform Amortization)	18.70
93.b.iii.	Difference Between unfunded ABO and Accrued Benefit Cost. (In this example, ABO is fully funded.)	–
	Transition Liability	**25.20**

93.b.ii. Note: If the amortization cannot be determined at transition, at a minimum, the amount amortized for unrecognized items during the prior year shall be utilized for this calculation. If the amount recognized for transition (greater of all three components) is subsequently determined to be less than what was amortized for the year, the difference between what was recognized for transition and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.

January 1, 2013 – Transition Date

2. Unassigned Funds	496	
Overfunded Plan Asset		496
(Aggregate Write-In for Other-Than-Invested Assets)		
3. Change in Nonadmitted – Overfunded Plan Asset	496	
Unassigned Funds		496
4. Unassigned Funds – Transition Liability	25.20	
Liability for Plan Benefits		25.20
(Aggregate for Write-In Liability)		

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan. (Reporting entities will need to continue to track these categories separately.) The first two entries (Entry A & B) have a **ZERO surplus impact** and the third entry recognizes a liability for 10% of the surplus impact calculated at transition as that is the greatest element from paragraph 93.b.

December 31, 2013 – Recognition of Net Periodic Pension Cost
After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.

As noted in paragraph 93.b., if surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact. As such, unless the entity elects to recognize the remaining surplus impact early (which is permitted under SSAP No. 102), there is no additional surplus impact from transition recognized as of December 31, 2013.

© 1999-2023 National Association of Insurance Commissioners

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	300
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**318.70**

Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP No. 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

D. Liability for Pension Benefits 18.70
(Aggregate Write-In for Liabilities)
Unassigned Funds – Transition Liability 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

E. Net Periodic Pension Cost 318.70
Prepaid Benefit Cost 318.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

F. Overfunded Plan Asset 318.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 318.70

Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.

© 1999-2023 National Association of Insurance Commissioners

G. Change in Nonadmitted – Prepaid Benefit Cost 318.70
Unassigned Funds 318.70

H. Unassigned Funds 318.70
Change in Nonadmitted – Overfunded Plan Asset 318.70

Entries to reflect the change in nonadmitted assets for both entries "E" and "F." These entries offset.

I. Unassigned Funds 318.70
Liability for Pension Benefits 318.70
(Aggregate Write-In for Liabilities)

Entry reflects the unfunded liability from the 2013 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "I" at year-end.

December 31, 2014 – Recognition of Deferred Transition Impact

J. Unassigned Funds – Transition Liability 25.20
Liability for Pension Benefits 25.20
(Aggregate Write-In for Liabilities)

Per paragraph 93, if surplus deferral is elected at transition, beginning with 2014 annual financials, the entity shall recognize the remaining surplus impact on a systematic basis over a period not to exceed the remaining nine years. This entry represents the minimum transition liability to be recognized subsequent to transition. Since it is assumed that there is no change in the amortization expectations, and ABO is still funded, this entry reflects 10% of the transition surplus impact.

December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	100
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	125
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**143.70**

Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to

© 1999-2023 National Association of Insurance Commissioners

amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP No. 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

		Debit	Credit
K.	Liability for Pension Benefits	18.70	
	(Aggregate Write-In for Liabilities)		
	Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

		Debit	Credit
L.	Net Periodic Pension Cost	143.70	
	Prepaid Benefit Cost		143.70
	(Aggregate Write-In for Other-Than-Invested Assets)		

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

		Debit	Credit
M.	Overfunded Plan Asset	143.70	
	(Aggregate Write-In for Other-Than-Invested Assets)		
	Unassigned Funds		143.70

Entry reflects the change in overfunded plan assets as a reduction in the contra-asset from initial transition.

		Debit	Credit
N.	Change in Nonadmitted – Prepaid Benefit Cost	143.70	
	Unassigned Funds		143.70
O.	Unassigned Funds	143.70	
	Change in Nonadmitted – Overfunded Plan Asset		143.70

Entries reflect the change in nonadmitted assets for both entries "L" and "M." These entries offset.

		Debit	Credit
P.	Unassigned Funds	143.70	
	Liability for Pension Benefits		143.70
	(Aggregate Write-In for Liabilities)		

Entry reflects the unfunded liability from the 2014 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status and will also need to be recorded as part of entry "P" at year-end.

© 1999-2023 National Association of Insurance Commissioners

January 1, 2015 – Recognition of Cash Contribution

	Jan. 1, 2015
Contribution	$900

Q. Prepaid Benefit Cost 900.00
(Aggregate Write-In for Other-Than-Invested Assets)
Cash 900.00

R. Liability for Pension Benefits 475.40
(Aggregate Write-In for Liabilities)
Overfunded Plan Asset 475.40
(Aggregate Write-In for Other-Than-Invested Assets)

S. Unassigned Funds 900.00
Change in Nonadmitted – Prepaid Benefit Cost 900.00

T. Change in Nonadmitted – Overfunded Plan Asset 475.40
Unassigned Funds 475.40

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $223.

U. Unassigned Funds 201.60
Overfunded Plan Asset 201.60

Since the plan is in an overfunded status, per paragraph 93.b. of SSAP No. 102, the entity is required to recognize the deferred surplus impact from initial transition to the extent that the plan is overfunded. As the plan is overfunded by more than the remaining transition surplus impact, this entry recognizes the full remaining surplus impact deferred at transition.

V. Change in Nonadmitted – Overfunded Plan Assets 201.60
Unassigned Funds 201.60

Entry reflects the change in nonadmitted assets from entry "U."

December 31, 2015 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2015**
Service Cost	100
Interest Cost	175
Expected Return on Plan Assets	(75)
Total	200
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**218.70**

(Previous notes on amortization continue to apply.)

© 1999-2023 National Association of Insurance Commissioners

	Debit	Credit
W. Overfunded Plan Asset	18.70	
(Aggregate Write-In for Other-Than-Invested Assets)		
Unassigned Funds		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the unrecognized items recognized to unassigned funds as part of the transition guidance (even if recognized subsequent to initial recognition under the deferral option) for the amount that will be amortized into periodic pension cost for the current period.

	Debit	Credit
X. Unassigned Funds	18.70	
Change in Nonadmitted – Overfunded Plan Asset		18.70

Entry reflects the change in nonadmitted assets from entry "W."

	Debit	Credit
Y. Net Periodic Pension Cost	218.70	
Prepaid Benefit Cost		218.70
(Aggregate Write-In for Other-Than-Invested Assets)		

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.

	Debit	Credit
Z. Change in Nonadmitted – Prepaid Benefit Cost	218.70	
Unassigned Funds		218.70

Entry reflects the change in nonadmitted assets from entry "Y." This example assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded at year-end in an **additional entry** impacting the Overfunded Plan Asset. If the plan became underfunded due to these changes, then the amount of the underfunding would then be recorded as a Liability for Pension Benefits.

Example: Assume the PBO increased by $100 at year-end due to discount rate changes, etc. This would cause the plan to be underfunded by $77.00.

	Debit	Credit
1. Unassigned Funds	*100.00*

Prior Service Cost	48	**0**	**0**	**0**	**0**	
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**	
Unrecognized Losses / (Gains)	600	**0**	**0**	**0**	**0**	
Total Unrecognized Items	748	**0**	**0**	**0**	**0**	
Net Overfunded Plan Asset / (Liability for Benefits)	**496**	**(132)**	**(432)**	**(582.20)**	**223**	**23**
Additional Minimum Liability (Unfunded ABO)	(32)	0	The concept of an additional minimum liability and related intangible asset for plans with an unfunded ABO is eliminated in SSAP No. 102.			
Intangible Asset	32	0				
Surplus Impact Deferred		**(120)**	**(120)**	**(94.80)**	–	–

Surplus Impact – The transition guidance in SSAP No. 92 and SSAP No. 102 requires a minimum of 10% of the surplus impact on the transition date. If a systematic 10-year allocation was applied to the total "unrecognized items" rather than the surplus impact, there would be a number of years in which a prepaid asset would still be reflected, without any impact to surplus, even though the plan is underfunded. This is because a reduced in overfunded plan assets alone has a corresponding change to nonadmitted assets, resulting in a net zero surplus impact.

Determine the initial transition surplus impact under the deferral election:

In accordance with paragraph 93.b. of SSAP No. 102, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the **greater of**:

[15] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

© 1999-2023 National Association of Insurance Commissioners

	Minimum Transition Liability	
93.b.i	10% of Calculated Surplus Impact at Transition	25.20
93.b.ii	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
93.b.iii	Difference Between unfunded ABO and Accrued Benefit Cost.	132.00
	Transition Liability	**132.00**

93.b.ii. Note: If the amortization cannot be determined at transition, at a minimum, the amount amortized for unrecognized items during the prior year shall be utilized for this calculation. If the amount recognized for transition (greater of all three components) is subsequently determined to be less than what was amortized for the year, the difference between what was recognized for transition and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.

January 1, 2013 – Transition Date

Reversal of Additional Minimum Liabilities/Intangible Plan Assets: As this plan has an unfunded ABO, following the guidance under SSAP No. 89, the entity had recognized an additional minimum liability and corresponding admitted intangible asset. As the concept of an additional minimum liability has been eliminated from SSAP No. 102, at transition these amounts are eliminated, with the determination of the overfunded/unfunded projected benefit obligation calculated subsequent to the elimination.

Unassigned Funds	32	
Intangible Asset		32
Additional Minimum Liability	32	
Unassigned Funds		32

Application of SSAP No. 102 – Recognition of Unfunded Status with Surplus Deferral:

A. Unassigned Funds	496	
Overfunded Plan Asset		496
(Aggregate Write-In for Other-Than-Invested Assets)		
B. Change in Nonadmitted – Overfunded Plan Asset	496	
Unassigned Funds		496
C. Unassigned Funds – Transition Liability	132	
Liability for Pension Benefits		132

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan. (Reporting entities will need to continue to track these categories separately.) Entries A & B have a **ZERO surplus impact** and the third entry recognizes a liability for the unfunded ABO per the requirements of paragraph 93.b.

December 31, 2013 – Recognition of Net Periodic Pension Cost

After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.

As noted in paragraph 93.b., if surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact. As such, unless the entity elects to recognize the remaining surplus impact early (which is permitted under SSAP No. 102), there is no additional surplus impact from transition recognized as of December 31, 2013.

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	300
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**318.70**

Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

D. Liability for Pension Benefits	18.70	
(Aggregate Write-In for Liabilities)		
Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

E. Net Periodic Pension Cost	318.70	
Prepaid Benefit Cost		318.70
(Aggregate Write-In for Other-Than-Invested Assets)		

© 1999-2023 National Association of Insurance Commissioners

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

		Debit	Credit
F.	Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*	318.70	
	Unassigned Funds		318.70

Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.

		Debit	Credit
G.	Change in Nonadmitted – Prepaid Benefit Cost	318.70	
	Unassigned Funds		318.70
H.	Unassigned Funds	318.70	
	Change in Nonadmitted – Overfunded Plan Asset		318.70

Entries to reflect the change in nonadmitted assets for both entries "E" and "F." These entries offset.

		Debit	Credit
I.	Unassigned Funds	318.70	
	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		318.70

Entry reflects the unfunded liability from the 2013 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status and will also need to be recorded as part of entry "I" at year-end.

December 31, 2014 – Recognition of Deferred Transition Impact

In accordance with paragraph 93 of SSAP No. 102, the minimum amount recognized each subsequent year shall be an amount that reflects the conditions of paragraph 93.b. As such, the surplus recognized shall be the **greater of:**

	Minimum Transition Liability	
93.b.i.	10% of Calculated Surplus Impact at Transition	25.20
93.b.ii.	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
93.b.iii.	Difference Between unfunded ABO and Accrued Benefit Cost/Fair Value of Plan Assets. (Dec. 31, 2014 - Fair value of plan assets together with the Liability for Pension Benefits exceed the ABO.)	–
	Transition Liability	**25.20**

(Previous note on amortization continues to apply.)

		Debit	Credit
J.	Unassigned Funds – Transition Liability	25.20	
	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		25.20

Entry represents the minimum transition liability to be recognized subsequent to transition. (10% of the transition surplus impact is the greatest component of paragraph 93.b. as of Dec. 31, 2014.)

© 1999-2023 National Association of Insurance Commissioners

December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	Dec. 31, 2014
Service Cost	100
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	125
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**143.70**

(Previous note on amortization continues to apply.)

K. Liability for Pension Benefits 18.70
(Aggregate Write-In for Liabilities)
Unassigned Funds – Transition Liability 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the unrecognized items recognized to unassigned funds as part of the transition guidance (even if recognized subsequent to initial recognition under the deferral option) for the amount that will be amortized into periodic pension cost for the current period.

L. Net Periodic Pension Cost 143.70
Prepaid Benefit Cost 143.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

M. Overfunded Plan Asset 143.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 143.70

Entry reflects the change in overfunded plan assets as a reduction in the contra-asset to correspond with the change in net periodic pension cost. With this entry, the Prepaid Benefit Cost and Overfunded Plan Assets net to zero. This is appropriate as the plan is underfunded and a liability is reflected.

N. Change in Nonadmitted – Prepaid Benefit Cost 143.70
Unassigned Funds 143.70

O. Unassigned Funds 143.70
Change in Nonadmitted – Overfunded Plan Asset 143.70

Entries to reflect the change in nonadmitted assets for both entries "L" and "M." These entries offset.

© 1999-2023 National Association of Insurance Commissioners

P. Unassigned Funds 143.70
Liability for Pension Benefits 143.70
(Aggregate Write-In for Liabilities)

Entry reflects the full unfunded liability, including impact from the 2014 plan-related costs.

Note - This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status and will also need to be recorded as part of entry "P" at year-end.

January 1, 2015 – Recognition of Cash Contribution

	Jan. 1, 2015
Contribution	$900

Q. Prepaid Benefit Costs 900.00
(Aggregate Write-In for Other-Than-Invested Assets)
Cash 900.00

R. Liability for Pension Benefits 582.20
(Aggregate Write-In for Liabilities)
Overfunded Plan Asset 582.20
(Aggregate Write-In for Other-Than-Invested Assets)

S. Unassigned Funds 900.00
Change in Nonadmitted – Prepaid Benefit Cost 900.00

T. Change in Nonadmitted – Overfunded Plan Asset 582.20
Unassigned Funds 582.20

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $223.

U. Unassigned Funds 94.80
Overfunded Plan Assets 94.80

As the surplus deferral was elected, with the overfunded status, per paragraph 93.b. of SSAP No. 102, the entity is required to recognize the deferred surplus impact from initial transition to the extent that the plan is overfunded. As the plan is overfunded by more than the remaining transition surplus impact, this entry recognizes the full remaining surplus impact deferred at transition.

V. Change in Nonadmitted – Overfunded Plan Assets 94.80
Unassigned Funds 94.80

Entry reflects the change in nonadmitted assets from entry U.

© 1999-2023 National Association of Insurance Commissioners

December 31, 2015 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2015**
Service Cost	100
Interest Cost	175
Expected Return on Plan Assets	(75)
Total	200
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**218.70**

(Prior amortization note continues to apply.)

W. Overfunded Plan Asset 18.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

X. Unassigned Funds 18.70
Change in Nonadmitted – Overfunded Plan Asset 18.70

Entry reflects the change in nonadmitted assets from entry "W."

Y. Net Periodic Pension Cost 218.70
Prepaid Benefit Cost 218.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.

Z. Change in Nonadmitted – Prepaid Benefit Cost 218.70
Unassigned Funds 218.70

Entry reflects the change in nonadmitted assets from entry "Y."

EXHIBIT B - CHANGES IN THE MEASUREMENT DATE AND PLAN SETTLEMENT

Note: Footnote references in this section link numbers together for ease of reference.

The reporting entity adopted this SSAP as of the transition date (January 1, 2013.) In accordance with this SSAP, Company B is changing the measurement date for its defined benefit pension plan from September 30 to December 31 for its December 31, 2014, financial statements. In accordance with this SSAP, statutory accounting principles require that change to be implemented by remeasuring plan assets and obligations as of December 31, 2013. Company B has a plan settlement on November 30, 2013, and remeasures its plan assets and benefit obligations as of November 30, 2013, resulting in a settlement loss before taxes of $60,000[6], which is a portion of the net loss in unassigned funds (surplus). However, the effects of remeasuring plan assets and obligations as of November 30, 2013, on the funded status reported in Company B's statement of financial position are not recognized until the following fiscal year because the change in measurement date has not been adopted at November 30, 2013. In recognizing the effects of the plan settlement and change in measurement date:

a. Recognize the settlement loss in net income in the fourth quarter of 2013 and a corresponding decrease in the cumulative net loss in unassigned funds (surplus).

b. Recognize the net periodic pension cost incurred from October 1, 2013, to December 31, 2013, net of tax, as an adjustment to beginning unassigned funds (surplus) for 2014.

c. Recognize any gains or losses arising during the period from October 1, 2013, to December 31, 2013, net of tax, as an adjustment to unassigned funds (surplus) for 2014.

d. Recognize corresponding changes in pension liability and deferred tax amounts for the above items.

The funded status of Company B's Plan assets as of September 30, 2013, November 30, 2013, December 31, 2013 and December 31, 2014, and amounts included in unassigned funds (surplus) to be recognized as a component of net periodic pension cost are shown below. Company B has no remaining transition asset or obligation. Company B is not required to amortize the cumulative net loss because it is less than 10% of the greater of the fair value of plan assets or the projected benefit obligation for all years presented. The applicable tax rate for 2013 and 2014 is 40%.

	9/30/13	11/30/13	12/31/13	12/31/14
Projected Benefit Obligation	(3,660)	(3,200)	(3,210)	(3,700)
Plan Asset – Fair Value	2,600	2,200	2,225	2,200
Funded Status	**(1,060)**	**(1,000)**	**(985)**	**(1,500)**
Items not yet recognized as a component of net periodic cost:	380	360	350	230
Prior Service Cost	265[5]	220	315[4]	365
Net Loss	**645**	**580**	**665**	**595**

Based on actuarial valuations performed as of September 30, 2013, and November 30, 2013, the reporting entity determines its net periodic pension cost for the two-month period from October 1, 2013, to November 30, 2013, and for the one-month period from December 1, 2013, to December 31, 2013, as follows:

© 1999-2023 National Association of Insurance Commissioners

Net Periodic Pension Cost	2 Months	1 Month	Total
Service Cost	25	15	40
Interest Cost	30	15	45
Expected Return on Plan Assets	(30)	(15)	(45)
Total service cost, interest cost, and expected return on plan assets	**25**	**15**	**40**[2]
Amortization of prior service cost	20	10	30[3]
Amortization of net loss	0	0	0
Total Amortization	20	10	30
Net Periodic Benefit Cost	**45**	**25**	**70**[1]

a. In the fourth quarter of 2013, the reporting entity makes the following journal entry to recognize the $60,000[6] settlement loss: (40% tax rate - $24,000)

Net Periodic Pension Cost (settlement loss)	60	
Deferred Tax Asset	24	
Unassigned Funds (Surplus)		84

b. In 2014, the reporting entity makes the following net journal entry to apply the measurement date provisions and adjust the beginning balances of unassigned funds (surplus), pension liability and deferred tax accounts for the amortization of prior service cost and the service cost, interest cost, and expected return on plan assets.

Unassigned Funds (Surplus)	24	
Deferred Tax Asset	16	
Accrued Benefit Cost		40

This journal entry reflects the following considerations:

- Debit to unassigned funds (surplus) for the $70[1] net periodic benefit cost
- Debit to deferred tax asset for $16 calculated as 40% of the $40[2] total service cost, interest cost, and expected return on plan assets
- Debit to unassigned funds (surplus) for $12 for the tax impact calculated as 40% of the $30[3] amortization of the prior service cost
- Credit to Unassigned funds (surplus) for $28 for the tax impact calculated as 40% of the $70[1] net periodic benefit cost
- Credit to Unassigned funds (surplus) for $30[3] for the amortization of the prior service cost.
- Credit to liability for pension benefits for the $40[2] total service cost, interest cost, and expected return on plan assets

c. The following entry adjusts the beginning balances of unassigned funds (surplus), pension liability and deferred tax accounts for the net loss arising during the period. (Net loss is calculated as follows: Net loss at December 31, 2013 of $315[4], less net loss at November 30, 2013 of $265[5], plus settlement loss of $60[6] to equal $110.)

Unassigned Funds (Surplus)	66	
Deferred Tax Asset	44	
Accrued Benefit Cost		110

SCOPE OF STATEMENT

1. Transfers of financial assets take many forms. Accounting for transfers in which the transferor has no continuing involvement with the transferred financial assets or with the transferee are generally straightforward. However, transfers of financial assets often occur in which the transferor has some continuing involvement either with the assets transferred or with the transferee. Examples of continuing involvement include, but are not limited to, servicing arrangements, recourse or guarantee arrangements, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into contemporaneously with, or in contemplation of the transfer, arrangements to provide financial support, pledges of collateral, and the transferor's beneficial interests in the transferred financial assets. Transfers of financial assets with continuing involvement raise issues about the circumstances under which the transfers should be considered as sales of all or part of the assets or as secured borrowings. An objective in accounting for transfers of financial assets is for each reporting entity that is a party to the transaction to recognize only assets it controls and liabilities it has incurred, to derecognize assets only when control has been surrendered, and to derecognize liabilities only when they have been extinguished. Sales and other transfers may frequently result in a disaggregation of financial assets and liabilities into components, which become separate assets and liabilities.

2. This statement focuses on the issues of accounting for transfers and servicing of financial assets and extinguishments of liabilities. This statement establishes statutory accounting principles for transfers

© 1999-2023 National Association of Insurance Commissioners

and servicing of financial assets, including asset securitizations and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements, repurchase financing and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. Securitizations of nonfinancial assets are outside the scope of this statement. Transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments*. Additionally, retained beneficial interests from the sale of loan-backed or structured securities are to be accounted for in accordance with *SSAP No. 43R—Loan-Backed and Structured Securities, Revised*.

3. *SSAP No. 25—Affiliates and Other Related Parties* shall be followed for accounting and disclosure requirements for all related party transactions.

4. *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* has been superseded by this statement.

5. This statement does not address the securitization of mortality or morbidity risk. The National Association of Insurance Commissioners' (NAIC's) Insurance Securitization Working Group of the Financial Condition (E) Committee is charged with the development of model laws, model regulations and proposed accounting guidance for the securitization of mortality and morbidity risk. When such proposed accounting guidance is finalized the development of a statement will be considered.

SUMMARY CONCLUSION

Accounting for Transfers and Servicing of Financial Assets

6. The objective of paragraph 8 and related implementation guidance is to determine whether a transferor has surrendered control over transferred financial assets. This determination must consider the transferor's continuing involvement in the transferred financial assets and requires the use of judgment that must consider all arrangements or agreements made contemporaneously with, or in contemplation of, the transfer, even if they were not entered into at the time of the transfer.

7. The requirements of paragraph 8 apply to transfers of an entire financial asset, transfers of a group of entire financial assets, and transfers of a participating interest in an entire financial asset (all of which are referred to collectively in this statement as transferred financial assets). A participating interest has all of the following characteristics:

a. From the date of the transfer, it represents a proportionate (pro rata) ownership interest in an entire financial asset. The percentage of ownership interests held by the transferor in the entire financial asset may vary over time, while the entire financial asset remains outstanding as long as the resulting portions held by the transferor (including any participating interest retained by the transferor or its agents) and the transferee(s) meet the other characteristics of a participating interest. For example, if the transferor's interest in an entire financial asset changes because it subsequently sells another interest in the entire financial asset, the interest held initially and subsequently by the transferor must meet the definition of a participating interest.

b. From the date of the transfer, all cash flows received from the entire financial asset are divided proportionately among the participating interest holders in an amount equal to their share of ownership. Cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be

required, which includes the profit that would be demanded in the marketplace. In addition, any cash flows received by the transferor as proceeds of the transfer of the participating interest shall be excluded from the determination of proportionate cash flows provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows.

c. The rights of each participating interest holder (including the transferor in its role as a participating interest holder) have the same priority, and no participating interest holder's interest is subordinated to the interest of another participating interest holder. That priority does not change in the event of bankruptcy or other receivership of the transferor, the original debtor, or any other participating interest holder. Participating interest holders have no recourse to the transferor, its agents or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits received by any participating interest holder. That is, no participating interest holder is entitled to receive cash before any other participating interest holder under its contractual rights as a participating interest holder. For example, if a participating interest holder also is the servicer of the entire financial asset and receives cash in its role as servicer, that arrangement would not violate this requirement.

d. No party has the right to pledge or exchange the entire financial asset unless all participating interest holders agree to pledge or exchange the entire financial asset.

If a transfer of a portion of an entire financial asset meets the definition of a participating interest, the transferor shall apply the guidance in paragraph 8. If a transfer of a portion of a financial asset does not meet the definition of a participating interest, the transferor and transferee shall account for the transfer in accordance with the guidance in paragraph 14 as a secured borrowing. However, if the transferor transfers an entire financial asset in portions that do not individually meet the participating interest definition, paragraph 8 shall be applied to the entire financial asset once all portions have been transferred.

8. A transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale if, and only if, all of the following conditions are met:

a. The transferred financial assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership. Transferred financial assets are isolated in bankruptcy or other receivership only if the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor.

b. Each transferee (or, if the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities and that entity is constrained from pledging or exchanging the assets it receives, each third-party holder of its beneficial interests) has the right to pledge or exchange the assets (or beneficial interests) it received, and no condition both constrains the transferee (or third-party holder of its beneficial interests) from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor (paragraphs 43-46).

c. The transferor or its agents do not maintain effective control over the transferred financial assets or third-party beneficial interests related to those transferred assets (paragraph 50). Examples of a transferor's effective control over the transferred financial assets include, but are not limited to (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 51-52), (2) an agreement that provides the transferor with both the unilateral ability to cause the holder to return specific

© 1999-2023 National Association of Insurance Commissioners

financial assets and a more-than-trivial benefit attributable to that ability, other than through a cleanup call (paragraphs 53-57), or (3) an agreement that permits the transferee to require the transferor to repurchase the transferred financial assets at a price that is so favorable to the transferee that it is probable that the transferee will require the transferor to repurchase them (paragraph 58).

Accounting for Transfers of Participating Interests

9. Upon completion of a transfer of a participating interest that satisfies the conditions to be accounted for as a sale (paragraph 8), the transferor (seller) shall:

a. Allocate the previous carrying amount of the entire financial asset between the participating interests sold and the participating interest that continues to be held by the transferor on the basis of their relative fair values at the date of the transfer (paragraph 61).

b. Derecognize the participating interest(s) sold.

c. Recognize and initially measure at fair value servicing assets, servicing liabilities, and any other assets obtained and liabilities incurred in the sale (such as cash) (paragraphs 62-66).

d. Recognize in earnings any gain or loss on the sale.

e. Report any participating interest or interests that continue to be held by the transferor as the difference between the previous carrying amount of the entire financial asset and the amount derecognized.

The transferee shall recognize the participating interest(s) obtained, other assets obtained, and any liabilities incurred and initially measure them at fair value.

10. Upon completion of a transfer of participating interests that does not satisfy the conditions to be accounted for as a sale, the guidance in paragraph 14 shall be applied.

Accounting for Transfers of an Entire Financial Asset or Group of Entire Financial Assets

11. Upon completion of a transfer of an entire financial asset or a group of entire financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 8), the transferor (seller) shall:

a. Derecognize the transferred financial assets;

b. Recognize and initially measure at fair value servicing assets, servicing liabilities, and any other assets obtained (including a transferor's beneficial interest in the transferred financial assets) and liabilities incurred[1] in the sale (paragraphs 60 and 62-66).

c. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be determined per the guidance in the SSAP for the specific type of investment (e.g., SSAP No. 43R for loan-backed and structured securities), or if not specifically stated in the related SSAP, in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and

[1] Some assets that might be obtained and liabilities that might be incurred include cash, put or call options that are held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations) and swaps (for example, provisions that convert interest rates from fixed to variable).

unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value.

12. Repurchase agreements, reverse repurchase agreements, repurchase financing, collateral requirements and dollar repurchase agreements are described in paragraphs 102-118. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales and shall be accounted for as sales as discussed in paragraphs 96-101 and disclosed as required by paragraph 28[2]. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred financial assets.

13. Upon completion of a transfer of an entire financial asset or a group of entire financial assets that does not satisfy the conditions to be accounted for as a sale in its entirety, the guidance in paragraph 14 shall be applied.

Secured Borrowing

14. If a transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset does not meet the conditions for a sale in paragraph 8, or if a transfer of a portion of an entire financial asset does not meet the definition of a participating interest (paragraph 7), the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 19). The transferor shall continue to report the transferred financial assets in its statement of financial position with no change in their measurement (that is, basis of accounting).

Recognition and Measurement of Servicing Assets and Liabilities

15. An entity shall recognize and initially measure at fair value, a servicing asset or servicing liability each time it undertakes an obligation to service a financial asset by entering into a servicing contract in either of the following situations:

a. A servicer’s transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset that meets the requirements for sale accounting; or

b. An acquisition or assumption of a servicing obligation that does not relate to financial assets of the servicer.

An entity that transfers its financial assets to an entity in a transfer that qualifies as a sale in which the transferor obtains the resulting securities and classifies them as debt securities shall separately recognize its servicing assets or servicing liabilities.

16. A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying assets remaining on the transferor’s balance sheet shall not be recognized as a servicing asset or servicing liability.

17. If distinct servicing rights exist in accordance with the above guidelines, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in

[2] Paragraph 28.l. also details the items that are excluded from the wash sale disclosure.

© 1999-2023 National Association of Insurance Commissioners

other income. Servicing assets or liabilities shall be measured subsequently at fair value at each reporting date with fluctuations in fair value reported as unrealized gains and losses. Declines in fair value which are determined to be other than temporary shall be recorded as realized losses.

Financial Assets Subject to Prepayment

18. Financial assets, except for instruments that are within the scope of *SSAP No. 86—Derivatives*, that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment shall be subsequently measured like investments in debt securities and loan-backed and structured securities in accordance with SSAP No. 43R. Examples of such financial assets include, but are not limited to, interest-only strips, other beneficial interests, loans, or other receivables.

Secured Borrowings and Collateral

19. A debtor may grant a security interest in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 14). The accounting for noncash[3] collateral by the debtor (or obligor) and the secured party depends on whether the secured party or its agent has the right to sell or repledge the collateral and on whether the debtor has defaulted. (Paragraphs 85-121 provide application guidance for securities lending, securities borrowing and repurchase agreements.)

a. If the secured party (transferee) or its agent has the right by contract or custom to sell or repledge the collateral, then the debtor (transferor) shall report that asset in its balance sheet.

b. If the secured party (transferee) sells collateral pledged to it, it shall recognize the proceeds from the sale and its obligation to return the collateral. The sale of the collateral is a transfer subject to the provisions of this statement.

c. If the debtor (transferor) defaults under the terms of the secured contract and is no longer entitled to redeem the pledged asset, it shall derecognize the pledged asset, and the secured party (transferee) shall recognize the collateral as its asset initially measured at fair value or, if it has already sold the collateral, derecognize its obligation to return the collateral.

d. Except as provided in paragraph 19.c., the debtor (transferor) shall continue to carry the collateral as its asset, and the secured party (transferee) shall not recognize the pledged asset.

20. Reporting entities may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. If the assets pledged are recorded as admitted assets under *SSAP No. 4—Assets and Nonadmitted Assets* and *INT 01-31: Assets Pledged as Collateral* and are not impaired under the provisions of *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, the pledging entity records the collateral as an admitted asset until committing a contract default that has not been cured in accordance with the contract provisions. At the time of an uncured default, the provisions of paragraph 19 shall be used to determine the appropriate

[3] Cash "collateral," sometimes used, for example, in securities lending transactions, shall be derecognized by the payer and recognized by the recipient, not as collateral, but rather as proceeds of either a sale or a borrowing.

accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging entity as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset shall be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer shall only record an admitted asset for the amount of collateral that it can redeem.

Extinguishments of Liabilities

21. A debtor shall derecognize a liability if and only if it has been extinguished (see *SSAP No. 15—Debt and* Holding *Company Obligations*). A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds; or

b. The debtor is legally released[4] from being the primary obligor under the liability, either judicially or by the creditor.

22. An exchange of debt instruments with substantially different terms is also considered a debt extinguishment and shall be accounted for in accordance with paragraph 21. A debtor's exchange of debt instruments (in a nontroubled debt situation) is accomplished with debt instruments that are substantially different if the present value of the cash flows under the terms of the new debt instrument is at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument. If the difference between the present value of the cash flows under the terms of the new debt instrument and the present value of the remaining cash flows under the terms of the original debt instrument is less than 10 percent, a creditor should evaluate whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification.

Disclosures

23. The principal objectives of the disclosures required by this statement are to provide users of the financial statements with an understanding of all of the following:

a. A transferor's continuing involvement (as defined in the glossary of this statement), if any, with transferred financial assets.

b. The nature of any restrictions on assets reported by an entity in its statement of financial position that relate to a transferred financial asset, including the carrying amounts of those assets.

c. How servicing assets and servicing liabilities are reported under this statement.

d. For transfers accounted for as sales when a transferor has continuing involvement with the transferred financial assets and for transfers of financial assets accounted for as secured borrowings, how the transfer of financial assets affects a transferor's financial position, financial performance, and cash flows.

[4] If nonrecourse debt (such as certain mortgage loans) is assumed by a third party in conjunction with the sale of an asset that serves as sole collateral for that debt, the sale and related assumption effectively accomplish a legal release of the seller-debtor for purposes of applying this statement.

© 1999-2023 National Association of Insurance Commissioners

Those objectives apply regardless of whether this statement requires specific disclosures. The specific disclosures required by this statement are minimum requirements and an entity may need to supplement the required disclosures specified in paragraph 28 depending on the facts and circumstances of a transfer, the nature of an entity's continuing involvement with the transferred financial assets, and the effect of an entity's continuing involvement on the transferor's financial position, financial performance, and cash flows. Disclosures required by other statement of statutory accounting principles (SSAPs) for a particular form of continuing involvement shall be considered when determining whether the disclosure objectives of this statement have been met.

24. Disclosures required by this statement may be reported in the aggregate for similar transfers if separate reporting of each transfer would not provide more useful information to financial statement users. A transferor shall disclose how similar transfers are aggregated. A transferor shall distinguish transfers that are accounted for as sales from transfers that are accounted for as secured borrowings. In determining whether to aggregate the disclosures for multiple transfers, the reporting entity shall consider quantitative and qualitative information about the characteristics of the transferred financial assets. For example, consideration should be given, but not limited, to the following:

a. The nature of the transferor's continuing involvement.

b. The types of financial assets transferred.

c. Risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the change in the transferor's risk profile as a result of the transfer.

25. The disclosures shall be presented in a manner that clearly and fully explains to financial statement users the transferor's risk exposure related to the transferred financial assets and any restrictions on the assets of the entity. An entity shall determine, in light of the facts and circumstances, how much detail it must provide to satisfy the disclosure requirements of this statement and how it aggregates information for assets with different risk characteristics. The entity must strike a balance between obscuring important information as a result of too much aggregation and excessive detail that may not assist financial statement users to understand the entity's financial position. For example, an entity shall not obscure important information by including it with a large amount of insignificant detail. Similarly, an entity shall not disclose information that is so aggregated that it obscures important differences between the different types of involvement or associated risks.

26. The disclosures in paragraph 28.g. of this statement apply to transfers accounted for as sales when the transferor has continuing involvement with transferred financial assets as a result of a securitization, asset-backed financing arrangement, or a similar transfer. If specific disclosures are required for a particular form of the transferor's continuing involvement by other SSAPs, the transferor shall provide the information required in paragraphs 28.f.i.(a) and 28.f.ii.(a) of this statement with a cross-reference to the separate notes to financial statements so a financial statement user can understand the risks retained in the transfer. The entity need not provide each specific disclosure required in paragraphs 28.f.i.(b), 28.f.ii.(a)(1)–(4), and 28.f.ii.(b)–(e) if the disclosure is not required by other SSAPs and the objectives of paragraph 23 are met. For example, if the transferor's only form of continuing involvement is a derivative, the entity shall provide the disclosures required in paragraphs 28.f.i.(a) and 28.f.ii.(a) of this statement and the disclosures about derivatives required by applicable SSAPs. In addition, the entity would evaluate whether the other disclosures in paragraph 28.g. are necessary for the entity to meet the objectives in paragraph 23.

27. To apply the disclosures in paragraph 28, an entity shall consider all involvements by the transferor or its agents to be involvements by the transferor.

© 1999-2023 National Association of Insurance Commissioners

28. A reporting entity shall disclose the following[5]:

a. For Repurchase and Reverse Repurchase Agreements:

i. If the entity has entered into repurchase or reverse repurchase agreements, information regarding the company policy or strategies for engaging in repo programs, policy for requiring collateral, as well as whether transactions have been accounted for as secured borrowings or as sale transactions. This disclosure shall include the terms of reverse repurchase agreements whose amounts are included in borrowing money. The following information shall be disclosed by type of agreement:

(a) Whether repo agreements are bilateral and/or tri-party trades;

(b) Maturity time frame divided by the following categories: open or continuous term contracts for which no maturity date is specified, overnight, 2 days to 1 week, from 1 week to 1 month, greater than 1 month to 3 months, greater than 3 months to 1 year, and greater than 1 year[6];

(c) Aggregate narrative disclosure of the fair value of securities sold and/or acquired that resulted in default. (This disclosure is not intended to capture "failed trades", which are defined as instances in which the trade did not occur as a result of an error and was timely corrected. Rather, this shall capture situations in which the non-defaulting party exercised their right to terminate after the defaulting party failed to execute.)

ii. For repurchase transactions accounted for as secured borrowings[7], the maximum amount and end balance as of each reporting period (quarterly and annual) for the following:

(a) Fair value of securities sold. (Book adjusted carrying value shall be provided as an end balance only.) This information is required in the aggregate, and by type of security categorized by NAIC designation, with identification of nonadmitted assets. Although legally sold as a secured borrowing, these assets are still reported by the insurer and shall be coded as restricted pursuant to the annual statement instructions, disclosed in accordance with *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures*, reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for restricted assets.

(b) Cash collateral and the fair value of security collateral (if any) received. This information is required in the aggregate and by type of security

---

[5] All repurchase and reverse repurchase transactions (collectively referred to as "repos"), and securities borrowing and securities lending transactions shall be reported gross for disclosure purposes and when detailed on the respective investment schedules. However, repurchase and reverse repurchase transactions, and securities borrowing and securities lending transactions may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* when a valid right to offset exists. When these transactions are offset in accordance with SSAP No. 64 and reported net in the financial statements, the disclosure requirements in SSAP No. 64, paragraph 6, shall be followed.

[6] Only short-term repo agreements (with a stated short-term maturity date) are allowed as admitted assets. Long-term repo agreements (agreements with maturity dates in excess of 365 days) are nonadmitted.

[7] For secured borrowing repurchase transactions, the insurance reporting entity is selling a security, and receiving collateral (generally cash) in an exchange that does not qualify as a sale.

categorized by NAIC designation with identification of collateral securities received that do not qualify as admitted assets.

(1) For collateral received, aggregate allocation of the collateral by the remaining contractual maturity of the repurchase agreements (gross): overnight and continuous, up to 30 days, 30-90 days, greater than 90 days. This disclosure shall also include a discussion of the potential risks associated with the agreements and related collateral received, including the impact arising changes in the fair value of the collateral received and/or the provided security and how those risks are managed.

(2) For cash collateral received that has been reinvested, the total reinvested cash and the aggregate amortized cost and fair value of the invested asset acquired with the cash collateral. This disclosure shall be reported by the maturity date of the invested asset: under 30 days, 60 days, 90 days, 120 days, 180 days, less than 1 year, 1-2 years, 2-3 years and greater than 3 years. To the extent that the maturity dates of the liability (collateral to be returned) does not match the invested assets, the reporting entity shall explain the additional sources of liquidity to manage those mismatches.

(c) Liability recognized to return cash collateral, and the liability recognized to return securities received as collateral as required pursuant to the terms of the secured borrowing transaction.

iii. For reverse repurchase transactions accounted for as secured borrowings[8], the maximum amount and end balance as of each reporting period (quarterly and annual) for the following:

(a) Fair value of securities acquired. This information shall be reported in the aggregate, and by type of security categorized by NAIC designation, with identification of whether acquired assets would not qualify as admitted assets.

(b) Cash collateral and the fair value of security collateral (if any) provided. (If security collateral was provided, book adjusted carrying value shall be provided as an end balance only.) Disclosure shall identify the book adjusted carrying value of any nonadmitted securities provided as collateral. For collateral pledged, the aggregate allocation of the collateral by the remaining contractual maturity of the reverse-repurchase agreements (gross): overnight and continuous, up to 30 days, 30-90 days, greater than 90 days. This disclosure shall also include a discussion of the potential risks associated with the agreements and related collateral pledged, including obligations arising from a decline in the fair value of the collateral pledged and how those risks are managed.

(c) Recognized receivable for the return of collateral. (Generally cash collateral, but including securities provided as collateral as applicable under the terms of the secured borrowing transaction. Receivables are not

---

[8] For secured borrowing reverse repurchase transactions, the insurance reporting entity is buying a security and providing collateral (generally cash) in an exchange that does not qualify as a sale.

recognized for securities provided as collateral if those securities are still reported as assets of the reporting entity.)

(d) Recognized liability to return securities acquired under the reverse-repurchase agreement as required pursuant to the secured borrowing transaction. (Generally, a liability is required if the acquired securities are sold.)

iv. For repurchase transactions accounted for as a sale[9], the maximum amount and end balance as of each reporting period (quarterly and annual) for the following:

(a) Fair value of securities sold (derecognized from the financial statements). (Book adjusted carrying value shall be provided as an end balance only, reflecting the amount derecognized from the sale transaction.) This information is required in the aggregate, and by type of security categorized by NAIC designation, with information on the book adjusted carrying value of nonadmitted assets sold.

(b) Cash and the fair value of securities (if any) received as proceeds and recognized in the financial statements. This information is required in the aggregate and by type of security categorized by NAIC designation, with identification of received assets nonadmitted in the financial statements. All securities received shall be coded as restricted pursuant to the annual statement instructions, disclosed in accordance with SSAP No. 1, reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for restricted assets.

(c) The forward repurchase commitment recognized to return the cash or securities received. Amount reported shall reflect the stated repurchase price under the repurchase transaction.

v. For reverse repurchase transactions accounted for as sale[10], the maximum amount and end balance as of each reporting period (quarterly and annual):

(a) Fair value of securities acquired and recognized on the financial statements. (Book adjusted carrying value shall be provided as an end balance only.) This information shall be reported in the aggregate, and by type of security categorized by NAIC designation. The disclosure also requires the book adjusted carrying value of nonadmitted assets acquired.

(b) Cash collateral and the fair value of security collateral (if any) provided. (If security collateral was provided, book adjusted carrying value shall be provided as an end balance only.) Disclosure shall also identify whether any nonadmitted assets were provided as collateral (derecognized from the financial statements).

[9] For sale repurchase transactions, the insurance reporting entity sold a security and received “proceeds” in exchange. With a sale transaction, the insurer removes the asset from their financial statements and recognizes the proceeds from the sale. This transaction requires recognition of a forward repurchase commitment.

[10] For sale reverse repurchase transactions, the insurance reporting entity has purchased a security and provided “proceeds” in exchange. With a sale transaction, the insurer reports the acquired asset in their financial statements and removes the proceeds provided. This transaction requires recognition of a forward resale commitment.

© 1999-2023 National Association of Insurance Commissioners

(c) The forward resale commitment recognized (stated repurchase price) to sell the acquired securities.

b. Collateral:

i. If the entity has entered into securities lending transactions, its policy for requiring collateral or other security and the fair value of the loaned security;

ii. If the entity has pledged any of its assets as collateral that are not reclassified and separately reported in the statement of financial position pursuant to paragraph 19.a., the carrying amounts and classifications of both those assets and associated liabilities as of the date of the latest statement of financial position presented, including qualitative information about the relationship(s) between those assets and associated liabilities. For example, if assets are restricted solely to satisfy a specific obligation, the carrying amounts of those assets and associated liabilities, including a description of the nature of restrictions placed on the assets, shall be disclosed.

iii. If the entity or its agent has accepted collateral that it is permitted by contract or custom to sell or repledge, the fair value as of the date of each statement of financial position presented of that collateral and of the portion of that collateral that it has sold or repledged, and information about the sources and uses of that collateral. Additionally, the reporting entity shall disclose the aggregate amount of contractually obligated open collateral positions (aggregate amount of securities at current fair value or cash received for which the borrower may request the return of on demand) and the aggregate amount of contractually obligated collateral positions under 30-day, 60-day, 90-day, and greater than 90-day terms.

iv. If the entity has accepted collateral that it is not permitted by contract or custom to sell or repledge, provide detail on these transactions, including the terms of the contract, and the current fair value of the collateral.

v. For all securities lending transactions, disclose collateral for transactions that extend beyond one year from the reporting date; and

vi. For securities lending transactions administered by an affiliated agent in which "one-line" reporting (paragraph 89.a.) of the reinvested collateral per paragraph 89.c. is optional, at the discretion of the reporting entity, disclose the aggregate value of the reinvested collateral which is "one line" reported and the aggregate value of items which are reported in the investment schedules (paragraph 89.b.). Identify the rationale between the items which are one line reported and those that are investment schedule reported and if the treatment has changed from the prior period and

vii. For securities lending transactions, include separately, the amount of any loaned securities within the separate account and if the policy and procedures for the separate account differ from the general account.

c. The reporting entity shall provide the following information by type of program (securities lending or dollar repurchase agreement) with respect to the reinvestment of the cash collateral and any securities which it or its agent receives as collateral that can be sold or repledged.

i. The aggregate amount of the reinvested cash collateral (amortized cost and fair value). Reinvested cash collateral shall be broken down by the maturity date of the

© 1999-2023 National Association of Insurance Commissioners

invested asset – under 30 days, 60 days, 90 days, 120 days, 180 days, less than 1 year, 1-2 years, 2-3 years and greater than 3 years.

ii. To the extent that the maturity dates of the liability (collateral to be returned) does not match the invested assets, the reporting entity shall explain the additional sources of liquidity to manage those mismatches.

d. For in-substance defeasance of debt

i. If debt was considered to be extinguished by in-substance defeasance, a general description of the transaction and the amount of debt that is considered extinguished at the end of each the period so long as that debt remains outstanding.

e. For all servicing assets and servicing liabilities:

i. A description of the risks inherent in servicing assets and servicing liabilities and, if applicable, the instruments used to mitigate the income statement effect of changes in fair value to the servicing assets and servicing liabilities. (Disclosure of quantitative information about the instruments used to manage the risks inherent in servicing assets and servicing liabilities is encouraged but not required.)

ii. The amount of contractually specified servicing fees, late fees and ancillary fees earned for each period for which results of operations are presented, including a description of where each amount is reported in the statement of income.

iii. Quantitative and qualitative information about the assumptions used to estimate the fair value (for example, discount rates, anticipated credit losses, and prepayment speeds). An entity that provides quantitative information about the instruments used to manage the risks inherent in the servicing assets and servicing liabilities, as encouraged by paragraph 28.e.i., also is encouraged, but not required to disclose the quantitative and qualitative information about the assumptions used to estimate the fair value of those instruments.

f. When servicing assets and servicing liabilities are subsequently measured at fair value:

i. For each class of servicing assets and servicing liabilities, the activity in the balance of servicing assets and the activity in the balance of servicing liabilities (including a description of where changes in fair value are reported in the statement of income for each period for which results of operations are presented), including, but not limited to, the following:

(a) The beginning and ending balances

(b) Additions (through purchases of servicing assets, assumptions of servicing obligations, and recognition of servicing obligations that result from transfers of financial assets)

(c) Disposals

(d) Changes in fair value during the period resulting from (i) changes in valuation inputs or assumptions used in the valuation model and (ii) other changes in fair value and a description of those changes

© 1999-2023 National Association of Insurance Commissioners

(e) Other changes that affect the balance and a description of those changes.

g. For securitizations, asset-backed financing arrangements, and similar transfers accounted for as sales when the transferor has continuing involvement (as defined in the glossary) with the transferred financial assets:

i. For each income statement presented:

(a) The characteristics of the transfer including a description of the transferor's continuing involvement with the transferred financial assets, the nature and initial fair value of the assets obtained as proceeds and the liabilities incurred in the transfer, and the gain or loss from sale of transferred financial assets. For initial fair value measurements of assets obtained and liabilities incurred in the transfer, the following information:

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3);

(2) The key inputs and assumptions[11] used in measuring the fair value of assets obtained and liabilities incurred as a result of the sale that relate to the transferor's continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable[12] financial assets, and anticipated credit losses, including expected static pool losses[13, 14]).

(b) Cash flows between a transferor and transferee, including proceeds from new transfers, proceeds from collections reinvested in revolving-period transfers, purchases of previously transferred financial assets, servicing fees, and cash flows received from a transferor's beneficial interests.

ii. For each statement of financial position presented, regardless of when the transfer occurred:

(a) Qualitative and quantitative information about the transferor's continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and

---

[11] If an entity has aggregated multiple transfers during a period in accordance with paragraphs 24 and 25, it may disclose the range of assumptions.

[12] The weighted-average life of prepayable assets in periods (for example, months or years) can be calculated by multiplying the principal collections expected in each future period by the number of periods until that future period, summing those products, and dividing the sum by the initial principal balance.

[13] Expected static pool losses can be calculated by summing the actual and projected future credit losses and dividing the sum by the original balance of the pool of assets.

[14] The timing and amount of future cash flows for transferor's interests in transferred financial assets are commonly uncertain, especially if those interests are subordinate to more senior beneficial interests. Thus, estimates of future cash flows used for a fair value measurement depend heavily on assumptions about default and prepayment of all the financial assets transferred, because of the implicit credit or prepayment risk enhancement arising from the subordination.

the extent that the transferor's risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk, and other risks), including:

(1) The total principal amount outstanding (BACV), the amount that has been derecognized, and the amount that continues to be recognized in the statement of financial position. The amount recognized (allocated fair value) by the reporting entity for the acquired participation in the transferred assets. The reporting schedules of both the transferred and reacquired assets. The percentage of beneficial interests from the reporting entity's transferred assets acquired by affiliated entities.

(2) The terms of any arrangements that could require the transferor to provide financial support (for example, liquidity arrangements and obligations to purchase assets) to the transferee or its beneficial interest holders, including a description of any events or circumstances that could expose the transferor to loss and the amount of the maximum exposure to loss.

(3) Whether the transferor has provided financial or other support during the periods presented that it was not previously contractually required to provide to the transferee or its beneficial interest holders, including when the transferor assisted the transferee or its beneficial interest holders in obtaining support, including:

(i.) The type and amount of support

(ii.) The primary reasons for providing the support

(4) Information is encouraged about any liquidity arrangements, guarantees, and/or other commitments provided by third parties related to the transferred financial assets that may affect the transferor's exposure to loss or risk of the related transferor's interest.

(b) The entity's accounting policies for subsequently measuring assets and liabilities that relate to the continuing involvement with the transferred financial assets;

(c) The key inputs and assumptions used in measuring the fair value of assets or liabilities that relate to the transferor's continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses);

(d) For the transferor's interests in the transferred financial assets, a sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests (including any servicing assets or servicing liabilities) of two or more unfavorable variations from the expected levels for each key assumption that is reported under paragraph 28.g.ii.(c) independently from

© 1999-2023 National Association of Insurance Commissioners

any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test;

(e) Information about the asset quality of transferred financial assets and any other assets that it manages together with them. This information shall be separated between assets that have been derecognized and assets that continue to be recognized in the statement of financial position. This information is intended to provide financial statement users with an understanding of the risks inherent in the transferred financial assets as well as in other assets and liabilities that it manages together with transferred financial assets. For example, information for receivables shall include, but is not limited to:

(i.) Delinquencies at the end of the period; and

(ii.) Credit losses, net of recoveries, during the period.

h. Disclosure requirements for transfers of financial assets accounted for as secured borrowing (excluding repurchase and reverse repurchase transactions disclosed under paragraph 28.a.):

i. The carrying amounts and classifications of both assets and associated liabilities recognized in the transferor's statement of financial position at the end of each period presented, including qualitative information about the relationship(s) between those assets and associated liabilities. For example, if assets are restricted solely to satisfy a specific obligation, the carrying amounts of those assets and associated liabilities, including a description of the nature of restrictions placed on the assets.

i. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted;

j. A description of the securities underlying, dollar repurchase and dollar reverse repurchase agreements, including book values and fair values, and maturities for the following categories: (i) securities subject to dollar repurchase agreements; and (ii.) securities subject to dollar reverse repurchase agreements.

k. Disclose any transfers of receivables with recourse.

l. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 12, for all affiliated investment transactions (including items originally classified as cash equivalents and short-term investments) and for non-affiliated investment transactions with an NAIC designation of 3 or below, or that do not have an NAIC designation. (For non-affiliated investments, all cash equivalents, derivative instruments and short-term investments with credit assessments equivalent to an NAIC 1-2 designation are excluded from this disclosure.) This disclosure shall be included in the financial statements for when the investment was initially sold and is only applicable for sales and purchases that cross quarter-end or year-end reporting periods. For example, if the investment was sold December 20, 2017, and reacquired on January 10, 2018, the transaction shall be captured in the wash sale disclosure included in the year-end 2017 financial statements, while an investment sold on May 1, 2019, and reacquired on May 20, 2019, would not be required to be disclosed:

i. A description of the reporting entity's objectives regarding these transactions;

© 1999-2023 National Association of Insurance Commissioners

ii. An aggregation of transactions by NAIC designation 3 or below, or that do not have an NAIC designation;

iii. The number of transactions involved during the reporting period;

iv. The book value of securities sold;

v. The cost of securities repurchased; and

vi. The realized gains/losses associated with the securities involved.

m. For reporting entities that have sold securities short within the reporting period, provide the following disclosures:

i. Unsettled Short Sale Transactions (outstanding at reporting date) – The amount of proceeds received and the fair value of the securities to deliver, with current unrealized gains and/or losses, and the expected settlement timeframe (number of days). This disclosure shall include the fair value of current transactions that were not settled within three days and the fair value of the short sales expected to be satisfied by a securities borrowing transaction. This disclosure shall be aggregated by security type. (For example, short sales of common stock shall be aggregated and reported together.)

ii. Settled Short Sale Transactions (settled during the reporting period) – The aggregate amount of proceeds received and the fair value of the security as of the settlement date with recognized gains and/or losses. This disclosure shall identify the aggregated fair value of settled transactions that were not settled within three days and the fair value of transactions that were settled through a securities borrowing transaction.

29. Refer to the Preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph 28 shall be made for the current quarter in the quarterly statement and for the year in the annual statement.

Application Guidance

30. This application guidance describes certain provisions of this statement in more detail and describes how they apply to certain types of transactions. It also discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. This application guidance is an integral part of the standards provided in this statement.

31. Paragraph 6 of this statement states that the objective of paragraph 8 and related implementation guidance is to determine whether a transferor has surrendered control over transferred financial assets.

Unit of Account

32. Paragraph 7 establishes the unit of account to which the sale accounting conditions in paragraph 8 shall be applied. Paragraph 7 states that paragraph 8 shall be applied to transfers of an entire financial asset, transfers of a group of entire financial assets, and transfers of a participating interest in an entire financial asset. Inherent in that principle is that to be eligible for sale accounting an entire financial asset cannot be divided into components before a transfer unless all of the components meet the definition of a participating interest.

© 1999-2023 National Association of Insurance Commissioners

33. The legal form of the asset and what the asset conveys to its holders shall be considered in determining what constitutes an entire financial asset. The following examples illustrate the application of what constitutes an entire financial asset:

a. A loan to one borrower in accordance with a single contract that is transferred to a securitization entity before securitization shall be considered an entire financial asset. Similarly, a beneficial interest in securitized financial assets after the securitization process has been completed shall be considered an entire financial asset. In contrast, a transferred interest in an individual loan shall not be considered an entire financial asset; however, if the transferred interest meets the definition of a participating interest, the participating interest would be eligible for sale accounting.

b. In a transaction in which the transferor creates an interest-only strip from a loan and transfers the interest-only strip, the interest-only strip does not meet the definition of an entire financial asset (and an interest-only strip does not meet the definition of a participating interest; therefore, sale accounting would be precluded). In contrast, if an entire financial asset is transferred to a securitization entity and the transfer meets the conditions for sale accounting, the transferor may obtain an interest-only strip as proceeds from the sale. An interest-only strip received as proceeds of a sale is an entire financial asset for purposes of evaluating any future transfers that could then be eligible for sale accounting.

c. If multiple advances are made to one borrower in accordance with a single contract (such as a line of credit, credit card loan, or a construction loan), an advance on that contract would be a separate unit of account if the advance retains its identity, does not become part of a larger loan balance, and is transferred in its entirety. However, if the transferor transfers an advance in its entirety and the advance loses its identity and becomes part of a larger loan balance, the transfer would be eligible for sale accounting only if the transfer of the advance does not result in the transferor retaining any interest in the larger balance or if the transfer results in the transferor's interest in the larger balance meeting the definition of a participating interest. Similarly, if the transferor transfers an interest in an advance that has lost its identity, the interest must be a participating interest in the larger balance to be eligible for sale accounting.

Participating Interests in an Entire Financial Asset

34. Paragraph 7.b. requires that all cash flows received from the entire financial asset be divided among the participating interest holders (including any interest retained by the transferor or its agents) in proportion to their share of ownership. That is, the participating interest definition does not allow for the allocation of specified cash flows unless each cash flow is proportionately allocated to the participating interest holders. For example, in the case of an individual loan in which the borrower is required to make a contractual payment that consists of a principal amount and interest amount on the loan, the transferor and transferee shall share in the principal and interest payments on the basis of their proportionate ownership interest in the loan. In contrast, if the transferor is entitled to receive an amount that represents the principal payments and the transferee is entitled to receive an amount that represents the interest payments on the loan, that arrangement would not be consistent with the participating interest definition because the transferor and transferee do not share proportionately in the cash flows received from the loan. In other cases, a transferor may transfer a portion of an individual loan that represents either a senior interest or a junior interest in an individual loan. In both of those cases, the transferor would account for the transfer as a secured borrowing because the senior interest or junior interest in the loan does not meet the requirements to be participating interests (see paragraph 38).

35. Paragraph 7.b. states that cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided that those cash flows are not subordinate to the proportionate

cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, including any profit that would be demanded in the marketplace. Cash flows allocated as compensation for services performed that are significantly above an amount that would fairly compensate a substitute service provider would result in a disproportionate division of cash flows of the entire financial asset among the participating interest holders and, therefore, would preclude the portion of a transferred financial asset from meeting the definition of a participating interest. Examples of cash flows that are compensation for services performed include loan origination fees paid by the borrower to the transferor, fees necessary to arrange and complete the transfer paid by the transferee to the transferor, and fees for servicing the financial asset.

36. The transfer of a portion of an entire financial asset may result in a gain or loss on the transfer when the contractual interest rate on the entire financial asset differs from the market rate at the time of transfer. Paragraph 7.b. states that any cash flows received by the transferor as proceeds of a transfer of a participating interest shall be excluded from the determination of whether the cash flows of the participating interest are proportionate provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows. For example, if the transferor transfers an interest in an entire financial asset and the transferee agrees to incorporate the excess interest (between the contractual interest rate on the financial asset and the market interest rate at the date of transfer) into the contractually specified servicing fee, the excess interest would likely result in the conveyance of an interest-only strip to the transferor from the transferee. An interest-only strip would result in a disproportionate division of cash flows of the financial asset among the participating interest holders and would preclude the portion from meeting the definition of a participating interest.

37. Paragraph 7.c. requires that the rights of each participating interest holder (including the transferor in its role as participating interest holder) have the same priority and that no participating interest holder's interest is subordinated to the interest of another participating interest holder. In certain transfers, recourse is provided to the transferee that requires the transferor to reimburse any premium paid by the transferee if the underlying financial asset is prepaid within a defined timeframe of the transfer date. Such recourse would preclude the transferred portion from meeting the definition of a participating interest. However, once the recourse provision expires, the transferred portion shall be reevaluated to determine if it meets the participating interest definition.

38. Paragraph 7.c. also requires that participating interest holders have no recourse to the transferor (or its agents) or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits. Recourse in the form of an independent third-party guarantee shall be excluded from the evaluation of whether the participating interest definition is met. Similarly, cash flows allocated to a third-party guarantor for the guarantee fee shall be excluded from the determination of whether the cash flows are divided proportionately among the participating interest holders.

Isolation Beyond the Reach of the Transferor and Its Creditors

39. The nature and extent of supporting evidence required for an assertion in financial statements that an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset (which are referred to collectively in this statement as transferred financial assets) have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered, including whether the contract or circumstances permit the transferor to revoke the transfer. It also may include consideration of the legal consequences of the transfer in the jurisdiction in which bankruptcy or other receivership would take place, whether a transfer of financial assets would likely be deemed a true sale at law (as described in paragraph 40.a.) or otherwise isolated (as described in paragraph 40.b.), whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred financial assets is appropriate only if the available evidence provides reasonable assurance that the transferred

© 1999-2023 National Association of Insurance Commissioners

financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor and its creditors (paragraph 74.c.). Transactions between related parties or affiliates are accounted for in accordance with SSAP No. 25.

40. In the context of U.S. bankruptcy laws, a true sale opinion from an attorney is often required to support a conclusion that transferred financial assets are isolated from the transferor, and its creditors. In addition, a nonconsolidation opinion is often required if the transfer is to an affiliated entity. In the context of U.S. bankruptcy laws:

a. A true sale opinion is an attorney's conclusion that the transferred financial assets have been sold and are beyond the reach of the transferor's creditors and that a court would conclude that the transferred financial assets would not be included in the transferor's bankruptcy estate.

b. A nonconsolidation opinion is an attorney's conclusion that a court would recognize that an entity holding the transferred financial assets exists separately from the transferor. Additionally, a nonconsolidation opinion is an attorney's conclusion that a court would not order the substantive consolidation of the assets and liabilities of the entity holding the transferred financial assets and the assets and liabilities of the transferor in the event of the transferor's bankruptcy or receivership.

A legal opinion may not be required if a transferor has a reasonable basis to conclude that the appropriate legal opinion(s) would be given if requested. For example, the transferor might reach a conclusion without consulting an attorney if (1) the transfer is a routine transfer of financial assets that does not result in any continuing involvement by the transferor or (2) the transferor had experience with other transfers with similar facts and circumstances under the same applicable laws and regulations.

41. For insurers that are subject to conservatorship, or other receivership procedures, judgments about whether transferred financial assets have been isolated need to be made in relation to the powers of conservators or receivers in those jurisdictions.

42. Whether securitizations isolate transferred financial assets may depend on such factors as whether the securitization is accomplished in one step or multiple step transfers (paragraphs 71-76). Some common financial transactions, for example, typical repurchase agreements and securities lending transactions, may isolate transferred financial assets from the transferor, although they may not meet the other conditions for surrender of control (paragraph 8).

Conditions That Constrain a Transferee

43. Sale accounting is allowed under paragraph 8.b. only if each transferee (or, if the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing arrangements and that entity is constrained from pledging or exchanging the assets it receives, each third-party holder of its beneficial interests) has the right to pledge or exchange the assets or beneficial interests it received, and no condition both constrains the transferee (or third-party holder of its beneficial interests) from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor. Many transferor-imposed or other conditions on a transferee's right to pledge or exchange both constrain a transferee from pledging or exchanging and, through that constraint, provide more than a trivial benefit to the transferor. Judgment is required to assess whether a particular condition results in a constraint. Judgment also is required to assess whether a constraint provides a more-than-trivial benefit to the transferor. If the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities, that entity may be constrained from pledging or exchanging the transferred financial assets to protect the rights of beneficial interest holders in the financial assets of the entity. Paragraph 8.b. requires that the transferor look through the constrained entity to determine whether each third-party holder of its beneficial interests has the right to pledge or exchange the beneficial interests that it holds. The considerations in

paragraphs 47-49 apply to the transferee or the third-party holders of its beneficial interests in an entity that is constrained from pledging or exchanging the assets it receives and whose sole purpose is to engage in securitization or asset-backed financing activities

44. Some conditions may constrain a transferee from pledging or exchanging the financial asset and may provide the transferor with more than a trivial benefit. For example, a provision that prohibits selling or pledging a transferred loan receivable not only constrains the transferee but also provides the transferor with the more-than-trivial benefit of knowing who holds the financial asset (a prerequisite to repurchasing the financial asset) and of being able to block the financial asset from being transferred to a competitor for the loan customer's business. Transferor-imposed contractual constraints that narrowly limit timing or terms, for example, allowing a transferee to pledge only on the day assets are obtained or only on terms agreed to with the transferor, also constrain the transferee and presumptively provide the transferor with more-than-trivial benefits. In some circumstances in which the transferor has no continuing involvement with the transferred financial assets, some conditions may constrain a transferee from pledging or exchanging the financial assets. If the transferor and its agents have no continuing involvement with the transferred financial assets, the condition under paragraph 8.b. is met. For example, if a transferor receives only cash in return for the transferred financial assets and the transferor and its agents have no continuing involvement with the transferred financial assets, sale accounting is allowed under paragraph 8.b. even if the transferee entity is significantly limited in its ability to pledge or exchange the transferred assets.

45. However, some conditions may not constrain a transferee from pledging or exchanging the transferred financial asset. For example, a transferor's right of first refusal on the occurrence of a bona fide offer to the transferee from a third party presumptively would not constrain a transferee. This is because the right in itself does not enable the transferor to compel the transferee to sell the financial asset and the transferee would be in a position to receive the sum offered by exchanging the financial asset, albeit possibly from the transferor rather than the third party. Further examples of conditions that presumptively would not constrain a transferee for purposes of this statement include (a) a requirement to obtain the transferor's permission to sell or pledge that is not to be unreasonably withheld, (b) a prohibition on sale to the transferor's competitor if other potential willing buyers exist, (c) a regulatory limitation such as on the number or nature of eligible transferees (as in the case of securities issued under Securities Act Rule 144A or debt placed privately), and (d) illiquidity, for example, the absence of an active market. However, judgment is required to assess the significance of some conditions. For example, a prohibition on sale to the transferor's competitor would be a constraint if that competitor were the only potential willing buyer other than the transferor.

46. A condition imposed by a transferor that constrains the transferee presumptively provides more than a trivial benefit to the transferor. A condition not imposed by the transferor that constrains the transferee may or may not provide more than a trivial benefit to the transferor. For example, if the transferor refrains from imposing its usual contractual constraint on a specific transfer because it knows an equivalent constraint is already imposed on the transferee by a third party, it presumptively benefits more than trivially from that constraint. However, the transferor cannot benefit from a constraint if it is unaware at the time of the transfer that the transferee is constrained.

Transferor's Rights or Obligations to Reacquire Transferred Assets or Beneficial Interests

47. Some rights or obligations to reacquire transferred financial assets or beneficial interests both constrain the transferee and provide more than a trivial benefit to the transferor, thus precluding sale accounting under paragraph 8.b. A freestanding call option written by a transferee to the transferor may benefit the transferor and, if the transferred financial assets are not readily obtainable in the marketplace, is likely to constrain a transferee because the transferee might have to default if the call was exercised and the transferee had pledged or exchanged the financial assets. For example, if a transferor in a securitization transaction has a call option to repurchase third-party beneficial interests at the price paid plus a stated return, that arrangement conveys more than a trivial benefit to the transferor (paragraphs 53 and 54). If the third-party holders of its beneficial interests are constrained from pledging or exchanging their beneficial

© 1999-2023 National Association of Insurance Commissioners

interests due to that call option, the transferor would be precluded from accounting for the transfer of financial assets to the securitization entity as a sale. Similarly, a freestanding forward purchase-sale contract between the transferor and the transferee on transferred financial assets not readily obtainable in the marketplace would benefit the transferor and is likely to constrain a transferee in much the same manner. Alternatively, freestanding rights to reacquire transferred assets that are readily obtainable presumptively do not constrain the transferee from pledging or exchanging them and thus do not preclude sale accounting under paragraph 8.b.

48. Other rights or obligations to reacquire transferred financial assets, regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred financial assets, as discussed in paragraphs 50-58, thus precluding sale accounting under paragraph 8.c. For example, an attached call in itself would not constrain a transferee who is able, by exchanging or pledging the asset subject to that call, to obtain substantially all of its economic benefits. However, an attached call could result in the transferor's maintaining effective control over the transferred asset(s) because the attached call gives the transferor the unilateral ability to cause whoever holds that specific asset to return it.

49. The concept of qualified special-purpose entities (QSPEs) was previously included within SSAP No. 91R. With the issuance of this statement, this concept is no longer included within statutory accounting guidance. Although this concept has been eliminated and is no longer a factor in determining whether a transfer of assets qualifies for sale accounting, reporting entities may continue to form, conduct transfers between, or have investments in trusts or other such legal vehicles that may have previously met the conditions to be considered a QSPE. Accounting for transfers of assets between the insurer and such trusts or other legal vehicles, including whether such transfers qualify for sale accounting, are subject to the provisions of this statement. As noted within paragraph 4, SSAP No. 25 shall be followed for accounting and disclosure requirements for all related party transactions.

Effective Control Over Transferred Financial Assets or Beneficial Interests

50. Judgment is required to assess whether the transferor maintains effective control over transferred financial assets or third-party beneficial interests. The transferor must evaluate whether a combination of multiple arrangements maintains effective control of transferred financial assets. When the transferee issues beneficial interests in the transferred financial assets, the evaluation of whether the transferor maintains effective control over the transferred financial assets also shall consider whether the transferor maintains effective control over the transferred financial assets through its control over the third-party beneficial interests. To assess whether the transferor maintains effective control over the transferred financial assets, all continuing involvement by the transferor or its agents shall be considered continuing involvement by the transferor. When assessing effective control, the transferor only considers the involvements of an agent when the agent acts for and on behalf of the transferor. In other words, if the transferor and transferee have the same agent, the agent's activities on behalf of the transferee would not be considered in the transferor's evaluation of whether it has effective control over a transferred financial asset. For example, an investment manager may act as a fiduciary (agent) for both the transferor and the transferee; therefore, the transferor need only consider the involvements of the investment manager when it is acting on its behalf.

Agreement to Repurchase or Redeem Transferred Financial Assets

51. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred financial assets from the transferee maintains the transferor's effective control over those assets as described in paragraph 8.c.(1) when all of the following conditions are met:

a. The financial assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 52).

b. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.

c. The agreement is entered into contemporaneously with, or in contemplation of, the transfer.

52. To be substantially the same, the financial asset that was transferred and the financial asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

b. Identical form and type so as to provide the same risks and rights;

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities similar remaining weighted-average maturities that result in approximately the same market yield);

d. Identical contractual interest rates;

e. Similar assets as collateral; and

f. The same aggregate unpaid principal amount or principal amounts within accepted “good delivery" standards for the type of security involved.

Unilateral Ability to Cause the Return of Specific Transferred Financial Assets

53. A transferor maintains effective control over transferred financial assets when the transferor has the unilateral ability to cause the holder to return specific financial assets and that ability provides more than a trivial benefit to the transferor. A cleanup call, however, is permitted as an exception to that general principle. A call on a transferred financial asset provides the transferor with effective control over that financial asset if, under its price and other terms, the call provides the transferor with the unilateral ability to reclaim the transferred financial asset and conveys more than a trivial benefit to the transferor. A call or other right conveys more than a trivial benefit if the price to be paid is fixed, determinable, or otherwise potentially advantageous, unless because that price is so far out of the money or for other reasons it is probable when the option is written that the transferor will not exercise it. A transferor’s unilateral ability to cause a securitization entity to return to the transferor or otherwise dispose of specific transferred financial assets, for example, in response to its decision to exit a market or a particular activity, would provide the transferor with effective control over the transferred financial assets if it provides more than a trivial benefit to the transferor. However, a call on readily obtainable assets at fair value may not provide the transferor with more than a trivial benefit. (Paragraph 56 provides an example in which, due to the combination of arrangements, the transferor would maintain effective control.)

54. Effective control over transferred financial assets can be present even if the right to reclaim is indirect. For example, if a call allows a transferor to buy back the beneficial interests at a fixed price, the transferor may maintain effective control of the financial assets underlying those beneficial interests. If the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities, that entity may be constrained from choosing to pledge or exchange the transferred financial assets. In that circumstance, any call held by the transferor on third-party beneficial interests is effectively an attached call on the transferred financial assets. Depending on the price and other terms of the call, the transferor may maintain effective control over the transferred financial assets.

55. An embedded call would not result in the transferor’s maintaining effective control because it is the issuer rather than the transferor who holds the call and the call does not provide more than a trivial benefit to the transferor. For example, a call embedded by the issuer of a callable bond or the borrower of

a prepayable mortgage loan would not provide the transferor with effective control over the transferred financial asset.

56. A right to reclaim specific transferred financial assets by paying their fair value when reclaimed generally does not maintain effective control when it does not convey a more than trivial benefit to the transferor. However, a transferor has maintained effective control if it has such a right and also holds the residual interest in the transferred financial assets. For example, if a transferor holds the residual interest in securitized financial assets and can reclaim the transferred financial assets at termination of the securitization entity by purchasing them in an auction, and thus at what might appear to be fair value, then sale accounting for the transfer of those financial assets it can reclaim would be precluded. Such circumstances provide the transferor with a more than trivial benefit and effective control over the financial assets because it can pay any price it chooses in the auction and recover any excess paid over fair value through its residual interest in the transferred financial assets.

57. Removal-of-account provisions do not result in the transferor's maintaining effective control, and are thus precluded from being accounted for as sales under statutory accounting as discussed in paragraph 78.

Arrangements to Reacquire Transferred Financial Assets

58. A transferor maintains effective control over the transferred financial asset as described in paragraph 8.c.(3) through an agreement that permits the transferee to require the transferor to repurchase the transferred financial asset at a price that is so favorable to the transferee at the date of the transfer that it is probable that the transferee will require the transferor to repurchase the transferred financial asset. For example, a put option written to the transferee generally does not provide the transferor with effective control over the transferred financial asset. However, a put option that is sufficiently deep in the money when it is written would provide the transferor effective control over the transferred financial asset because it is probable that the transferee will exercise the option and the transferor will be required to repurchase the transferred financial asset. In contrast, a sufficiently out-of-the-money put option held by the transferee would not provide the transferor with effective control over the transferred financial asset if it is probable when the option is written that the option will not be exercised. Likewise, a put option held by the transferee at fair value would not provide the transferor with effective control over the transferred financial asset.

Changes That Result in the Transferor's Regaining Control of Financial Assets Sold

59. A change in law or other circumstance may result in a transferred portion of an entire financial asset no longer meeting the conditions of a participating interest (paragraph 7) or the transferor's regaining control of transferred financial assets after a transfer that was previously accounted for as a sale, because one or more of the conditions in paragraph 8 are no longer met. Such changes, unless they arise solely from the initial application of this statement or from a change in market prices (for example, an increase in price that moves into-the-money a freestanding call on a non-readily-obtainable transferred financial asset that was originally sufficiently out-of-the-money that it was judged not to constrain the transferee), are accounted for in the same manner as a purchase of the transferred financial assets from the former transferee(s) in exchange for liabilities assumed (paragraph 9 or 11). (This "re-purchase" premise is consistent with *INT 04-21: EITF 02-09: Accounting for Changes that Result in a Transferor Regaining Control of Financial Assets Sold*.) After that change, the transferor recognizes in its financial statements those transferred financial assets together with liabilities to the former transferee(s) or beneficial interest holders of the former transferee(s). The transferor initially measures those transferred financial assets and liabilities at fair value on the date of the change, as if the transferor purchased the transferred financial assets and assumed the liabilities on that date. The former transferee would derecognize the transferred financial assets on that date, as if it had sold the transferred financial assets in exchange for a receivable from the transferor.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

60. The proceeds from a sale of financial assets consist of the cash and any other assets obtained, including beneficial interests and separately recognized servicing assets, in the transfer less any liabilities incurred, including separately recognized servicing liabilities. Any asset obtained is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred financial assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained, or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Participating Interests in Financial Assets That Continue to be Held by a Transferor

61. Participating interests in financial assets that continue to be held by a transferor are not part of the proceeds of the transfer, and the carrying amount of those participating interests shall be measured at the date of the transfer by allocating the previous carrying amount between the participating interests transferred and sold, and the participating interests that are not transferred and continue to be held by a transferor, based on their relative fair values.

Servicing Assets and Liabilities

62. Servicing of mortgage loans, credit card receivables, or other financial assets commonly includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and insurance from escrowed funds; monitoring delinquencies; executing foreclosure if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interests or participating interests in the financial assets. Servicing is inherent in all financial assets; it becomes a distinct asset or liability for accounting purposes only in the circumstances described in paragraph 63. If a transferor sells a participating interest in an entire financial asset, it will recognize a servicing asset or a servicing liability only related to the participating interest sold.

63. An entity that undertakes a contract to service financial assets shall recognize either a servicing asset or a servicing liability, each time it undertakes an obligation to service a financial asset that (a) results from a servicer's transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset that meets the requirements for sale accounting, or (b) is acquired or assumed and the servicing obligation does not relate to financial assets of the servicer. However, if the transferor transfers the assets to an entity in a transfer that qualifies as a sale in which the transferor obtains the resulting securities, and classifies them as debt securities, the servicing asset or servicing liability may be reported together with the asset being serviced and not recognized separately. A servicer of financial assets commonly receives the benefits of servicing—revenues from contractually specified servicing fees, a portion of the interest from the financial assets, late charges, and other ancillary sources, including "float," all of which it is entitled to receive only if it performs the servicing—and incurs the costs of servicing the financial assets. Typically, the benefits of servicing are expected to be more than adequate compensation to a servicer for performing the servicing, and the contract results in a servicing asset. However, if the benefits of servicing are not expected to adequately compensate a servicer for performing the servicing, the contract results in a servicing liability. (A servicing asset may become a servicing liability, or vice versa, if circumstances change, and the initial measure for servicing may be zero if the benefits of servicing are just adequate to compensate the servicer for its servicing responsibilities.) A servicer would account for its servicing contract that qualifies for separate recognition as a servicing asset or a servicing liability initially measured at its fair value regardless of whether explicit consideration was exchanged.

64. A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying financial

© 1999-2023 National Association of Insurance Commissioners

assets remaining on the transferor's balance sheet shall not recognize a servicing asset or a servicing liability.

65. A servicer that recognizes a servicing asset or servicing liability shall account for the contract to service financial assets separately from those financial assets, as follows:

a. Report servicing assets separately from servicing liabilities as a nonadmitted asset in the statement of financial position.

b. Initially measure servicing assets and servicing liabilities at fair value, (paragraph 15).

c. Account separately for rights to future interest income from the serviced assets that exceed contractually specified servicing fees. Those rights are not servicing assets; they are financial assets, effectively interest-only strips to be accounted for in accordance with paragraph 18 of this statement. (Interest-only strips preclude a portion of a financial asset from meeting the definition of a participating interest; see paragraph 36.)

d. Identify classes of servicing assets and servicing liabilities based on (1) the availability of market inputs used in determining the fair value of servicing assets and servicing liabilities, (2) an entity's method for managing the risks of its servicing assets and servicing liabilities, or (3) both.

e. Subsequently measure each class of separately recognized servicing assets and servicing liabilities at fair value. Changes in fair value should be reported as unrealized gains and losses (paragraph 17). Declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

66. As indicated above, transferors sometimes agree to take on servicing responsibilities when the future benefits of servicing are not expected to adequately compensate them for performing that servicing. In that circumstance, the result is a servicing liability rather than a servicing asset. For example, if in the transaction illustrated in Exhibit B – Illustration 3 the transferor had agreed to service the loans without explicit compensation and it estimated the fair value of that servicing obligation at $50, net proceeds would be reduced to $980, gain on sale would become a loss on sale of $20, and the transferor would report a servicing liability of $50.

Securitizations

67. Financial assets, such as mortgage loans, are commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties, and even taxi medallions also have been securitized. But securitizations of nonfinancial assets are outside the scope of this statement.

68. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to a securitization entity, commonly a trust. In "pass-through" and "pay-through" securitizations, receivables are transferred to the entity at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the entity.

69. Beneficial interests in the securitization entity are sold to investors and the proceeds are used to pay the transferor for the assets transferred financial assets. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the entity.

© 1999-2023 National Association of Insurance Commissioners

70. Pass-through and pay-through securitizations that meet the conditions in paragraph 8 qualify for sale accounting under this statement. All financial assets obtained and liabilities incurred by the transferor of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraphs 9 and 11; that includes the implicit forward contract to sell additional financial assets during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Isolation of Transferred Financial Assets in Securitizations

71. A securitization carried out in one transfer or a series of transfers may or may not isolate the transferred financial assets beyond the reach of the transferor and its creditors. Whether it does depends on the structure of the securitization transaction taken as a whole, considering such factors as the type and extent of further involvement in arrangements to protect investors from credit, and interest rate, and other risks, the availability of other financial assets, and the powers of bankruptcy courts or other receivers. The discussion in paragraphs 72-74 relates only to the isolation condition in paragraph 8.a. The conditions in paragraphs 8.b. and 8.c. also must be considered to determine whether a transferor has surrendered control over the transferred financial assets.

72. In certain securitizations, a corporation that, if it failed, would be subject to the U.S. Bankruptcy Code transfers financial assets to a securitization entity exchange for cash. The entity raises that cash by issuing to investors beneficial interests that pass through all cash received from the financial assets, and the transferor has no further involvement with the trust or the transferred financial assets. The Board understands that those securitizations generally would be judged as having isolated the assets, because, in the absence of any continuing involvement, there would be reasonable assurance that the transfer would be found to be a true sale at law that places the assets beyond the reach of the transferor, and its creditors, even in bankruptcy or other receivership.

73. In other securitizations, a similar corporation transfers financial assets to a securitization entity in exchange for cash and beneficial interests in the transferred financial assets. That entity raises the cash by issuing to investors commercial paper that gives them a senior beneficial interest in cash received from the financial assets. The beneficial interests obtained by the transferring corporation represent a junior interest to be reduced by any credit losses on the financial assets in the entity. The senior beneficial interests (commercial paper) are highly rated by credit rating agencies only if both (a) the credit enhancement from the junior interest is sufficient and (b) the transferor is highly rated. Depending on facts and circumstances, the Board understands that those "single-step" securitizations often would be judged in the United States as not having isolated the financial assets, because the nature of the continuing involvement may make it difficult to obtain reasonable assurance that the transfer would be found to be a true sale at law that places the financial assets beyond the reach of the transferor and its creditors in U.S. bankruptcy (paragraph 39). If the transferor fell into bankruptcy and the transfer was found not to be a true sale at law, investors in the transferred financial assets might be subjected to an automatic stay that would delay payments due them, and they might have to share in bankruptcy expenses and suffer further losses if the transfer was recharacterized as a secured loan.

74. Still other securitizations use multiple transfers intended to isolate transferred financial assets beyond the reach of the transferor and its creditors, even in bankruptcy. For example, in "two-step" structures:

a. First, the corporation transfers a group of financial assets to a special-purpose corporation that, although wholly owned, is so designed that the possibility is remote that the transferor or its creditors could reclaim the financial assets. This first transfer is designed to be judged to be a true sale at law, in part because the transferor does not provide "excessive" credit or yield protection to the special-purpose corporation, and the Board understands that transferred financial assets are likely to be judged beyond the reach of the transferor or the transferor's creditors even in bankruptcy or other receivership.

b. Second, the special-purpose corporation transfers a group of financial assets to a trust or other legal vehicle with a sufficient increase in the credit or yield protection on the second transfer (provided by a transferor's junior beneficial interest or other means) to merit the high credit rating sought by third-party investors who buy senior beneficial interests in the trust. Because of that aspect of its design, that second transfer might not be judged to be a true sale at law and, thus, the transferred financial assets could at least in theory be reached by a bankruptcy trustee for the special-purpose corporation.

c. However, the special-purpose corporation is designed to make remote the possibility that it would enter bankruptcy. For example, its charter forbids it from undertaking any other business or incurring any liabilities, so that there can be no creditors to petition to place it in bankruptcy. Furthermore, its dedication to a single purpose is intended to make it extremely unlikely, even if it somehow entered bankruptcy, that a receiver under the U.S. Bankruptcy Code could reclaim the transferred financial assets because it has no other assets to substitute for the transferred financial assets.

75. The Board understands that the "two-step" securitizations described above, taken as a whole, generally would be judged under present U.S. law as having isolated the financial assets beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership. However, each entity involved in a transfer must be evaluated under the applicable accounting guidance.

76. The powers of receivers vary considerably by state of domicile, and therefore some receivers may be able to reach financial assets transferred under a particular arrangement and others may not. A securitization may isolate transferred financial assets from a transferor subject to such a receiver and its creditors even though it is accomplished by only one transfer directly to a securitization entity that issues beneficial interests to investors and the transferor provides credit or yield protection.

Sales of Future Revenues

77. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

Removal-of-Accounts Provisions

78. Many transfers of financial assets that involve transfers of a group of entire financial assets to an entity whose sole purpose is to engage in securitization or asset-backed financing activities empower the transferor to reclaim assets subject to certain restrictions. Such a power is sometimes called a removal-of-accounts provision (ROAP). Transfers of assets that include ROAP provisions are precluded from being accounted for as sales under statutory accounting and shall follow the guidance in paragraph 14 for secured borrowing.

Short Sales

79. A short sale, as defined for statutory accounting, is the sale of a security that a selling reporting entity (seller) does not own at the time of sale or a sale which is consummated by the delivery of a security borrowed by, or for the account of, the seller. Short sales are normally settled by the delivery of a security borrowed by or on behalf of the seller. The seller later closes out the position by returning the borrowed security to the lender, typically by purchasing securities on the open market. If the price of the security rises, short sellers who buy it at the higher price will incur a loss.

© 1999-2023 National Association of Insurance Commissioners

80. In a “naked” short sale, the seller does not borrow or arrange to borrow the securities in time to make delivery to the buyer within the standard three-day settlement period (T+3). As a result, the seller fails to deliver securities to the buyer when delivery is due (known as a "failure to deliver" or "fail").

81. Consistent with U.S. GAAP guidance, short sales generally do not meet the definition of a derivative unless a forward purchase or forward sale is involved. Even if a forward purchase or forward sale element is included, if the contract meets the regular-way security trade exception, it would not be subject to the derivative guidance.

82. State statutes or state laws may have restrictions regarding whether a reporting entity is permitted to sell securities short. In situations in which state regulations do not prohibit, or otherwise provide specific guidance, short-sale transactions shall be accounted for in accordance with this statement.

83. Selling a security short is an action by a reporting entity, which results with the reporting entity recognizing proceeds from the sale and an obligation to deliver the sold security. For statutory accounting purposes, obligations to deliver securities resulting from short sales shall be reported as contra-assets (negative assets) in the respective investment schedule for the type of asset sold, with an investment code detailing the item as a short sale. The obligation (negative asset) shall be initially reflected at fair value, with changes in fair value recognized as unrealized gains and losses. These unrealized gains and losses shall be realized upon settlement of the short sale obligation. Interest on short sale positions shall be accrued periodically and reported as interest expense.

84. If short sales are supported by a securities borrowing transaction, the accounting and reporting guidelines in paragraphs 93-95 shall also be followed.

Securities Lending Transactions

85. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer’s failure to deliver securities sold. Securities lending transactions typically extend less than one year. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

86. If the criteria conditions in paragraph 8 (sales criteria) are met, securities lending transactions shall be accounted for:

a. By the transferor as a sale of the “loaned” securities for proceeds consisting of the cash collateral[15] and a forward repurchase commitment.

b. By the transferee as a purchase of the “borrowed” securities in exchange for the collateral and a forward resale commitment. During the term of that agreement, the transferor has

[15] If the “collateral” in a transaction that meets the criteria in paragraph 8 is a financial asset that the holder or its agent is permitted by contract or custom to sell or repledge, that financial asset is proceeds of the sale of the “loaned” securities. To the extent that the “collateral” consists of letters of credit or other financial instruments that the holder or its agent is not permitted by contract or custom to sell or repledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee.

© 1999-2023 National Association of Insurance Commissioners

surrendered control over the securities transferred and the transferee has obtained control over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

87. Many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred financial assets before their maturity under which the transferor maintains effective control over those financial assets (paragraphs 51-52). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder or its agent is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash or securities borrowed and reclassified as set forth in paragraph 19.a., and any rebate paid to the transferee of securities is interest on the cash or securities the transferor is considered to have borrowed.

88. The transferor of securities being "loaned" accounts for cash received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The cash received shall be recognized as the transferor's asset – as shall investments made with that cash, even if made by agents or in pools with other securities lenders – along with the obligation to return the cash. If securities that may be sold or repledged are received, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for cash received.

89. The transferor of securities being "loaned" accounts for collateral received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The collateral received shall be recognized as the transferor's asset – as shall investments made with that collateral, even if made by agents or in pools with other securities lenders – along with the obligation to return the collateral. If securities that may be sold or repledged are received by the transferor or its agent, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for collateral received. Collateral which may be sold or repledged by the transferor or its agent is reflected on balance sheet, along with the obligation to return the asset[16]. Collateral received which may not be sold or repledged by the transferor or its agent is off balance sheet[17]. For collateral on the balance sheet, the reporting is determined by the administration of the program.

a. Securities lending programs where the collateral received by the reporting entity's unaffiliated agent that can be sold or repledged is reported on the balance sheet. The collateral received and reinvestment of that collateral by the reporting entity's unaffiliated agent shall be reflected as a one-line entry on the balance sheet (Securities Lending Collateral) and a detailed schedule will be required each quarter and at year-end to list the description of the collateral asset. This description shall include the NAIC designation, fair value; book adjusted carrying value and maturity date. A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities).

b. Securities lending programs where the collateral received by the reporting entity that can be sold or repledged is reported on the balance sheet. If the reporting entity is the administrator of the program, then, the collateral received and any reinvestment of that collateral is reported with the invested assets of the reporting entity based on the type of

---

[16] If cash is received by the transferor or its agent and reinvested or repledged it is reported on balance sheet. It is explicitly intended that when the lender bears reinvestment risk, that collateral is on balance sheet.

[17] An example of collateral which is off balance sheet is when securities are received by the transferor or its agent in which the collateral must be held and returned, without the ability to transfer or repledge the collateral. This would involve limited situations in which the transferor or agent is prohibited from reinvesting the collateral.

© 1999-2023 National Association of Insurance Commissioners

investment (i.e. bond, common stock, etc.). A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities).

c. Securities lending programs where the collateral received by the reporting entity's affiliated agent can report using either one-line reporting (paragraph 89.a.) or investment schedule reporting (paragraph 89.b.).

90. Reinvestment of the collateral by the reporting entity or its agent shall follow the same impairment guidance as other similar invested assets reported on the balance sheet. Any fees received by the transferor for loaning the securities shall be recorded as miscellaneous investment income.

Securities Lending Transactions – Collateral Requirements[18]

91. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral by the end of the next business day, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

92. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral by the end of the next business day, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

Securities Borrowing Transactions – Sale Criteria is Not Met (Secured Borrowing)

93. In addition to being the transferor of securities being loaned and receiving collateral under a securities lending arrangement, reporting entities may be a transferee of borrowed securities, and provide collateral under a securities borrowing arrangement.

94. A transferee that sells borrowed securities shall recognize the proceeds from the sale of the securities and an obligation, at fair value, to return the borrowed securities to the transferor. If cash proceeds from the sale of borrowed securities are invested into other assets, or if non-cash proceeds are received from the sale, the assets acquired shall be shown as assets on the reporting entity's (transferee's) financial statements and accounted and reported in accordance with the SSAP for the type of assets acquired. For all instances in which the transferee sells borrowed securities, the reporting entity shall designate restricted assets equivalent to the fair value of the obligation to return the borrowed securities to the transferor.

95. A reporting entity transferee that borrows securities captured under this section (sale criteria is not met) and uses the borrowed securities to settle a short sale transaction shall eliminate the contra-asset recognized under the short sale (paragraph 83) and establish a liability to return the borrowed security. The liability to return the borrowed security shall remain on the books until the reporting entity acquires the

[18] The collateral requirements are required for determining admitted assets under statutory accounting, but the receipt of collateral is not a factor in determining whether the transferor has effective control over the loaned assets in accordance with paragraph 51.

© 1999-2023 National Association of Insurance Commissioners

security to return to the transferor. The accounting/reporting for the short sale and the secured borrowing transaction shall be separately reflected within the financial statements. As such, use of the borrowed asset for the short sale would be similar to recognizing "proceeds" from selling a borrowed asset, as such, if the borrowed asset is used to settle a short sale, the reporting entity shall recognize the borrowed asset and the obligation to return the asset under the secured borrowing agreement until the asset has been returned under the secured borrowing transaction. and recognize an obligation, at fair value, to return the borrowed securities.

Repurchase Agreements and "Wash Sales"

96. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in exchange for cash[19] and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest" factor. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

97. Repurchase agreements can be affected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee or its agent has the right to sell or repledge the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does not have the right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred financial asset. Some repurchase agreements call for repurchase of securities that need not be identical to the securities transferred.

98. If the conditions in paragraph 8 are met, the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Other transfers that are accompanied by an agreement to repurchase the transferred financial assets that may be accounted for as sales include transfers with agreements to repurchase at maturity. (Repurchase financing is addressed in paragraphs 105-110.)

99. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased within 30 days before or after the sale shall be accounted for as sales under this statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred financial assets.

100. As with securities lending transactions, under many agreements to repurchase transferred financial assets before their maturity the transferor maintains effective control over those financial assets. Repurchase agreements that do not meet all the conditions in paragraph 8 shall be treated as secured borrowings. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as the securities sold, qualify as borrowings if the return of substantially the same (paragraph 52) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

101. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the term of the

[19] Instead of cash, other securities or letters of credit sometimes are exchanged. Those transactions are accounted for in the same manner as securities lending transactions (paragraphs 85-92).

© 1999-2023 National Association of Insurance Commissioners

repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets.

Repurchase Agreements

102. Repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 52 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

103. For repurchase agreements that are accounted for as collateralized borrowings in accordance with paragraph 100 of this statement, the underlying securities shall continue to be accounted for as an investment owned by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

104. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.

Repurchase Financing

105. Repurchase financing is a repurchase agreement that relates to a previously transferred financial asset between the same counterparties (or affiliates of either counterparty) that is entered into contemporaneously with, or in contemplation of, the initial transfer.

106. A repurchase financing involves the transfer of a previously transferred financial asset back to the initial transferor as collateral for a financing between the initial transferee (the borrower) and the initial transferor (the lender). A repurchase financing also typically involves the initial transferor returning the transferred financial asset (or substantially the same asset) to the initial transferee when the financing is repaid on a stated date. A repurchase financing is entered into in contemplation of the initial transfer if both transactions are considered together at the execution of the initial transfer.

107. When the transferor transfers a financial asset and also enters into a repurchase financing with the transferee, there are typically three transfers of the financial assets:

a. Initial transfer – An initial transferor transfers a financial asset to an initial transferee.

b. Repurchase financing – The initial transferee (the borrower) transfer the previously transferred financial asset back to the initial transferor (the lender) as collateral for a financing between the initial transferor and initial transferee.

c. Settlement – The initial transferor (the lender) returns the financial asset (or substantially the same asset) to the initial transferee (the borrower) upon receipt of payment from the initial transferee.

108. Repurchase financing that is entered into contemporaneously with, or in contemplation of, an initial transfer of financial asset between the same counterparties (or affiliates of either counterparty) shall not be separately accounted for as a transfer of a financial asset and a related repurchase financing unless (a) the two transactions have a valid and distinct business or economic purpose for being entered into separately and (b) the repurchase financing does not result in the initial transferor regaining control over the financial

asset. Unless the provisions in paragraph 109 are met, the initial transfer and repurchase financing shall be evaluated as a linked transaction. The linked transaction shall be evaluated to determine whether it meets the requirements for sale accounting per paragraph 8. If the linked transaction does not meet the requirements for sale accounting, the linked transaction shall be accounted for based on the economies of the combined transactions, which generally represent a forward contract. SSAP No. 86 shall be used to evaluate whether the linked transaction shall be accounted for as a derivative.

109. An initial transfer of a financial asset and repurchase financing that are entered into contemporaneously with, or in contemplation of, one another shall be considered linked unless all of the following criteria are met at the inception of the transaction:

a. The initial transfer and the repurchase financing are not contractually contingent on one another. Even if no contractual relationship exists, the pricing and performance of either the initial transfer or the repurchase financing must not be dependent on the terms and execution of the other transaction.

b. The repurchase financing provides the initial transferor with recourse to the initial transferee upon default. That recourse must expose the initial transferor to the credit risk of the initial transferee, or its affiliates, and not solely to the market risk of the transferred financial asset. The initial transferee's agreement to repurchase the previously transferred financial asset (or substantially the same asset) for a fixed price and not fair value.

c. The financial asset subject to the initial transfer and repurchase financing is readily obtainable in the marketplace. In addition, the initial transfer of a financial asset and the repurchase financing are executed at market rates. This criterion may not be circumvented by embedding off-market terms in a separate transaction contemplated with the initial transfer or the repurchase financing.

d. The financial asset and repurchase agreement are not coterminous (the maturity of the repurchase financing must be before the maturity of the financial asset).

110. In accordance with paragraph 108, an initial transfer of assets and a repurchase financing shall not be considered separate transactions unless the provisions of paragraph 109 are met. If the provisions of paragraph 109 are met, the initial transfer shall be evaluated to determine whether it meets the requirements for sale accounting without taking into consideration the repurchase financing. In such situations, the repurchase financing shall then be separately analyzed as a repurchase agreement.

Reverse Repurchase Agreements

111. Reverse repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 52 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

112. For reverse repurchase agreements that are accounted for as collateralized lendings in accordance with paragraph 100 of this statement, the underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

© 1999-2023 National Association of Insurance Commissioners

Collateral Requirements – Repurchase and Reverse Repurchase Agreements[20]

113. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at any time the fair value of the collateral received from the counterparty is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral by the end of the next business day the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities. If the collateral is less than 95 percent at the reporting date, the difference between the actual collateral and 95 percent will be nonadmitted.

Reverse Repurchase Transaction

b. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at any time the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price.

Dollar Repurchase Agreements

114. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 52, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

115. For the seller in a dollar repurchase agreement accounted for as collateralized borrowing in accordance with paragraph 100 of this statement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

116. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 52.

[20] The collateral requirements are required for determining admitted assets under statutory accounting, but the receipt of collateral is not a factor in determining whether the transferor has effective control over the loaned assets in accordance with paragraph 50.

© 1999-2023 National Association of Insurance Commissioners

117. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

118. For the purchaser in a dollar reverse repurchase agreement accounted for as collateralized lending in accordance with paragraph 100 of this statement, an asset is recorded for the amount of the purchase. Upon completion of the reverse repurchase agreement, cash is received in exchange for a "substantially the same" security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Separate Transactions

119. Agreements to repurchase and resell securities that do not meet the definitions in paragraphs 85-101 of this statement shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

120. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

121. Reporting entities shall offset such liabilities and assets only to the extent that a legal right to offset exists as defined in SSAP No. 64, paragraph 2. Otherwise, separate assets and liabilities shall be recognized.

Loan Syndications

122. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

123. A loan syndication is not a transfer of financial assets. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as a financial asset.

Loan Participations

124. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers interests in the loan to other entities.

125. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

126. If the loan participation agreement transfers a participating interest in an entire financial asset (as described in paragraph 7 of this statement) and the conditions in paragraph 8 are met, the transfer shall be accounted for by the transferor as a sale of a participating interest. A transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor is a limitation on the transferee's rights but presumptively does not constrain a transferee from exercising its right to pledge or

© 1999-2023 National Association of Insurance Commissioners

exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging its participating interest and that constraint provides a more-than-trivial benefit to the transferor, the transferor has not relinquished control and shall account for the transfer as a secured borrowing.

Factoring Arrangements

127. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable in their entireties are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the conditions in paragraph 8 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

128. In a transfer of an entire receivable, a group of entire receivables, or a portion of an entire receivable with recourse, the transferor provides the transferee with full or limited recourse. The transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale, but rather as secured borrowing. (This provision is applied regardless if the transfer was comprised of the entire receivable, a group of the entire receivable, or a portion of the entire receivable.) A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in *SSAP No. 42—Sale of Premium Receivables*.

Extinguishments of Liabilities

129. If a creditor releases a debtor from primary obligation on the condition that a third party assumes the obligation and that the original debtor becomes secondarily liable, that release extinguishes the original debtor's liability. However, in those circumstances, whether or not explicit consideration was paid for that guarantee, the original debtor becomes a guarantor. As a guarantor, it shall recognize a guarantee obligation in the same manner as would a guarantor that had never been primarily liable to that creditor, with due regard for the likelihood that the third party will carry out its obligations. The guarantee obligation shall be initially measured at fair value, and that amount reduces the gain or increases the loss recognized on extinguishment.

130. Exchanges of debt instruments or debt instrument modifications are considered extinguishments if the exchange or modification results with substantially different terms or is considered more than minor. If the cash flows under the terms of the new debt instrument are at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of, or modification to, debt instruments is consider substantially different and/or more than minor.

Relevant Literature

131. The accounting guidance in this statement adopts with modification *FAS 166, Accounting for the Transfers of Financial Assets, an Amendment to FAS 140* (FAS 166), *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140), as amended by FAS 166, and FAS 156, *Accounting for Servicing of Financial Assets, an amendment of FASB Statement No. 140*, as amended by FAS 166. Statutory modifications from these adoptions include:

a. Rejects the GAAP consideration for "consolidated affiliates" as the concept of consolidation has not been adopted for statutory accounting.

b. Rejects reference to GAAP standards and GAAP methods not adopted for statutory as well as concepts that are not pertinent for insurers. For example, references to investments

© 1999-2023 National Association of Insurance Commissioners

"held-to-maturity", "available for sale" or "trading" and reference to FASB standards are replaced with statutory terms and references to statutory standards.

c. Rejects GAAP reference and guidance regarding "Revolving-Period Securitizations" as this GAAP guidance is not applicable to statutory accounting. This concept was also deemed not applicable to statutory accounting under SSAP No. 91R.

d. Rejects GAAP guidance for "Sale-Type and Direct-Financing Lease Receivables" as leases shall be accounted for in accordance with *SSAP No. 22R—Leases*. This conclusion is consistent with SSAP No. 91R.

e. Rejects GAAP guidance for "Banker's Acceptances and Risk Participations in Them," as not applicable for statutory accounting. This GAAP guidance was also deemed not applicable to statutory accounting under SSAP No. 91R.

f. Rejects GAAP guidance for "Removal of Account Provisions" that allows recognition of sale accounting. For statutory, transfers that would empower the transferor to reclaim assets under certain conditions (considered "removal-of-accounts provisions") are precluded from being accounted for as sales. This conclusion is consistent with SSAP No. 91R.

g. Rejects GAAP guidance for "Transfers of Receivables with Recourse" that allows transfers of receivables in their entirety with recourse to be accounted for as sales. For statutory, a transfer of receivables with recourse shall be accounted for as a secured borrowing. This conclusion is consistent with SSAP No. 91R.

h. Rejects illustrations for transactions involving transfers of lease financing receivables with residual values and banker's acceptances with a risk participation as the GAAP guidance in FAS 166 related to these topics has been rejected for statutory accounting.

i. Rejects the optionality provided within FAS 156 for subsequent measurement of servicing assets and servicing liabilities using either fair value or an amortization method. This statement requires application of a fair value method for subsequent measurement.

j. Incorporates guidance previously included in SSAP No. 91R specific to insurance entities, and guidance that was adopted from GAAP guidance not revised through the issuance of FAS 166. Items incorporated include:

   i. Clarification that transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments* (paragraph 2).

   ii. Clarification that transactions between related parties or affiliates are accounted for in accordance with *SSAP No. 25—Affiliates and Other Related Parties* (paragraph 4).

   iii. Clarification that the guidance does not address the securitization of mortality or morbidity risk (paragraph 5).

   iv. Guidance on the accounting of sale transactions for entities required to maintain an interest maintenance reserve (IMR). This guidance requires such entities to account for realized and unrealized capital gains and losses per the guidance in the SSAP for the specific type of investment, or if not specifically stated in the related SSAP, in accordance with SSAP No. 7 (paragraph 11.c.).

© 1999-2023 National Association of Insurance Commissioners

v. Clarification of when servicing assets and servicing liabilities shall be recognized as well as measurement of these items. Continues prior statutory decision that servicing rights assets shall be nonadmitted (paragraphs 15-17).

vi. Guidance on the accounting for transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract (paragraph 20).

vii. Disclosures on security lending transactions, loaned securities; securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements; receivables with recourse; and wash sales (paragraphs 28.a., 28.b., and 28.h.-28.l.).

viii. Guidance on the sales of future revenues (paragraph 77).

ix. Guidance on collateral requirements for securities lending transactions (paragraph 91).

x. Clarification that repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this guidance (paragraph 96).

xi. Guidance on Repurchase Agreements (paragraphs 96-110).

xii. Guidance on Reverse Repurchase Agreements (paragraphs 111-112).

xiii. Guidance on Collateral for Reverse and Repurchase Agreements (paragraph 113).

xiv. Guidance on Dollar Repurchase Agreements (paragraph 114-118).

xv. Guidance for Separate Transactions (paragraph 119).

xvi. Guidance for Offsetting (paragraph 121). (This guidance was revised in November 2012 to only allow offsetting when a valid right to offset exists in accordance with SSAP No. 64. This is different from previous guidance reflected in SSAP No. 91R.)

xvii. Guidance for Transfers of Receivables with Recourse (paragraph 129).

132. This statement also adopts *FASB Staff Position 140-3, Accounting for Transfers of Financial Assets and Repurchase Financing Transactions* (FSP FAS 140-3), *ASU 2011-03, Transfers and Servicing (Topic 860): Reconsideration of Effective Control for Repurchase Agreements* and *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as used In Certain Audit Guides and a Statement of Position.* This statement adopts *FASB Emerging Issues Task Force (EITF) No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold, FASB EITF No. 88-18, Sales of Future Revenues, FASB EITF No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB EITF No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights, FASB EITF No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments*, as amended by FAS 166, and *FASB EITF No. 01-7, Creditor's Accounting for a Modification or Exchange of Debt Instruments*. This statement adopts ASC guidance for short sales with modification to require the short sale obligation to be reflected as a contra-asset rather than a liability. Also, the recognition of unrealized gains

© 1999-2023 National Association of Insurance Commissioners

and losses is consistent with statutory accounting recognition, rather than directly to net income under U.S. GAAP. (The adopted ASC guidance includes guidance reflected in 942-405-25-1 through 25-2, 942-405-35-1, and 942-405-45-1. Additionally, the guidance in ASC 815-10-55-57 through 59 and 815-10-15-15 through 17, which addresses whether short sales are within the scope of SSAP No. 86, and the definition of a regular-way security trade is also adopted.)

133. This statement rejects FASB *EITF No. 84-5, Sale of Marketable Securities with a Put Option*, and FASB *EITF No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse* and *FTB 01-1:* Effective *Date for Certain Financial Institutions of Certain Provisions of Statement 140 related to Isolation of Transferred Financial Assets*. This statement rejects *FIN 41, Offsetting Amounts Related to Certain Repurchase and Reverse Repurchase Agreements*. This rejection, as it is a reversal of the prior adoption of this guidance in SSAP No. 45, and the revisions to paragraphs 121-122 adopted November 2012, are effective January 1, 2013. This guidance has been rejected as it permits optionality as to whether offsetting and net reporting occurs for repurchase and reverse purchase agreements under master netting agreements. The provisions of SSAP No. 64 shall be used in determining whether assets and liabilities shall be offset and reported net.

Effective Date and Transition

134. This standard shall be effective for years beginning on and after January 1, 2013 (effective date) and shall be applied prospectively. This statement must be applied as of the beginning of the reporting entity's first annual reporting period after the effective date, for interim periods within that first annual reporting period, and for interim and annual reporting periods thereafter. Earlier application is prohibited. This statement must be applied to transfers occurring on or after the effective date. On and after the effective date, the concept of a qualifying special purpose entity is no longer relevant for statutory accounting purposes. The disclosure provisions of this statement shall be applied to transfers that occurred both before and after the effective date of this statement. Guidance reflected in paragraph 22 added from *INT 03-05, EITF 01-7: Creditor's Accounting for a Modification or Exchange of Debt Instruments* has been in effect since June 22, 2003. Guidance in paragraphs 22 and 121 was originally contained in *INT 99-14: EITF No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments, as amended by FAS 166* and was effective October 4, 1999. Revisions to incorporate guidance for short sales, detailed in *Issue Paper No. 152—Short Sales*, are effective on a prospective basis for transactions occurring on or after January 1, 2017, unless a reporting entity has previously been following an approach similar to the adopted guidance. Reporting entities that have previously been following a similar approach shall not deviate from that approach prior to the effective date of the adopted guidance. Revisions to paragraph 28.a. of this statement to incorporate enhanced disclosures on repurchase and reverse repurchase transactions are effective December 31, 2017.

EXHIBIT A – GLOSSARY

Adequate Compensation

The amount of benefits of servicing that would fairly compensate a substitute servicer should one be required, which includes the profit that would be demanded in the marketplace.

Agent

A party that acts for and on behalf of another party. For example, a third-party intermediary is an agent of the transferor if it acts on behalf of the transferor.

Attached Call

A call option held by the transferor of a financial asset that becomes part of and is traded with the underlying instrument. Rather than being an obligation of the transferee, an attached call is traded with and diminishes the value of the underlying instrument transferred subject to that call.

Beneficial Interests

Rights to receive all or portions of specified cash inflows received by a trust or other entity, including, but not limited to, senior and subordinated shares of interest, principal, or other cash inflows to be "passed-through" or "paid-through," premiums due to guarantors, commercial paper obligations, and residual interests, whether in the form of debt or equity.

Benefits of Servicing

Revenues from contractually specified servicing fees, late charges, and other ancillary sources, including "float."

Cleanup Call

An option held by the servicer or its affiliate, which may be the transferor, to purchase the remaining transferred financial assets, or the remaining beneficial interests not held by the transferor, its affiliates, or its agents in an entity (or in a series of beneficial interests in transferred financial assets within an entity), if the amount of outstanding financial assets or beneficial interests falls to a level at which the cost of servicing those assets or beneficial interests becomes burdensome in relation to the benefits of servicing.

Collateral

Personal or real property in which a security interest has been given.

Continuing Involvement

Any involvement with the transferred financial assets that permits the transferor to receive cash flows or other benefits that arise from the transferred financial assets or that obligates the transferor to provide additional cash flows or other assets to any party related to the transfer. All available evidence shall be considered, including, but not limited to, explicit written arrangements, communications between the transferor and the transferee or its beneficial interest holders, and unwritten arrangements customary to similar transfers. Examples of continuing involvement with the transferred financial assets include, but are not limited to, servicing arrangements, recourse or guarantee arrangements, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into contemporaneously with, or in contemplation of, the transfer, arrangements to provide financial support, pledges of collateral, and the transferor's beneficial interests in the transferred financial assets.

© 1999-2023 National Association of Insurance Commissioners

Contractually Specified Servicing Fees

All amounts that, per contract, are due to the servicer in exchange for servicing the financial asset and would no longer be received by a servicer if the beneficial owners of the serviced assets (or their trustees or agents) were to exercise their actual or potential authority under the contract to shift the servicing to another servicer. Depending on the servicing contract, those fees may include some or all of the difference between the interest rate collectible on the financial asset being serviced and the rate to be paid to the beneficial owners of those financial assets.

Derecognize

Remove previously recognized assets or liabilities from the statement of financial position.

Derivative Financial Instrument

A derivative instrument (as defined in *SSAP No. 86—Derivatives*) that is a financial instrument (refer to *SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures*, paragraph 2).

Embedded Call

A call option held by the issuer of a financial instrument that is part of and trades with the underlying instrument. For example, a bond may allow the issuer to call it by posting a public notice well before its stated maturity that asks the current holder to submit it for early redemption and provides that interest ceases to accrue on the bond after the early redemption date. Rather than being an obligation of the initial purchaser of the bond, an embedded call trades with and diminishes the value of the underlying bond.

Financial Asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a one entity a right (a) to receive cash or another financial instrument from a second entity or (b) to exchange other financial instruments on potentially favorable terms with the second entity.

Financial Liability

A contract that imposes on one entity an obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Freestanding Call

A call that is neither embedded in nor attached to an asset subject to that call.

Interest-Only Strip

A contractual right to receive some or all of the interest due on a bond, mortgage loan, collateralized mortgage obligation, or other interest-bearing financial asset.

Naked Short Sale

A short sale in which the seller does not borrow or arrange to borrow the securities in time to make delivery to the buyer within the standard three-day settlement period (T+3). As a result, the seller fails to deliver securities to the buyer when delivery is due (known as a "failure to deliver" or "fail").

© 1999-2023 National Association of Insurance Commissioners

Participating Interest

A participating interest has the following characteristics:

a. From the date of the transfer, it represents a proportionate (pro rata) ownership interest in an entire financial asset. The percentage of ownership interests held by the transferor in the entire financial asset may vary over time, while the entire financial asset remains outstanding as long as the resulting portions held by the transferor or its agents) and the transferee(s) meet the other characteristics of a participating interest. For example, if the transferor's interest in an entire financial asset changes because it subsequently sells another interest in the entire financial asset, the interest held initially and subsequently by the transferor must meet the definition of a participating interest.

b. From the date of the transfer, all cash flows received from the entire financial asset are divided proportionately among the participating interest holders in an amount equal to their share of ownership. Cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, which includes the profit that would be demanded in the marketplace. In addition, any cash flows received by the transferor as proceeds of the transfer of the participating interest shall be excluded from the determination of proportionate cash flows provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows.

c. The rights of each participating interest holder (including the transferor in its role as a participating interest holder) have the same priority, and no participating interest holder's interest is subordinated to the interest of another participating interest holder. That priority does not change in the event of bankruptcy or other receivership of the transferor, the original debtor, or any other participating interest holder. Participating interest holders have no recourse to the transferor, its agents or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits received by any participating interest holder. That is, no participating interest holder is entitled to receive cash before any other participating interest holder under its contractual rights as a participating interest holder. For example, if a participating interest holder also is the servicer of the entire financial asset and receives cash in its role as servicer, that arrangement would not violate this requirement.

d. No party has the right to pledge or exchange the entire financial asset unless all participating interest holders agree to pledge or exchange the entire financial asset.

Proceeds

Cash, beneficial interests, servicing assets, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

© 1999-2023 National Association of Insurance Commissioners

Regular-Way Security Trade

Contracts that provide for delivery of a security within a period of time after the trade date generally established by regulations or conventions in the marketplace or exchange in which it is being executed.

Securitization

The process by which financial assets are transformed into securities.

Security Interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing Asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Short Sale

A short sale, as defined for statutory accounting, is the sale of a security that a selling reporting entity (seller) does not own at the time of sale or a sale which is consummated by the delivery of a security borrowed by, or for the account of, the seller.

Servicing Liability

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Standard Representations and Warranties

Representations and warranties that assert the financial asset being transferred is what it is purported to be at the transfer date. Examples include representations and warranties about (a) the characteristics, nature, and quality of the underlying financial asset, including characteristics of the underlying borrower and the type and nature of the collateral securing the underlying financial asset, (b) the quality, accuracy, and delivery of documentation relating to the transfer and the underlying financial asset, and (c) the accuracy of the transferor’s representations in relation to the underlying financial asset.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

© 1999-2023 National Association of Insurance Commissioners

Transferee

An entity that receives a financial asset, an interest in a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, an interest in a financial asset, or a group of financial assets that it controls to another entity.

Unilateral Ability (See paragraphs 53 and 54)

A capacity for action not dependent on the actions (or failure to act) of any other party.

EXHIBIT B ‑ ILLUSTRATIONS

Illustration—Recording Transfers with Proceeds of Cash, Derivatives, and Other Liabilities

1. Company A transfers entire loans with a carrying amount of $1,000 to a subsidiary and receives proceeds with a fair value of $1,030 and the transfer is accounted for as a sale. Company A undertakes no servicing responsibilities and assumes a limited recourse obligation to repurchase delinquent loans.

Company A agrees to provide the transferee a return at a floating rate of interest even though the contractual terms of the loan are fixed rate in nature (that provision is effectively an interest rate swap).

Fair Values	
Cash proceeds	$1,050
Interest rate swap asset	40
Recourse obligation	60

Net Proceeds	
Cash received	$1,050
Plus: Interest rate swap asset	40
Less: Recourse obligation	(60)
Net proceeds	$1,030

Gain on Sale	$1,030
Net proceeds	1,000
Carrying amount of loans sold	$30
Gain on sale	

Journal Entry		
Cash	1,050	
Interest rate swap asset	40	
Loans		1,000
Recourse obligation		60
Gain on sale		30
To record transfer		

Illustration—Recording Transfers of Participating Interests

2. Company B transfers a nine-tenths participating interest in a loan with a fair value of $1,100 and a carrying amount of $1,000, and the transfer is accounted for as a sale. The servicing contract has a fair value of zero because Company B estimates that the benefits of servicing are just adequate to compensate it for its servicing responsibilities.

Fair Values	
Cash proceeds for nine-tenths sold ($1,100 x 9/10)	$990
One-tenth interest continued to be held by the transferor ($1,100 x 1/10)	110

Allocated Carrying Amount Based on Relative Fair Values

	Fair Value	Percentage Of Total Fair Value	Allocated Carrying Amount
Nine-tenths participating interest sold ($1,100 x 9/10)	$990	90	$900
One-tenth participating interest continued to be held by the transferor ($1,100 x 1/10)	110	10	100
Total	$ 1,100	100	$1,000

Gain on Sale	
Net proceeds	$ 990
Less: Carrying amount of loans sold	(900)
Gain on sale	$90

Journal Entry		
Cash	990	
Loans		900
Gain on sale		90
To record transfer		

Illustration—Sale of Receivables with Servicing Obtained

3. Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C transfers the entire loans to an entity and the transfer is accounted for as a sale. Company C receives as proceeds $1,000 cash, a beneficial interest to receive 1 percent on the contractual interest on the loans (an interest-only strip receivable), and an additional 1 percent of the contractual interest as compensation for servicing the loans. The fair values of the servicing asset and the interest-only strip receivable are $40 and $60, respectively.

Fair Values	
Cash proceeds	$1,000
Servicing asset	40
Interest-only strip receivable	60

Net Proceeds	
Cash proceeds	$1,000
Servicing Asset	40
Interest-only strip receivable	60
Net Proceeds	$1,100

Gain on Sale	
Net proceeds	$1,100
Less: Carrying amount of loans sold	(1,000)
Gain on sale	$ 100

Journal Entries		
Cash	1,000	
Interest-only strip receivable	60	
Servicing Asset	40	
Loans		1,000
Gain on sale		100

Cash	1,000	
Obligation to return borrowed securities		1,000

To record sale of borrowed securities to a third party and the resulting obligation to return securities that it no longer holds

At conclusion:

Obligation to return borrowed securities	1,000	
Cash		1,000

To record the repurchase of securities borrowed

Cash	1,024	
Receivable under securities loan agreements		1,020
Interest revenue (“rebate”)		4

To record the receipt of cash collateral and rebate interest

Illustration—Short Sale Settled with Securities Borrowed Under a Secured Borrowing Agreement

5. The following example illustrates the accounting for a securities borrowing transaction treated as a secured borrowing, in which the insurer borrows securities and delivers the borrowed securities to a different counterparty to settle a short sale transaction.

Cash
    Contra-Asset – Securities Sold Short

To recognize the cash received and the obligation to delivery securities under a short sale.

Receivable Under Securities Loan Agreement (Borrow Securities)
    Cash

To recognize transfer of cash under the security borrowing agreement, with recognition of a receivable for the return. The actual securities borrowed under the agreement (as sale accounting criteria is not met) shall not be recognized on the financial statements.

Borrowed Asset ("Proceeds" of selling asset)
    Obligation to return Securities Borrowed

To recognize the use of the borrowed security to settle a short-sale transaction. This transaction would be similar to receiving "proceeds" from the sale of a borrowed security – but instead of "cash" recognition of the actual borrowed asset, with an obligation to return the borrowed securities.

Contra-Asset – Securities Sold Short
    Borrowed Asset

Close out the short sale by delivering the asset to the counterparty.

Obligation to Return Securities Borrowed
    Cash

Eliminate the liability to return the borrowed asset by purchasing the asset and re-establishing it as off-balance sheet collateral for the securities borrowing transaction.

Cash
    Receivable Under Securities Loan Agreement

To recognize the return of cash collateral from the transferor and the unwinding of the securities borrowing agreement.

EXHIBIT A – CLASSIFICATION CRITERIA: LIABILITY OR EQUITY 28

Classification Criteria 28
Distinguishing Liability from Equity – Scope and Scope Exclusions 30

SCOPE OF STATEMENT

1. This statement provides statutory accounting principles for transactions in which an entity exchanges its equity instruments to employees and non-employees[1] in share-based payment transactions, including employee share purchase plans and deferred compensation obligations held in a rabbi trust. This

[1] Guidance referencing grantees is intended to be applicable to recipients of both employee and nonemployee awards, and guidance referencing employees or nonemployees is only applicable to those specific types of awards.

© 1999-2023 National Association of Insurance Commissioners

statement does not provide statutory accounting principles for employee share ownership plans; those transactions are addressed in *SSAP No. 12—Employee Stock Ownership Plans*.

SUMMARY OF ISSUE

2. The objective of accounting for transactions under share-based payment arrangements is to recognize in the financial statements the goods or services received in exchange for equity instruments granted or liabilities incurred and the related cost to the entity as those goods or services are received. This statement uses the terms "compensation" and "payment" in their broadest senses to refer to the consideration paid for goods or services.

3. This statement requires that the cost resulting from all share-based payment transactions be recognized in the financial statements. This statement establishes fair value as the measurement objective in accounting for share-based payment arrangements and requires all entities to apply a fair-value-based measurement method[2] in accounting for share-based payment transactions .

Scope and Scope Exceptions

4. This statement applies to all share-based payment transactions in which a grantor acquires goods or services to be used or consumed in the grantor's own operations by issuing (or offering to issue) its shares, share options, or other equity instruments or by incurring liabilities to an employee or nonemployee that meet either of the following conditions:

a. The amounts are based, at least in part[3], on the price of the entity's shares or other equity instruments.

b. The awards require or may require settlement by issuing the entity's equity shares or other equity instruments.

5. Share-based payments awarded to a grantee by a related party or other holder of an economic interest in the entity as compensation for goods or services provided to the reporting entity are share-based payment transactions to be accounted for under this statement unless the transfer is clearly for a purpose other than compensation for goods or services to the reporting entity. The substance of such a transaction is that the economic interest holder makes a capital contribution to the reporting entity, and that entity makes a share-based payment to the grantee in exchange for services rendered or goods received. An example of a situation in which such a transfer is not compensation is a transfer to settle an obligation of the economic interest holder to the grantee that is unrelated to goods or services to be used or consumed in a grantor's own operations.

[2] Accounting pronouncements that require fair value measurements but that are excluded from *SSAP No. 100R—Fair Value* is limited to this statement addressing share-based payment transactions. The fair value measurement objective in this statement is generally consistent with the fair value measurement objective in SSAP No. 100R. However, for certain share-based payment transactions, the measurements at the grant date are fair-value-based measurements, not fair value measurements. Although some measurements in this statement are fair value measurements, for practical reasons this statement is excluded in its entirety from SSAP No. 100R. To be consistent with GAAP guidance on share-based payment transactions, the definition of fair value for use in this statement is: "the amount at which the asset (or liability) could be bought (or incurred) or sold (settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale." Observable market prices of identical or similar equity or liability instruments in active markets are the best estimate of fair value and, if available, should be used as the basis for the measurement of equity and liability instruments awarded in a share-based payment transaction with employees.

[3] The phrase "at least in part" is used because an award of share-based compensation may be indexed to both the price of an entity's shares and something else that is neither the price of the entity's shares nor a market, performance, or service condition.

6. The guidance in this statement does not apply to:

   a. Equity instruments held by an employee stock ownership plan. Such equity instruments shall follow the guidance in *SSAP No. 12—Employee Stock Ownership Plans*.

   b. Transactions involving equity instruments granted to a lender or investor that provides financing to the issuer.

   c. Transactions involving equity instruments granted in conjunction with selling goods or services to customers as part of a contract (for example, sales incentives). If consideration payable to a customer is payment for a distinct good or service from the customer, then the entity shall account for the purchase of the good or service in the same way it accounts for other purchases from suppliers. Therefore, share-based payment awards granted to a customer for a distinct good or service to be used or consumed in the grantor's own operations are accounted for under this statement.

7. Paragraphs ~~115-122~~116-123 apply to all entities that use employee share purchase plans. This is a separate and distinct scope from share-based payment transactions captured in paragraph 4.

Recognition

8. An entity shall recognize the goods acquired or services received in a share-based payment transaction when it obtains the goods or as services are received, as further described in paragraphs 9-10. The entity shall recognize either a corresponding increase in equity or a liability, depending on whether the instruments granted satisfy the equity or liability classification criteria (see paragraphs 15-29).

9. Employee services themselves are not recognized before they are received. As the services are consumed, the entity shall recognize the related cost. For example, as services are consumed, the cost usually is recognized in determining net income of that period, for example, as expenses incurred for employee services. In some circumstances, the cost of services may be initially capitalized as part of the cost to acquire or construct another asset, such as inventory, and later recognized in the income statement when that asset is disposed of or consumed. This statement refers to recognizing compensation cost rather than compensation expense because any compensation cost that is capitalized as part of the cost to acquire or construct an asset would not be recognized as compensation expense in the income statement.

10. Transactions with nonemployees in which share-based payment awards are granted in exchange for the receipt of goods or services may involve a contemporaneous exchange of the share-based payment awards for goods or services or may involve an exchange that spans several financial reporting periods. Furthermore, by virtue of the terms of the exchange with the grantee, the quantity and terms of the share-based payment awards to be granted may be known or not known when the transaction arrangement is established because of specific conditions dictated by the agreement (for example, performance conditions). Judgment is required in determining the period over which to recognize cost, otherwise known as the nonemployee's vesting period.

11. This guidance does not address the period(s) or the manner (that is, capitalize versus expense) in which an entity granting the share-based payment award (the purchaser or grantor) to a nonemployee shall recognize the cost of the share-based payment award that will be issued, other than to require that a nonadmitted prepaid asset or expense be recognized (or previous recognition reversed) in the same period(s) and in the same manner as if the grantor had paid cash for the goods or services instead of paying with or using the share-based payment award.

12. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. For example, the rights and obligations embodied in a transfer of equity shares for a note that provides no recourse to other assets of the grantee (that is, other than the shares) are

substantially the same as those embodied in a grant of equity share options. Thus, that transaction shall be accounted for as a substantive grant of equity share options.

13. Assessment of both the rights and obligations in a share-based payment award and any related arrangement and how those rights and obligations affect the fair value of an award requires the exercise of judgment in considering the relevant facts and circumstances.

Determining the Grant Date

14. As a practical accommodation, in determining the grant date of an award subject to this statement, assuming all other criteria in the grant date definition have been met, a mutual understanding of the key terms and conditions of an award to an individual grantee shall be presumed to exist at the date the award is approved in accordance with the relevant corporate governance requirements (that is, by the Board or management with the relevant authority) if both of the following conditions are met:

a. The award is a unilateral grant and, therefore, the recipient does not have the ability to negotiate the key terms and conditions of the award with the grantee.

b. The key terms and conditions of the award are expected to be communicated to an individual recipient within a relatively short time period from the date of approval. A relatively short time period is that period in which an entity could reasonably complete all actions necessary to communicate the awards to the recipients in accordance with the entity's customary practices.

Determining Whether to Classify a Financial Instrument as a Liability or As Equity

15. Paragraphs 15-29 provide guidance for determining whether certain financial instruments awarded in share-based payment transactions are liabilities. In determining whether an instrument not specifically discussed in those paragraphs shall be classified as a liability or as equity, an entity shall apply statutory accounting principles applicable to financial instruments issued in transactions not involving share-based payment.

16. Unless paragraphs 17-29 require otherwise, an entity shall apply the classification criteria in Exhibit A in determining whether to classify as a liability a freestanding financial instrument given to a grantee in a share-based payment transaction. Paragraphs ~~77-82~~78-83 provide criteria for determining when instruments subject to this statement subsequently become subject to other applicable statutory accounting principles.

17. In determining the classification of an instrument, an entity shall take into account the classification requirements as established by Exhibit A. In addition, a call option written on an instrument that is not classified as a liability under those classification requirements also shall be classified as equity so long as those equity classification requirements for the entity continue to be met, unless liability classification is required under the provisions of paragraphs 20-21.

18. Exhibit A does not apply to outstanding shares embodying a conditional obligation to transfer assets, for example, shares that give the grantee the right to require the grantor to repurchase them for cash equal to their fair value (puttable shares). A put right may be granted to the grantee in a transaction that is related to a share-based compensation arrangement. If exercise of such a put right would require the entity to repurchase shares issued under the share-based compensation arrangement, the shares shall be accounted for as puttable shares. A puttable (or callable) share awarded to an grantee as compensation shall be classified as a liability if either of the following conditions is met:

a. The repurchase feature permits the grantee to avoid bearing the risks and rewards normally associated with equity share ownership for a reasonable period of time from the date the good is delivered or the service is rendered, and the share is issued. A grantee begins to

© 1999-2023 National Association of Insurance Commissioners

bear the risks and rewards normally associated with equity share ownership when all the goods are delivered, or all the service has been rendered and the share is issued. A repurchase feature that can be exercised only upon the occurrence of a contingent event that is outside the grantee's control (such as an initial public offering) would not meet this condition until it becomes probable that the event will occur within the reasonable period of time.

b. It is probable that the grantor would prevent the grantee from bearing those risks and rewards for a reasonable period of time from the date the share is issued.

For this purpose, a period of six months or more is a reasonable period of time.

19. A puttable (or callable) share that does not meet either of those conditions shall be classified as equity.

20. Options or similar instruments on shares shall be classified as liabilities if either of the following conditions is met:

a. The underlying shares are classified as liabilities.

b. The entity can be required under any circumstances to settle the option or similar instrument by transferring cash or other assets. A cash settlement feature that can be exercised only upon the occurrence of a contingent event that is outside the grantee's control (such as an initial public offering) would not meet this condition until it becomes probable that event will occur.

21. For example, a reporting entity that is a Securities and Exchange Commission (SEC) registrant may grant an option to a grantee that, upon exercise, would be settled by issuing a mandatorily redeemable share. Because the mandatorily redeemable share would be classified as a liability under Exhibit A (as well as under *SSAP No. 72—Surplus and Quasi-Reorganizations*), the option also would be classified as a liability.

22. An award may be indexed to a factor in addition to the entity's share price. If that additional factor is not a market, performance, or service condition, the award shall be classified as a liability for purposes of this statement, and the additional factor shall be reflected in estimating the fair value of the award.

23. For this purpose, an award of equity share options granted to a grantee of an entity's foreign operation that provides for a fixed exercise price denominated either in the foreign operation's functional currency or in the currency in which the foreign operation's employee's pay is denominated shall not be considered to contain a condition that is not a market, performance, or service condition. Therefore, such an award is not required to be classified as a liability if it otherwise qualifies as equity. For example, equity share options with an exercise price denominated in euros granted to employees or nonemployees of a U.S. entity's foreign operation whose functional currency is the euro are not required to be classified as liabilities if those options otherwise qualify as equity. In addition, options granted to employees and nonemployees are not required to be classified as liabilities even if the functional currency of the foreign operation is the U.S. dollar, provided that the foreign operation's employees are paid in euros.

24. For purposes of applying paragraph 22, a share-based payment award with an exercise price denominated in the currency of a market in which a substantial portion of the entity's equity securities trades shall not be considered to contain a condition that is not a market, performance, or service condition. Therefore, in accordance with that paragraph, such an award shall not be classified as a liability if it otherwise qualifies for equity classification. For example, a parent entity whose functional currency is the Canadian dollar grants equity share options with an exercise price denominated in U.S. dollars to grantees of a Canadian entity with the functional and payroll currency of the Canadian dollar. If a substantial portion of the parent entity's equity securities trades on a U.S. dollar denominated exchange, the options are not precluded from equity classification.

© 1999-2023 National Association of Insurance Commissioners

25. The accounting for an award of a share-based payment shall reflect the substantive terms of the award and any related arrangement. Generally, the written terms provide the best evidence of the substantive terms of an award. However, an entity's past practice may indicate that the substantive terms of an award differ from its written terms. For example, an entity that grants a tandem award under which a grantee receives either a stock option or a cash-settled stock appreciation right is obligated to pay cash on demand if the choice is the grantee's, and the entity thus incurs a liability to the grantee. In contrast, if the choice is the entities, it can avoid transferring its assets by choosing to settle in stock, and the award qualifies as an equity instrument. However, if an entity that nominally has the choice of settling awards by issuing stock predominately settles in cash or if the entity usually settles in cash whenever a grantee asks for cash settlement, the entity is settling a substantive liability rather than repurchasing an equity instrument. In determining whether an entity that has the choice of settling an award by issuing equity shares has a substantive liability, the entity also shall consider whether:

a. It has the ability to deliver the shares. Requirements to deliver registered shares do not, by themselves, imply that an entity does not have the ability to deliver shares and thus do not require an award that otherwise qualifies as equity to be classified as a liability.)

b. It is required to pay cash if a contingent event occurs (see paragraphs 20-21).

26. A provision that permits grantees to effect a broker-assisted cashless exercise of part or all of an award of share options through a broker does not result in liability classification for instruments that otherwise would be classified as equity if both of the following criteria are satisfied:

a. The cashless exercise requires a valid exercise of the share options.

b. The grantee is the legal owner of the shares subject to the option (even though the grantee has not paid the exercise price before the sale of the shares subject to the option).

27. A broker that is a related party of the entity must sell the shares in the open market within a normal settlement period, which generally is three days, for the award to qualify as equity.

28. Similarly, a provision for either direct or indirect (through a net-settlement feature) repurchase of shares issued upon exercise of options (or the vesting of nonvested shares), with any payment due employees withheld to meet the employer's statutory withholding requirements resulting from the exercise, does not, by itself, result in liability classification of instruments that otherwise would be classified as equity. However, if the amount that is withheld, or may be withheld at the employer's discretion, is in excess of the maximum statutory tax rates in the employee's applicable jurisdictions, the entire award shall be classified and accounted for as a liability. That is, to qualify for equity classification, the employer must have a statutory obligation to withhold taxes on the employee's behalf, and the amount withheld cannot exceed the maximum statutory tax rates in the employees' applicable jurisdictions. The maximum statutory tax rates are based on the applicable rates of the relevant tax authorities (for example, federal, state, and local), including the employee's share of payroll or similar taxes, as provided in tax law, regulations, or the authority's administrative practices, not to exceed the highest statutory rate in that jurisdiction, even if that rate exceeds the highest rate that may be applicable to the specific award grantee.

29. Cash paid to a tax authority by an grantor when withholding shares from a grantee's award for tax withholding purposes shall be considered cash flows from financing activities in the Statement of Cash Flows as it represents an outlay to reacquire the entity's equity instruments.

Market, Performance, and Service Conditions

30. Accruals of compensation cost for an award with a performance condition shall be based on the probable outcome of that performance condition—compensation cost shall be accrued if it is probable that the performance condition will be achieved and shall not be accrued if it is not probable that the performance condition will be achieved. If an award has multiple performance conditions (for example, if the number of

© 1999-2023 National Association of Insurance Commissioners

options or shares a grantee earns varies depending on which, if any, of two or more performance conditions is satisfied), compensation cost shall be accrued if it is probable that a performance condition will be satisfied. In making that assessment, it may be necessary to take into account the interrelationship of those performance conditions.

31. If an award requires satisfaction of one or more market, performance, or service conditions (or any combination thereof), compensation cost shall be recognized if the good is delivered or the service is rendered, and no compensation cost shall be recognized if the good is not delivered or the service is not rendered.

Payroll Taxes

32. A liability for employee payroll taxes on employee stock compensation shall be recognized on the date of the event triggering the measurement and payment of the tax to the taxing authority (for a nonqualified option in the United States, generally the exercise date). Payroll taxes, even though directly related to the appreciation on stock options, are operating expenses and shall be reflected as such in the statement of operations.

Initial Measurement

33. While some of the material in paragraphs 33-63~~62~~ was written in terms of awards classified as equity, it applies equally to awards classified as liabilities.

34. A share-based payment transaction shall be measured based on the fair value (or in certain situations specified in this statement, a calculated value or intrinsic value) of the equity instruments issued.

35. An entity shall account for the compensation cost from share-based payment transactions in accordance with the fair-value-based method set forth in this statement. That is, the cost of goods obtained or services received in exchange for awards of share-based compensation generally shall be measured based on the grant-date fair value of the equity instruments issued or on the fair value of the liabilities incurred. The cost of goods obtained or services received by an entity as consideration for equity instruments issued or liabilities incurred in share-based compensation transactions with employees shall be measured based on the fair value of the equity instruments issued or the liabilities settled. The portion of the fair value of an instrument attributed to goods obtained or services received is net of any amount that a grantee pays (or becomes obligated to pay) for that instrument when it is granted. For example, if a grantee pays $5 at the grant date for an option with a grant-date fair value of $50, the amount attributed to goods or services provided by the grantee is $45.

36. However, this statement provides certain exceptions (paragraph ~~55~~56) to that measurement method if it is not possible to reasonably estimate the fair value of an award at the grant date. A reporting entity that is not able to reasonably estimate the fair value of its equity options and similar instruments may measure its liabilities under share-based payment arrangements at intrinsic value (see paragraphs 38.b. and 52*)*.

37. The terms of a share-based payment award and any related arrangement affect its value and, except for certain explicitly excluded features, such as a reload feature, shall be reflected in determining the fair value of the equity or liability instruments granted. For example, the fair value of a substantive option structured as the exchange of equity shares for a nonrecourse note will differ depending on whether the grantee is required to pay nonrefundable interest on the note.

Measurement Objective – Fair Value at Grant Date

38. The measurement objective for equity instruments awarded to grantees is to estimate the fair value at the grant date of the equity instruments that the entity is obligated to issue when grantees have delivered the good or rendered the service and satisfied any other conditions necessary to earn the right to benefit

from the instruments (for example, to exercise share options). That estimate is based on the share price and other pertinent factors, such as expected volatility, at the grant date.

a. Measurement Objective and Measurement Date for Awards Classified as Liabilities: At the grant date, the measurement objective for liabilities incurred under share-based compensation arrangements is the same as the measurement objective for equity instruments awarded to grantees as described in paragraph 38. However, the measurement date for liability instruments is the date of settlement.

b. Intrinsic Value Option for Awards Classified as Liabilities: A reporting entity shall make a policy decision of whether to measure all of its liabilities incurred under share-based payment arrangements at fair value or to measure all such liabilities at intrinsic value..

39. The fair value of an equity share option or similar instrument shall be measured based on the observable market price of an option with the same or similar terms and conditions, if one is available.

40. Such market prices for equity share options and similar instruments granted in share-based payment transactions are frequently not available; however, they may become so in the future. As such, the fair value of an equity share option or similar instrument shall be estimated using a valuation technique such as an option-pricing model. For this purpose, a similar instrument is one whose fair value differs from its intrinsic value, that is, an instrument that has time value. For example, a share appreciation right that requires net settlement in equity shares has time value; an equity share does not.

41. To satisfy the measurement objective in paragraph 38, the restrictions and conditions inherent in equity instruments awarded are treated differently depending on whether they continue in effect after the requisite service period or the nonemployee's vesting period. A restriction that continues in effect after an entity has issued awards, such as the inability to transfer vested equity share options to third parties or the inability to sell vested shares for a period of time, is considered in estimating the fair value of the instruments at the grant date. For equity share options and similar instruments, the effect of nontransferability (and nonhedgeability, which has a similar effect) is taken into account by reflecting the effects of grantees' expected exercise and postvesting termination behavior in estimating fair value (referred to as an option's expected term).

42. On an award-by-award basis, an entity may elect to use the contractual term as the expected term when estimating the fair value of a nonemployee award to satisfy the measurement objective in paragraph 38. Otherwise, an entity shall apply the guidance in this statement in estimating the expected term of a nonemployee award, which may result in a term less than the contractual term of the award.

43. When a reporting entity chooses to measure a nonemployee share-based payment award by estimating its expected term and applies the practical expedient in paragraph 53, it must apply the practical expedient to all nonemployee awards that meet the condition in paragraph 54. However, a reporting entity may still elect, on an award-by-award basis, to use the contractual term as the expected term as described in paragraph 42.

44. A restriction that stems from the forfeitability of instruments to which grantees have not yet earned the right, such as the inability either to exercise a nonvested equity share option or to sell nonvested shares, is not reflected in estimating the fair value of the related instruments at the grant date. Instead, those restrictions are taken into account by recognizing compensation cost only for awards for which grantees deliver the good or render the service.

45. Awards of share-based compensation ordinarily specify a performance condition or a service condition (or both) that must be satisfied for a grantee to earn the right to benefit from the award. No compensation cost is recognized for instruments forfeited because a service condition or a performance

© 1999-2023 National Association of Insurance Commissioners

condition is not satisfied (for example, instruments for which the good is not delivered or service is not rendered).

46. The fair-value-based method described in paragraphs 38 and 41-47 uses fair value measurement techniques, and the grant-date share price and other pertinent factors are used in applying those techniques. However, the effects on the grant-date fair value of service and performance conditions that apply only during the employee's requisite service period or a nonemployee's vesting period are reflected based on the outcomes of those conditions. This statement refers to the required measure as fair value.

47. Some awards contain a market condition. The effect of a market condition is reflected in the grant-date fair value of an award. (Valuation techniques have been developed to value path-dependent options as well as other options with complex terms. Awards with market conditions, as defined in this statement, are path-dependent options.) Compensation cost thus is recognized for an award with a market condition provided that the good is delivered or the service is rendered, regardless of when, if ever, the market condition is satisfied.

48. Market, performance, and service conditions (or any combination thereof) may affect an award's exercise price, contractual term, quantity, conversion ratio, or other factors that are considered in measuring an award's grant-date fair value. A grant-date fair value shall be estimated for each possible outcome of such a performance or service condition, and the final measure of compensation cost shall be based on the amount estimated at the grant date for the condition or outcome that is actually satisfied.

49. A nonvested equity share or nonvested equity share unit shall be measured at its fair value as if it were vested and issued on the grant date.

50. Nonvested shares granted in share-based payment transactions usually are referred to as restricted shares, but this statement reserves that term for fully vested and outstanding shares whose sale is contractually or governmentally prohibited for a specified period of time.

51. A restricted share awarded to a grantee, that is, a share that will be restricted after the grantee has a vested right to it, shall be measured at its fair value, which is the same amount for which a similarly restricted share would be issued to third parties.

52. A reporting entity may not be able to reasonably estimate the fair value of its equity share options, nonemployee awards and similar instruments because it is not practicable for the reporting entity to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options, nonemployee awards and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (the calculated value). A reporting entity's use of calculated value shall be consistent between employee share-based payment transactions and nonemployee share-based payment transactions. Throughout the remainder of this statement, provisions that apply to accounting for share options, nonemployee awards and similar instruments at fair value also apply to calculated value.

53. For an award that meets the conditions in paragraph 54, a reporting entity may make an entity-wide accounting policy election to estimate the expected term using the following practical expedient:

a. If vesting is only dependent upon a service condition, a reporting entity shall estimate the expected term as the midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term of the award.

b. If vesting is dependent upon satisfying a performance condition, an entity first would determine whether the performance condition is probable of being achieved.

i. If the reporting entity concludes that the performance condition is probable of being achieved, the entity shall estimate the expected term as the midpoint between

© 1999-2023 National Association of Insurance Commissioners

the employee's requisite service period or the nonemployee's vesting period and the contractual term.

ii. If the reporting entity concludes that the performance condition is not probable of being achieved, the reporting entity shall estimate the expected term as either:

(a) The contractual term if the service period is implied (that is, the requisite service period or the nonemployee's vesting period is not explicitly stated but inferred based on the achievement of the performance condition at some undetermined point in the future).

(b) The midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term if the requisite service period is stated explicitly.

54. A reporting entity that elects to apply the practical expedient in paragraph 53 shall apply the practical expedient to a share option or similar award that has all of the following characteristics:

a. The share option or similar award is granted at the money.

b. The grantee has only a limited time to exercise the award (typically 30-90 days) if the grantee no longer provides goods or terminates service after vesting.

c. The grantee can only exercise the award. The grantee cannot sell or hedge the award.

d. The award does not include a market condition.

A reporting entity that elects to apply the practical expedient in paragraph 53 may always elect to use the contractual term as the expected term when estimating the fair value of a nonemployee award as described in paragraph 42. However, a reporting entity must apply the practical expedient in paragraph 53 for all nonemployee awards that have all the characteristics listed in this paragraph if that reporting entity does not elect to use the contractual term as the expected term and that reporting entity elects the accounting policy election to apply the practical expedient in paragraph 53.

55. If a reporting entity is not able to reasonably estimate the current share price (fair value) as a practical expedient, a reporting entity may use a value determined by the reasonable application of a reasonable valuation method as the current price of its underlying share for purposes of determining the fair value of an award that is classified as equity at grant date or upon a modification. The determination of whether a valuation method is reasonable, or whether an application of a valuation method is reasonable, shall be made on the facts and circumstances as of the measurement date. Factors to be considered under a reasonable valuation method include, as applicable:

a. The value of tangible and intangible assets.

b. The present value of anticipated future cash flows.

c. The market value of stock or equity interests in similar corporations and other entities engaged in trades or businesses substantially similar to those engaged by the entity for which the stock is to be valued, the value of which can be readily determined through nondiscretionary, objective means (such as through trading prices on an established securities market or an amount in an arm's length transaction).

d. Recent arm's length transactions involving the sale or transfer of stock or equity interest.

e. Other relevant factors such as control premiums or discounts for lack of marketability and whether the valuation method is used for other purposes that have a material economic effect on the entity, its stockholders, or its creditors.

f. The entity's consistent use of a valuation method to determine the value of its stock or assets for other purposes, including purposes unrelated to compensation of service providers.

~~55.~~56. It should be possible to reasonably estimate the fair value of most equity share options and other equity instruments at the date they are granted. However, in rare circumstances, it may not be possible to reasonably estimate the fair value of an equity share option or other equity instrument at the grant date because of the complexity of its terms.

~~56.~~57. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be accounted for based on its intrinsic value (paragraph ~~84~~85) for measurement after issue date.

~~57.~~58. The fair value of each award of equity instruments, including an award of options with a reload feature (reload options), shall be measured separately based on its terms and the share price and other pertinent factors at the grant date. The effect of a reload feature in the terms of an award shall not be included in estimating the grant-date fair value of the award. Rather, a subsequent grant of reload options pursuant to that provision shall be accounted for as a separate award when the reload options are granted.

~~58.~~59. A contingent feature of an award that might cause a grantee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature shall not be reflected in estimating the grant-date fair value of an equity instrument.

~~59.~~60. An entity shall make its initial best estimate of the requisite service period at the grant date (or at the service inception date, if that date precedes the grant date) and shall base accruals of compensation cost on that period.

~~60.~~61. The initial best estimate and any subsequent adjustment to that estimate of the requisite service period for an award with a combination of market, performance, or service conditions shall be based on an analysis of all of the following:

a. All vesting and exercisability conditions

b. All explicit, implicit, and derived service periods

c. The probability that performance or service conditions will be satisfied.

~~61.~~62. Performance or service conditions that affect vesting are not reflected in estimating the fair value of an award at the grant date because those conditions are restrictions that stem from the forfeitability of instruments to which grantees have not yet earned the right. However, the effect of a market condition is reflected in estimating the fair value of an award at the grant date (paragraph 47). For purposes of this statement, a market condition is not considered to be a vesting condition, and an award is not deemed to be forfeited solely because a market condition is not satisfied.

~~62.~~63. In some cases, the terms of an award may provide that a performance target that affects vesting could be achieved after an employee completes the requisite service period or a nonemployee satisfies a vesting period. That is, the grantee would be eligible to vest in the award regardless of whether the grantee is rendering service or delivering goods on the date the performance target is achieved. A performance target that affects vesting and that could be achieved after an employee's requisite service period or a nonemployee's vesting period shall be accounted for as a performance condition. As such, the performance target shall not be reflected in estimating the fair value of the award at the grant date. Compensation cost

© 1999-2023 National Association of Insurance Commissioners

shall be recognized in the period in which it becomes probable that the performance target will be achieved and should represent the compensation cost attributable to the period(s) for which the service or goods already have been provided. If the performance target becomes probable of being achieved before the end of the employee's requisite service period or the nonemployee's vesting period, the remaining unrecognized compensation cost for which service or goods have not yet been provided shall be recognized prospectively over the remaining employee's requisite service period or the nonemployee's vesting period. The total amount of compensation cost recognized during and after the employee's requisite service period or the nonemployee's vesting period shall reflect the number of awards that are expected to vest based on the performance target and shall be adjusted to reflect those awards that ultimately vest. An entity that has an accounting policy to account for forfeitures when they occur in accordance with paragraph ~~67~~68 or paragraph ~~71~~72 shall reverse compensation cost previously recognized, in the period the award is forfeited, for an award that is forfeited before completion of the employee's requisite service period or the nonemployee's vesting period. The employee's requisite service period and the nonemployee's vesting period end when the grantee can cease rendering service or delivering goods and still be eligible to vest in the award if the performance target is achieved. The stated vesting period (which includes the period in which the performance target could be achieved) may differ from the employee's requisite service period or the nonemployee's vesting period.

Subsequent Measurement

~~63.~~64. Guidance that equally applies to both liabilities and equity is generally found in paragraphs ~~63-83~~64-84. Paragraphs ~~84-94~~85-95 provide additional subsequent measurement guidance for awards classified as equity and paragraphs ~~95-98~~96-99 provide additional subsequent measurement guidance for awards classified as liabilities.

Recognition of Nonemployee Compensation Costs

~~64.~~65. A grantor shall recognize the goods acquired or services received in a share-based payment transaction with nonemployees when it obtains the goods or as services are received. A grantor may need to recognize a nonadmitted prepaid asset before it actually receives goods or services if it first exchanges a share-based payment for an enforceable right to receive those goods or services. Nonetheless, the goods or services shall not be recognized before they are received. (The nonadmitted asset recognized prior to the goods and services would be eliminated upon receipt of the goods and services that are recognized.)

~~65.~~66. If fully vested, nonforfeitable equity instruments are granted at the date the grantor and nonemployee enter into an agreement for goods or services (no specific performance is required by the nonemployee to retain those equity instruments), then, because of the elimination of any obligation on the part of the nonemployee to earn the equity instruments, a grantor shall recognize the equity instruments when they are granted (in most cases, when the agreement is entered into). Whether the corresponding cost is an immediate expense or a nonadmitted prepaid asset depends on the specific facts and circumstances. A grantor may conclude that an asset (other than a note or a receivable) has been received in return for fully-vested, nonforfeitable nonemployee share-based payment awards that are issued at the date the grantor and nonemployee enter into an agreement for goods or services (and no specific performance is required by the nonemployee in order to retain those equity instruments). Such an asset shall not be displayed as contra-equity by the grantor of the. The transferability (or lack thereof) of the awards shall not affect the balance sheet display of this nonadmitted prepaid asset. This guidance is limited to transactions in which awards are transferred to nonemployees in exchange for goods or services.

~~66.~~67. An entity may grant fully vested, nonforfeitable equity instruments that are exercisable by the nonemployee only after a specified period of time if the terms of the agreement provide for earlier exercisability if the nonemployee achieves specified performance conditions. Any measured cost of the transaction shall be recognized in the same period(s) and in the same manner as if the entity had paid cash for the goods or services instead of paying with, or using, the share-based payment awards.

© 1999-2023 National Association of Insurance Commissioners

~~67.~~68. The total amount of compensation cost recognized for share-based payment awards to nonemployees shall be based on the number of instruments for which a good has been delivered or a service has been rendered. To determine the amount of compensation cost to be recognized in each period, an entity shall make an entity-wide accounting policy election for all nonemployee share-based payment awards to do either of the following:

a. Estimate the number of forfeitures expected to occur. The entity shall base initial accruals of compensation cost on the estimated number of nonemployee share-based payment awards for which a good is expected to be delivered or service is expected to be rendered. The entity shall revise that estimate if subsequent information indicates that the actual number of instruments is likely to differ from previous estimates. The cumulative effect on current and prior periods of a change in the estimates shall be recognized in compensation cost in the period of the change.

b. Recognize the effect of forfeitures in compensation cost when they occur. Previously recognized compensation cost for a nonemployee share-based payment award shall be reversed in the period that the award is forfeited.

~~68.~~69. A recognized nonadmitted prepaid asset or expense shall not be reversed if a stock option that the nonemployee has the right to exercise expires unexercised.

~~69.~~70. A grantor shall recognize either a corresponding increase in equity or a liability, depending on whether the instruments granted satisfy the equity or liability classification criteria established in paragraphs 15-29. As the goods or services are disposed of or consumed, the grantor shall recognize the related cost, unless other statutory accounting principles require costs to be expensed when incurred. In these instances, when the goods or services are received, the grantor shall recognize the related cost.

Recognition of Employee Compensation Costs

~~70.~~71. The compensation cost for an award of share-based employee compensation classified as equity shall be recognized over the requisite service period, with a corresponding credit to equity (generally, paid-in capital). The requisite service period is the period during which an employee is required to provide service in exchange for an award, which often is the vesting period. The requisite service period is estimated based on an analysis of the terms of the share-based payment award.

~~71.~~72. The total amount of compensation cost recognized at the end of the requisite service period for an award of share-based compensation shall be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed). Previously recognized compensation cost shall not be reversed if an employee share option (or share unit) for which the requisite service has been rendered expires unexercised (or unconverted). To determine the amount of compensation cost to be recognized in each period, an entity shall make an entity-wide accounting policy election for all employee share-based payment awards to do either of the following:

a. Estimate the number of awards for which the requisite service will not be rendered (that is, estimate the number of forfeitures expected to occur). The entity shall base initial accruals of compensation cost on the estimated number of instruments for which the requisite service is expected to be rendered. The entity shall revise that estimate if subsequent information indicates that the actual number of instruments is likely to differ from previous estimates. The cumulative effect on current and prior periods of a change in the estimated number of instruments for which the requisite service is expected to be or has been rendered shall be recognized in compensation cost in the period of the change.

b. Recognize the effect of awards for which the requisite service is not rendered when the award is forfeited (that is, recognize the effect of forfeitures in compensation cost when

they occur). Previously recognized compensation cost for an award shall be reversed in the period that the award is forfeited.

~~72.~~73. An entity shall reverse previously recognized compensation cost for an award with a market condition only if the requisite service is not rendered.

~~73.~~74. The requisite service period for employee awards may be explicit or it may be implicit, being inferred from an analysis of other terms in the award, including other explicit service or performance conditions. The requisite service period for an award that contains a market condition can be derived from certain valuation techniques that may be used to estimate grant-date fair value. An award may have one or more explicit, implicit, or derived service periods; however, an award may have only one requisite service period for accounting purposes unless it is accounted for as in-substance multiple awards. An award with a graded vesting schedule that is accounted for as in-substance multiple awards is an example of an award that has more than one requisite service period (paragraph ~~76~~77).

~~74.~~75. The service inception date is the beginning of the requisite service period. If the service inception date precedes the grant date, accrual of compensation cost for periods before the grant date shall be based on the fair value of the award at the reporting date. In the period in which the grant date occurs, cumulative compensation cost shall be adjusted to reflect the cumulative effect of measuring compensation cost based on fair value at the grant date rather than the fair value previously used at the service inception date (or any subsequent reporting date).

~~75.~~76. An entity shall adjust that initial best estimate in light of changes in facts and circumstances. Whether and how the initial best estimate of the requisite service period is adjusted depends on both the nature of the conditions identified in paragraph ~~60~~61 and the manner in which they are combined, for example, whether an award vests or becomes exercisable when either a market or a performance condition is satisfied or whether both conditions must be satisfied.

~~76.~~77. An entity shall make a policy decision about whether to recognize compensation cost for an employee award with only service conditions that has a graded vesting schedule in either of the following ways:

a. On a straight-line basis over the requisite service period for each separately vesting portion of the award as if the award was, in-substance, multiple awards.

b. On a straight-line basis over the requisite service period for the entire award (that is, over the requisite service period of the last separately vesting portion of the award).

However, the amount of compensation cost recognized at any date must at least equal the portion of the grant-date value of the award that is vested at that date.

Awards May Become Subject to Other Guidance

~~77.~~78. Paragraphs ~~79-82~~80-83 are intended to apply to those instruments issued in share-based payment transactions with employees and nonemployees accounted for under this statement, and to instruments exchanged in a business combination for share-based payment awards of the acquired business that were originally granted to grantees of the acquired business and are outstanding as of the date of the business combination..

~~78.~~79. A convertible instrument award granted to a nonemployee in exchange for goods or services to be used or consumed in a grantor's own operations is subject to recognition and measurement guidance in this statement until the award is fully vested. Once vested, a convertible instrument award that is equity in form, or debt in form, that can be converted into equity instruments of the grantor, shall follow recognition and measurement through reference to other applicable statutory accounting guidance.

~~79.~~80. A freestanding financial instrument issued to a grantee in exchange for goods or services received (or to be received) that is subject to initial recognition and measurement guidance within this statement shall continue to be subject to the recognition and measurement provisions of this statement throughout the life of the instrument, unless its terms are modified after a nonemployee vests in the award and is no longer providing goods or services, or a grantee is no longer an employee. Only for purposes of this paragraph, a modification does not include a change to the terms of an award if that change is made solely to reflect an equity restructuring provided that both of the following conditions are met:

a. There is no increase in fair value of the award (or the ratio of intrinsic value to the exercise price of the award is preserved, that is, the holder is made whole) or the antidilution provision is not added to the terms of the award in contemplation of an equity restructuring.

b. All holders of the same class of equity instruments (for example, stock options) are treated in the same manner.

~~80.~~81. Other modifications of that instrument that take place after a nonemployee vests in the award and is no longer providing goods or services, or a grantee is no longer an employee shall be subject to the modification guidance in paragraph ~~82~~83. Following modification, recognition and measurement of the instrument shall be determined through reference to other applicable statutory accounting principles.

~~81.~~82. Once the classification of an instrument is determined, the recognition and measurement provisions of this statement shall be applied until the instrument ceases to be subject to the requirements discussed in paragraph ~~79~~80. Other applicable statutory accounting principles apply to a freestanding financial instrument that was issued under a share-based payment arrangement but that is no longer subject to this statement. This guidance is not intended to suggest that all freestanding financial instruments shall be accounted for as liabilities, but rather that freestanding financial instruments issued in share-based payment transactions may become subject to other applicable statutory accounting principles depending on their substantive characteristics and when certain criteria are met.

~~82.~~83. An entity may modify (including cancel and replace) or settle a fully vested, freestanding financial instrument after it becomes subject to other applicable statutory accounting principles. Such a modification or settlement shall be accounted for under the provisions of this statement unless it applies equally to all financial instruments of the same class regardless of the holder of the financial instrument. Following the modification, the instrument continues to be accounted for under other applicable statutory accounting principles. A modification or settlement of a class of financial instrument that is designed exclusively for and held only by grantees (or their beneficiaries) may stem from the employment or vendor relationship depending on the terms of the modification or settlement. Thus, such a modification or settlement may be subject to the requirements of this statement. See paragraph ~~79~~80 for a discussion of changes to awards made solely to reflect an equity restructuring.

~~83.~~84. An option or similar instrument that is classified as equity, but subsequently becomes a liability because the contingent cash settlement event is probable of occurring, shall be accounted for similar to a modification from an equity to liability award. That is, on the date the contingent event becomes probable of occurring (and therefore the award must be recognized as a liability), the entity recognizes a share-based liability equal to the portion of the award attributed to past performance (which reflects any provision for acceleration of vesting) multiplied by the award's fair value on that date. To the extent the liability equals or is less than the amount previously recognized in equity, the offsetting debit is a charge to equity. To the extent that the liability exceeds the amount previously recognized in equity, the excess is recognized as compensation cost. The total recognized compensation cost for an award with a contingent cash settlement feature shall at least equal the fair value of the award at the grant date. The guidance in this paragraph is applicable only for options or similar instruments issued as part of compensation arrangements. That is, the guidance included in this paragraph is not applicable, by analogy or otherwise, to instruments outside share-based payment arrangements.

© 1999-2023 National Association of Insurance Commissioners

Subsequent Measurement - Awards Classified as Equity

~~84.~~85. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be remeasured at each reporting date through the date of exercise or other settlement. The final measure of compensation cost shall be the intrinsic value of the instrument at the date it is settled. Compensation cost for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered for an employee award or the percentage that would have been recognized had the grantor paid cash for the goods or services instead of paying with a nonemployee award at the reporting date) in the intrinsic value of the instrument in each reporting period. The entity shall continue to use the intrinsic value method for those instruments even if it subsequently concludes that it is possible to reasonably estimate their fair value.

~~85.~~86. A contingent feature of an award that might cause a grantee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature, shall be accounted for if and when the contingent event occurs.

Modification of An Award

~~86.~~87. An entity shall account for the effects of a modification as described in paragraphs ~~87-94~~88-95, unless all of the following are met:

a. The fair value (or calculated value or intrinsic value, if such an alternative measurement method is used) of the modified award is the same as the fair value (or calculated value or intrinsic value, if such an alternative measurement method is used) of the original award immediately before the original award is modified. If the modification does not affect any of the inputs to the valuation technique that the entity uses to value the award, the entity is not required to estimate the value immediately before and after the modification.

b. The vesting conditions of the modified award are the same as the vesting conditions of the original award immediately before the original award is modified.

c. The classification of the modified award as an equity instrument or a liability instrument is the same as the classification of the original award immediately before the original award is modified.

The disclosure requirements in paragraph ~~113~~114 apply regardless of whether an entity is required to apply modification accounting.

~~87.~~88. Except as described in paragraph ~~86~~87, a modification of the terms or conditions of an equity award shall be treated as an exchange of the original award for a new award. In substance, the entity repurchases the original instrument by issuing a new instrument of equal or greater value, incurring additional compensation cost for any incremental value. The effects of a modification shall be measured as follows:

a. Incremental compensation cost shall be measured as the excess, if any, of the fair value of the modified award determined in accordance with the provisions of this statement over the fair value of the original award immediately before its terms are modified, measured based on the share price and other pertinent factors at that date. As indicated in paragraph 52, references to fair value throughout this statement shall be read also to encompass calculated value. The effect of the modification on the number of instruments expected to vest also shall be reflected in determining incremental compensation cost. The estimate at the modification date of the portion of the award expected to vest shall be subsequently adjusted, if necessary, in accordance with paragraph ~~67~~68 or ~~71~~72.

© 1999-2023 National Association of Insurance Commissioners

b. Total recognized compensation cost for an equity award shall at least equal the fair value of the award at the grant date unless at the date of the modification the performance or service conditions of the original award are not expected to be satisfied. Thus, the total compensation cost measured at the date of a modification shall be the sum of the following:

i. The portion of the grant-date fair value of the original award for which the promised good is expected to be delivered (or has already been delivered) or the service is expected to be rendered (or has already been rendered) at that date, and

ii. The incremental cost resulting from the modification.

Compensation cost shall be subsequently adjusted, if necessary, in accordance with paragraph ~~67~~68 or ~~71~~72.

c. A change in compensation cost for an equity award measured at intrinsic value in accordance with paragraph ~~84~~85 shall be measured by comparing the intrinsic value of the modified award, if any, with the intrinsic value of the original award, if any, immediately before the modification.

~~88.~~89. An entity that has an accounting policy to account for forfeitures when they occur in accordance with paragraph ~~67~~68 or ~~71~~72 shall assess at the date of the modification whether the performance or service conditions of the original award are expected to be satisfied when measuring the effects of the modification in accordance with paragraph ~~86~~87. However, the entity shall apply its accounting policy to account for forfeitures when they occur when subsequently accounting for the modified award.

~~89.~~90. Paragraphs ~~77-82~~78-83 provide additional guidance on accounting for modifications of certain freestanding financial instruments that initially were subject to this statement but subsequently became subject to other applicable statutory accounting principles.

Short-Term Inducements

~~90.~~91. Except as described in paragraph ~~86~~87, a short-term inducement shall be accounted for as a modification of the terms of only the awards of grantees who accept the inducement, and other inducements shall be accounted for as modifications of the terms of all awards subject to them.

Equity Restructuring or Business Combination

~~91.~~92. Exchanges of share options or other equity instruments or changes to their terms in conjunction with an equity restructuring or a business combination are modifications for purposes of this statement. An entity shall apply the guidance in paragraph ~~86~~87 to those exchanges or changes to determine whether it shall account for the effects of those modifications. See paragraph ~~79~~80 for an exception.

Repurchase or Cancellation

~~92.~~93. The amount of cash or other assets transferred (or liabilities incurred) to repurchase an equity award shall be charged to equity, to the extent that the amount paid does not exceed the fair value of the equity instruments repurchased at the repurchase date. Any excess of the repurchase price over the fair value of the instruments repurchased shall be recognized as additional compensation cost. An entity that repurchases an award for which the promised goods have not been delivered or the service has not been rendered has, in effect, modified the employee's requisite service period or nonemployee's vesting period to the period for which goods have already been delivered or service already has been rendered, and thus the amount of compensation cost measured at the grant date but not yet recognized shall be recognized at the repurchase date.

© 1999-2023 National Association of Insurance Commissioners

Cancellation and Replacement

~~93.~~94. Except as described in paragraph ~~86~~87, cancellation of an award accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a modification of the terms of the cancelled award. (The phrase *offer to grant* is intended to cover situations in which the service inception date precedes the grant date.) Therefore, incremental compensation cost shall be measured as the excess of the fair value of the replacement award or other valuable consideration over the fair value of the cancelled award at the cancellation date in accordance with paragraph ~~87~~88. Thus, the total compensation cost measured at the date of a cancellation and replacement shall be the portion of the grant-date fair value of the original award for which the promised good is expected to be delivered (or has already been delivered) or the service is expected to be rendered (or has already been rendered) at that date plus the incremental cost resulting from the cancellation and replacement.

~~94.~~95. A cancellation of an award that is not accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a repurchase for no consideration. Accordingly, any previously unrecognized compensation cost shall be recognized at the cancellation date.

Subsequent Measurement - Awards Classified as Liabilities

~~95.~~96. The fair value of liabilities incurred in share-based payment transactions shall be remeasured at the end of each reporting period through settlement.

~~96.~~97. Changes in the fair value (or intrinsic value for a reporting entity that elects that method) of a liability incurred under a share-based payment arrangement that occur during the employee's requisite service period or the nonemployee's vesting period shall be recognized as compensation cost over that period. The percentage of the fair value (or intrinsic value) that is accrued as compensation cost at the end of each period shall equal the percentage of the requisite service that has been rendered for an employee award or the percentage that would have been recognized had the grantor paid cash for the goods or services instead of paying with a nonemployee award at that date. Changes in the fair value (or intrinsic value) of a liability that occur after the end of the employee's requisite service period or the nonemployee's vesting period are compensation costs of the period in which the changes occur. Any difference between the amount for which a liability award is settled and its fair value at the settlement date as estimated in accordance with the provisions of this statement is an adjustment of compensation cost in the period of settlement.

~~97.~~98. Reporting entities shall measure a liability award under a share-based payment arrangement based on the award's fair value (or permitted value in accordance with paragraph 52) remeasured at each reporting date until the date of settlement. Compensation costs for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered for an employee award or the percentage that would have been recognized had the grantor paid cash for the goods and services instead of paying with a nonemployee award at the reporting date) in the fair value of the instrument for each reporting period.

~~98.~~99. A modification of a liability award is accounted for as the exchange of the original award for a new award. However, because liability awards are remeasured at their fair value (or calculated value for an entity subject to paragraph 52) at each reporting date, no special guidance is necessary in accounting for a modification of a liability award that remains a liability after the modification.

Accounting for Tax Effects of Share-Based Arrangements

~~99.~~100. Income tax regulations specify allowable tax deductions for instruments issued under share-based payment arrangements in determining an entity's income tax liability. For example, under tax law, allowable tax deductions may be measured as the intrinsic value of an instrument on a specified date. The time value component, if any, of the fair value of an instrument generally may not be tax deductible.

© 1999-2023 National Association of Insurance Commissioners

Therefore, tax deductions may arise in different amounts and in different periods from compensation costs recognized in financial statements. Similarly, the amount of expense reported for an employee stock ownership plan during a period may differ from the amount of the related income tax deduction prescribed by income tax rules and regulations.

~~100.~~101. This guidance addresses how temporary differences are recognized for share-based payment arrangement awards that are classified either as equity or as liabilities under the requirements of paragraphs 16-29. Incremental guidance is also provided for issues related to employee stock ownership plans.

Tax Effects for Instruments Classified as Equity

~~101.~~102. The cumulative amount of compensation cost recognized for instruments classified as equity that ordinarily would result in a future tax deduction under existing tax law shall be considered to be a deductible temporary difference in applying the requirements of *SSAP No. 101—Income Taxes*. The deductible temporary difference shall be based on the compensation cost recognized for financial reporting purposes. Compensation cost that is capitalized as part of the cost of an asset, such as inventory, shall be considered to be part of the tax basis of that asset for financial reporting purposes.

~~102.~~103. Recognition of compensation cost for instruments that ordinarily do not result in tax deductions under existing tax law shall not be considered to result in a deductible temporary difference. A future event can give rise to a tax deduction for instruments that ordinarily do not result in a tax deduction. The tax effects of such an event shall be recognized only when it occurs. An example of a future event that would be recognized only when it occurs is an employee's sale of shares obtained from an award before meeting a tax law's holding period requirement, sometimes referred to as a disqualifying disposition, which results in a tax deduction not ordinarily available for such an award.

Tax Effects for Instruments Classified as Liability

~~103.~~104. The cumulative amount of compensation cost recognized for instruments classified as liabilities that ordinarily would result in a future tax deduction under existing tax law also shall be considered to be a deductible temporary difference. The deductible temporary difference shall be based on the compensation costs recognized for financial reporting purposes.

Accounting for Tax Effects

~~104.~~105. The deferred tax benefit (expense) that results from increases (or decreases) in the recognized share-based payment temporary difference, for example, an increase that results as additional service is rendered and the related cost is recognized or a decrease that results from forfeiture of an award, shall be recognized in the income statement.

~~105.~~106. SSAP No. 101 requires a deferred tax asset to be evaluated for future realization and to be reduced by a statutory valuation allowance if, based on the weight of the available evidence, it is more likely than not that some portion or all of the deferred tax asset will not be realized. Differences between the deductible temporary difference computed pursuant to paragraphs ~~101-102~~102-103 and the tax deduction that would result based on the current fair value of the entity's shares shall not be considered in measuring the gross deferred tax asset or determining the need for a valuation allowance for a deferred tax asset recognized under these requirements.

~~106.~~107. The tax effect of the difference, if any, between the cumulative compensation cost of an award recognized for financial reporting purposes and the deduction for an award for tax purposes shall be recognized as income tax expense or benefit in the income statement. The tax effect shall be recognized in the period in which the amount of the deduction is determined, which is typically when an award is exercised, or expired, in the case of share options, or vests in the case of nonvested stock awards. The appropriate period depends on the type of award and the guidance in SSAP No. 101.

© 1999-2023 National Association of Insurance Commissioners

Tax Benefits of Dividends on Share-Based Payment Awards

~~107.~~108. An income tax benefit from dividends or dividend equivalents that are charged to unassigned-funds (surplus) and are paid to employees for any of the following equity classified awards shall be recognized as an income tax expense or benefit in the income statement:

a. Nonvested equity shares

b. Nonvested equity share units

c. Outstanding equity share options.

Accounting for Rabbi Trusts

~~108.~~109. This section addresses the accounting for deferred compensation arrangements where amounts earned by an employee are invested in the stock of the employer and placed in a rabbi trust. Certain of these plans allow the employee to immediately diversify into nonemployer securities or to diversify after a holding period (for example, six months); other plans do not allow for diversification. The deferred compensation obligation of some plans may be settled in any of the following:

a. Cash, by having the trust sell the employer stock (or the diversified assets) in the open market

b. Shares of employer's stock

c. Diversified assets

In other plans, the deferred compensation obligation may be settled only by the delivery of the shares of the employer stock.

~~109.~~110. The guidance in this section addresses the accounting for deferred compensation that have characteristics in paragraphs ~~109~~110.a. or ~~109~~110.b. This section does not address the accounting for stock appreciation rights, even if they are funded through a rabbi trust.

a. If amounts earned by an employee are invested in the stock of the employer and placed in a rabbi trust.

b. Where the employee elects to diversify the assets held by the rabbi trust into nonemployer securities.

~~110.~~111. Rabbi trusts are grantor trusts generally set up to fund compensation for a select group of management or highly paid executives. To qualify as a rabbi trust for income tax purposes, the terms of the trust agreement must explicitly state that the assets of the trust are available to satisfy the claims of general creditors in the event of bankruptcy of the employer.

~~111.~~112. The following are the four types of deferred compensation arrangements involving rabbi trusts covered in this guidance:

Plan A: The plan does not permit diversification and must be settled by the delivery of a fixed number of shares of employer stock.

Plan B: The plan does not permit diversification and may be settled by the delivery of cash or shares of employer stock.

© 1999-2023 National Association of Insurance Commissioners

Plan C: The plan permits diversification; however, the employee has not diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

Plan D: The plan permits diversification and the employee has diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

~~112.~~113. The accounts of the rabbi trust should be consolidated with the accounts of the employer in the financial statements of the employer.

a. For Plan A, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as an equity instrument and changes in the fair value of the amount owed to the employee should not be recognized.

b. For Plans B and C, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as a liability and adjusted with a corresponding charge (or credit) to compensation cost, to reflect the changes in the fair value of the amount owed to the employee.

c. For Plan D, assets held by the rabbi trust should be accounted for in accordance with statutory accounting principles for the particular asset (for example, if the diversified asset is an unaffiliated common stock security, that security would be accounted for in accordance with *SSAP No. 30R—Unaffiliated Common Stock*. The deferred compensation obligation should be classified as a liability and adjusted, with a corresponding charge (or credit) to compensation cost, to reflect changes in the fair value of the amount owed to the employee. Changes in the fair value of the deferred compensation obligation should not be recorded in unrealized gains or losses, even if changes in the fair value of the assets held by the rabbi trust are recorded in surplus pursuant to SSAP No. 30R.

Disclosures

~~113.~~114. An entity with one or more share-based payment arrangements shall disclose information that enables users of the financial statements to understand all of the following:

a. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders;

b. The effect of compensation costs arising from share-based payment arrangements on the income statement;

c. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period; and

d. The cash flow effects resulting from share-based payment arrangements.

~~114.~~115. The disclosures in paragraph ~~113~~114 are for annual audited statutory financial statements only. This statement adopts FASB Codification 718-10-50-2 for the minimum disclosure information needed to achieve the objective in paragraph ~~113~~114 of this statement, noting that a reporting entity may need to disclose additional information to achieve the objectives.

Employee Share Purchase Plans

Overview and Background

~~115.~~116. This section provides guidance to all entities that use employee share purchase plans. The entity must first determine whether the plan is compensatory or noncompensatory. This is determined by the terms of the plan (paragraphs ~~116-117~~117-118). A plan with an option feature, for example a look-back feature, is considered compensatory. (This section on employee share purchase plans has its own discrete scope, which is separate and distinct from the pervasive scope.)

Recognition

~~116.~~117. An employee share purchase plan that satisfies all of the following criteria does not give rise to recognizable compensation costs (that is, the plan is noncompensatory):

a. The plan satisfies either of the following conditions:

i. The terms of the plan are no more favorable than those available to all holders of the same class of shares. Note that a transaction subject to an employee share purchase plan that involves a class of equity shares designed exclusively for and held only by current or former employees or their beneficiaries may be compensatory depending on the terms of the arrangement.

ii. Any purchase discount from the market price does not exceed the per-share amount of share issuance costs that would have been incurred to raise a significant amount of capital by a public offering. A purchase discount of 5 percent or less from the market price shall be considered to comply with this condition without further justification. A purchase discount greater than 5 percent that cannot be justified under this condition results in compensation cost for the entire amount of the discount. Note that an entity that justifies a purchase discount in excess of 5 percent shall reassess at least annually, and no later than the first share purchase offer during the fiscal year, whether it can continue to justify that discount pursuant to this paragraph.

b. Substantially all employees that meet limited employment qualifications may participate on an equitable basis.

c. The plan incorporates no option features, other than the following:

i. Employees are permitted a short period of time—not exceeding 31 days—after the purchase price has been fixed to enroll in the plan.

ii. The purchase price is based solely on the market price of the shares at the date of purchase, and employees are permitted to cancel participation before the purchase date and obtain a refund of amounts previously paid (such as those paid by payroll withholdings).

~~117.~~118. A plan provision that establishes the purchase price as an amount based on the lesser of the equity share's market price at date of grant or its market price at date of purchase, commonly called a look-back plan, is an example of an option feature that causes the plan to be compensatory. Similarly, a plan in which the purchase price is based on the share's market price at date of grant and that permits a participating employee to cancel participation before the purchase date and obtain a refund of amounts previously paid contains an option feature that causes the plan to be compensatory.

~~118.~~119. The requisite service period for any compensation cost resulting from an employee share purchase plan is the period over which the employee participates in the plan and pays for the shares.

© 1999-2023 National Association of Insurance Commissioners

Initial Measurement

~~119.~~120. Paragraph 38 states that the objective of the fair value measurement method is to estimate the fair value of the equity instruments, based on the share price and other measurement assumptions at the grant date, that are issued in exchange for providing goods or rendering services. Estimating the fair value of equity instruments at the grant date, which are issued in exchange for employee services also applies to the fair value measurements associated with grants under a compensatory employee share purchase plan.

Look-Back Plans

~~120.~~121. Many employee share purchase plans with a look-back option have differing features. For example, some plans contain multiple purchase periods, others contain reset mechanisms, and still others allow changes in the withholding amounts or percentages after the grant date. In some circumstances, applying the measurement approaches described in this section may not be practicable for certain types of employee share purchase plans. Paragraph ~~84~~85 provides guidance on the measurement requirements if it is not possible to reasonably estimate fair value at the grant date.

Subsequent Measurement

~~121.~~122. Changes in total employee withholdings during a purchase period that occur solely as a result of salary increases, commissions, or bonus payments are not plan modifications if they do not represent changes to the terms of the award that was offered by the employer and initially agreed to by the employee at the grant (or measurement) date. Under those circumstances, the only incremental compensation cost is that which results from the additional shares that may be purchased with the additional amounts withheld (using the fair value calculated at the grant date). For example, an employee may elect to participate in the plan on the grant date by requesting that 5 percent of the employee's annual salary be withheld for future purchases of stock. If the employee receives an increase in salary during the term of the award, the base salary on which the 5 percent withholding amount is applied will increase, thus increasing the total amount withheld for future share purchases. That increase in withholdings as a result of the salary increase is not considered a plan modification and thus only increases the total compensation cost associated with the award by the grant date fair value associated with the incremental number of shares that may be purchased with the additional withholdings during the period. The incremental number of shares that may be purchased is calculated by dividing the incremental amount withheld by the exercise price as of the grant date (for example, 85 percent of the grant date stock price).

~~122.~~123. Any decreases in the withholding amounts (or percentages) shall be disregarded for purposes of recognizing compensation cost unless the employee services that were valued at the grant date will no longer be provided to the employer due to a termination. However, no compensation cost shall be recognized for awards that an employee forfeits because of failure to satisfy a service requirement for vesting. The accounting for decreases in withholdings is consistent with the requirement in paragraph ~~62~~63 that the total amount of compensation cost that must be recognized for an award be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed).

Consolidated / Holding Company Plans

~~123.~~124. Except for the disclosure requirement in paragraph ~~124~~125, the provisions of this statement do not apply to a reporting entity, as long as:

a. The reporting entity is not directly liable for obligations under the share-based payment plan.

b. Compensation costs associated with share-based payments provided by a related party or holder of an economic interest in the reporting entity, equal to the required contribution to

the plan for the period, are included in allocated expenses to the reporting entity. A liability shall be established for any such contributions due and unpaid.

~~124.~~125. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed.

~~125.~~126. If the reporting entity is directly liable for the share-based payment plan, then the other provisions of this statement apply.

Relevant Literature

~~126.~~127. This statement adopts with modification the U.S. GAAP guidance for share-based payment transactions reflected in FASB *Accounting Standards Codification (ASC) Topic 718, Compensation – Stock Compensation*, as modified by the ASUs listed in paragraphs ~~126~~127.a. through ~~126~~127.e., excluding the guidance in *ASC Subtopic 718-40, Employee Stock Ownership Plans* (ESOPs). Statutory accounting guidance for ESOPs is addressed in *SSAP No. 12—Employee Stock Ownership Plans*. This adoption with modification includes the related implementation guidance reflected within the FASB Codification Topic 718 not reflected within this standard. The U.S. GAAP guidance adopted with modification reflects the adoption with modification of the following ASUs:

a. *ASU 2018-07, Improvements to Nonemployee Share-Based Payment Accounting.* The revisions from ASU 2018-07 expand the scope of ASC 718 to include share-based payment transactions for acquiring goods and services from nonemployees. With ASU 2018-17, *ASC 505-50, Equity – Equity Payments to Nonemployees* was superseded.

b. *ASU 2017-09, Scope of Modification Accounting*

c. *ASU 2016-09, Improvements to Employee Share-Based Payment Accounting*

d. *ASU 2014-12, Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period*

e. *ASU 2010-13, Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Current of the Market in Which the Underlying Equity Security Trades*

~~127.~~128. The statutory accounting guidance for share-based payments is intended to be consistent with U.S. GAAP. Adopted modifications to U.S. GAAP guidance are as follows:

a. GAAP references to "public and nonpublic" guidance have been eliminated. However, entities that report share-payment transactions under U.S. GAAP as "public" entities shall not report different amounts between U.S. GAAP and SAP. (For example, if a reporting entity reports "fair value" under U.S. GAAP, that entity shall not utilize a "calculated or intrinsic" amount under statutory accounting.

b. Prepaid assets are nonadmitted.

c. GAAP references are revised to reference applicable statutory accounting guidance.

d. GAAP reporting line items (either explicitly provided in the statement or adopted by reference – such as the GAAP implementation guidance) shall be replaced to reference applicable statutory annual statement line items. (For example, GAAP references to "other comprehensive income" shall be reflected within "Surplus - Unassigned Funds").

© 1999-2023 National Association of Insurance Commissioners

e. GAAP guidance to calculate earnings per share is not applicable to statutory accounting and has not been included within the statement.

f. GAAP effective date and transition, and transition disclosures have not been incorporated. Reporting entities shall follow the effective date and transition elements provided within this statement.

g. Inclusion of guidance specific to statutory for consolidated/holding company plans.

~~128.~~129. The adoption with modification of FASB Codification Topic 718 detailed in paragraph ~~126~~127 of this statement reflects adoption with modification of the following pre-codification GAAP standards:

a. *FAS 123R, Share-Based Payment* (FAS 123R);

b. *FAS 150, Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity* (FAS 150) – (Adopted only to the extent referenced in FAS 123R for classifying instruments as equity or liability for application in this statement. Adopted guidance is reflected in Exhibit A);

c. *FASB Staff Position FAS 123(R)-1: Classification and Measurement of Freestanding Financial Instruments Originally issued in Exchange for Employee Services under FASB Statement No. 123(R)* (FAS 123R-1);

d. *FASB Staff Position (FSP) FAS 123(R)-2: Practical Accommodation to the Application of Grant Date as Defined in FASB Statement No. 123(R)* (FSP FAS 123R-2);

e. *FASB Staff Position (FSP) FAS123(R)-4: Classification of Options and Similar Instruments Issued as Employee Compensation That Allow for Cash Settlement upon the Occurrence of a Contingent Event* (FSP FAS 123R-4);

f. *FASB Staff Position (FSP) FAS 123(R)-5: Amendment of FASB Staff Position FAS 123R-1* (FSP FAS 123R-5);

g. *FASB Staff Position (FSP) FAS 123(R)-6: Technical Corrections of FASB Statement No. 123(R)* (FSP FAS 123R-6);

h. *FASB Emerging Issues Task Force 97-14: Accounting for Deferred Compensation Arrangements Where Amounts Earned Are Held in a Rabbi Trust and Invested* (EITF 97-14);

i. *FASB Emerging Issues Task Force 00-16: Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (EITF 00-16);

j. *FASB Technical Bulletin 97-01, Accounting under Statement 123 for Certain Employee Stock Purchase Plans with a Look-Back Option* (TB 97-01)

~~129.~~130. The adoption with modification of FASB Codification Topic 718 in this statement reflects rejection of the following pre-codification GAAP standards:

a. *FASB Staff Position (FSP) FAS 123(R)-3: Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards* (FSP FAS 123R-3); and

b. *FASB Staff Position (FSP) EITF 03-6-1; Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-1).

© 1999-2023 National Association of Insurance Commissioners

Effective Date and Transition

~~130.~~131. This statement was effective January 1, 2013, with interim and annual financial reporting thereafter. Early adoption was permitted for December 31, 2012, financial statements with interim and annual reporting thereafter. At the time of initial adoption of this statement, reporting entities with existing share-based payment instruments that applied the guidance in *SSAP No. 13—Stock Options and Stock Purchase Plans* were to apply the requirements of SSAP No. 104 prospectively to new awards and to awards modified, repurchased or cancelled after the required effective date. Those reporting entities were to continue to account for any portion of awards outstanding at the date of initial application using the statutory accounting principles originally applied to those awards (e.g., SSAP No. 13).

~~131.~~132. Since the initial adoption of SSAP No. 104, subsequent revisions were effective as follows:

a. *ASU 2021-07, Compensation – Stock Compensation, Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards.* This SAP clarification is effective August 10, 2022.

~~a.~~b. *ASU 2018-07, Improvements to Nonemployee Share-Based Payment Accounting:* Nonsubstantive revisions effective January 1, 2020, with early application permitted.

~~b.~~c. *ASU 2017-09, Scope of Modification Accounting:* Nonsubstantive revisions effective January 1, 2018, applicable to modifications that occur on or after the effective date, with early application permitted.

~~c.~~d. *ASU 2016-09, Improvements to Employee Share-Based Payment Accounting:* Nonsubstantive revisions effective December 31, 2017, with early adoption permitted. The adoption included the transition provisions from ASU 2016-19, although not duplicated within this statement.

~~d.~~e. *ASU 2014-12, Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period:* Nonsubstantive revisions effective January 1, 2016, with early adoption permitted.

~~e.~~f. *ASU 2010-13, Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Current of the Market in Which the Underlying Equity Security Trades:* Captured in the original adoption of SSAP No. 104, effective January 1, 2013.

~~132.~~133. After initial adoption of SSAP No. 104, substantive revisions, detailed in Issue Paper No. 146, were adopted to incorporate guidance for share-based payment transaction with nonemployees. These substantive revisions adopted with modification U.S. GAAP guidance reflected in *ASC 505-50, Equity Payments to Nonemployees*. Pursuant to the adoption with modification of ASU 2018-07, statutory accounting guidance previously adopted from ASC 505-50 has been superseded. As such, the following pre-codification standards have also been superseded and are no longer considered adopted for statutory accounting:

a. *FASB Emerging Issues Task Force 96-18: Accounting for Equity Instruments That are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling Goods or Services;*

b. *FASB Emerging Issues Task Force 00-08: Accounting by a Grantee for an Equity Instrument to Be Received in Conjunction with Providing Goods or Services*; and

c. *FASB Emerging Issues Task Force 00-18: Accounting Recognition for Certain Transactions Involving Equity Instruments Granted to Other Than Employees*.

EXHIBIT A – Classification Criteria: Liability or Equity

Classification Criteria

1. As detailed in paragraph 16 of this statement, unless paragraphs 17-29 require otherwise, an entity shall apply the classification criteria in this Exhibit in determining whether to classify a freestanding financial instrument given to a grantee as a liability

2. The guidance in this Exhibit shall be applied to a freestanding financial instrument in its entirety. Any nonsubstantive or minimal features shall be disregarded in applying the classification provisions of this Exhibit. Judgment, based on consideration of all the terms of an instrument and other relevant facts and circumstances, is necessary to distinguish substantive, nonminimal features from nonsubstantive or minimal features.

Mandatorily Redeemable Financial Instruments

3. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the reporting entity.

4. A financial instrument that embodies a conditional obligation to redeem the instrument by transferring assets upon an event not certain to occur becomes mandatorily redeemable if that event occurs, the condition is resolved, or the event becomes certain to occur.

5. In determining if an instrument is mandatorily redeemable, all terms within a redeemable instrument shall be considered. The following items do not affect the classification of a mandatorily redeemable financial instrument as a liability:

   a. A term extension option

   b. A provision that defers redemption until a specified liquidity level is reached

   c. A similar provision that may delay or accelerate the timing of a mandatory redemption.

6. If a financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument in this statement. However, that financial instrument would be assessed at each reporting period to determine whether circumstances have changed such that the instrument now meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument is reclassified as a liability.

Obligations to Repurchase Issuer's Equity Shares by Transferring Assets

7. An entity shall classify as a liability (or an asset in some circumstances) any financial instrument, other than an outstanding share, that, at inception, has both of the following characteristics:

   a. It embodies an obligation to repurchase the issuer's equity shares, or is indexed to such an obligation, and

   b. It requires or may require the issuer to settle the obligation by transferring assets.

8. In this statement, "indexed to" is used interchangeably with "based on variations in the fair value of." The phrase "requires or may require" encompasses instruments that either conditionally or unconditionally obligate the issuer to transfer assets. If the obligation is conditional, the number of conditions leading up to the transfer of assets is irrelevant.

© 1999-2023 National Association of Insurance Commissioners

9. Examples of financial instruments that meet the criteria in paragraph 7 of this Exhibit include forward purchase contracts or written put options on the issuer's equity shares that are to be physically settled or net cash settled.

10. All obligations that permit the holder to require the issuer to transfer assets result in liabilities, regardless of whether the settlement alternatives have the potential to differ.

11. Certain financial instruments that embody obligations that are liabilities within the scope of this statement also may contain characteristics of assets but be reported as single items. Some examples include the following:

a. Net-cash-settled or net-share-settled forward purchase contracts.

b. Certain combined options to repurchase the issuer's shares.

Those instruments are classified as assets or liabilities initially or subsequently depending on the instrument's fair value on the reporting date.

12. An instrument that requires the issuer to settle its obligation by issuing another instrument (for example, a note payable in cash) ultimately requires settlement by a transfer of assets, accordingly:

a. When applying paragraphs 7-11 of this Exhibit, this also would apply for an instrument settled with another instrument that ultimately may require settlement by a transfer of assets (warrants for puttable shares).

b. It is clear that a warrant for mandatorily redeemable shares would be a liability under this statement.

Certain Obligations to Issue a Variable Number of Shares

13. A financial instrument that embodies an unconditional obligation, or a financial instrument other than an outstanding share that embodies a conditional obligation, that the issuer must or may settle by issuing a variable number of its equity shares shall be classified as a liability (or an asset in some circumstances) if, at inception, the monetary value of the obligation is based solely or predominantly on any one of the following:

a. A fixed monetary amount known at inception (for example, a payable settleable with a variable number of the issuer's equity shares),

b. Variations in something other than the fair value of the issuer's equity shares (for example, a financial instrument indexed to the Standard and Poor's S&P 500 Index and settleable with a variable number of the issuer's equity shares), or

c. Variations inversely related to changes in the fair value of the issuer's equity shares (for example, a written put option that could be net share settled).

Prohibition on Combining Freestanding Financial Instruments

14. A freestanding financial instrument that is within the scope of this statement shall not be combined with another freestanding financial instrument in applying paragraphs 3-13 of this Exhibit. For example, a freestanding written put option that is classified as a liability under this statement shall not be combined with an outstanding equity share.

Distinguishing Liability from Equity – Scope and Scope Exclusions

15. The guidance in paragraphs 15-29 of this statement applies to any freestanding financial instrument, including one that has any of the following attributes:

   a. Comprises more than one option or forward contract, or

   b. Has characteristics of both a liability and equity and, in some circumstances, also has characteristics of an asset (for example, a forward contract to purchase the issuer's equity shares that is to be net cash settled). Accordingly, this statement does not address an instrument that has only characteristics of an asset.

16. For example, an instrument that consists of a written put option for an issuer's equity shares and a purchased call option and nothing else is a freestanding financial instrument. That freestanding financial instrument embodies an obligation to repurchase the issuer's equity shares and is subject to the requirements of this statement.

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for working capital finance investments held by reporting entities. This statement amends *SSAP No. 20—Nonadmitted Assets* (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this statement.

SUMMARY CONCLUSION

2. Working capital finance investments represent a confirmed short-term obligation[1] to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office.

[1] All references to short-term obligations in this statement to refer to obligations not exceeding one year.

© 1999-2023 National Association of Insurance Commissioners

Pursuant to the working capital finance investment program, this short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third party investor.

3. Working capital finance investments held by a reporting entity represent a right of the reporting entity to receive future payment. This statement provides accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria.

Working Capital Finance Program - Definitions and Conditions

4. A "working capital finance program" is an open account program under which an investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A working capital finance program is created for the benefit of a commercial investment-grade obligor and its suppliers of goods or services, and facilitated by a finance agent.

5. A working capital finance program transfers a right to payment to an investor from a short term obligation and arises from transactions among:

a. a buyer of goods or services that becomes an obligor to the supplier of goods or services,

b. the supplier(s) of those goods or services,

c. a finance agent, and

d. an investor.

6. A "working capital finance investment" is an interest in payment(s) from a confirmed supplier receivable issued pursuant to a working capital finance program. The payment (maturity) date must not exceed one year from the date of invoice from the supplier to the obligor. This investment is created when the investor purchases from a working capital finance program that is currently designated as NAIC "1" or "2" by the NAIC Securities Valuation Office, any of the following:

a. One or more confirmed supplier receivables;

b. in case of a participation, a participation interest in one or more confirmed supplier receivables issued by the finance agent or lead lender holding confirmed supplier receivables; or

c. a certificate, note or other interest manifestation, documented in a way that is verifiable, representing a legally enforceable interest in a right to payment either directly to the investor or from a trust, other special purpose entity or pool holding confirmed supplier receivables.

7. "Obligor" is the party that purchases the goods or services that generates the original supplier receivable (which is the payable for that Obligor). The obligor must have an NAIC designation of "1" or "2" or a Credit Rating Provider equivalent. The obligor must confirm the supplier receivable described in paragraph 11 as described in the confirmation process in paragraphs 12 and 13.

8. "Supplier" is the party that sells the goods or services to the obligor. The supplier sells the confirmed supplier receivable in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office at a price agreed to by the finance agent and/or investor.

9. "Investor" is the party purchasing a working capital finance investment in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office.

© 1999-2023 National Association of Insurance Commissioners

10. The "finance agent" is a bank, financial institution, other financial intermediary, or service provider that facilitates the working capital finance program, arranges the sale, assignment or transfer of the confirmed supplier receivable to the investor for a fee and administers the payment mechanism. In the case of participation, the finance agent must inform the reporting entity investor of a default or event of default as soon as it becomes aware of such default or event of default. For the working capital finance program to qualify under this SSAP, the finance agent must meet the requirements of either paragraph 10.a. or 10.b.:

a. The finance agent is directly regulated by, or falls under the supervision of, a financial regulator of its domiciliary country provided that such country appears on the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* List of Jurisdictions Eligible for Netting; or

b. Payments from the obligor must be paid directly to the reporting entity (investor) or into an account maintained by a regulated financial institution for the benefit of investors in the working capital finance program and, in either case, the finance agent cannot be the beneficiary of such payment.

11. A "confirmed supplier receivable" is a first priority perfected security interest or right to payment of a monetary obligation from the obligor arising from the sale of goods or services from the supplier to the obligor the payment of which has been confirmed by the obligor committing and stating that the obligations under the agreement and any payment shall not be affected by the invalidity, unenforceability, existence, performance or non-performance of the underlying commercial trade transaction or any related contract or undertaking nor that it will not protest, delay, or deny, nor offer nor assert any defenses, personal or otherwise, against payment to the supplier or any party taking claims, interests, or rights to payments made by the supplier.

a. The confirmed supplier receivable must be sold, assigned or otherwise transferred in a manner that results in an absolute, irrevocable and legally enforceable obligation that has been confirmed by the Obligor.

b. In the case of a participation, the certificates or other evidence of participation provide an absolute, irrevocable, and legally enforceable obligation of the finance agent or holder of the confirmed supplier receivable to pay to the reporting entity investor all of the amounts due to it under the confirmed supplier receivable, without reduction or delay arising from any claims that the finance agent may have against the reporting entity investor. The reporting entity investor's ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to, other than during a cure period not to exceed thirty days, the discretion of the finance agent or other lenders or investors.

Confirmation Process

12. In the case of a purchase, the investor shall verify, prior to the sale that the obligor has confirmed the respective amounts, payment dates and related invoice numbers' specified dates and has waived all defenses to payment. In the case of a participation, the finance agent must verify that the obligor has confirmed the respective amounts, payment dates and related invoice reference numbers' specified due dates, and has waived all defenses to payment in accordance with the confirmation process.

13. The obligor must commit and state that upon confirmation of a supplier receivable it is obligated to pay to the investor, the finance agent, or any third party acting as agent or trustee for the investor, a sum equal to the full amount of that confirmed supplier receivable(s) on a date certain stated in the confirmation and that it waives any right of setoff or other defenses to avoid or delay the full and timely payment of that Confirmed Supplier Receivable. The documents establishing the working capital finance program or the confirmation must state and confirm that the obligation to pay must be independent of any other contracts

© 1999-2023 National Association of Insurance Commissioners

or claims that might be raised in defense arising from any transaction financed in connection with the WCFI program, the confirmed supplier receivable, or any other courses of performance or courses of dealing with the supplier.

Program Requirements

14. The working capital finance program investor must provide in its annual filing with the NAIC Securities Valuation Office one of the following:

a. An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16 (or functional equivalent), reporting on controls at a service organization related to the administration of the investment; or

b. An annual audit of the financial statements and internal controls of the consolidated group of which the finance agent is part, which does not note any material weaknesses related to servicing working capital financial investments.

The NAIC Securities Valuation Office would review the materiality of the report findings in making their determination of the assignment of a designation.

15. If the credit rating of the working capital finance program or obligor falls to non-investment grade (below the equivalent of NAIC designation "1" or "2"), the reporting entity shall nonadmit, the working capital finance investments obtained under the related working capital finance program and/or the related obligor. Due to the short-term nature of these investments, once an investment is nonadmitted due to the credit rating of the working capital finance program or the obligor, those investments will continue to be nonadmitted.

16. Reporting entity investors must have the ability to monitor the working capital finance program and the credit-related activities of the obligor. Reporting entity investors must provide information as requested to the state of domicile indicating that they have the ability to monitor on an ongoing basis the activities of the working capital finance program.

17. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that if a dispute arises among any of the parties under any of the contracts or agreements that are a part of or that together constitute the working capital finance program, each party agrees that the dispute will be submitted to a court of competent jurisdiction in the United States or a constituent state thereof or of an alternative dispute resolution process recognized thereby. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that any dispute arising under any of the contracts or agreements that are a part of or that together constitute the working capital finance program must be resolved pursuant to the laws of the United States or a constituent state thereof that address the substance of the dispute but excluding those laws addressing conflicts of law.

Exclusions

18. A working capital finance investment excludes any receivables financed through:

a. Factoring: the purchase of receivables in bulk from a supplier where the receivables represent the payment obligations of potentially thousands of buyers to a single supplier, in which the buyers have no relationship with or contractual obligation to pay the factor and retain all legal defenses to payment they may have against the supplier;

b. Forfaiting: the purchase of one or a series of receivables from exporters by a forfaiter to enable the exporter (seller) to finance a commercial transaction with a buyer in which the Obligor has no relationship with or contractual obligation to pay the forfaiter and retains all legal defenses to pay it may have against the seller; or

© 1999-2023 National Association of Insurance Commissioners

c. Invoice discounting: the advancement of funds by a finance company to a business entity with the funds advanced limited to a defined percentage of the business entity's eligible and outstanding receivables.

19. Eligible Confirmed Supplier Receivables must not:

a. Include insurance or insurance related assets;

b. Be impaired or in default at the time of purchase;

c. Have a payment (maturity) date longer than one year from the date of the invoice from the Supplier to the Obligor giving rise to the confirmed supplier receivable, and the maturity date must not be subject to change or rolling; nor

d. Include any receivable of any parent or affiliate of the reporting entity investor, and neither the Obligor nor any Supplier may be affiliated with the reporting entity investor. Working Capital Finance Investments that have obligors or vendors that are affiliated with the investor are ineligible, and therefore, nonadmitted assets.

Accounting and Reporting

20. The right to receive payment generated by a working capital finance investment issued under a working capital finance program is considered to meet the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets*, and is an admitted asset to the extent the investment conforms to the requirements set forth in this statement and the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. For programs that comply with all of these elements, working capital finance investments shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the NAIC Valuations of Securities product. Programs that do not comply with the elements set forth in this statement, or the provisions set forth in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* are nonadmitted. Working capital finance investments are reported as other invested assets in the financial statements.

21. A working capital finance investment shall be recorded on the trade date. At acquisition, the Working Capital Finance Investment shall be initially reported at cost, excluding brokerage and other related fees, and all other costs (internal costs, or costs paid for origination, purchase or commitment to purchase such investments), which shall be expensed as incurred.

22. After initial acquisition, the Working Capital Finance Investment shall be reported at amortized cost until the specified maturity date, unless the investment, or a portion thereof, is deemed uncollectible or when an other-than-temporary impairment has occurred. In the event that a working capital finance investment is purchased by a reporting entity investor at a premium (amount to be received by the entity under the confirmed supplier receivable is less than the price paid for the investment), the excess paid by the reporting entity investor in comparison to the amount receivable under the confirmed supplier receivable must be immediately expensed.

23. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses from working capital finance investments shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized gains and losses from working capital finance investments shall be reported as net realized capital gains or losses in the statement of income. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

© 1999-2023 National Association of Insurance Commissioners

24. A Working Capital Finance Investment may provide for a prepayment penalty or acceleration fee in the event the working capital finance investment is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

25. *SSAP No. 34—Investment Income Due and Accrued* shall be followed for determining and recording investment income earned on working capital finance investments acquired at a discount. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts that have been determined to be uncollectible, however amounts more than 15 days overdue are nonadmitted.

Default

26. A working capital finance investment payment that is uncollected by the reporting entity within 30 days after the due date shall be considered in default and nonadmitted. If the reporting entity has any other working capital finance investment assets from the same defaulting counterparty, all other working capital finance investments from that counterparty shall be nonadmitted. All working capital finance investments from a counterparty identified in default shall be evaluated for impairment.

Impairment

27. An other-than-temporary impairment[(INT 06-07)] shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a confirmed supplier receivable including the payment on the established due date. Pursuant to this guidance, assessment of other-than-temporary impairment shall include an evaluation of the financial condition and short-term prospects of the obligor. If it is determined that a decline in the fair value of a working capital finance investment below book/adjusted carrying value is due to an other-than-temporary impairment, an impairment loss shall be recognized as a realized loss equal to the entire difference between the working capital finance investment's carrying value and fair value as of the reporting period for which the assessment is made. Fair value shall be determined in accordance with *SSAP No. 100R—Fair Value*, and reflect the price to sell the asset in an orderly market between market participants. As such, the fair value shall reflect the assumptions market participants will use in pricing the asset, including assumptions about risk.

28. For reporting entities required to maintain an AVR/IMR, the entire amount of the realized loss from the other-than-temporary impairment shall be recorded through the AVR, in accordance with SSAP No. 7.

29. Upon recognition of an other-than-temporary impairment, the fair value of the working capital finance investment on the measurement date shall become the new cost basis of the working capital finance investment and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Once an investment is determined to be other-than-temporarily impaired, until all expected payments are received, the reporting entity must re-evaluate the investment quarterly and reassess fair value, with recognized realized losses for the difference between the book/adjusted carrying value and the current fair value. This process shall continue until either all expected payments are received, or the entity has recognized a realized loss for the entire uncollected carrying value.

Disclosures

30. The financial statements shall include the following disclosures:

a. Fair value in accordance with SSAP No. 100R.

b. Concentrations of credit risk in accordance with *SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures* in the annual audited statutory financial reports only.

© 1999-2023 National Association of Insurance Commissioners

c. Information regarding the aggregate book/adjusted carrying value of working capital finance investment by designation including gross assets with nonadmitted and net admitted amounts annually. (Note that programs designated 3-6 are nonadmitted.)

	Gross Asset CY	Non-Admitted Asset CY	Net Admitted Asset CY
WCFI Designation 1			
WCFI Designation 2			
WCFI Designation 3			
WCFI Designation 4			
WCFI Designation 5			
WCFI Designation 6			
Total			

d. Annual and quarterly information regarding the aggregate book/adjusted carrying value maturity distribution on the underlying working capital finance investments by the categories of maturities up to 180 days and 181 to 365 days.

e. Any events of default of working capital finance investments during the reporting period.

31. Refer to the Preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

32. This statement is effective for years on or after January 1, 2014. Substantive revisions documented in *Issue Paper No. 163—Working Capital Finance Investment Updates* are effective for financial reporting periods on or after June 30, 2020. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

SCOPE OF STATEMENT

1. The Affordable Care Act (ACA) imposes fees and premium stabilization provisions on health insurance issuers offering commercial health insurance. This statement provides accounting for three programs known as risk adjustment, reinsurance and risk corridors that take effect in 2014. Risk adjustment is a permanent risk-spreading program (ACA Section 1343). The temporary transitional reinsurance program (ACA Section 1341) and temporary risk corridors program (ACA Section 1342) are for years 2014 through 2016.

© 1999-2023 National Association of Insurance Commissioners

SUMMARY CONCLUSION

2. Specific terms included in Exhibit A are unique to these programs and should not be applied to other aspects of statutory accounting. The required payments to the programs by reporting entities are described as "contributions" in the program literature but are referred to in this guidance as assessments for clarity. Amounts redistributed by the programs back to reporting entities are termed "payments" by the programs. These "payments" are recoverables / receivables for the reporting entity and are termed program distributions or receivables (to the reporting entity) in this guidance. The reporting of payable or receivable amounts in this guidance is from the perspective of the reporting entity. This statement nullifies *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act.*

3. This statement establishes statutory accounting principles for the risk-sharing provisions of the ACA. The manner in which these provisions are applied in the determination of the medical loss ratios (MLR) and rebates may be different from these as the MLR calculations are based on the ACA Section 2718(b).

Risk Adjustment Program – Description and Overview

4. The risk adjustment program based on Section 1343 of the ACA is effective beginning in the 2014 benefit year and continues as a permanent program.

5. The risk adjustment program includes health plans (except certain exempt and grandfathered plans) in the individual or small group markets both on and off the exchange. All covered risk adjustment plans are required to participate in the risk adjustment program.

6. The purpose of the risk adjustment program is to transfer funds from lower risk plans to higher risk plans within similar plans in the same state in order to adjust premiums for adverse selection among carriers caused by membership shifts due to guarantee issue and community rating mandates. States may set up their own risk adjustment programs, or they may permit the U.S. Department of Health and Human Services (HHS) to develop and manage the program in the state. In addition to the risk adjustment amount, HHS determines the user fee. In states operating their own risk adjustment program, the state will determine the fee.

7. Risk adjustment assessments and distributions will be computed based on the reporting entity's risk score versus the overall market risk score after applying adjustments. Effective for 2018 benefit plan years, the risk adjustments and distributions are calculated including the high-cost risk pool aspect of this program (see high-cost risk pool in paragraphs 10-11, paragraph 15 and paragraph 16). Risk adjustment assessments will be made if the plan average actuarial risk of all of their enrollees in a market and state is lower than the plan average risk of all enrollees in fully insured plans in that market and state risk pool. Risk adjustment distributions will be made to health plan issuers whose plans have an average actuarial risk that is greater than the plan average actuarial risk scores in that market and state risk pool. The reinsurance program is not considered in the computation.

8. HHS will collect a user fee to support the administration of the HHS-operated risk adjustment program. This fee applies to issuers of risk adjustment covered plans in states in which HHS is operating the risk adjustment program. For example, HHS projects that the per capita risk adjustment user fee for 2014 is approximately $1 per enrollee per year. Similar terms will apply for the user fees of state operated programs.

9. All risk adjustment distributions made to issuers are completely funded through the amounts assessed to other issuers within the same market in the same state to ensure equality between program distributions and assessments. Consequently, risk adjustment assessments will be invoiced prior to processing program distributions to issuers. Once applicable risk adjustment assessments by issuers are received by HHS or the state, funds will be redistributed to the higher risk plans. Each issuer that offers a

© 1999-2023 National Association of Insurance Commissioners

risk adjustment covered plan will be notified of risk adjustment distributions or assessments by June 30 of the year following the benefit year to align with the program distributions and assessment processing. Risk adjustment assessments owed by an issuer to HHS or the state are required to be remitted within 30 days of notification of the assessment. Once applicable assessments are received by HHS or the state, funds will be redistributed to the higher risk plans.

10. In December 2016, the HHS adopted a new regulation that changed how the ACA risk adjustment program would function, beginning with the 2018 benefit year. Specifically, the ACA risk adjustment methodology will incorporate a high-cost risk pool calculation. This adds a reinsurance-like element to the risk adjustment program, which is referred to as high-cost risk pooling. The operation of the high-cost risk pools will exclude a percentage of costs above a threshold level in the calculation of enrollee-level plan liability risk scores so that risk adjustment factors in the risk adjustment program described in paragraphs 4-9 would be calculated for risk excluding these extreme costs as determined by federal regulations. The program will operate two national high-cost risk pools, one for individuals and one for small groups. An overview of the new high-cost risk pool aspect of ACA risk adjustment is as follows:

a. HHS will establish two new high-cost risk pool parameters: a threshold and a coinsurance rate. For 2018, the threshold has been set at $1 million, and the coinsurance rate has been set at 60%. For 2018, the high-cost risk pools for high-cost enrollees would fund 60% of an issuer's costs for individual enrollees with claims above $1 million.

b. In the calculation of each issuer's annual risk adjustment transfer amount, the issuer will be reimbursed for a portion (specifically, the coinsurance rate) of actual enrollee-level claims above the threshold. Conforming changes will be made to how each issuer's enrollee-level plan liability risk scores are calculated. For example, in 2018, claims in excess of $1 million per enrollee will be reimbursed from the respective high-cost risk pool at a 60% coinsurance rate. This payment is referred to hereafter as the high-cost risk pool claims reimbursement.

c. In order to maintain the zero-sum nature of risk adjustment across each market in light of the new high-cost risk pool claims reimbursements detailed in paragraph 10.b., each issuer's risk adjustment transfer amount payable to HHS will include an assessment to all risk adjustment entities, which will be calculated as a percentage of the issuer's total premiums in the applicable market. The sum of the assessments across all issuers is intended to equal the sum of the high-cost risk pool claims reimbursements across all issuers.

d. HHS will report the high-cost risk pool amounts as part of the risk adjustment payment transfer formula including all components as a single amount, which should be reported on a net basis.

11. Conceptually, high-cost risk pool can be thought of as an involuntary reinsurance pool or as an aspect of the risk adjustment program. Combining the estimates of the various parts of the risk adjustment program reduces the potential impact of misestimating each element.

Risk Adjustment Program – Accounting Treatment

12. The accounting elements of the ACA permanent risk adjustment program, which are considered separately, include the user fee and the risk adjustment assessments and distributions.

13. The user fee is paid to HHS in states where the risk adjustment program is being operated by HHS and to the state program if operated by the state. Risk adjustment user fees shall be treated as government assessments. These fees are treated the same as other non-income-based governmental taxes

© 1999-2023 National Association of Insurance Commissioners

and fees in that they are recognized as an expense and liability when the premium subject to the assessment is written.

14. Premium adjustments pursuant to the risk adjustment program will be based upon the risk scores (health status) of enrollees, participating in risk adjustment covered plans rather than the actual loss experience of the insured. This program bears some similarities to the Medicare Advantage risk adjustment program[1] under which the plan receives additional funding (or pays additional amounts) based on adjustments to risk scores of enrollees (see *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage*).

15. The risk adjustment payables and receivables shall be accounted for as premium adjustments subject to redetermination as specified in this statement. Effective beginning with 2018 benefit plan years, the risk adjustment assessments and distributions are calculated including the high-cost risk pool aspect of this program and should be reported on a net basis.

a. Risk adjustment payables meet the definition of liabilities as set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. Risk adjustment receivables meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this statement.

b. Risk adjustment payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. Reporting entities shall be aware of the significant uncertainties involved in preparing estimates and be both diligent and conservative in their estimations. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk adjustment program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient data to determine a reasonable estimate. Ensuring sufficient data requires that the reporting entity's estimate is based on demonstrated knowledge of the marketplace and annual information which includes patient encounter and diagnosis code data to determine the differences in the actuarial risk profile of the reporting entity's insureds versus the market participants in the particular market and state risk pool. Sufficient data shall incorporate patient default scores, if applicable, under the terms of the risk adjustment program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.

c. Premium revenue adjustments for the risk adjustment program are estimated for the portion of the policy period that has expired and shall be reported as an immediate adjustment to premium. Accrued risk adjustment receivables shall be recorded in premium and considerations receivable, with a corresponding entry to written premiums. Accrued risk adjustment payables shall be recorded as a liability[2] with a corresponding entry to written premiums. Reporting entities shall record additions or reductions to revenue resulting from the risk adjustment program in the period in which the changes in risk scores of enrollees result in reasonably estimable additions or reductions. The risk adjustment program receivables shall be reported gross of payables.

---

[1] The ACA program also has significant differences from the Medicare Advantage risk adjustment program, which is retrospective, administered as a single national program, with most enrollees administered by the federal government. By contrast, the ACA risk adjustment is not retrospective, and is administered by each entity by state and by plan.

[2] The annual statement liability lines will vary by the type of annual statement the reporting entity files. Managed care/accident and health reporting entities report as aggregate health policy reserves; life and accident and health reporting entities report as aggregate reserves for accident and health contracts; and property and casualty reporting entities report as aggregate write-ins for liabilities.

© 1999-2023 National Association of Insurance Commissioners

d. The risk adjustment receivables are administered through a federal governmental program. Once amounts are collected by the governmental entity, there is an obligation to distribute the funds. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.

e. Provided that the risk adjustment receivables due the reporting entity are determined in a manner that is consistent with the requirements of this statement, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk adjustment amounts under appeal shall be reflected as a nonadmitted asset.

f. Evaluation of the collectibility of all amounts receivable from the risk adjustment program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk adjustment receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

Risk Adjustment Program – High-Cost Risk Pool – Accounting Treatment

16. The individual and small group high-cost risk pools of the ACA risk adjustment program shall be accounted for consistent with the rest of the ACA risk adjustment program. Reporting entity issuers in the individual or small group markets need to account for the following risk adjustment payables and receivables including the impairment and aging guidance reflected in paragraph 15 and paragraph 16:

a. The high-cost risk pool assessment payable by the reporting entity, which is the percent-of-premium charge to the issuer in order to fund reimbursements across all issuers of claims above the high cost risk pool threshold, shall be accounted for as decreases to written premium subject to redetermination.

b. High-cost risk pool distributions, which represent proportionate reimbursement for the issuer's claims above the high cost risk pool threshold, would be accounted for as increases to written premium subject to redetermination.

c. As the risk adjustments and distributions described in paragraphs 4-9 are calculated after excluding the percentage of costs above the threshold specified in the high-cost risk pool aspect of this program, the payments described in paragraphs 4-9 will continue to be accounted for consistent with guidance in paragraph 15 and paragraph 16 (i.e., as a premium adjustment subject to redetermination).

Transitional Reinsurance Program – Description and Overview

17. The transitional reinsurance program based on Section 1341 of the ACA is effective for plan years 2014 through 2016. Reinsurance assessments will be collected and distributions will be issued during the three-year term.

18. All issuers of major medical commercial products and third party administrators (TPAs) on behalf of uninsured group health plans are required to contribute funding at the national contribution rate to HHS. States establishing reinsurance programs may collect additional funding. Non-grandfathered individual plans are eligible to receive benefit program distributions via an excess-of-loss reinsurance

© 1999-2023 National Association of Insurance Commissioners

system. Grandfathered plans are ineligible. Group plans are required to contribute funding, but are not eligible to receive reinsurance program distributions.

19. In general, this transitional reinsurance program provides funding to issuers in the individual market that incur high claims costs for enrollees. The program requires assessments from all issuers and TPAs on behalf of group health plans based on a per member annual fee established by HHS. The reinsurance assessment will fund reinsurance program distributions plus disbursements to the U.S. Treasury, in addition to covering administrative expenses of the program.

20. Consequently, the term “reinsurance” does not represent actual reinsurance between licensed insurers as defined by *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance*. This program is similar to an involuntary pool in *SSAP No. 63—Underwriting Pools* for the individual insured health products subject to the 2014 ACA market reforms. For the group plans, which are required to contribute funding but are not eligible to receive program distributions, the program is an assessment payable by the reporting entity and not a pool.

21. The national transitional reinsurance program assessment rate for all issuers and TPAs will be established by HHS and will be designed to collect more than $12 billion in 2014 to cover the required $10 billion for the reinsurance program, the $2 billion contribution to the U.S. Treasury, and additional amounts to cover the administrative costs of the federal government entity and applicable reinsurance entities. States electing to operate their own reinsurance program have the option to increase the reinsurance assessment rate to provide additional funding for the reinsurance program or to fund the administrative expenses of the applicable reinsurance entity. Assessments for the reinsurance program must fund the reinsurance program of $10 billion in 2014, $6 billion in 2015 and $4 billion in 2016, plus disbursements to the U.S. Treasury of $2 billion, $2 billion and $1 billion for years 2014 through 2016, in addition to covering administrative expenses of the applicable reinsurance entity or HHS.

22. Reinsurance program distributions will be processed either by the applicable reinsurance entity or by HHS and will be made to issuers of non-grandfathered individual market plans for high claim costs of enrollees. Distributions from the applicable reinsurance entity to insurers providing individual coverage will be calculated as a coinsurance rate multiplied by the eligible claims submitted for an individual enrollee’s covered benefits between an attachment point and the reinsurance cap for each benefit year. The coinsurance rate, attachment point and reinsurance cap are initially determined by HHS, but may be modified by the state, if the state chooses to establish its own reinsurance program.

23. Each state is eligible to establish a reinsurance program, regardless of whether the state establishes a Marketplace Exchange. If a state establishes a reinsurance program, the state must enter into a contract with an applicable reinsurance entity or entities or establish a reinsurance entity to carry out the program. If a state does not elect to establish its own reinsurance program, HHS will administer the reinsurance program on behalf of that state. HHS establishes the annual administrative portion for the fee. (For example, the 2014 fee will be $0.11 per-member per-year resulting in $20.3 million of administrative expense funding).

24. Reinsurance assessments to fund the program are made on an annual basis with billing beginning December 15, 2014. An insurer may submit claims for reimbursement when an enrollee of the reinsurance-eligible plan has met the applicable criteria as determined by either the state or HHS. Claims may be submitted through April 30 of the year following the benefit year. HHS will distribute reinsurance program funds among issuers nationally based on submitted claims. Issuers will be notified of pending reinsurance distributions by June 30 following the benefit year. If the requests for distributions exceed the actual assessments collected, HHS will reduce reinsurance distributions on a pro-rata basis. If the requests for distributions are less than actual assessments collected, HHS will increase reinsurance distributions on a pro-rata basis.

Transitional Reinsurance Program – Accounting Treatment

25. Due to the diverse elements of the transitional reinsurance program, which includes characteristics of traditional reinsurance, involuntary pools and governmental assessments, a hybrid accounting approach is required. The accounting treatment for the transitional reinsurance program outlined below is discussed in terms of the payables and receivables and the impact to the health insurance products subject to the program.

26. The following are the broad groupings of the health insurance products subject to the transitional reinsurance program:

a. Individual insured health products subject to the 2014 ACA market reforms. This excludes grandfathered and non-grandfathered 2013 products (referred to as subject individual insured products);

b. Other insured health products. This encompasses products which are not subject to the ACA market reforms including individual grandfathered and non-grandfathered (referred to as other insured health products);

c. Self-insured health products.

27. The guidance in this section will provide treatment for each of the assessments payable and program distribution receivable elements of the program listed below for the health insurance products listed in paragraph 26.

a. Assessments for reinsurance

b. Administrative costs assessments

c. Additional U.S. Treasury assessment

d. Reinsurance distributions

Subject Individual Insured Health Products

Subject Individual Insured Issuers - Assessments Payable for Reinsurance

28. Transitional reinsurance assessments attributable to enrollees in individual plans are treated as ceded reinsurance premium. This applies both to assessments made at the national assessment rate and to any state-elected additional assessments that will fund reinsurance program distributions. Ceded premiums would be reported as a reinsurance cession and follow reinsurance accounting in accordance with SSAP No. 61R, paragraph 17 and paragraphs 25-27.

29. For the individual coverage issuers, this is an involuntary pool and under the terms of the transitional reinsurance program, the transfer of risk and timely reimbursement requirements of SSAP No. 61R are deemed to be met.

30. With regard to individual coverage issuers, the transitional reinsurance program is more similar to traditional reinsurance than it is to an assessment, because program assessments are made to and program distributions are received from the government or government-sponsored entity. Accordingly, the program is accounted for as reinsurance for individual insured products subject to the transitional reinsurance program.

31. The provisions of SSAP No. 63, paragraph 3, define involuntary pools.

© 1999-2023 National Association of Insurance Commissioners

32. The transitional reinsurance program differs from an involuntary pool, in that there is not a proportionate sharing of the entire results of a pool. However, the purpose is very similar: to address the additional costs associated with high-risk individuals. Furthermore, HHS has noted, *"the Affordable Care Act ... requires that states eliminate or modify high-risk pools to the extent necessary to carry out the reinsurance program,"* which likewise highlights the similar purposes of the two mechanisms. Therefore, SSAP No. 63, paragraph 8, provides additional relevant guidance. As the transitional reinsurance program is a mechanism for sharing the additional costs associated with high-risk individuals, it is accounted for as traditional reinsurance.

Subject Individual Insured Issuers - Reinsurance Administrative Expense Assessments

33. The assessment payable by the reporting entity for administrative expenses attributable to individual coverage is reflected as ceded premium. This applies both to assessments made at the national assessment rate and to any state-required assessments that will provide additional funding for administrative expenses.

34. Normally reinsurance premiums are set at a level intended to cover anticipated claim costs and include an administrative charge component. Therefore, as a matter of consistency, it is appropriate to include the administrative charge component for the transitional reinsurance program in ceded premium for individual insured products.

Subject Individual Insured Issuers - U.S. Treasury Assessment

35. Because this portion of the assessment is earmarked for the U.S. Treasury and not for the reimbursement of claims or to cover the operating costs of the reinsurance program, it is a federal assessment not based on income. This portion of the assessment is not treated as ceded premium, but as an assessment under SSAP No. 35R and is reflected in the same expense category as taxes, licenses and fees. This is also consistent with annual statement expense reporting categories.

Subject Individual Insured Issuers - Reinsurance Program Distributions

36. Program distributions received from the ACA transitional reinsurance program for individual insurance is reflected as ceded claim benefit recoveries. This applies both to distributions received pursuant to the uniform federal reinsurance parameters and to any state distribution received.

37. In keeping with the rationale for reinsurance assessments above, distributions receivable from the transitional reinsurance program for individual insurance products is reflected the same as traditional reinsurance recoveries as described in SSAP No. 61R, paragraph 27.

38. Therefore, recoveries received are reported in the summary of operations and will reduce the ceding entity's reported benefits paid.

39. HHS and all applicable reinsurance entities shall be reported consistent with providers to an involuntary pool and will be treated as authorized reinsurers for the purposes of financial reporting for subject individual health products.

40. All receivables from the transitional reinsurance program are subject to the 90-day nonadmission rule beginning from when program receivables are due to be disbursed by the government or a government-sponsored entity. That is, the 90-day rule begins when governmental receivables are due, not from the date of initial accrual. The announced governmental or government-sponsored entity distribution date shall be the contractual due date similar to Appendix A-791, paragraph 2.h., which requires that payments due from the reinsurer are made in cash within ninety (90) days of the settlement date. The receivable is also subject to impairment analysis.

© 1999-2023 National Association of Insurance Commissioners

Other Insured Health Products

Other Insured Health Products – Assessments Payable for Reinsurance

41. Transitional reinsurance program reinsurance assessments made for enrollees in fully insured plans other than individual plans are treated as an assessment payable by the reporting entity and charged to taxes, licenses and fees. This applies both to assessments made at the national assessment rate and to any state assessments that will fund reinsurance program distributions. In this case, for fully insured non-individual plans, the entity cannot, under the terms of the program, be deemed to be "participating," as funds for claim recoveries will not be re-distributed back to the issuer for the coverage that is being assessed. Therefore, issuers of other insured health products that are not for individuals are paying an involuntary fee but are not participating in an involuntary pool.

42. The treatment of the transitional reinsurance program reinsurance assessments for non-individual fully insured plans differs from the treatment for individual plans. Since the non-individual plans are not eligible for reimbursement, they are not participating in a reinsurance arrangement, and thus, the assessments are not treated as ceded premium. As an involuntary assessment, the transitional reinsurance program reinsurance assessments, consistent with SSAP No. 35R are treated as an assessment payable by the reporting entity and charged to taxes, licenses and fees expense. The expense is accrued in proportion to the other insured health enrollees base that will be used to determine the assessments payable as the premium subject to the assessment is written.

Other Insured Health Products - Reinsurance Administrative Expense Assessments

43. The reinsurance program administrative costs for other insured health products are an assessment payable by the reporting entity. This applies both to assessments made at the national assessment rate and to any state assessment that will fund administrative expenses and is reflected in the same expense category as taxes, licenses and fees.

Other Insured Health Products - U.S. Treasury Assessment

44. The additional U.S. Treasury assessment for other insured health products is a federal assessment payable by the reporting entity which is not based on income and is reflected in the same expense category as taxes, licenses and fees.

Other Insured Health Products - Reinsurance Program Distributions (not applicable)

45. Reinsurance recoveries will not occur for insured health products other than individual. Other insured health products will pay the transitional reinsurance program assessments payable but not receive program distributions for claims.

Self-Insured Health Products

Self-Insured Health Products - Assessments Payable for Reinsurance

46. Assessments made on behalf of self-insured plans which are administered by the reporting entity are uninsured plans and are excluded from the reporting entity's statement of operations, with respect to both monies received from the plans and assessments disbursed by the reporting entity. Any resulting liabilities or receivables shall be reported as liabilities and receivables held in connection with uninsured plans. This treatment is consistent with *SSAP No. 47—Uninsured Plans,* paragraphs 5 and 8-11.

47. The self-insured plan, not the reporting entity, is legally liable for assessments for the transitional reinsurance program. The funds are a bona fide pass-through by the reporting entity, which is merely

providing a service for the self-insured (uninsured) plan. Therefore, the reporting entity will not report revenues or expenses for the assessments for the transitional reinsurance program.

48. The reporting entity may have received funds from the self-insured plans in advance of making disbursements. In that event, a liability is established for funds held in connection with self-insured plans.

49. The reporting entity, depending on its arrangement with the (uninsured) plan, may make a disbursement before receiving full funding from the plan. In that event, an asset is established for amounts receivable in connection with uninsured plans. The asset would be subject to the rules for admissibility and impairment as prescribed in SSAP No. 47, paragraphs 9-10.

Self-Insured Health Products - Reinsurance Administrative Expense Assessments Payable and U.S. Treasury Assessment

50. A reporting entity providing a service for a self-insured plan that is uninsured shall apply the pass-through treatment for the transitional reinsurance program's administrative cost assessments and additional U.S. Treasury contribution amounts. The uninsured plan, not the reporting entity, is legally liable. Therefore, the reporting entity will not report revenues or expenses with respect to the transitional reinsurance program's administrative cost assessments and additional U.S. Treasury contribution amounts.

Self-Insured Health Products - Reinsurance Payments (not applicable)

51. Reinsurance recoveries will not occur for self-insured health products, as these products will pay fees but not receive claims reimbursements.

Risk Corridors – Description and Overview

52. The risk corridors program based on Section 1342 of the ACA is effective for benefit years beginning in 2014 through 2016. The risk corridors program applies to Qualified Health Plans (QHPs) in the individual and small group markets whether sold on or outside of an exchange.

53. The purpose of the risk corridors program is to provide limitations on issuer losses and gains for QHPs through additional protection against initial pricing risk. The program creates a mechanism for sharing the risk for Allowable Costs between the federal government and the QHP issuers. The program is applied at the QHP level, not the issuer or market segment level. Although the risk corridors program provides protection against extreme bounds of experience, there is a substantial corridor in which all variance in experience directly affects the financial return of the reporting entity.

54. To determine whether an issuer pays into (contributes), or receives distributions from, the risk corridors program, HHS will compare Allowable Costs[3] and the Target Amount[4] based on a formula that compares Allowable Costs. Below is an example (before transition requirements) for a QHP.

a. When a QHP's Allowable Costs for any benefit year are more than 103% but not more than 108% of the Target Amount, HHS will pay the QHP issuer an amount equal to 50% of the Allowable Costs in excess of 103% of the Target Amount.

[3] With respect to a QHP, Allowable Costs is an amount equal to the sum of incurred claims of the QHP issuer, adjusted to include qualifying expenditures by the QHP for activities that improve health care quality, expenditures for health information technology and meaningful use requirements and other required adjustments.

[4] With respect to a QHP, the Target Amount is an amount equal to the total premiums earned with respect to a QHP, including any premium tax credit under any governmental program, reduced by the allowable administrative costs of the plan.

© 1999-2023 National Association of Insurance Commissioners

b. When a QHP's Allowable Costs for any benefit year are more than 108% of the Target Amount, HHS will pay the QHP issuer an amount equal to 2.5% of the Target Amount plus 80% of the Allowable Costs in excess of 108% of the Target Amount.

c. If a QHP's Allowable Costs for any benefit year are less than 97% but not less than 92% of the Target Amount, the QHP issuer must remit assessments payable to HHS in an amount equal to 50% of the difference between 97% of the Target Amount and the Allowable Costs.

d. When a QHP's Allowable Costs for any benefit year are less than 92% of the Target Amount, the QHP issuer must remit assessments payable to HHS in an amount equal to the sum of 2.5% of the Target Amount plus 80% of the difference between 92% of the Target Amount and the Allowable Costs.

55. The risk corridors program creates a mechanism for sharing risk for Allowable Costs between the federal government and QHP issuers. The ACA establishes the risk corridors program as a federal program; consequently, HHS will operate the risk corridors program under federal rules without state variations. The risk corridors program is intended to protect against inaccurate rate setting in the early years of the exchanges by limiting the extent of issuer losses and gains. In the event that risk corridors program collections are not sufficient to cover all the required distributions, the ACA requires the use of other sources of federal funding for the required distributions, subject to the availability of appropriations.

56. The final risk corridors settlement calculation will be communicated by HHS after the end of the benefit year and after premium and loss adjustments related to the reinsurance and risk adjustment programs have been determined.

Risk Corridors – Accounting Treatment(INT 15-01)

57. This program is similar to the risk corridors program established for the Medicare Part D prescription drug coverage[5]. However, due to the asymmetrical nature of the risk corridors calculation, an overstatement of expense in one cell, which is theoretically offset by the understatement of expense in another cell, does not necessarily result in zero financial impact.

58. Payables and receivables pursuant to the temporary risk corridors program shall be accounted for as specified in this statement.

59. Risk corridors assessments meet the definition of liabilities as set forth in SSAP No. 5R. Risk corridors receivables due to the reporting entity meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this statement.

a. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

b. The additions or reductions to premium revenue resulting from the risk corridors program are recognized over the contractual period of coverage, to the extent that such additions or reductions are reasonably estimable. Reporting entities shall be aware of the significant uncertainties involved in preparing estimates and be both diligent and

[5] The ACA risk corridors program also has significant differences between the Medicare risk corridors program. The ACA risk corridors program is performed at a significantly more granular plan specific level with a pro-rata allocation of the issuer's overall claim costs for the plan's state/market cell.

conservative in their estimations. Risk corridors payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk corridors program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient information to determine a reasonable estimate. Part of ensuring sufficient information requires that the reporting entity's estimate is based on demonstrated knowledge of the impacts of the other risk-sharing programs on the risk corridors program and the terms of the risk corridors program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.

c. The risk corridors receivables are from a federal governmental program. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.

d. Provided that the risk corridors receivables due the reporting entity are determined in a manner that is consistent with the requirements of this statement, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk corridors amounts under appeal shall be reflected as a nonadmitted asset.

e. Evaluation of the collectibility of all amounts receivable from the risk corridors program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk corridors receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible, that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

f. Reporting shall be consistent with *SSAP No. 66—Retrospectively Rated Contracts*, paragraph 9 guidance on reporting for retrospective premium.

Disclosures

60. The financial statements shall disclose on an annual and quarterly basis beginning in the first quarter of 2014, the assets, liabilities and revenue elements by program regarding the risk-sharing provisions of the Affordable Care Act for the reporting periods which are impacted by the programs including the listing in paragraphs 60.a. through 60.c. Reporting entities shall also indicate if they wrote any accident and health insurance premium, which is subject to the Affordable Care Act risk-sharing provisions. In the event that the balances are zero, the reporting entity should provide context to explain the reasons for the zero balances, including insufficient data to make an estimate, no balances or premium was excluded from the program, etc. Asset balances shall reflect admitted asset balances. The disclosure shall include the following:

a. ACA Permanent Risk Adjustment Program

i. Premium adjustments receivable due to ACA Risk Adjustment (including high-cost risk pool payments)

ii. Risk adjustment user fees payable for ACA Risk Adjustment

iii. Premium adjustments payable due to ACA Risk Adjustment (including high-cost risk pool ceded premium)

iv. Reported as revenue in premium for accident and health contracts (written/collected) due to ACA Risk Adjustment

v. Reported in expenses as ACA risk adjustment user fees (incurred/paid)

b. ACA Transitional Reinsurance Program

i. Amounts recoverable for claims paid due to ACA Reinsurance

ii. Amounts recoverable for claims unpaid due to ACA Reinsurance (contra-liability)

iii. Amounts receivable relating to uninsured plans for contributions for ACA Reinsurance

iv. Liabilities for contributions payable due to ACA Reinsurance - not reported as ceded premium

v. Ceded reinsurance premiums payable due to ACA Reinsurance

vi. Liability for amounts held under uninsured plans contributions for ACA Reinsurance

vii. Ceded reinsurance premiums due to ACA Reinsurance

viii. Reinsurance recoveries (income statement) due to ACA Reinsurance payments or expected payments

ix. ACA Reinsurance Contributions – not reported as ceded premium

c. ACA Temporary Risk Corridors Program

i. Accrued retrospective premium due from ACA Risk Corridors

ii. Reserve for rate credits or policy experience rating refunds due to ACA Risk Corridors

iii. Effect of ACA Risk Corridors on net premium income (paid/received)

iv. Effect of ACA Risk Corridors on change in reserves for rate credits

61. In addition, beginning in annual 2014 and both quarterly and annual thereafter, a roll forward of prior year ACA risk-sharing provisions specified asset and liability balances shall be disclosed in the annual statutory Notes to Financial Statements, as illustrated in Exhibit B. Note for the roll forward illustration, assets shall be reflected gross of any nonadmission. The reasons for adjustments to prior year balances (i.e. federal audits, revised participant counts, information which impacted risk score projections, etc.) shall also be disclosed. For year-end 2014, all columns and rows are expected to be zero since 2014 is the first year that a receivable or liability will be recorded. For reporting periods on or after March 31, 2016, the risk corridors roll forward is amended to require disclosure of the risk corridors asset

and liability balances and subsequent adjustments by program benefit year. The beginning receivable or payable in the roll forward will reflect the prior year-end balance for the specified benefit.

62. For reporting periods ending on or after March 31, 2016, for both quarterly and annual reporting, the following information is required for risk corridors balances by program benefit year:

a. Estimated amount to be filed or final amounts filed with federal agency

b. Amounts impaired or amounts not accrued for other reasons (not withstanding collectability concerns)

c. Amounts received from federal agency

d. Asset balance gross of nonadmission

e. Nonadmitted amounts

f. Net admitted assets

Generally Accepted Accounting Principles

63. U.S. GAAP did not issue additional guidance to address the risk-sharing provisions of the ACA.

Effective Date and Transition

64. This statement is effective for years ending on or after December 15, 2014. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Risk-sharing provisions guidance was previously reflected within *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act* and was effective January 1, 2014. Upon adoption of this statement, INT 13-04 was nullified. Disclosures in paragraphs 60 and 61 were adopted in *SSAP No. 35R—Guaranty Fund and Other Assessments,* but were incorporated into this statement prior to publication. Statement revisions in paragraphs 10-11 and paragraphs 15-16 for risk adjustment high-cost risk pools and related disclosure changes are effective for reporting periods beginning on or after January 1, 2018.

© 1999-2023 National Association of Insurance Commissioners

EXHIBIT A – GLOSSARY

The terms included in this exhibit are specific to the risk-sharing provisions of the ACA; accordingly, they are not intended to be applied to other topics.

Affordable Care Act (ACA) – The Patient Protection and Affordable Care Act (PPACA), commonly called the Affordable Care Act (ACA), is a United States federal statute signed into law on March 23, 2010.

Applicable Reinsurance Entity – A tax-exempt not-for-profit organization, the duties of which shall be to carry out the transitional reinsurance program by coordinating the funding and operation of the risk-spreading mechanisms designed to stabilize the individual markets during the implementation of health reform.

Cell – The risk corridor calculation is done at the QHP (Qualified Health Plan) level – the cell is state, market (individual or small group), QHP.

Assessment – Required payments into the applicable reinsurance entity by all issuers of major medical commercial products and third-party administrators to fund the transitional reinsurance program.

Exchange – Health insurance marketplaces, also called Health Exchanges, are organizations set up to facilitate the purchase of health insurance in every state of the United States in accordance with the Patient Protection and Affordable Care Act. The exchanges are regulated, online marketplaces, administered by either federal or state government, where individuals, families and small businesses can purchase qualified health insurance plans starting October 1, 2013, with coverage beginning January 1, 2014. Exchanges will also determine who qualifies for subsidies and make subsidy payments to insurers on behalf of individuals receiving them. They will also accept applications for other health coverage programs such as Medicaid and Children's Health Insurance Program (CHIP).

Exempt Plans – Certain health plans that are determined not to be a risk adjustment covered plan in the applicable federally certified risk adjustment methodology (45 C.F.R. § 153.20), grandfathered health plans, group health insurance coverage benefits that are not an integral part of a group health plan, are limited scope, or supplemental benefits (45 C.F.R. § 146.145(c)), and individual health insurance coverage excepted benefits (45 C.F.R. § 148.220).

Grandfathered Plans – A group health plan that was created or an individual health insurance policy that was purchased on or before March 23, 2010. Grandfathered plans are exempted from many changes required under the ACA. Plans or policies may lose their "grandfathered" status if they make certain significant changes that reduce benefits or increase costs to consumers. New employees and new family members may be added to grandfathered group plans after March 23, 2010.

Health and Human Services (HHS) – The Department of Health and Human Services (HHS) is the United States government's principal agency that oversees CMS, which administers programs for protecting the health of all Americans and providing essential human services.

Market Segment – Subset of consumers with its own set of demographic and other assumptions such as individual, state/federal, small group, group, Medicaid or Medicare.

Program Distribution– Amounts payable to or redistributed by the applicable reinsurance entity or the HHS to issuers of non-grandfathered individual market plans that incur high claims costs for enrollees and are eligible to receive benefit payments (recoveries).

© 1999-2023 National Association of Insurance Commissioners

Qualified Health Plan (QHP) – Under the Affordable Care Act, starting in 2014, an insurance plan that is certified by the Health Insurance Marketplace, provides essential health benefits and follows established limits on cost-sharing (such as deductibles, copayments, and out-of-pocket maximum amounts).

Risk Score – Individual risk score means a relative measure of predicted health care costs for a particular enrollee that is the result of a risk adjustment model. Claims-based risk-assessment models use data, typically from a 12-month period, to identify underlying conditions and assign a risk score for each individual based on an algorithm.

EXHIBIT A – CALCULATION OF DEFERRED ASSET OR DEFERRED LIABILITY **12**

SCOPE OF STATEMENT

1. Current statutory accounting guidance for derivatives qualifying for hedging effectiveness is in *SSAP No. 86—Derivatives*. Pursuant to the direction from the Financial Condition (E) Committee, this statement allows special accounting treatment for limited derivatives hedging variable annuity guarantee benefits subject to fluctuations as a result of interest rate sensitivity. The provisions within this statement are separate and distinct from the guidance in SSAP No. 86, as the items subject to the scope of this guidance, and the provisions within, would not qualify for hedge effectiveness under SSAP No. 86. The provisions provided within this statement are only permitted if all of the components of the statement are met and shall not be inferred as an acceptable statutory accounting approach for derivative transactions that do not meet the stated qualifications or that are not specifically addressed within this guidance.

SUMMARY CONCLUSION

2. This statement establishes statutory accounting principles to address certain, limited derivative transactions hedging variable annuity guarantees subject to fluctuations as a result of interest rate sensitivity. Eligibility for the special accounting provision within this standard is strictly limited to variable annuity contracts and other contracts involving certain guaranteed benefits similar to those offered with

© 1999-2023 National Association of Insurance Commissioners

variable annuities that are reserved for in accordance with Valuation Manual 21: Requirements for Principal-Based Reserves for Variable Annuities (VM-21)[1]. The statutory accounting guidance within this statement is considered a special accounting provision, only permitted if all the components in the standard are met, and shall not be inferred as an acceptable statutory accounting approach for situations that do not meet the stated qualifications or that are not specifically addressed within this guidance.

Terms/Concepts (for purposes of this statement)

3. The following terms reflect concepts specific to this statement. (This listing only details the key concepts. Specific guidelines are reflected throughout the guidance.)

a. Derivative Instrument: An agreement, option, instrument or series or combination thereof: (1) To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or (2) That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

b. Dynamic Hedging Approach: A dynamic hedging strategy allows for the portfolio of derivatives comprising the hedging instrument to be rebalanced in accordance with changes to the hedged item in order to adhere to the specified, documented hedging strategy.

c. Hedged Item: The hedged item shall consist of declared guarantee benefits on a pool, or portion thereof, of variable annuity contracts exposed to interest rate risk. The hedged item may relate to an open or flexible portfolio (e.g., group of variable annuity contracts with different characteristics and liability durations) that allows for addition of newly issued contracts, subtraction of surrenders and fluctuations in balances. The portfolio of variable annuity contracts may consist of an entire book of business or declared components thereof.

d. Hedging Instrument: The hedging instrument shall reflect a specified derivative, or a portfolio of specified derivatives, that hedges the interest rate sensitivity of the designated hedged item. The hedging instrument may reflect a dynamic hedging strategy in which a portfolio of derivatives comprising the hedging instrument is rebalanced in accordance with changes to the hedged item.

Special Accounting Provision

4. The special accounting provision within this statement permits reporting entities to utilize a form of “macro-hedging” in which a portfolio of variable annuity policies, which could include the entire book of business or subsections thereof, are jointly designated as the host contracts containing the hedged item, in a fair value hedge[2], pursuant to a Clearly Defined Hedging Strategy (throughout this issue paper also referred to as “CDHS” or “hedging strategy”). This is considered a macro-hedge, as the designated hedged item (rate sensitive guarantee benefits) may be attached to a portfolio of variable annuity contracts with different characteristics and liability durations. Under this special accounting provision, the portfolio of contracts giving rise to the hedged item is not required to be static, but can be revised to remove policies and/or include new policies to allow for continuous risk management (hedging) of the variable annuity guarantees in accordance with the specific risks being hedged and the hedge objectives of the specified, documented hedging strategy. In designating the hedged item, reporting entities are permitted to exclude specific components of the variable annuity contracts, but such exclusions must apply collectively to all

[1] Actuarial Guideline XLIII, CARVM for Variable Annuities (AG 43) shall apply in states that have not adopted the Valuation Manual.

[2] As detailed in paragraph 10, these hedges are required to be highly effective in achieving offsetting changes in fair value attributed to the hedged risk between the derivative hedging instruments and the hedged item during the period that the hedge is designated.

policies included within the portfolio. For example, reporting entities may elect to only hedge the interest rate risk of rider cash flows, and if making this election, would define the hedged item as the "fair value of rider claims net of rider fees" for the portfolio of policies designated as giving rise to the hedged item.

5. This special accounting provision permits reporting entities to utilize a specified derivative, or a portfolio of specified derivatives, as the hedging instrument within a fair value hedge to hedge the interest rate sensitivity, or a specific percentage[3] of the interest rate sensitivity, of the designated hedged item. The hedging instrument may reflect a dynamic hedging strategy in which a portfolio of derivatives comprising the hedging instrument is rebalanced in accordance with changes to the hedged item in order to adhere to the specified, documented hedging strategy. Although the hedging instruments must address interest rate risk, this guidance does not preclude use of derivative instruments that may offset risks other than interest rate risk from being designated as the hedging instruments. For derivative instruments that are affected by multiple risk factors, including interest rate risk, reporting entities shall apply this special accounting treatment to the change in fair value due to interest rate risk. Reporting entities shall bifurcate the change in fair value due to the various risk factors - e.g., fair value volatility due to interest rates (rho), and other risk factors, such as equity level (delta) or volatility (vega). Pursuant to paragraphs 10 and 13, fair value fluctuations not attributed to the hedged risk, including fair value changes from excluded open components, shall be recognized as unrealized gains or losses.

6. With the provisions in this standard to allow for flexibility in the hedged item (changes to variable annuity contracts within a portfolio) coupled with a dynamic hedging approach (rebalancing of derivative hedging instruments), there is a greater risk of misrepresentation of successful risk management and achievement of a highly effective hedging relationship. Although this risk cannot be eliminated, the following provisions intend to ensure governance of the program and provide sufficient tools to allow for regulator review:

a. Prior to implementing a hedging program for application within scope of this standard, the reporting entity must obtain explicit approval from the domiciliary state commissioner allowing use of this special accounting provision. The domiciliary state commissioner may subsequently disallow use of this special accounting provision at their discretion. Although this guidance does not restrict the state domiciliary commissioner on when to prohibit future use, disallowance should be considered upon finding that the reporting entity's documentation, controls, measurement, prior execution of strategy or historical results are not adequate to support future use.

b. Actuarial certifications of VM-21 reserves, consistent with Valuation Manual requirements, which explicitly include the following:

i. Certification as to whether the hedging strategy is incorporated within the establishment of VM-21 reserves, and the impact of the hedging strategy within the VM-21 Conditional Tail Expectation Amount.

ii. Certification by a financial officer of the company (CFO, treasurer, CIO, or designated person with authority over the actual trading of assets and derivatives) that the hedging strategy meets the definition of a Clearly Defined Hedging Strategy within VM-21 and that the Clearly Defined Hedging Strategy is the hedging strategy being used by the company in its actual day-to-day risk mitigation efforts. This provision does not require reporting entities to use a hedging strategy in determining VM-21 reserves, nor does it require entities to use the special accounting provision within this standard. However, it does require reporting entities that use the special accounting provisions within this standard to certify

[3] In identifying the hedged risk, reporting entities must identify whether they are hedging the full, or a portion of (e.g., 40%), the interest rate sensitivity.

© 1999-2023 National Association of Insurance Commissioners

that the hedging strategy within scope of this standard is a Clearly Defined Hedging Strategy and is reflected in the establishment of VM-21 reserves.

7. As identified in paragraph 2, eligibility for the special accounting provision within this standard is strictly limited to variable annuity contracts and other contracts involving certain guaranteed benefits similar to those offered with variable annuities that are reserved for in accordance with VM-21. This special accounting provision requires the reporting entity to engage in highly effective fair value hedges that follow a Clearly Defined Hedging Strategy, as defined in VM-21, meeting all required provisions of VM-21 allowing the reporting entity to reduce the amount of the Conditional Tail Expectation (CTE) Amount. In order to qualify as a Clearly Defined Hedging Strategy (which may be dynamic, static, or a combination thereof), the strategy must meet the principles outlined in VM-21, be in place (implemented) for at least three months[4], and shall at a minimum, identify:

a. Specific risks being hedged[5],

b. Hedge objectives,

c. Risks not being hedged,

d. Financial instruments that will be used to hedge the risks,

e. Hedge trading rules, including permitted tolerances from hedging objectives,

f. Metric(s) used for measuring hedging effectiveness,

g. Criteria that will be used to measure effectiveness,

h. Frequency of measuring hedging effectiveness,

i. Conditions under which hedging will not take place, and

j. The individuals responsible for implementing the hedging strategy.

8. While an initially documented hedging strategy may subsequently change, any change in hedging strategy, which includes a change in hedge target, shall be documented, with notification to the domiciliary state commissioner, and include an effective date of the change in strategy. Reporting entities that elect to change a documented hedging strategy prior to the end of the three-month minimum implementation timeframe shall identify the hedging strategy, and all hedging instruments executed under the strategy, as ineffective. The three-month timeframe begins with the stated effective date of the hedging strategy regardless if any hedging instruments have been executed under the hedging strategy. Changes in a documented hedging strategy that occur after the three-month implementation timeframe do not necessitate an ineffective determination as long as hedged items and hedging instruments under the revised/new strategy continue to meet the requirements of a highly effective fair value hedge. Reporting entities are permitted to have more than one hedging strategy implemented, but all implemented strategies must qualify as a component of a Clearly Defined Hedging Strategy pursuant to paragraph 7.

---

[4] As detailed in VM-21, before a new or revised hedging strategy can be used to reduce the amount of the Conditional Tail Expectation (CTE) otherwise calculated, the hedging strategy should be in place (effectively implemented) for at least three months. As detailed in VM-21, the reporting entity may meet the time requirement by having evaluated the effective implementation of the hedging strategy for at least three months without actually having executed the trades indicated by the hedging strategy (e.g., mock testing or by having effectively implemented the strategy with similar annuity products for at least three months.)

[5] The specific risk being hedged shall include a measure of the hedge coverage (e.g., percentage of interest rate sensitivity being hedged).

© 1999-2023 National Association of Insurance Commissioners

Assessing Hedge Effectiveness

9. The provisions within this standard require the entity to use a specific method, as detailed in paragraph 10, to assess hedge effectiveness at inception and on an ongoing basis. At a minimum, hedge effectiveness assessment is required whenever financial statements are reported, at least every three months. Documentation requires prospective and retrospective[6] hedge effectiveness assessments, with on-going assessment consistent with the originally documented risk management strategy.

10. Both at inception, and on an ongoing basis, the hedging relationship must be highly effective in achieving offsetting changes in fair value attributed to the hedged risk during the period that the hedge is designated. Reporting entities electing to use this special accounting provision must calculate the fair value of the hedged item at inception and on an ongoing basis, and compare the fair value change of the hedged item to the fair value change of the hedging instruments in assessing whether the relationship is highly effective on a cumulative basis. This comparison is specific to the designated hedged risks and exposures, therefore, if only a portion of the interest rate risk is hedged or if the designated hedge only include specific components of the variable annuity policies (e.g., riders), for determining hedge effectiveness, the fair value comparisons is limited to those designated items. If an entity's defined risk management strategy for a particular hedging relationship excludes specific components of the hedging derivative from the assessment of hedge effectiveness, the excluded open components shall be reported at fair value with gains or losses recognized as unrealized gains or losses.

11. The term "highly effective" describes a fair value hedging relationship where the change in fair value of the derivative instrument is within 80 to 125 percent of the opposite change in fair value of the hedged item attributed to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique.

Measurement/Recognition of Gains and Losses of Outstanding (Open) Instruments

12. All designated hedging instruments (all derivatives, including those reflected in portfolios) shall be reported in the financial statements at fair value.

13. Fair value fluctuations in the measurement of outstanding (non-expired) derivatives within a highly effective hedging strategy shall be reflected as follows:

a. Fair value fluctuations in the hedging instruments attributable to the hedged risk that offset the current period change in the designated portion of the VM-21 reserve liability[7] shall be recognized as a realized[8] gain or loss.

---

[6] For situations in which there has been a change in hedging strategy pursuant to paragraph 8, when conducting retrospective hedge effectiveness assessments, reporting entities shall assess effectiveness based on the hedge target that was actually in effect during the retrospective time periods.

[7] Hedge effectiveness is determined by comparing fair value fluctuations between the hedging instruments and the hedged item. However, in determining recognition in the financial statements, the fair value fluctuation of the hedging instruments is compared to the change in the reported value of the designated portion of the VM-21 liability. The designated portion of the VM-21 liability is not reported at fair value in the statutory financial statements, as such, the offset reported as realized gains and losses is the portion of the fair value change in hedging instruments offset by the change in the reported value of the designated portion of the VM-21 reserve. In accordance with the documented hedging strategy, reporting entities shall compare the fair value fluctuations to the change in the designated portion of the reserve liability, after considering recognized derivative returns (including recognized derivative income), when determining the recognition of fair value fluctuations.

[8] Recognizing the fair value change for open derivative positions that offset the VM-21 change as a realized gain/loss (instead of an unrealized gain or loss) directly offsets the VM-21 reserve change in the income statement.

© 1999-2023 National Association of Insurance Commissioners

b. Fair value fluctuations in the hedging instruments attributable to the hedged risk[9] that do not offset the current period change in the designated portion of the VM-21 reserve liability shall be recognized as deferred assets (admitted) and deferred liabilities. The ability to recognize a deferred asset and deferred liability is limited to only the portion of the fair value fluctuation in the hedging instruments that is attributed to the hedged risk and does not immediately offset changes in the designated portion of the VM-21 reserve liability.

c. An amount equal to the net deferred asset and deferred liability (net amount from all hedging strategies/programs captured within this guidance) shall be allocated from unassigned funds to special surplus. Upon domestic regulator request, reporting entities shall provide estimations of RBC as if the special accounting provisions had not been applied. This estimation shall reflect the removal of deferred assets or deferred liabilities and reflect the impact to unassigned funds as if the derivative gains and losses had been recognized.

d. As detailed in paragraph 10, fair value fluctuations in the hedging instruments that are not attributable to the hedged risk, shall be recognized as unrealized gains or unrealized losses.

e. Reporting entities shall utilize the following calculation for establishing the deferred asset (also illustrated in Exhibit A) unless a different method has been approved by the domiciliary state commissioner:

i. Calculate the fair value gain or loss in the hedged item attributable to the hedged risk.

ii. Express the quantity calculated in paragraph 13.e.i. as a percentage of the change in the full-contract fair value (i.e., with all product cash flows) attributed to interest rate movements[10].

iii. Calculate the VM-21 liability change attributed to the hedged risk as the quantity calculated in paragraph 13.e.ii. multiplied by the VM-21 liability change attributable to interest rate.

iv. Establish the deferred asset or deferred liability in the amount of the fair value loss or (gain) of the designated hedging instruments attributed to the hedged risk less the VM-21 liability decrease or (increase) attributed to the hedged risk as calculated in paragraph 13.e.iii.

v. Allocate an amount equal to the net deferred asset and deferred liability (net amount from all hedging strategies/programs captured within this guidance) to special surplus.

---

[9] The change in fair value of the hedging instruments and hedged item is limited to changes driven by market factors. For example, periodic recognition of a cost owed to acquire the derivative from a counterparty (financing cost) shall not be captured as a change in the derivative instrument's fair value. The fair value of the instrument shall be determined based on the underlying derivative without inclusion of acquisition costs (or other such contractual elements that may exist with the counterparty) that do not change based on the underlying derivative interests or market factors.

[10] The result of this calculation (the coverage ratio) should not exceed 100% nor drop below zero.

© 1999-2023 National Association of Insurance Commissioners

14. Deferred assets and deferred liabilities recognized under paragraph 13.b. shall be amortized using a straight-line method into realized gains or realized losses over a finite amortization period. The amortization timeframe shall equal the Macaulay duration of the guarantee benefit cash flows based on the VM-21 Standard ~~Scenario~~Projection[11], but shall not exceed a period of 10 years.

a. Future recognition of deferred assets or liabilities (fair value fluctuations attributed to the hedged risk that are not offset by the reserve liability change) do not extend the amortization timeframe for previously recognized deferred assets or deferred liabilities. Reporting entities are required to separately track, with a schedule to show the initial deferred amount and amortization schedule, of the deferred assets and deferred liabilities recognized and outstanding at each reporting date.

b. The amount reported on the financial statement at each reporting date shall reflect the net amount (net as either a deferred asset or deferred liability) for each hedging strategy captured within scope of this guidance. (Reporting entities that have more than one hedging strategy could have both deferred assets and deferred liabilities in the financial statements based on the net position of the separate hedging strategies.)

c. Reporting entities are permitted to amortize a greater portion of the deferred assets and/or deferred liabilities into realized gains or realized losses at any time in advance of the scheduled amortization period.

i. If electing to accelerate amortization, reporting entities are required to accelerate amortization equally between deferred assets and deferred liabilities within a single hedging strategy. For example, a reporting entity is not permitted to accelerate amortization of the deferred liabilities (recognizing the gains from fair value changes) and not accelerate amortization of the deferred assets (continuing to defer losses from fair value changes). If a reporting entity only has a single hedging strategy which only reflects deferred assets or deferred liabilities, the reporting entity is permitted to accelerate amortization without restrictions.

ii. If a reporting entity has more than one hedging strategy, and the strategies have offsetting net positions (both deferred assets and deferred liabilities are recognized in the financial statements), a reporting entity's election to accelerate amortization must be applied equally to programs with offsetting net positions. (For example, a decision to accelerate amortization of a program with a net deferred liability must be applied equally to a program with a deferred asset that best corresponds to the deferred liability[12].) In these situations, the guidance in paragraph 14.c.i. is also applicable, whereas, the accelerated amortization must also apply equally to the deferred assets and deferred liabilities within each individual hedging program. If a reporting entity with more than one hedging strategy only has net deferred assets or net deferred liabilities recognized, the reporting entity is permitted to accelerate

[11] The VM-21 Standard Projection benefit cash flows shall be based on the prescribed assumptions run for the scenario that produces the scenario reserve closest to conditional tail expectation (CTE) 70 (adjusted). The VM-21 Standard Projection with prescribed assumptions run is determined using the method (company specific market path (CSMP) or conditional tail expectations with prescribed assumptions (CTEPA)) applied by the reporting entity to calculate the prescribed projections amount. For the CSMP method, the economic scenario is Path A, with the guarantee benefit cash flows from the run to calculate Prescribed Amount A. For the CTEPA method, the economic scenario is the scenario that produces the scenario reserve closest to the CTE70 (adjusted) from the stochastic reserve calculation, with the guarantee benefit cash flows from the VM-21 Standard Projection with prescribed assumptions run for this economic scenario. The discount rate for the Macaulay duration calculation shall be equal to the valuation interest rate specified by the Standard Valuation Law for annuities valued on an issue year basis, using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years.

[12] The intent of this guidance is to ensure that the ability to accelerate amortization does not result with elections that simply result in favorable financial statement presentation.

© 1999-2023 National Association of Insurance Commissioners

amortization to a single program in a manner consistent with the guidelines in paragraphs 14.c.i.

15. For outstanding (non-expired) derivative instruments that were removed from a highly effective hedging strategy (rebalanced), subsequent gains and losses from fair value fluctuations shall not impact the previously recognized deferred assets or deferred liabilities. The deferred assets and deferred liabilities for these derivative instruments shall be "locked" and amortized under the remaining schedule unless the reporting entity elects to terminate or accelerate amortization. Subsequent to the removal from a highly effective strategy, all fair value fluctuations from the outstanding derivative instruments would be subject to the guidance in SSAP No. 86, and recognized as unrealized gains and/or unrealized losses. If the derivative is re-designated as part of a highly effective hedging strategy qualifying under this standard, subsequent fair value fluctuations (after the re-designation) may be accounted for under the special accounting provision detailed in this statement.

16. For outstanding (non-expired) derivative instruments in a hedging strategy that no longer qualifies within scope of this standard (e.g., VM-21 requirements are not met) or is no longer a highly effective hedge, any non-amortized deferred assets or deferred liabilities shall be amortized to unrealized gains or unrealized losses over the remaining amortization timeframe, not to exceed five-years. If the deferred assets/deferred liabilities have a remaining amortization period that is less than the shortened timeframe, amortization shall continue over the remaining period. If the remaining amortization period is greater than 5-years at the time of the program no longer qualifies, or is no longer highly effective, the amortization schedule shall be revised to require full amortization within the shortened 5-year timeframe. If elected by the reporting entity, deferred assets and deferred liabilities may be immediately recognized as unrealized gains and/or unrealized losses or have accelerated amortization (less than 5-years) as unrealized gains and/or unrealized losses. (An election to immediate eliminate or accelerate amortization must follow the provisions in paragraph 14.c.) All future fair value fluctuations for these derivative instruments would be subject to the guidance in SSAP No. 86, and shall be recognized as unrealized gains or unrealized losses unless the instrument is subsequently designated as part of a highly effective hedging strategy within scope of this statement. If the derivative is re-designated as part of a highly effective hedging strategy qualifying under this standard, subsequent fair value fluctuations (after the re-designation) may be accounted for under the special accounting provision detailed in this statement.

17. Reporting entities may elect to terminate use of this special accounting provision at any time. In those instances, if the derivative instruments are outstanding, all deferred assets and deferred liabilities shall be amortized to unrealized gains or unrealized losses over the remaining amortization timeframe, not to exceed five-years. If the deferred assets/deferred liabilities have an amortization period that is less than the shortened 5-year timeframe, amortization shall continue over the established period. If the remaining amortization period is greater than 5-years at the time of termination, the amortization schedule shall be revised to require full amortization within the shortened 5-year timeframe. If elected by the reporting entity, deferred assets and deferred liabilities may be immediately eliminated or have accelerated amortization (less than 5-years) with recognition as unrealized gains and/or unrealized losses. (An election to immediate eliminate or accelerate amortization must follow the provisions in paragraph 14.c.) Once the special accounting provision is terminated, unless re-designated by the reporting entity, subsequent accounting of the derivatives in a hedging strategy that would be captured within this statement shall follow the fair value accounting approach in SSAP No. 86[13].

Measurement/Recognition of Realized Gains or Losses of Expired Derivatives

18. With the ability to rebalance the hedging instrument, this guidance allows for individual derivative instruments to expire and/or be removed from the portfolio of the hedging instrument, and not immediately

[13] Macro-hedges and the ability to rebalance hedging instruments are not provisions permitted within "effective" hedges in scope of SSAP No. 86. As such, hedging strategies with these components accounted for under SSAP No. 86 shall follow the fair value accounting approach detailed in that standard.

© 1999-2023 National Association of Insurance Commissioners

trigger an assessment that the overall hedging strategy is no longer highly effective. Furthermore, special allowances are included to consider the tenure differences between a hedging instrument and VM-21 liability duration. These allowances permit expired[14] derivative instruments that were part of a highly effective hedging strategy at the time of expiration to continue amortizing the deferred gains and deferred losses over the previously established amortization timeframe even if the overall hedging strategy is subsequently terminated or subsequently identified as no longer qualifying as a highly effective hedge.

19. Pursuant to the provisions in paragraph 14.c., reporting entities are permitted to amortize a greater portion of the deferred assets and/or deferred liabilities from expired derivatives into realized gains or realized losses in advance of the scheduled amortization period.

20. Consistent with the guidance in paragraph 17, reporting entities may elect to terminate use of this special accounting provision at any time. In those instances, if the derivative instruments have expired, all deferred assets and deferred liabilities shall be amortized to realized gains or realized losses over the remaining amortization timeframe, not to exceed 5-years. If the deferred assets/deferred liabilities had an amortization period that was less than the shortened timeframe, amortization shall continue over the established period. If the amortization period was greater than 5-years at the time of termination, the amortization schedule would be revised to require full amortization within the shortened timeframe. If elected by the reporting entity, the deferred assets and deferred liabilities may be immediately eliminated, or have accelerated amortization, with recognition as realized gains and/or realized losses. An election to immediate eliminate or accelerate amortization (less than 5 years) must follow the provisions in paragraph 14.c.)

Derivative Income

21. Derivative income shall be recognized when earned.

22. Pursuant to the documented hedging strategy as a fair value hedge, derivative income shall be considered as part of the overall hedging strategy and included in the assessments on whether the strategy is highly effective.

Disclosures

23. A reporting entity that has any outstanding derivatives accounted for under this special accounting provision, or that has unamortized deferred assets and/or deferred liabilities (representing previously unrecognized qualifying fair value fluctuations) from expired derivatives under the special accounting provision shall disclose the following within the financial statements:

a. Discussion of hedged item, including information on the guarantees sensitive to interest rate risk, along with information on the designated hedging instruments being used to hedge the risk. Discussion of the hedging instruments shall identify whether a hedging instrument is a single instrument or portfolio, as well as information on the hedging strategy (including whether there have been changes in strategy from the prior reporting period, along with detailed information on the changes), and assessment of hedging effectiveness and compliance with the "Clearly Defined Hedging Strategy" of VM-21. Identification shall occur on whether the hedged item is intended to be fully hedged under the hedging strategy, or if the strategy is only focused on a portion of the liability characteristics or a portion of the interest rate sensitivity. Hedging strategies shall be identified as highly effective or not highly effective. If the strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, from the assessment of hedge effectiveness, details on the excluded components shall be disclosed.

[14] Throughout this standard the use of the word "expire" is intended to capture all instances in which the derivative is no longer outstanding. It includes maturities, terminations, sales, and/or other closing transactions of a derivative.

© 1999-2023 National Association of Insurance Commissioners

b. Aggregate disclosure of the original cost and fair value of hedging instruments (including all instruments within a portfolio), including any net investment income, realized and unrealized gains and losses during the reporting period. Additionally, disclose the fair value of the hedged item, the change in fair value from the prior reporting period, and the portion of the fair value change attributed to the hedged risk.

c. Schedule showing the aggregate fair value change from the prior reporting period for the designated components for all hedging instruments, with identification of the fair value change reflected in realized gains, realized losses, deferred assets, and deferred liabilities. This schedule shall also show the current period amortization, including any accelerated amortization elected by the reporting entity, and the future scheduled amortization of the deferred assets and deferred liabilities. This schedule shall identify the fair value of the excluded components of the hedging instruments, and the fair value change for those components reflected in unrealized gain and unrealized loss.

d. For hedging strategies no longer identified as highly effective previously captured within scope of this standard, information on the determination of ineffectiveness, including variations from prior assessments resulting in the change from classification as a highly effective hedge. This disclosure shall also include:

i. Identification of outstanding hedging instruments previously captured within scope of this standard and subsequently identified as no longer part of a highly effective hedging strategy. This disclosure shall identify the date in which the domiciliary state was notified that the hedging strategy had been identified by the reporting entity as no longer highly effective.

ii. Deferred assets and deferred liabilities previously recognized when the program was highly effective, with a schedule that shows the amortization that would have occurred if the program had remained highly effective, the amount of original amortization as well as a schedule that details the amortization that will occur as the program is no longer highly effective (maximum five-year timeframe).

iii. Disclosure on whether the reporting entity is electing to accelerate amortization (in advance of the remaining scheduled amortization or the maximum five-year timeframe), along with amounts immediately recognized to unrealized gains/losses, and how the election impacts the scheduled amortization.

e. For situations in which the reporting entity has elected to terminate the hedging strategy and/or discontinue the special accounting provisions permitted within this SSAP, the reporting entity shall disclose the key elements in the reporting's entity' decision to terminate, identifying changes in the reporting entity's objectives or perspectives from initial application. This disclosure shall also include:

i. Identification of outstanding hedging instruments previously captured within scope of this standard and the accounting impact as a result of the termination/discontinuation. (Open derivative transactions no longer captured within the special accounting provision would be subject to the accounting and reporting guidance within SSAP No. 86.) This disclosure shall identify the date in which the domiciliary state was notified that the hedging strategy or the election to use the special accounting provision in this SSAP had been terminated.

ii. Deferred assets and deferred liabilities previously recognized under the hedging strategy and/or program, with a schedule that shows the amortization that would have occurred if the strategy and/or program had remained highly effective, as well

© 1999-2023 National Association of Insurance Commissioners

as a schedule that details the amortization that will occur with the termination of the strategy and/or program (maximum five-year timeframe).

iii. Disclosure on whether the reporting entity is electing to accelerate amortization (in advance of the remaining scheduled amortization or the maximum five-year timeframe), along with amounts immediately recognized to unrealized gains/losses, and the resulting impact to the scheduled amortization.

Effective Date and Transition

24. This statement is effective January 1, 2020, with early adoption permitted January 1, 2019. The guidance in this SSAP is required to be applied on a prospective basis for qualifying hedge programs in place on or after the effective date. This prospective application prohibits deferred asset and deferred liability recognition from fair value fluctuations previously recognized as unrealized gains or losses that occurred prior to the effective date of the guidance.

25. Reporting entities that have previously received permitted or prescribed practices for qualifying hedge programs, resulting with the recognition of deferred assets/deferred liabilities from unrecognized fair value fluctuations, shall work with their domiciliary state regulator to determine the appropriate method in transitioning from previously approved permitted practices. The reporting entity shall include disclosure of the transition approach approved by the domiciliary state in their financial statements in the first year of application. The approved transition approach is not considered a permitted practice as long as the reporting entity is fully compliant with the provisions of this statement after implementation. After the effective date of this statement, domiciliary state provisions that differ from this statement must be disclosed as a permitted or prescribed practice pursuant to *SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures*.

RELEVANT ISSUE PAPERS

- *Issue Paper No. 159—Special Accounting Treatment for Limited Derivatives*

EXHIBIT A – CALCULATION OF DEFERRED ASSET OR DEFERRED LIABILITY

Under the special accounting provisions within this issue paper, as detailed in paragraph 13.e., fair value fluctuations in the hedging instruments attributable to the hedged risk that do not offset the current period change in the hedged item (the change in the VM-21 reserve liability) can be recognized as deferred assets (admitted) and deferred liabilities.

The ability to recognize a deferred asset and deferred liability is limited to only the portion of the fair value fluctuation in the hedging instruments that is attributed to the hedged risk and does not immediately offset changes in the hedged item. As detailed in the standard, the hedged risk may be designated as a specific component of the hedged item. For example, if the variable annuity reserve benefits are matched to bonds, the hedged risk could only be the portion of interest rate risk remaining after the natural hedge based on the asset-liability matching.

Unless a different method has been approved by the domiciliary state commissioner, reporting entities shall utilize the following calculation (detailed in paragraph 13) for establishing the deferred asset:

13.e.i. Calculate the fair value gain or loss in the hedged item attributable to the hedged risk (Step 1);

13.e.ii. Express the fair value gain or loss calculated (Step 1) as a percentage of the change in the full-contract fair value (i.e., with all product cash flows) attributed to interest rate movements (Step 2)[15].

13.e.iii. Calculate the VM-21 liability change attributed to the hedged risk as the quantity calculated in Step 2 multiplied by the VM-21 liability change attributable to interest rate (Step 3).

13.e.iv. Establish the deferred asset or deferred liability in the amount of the fair value loss or (gain) of the designated hedging instruments attributed to the hedged risk less the VM-21 liability decrease or (increase) attributed to the hedged risk as calculated in Step 3.

13.e.v. Allocate an amount equal to the net deferred asset and deferred liability (net amount from all hedging strategies/programs captured within this guidance) to special surplus.

To illustrate the above calculation:

Clearly Defined Hedging Strategy (CDHS) characteristics

Hedged item	Rider claims less rider fees
Hedged risk	50% of the rho (first-order IR level sensitivity)

Calculation of the deferred asset or liability

Note: positive values = increase in liability

Fair value gain (loss) in hedged item attributable to interest rate movement	(500)
13.e.i. – Fair value gain (loss) in hedged item attributable to hedged risk	**(250)**

[15] The result of this calculation (the coverage ratio) should not exceed 100% nor drop below zero.

© 1999-2023 National Association of Insurance Commissioners

Hence, if the insurer were hedging per the CDHS perfectly, then the insurer should see a 250 fair value loss in the designated IR hedge instruments. To determine how much of that loss should be deferred:

Fair value gain (loss) in full-contract cash flows attributable to IR movement	(700)
13.e.ii. – Quantity calculated in 13.b.i. as a % of the (700) above	36%

VM-21 liability increase (decrease) from beginning of period to end of period	400
VM-21 liability increase (decrease) attributable to interest rate movements	(100)
13.e.iii. – VM-21 liability increase (decrease) attributable to the hedged risk	(36)

In this example, even though the VM-21 liability increased by 400 during the reporting period, interest rate movements actually contributed to a 100 *decrease*. The hedged risk (50% of the interest rate sensitivity of rider cash flows) accounts for 36% of this, or $36 of the liability decrease. As such, $36 of the fair value loss on the interest rate hedge instruments should be reflected immediately and the remainder deferred via a deferred asset equal in amount to 250 – 36 = 214.

13.e.iv. – Deferred asset (13.b.i less 13.b.iii) attributable to hedged risk	**(214)**

(This is shown as a negative – to be consistent with the decrease in VM-21 liability – but represents a deferred asset. Deferred assets reflect fair value losses.)

INDEX to the Statements of Statutory Accounting Principles

This index is a compilation of topics listed in the table of contents found at the beginning of each statement of statutory accounting principle (SSAP). Refer to the referenced SSAP table of contents for specific page location. Also included in this index are topics and terms deemed significant that are not specifically listed in a SSAP table of contents but are referenced within the content of the statement(s).

GLOSSARY to the Statements of Statutory Accounting Principles

The terms in this Glossary are common in most SSAPs. Some SSAPs may have terminology that is topic-specific and not intended to be applied to other topics.

Adjusted Carrying Value – Carrying value amount adjusted to remove any accrued interest and to add back any of the following amounts: individual nonadmitted amounts, individual valuation allowances (if applicable), and aggregate valuation allowance (if applicable). In effect, this is equivalent to the SAP Book Value. (Not to be confused with the old "book value" reported in the annual statement blanks for data years 2000 and prior.)

Amortized Cost – See SAP Book Value.

Call Provision – Option to buy an asset at a specified price within a specified period. (Also applicable to Call and Call Option.)

Capitation Arrangement – A compensation plan used in connection with some managed care contracts in which a physician or other medical provider is paid a flat amount, usually on a monthly basis, for each subscriber who has elected to use that physician or medical provider.

Credit Rating Provider – CRP stands for Credit Rating Provider and refers to the nationally recognized statistical rating organizations (NRSROs) on the NAIC Credit Rating Provider List discussed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*.

Deferred Tax Asset – The deferred tax consequences attributable to deductible temporary differences and carryforwards. A deferred tax asset is measured using the applicable enacted tax rate and provisions of the enacted tax law. Deferred tax assets are subject to the admissibility criteria as outlined in *SSAP No. 101—Income Taxes*, paragraph 11.

Deferred Tax Liability – The deferred tax consequences attributable to taxable temporary differences. A deferred tax liability is measured using the applicable enacted tax rate and provisions of the enacted tax law.

Equity Method – Accounting valuation approach used in which the initial investment is adjusted in accordance with the ownership of another entity. Guidance for using the equity method, and for determining adjustments to the investment under the equity method is detailed in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48) and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* (SSAP No. 97).

Fair Value – Fair value is defined in *SSAP No. 100R—Fair Value.*

Guaranteed Investment Contract or Guaranteed Interest Contract (GIC) – An insurer-issued funding vehicle, typically issued to retirement plans, under which the insurer accepts a deposit (or, less frequently, a series of deposits) from the purchaser and guarantees to pay a specified interest rate of return on the funds deposited during a specified period of time.

Morbidity Risk – The potential for a person to experience illness, injury, or other physical or psychological impairment, whether temporary or permanent. Morbidity risk excludes the potential for an individual's death, but includes the potential for an illness or injury that results in death.

Mortality Risk – The potential for loss of life, with respect to a specified person or group of people. For reverse mortgages (SSAP No. 39), mortality risk is defined as the risk of loan payments extending beyond the borrower's original projected life expectancy.

© 1999-2023 National Association of Insurance Commissioners

Nonforfeiture – The principle that some types of insurance contract have an economic value to which the contract owner is entitled even upon lapsation or surrender of the contract. A *nonforfeiture value* is the economic value that must be provided to the contract owner upon lapsation or surrender; it can take various forms, such as a lump-sum cash payment, an amount of paid-up insurance, an amount of term insurance, etc.

Nonoperating System Software – Application systems software such as language processors, library routines and debugging aides and other computer software are not considered operating system software.

Operating System Software – The operating system is a program or a series of programs controlling the data job and task management operations of a computer or a computer network through executive scheduling and monitoring. It increases the productivity of a computer installation by managing the allocation of all available computer resources including the control processing unit, main storage and input/output devices.

Original Cost – See SAP Book Value.

Par Value – The nominal (or face value) of a stock or bond.

Recorded Investment – The SAP Book Value (Adjusted Carrying Value) plus Accrued Interest.

SAP Book Value – Original cost, including capitalized acquisition costs and accumulated depreciation, unamortized premium and discount, deferred origination and commitment fees, direct write-downs, and increase/decrease by adjustment.

SAP Carrying Value (Amount) – The SAP book value plus accrued interest and reduced by any valuation allowance (if applicable) and any nonadmitted adjustment applied to the individual investment. Carrying value is used in the determination of impairment.

Statement Value – The SAP book value reduced by any valuation allowance and nonadmitted adjustment applied to an individual investment or a similar group of investments, e.g., bonds, mortgage loans, common stock.

Appendix A
Excerpts of NAIC Model Laws

Introduction

The following appendices are an integral part of the NAIC *Accounting Practices and Procedures Manual*. The guidance herein is referred to by specific statements of statutory accounting principles (SSAPs).

Some appendices define certain terms. Such definitions are not intended to change the meaning of any terms used elsewhere in the NAIC *Accounting Practices and Procedures Manual* and should only be used in the context of the appendix in which it appears and the SSAP that refers to that appendix.

Certain appendices contain requirements regarding reserves, which are effective with new business written after the effective date of the related SSAP. Transition guidance is provided in the related SSAPs.

Appendix A-001

Investments of Reporting Entities

Relevant SSAPs:
SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures
SSAP No. 21R—Other Admitted Assets
SSAP No. 83—Mezzanine Real Estate Loans

Introduction

Section 1. Reporting Requirements
Section 2. Investment Risk Interrogatories
Section 3. Summary Investment Schedule

Introduction

A reporting entity may acquire, hold or invest in investments or engage in investment practices as set forth in the laws and regulations of its domiciliary state. The disclosure required by this appendix is not intended to preempt such state authority. The financial information disclosed herein is intended solely for the use of state regulators for solvency analysis and should not be used for any other purpose.

Section 1. Reporting Requirements

The following reporting requirements apply to the provisions of this appendix:

1. Annual Statement – Section 3
2. Supplement to Annual Statement filed by April 1 – Section 2
3. Audited Statutory Financial Statements – Sections 2 and 3

© 1999-2023 National Association of Insurance Commissioners

Section 2. Investment Risks Interrogatories

Of The.. Insurance Company
Address (City, State, Zip Code) ....
NAIC Group Code.. NAIC Company Code.. Employer's ID Number...............................

The Investment Risks Interrogatories are to be filed by April 1. They are also to be included with the Audited Statutory Financial Statements.

Answer the following interrogatories by reporting the applicable U.S. dollar amounts and percentages of the reporting entity's total admitted assets held in that category of investments.

1. Reporting entity's total admitted assets as reported on Page 2 of this annual statement: $____________

2. Ten largest exposures to a single issuer/borrower/investment:

	1 Issuer	2 Description of Exposure	3 Amount	4 Percentage of Total Admitted Assets
2.01	....	a.	$.........................	.................................%
2.02	....	b.	$.........................	.................................%
2.03	....	c.	$.........................	.................................%
2.04	....	d.	$.........................	.................................%
2.05	....	e.	$.........................	.................................%
2.06	....	f.	$.........................	.................................%
2.07	....	g.	$.........................	.................................%
2.08	....	h.	$.........................	.................................%
2.09	....	i.	$.........................	.................................%
2.10	....	j.	$.........................	.................................%

3. Amounts and percentages of the reporting entity's total admitted assets held in bonds and preferred stocks by NAIC designation:

	Bonds	1	2		**Preferred Stocks**	3	4
3.01	NAIC – 1	$...............	................%	3.07	NAIC – 1	$................	................%
3.02	NAIC – 2	$...............	................%	3.08	NAIC – 2	$................	................%
3.03	NAIC – 3	$...............	................%	3.09	NAIC – 3	$................	................%
3.04	NAIC – 4	$...............	................%	3.10	NAIC – 4	$................	................%
3.05	NAIC – 5	$...............	................%	3.11	NAIC – 5	$................	................%
3.06	NAIC – 6	$...............	................%	3.12	NAIC – 6	$................	................%

4. Assets held in foreign investments:

4.01 Are assets held in foreign investments less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response, to 4.01 above is yes, responses are not required for interrogatories 5 – 10.

4.02	Total admitted assets held in foreign investments	$	.... %
4.03	Foreign-currency-denominated investments	$	.... %
4.04	Insurance liabilities denominated in that same foreign currency	$	.... %

Appendix A-010

Minimum Reserve Standards for Individual and Group Health Insurance Contracts

Relevant SSAPs:
SSAP No. 35R—Guaranty Fund and Other Assessments
SSAP No. 54R—Individual and Group Accident and Health Contracts
SSAP No. 59—Credit Life and Accident and Health Insurance Contracts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definitions

1. "Annual claim cost" is the net annual cost per unit of benefit before the addition of expenses, including claim settlement expenses, and a margin for profit or contingencies. For example, the annual claim cost for a $100 monthly disability benefit, for a maximum disability benefit period of one year, with an elimination period of one week, with respect to a male at age 35, in a certain occupation might be $12, while the gross premium for this benefit might be $18. The additional $6 would cover expenses and profit or contingencies.

2. "Claims accrued" is that portion of claims incurred on or prior to the valuation date that result in liability of the insurer for the payment of benefits for medical services that have been rendered on or prior to the valuation date, and for the payment of benefits for days of hospitalization and days of disability that have occurred on or prior to the valuation date, that the insurer has not paid as of the valuation date, but for which it is liable and will have to pay after the valuation date. This liability is sometimes referred to as a liability for "accrued" benefits. A claim reserve, which represents an estimate of this accrued claim liability, must be established. *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses defines this as a Claim Liability and not a Claim Reserve.*

3. "Claims reported" are considered as a reported claim for annual statement purposes when an insurer has been informed that a claim has been incurred, if the date reported is on or prior to the valuation date.

4. "Claims unaccrued" represent that portion of claims incurred on or prior to the valuation date which result in liability of the insurer for the payment of benefits for medical services expected to be rendered after the valuation date, and for benefits expected to be payable for days of hospitalization and days of disability occurring after the valuation date. This liability is sometimes referred to as a liability for unaccrued benefits. A claim reserve, which represents an estimate of the unaccrued claim payments expected to be made (which may or may not be discounted with interest), must be established. *SSAP No. 54R—Individual and Group Accident and Health Contracts defines this as a Claim Reserve differentiated from the Claim Liability in paragraph 2 above.*

5. When an insurer has not been informed, on or before the valuation date, concerning a claim that has been incurred on or prior to the valuation date, the claim is considered an "unreported claim" for annual statement purposes.

6. "Date of disablement" is the earliest date the insured is considered as being disabled under the definition of disability in the contract, based on a doctor's evaluation or other evidence. Normally this date will coincide with the start of any elimination period.

7. "Elimination period" is a specified number of days, weeks, or months starting at the beginning of each period of loss, during which no benefits are payable.

© 1999-2023 National Association of Insurance Commissioners

8. "Gross premium" is the amount of premium charged by the insurer. It includes the net premium (based on claim-cost) for the risk, together with any loading for expenses, profit or contingencies.

9. The term "group long-term disability income" includes group contracts providing group disability income coverage with a maximum benefit duration longer than two years. Group long-term disability income contracts are based on a group pricing structure. The term "group long-term disability" does not include group short-term disability (coverage with benefit periods of two years or less in maximum duration). It also does not include voluntary group disability income coverage that is priced on an individual risk structure and generally sold in the workplace.

10. The term "group insurance" includes blanket insurance and franchise insurance and any other forms of group insurance.

11. "Level premium" is a premium calculated to remain unchanged throughout either the lifetime of the policy or for some shorter projected period of years. The premium need not be guaranteed; in which case, although it is calculated to remain level, it may be changed if any of the assumptions on which it was based are revised at a later time. Generally, the annual claim costs are expected to increase each year and the insurer, instead of charging premiums that correspondingly increase each year, charges a premium calculated to remain level for a period of years or for the lifetime of the contract. In this case the benefit portion of the premium is more than needed to provide for the cost of benefits during the earlier years of the policy and less than the actual cost in the later years. The building of a prospective contract reserve is a natural result of level premiums.

12. "Long-term care insurance" is any insurance policy or rider advertised, marketed, offered or designed to provide coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis; for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Such term also includes a policy or rider which provides for payment of benefits based upon cognitive impairment or the loss of functional capacity. Long-term care insurance may be issued by insurers; fraternal benefit societies; nonprofit health, hospital, and medical service corporations; prepaid health plans; health maintenance organizations or any similar organization to the extent they are otherwise authorized to issue life or health insurance. Long-term care insurance shall not include any insurance policy which is offered primarily to provide basic Medicare supplement coverage, basic hospital expense coverage, basic medical-surgical expense coverage, hospital confinement indemnity coverage, major medical expense coverage, disability income or related asset-protection coverage, accident only coverage, specified disease or specified accident coverage, or limited benefit health coverage.

13. "Modal Premium" refers to the premium paid on a contract based on a premium term which could be annual, semi-annual, quarterly, monthly, or weekly. Thus if the annual premium is $100 and if, instead, monthly premiums of $9 are paid then the modal premium is $9.

14. Normally the terminal reserve is a positive value. However, if the values of the benefits are decreasing with advancing age or duration it could be a negative value, called a "negative reserve."

15. "Preliminary Term Reserve Method" is a method of valuation whereby the valuation net premium for each year falling within the preliminary term period is exactly sufficient to cover the expected incurred claims of that year, so that the terminal reserves will be zero at the end of the year. As of the end of the preliminary term period, a new constant valuation net premium (or stream of changing valuation premiums) becomes applicable such that the present value of all such premiums is equal to the present value of all claims expected to be incurred following the end of the preliminary term period.

16. "Present value of amounts not yet due on claims" represents the reserve for "claims unaccrued" (see definition), which may be discounted at interest.

© 1999-2023 National Association of Insurance Commissioners

17. "Rating block" means a grouping of contracts determined by the valuation actuary based on common characteristics, such as a policy form or forms having similar benefit designs.

18. The term "reserve" is used to include all items of benefit liability, whether in the nature of incurred claim liability or in the nature of contract liability relating to future periods of coverage, and whether the liability is accrued or unaccrued. An insurer under its contracts promises benefits which result in:

a. Claims that have been incurred, that is, for which the insurer has become obligated to make payment, on or prior to the valuation date. On these claims, payments expected to be made after the valuation date for accrued and unaccrued benefits are liabilities of the insurer which shall be provided for by establishing claim reserves; or

b. Claims that are expected to be incurred after the valuation date. Any present liability of the insurer for these future claims shall be provided for by the establishment of contract reserves and unearned premium reserves.

19. "Terminal reserve" is the reserve at the end of a contract year and is defined as the present value of benefits expected to be incurred after that contract year minus the present value of future valuation net premiums.

20. "Unearned premium reserve" values that portion of the premium paid or due to the insurer which is applicable to the period of coverage extending beyond the valuation date. Thus if an annual premium of $120 was paid on November 1, $20 would be earned as of December 31 and the remaining $100 would be unearned. The unearned premium reserve could be on a gross basis as in this example or on a valuation net premium basis.

21. "Valuation net modal premium" is the modal fraction of the valuation net annual premium that corresponds to the gross modal premium in effect on any contract to which contract reserves apply. Thus if the mode of payment in effect is quarterly, the valuation net modal premium is the quarterly equivalent of the valuation net annual premium.

22. "Worksite Disability Policies" refers to individual short-term disability policies that are sold at the worksite through employer-sponsored enrollment, cover normal pregnancy, and that have benefit periods up to 24 months. Worksite disability policies do not include personal disability policies sold to an individual and not associated with employer-sponsored enrollment. They also do not include business overhead expense, disability buyout or key person policies, in whatever manner those policies are sold.

Scope

23. These standards apply to all individual and group health and accident and sickness insurance coverages, including single premium credit disability insurance. All other credit insurance is not subject to Appendix A-010.

24. When an insurer determines that adequacy of its health insurance reserves requires reserves in excess of the minimum standards specified herein, such increased reserves shall be held and shall be considered the minimum reserves for that insurer.

25. With respect to any block of contracts, or with respect to an insurer's health business as a whole, a prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date. Such a gross premium valuation will take into account, for contracts in force, in a claims status, or in a continuation of benefits status on the valuation date, the present value as of the valuation date of: all expected benefits unpaid, all expected expenses unpaid, and all unearned or expected premiums, adjusted for future premium increases reasonably expected to be put into effect.

© 1999-2023 National Association of Insurance Commissioners

26. Such a gross premium valuation is to be performed whenever a significant doubt exists as to reserve adequacy with respect to any major block of contracts, or with respect to the insurer's health business as a whole. In the event inadequacy is found to exist, immediate loss recognition shall be made and the reserves restored to adequacy. Adequate reserves (inclusive of claim, premium and contract reserves, if any) shall be held with respect to all contracts, regardless of whether contract reserves are required for such contracts under these standards.

27. Whenever minimum reserves, as defined in this Appendix, exceed reserve requirements as determined by a prospective gross premium valuation, such minimum reserves remain the minimum requirement under these standards.

28. The following paragraphs set forth minimum standards for three categories of health insurance reserves:

a. Claim Reserves;

b. Premium Reserves;

c. Contract Reserves.

29. Adequacy of an insurer's health insurance reserves is to be determined on the basis of all three categories combined. However, these standards emphasize the importance of determining appropriate reserves for each of the three categories separately.

Claim Reserves

30. General:

a. Claim reserves are required for all incurred but unpaid claims on all health insurance policies. For contracts with an elimination period, the duration of disablement shall be measured as dating from the time that benefits would have begun to accrue had there been no elimination period.

b. Appropriate claim expense reserves are required with respect to the estimated expense of settlement of all incurred but unpaid claims.

c. All such reserves for prior valuation years are to be tested for adequacy and reasonableness along the lines of claim runoff schedules in accordance with the statutory financial statement including consideration of any residual unpaid liability.

d. For claim reserves on policies that require contract reserves, the claim incurral date is to be considered the "issue date" for determining the table and interest rate to be used for claim reserves.

e. The maximum interest rate for claim reserves is specified in Exhibit 1.

f. With respect to claim reserves for policies issued before the operative date[1] of the Valuation Manual, the requirements for claim reserves on claims incurred after that date shall be as described in this Appendix A-010 based on the incurred date of the claim.

[1] The historical application of new requirements for claim reserves has been the incurred date of the claim. The 2009 changes to the Standard Valuation Law apply new requirements provided through the *Valuation Manual* only to policies issued after the effective date of the changes and the *Valuation Manual*. This addition makes new requirements for claim reserves applicable based on the incurred date irrespective of the policy issue date – i.e. consistent with historical practice.

© 1999-2023 National Association of Insurance Commissioners

Minimum Morbidity Standards for Individual Disability Income Claim Reserves:

31. For individual disability income claims incurred January 1, 2001, to January 1, 2007, each insurer may elect which of the following to use as the minimum morbidity standard for claim reserves:

a. The minimum morbidity standard in effect for claim reserves as of the date the claim was incurred, or

b. The standards as defined in paragraph 32, which applies on or after January 1, 2017, shall be applied to all open claims unless the company chooses on or after January 1, 2017, to apply the standards in paragraph 31.c. Once an insurer elects to calculate reserves for all open claims on the newer standards defined in paragraph 32 or paragraph 31.c., all future valuations must be on that basis.

c. The standards as defined in paragraph 33 through paragraph 36, which apply on or after January 1, 2017, shall be applied to all open claims. Once an insurer elects to calculate reserves for all open claims on the standards defined in paragraph 33 through paragraph 36, all future valuations must be on that basis.

32. For individual disability income claims incurred on or after January 1, 2007, and prior to the effective date for the company as determined in paragraph 35, the minimum standards with respect to morbidity are those specified in Exhibit 1, except that, at the option of the insurer, assumptions regarding claim termination rates for the period less than two (2) years from the date of disablement may be based on the insurer's experience, if such experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

33. For claims incurred on or after January 1, 2020, the minimum standards are those specified in Exhibit 1, including (as derived in accordance with *Actuarial Guideline L—2013 Individual Disability Income Valuation Table Actuarial Guideline*):

a. The use of the insurer's own experience;

b. An adjustment to include an own experience measurement margin; and

c. The application of a credibility factor.

34. In determining the minimum reserves in accordance with paragraph 33, the provisions in paragraph 33.a., 33.b. and 33.c. are not required if:

a. The insurer meets the Own Experience Measurement Exemption provided in Actuarial Guideline L; or

b. For worksite disability policies with benefit periods of up to two years, at the option of the insurer, disabled life reserves may be based on the insurer's experience, if such experience is considered credible, or upon other assumptions and methods designed to place a sound value on the liabilities.

35. An insurer may begin to use the minimum reserve standards in paragraph 33 at a date earlier than January 1, 2020, but not prior to January 1, 2017.

© 1999-2023 National Association of Insurance Commissioners

36. An insurer may, within three years[2] of January 1, 2020 (or such earlier date it elects under paragraph 35), apply the new standards in paragraph 33 to all open claims incurred prior to the effective date of paragraph 33 for the insurer. Once an insurer elects to calculate reserves for all open claims based on paragraph 33, all future valuations must be on that basis.

Minimum Morbidity Standards for Group Disability Income Claim Reserves

37. For group disability income claims incurred from January 1, 2001, through December 31, 2006, with a duration from date of disablement of more than two (2) years but less than five (5) years, reserves may be based on the insurer's experience if such experience is considered credible and for which the insurer maintains underwriting and claim administration control.

38. For group disability income claims incurred prior to January 1, 2007, each insurer may elect to use as the minimum morbidity standard for claim reserves:

a. The group disability income claims minimum morbidity standard in effect for claim reserves as of the date the claim was incurred; or

b. After the effective date selected by the company in paragraphs 41 and 42, the standards as defined in paragraphs 41 and 42 applied to all open group long-term disability income claims, or

c. The standards as defined in paragraphs 41 and 42 applied to all open group disability income claims.

Once an insurer elects to calculate reserves for all open claims on a more recent standard, then all future valuations must be on that basis.

39. For group long-term disability income claims incurred on or after January 1, 2007, but before the effective date selected by the company in paragraph 42, and group disability income claims incurred on or after January 1, 2007, that are not group long-term disability income, the minimum standards with respect to morbidity are those specified in Exhibit 1, except that, at the option of the insurer:

a. Assumptions regarding claim termination rates for the period less than two (2) years from the date of disablement may be based on the insurer's experience, if the experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

b. Assumptions regarding claim termination rates for the period two (2) or more years but less than five (5) years from the date of disablement may, with the approval of the commissioner, be based on the insurer's experience if such experience is considered credible and for which the insurer maintains underwriting and claim administration control.

c. With respect to claims termination standards in paragraphs 37 and 39.b., for experience to be considered credible for purposes of this appendix, the company should be able to provide claim termination patterns over no more than six (6) years reflecting at least

[2] The 2013 Table requires additional information that was not required to determine claim reserves under prior tables. The three year period is a period after the date a company starts using the 2013 Table for new claims to allow the company to update its claims data to use the 2013 Table for claims incurred prior to that date. For example, if a company begins to use the 2013 Table on January 1, 2020, for claims incurred after that date, it does not need to immediately convert all existing claims. This provision allows for the run-off of existing claims until December 31, 2022. As of that date (or an earlier date), the company must either continue use of the existing tables applicable to these claims or may convert all still open claims to the 2013 Table (adding the necessary data only for the remaining open claims).

© 1999-2023 National Association of Insurance Commissioners

5,000 claims terminations during the third through fifth claims durations on reasonably similar applicable policy forms. The request for such approval of a plan of modification to the reserve basis must be in writing and must include:

i. An analysis of the credibility of the experience;

ii. A description of how all of the insurer's experience is proposed to be used in setting reserves;

iii. A description and quantification of the margins to be included;

iv. A summary of the financial impact that the proposed plan of modification would have had on the insurer's last filed annual statement;

v. A copy of the approval of the proposed plan of modification by the commissioner of the state of domicile; and

vi. Any other information deemed necessary by the commissioner.

d. For claim reserves to reflect "sound values" and/or reasonable margins, reserve tables based on credible experience should be adjusted regularly to maintain reasonable margins.

40. On or after October 1, 2014, with respect to incurred claims subject to paragraph 39, each insurer may elect which of the following to use as the minimum morbidity standard for group long-term disability income claim reserves:

a. The minimum morbidity standard in effect for claim reserves as of the date the claim was incurred, or

b. The standards as defined in paragraph 41, applied to all open claims.

Once an insurer elects to calculate reserves for all open claims on a more recent standard, then all future valuations must be on that basis.

41. For group long-term disability income claims incurred on or after January 1, 2017, or the earlier date that is chosen for optional early adoption, but not before October 1, 2014, the minimum standards with respect to morbidity shall be based on the 2012 GLTD termination table with considerations of:

a. The insurer's own experience computed in accordance with Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual*,

b. An adjustment to include an own experience measurement margin derived in accordance with Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual*, and

c. A credibility factor derived in accordance with Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual*.

42. An insurer may begin to use the minimum reserve standards in paragraph 41 at a date earlier than January 1, 2017, but not prior to October 1, 2014. An insurer may apply the standards in paragraph 41 to all open claims incurred prior to the effective date of paragraph 41 for the insurer. Once an insurer elects to calculate reserves for all open claims based on paragraph 41, all future valuations must be on that basis. This option with respect to Exhibit 1, paragraph 1.a.iii.(a) and paragraph 1.a.iii.(b) may be selected only if

© 1999-2023 National Association of Insurance Commissioners

the insurer maintains adequate claim records for claims incurred to use the 2013 Individual Disability Income (IDI) Valuation Table appropriately.

Minimum Morbidity Standards for Other Health Insurance Claim Reserves

43. The reserve shall be based on the insurer's experience, if such experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

44. Claim Reserve Methods Generally – A generally accepted actuarial reserving method or other reasonable method, or a combination of methods may be used to estimate all claim liabilities. The methods used for estimating liabilities generally may be aggregate methods, or various reserve items may be separately valued. Approximations based on groupings and averages may also be employed. Adequacy of the claim reserves, however, shall be determined in the aggregate.

Premium Reserves

45. General:

a. Except as noted in paragraph 46.b., unearned premium reserves are required for all contracts with respect to the period of coverage for which premiums, other than premiums paid in advance, have been paid beyond the date of valuation.

b. Single premium credit disability insurance individual policies and group certificates are excluded from unearned premium reserve requirements of paragraphs 45-47.

c. If premiums due and unpaid are carried as an asset, such premiums must be treated as premiums in force, subject to unearned premium reserve determination. The value of unpaid commissions, premium taxes, and the cost of collection associated with due and unpaid premiums must be carried as an offsetting liability.

d. The gross premiums paid in advance for a period of coverage commencing after the next premium due date which follows the date of valuation may be appropriately discounted to the valuation date and shall be held as a separate liability.

46. Minimum Standards for Unearned Premium Reserves:

a. The minimum unearned premium reserve with respect to any contract is the pro rata unearned modal premium that applies to the premium period beyond the valuation date, with such premium determined on the basis of:

i. The valuation net modal premium on the contract reserve basis applying to the contract; or;

ii. The gross modal premium for the contract if no contract reserve applies.

b. However, in no event may the sum of the unearned premium and contract reserves for all contracts of the insurer subject to contract reserve requirements be less than the gross modal unearned premium reserve on all such contracts, as of the date of valuation. Such reserve shall never be less than the expected claims for the period beyond the valuation date represented by such unearned premium reserve, to the extent not provided for elsewhere.

47. Premium Reserve Methods Generally – The insurer may employ suitable approximations and estimates; including, but not limited to groupings, averages and aggregate estimation; in computing premium reserves. Such approximations or estimates shall be tested periodically to determine their continuing adequacy and reliability.

© 1999-2023 National Association of Insurance Commissioners

Contract Reserves

48. General:

    a. Contract reserves are required, unless otherwise specified in paragraph 48.b. for:

        i. All individual and group contracts with which level premiums are used; or

        ii. All individual and group contracts with respect to which, due to the gross premium pricing structure at issue, the value of the future benefits at any time exceeds the value of any appropriate future valuation net premiums at that time. This evaluation may be applied on a rating block basis if the total premiums for the block were developed to support the total risk assumed and expected expenses for the block each year, and a qualified actuary certifies the premium development. The actuary should state in the certification that premiums for the rating block were developed such that each year's premium was intended to cover that year's costs without any prefunding. If the premium is also intended to recover costs for any prior years, the actuary should also disclose the reasons for and magnitude of such recovery. The values specified in this paragraph shall be determined on the basis specified in paragraph 49.

        iii. If rates are determined such that each year's premium is intended to cover that year's cost, the rating block approach results in no contract reserves unless required by paragraph 51. If rates are designed to prefund future years' costs, contract reserves will be required.

    b. Contracts not requiring a contract reserve are contracts which cannot be continued after one year from issue and contracts already in force on January 1, 2001, for which no contract reserve was required under SSAP No. 54R, paragraph 42.

    c. The contract reserve is in addition to claim reserves and premium reserves.

    d. The methods and procedures for contract reserves shall be consistent with those for claim reserves for any contract, or else appropriate adjustment must be made when necessary to assure provision for the aggregate liability. The definition of the date of incurral must be the same in both determinations.

    e. The total contract reserve established shall incorporate provisions for moderately adverse deviations.

49. Minimum Standards for Contract Reserves:

    a. Basis:

        i. Morbidity or other Contingency. Minimum standards with respect to morbidity are those set forth in Exhibit 1.

            (a) Valuation net premiums used under each contract must have a structure consistent with the gross premium structure at issue of the contract as this relates to advancing age of insured, contract duration and period for which gross premiums have been calculated.

            (b) Except as provided in paragraph 48.a.ii., if for a policy form there is no gross premium variation by age, the valuation net premiums will nonetheless vary based on age at issue for each contract since at issue the

present value of valuation net premiums for a contract must equal the present value of tabular claim costs.

(c) Contracts for which tabular morbidity standards are not specified in Exhibit 1 shall be valued using tables established for reserve purposes by a qualified actuary. The morbidity tables shall contain a pattern of incurred claims cost that reflects the underlying morbidity and shall not be constructed for the primary purpose of minimizing reserves.

(d) Effective January 1, 2007, when determining the morbidity assumptions, the actuary shall use assumptions that represent the best estimate of anticipated future experience, but shall not incorporate any expectation of future morbidity improvement. Morbidity improvement is a change, in the combined effect of claim frequency and the present value of future expected claim payments given that a claim has occurred, from the current morbidity tables or experience that will result in a reduction to reserves. It is not the intent of this provision to restrict the ability of the actuary to reflect the morbidity impact for a specific known event that has occurred and that is able to be evaluated and quantified.

(e) Business in force prior to January 1, 2007, may be permitted to retain the original reserve basis, which may not meet the provisions of (d) above.

ii. Interest. The maximum interest rate is specified in Exhibit 1.

iii. Termination rates. Termination rates used in the computation of reserves shall be on the basis of a mortality table as specified in Exhibit 1 except as noted in the following paragraphs.

(a) Under contracts for which premium rates are not guaranteed, and where the effects of insurer underwriting are specifically used by policy duration in the valuation morbidity standard or for return of premium or other deferred cash benefits, total termination rates may be used at ages and durations where these exceed specified mortality table rates, but not in excess of the lesser of:

(1) Eighty percent of the total termination rate used in the calculation of the gross premiums, or

(2) Eight percent.

(b) For long-term care individual policies or group certificates, issued within the period January 1, 2001, to December 31, 2006, the contract reserve may be established on a basis of separate:

(1) Mortality (as specified in Exhibit 1) and

(2) Terminations other than mortality, where the terminations are not to exceed:

(i) For policy years one through four (4), the lesser of eighty percent (80%) of the voluntary lapse rate used in the calculation of gross premiums and eight percent (8%);

© 1999-2023 National Association of Insurance Commissioners

(ii) For policy years five (5) and later, the lesser of one hundred percent (100%) of the voluntary lapse rate used in the calculation of gross premiums and four percent (4%).

(c) For long-term care individual policies or group certificates issued on or after January 1, 2007, the contract reserve shall be established on the basis of:

(1) Mortality (as specified in Exhibit 1); and

(2) Terminations other than mortality, where the terminations are not to exceed:

(i) For policy year one, the lesser of eighty percent (80%) of the voluntary lapse rate used in the calculation of gross premiums and six percent (6%).

(ii) For policy years two (2) through four (4), the lesser of eighty percent (80%) of the voluntary lapse rate used in the calculation of gross premiums and four percent (4%).

(iii) For policy years five (5) and later, the lesser of one hundred percent (100%) of the voluntary lapse rate used in the calculation of gross premiums and two percent (2%), except certificates under policies issued to one or more employers or labor organizations, or to a trust or to the trustees of a fund established by one or more employers or labor organizations, or a combination thereof, for employees or former employees or a combination thereof, or for members or former members or a combination thereof, of a labor organization where the 2% shall be three percent (3%).

(d) Where a morbidity standard specified in Exhibit 1 is on an aggregate basis, such morbidity standard may be adjusted to reflect the effect of insurer underwriting by policy duration. The adjustments must be appropriate to the underwriting.

b. Reserve Method:

i. For insurance except long-term care and return of premium or other deferred cash benefits, the minimum reserve is the reserve calculated on the two-year full preliminary term method; that is, under which the terminal reserve is zero at the first and also the second contract anniversary.

ii. For long-term care insurance, the minimum reserve is the reserve calculated on the one-year full preliminary term method.

iii. (a) For return of premium or other deferred cash benefits, the minimum reserve is the reserve calculated as follows:

© 1999-2023 National Association of Insurance Commissioners

(1) On the one-year preliminary term method if the benefits are provided at any time before the twentieth anniversary;

(2) On the two-year preliminary term method if the benefits are only provided on or after the twentieth anniversary.

(b) The preliminary term method may be applied only in relation to the date of issue of a contract. Reserve adjustments introduced later, as a result of rate increases, revisions in assumptions (e.g., projected inflation rates) or for other reasons, are to be applied immediately as of the effective date of adoption of the adjusted basis.

c. Negative Reserves. Negative reserves on any benefit may be offset against positive reserves for other benefits in the same contract, but the total contract reserve with respect to all benefits combined may not be less than zero.

d. Nonforfeiture Benefits for Long-Term Care Insurance. The contract reserve on a policy basis shall not be less than the net single premium for the nonforfeiture benefits at the appropriate policy duration, where the net single premium is computed according to the above specifications.

50. Alternative Valuation Methods and Assumptions Generally – Provided the contract reserve on all contracts to which an alternative method or basis is applied is not less in the aggregate than the amount determined according to the applicable standards specified above; an insurer may use any reasonable assumptions as to interest rates, termination and/or mortality rates, and rates of morbidity or other contingency. Also, subject to the preceding condition, the insurer may employ methods other than the methods stated above in determining a sound value of its liabilities under such contracts, including but not limited to the following: the net level premium method; the one-year full preliminary term method; prospective valuation on the basis of actual gross premiums with reasonable allowance for future expenses; the use of approximations such as those involving age groupings, groupings of several years of issue, average amounts of indemnity, grouping of similar contract forms; the computation of the reserve for one contract benefit as a percentage of, or by other relation to, the aggregate contract reserves exclusive of the benefit or benefits so valued; and the use of a composite annual claim cost for all or any combination of the benefits included in the contracts valued.

51. Tests For Adequacy and Reasonableness of Contract Reserves:

a. Annually, an appropriate review shall be made of the insurer's prospective contract liabilities on contracts valued by tabular reserves, to determine the continuing adequacy and reasonableness of the tabular reserves giving consideration to future gross premiums. The insurer shall make appropriate increments to such tabular reserves if such tests indicate that the basis of such reserves is no longer adequate subject, however, to the minimum standards in paragraph 49.

b. In the event a company has a contract or a group of related similar contracts, for which future gross premiums will be restricted by contract, insurance department regulations, or for other reasons, such that the future gross premiums reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims, the company shall establish contract reserves for such shortfall in the aggregate.

Reinsurance

52. Increases to, or credits against reserves carried, arising because of reinsurance assumed or reinsurance ceded, must be determined in a manner consistent with these minimum reserve standards and with all applicable provisions of the reinsurance contracts which affect the insurer's liabilities.

© 1999-2023 National Association of Insurance Commissioners

Exhibit 1 Specific Standards For Morbidity, Interest And Mortality

Morbidity

1. Minimum morbidity standards for valuation of specified individual contract health insurance benefits are as follows:

a. Disability Income Benefits Due to Accident or Sickness

i. Contract Reserves for Contracts issued before January 1, 2020:

(a) The 1985 Commissioners Individual Disability Tables A (85CIDA); or

(b) The 1985 Commissioners Individual Disability Tables B (85CIDB).

(c) Each insurer shall elect, with respect to all individual contracts issued in any one statement year, whether it will use Tables A or Tables B as the minimum standard.

ii. Contract Reserves for Contracts issued on or after January 1, 2020:

The 2013 IDI Valuation Table with modifiers as described in Actuarial Guideline L. An insurer may begin to use the 2013 IDI Valuation Table with modifiers at a date earlier than January 1, 2020, but not prior to January 1, 2017.

Within three years of 2020, or the earlier date that an insurer begins to use the 2013 IDI Valuation Table, the insurer may elect to apply that morbidity standard for all policies issued subject to other valuation tables. This may be done if the following conditions are met:

(a) The insurer must apply the morbidity standard to all inforce policies and incurred claims;

(b) The insurer elects or has elected to apply the 2013 IDI Valuation Table to all claims incurred, regardless of incurred date;

(c) The insurer maintains adequate policy records on policies issued prior to 2020 that allow the insurer to apply the 2013 IDI Valuation Table appropriately; and

(d) Once an insurer elects to calculate reserves for all inforce policies based on the 2013 IDI Valuation Table morbidity standard, all future valuations must be on that basis

iii. Claim Reserves:

(a) For claims incurred from January 1, 2001, through December 31, 2001:

Each insurer may elect which of the following to use as the minimum standard for claims incurred prior to January 1, 2002:

(1) The minimum morbidity standard in effect for contract reserves on currently issued contracts, as of the date the claim is incurred, or

(2) The standard as defined in Exhibit 1, paragraph 1.a.iii.(b) on or after January 1, 2002, applied to all open claims, or

(3) The standard as defined in Exhibit 1, paragraph 1.a.iii.(c) on or after January 1, 2017, applied to all open non-worksite claims, provided the insurer maintains adequate claim records to allow the insurer to apply the standard defined in Exhibit 1, paragraph 1.a.iii.(c). This option is available whether claims incurred prior to January 1, 2002, were determined under Exhibit 1, paragraph 1.a.iii.(a) or paragraph 1.a.iii.(b).

(4) Once an insurer elects to calculate reserves for all open claims on the standard defined in Exhibit 1, in either paragraph 1.a.iii.(b) or paragraph 1.a.iii.(c), all future valuations must be on that basis.

(b) For claims incurred on or after January 1, 2002, and prior to January 1, 2020:

The 1985 Commissioners Individual Disability Table A (85CIDA) with claim termination rates multiplied by the following adjustment factors:

Duration	**Adjustment Factor**	**Adjusted Termination Rates***
Week 1	0.366	0.04831

6 and later	1.000	**

* The adjusted termination rates derived from the application of the adjustment factors to the DTS Valuation Table termination rates shown in exhibits 3a, 3b, 3c, 4, and 5 (*Transactions of the Society of Actuaries* (TSA) XXXVII, pp. 457-463) is displayed. The adjustment factors for age, elimination period, class, sex, and cause displayed in exhibits 3a, 3b, 3c, and 4 should be applied to the adjusted termination rates shown in this table.

** Applicable DTS Valuation Table duration rate from exhibits 3c and 4 (TSA XXXVII, pp. 462-463).

The 85CIDA table so adjusted for the computation of claim reserves shall be known as 85CIDC (The 1985 Commissioners Individual Disability Table C).

(c) For claims incurred on or after 2020, the 2013 IDI Valuation Table with modifiers and adjustments for company experience as prescribed in Actuarial Guideline L, except for worksite disability policies with benefit periods of 24 months or less.

(d) For worksite disability policies, claim reserves may be calculated using claim run-out analysis or claim triangles, or other methods that place a sound value on the reserves that are appropriate for the business and risks involved.

b. Hospital Benefits, Surgical Benefits and Maternity Benefits (Scheduled benefits or fixed time period benefits only)

i. Contract Reserves:

The 1974 Medical Expense Tables, Table A, Transactions of the Society of Actuaries, Volume XXX, pg. 63. Refer to the paper (in the same volume, pg. 9) to which this table is appended, including its discussions, for methods of adjustment for benefits not directly valued in Table A: “Development of the 1974 Medical Expense Benefits,” Houghton and Wolf.

© 1999-2023 National Association of Insurance Commissioners

ii. Claim Reserves:

No specific standard. See paragraph 1.f. of this Exhibit.

c. Cancer Expense Benefits

i. Contract Reserves:

(a) Contracts issued on or after January 1, 1986, and before January 1, 2019: The 1985 NAIC Cancer Claim Cost Tables (1985 CCCT).

(b) Contracts issued on or after January 1, 2019:

(i) For first occurrence and hospitalization benefits: The 2016 Cancer Claim Cost Valuation Tables (2016 CCCVT): *https://content.naic.org/sites/default/files/actuary-01-naic-2017-cancer-claim-cost-valuation-table.xlsx*.

(ii) For all other benefits: Assumptions based on company experience, relevant industry experience and actuarial judgement. Such assumptions should be appropriate for valuation which considers margin for adverse experience.

(iii) For contracts issued on or after January 1, 2018, and before January 1, 2019, a company may elect to use morbidity basis described in paragraphs (i.) and (ii). Once a company begins use of the 2016 CCCVT for new issues, it may not revert to the 1985 CCCT.

ii. Claim Reserves:

No specific standard. See paragraph 1.f. of this Exhibit.

d. Accidental Death Benefits

i. Contract Reserves:

The 1959 Accidental Death Benefits Table.

ii. Claim Reserves:

Actual amount incurred.

e. Single Premium Credit Disability

i. Contract Reserves:

(a) For contracts issued on or after January 1, 2002:

(i) For plans having less than a thirty-day elimination period, the 1985 Commissioners Individual Disability Table A (85CIDA) with claim incidence rates increased by twelve percent (12%).

(ii) For plans having a thirty-day and greater elimination period, the 85CIDA for a fourteen-day elimination period with the adjustment in Item (i).

© 1999-2023 National Association of Insurance Commissioners

(b) For contracts issued prior to January 1, 2002, each insurer may elect either Item (i) or (ii) to use as the minimum standard. Once an insurer elects to calculate reserves for all contracts on the standard defined in Item (a), all future valuations must be on that basis.

(i) The minimum morbidity standard in effect for contract reserves on currently issued contracts, as of the date the contract was issued, or

(ii) The standard as defined in Item (a), applied to all contracts.

ii. Claim Reserves:

Claim reserves are to be determined as provided in paragraph 44.

f. Other Individual Contract Benefits

i. Contract Reserves:

For all other individual contract benefits, morbidity assumptions are to be determined as provided in the reserve standards.

ii. Claim Reserves:

For all benefits other than disability, claim reserves are to be determined as provided in the standards.

2. Minimum morbidity standards for valuation of specified group contract health insurance benefits are as follows:

a. Disability Income Benefits Due to Accident or Sickness where this Appendix references this Exhibit; otherwise, Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual*.

i. Contract Reserves:

The 1987 Commissioners Group Disability Income Table (87CGDT).

ii. Claim Reserves:

The 1987 Commissioners Group Disability Income Table (87CGDT);

b. Single Premium Credit Disability

i. Contract Reserves:

(a) For contracts issued on or after January 1, 2002:

(i) For plans having less than a thirty-day elimination period, the 1985 Commissioners Individual Disability Table A (85CIDA) with claim incidence rates increased by twelve percent (12%).

(ii) For plans having a thirty-day and greater elimination period, the 85CIDA for a fourteen-day elimination period with the adjustment in item (i).

© 1999-2023 National Association of Insurance Commissioners

ii. For contracts issued prior to January 1, 2002, each insurer may elect either Item (a) or (b) to use as the minimum standard. Once an insurer elects to calculate reserves for all contracts on the standard defined in Item (a), all future valuations must be on that basis.

(a) The minimum morbidity standard in effect for contract reserves on currently issued contracts, as of the date the contract was issued, or

(b) The standard as defined in Item (a), applied to all contracts.

iii. Claim Reserves:

Claim reserves are to be determined as provided in paragraph 44.

c. Other Group Contract Benefits

i. Contract Reserves:

For all other group contract benefits, morbidity assumptions are to be determined as provided in the reserve standards.

ii. Claim Reserves:

For all benefits other than disability, claim reserves are to be determined as provided in the standards.

Interest

3. For contract reserves the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of whole life insurance issued on the same date as the health insurance contract.

4. For claim reserves on policies that require contract reserves, the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of whole life insurance issued on the same date as the claim incurral date.

5. For claim reserves on policies not requiring contract reserves, the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of single premium immediate annuities issued on the same date as the claim incurral date, reduced by 100 basis points.

Mortality

6. a. Unless paragraph 7 or paragraph 8 of this Exhibit 1 applies, the mortality basis used for all policies except long-term care individual policies and group certificates issued before January 1, 2001, shall be according to a table (but without use of selection factors) permitted by law for the valuation of whole life insurance issued on the same date as the health insurance contract.

b. For long-term care insurance individual policies or group certificates issued from January 1, 2001, through December 31, 2006, the mortality basis used shall be the 1983 Group Annuity Mortality Table without projection. For long-term care insurance individual policies or group certificates issued on or after January 1, 2007, the mortality basis used shall be the 1994 Group Annuity Mortality Static Table.

© 1999-2023 National Association of Insurance Commissioners

7. Other mortality tables adopted by the NAIC and promulgated by the commissioner may be used in the calculation of the minimum reserves if appropriate for the type of benefits and if approved by the commissioner. The request for approval shall include the proposed mortality table and the reason that the standard specified in paragraph 6.a. of this Exhibit 1 is inappropriate.

8. For single premium credit insurance using the 85CIDA table, no separate mortality shall be assumed.

© 1999-2023 National Association of Insurance Commissioners

Exhibit 2 Reserves for Waiver of Premium (Supplementary explanatory material)

1. Waiver of premium reserves involve several special considerations. First, the disability valuation tables promulgated by the NAIC are based on exposures that include contracts on premium waiver as in-force contracts. Hence, contract reserves based on these tables are NOT reserves on "active lives" but rather reserves on contracts "in force." This is true for the 1964 CDT and for both the 1985 CIDA and CIDB tables.

2. Accordingly, tabular reserves using any of these tables should value reserves on the following basis:

   a. Claim reserves should include reserves for premiums expected to be waived, valuing as a minimum the valuation net premium being waived.

   b. Premium reserves should include contracts on premium waiver as in-force contracts, valuing as a minimum the unearned modal valuation net premium being waived.

   c. Contract reserves should include recognition of the waiver of premium benefit in addition to other contract benefits provided for, valuing as a minimum the valuation net premium to be waived.

If an insurer is, instead, valuing reserves on what is truly an active life table, or if a specific valuation table is not being used but the insurer's gross premiums are calculated on a basis that includes in the projected exposure only those contracts for which premiums are being paid, then it may not be necessary to provide specifically for waiver of premium reserves. Any insurer using such a true "active life" basis should carefully consider, however, whether or not additional liability should be recognized on account of premiums waived during periods of disability or during claim continuation.

Appendix A-200

Separate Accounts Funding Guaranteed Minimum Benefits Under Group Contracts

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 52—Deposit-Type Contracts
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)
Actuarial Opinion and Memorandum Regulation (#822)

Scope

1. This appendix applies to a group life insurance contract providing survivor income benefits, a group annuity contract, or a funding agreement if the contract is a group contract that utilizes a separate account and provides guaranteed minimum benefits. This appendix shall not apply to modified guaranteed annuities or modified guaranteed life insurance or variable annuity or variable life insurance subject to appendices A-255, A-588, A-250, and A-270 or equity index products but this appendix shall apply to index contracts as defined in paragraph 18.

Definitions

2. "Account assets" means separate account assets plus any assets held in the general account or a supplemental account to meet the asset maintenance requirements.

3. "Account contracts" means the contracts providing guaranteed minimum benefits or other benefits and funded by a separate account and, if applicable, funded in part by the general account or a supplemental account to meet the asset maintenance requirements.

4. "Actuarial opinion" means the valuation actuary's opinion covering reserves for contract liabilities under account contracts that is required to be submitted to the commissioner.

5. "Actuarial memorandum" means the memorandum of the valuation actuary that supports the actuarial opinion covering reserves for contract liabilities under account contracts.

6. "Appointed actuary" means the qualified actuary appointed or retained either directly by or by the authority of the board of directors through an executive officer of the company to prepare the annual statement of actuarial opinion for the company as a whole.

7. "Asset maintenance requirements" means the requirement to maintain assets to fund contract benefits in accordance with paragraphs 30-45.

8. "Book value contract" means a fixed accumulation contract (GIC), purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer, that does not participate in the investment experience of a separate account, with a fixed interest rate guarantee, including a guarantee based on an external index, and that is supported by a separate account, the plan of operations of which provides that the separate account's assets are valued as if the assets were held in the insurance company's general account.

9. "Class of contracts" means the set of all contracts to which a given plan of operations pertains.

© 1999-2023 National Association of Insurance Commissioners

10. “Contract” means a group life insurance policy, group annuity contract, or funding agreement that is within the scope of this appendix as set forth in paragraph 1.

11. “Contract benefits” means the amounts obligated to be paid by the insurance company under an account contract.

12. “Contract liabilities” means the liabilities of the insurance company under account contracts, including liabilities with respect to which guarantees as to amount are provided by the insurance company and liabilities with respect to which guarantees as to amount are not provided by the insurance company.

13. a. “Derivative instrument” means an agreement, option, instrument or a series or combination of them:

i. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or

ii. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

b. Derivative instruments include options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures and any other agreements, options or substantially similar instruments or any series or combination of them.

14. “Duration” means, with respect to separate account or supplemental account assets or guaranteed contract liabilities, a measure of the price sensitivity of a stream of cash flows to interest rate movements, including, but not limited to, modified duration or option adjusted duration.

15. “General account” means the assets of the insurance company other than separate account and supplemental account assets, and associated reserves.

16. “Guaranteed minimum benefits” means benefits payable under the terms of the contract that are based on either (1) the greater of paragraph 16.a. or 16.b., or (2) paragraph 16.c. where:

a. Is that part of the market value of account assets that determines the contractholder’s benefits, i.e., to the extent the assets are beneficially “client” assets; provided, that if asset performance does not determine the contractholder’s benefit, this subparagraph equals zero;

b. Is a fixed minimum guarantee related to all or part of the considerations received under the contract; and

c. Is an amount based upon a publicly available interest rates series or an index of the aggregate market value of a group of publicly traded financial instruments, either of which is specified in the contract.

17. “Hedging transaction” means a derivative transaction, involving use of one or more derivative instruments, that is entered into and maintained to reduce:

a. The risk of a change in the value, yield, price, cash flow or quantity of assets or liabilities that the insurer has acquired or incurred or anticipates acquiring or incurring; or

b. The currency exchange risk or the degree of exposure as to assets or liabilities that an insurer has acquired or incurred or anticipates acquiring or incurring.

© 1999-2023 National Association of Insurance Commissioners

18. “Index contract” means a contract under which contract benefits shall be based upon a publicly available interest rate series or an index of the aggregate market value of a group of publicly traded financial instruments, either of which is specified in the contract, and that does not provide a guarantee of some or all of the consideration received plus earnings at a fixed rate specified in advance and that does not provide any secondary guarantees on elective benefits or maturity values.

19. “Market value separate account” means a separate account in which the separate account assets are valued at their market value.

20. “Nationally Recognized Statistical Rating Organization (NRSRO)” means a rating organization so designated by the Securities and Exchange Commission of the United States of America (SEC) which has applied to, and whose NRSRO status has been confirmed by, the NAIC Securities Valuation Office.

21. “Plan of operations” means a written plan meeting the requirements of paragraph 29.

22. “Prudent estimate” assumption means an assumption developed by applying a margin to the best estimate assumption for that risk.

23. “Qualified actuary” means an individual who is qualified to sign statements of actuarial opinion in accordance with the qualification standards set forth in Appendix A-820.

24. “Spot rate”

a. “Treasury-based spot rate corresponding to a given time of benefit payment means the yield on a zero-coupon non-callable and non-prepayable United States government obligation maturing at that time, or the zero-coupon yield implied by the price of a representative sampling of coupon-bearing, non-callable and non-prepayable United States government obligations in accordance with a formula set forth in the plan of operation.

b. “Index spot rate” corresponding to a given time of benefit payment means the zero-coupon yield implied by (x) the Barclays Short Term Corporate Index (for a given time of benefit payment under one year) or (y) the zero-coupon yield implied by the Barclays U.S. Corporate Investment Grade Bond Index (for a given time of benefit payment greater than or equal to one year).

c. “Blended spot rate” corresponding to a given time of benefit payment means a blend of 50% of each of (i) the Treasury-based spot rate, and (ii) the index spot rate. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country rates, in one of the two (2) highest rating categories by an independent nationally recognized United States rating agency acceptable to the commissioner and which are supported by investments denominated in the currency of the foreign country, the Treasury-based spot rate component of the blended spot rate may be determined by reference to substantially similar obligations of the government of the foreign country. For liabilities other than those described above, the blended spot rate shall be determined on a basis mutually agreed upon by the insurer and the commissioner.

25. “Supplemental account” means a separate account to which assets may be contributed by the insurance company for the purpose of complying, in whole or in part, with the asset maintenance requirement and with respect to which neither the account contracts nor applicable law shall provide that the assets of the supplemental account are not chargeable with liabilities arising out of any other business of the insurance company.

26. “United States government obligation” means a direct obligation issued, assumed, guaranteed or insured by the United States of America or by an agency or instrumentality of the United States.

© 1999-2023 National Association of Insurance Commissioners

27. “Valuation actuary” means the appointed actuary or, alternatively, a qualified actuary designated by the appointed actuary to render the actuarial opinion. Written documentation of any such designation shall be on file at the company and available for review upon request.

Plan of Operations

28. The plan of operations for a class of contracts shall describe the financial implications for the insurer of the issuance of contracts in the class, and shall include at least the following:

a. A description of the class of contracts to which the plan of operations pertains. This should include a description of the products, the markets to which the products will be sold, the benefits that are being offered (including whether those benefits will be paid on a market or book value basis);

b. A statement of the investment policy for the separate account and any supplemental account, including requirements for diversification, maturity, type and quality of assets, and as applicable, target duration for matching guaranteed contract liabilities or the degree to which the investment policy is likely to match the performance of an interest rate series or index on which contract benefits are based;

c. A description of how the value of the separate account assets and any supplemental account is to be determined, including but not limited to, a statement of procedures and rules for valuing securities and other assets that are not publicly traded;

d. A description of how the guaranteed contract liabilities are to be valued, including, if applicable, with respect to guaranteed minimum benefits or other benefits, a description of the methodology for calculating spot rates and the rates proposed to be used to discount guaranteed contract liabilities if higher than the applicable spot rates, but the rate or rates used shall not exceed the blended spot rate, except that if the expected time of payment of a contract benefit is more than thirty (30) years, it shall be discounted from the expected time of payment to year thirty (30) at a rate of no more than eighty percent (80%) of the thirty-year blended spot rate and from year thirty (30) to the date of valuation at a rate not greater than the thirty-year blended spot rate, and shall conservatively reflect expected investment returns (taking into account foreign exchange risks);

e. A statement of how the separate account’s operations are designed to provide for payment of contract benefits as they become due, including but not limited to:

i. A description of the method for estimating the amount and timing of benefit payments;

ii. The arrangements necessary to provide liquidity to cover contingencies;

iii. The method to be used to comply with the asset maintenance requirement;

iv. The manner in which account assets will be allocated between the separate account, any supplemental account, and the general account;

v. If applicable, the deductions to be used in determining the market value of an asset when determining the asset maintenance requirement when the investment policy of the separate account and any supplemental accounts is not likely to match the performance of an interest rate series or index on which contract benefits are based; and

© 1999-2023 National Association of Insurance Commissioners

vi. For index contracts, the deductions to be used for replicated (synthetic) asset transactions in determining the market value of the separate account.

vii. For market value separate accounts supporting contracts other than index contracts:

(a) A description of the criteria used by the insurer in approving for contract issuance a pooled fund representing multiple employer-sponsored plans;

(b) A description of risk-mitigation techniques used by the insurer in connection with contracts issued to pooled funds representing multiple employer-sponsored plans

f. If hedging transactions are to be utilized in managing separate account or any supplemental account assets, a description of the instruments and techniques and an explanation of how they are intended to reduce risk of loss;

g. If the amount of the asset maintenance requirement depends on the separate account, any supplemental account or a subportfolio of either being duration matched, a description of the method used to determine the durations of separate account and any supplemental account assets and guaranteed contract liabilities;

h. If a part of the asset maintenance requirement is to be met by maintaining a reserve liability in the general account, a description of:

i. The circumstances under which increases and decreases in the general account portion of the reserve liability will be made;

ii. The circumstances under which transfers will be made between the separate account and the general account; and

iii. Any arrangements needed to provide sufficient liquidity in the general account to enable the insurance company to make transfers to the separate account when due.

i. A statement as to the extent to which the contracts in the class will provide or applicable law does provide that the separate account assets shall not be chargeable with liabilities arising out of any other business of the insurance company; and

j. If any person other than the insurance company may authorize, approve or review the acquisition and disposition of investments for the separate account or any supplemental account, a statement of the safeguards adopted by the insurance company to assure that the actions to be taken by these persons are appropriate, including a description of the criteria used by the insurance company in selecting the person.

29. Notwithstanding the descriptions in the plan of operations, the insurance company may change the rate used pursuant to paragraph 35 to discount guaranteed contract liabilities and other items applicable to the separate account or any supplemental accounts, such as if the investment portfolio is different from that anticipated by the plan of operations, provided that the rates used shall not exceed the blended spot rates as prescribed in paragraph 28.d.

© 1999-2023 National Association of Insurance Commissioners

Asset Maintenance Requirements for Market Value Separate Accounts Supporting Contracts other than Index Contracts

30. At all times an insurer shall hold sufficient assets as a reserve in the general account, the separate account or supplemental accounts, as appropriate, such that the:

a. Market value of the assets held in the separate account, plus

b. The market value of any supplemental account, plus

c. Any assets held in the general account as a reserve for guaranteed contract liabilities, less

d. The deductions provided for in paragraph 31, equals or exceeds the value of guaranteed contract liabilities determined in accordance with paragraphs 35 and 36.

31. In determining compliance with the asset maintenance requirement and the reserve for guaranteed contract liabilities in accordance with paragraph 30, the insurance company shall deduct a percentage of the market value of the separate account or supplemental account asset or an amount attributable to a replicated (synthetic) asset transaction as follows:

a. For debt instruments, the percentage shall be the NAIC asset valuation reserve "reserve objective factor," but the factor shall be increased fifty percent (50%) for the purpose of this calculation if the difference in durations of the assets and liabilities is more than one-half year;

b. For assets that are not debt instruments, the percentage shall be the NAIC asset valuation reserve "maximum reserve factor"; and

c. For replicated (synthetic) asset transactions, the market value of the separate account or supplemental account assets shall be decreased by an amount equal to the asset valuation reserve for the transaction as if the transaction were occurring in the general account, determined in accordance with SSAP No. 7; but to the extent that the NAIC asset valuation reserve maximum reserve factor was not used in determining the amount of the deduction, the amount of the deduction shall be increased fifty percent (50%) for purposes of this calculation.

32. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by separate account or supplemental account assets denominated in the currency of the foreign country, the percentage deduction for these assets under paragraph 31 shall be that for a substantially similar investment denominated in the currency of the United States.

33. To the extent that guaranteed contract liabilities are denominated in the currency of the United States and are supported by separate account or supplemental account assets denominated in the currency of a foreign country, and to the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by separate account or supplemental account assets denominated in the currency of the United States, the deduction for debt instruments and replicated (synthetic) assets transactions under paragraph 31 shall be increased by fifteen percent (15%) of its market value unless the currency exchange risk has been adequately hedged, in which case the percentage deduction under paragraph 31 shall be increased by one-half percent (0.5%). No guaranteed contract liabilities denominated in the currency of a foreign country shall be supported by separate account or supplemental account assets denominated in the currency of another foreign country. For purposes of this paragraph, the currency exchange rate on an asset is deemed to be adequately hedged if:

© 1999-2023 National Association of Insurance Commissioners

a. It is an obligation of a jurisdiction that is rated in one of two (2) highest rating categories by an NRSRO or a political subdivision or other governmental unit of the jurisdiction, or is organized under the laws of the jurisdiction; and

b. At all times the principal amount and scheduled interest payments on the principal are hedged against the United States dollar pursuant to contracts or agreements that are:

   i. Issued by or traded on a securities exchange or board of trade regulated under the laws of the United States or Canada or a province of Canada;

   ii. Entered into with a United States banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations, that are rated in one of the two (2) highest rating categories by an NRSRO, or with a broker-dealer registered with the Securities and Exchange Commission that has net capital in excess of $250 million; or

   iii. Entered into with any other banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations outstanding, that are rated in one of the two (2) highest rating categories by an NRSRO and that is organized under the laws of a jurisdiction that is rated in one of the two (2) highest rating categories by an NRSRO.

34. All or a portion of the amount needed to comply with the asset maintenance requirement may be allocated to one or more supplemental accounts. If the account contract or applicable law provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurance company, the insurance company shall maintain in a supplemental account or the general account the amount of any account assets in excess of the sum of (i) the amounts contributed (net of withdrawals) by the contractholder, and (ii) the earnings attributable to the amounts contributed (net of withdrawals) by the contractholder.

35. For purposes of paragraphs 30-36, the minimum value of guaranteed contract liabilities is defined to be the sum of the expected guaranteed contract benefits, each discounted at a rate corresponding to the expected time of payment of the contract benefit that is not greater than the rate supportable by the expected return from the separate account and any supplemental account assets provided that the rate used shall not exceed the blended spot rates as prescribed in paragraph 28.d. or as described in the actuarial opinion. In calculating the minimum value of contract benefits, all guaranteed contract benefits potentially available to the contractholder shall be considered in the valuation process and analysis, and the reserve held shall be sufficient to fund the greatest present value of each independent guaranteed benefit stream, including guaranteed annuitization options available.

36. To the extent that future cash flows are dependent upon the benefit responsiveness features of an employer-sponsored plan, a best estimate or an estimate based on the insurance company's experience shall be used in the projections of the future cash flows. In addition, the valuation actuary shall periodically review the actual experience under the contract to validate the assumptions used. In projecting cash flows for contingent benefits involving mortality, the mortality tables for these benefits prescribed in Appendix A-820 shall be used.

37. The minimum value of guaranteed contract benefits under a contract issued to a pooled fund representing multiple employer-sponsored plans shall be determined so as to reflect projected plan sponsor contract value withdrawals available to the member plans in the pooled fund. Projections of such future cash flows shall take into account (i) known plan sponsor withdrawals, and (ii) a prudent estimate of future plan sponsor withdrawals. The prudent estimate shall be based on company experience and other relevant criteria.

© 1999-2023 National Association of Insurance Commissioners

38. A single valuation rate shall be determined equal to the lesser of:

a. The expected return from the separate account, or

b. The blended spot rate based on the duration of the separate account.

39. This single valuation rate shall be used to model future market values of the separate account. Future credited interest rates shall be modeled according to the contractually defined crediting rate formula. Modeled future contract values shall reflect modeled future market values, modeled future credited interest rates, known future plan sponsor withdrawals, the prudent estimate of future plan sponsor withdrawals, future withdrawals consistent with paragraph 37, and any remaining final payment at the modeled contract termination date.

40. All such modeled withdrawals and termination payments shall be discounted using the single valuation rate and the modeled times of those withdrawals and payments. The sum of these present values shall be deemed the minimum value of the guaranteed contract liabilities for a pooled fund contract.

Asset Maintenance Requirements for Market Value Separate Accounts Supporting Index Contracts

41. At all times an insurance company shall hold sufficient assets as a reserve in the general account, the separate account or supplemental accounts, as appropriate, such that the:

a. Market value of the assets held in the separate account, plus

b. The market value of any supplemental account, plus

c. Any assets held in the general account as a reserve for guaranteed contract liabilities, less

d. Any deduction provided for in paragraph 42, equals or exceeds the value of guaranteed contract liabilities determined in the manner set forth in the plan of operations.

42. In determining compliance with the asset maintenance requirement and the reserves for guaranteed contract liabilities in accordance with paragraph 41, the insurance company shall deduct a percentage of the market value of a separate account or supplemental account asset as set forth in the plan of operations, and for replication (synthetic asset) transactions, the value of the separate account or supplemental account assets shall be decreased in the manner set forth in the plan of operations.

43. All or a portion of the amount needed to comply with the asset maintenance requirement may be allocated to one or more supplemental accounts. If the account contract or applicable law provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurance company, the insurance company shall maintain in a supplemental account or the general account the amount of any account assets in excess of the sum of (i) the amounts contributed (net of withdrawals) by the contractholder, and (ii) the earnings attributable to the amounts contributed (net of withdrawals) by the contractholder.

Asset Maintenance Requirements for Separate Accounts Supporting Book Value Contracts

44. At all times an insurance company shall hold sufficient assets in the general account, the separate account or supplemental accounts, as appropriate, such that the value of the account assets, valued as if the assets were held in the insurance company’s general account, equals or exceeds the reserve required for contracts supported by the separate account, determined as if the contracts were held in the general account.

© 1999-2023 National Association of Insurance Commissioners

45. All or any portion of the amount needed to comply with the asset maintenance requirement may be allocated to one or more supplemental accounts. If the account contract or applicable law provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurance company, the insurance company shall maintain in a supplemental account or the general account the amount of any account assets in excess of the sum of (i) the amounts contributed (net of withdrawals) by the contractholder, and (ii) the earnings attributable to the amounts contributed (net of withdrawals) by the contractholder.

Asset Valuation Reserve

46. When the insurance company values separate account or supplemental account assets at market and complies with the asset maintenance requirements of the section entitled Asset Maintenance Requirements for Market Value Separate Accounts Supporting Contracts other than Index Contracts or the section entitled Asset Maintenance Requirements for Market Value Separate Accounts Supporting Index Contracts, it need not maintain an asset valuation reserve with respect to these assets.

Reserve Valuation and Documentation

47. Reserves for contracts funded by a market value separate account supporting contracts other than index contracts shall be an amount equal to the following:

a. The total reserve required to be maintained on the valuation date under paragraphs 30-36;

b. Plus the excess, if any, of the market value of separate account assets (to the extent that the market value of the assets determines the contractholder’s benefits, i.e., to the extent the assets are beneficially “client” assets) over the amount determined in accordance with paragraph 47.a.;

c. Plus any additional amount determined by the valuation actuary as necessary to make adequate provision for all of the contract liabilities.

48. Reserves for index contracts funded by a market value separate account shall be an amount equal to the following:

a. The total reserve required to be maintained on the valuation date under paragraphs 41-43;

b. Plus the excess, if any, of the market value of separate account assets (to the extent that the market value of the assets determines the contractholder’s benefits, i.e., to the extent the assets are beneficially “client” assets) over the amount determined in accordance with paragraph 48.a.;

c. Plus any additional amounts determined by the valuation actuary as necessary to make adequate provision for all of the contract liabilities.

49. Reserves for book value contracts shall be determined as if the contracts were held in the general account.

50. The amount of any reserves required by paragraph 47.c. or paragraph 48.c. may be established by either:

a. Allocating sufficient assets to the separate account or a supplemental account to satisfy the requirement; or

b. Setting up the additional reserves in the general account.

© 1999-2023 National Association of Insurance Commissioners

51. Account assets shall make adequate provision for contract liabilities, taking into account any risk charge payable from the separate account assets and the amount of any reserve liability of the general account and amounts held in any supplemental account with respect to the asset maintenance requirement.

52. The level of risk charges, if any, payable to the general account shall be appropriate in view of such factors as the nature of the guaranteed contract liabilities and losses experienced in connection with account contracts and other pricing factors.

53. The fixed-income asset portfolio shall conform to and justify the rates used to discount contract liabilities for valuation pursuant to paragraph 35 if applicable.

54. The company shall document whether any rates used pursuant to paragraph 35 to discount guaranteed contract liabilities and other items applicable to the separate account or any supplemental account were modified from the rate or rates described in the plan of operations.

55. The company shall substantially conform with Appendix A-822 and maintain internal documentation to either:

a. Demonstrate the adequacy of account assets based upon cash flow analysis; or

b. Explain why cash flow analysis is not appropriate, describe the alternative methodology of asset adequacy testing used, and demonstrate the adequacy of account assets under such methodology.

56. The company's internal documentation pertaining to reserves for contract liabilities under account contracts shall also:

a. Clearly describe the assumptions used in projecting cash flows under each class of assets, and any dynamic portfolio hedging techniques utilized and the tests performed on the utilization of the techniques;

b. Clearly describe how the company reflected the risk of default on obligations and mortgage loans, including obligations and mortgage loans that are not investment grade;

c. Clearly describe how the company has reflected withdrawal risks, if applicable, including a discussion of the positioning of the contracts within the benefit withdrawal priority order pertaining to the contracts, the impact of any dynamic lapse assumption and the results of sensitivity testing the prudent estimate of future plan sponsor withdrawals pursuant to paragraphs 37-40;

d. If the plan of operations provides for investments in separate account or supplemental account assets other than United States government obligations, demonstrate that the rates used to discount contract liabilities pursuant to paragraph 35 conservatively reflect expected investment returns (taking into account any foreign exchange risks);

e. If the contracts provide that in certain circumstances they would cease to be funded by a separate account and, instead, would become contracts funded by the general account, clearly describe how any increased reserves would be provided for if and to the extent these circumstances occurred;

f. Document the amount of separate account assets that are not chargeable with liabilities arising out of any other business of the insurance company;

g. Document the amount of reserves and supporting assets as of December 31 and where the reserves and assets are shown in the annual statement;

© 1999-2023 National Association of Insurance Commissioners

h. Document the amount of any contingency reserve carried as part of surplus;

i. For book value contracts, document the market value of supporting assets; and

j. Where separate account assets are not chargeable with liabilities arising out of any other business of the insurance company, describe how the level of risk charges payable to the general account provider are appropriate compensation for the risk taken by the general account.

Appendix A-205

Illustrative Disclosure of Differences Between NAIC Statutory Accounting Practices and Procedures and Accounting Practices Prescribed or Permitted by the State of Domicile

Relevant SSAPs:
SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures

XYZ Insurance Company
Footnotes to Financial Statements
December 31, 2002 and 2001

Note 1–Organization

The XYZ Company is a mutual life insurance company domiciled in the state of ABC and licensed to do business in all 50 states. The company markets traditional whole life, term and disability income insurance policies to individuals through its career agency force.

Notes 2–Basis of Presentation

The financial statements of XYZ Company are presented on the basis of accounting practices prescribed or permitted by the ABC Insurance Department.

The ABC Insurance Department recognizes only statutory accounting practices prescribed or permitted by the state of ABC for determining and reporting the financial condition and results of operations of an insurance company, for determining its solvency under the ABC Insurance Law. The National Association of Insurance Commissioners' (the "NAIC") *Accounting Practices and Procedures Manual* version effective January 1, 2001 ("NAIC SAP") has been adopted as a component of prescribed or permitted practices by the state of ABC. The state has adopted certain prescribed accounting practices which differ from those found in NAIC SAP. Specifically, 1) goodwill arising from the purchase of a subsidiary, controlled or affiliated entity is written off directly to surplus in the year it originates by ABC domiciled companies; in NAIC SAP, goodwill in amounts not to exceed 10% of an insurer's capital and surplus may be capitalized and all amounts of goodwill are amortized to unrealized gains and losses on investments over periods not to exceed 10 years, and 2) 100% of all fixed assets may be admitted by ABC domiciled companies; in NAIC SAP, fixed assets are not admitted. The Commissioner of Insurance has the right to permit other specific practices which deviate from prescribed practices.

The Company, with the explicit permission of the Commissioner of Insurance of the state of ABC, records the value of its home office building at fair market value instead of at the depreciated cost method required by NAIC SAP. If the home office building were carried at depreciated cost, home office property and statutory surplus would be decreased by $2,500,000 and $2,300,000 as of December 31, 2002 and 2001, respectively. Additionally, net income would be increased by $120,000 and $103,000 respectively, for the years then ended.

Illustration to use if prescribed or permitted statutory accounting practices (individually or in the aggregate), which differ from the NAIC basis of accounting, prevent the triggering of a regulatory event:

> If the reporting entity had not used the above prescribed and permitted practices that differ from the NAIC basis of accounting a risk based capital regulatory event would have been triggered. The company would have moved to a risk based capital company action level and the total adjusted capital would have been decreased by $300,000.

Illustration to use if prescribed or permitted practices statutory accounting practices, which differ from the NAIC basis of accounting, have no impact on regulatory events:

> If the reporting entity has not used the above prescribed and permitted practices that differ from the NAIC basis of accounting a risk based capital regulatory event would not have been triggered. The impact on net income and capital is shown in the following paragraphs.

A reconciliation of the Company's net income and capital and surplus between NAIC SAP and practices prescribed and permitted by the state of ABC is shown below.

	2002	**2001**
Net Income, ABC state basis	$3,200,000	$2,900,000
State Prescribed Practices:		
Depreciation of fixed assets	100,000	110,000
State Permitted Practices:		
Depreciation, home office property	120,000	103,000
Net Income, NAIC SAP	$3,420,000	$3,113,000
Statutory Surplus, ABC state basis	$30,000,000	$27,900,000
State Prescribed Practices:		
Goodwill, net	3,000,000	2,700,000
Fixed Assets, net	(850,000)	(950,000)
State Permitted Practices:		
Home Office Property	(2,500,000)	(2,300,000)
Statutory Surplus, NAIC SAP	$29,650,000	$27,350,000

Managing General Agents

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 53—Property and Casualty Contracts–Premiums
SSAP No. 54R—Individual and Group Accident and Health Contracts
SSAP No. 59—Credit Life and Accident and Health Insurance Contracts

Definitions

1. “Managing General Agent” (MGA) means any person, firm, association or corporation who:

    a. Manages all or part of the insurance business of an insurer (including the management of a separate division, department or underwriting office); and

    b. Acts as an agent for such insurer whether known as a Managing General Agent, manager or other similar term, who, with or without the authority, either separately or together with affiliates, produces, directly or indirectly, and underwrites an amount of gross direct written premium equal to or more than five percent (5%) of the policyholder surplus as reported in the last annual statement of the insurer in any one quarter or year together with one or more of the following activities related to the business produced:

        i. Adjusts or pays claims in a material amount;

        ii. Negotiates reinsurance on behalf of the insurer.

    c. Notwithstanding the above, the following persons shall not be considered MGAs for the purposes of this Appendix:

        i. An employee of the insurer;

        ii. A U.S. Manager of the United States branch of an alien insurer;

        iii. An underwriting manager which, pursuant to contract, manages all or part of the insurance operations of the insurer, is under common control with the insurer, subject to a regulatory holding company act, if any, and whose compensation is not based on the volume of premiums written;

        iv. The attorney-in-fact authorized by and acting for the subscribers of a reciprocal insurer or inter-insurance exchange under powers of attorney.

2. “Underwrite” means the authority to accept or reject risk on behalf of the insurer.

Appendix A-235

Interest-Indexed Annuity Contracts

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 52—Deposit-Type Contracts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definition

1. "Interest-indexed annuity contract" means any annuity contract where the interest credits are linked to an external reference.

Valuation Requirements

2. In developing life insurance reserves for interest-indexed annuity contracts, the insurer must be in compliance with the minimum requirements of Appendix A-820.

3. In the calculation of reserves for interest-indexed annuity contracts, future guarantees will be determined by assuming that future interest crediting rates will be equal to the statutory valuation interest rate for such contracts as defined in Appendix A-820.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-250

Variable Annuities

Relevant SSAPs:
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definitions

1. “Variable annuity” means a policy or contract, individual or group, that provides for annuity benefits that vary according to the investment experience of a separate account or accounts maintained by the insurer as to the policy or contract.

2. The company shall maintain in each such separate account assets with a value at least equal to the reserves and other contract liabilities with respect to the account.

3. The reserve liability for variable annuities shall be established pursuant to the requirements of Appendix A-820 in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-255

Modified Guaranteed Annuities

Relevant SSAPs:
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definitions

1. A "Modified Guaranteed Annuity" is a deferred annuity contract, individual or group, the underlying assets of which are held in a separate account, and the values of which are guaranteed if held for specified periods. The contract contains nonforfeiture values that are based upon a market-value adjustment formula if held for shorter periods. This formula may or may not reflect the value of assets held in the separate account. The assets underlying the contract must be in a separate account during the period or periods when the contract holder can surrender the contract.

2. "Interest credits" means all interest that is credited to the contract.

3. "Separate account" means a separate account established pursuant to the insurance laws pertaining to the insurer.

Valuation Requirements

4. Reserve liabilities for modified guaranteed annuities shall be established as provided in Appendix A-820 in accordance with actuarial procedures that recognize:

   a. That assets of the separate account are based on market values;

   b. The variable nature of benefits provided; and

   c. Any mortality guarantees.

5. As a minimum, the separate account liability will equal the surrender value based upon the market-value adjustment formula contained in the contract. If that liability is greater than the market value of the assets, a transfer of assets will be made into the separate account so that the market value of the assets at least equals that of the liabilities. Any additional reserve that is needed to cover future guaranteed benefits shall be established.

6. The market-value adjustment formula, the interest guarantees, and the degree to which projected cash flow of assets and liabilities are matched must also be considered. The company shall determine whether the assets in the separate account are adequate to provide all future benefits that are guaranteed.

Separate Accounts

7. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-270

Variable Life Insurance

Relevant SSAPs:
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definitions

1. “Variable life insurance policy” means an individual or group policy that provides for life insurance the amount or duration of which varies according to the investment experience of any separate account or accounts established and maintained by the insurer as to the policy.

2. “Affiliate” of an insurer means a person, directly or indirectly, controlling, controlled by, or under common control with the insurer; a person who regularly furnishes investment advice to the insurer with respect to its separate accounts for which a specific fee or commission is charged; or any director, officer, partner or employee of the insurer, controlling or controlled person, or person providing investment advice or any member of the immediate family of such person.

3. “Assumed investment rate” means the rate of investment return that would be required to be credited to a variable life insurance policy, after deduction of charges for taxes, investment expenses and mortality and expense guarantees to maintain the variable death benefit equal at all times to the amount of death benefit, other than incidental insurance benefits, which would be payable under the plan of insurance if the death benefit did not vary according to the investment experience of the separate account.

4. “Benefit base” means the amount to which the net investment return is applied.

5. “Control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing more than ten percent (10%) of the voting securities of any other person. This presumption can be overcome by predominant evidence to the contrary, however, it shall stand until overcome by such predominant contradictory evidence.

6. “Flexible premium policy” means any variable life insurance policy other than a “scheduled premium policy” as defined in paragraph 13.

7. “General account” means all assets of the insurer other than assets in separate accounts.

8. “Incidental insurance benefit” means all insurance benefits in a variable life insurance policy, other than the variable death benefit and the minimum death benefit, including but not limited to, accidental death and dismemberment benefits, disability benefits, guaranteed insurability options, family income or term riders.

9. “Minimum death benefit” means the amount of the guaranteed death benefit, other than incidental insurance benefits, payable under a variable life insurance policy regardless of the investment performance of the separate account.

© 1999-2023 National Association of Insurance Commissioners

10. “Net investment return” means the rate of investment return in a separate account to be applied to the benefit base.

11. “Person” means an individual, corporation, partnership, association, trust or fund.

12. “Policy processing day” means the day on which charges authorized in the policy are deducted from the policy’s cash value.

13. “Scheduled premium policy” means a variable life insurance policy under which both the amount and timing of premium payments are fixed by the insurer.

14. “Variable death benefit” means the amount of the death benefit, other than incidental insurance benefits, payable under a variable life insurance policy dependent on the investment performance of the separate account, which the insurer would have to pay in the absence of any minimum death benefit.

Valuation Requirements

15. Reserve liabilities for variable life insurance policies shall be established as provided in Appendix A-820 in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.

16. Reserve liabilities for the guaranteed minimum death benefit shall be the reserve needed to provide for the contingency of death occurring when the guaranteed minimum death benefit exceeds the death benefit that would be paid in the absence of the guarantee, and shall be maintained in the general account of the insurer and shall not be less than the greater of the following minimum reserves:

a. The aggregate total of the term costs, if any, covering a period of one full year from the valuation date or, if less, covering the period provided for in the guarantee not otherwise provided for by the reserves held in the separate account, on each variable life insurance contract, assuming an immediate one-third depreciation in the current value of the assets in the separate account followed by a net investment return equal to the assumed investment rate; or

b. The aggregate total of the “attained age level” reserves on each variable life insurance contract. The “attained age level” reserve on each variable life insurance contract shall not be less than zero and shall equal the “residue,” as described in paragraph 16.b.i. below, of the prior year’s “attained age level” reserve on the contract, with any such “residue,” increased or decreased by a payment computed on an attained age basis as described in paragraph 16.b.ii. below.

i. The “residue” of the prior year’s “attained age level” reserve on each variable life insurance contract shall not be less than zero and shall be determined by adding interest at the valuation interest rate to the prior year’s reserve, deducting the tabular claims based on the “excess,” if any, of the guaranteed minimum death benefit over the death benefit that would be payable in the absence of a guarantee, and dividing the net result by the tabular probability of survival. The “excess” referred to in the preceding sentence shall be based on the actual level of death benefits that would have been in effect during the preceding year in the absence of the guarantee, taking appropriate account of the reserve assumptions regarding the distribution of death claim payments over the year.

ii. The payment referred to in this paragraph shall be computed so that the present value of a level payment of that amount each year over the future period for which charges for this risk will be collected under the contract, is equal to (A) minus (B) minus (C), where (A) is the present value of the future guaranteed

© 1999-2023 National Association of Insurance Commissioners

minimum death benefits, (B) is the present value of the future death benefits that would be payable in the absence of such guarantee, and (C) is any "residue," as described in paragraph 16.b.i. of the prior year's "attained age level" reserve on such variable life insurance contract. This result shall be divided by the present value, at the valuation date, of a temporary life annuity of one per annum at the current attained age payable over the period in which future charges for this risk will be collected under the contract. If no future charges for this risk will be collected under the contract, the payment shall equal (A) minus (B) minus (C). The amounts of the future death benefits referred to in (B) shall be computed assuming a net investment return of the separate account which may differ from the assumed investment rate or the valuation interest but in no event may exceed the maximum interest rate permitted for the valuation of life contracts.

c. The valuation interest rate and mortality table used in computing the two minimum reserves described in 16 a. and 16 b. above shall conform to acceptable standards for the valuation of life insurance contracts. In determining the minimum reserves, the company may employ suitable approximations and estimates, including but not limited to groupings and averages.

17. Incidental Insurance Benefit. Reserve liabilities for all fixed incidental insurance benefits and any guarantees associated with variable accidental insurance benefits shall be maintained in the general account and reserve liabilities for all variable aspects of the variable incidental insurance benefits shall be maintained in a separate account, in amounts determined in accordance with the actuarial procedures appropriate to the benefit.

Separate Accounts

18. The assets of separate accounts shall be valued at least as often as variable benefits are determined but, in any event, at least monthly.

19. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-440

Insurance Holding Companies

Relevant SSAPs:
SSAP No. 25—Affiliates and Other Related Parties
SSAP No. 62R—Property and Casualty Reinsurance

Definitions

1. “Affiliate.” An “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

2. “Control.” The term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption can be overcome by predominant evidence to the contrary, however, it shall stand until overcome by such predominant contradictory evidence.

3. “Insurance Holding Company System.” An “insurance holding company system” consists of two (2) or more affiliated persons, one or more of which is an insurer.

4. “Person.” A “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert, but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

5. “Securityholder.” A “securityholder” of a specified person is one who owns any security of such person, including common stock, preferred stock, debt obligations and any other security convertible into or evidencing the right to acquire any of the foregoing.

6. “Subsidiary.” A “subsidiary” of a specified person is an affiliate controlled by such person directly or indirectly through one or more intermediaries.

7. “Voting Security.” The term “voting security” shall include any security convertible into or evidencing a right to acquire a voting security.

Standards and Management of an Insurer Within a Holding Company System

8. Transactions Within a Holding Company System

9. Transactions within a holding company system to which an insurer subject to registration is a party shall be subject to the following standards:

   a. The terms shall be fair and reasonable;

   b. Charges or fees for services performed shall be reasonable;

   c. Expenses incurred and payment received shall be allocated to the insurer in conformity with statutory accounting practices consistently applied;

© 1999-2023 National Association of Insurance Commissioners

d. The books, accounts and records of each party to all such transactions shall be so maintained as to clearly and accurately disclose the nature and details of the transactions including such accounting information as is necessary to support the reasonableness of the charges or fees to the respective parties; and

e. The insurer's surplus as regards policyholders following any dividends or distributions to shareholder affiliates shall be reasonable in relation to the insurer's outstanding liabilities and adequate to meet its financial needs. In determining whether an insurer's surplus as regards policyholders is reasonable in relation to the insurer's outstanding liabilities and adequate to meet its financial needs, the following factors, among others, shall be considered:

i. The size of the insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force and other appropriate criteria;

ii. The extent to which the insurer's business is diversified among several lines of insurance;

iii. The number and size of risks insured in each line of business;

iv. The extent of the geographical dispersion of the insurer's insured risks;

v. The nature and extent of the insurer's reinsurance program;

vi. The quality, diversification and liquidity of the insurer's investment portfolio;

vii. The recent past and projected future trend in the size of the insurer's investment portfolio;

viii. The surplus as regards policyholders maintained by other comparable insurers;

ix. The adequacy of the insurer's reserves; and

x. The quality and liquidity of investments in affiliates.

Appendix A-585

Universal Life Insurance

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definitions

1. “Cash surrender value” means the net cash surrender value plus any amounts outstanding as policy loans.

2. “Fixed premium universal life insurance policy” means a universal life insurance policy other than a flexible premium universal life insurance policy.

3. “Flexible premium universal life insurance policy” means a universal life insurance policy which permits the policyowner to vary, independently of each other, the amount or timing of one or more premium payments or the amount of insurance.

4. “Interest-indexed universal life insurance policy” means any universal life insurance policy where the interest credits are linked to an external referent.

5. “Net cash surrender value” means the maximum amount payable to the policyowner upon surrender.

6. “Policy value” means the amount to which separately identified interest credits and mortality, expense, or other charges are made under a universal life insurance policy.

7. “Universal life insurance policy” means a life insurance policy where separately identified interest credits (other than in connection with dividend accumulations, premium deposit funds, or other supplementary accounts) and mortality and expense charges are made to the policy. A universal life insurance policy may provide for other credits and charges, such as charges for the cost of benefits provided by rider.

Valuation Requirements

8. The minimum valuation standard for universal life insurance policies shall be the Commissioners Reserve Valuation Method, as described below for such policies, and the tables and interest rates specified below. The terminal reserve for the basic policy and any benefits and/or riders for which premiums are not paid separately as of any policy anniversary shall be equal to the net level premium reserves less (C) and less (D), where:

   a. Reserves by the net level premium method shall be equal to ((A)-(B))r where (A), (B) and “r” are as defined below:

      i. (A) is the present value of all future guaranteed benefits at the date of valuation.

      ii. (B) is the quantity $\frac{PVFB}{\ddot{a}_x}\ddot{a}_{x+t}$ where PVFB is the present value of all benefits

guaranteed at issue assuming future guaranteed maturity premiums are paid by the policyowner and taking into account all guarantees contained in the policy or declared by the insurer.

b. äx and äx+t are present values of an annuity of one per year payable on policy anniversaries beginning at ages x and x+t, respectively, and continuing until the highest attained age at which a premium may be paid under the policy. The letter "x" is defined as the issue age and the letter "t" is defined as the duration of the policy.

c. The guaranteed maturity premium for flexible premium universal life insurance policies shall be that level gross premium, paid at issue and periodically thereafter over the period during which premiums are allowed to be paid, which will mature the policy on the latest maturity date, if any, permitted under the policy (otherwise at the highest age in the valuation mortality table), for an amount which is in accordance with the policy structure.[1] The guaranteed maturity premium is calculated at issue based on all policy guarantees at issue (excluding guarantees linked to an external referent). The guaranteed maturity premium for fixed premium universal life insurance policies shall be the premium defined in the policy which at issue provides the minimum policy guarantees.[2]

d. The letter "r" is equal to one, unless the policy is a flexible premium policy and the policy value is less than the guaranteed maturity fund, in which case "r" is the ratio of the policy value to the guaranteed maturity fund.

e. The guaranteed maturity fund at any duration is that amount which, together with future guaranteed maturity premiums, will mature the policy based on all policy guarantees at issue.

f. (C) is the quantity $((a)-(b))\frac{\ddot{a}_{x+t}}{\ddot{a}_x} r$ where (a)-(b) is as described in paragraph 9 of Appendix A-820 for the plan of insurance defined at issue by the guaranteed maturity premiums and all guarantees contained in the policy or declared by the insurer.

g. (D) is the sum of any additional quantities analogous to (C) which arise because of structural changes[3] in the policy, with each such quantity being determined on a basis consistent with that of (C) using the maturity date in effect at the time of the change.

---

[1] The maturity amount shall be the initial death benefit where the death benefit is level over the lifetime of the policy except for the existence of a minimum-death-benefit corridor, or shall be the specified amount where the death benefit equals a specified amount plus the policy value or cash surrender value except for the existence of a minimum-death-benefit corridor.

[2] The Guaranteed Maturity Premium for both flexible and fixed premium policies shall be adjusted for death benefit corridors provided by the policy. The Guaranteed Maturity Premium may be less than the premium necessary to pay all charges. This can especially happen in the first year for policies with large first year expense charges.

[3] Structural changes are those changes which are separate from the automatic workings of the policy. Such changes usually would be initiated by the policyholder and include changes in the guaranteed benefits, changes in latest maturity date, or changes in allowable premium payment period. For fixed premium universal life policies with redetermination of all credits and charges no more frequently than annually, on policy anniversaries, structural changes also include changes in guaranteed benefits, or in fixed premiums, unanticipated by the guaranteed maturity premium for such policies at the date of issue, even if such changes arise from automatic workings of the policy. The recomputation of (B) in paragraph 8.a.ii. above, for fixed premium universal life structural changes, shall exclude from PVFB, the present value of future guaranteed benefits, those guaranteed benefits which are funded by the excess of the insurer's declared guarantees of interest, mortality and expenses, over the guarantees contained in the policy at the date of issue.

© 1999-2023 National Association of Insurance Commissioners

h. The guaranteed maturity premium, the guaranteed maturity fund and (B) above shall be recalculated to reflect any structural changes in the policy. This recalculation shall be done in a manner consistent with the descriptions above.

i. Future guaranteed benefits are determined by (1) projecting the greater of the guaranteed maturity fund and the policy value, taking into account future guaranteed maturity premiums, if any, and using all guarantees of interest, mortality, expense deductions, etc., contained in the policy or declared by the insurer; and (2) taking into account any benefits guaranteed in the policy or by declaration which do not depend on the policy value.

j. All present values shall be determined using (i) an interest rate (or rates) specified by Appendix A-820 for policies issued in the same year; (ii) the mortality rates specified by Appendix A-820 for policies issued in the same year; and (iii) any other tables needed to value supplementary benefits provided by a rider which is being valued together with the policy.

9. To the extent that the insurer declares guarantees more favorable than those in the policy (contractual guarantees), such declared guarantees shall be applicable to the determination of future guaranteed benefits.

10. The mortality and interest bases for calculating present values are the minimum standards in Appendix A-820.

11. In effecting structural changes, consistent methods are prescribed when calculating reserves. Several such methods are possible, but perhaps the simplest such method would be that of maintaining proportionality between the Guaranteed Maturity Fund and Guaranteed Maturity Premium values and the current face amount. In applying this method, Guaranteed Maturity Fund and Guaranteed Maturity Premium values could be calculated per dollar of face amount and simply multiplied by the new face amount. This would eliminate much of the complexity involved in other methods.

Alternative Minimum Reserves

12. If, in any policy year, the guaranteed maturity premium on any universal life insurance policy is less than the valuation net premium for such policy, calculated by the valuation method actually used in calculating the reserve thereon but using the minimum valuation standards of mortality and rate of interest, the minimum reserve required for such contract shall be the greater of a. or b.

a. The reserve calculated according to the method, the mortality table, and the rate of interest actually used.

b. The reserve calculated according to the method actually used but using the minimum valuation standards of mortality and rate of interest and replacing the valuation net premium by the Guaranteed Maturity Premium in each policy year for which the valuation net premium exceeds the Guaranteed Maturity Premium.

13. For universal life insurance reserves on a net level premium basis, the valuation net premium is:

$$\frac{PVFB}{\ddot{a}x}$$

and for reserves on a Commissioners Reserve Valuation Method, the valuation net premium is:

$$\frac{PVFB}{\ddot{a}x} + \frac{(a)-(b)}{\ddot{a}x}$$

Appendix A-588

Modified Guaranteed Life Insurance

The NAIC no longer maintains Model Law 588 as an NAIC sponsored model law; however, as this appendix is referenced in *SSAP No. 56—Separate Accounts,* the Statutory Accounting Principles (E) Working Group has chosen to retain this appendix as a valid NAIC standard.

Relevant SSAPs:
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definitions

1. “Interest Credits” means all interest that is credited to the policy.

2. “Modified Guaranteed Life Insurance Policy” means an individual or group policy of life insurance, the underlying assets which are held in a separate account, and the values of which are guaranteed if held for specified periods. It contains cash-surrender values that are based upon a market value adjustment formula if held for shorter periods. The formula may, or may not, reflect the value of assets held in the separate account. The assets underlying the policy must be in a separate account during the period or periods when the policyholder can surrender the policy.

3. “Policy processing day” means the day on which charges authorized in the policy are deducted from the policy’s cash value.

4. “Separate account” means a separate account established pursuant to the insurance laws pertaining to the insurer.

Valuation Requirements

5. Reserve liabilities for modified guaranteed life insurance policies shall be established pursuant to the requirements of Appendix A-820 in accordance with actuarial procedures that recognize:

   a. That assets of the separate account are based on market value;

   b. The variable nature of the benefits provided; and

   c. Any mortality guarantees.

6. As a minimum, the separate account liability will equal the surrender value based upon the market value adjustment formula contained in the policy. If that liability is greater than the market value of the assets, a transfer of assets will be made into the separate account so that the market value of the assets at least equals that of the liabilities. Any additional reserve that is needed to cover future guaranteed benefits shall be established.

7. The market value adjustment formula, the interest guarantees and the degree to which projected cash flow of assets and liabilities are matched must also be considered. The company shall determine whether the assets in the separate account are adequate to provide all future guaranteed benefits.

8. Reserve liabilities for all fixed incidental insurance benefits and any guarantees associated with variable incidental insurance benefits shall be maintained in the general account.

Separate Accounts

9. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.

Appendix A-620

Accelerated Benefits

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Purpose

The purpose of this Appendix is to provide guidance with respect to accelerated benefit related to individual and group life insurance policies. This Appendix shall apply to all accelerated benefits provisions of individual and group life insurance policies except those subject to Appendix A-641.

Definitions

1. "Accelerated benefits" covered under this Appendix are benefits payable under a life insurance contract:

   a. To a policyowner or certificateholder, during the lifetime of the insured, in anticipation of death or upon the occurrence of specified life-threatening or catastrophic conditions as defined by the policy or rider; and

   b. Which reduce the death benefit otherwise payable under the life insurance contract; and

   c. Which are payable upon the occurrence of a single qualifying event which results in the payment of a benefit amount fixed at the time of acceleration.

2. "Qualifying event" shall mean one or more of the following:

   a. A medical condition which would result in a drastically limited life span as specified in the contract, for example, twenty-four (24) months or less; or

   b. A medical condition which has required or requires extraordinary medical intervention, such as, but not limited to, major organ transplant or continuous artificial life support, without which the insured would die; or

   c. Any condition which usually requires continuous confinement in an eligible institution as defined in the contract if the insured is expected to remain there for the rest of his or her life; or

   d. A medical condition which would, in the absence of extensive or extraordinary medical treatment, result in a drastically limited life span. Such conditions may include, but are not limited to, one or more of the following:

      i. Coronary artery disease resulting in an acute infarction or requiring surgery;

      ii. Permanent neurological deficit resulting from cerebral vascular accident;

iii. End stage renal failure; or

iv. Acquired Immune Deficiency Syndrome.

Valuation Requirements

3. When benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves shall be determined in accordance with Appendix A-820. Mortality tables and interest for life insurance reserves as specified in Appendix A-820 shall be used as well as appropriate assumptions for the other provisions incorporated in the policy form. Reserves in the aggregate should be sufficient to cover:

a. Policies upon which no claim has yet arisen.

b. Policies upon which an accelerated claim has arisen.

4. For policies and certificates which provide actuarially equivalent benefits, no additional reserves need to be established.

5. Policy liens and policy loans, including accrued interest, represent assets of the company for statutory reporting purposes. For any policy on which the policy lien exceeds the policy's statutory reserve liability such excess must be held as a nonadmitted asset.

Appendix A-628

Title Insurance

Relevant SSAPs:
SSAP No. 57—Title Insurance

Definitions

1. “Abstract of title” or “abstract” means a written history, synopsis or summary of the recorded instruments affecting the title to real property.

2. “Affiliate” means a specific person that directly, or indirectly through one or more intermediaries, controls, or is controlled by or is under common control with the person specified.

3. “Bona fide employee” of the title insurer or title insurance agent means an individual who devotes substantially all of his or her time to performing services on behalf of a title insurer or title insurance agent and whose compensation for those services is in the form of salary or its equivalent paid by the title insurer or title insurance agent.

4. “Control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of another person. This presumption can be overcome by predominant evidence to the contrary; however, it shall stand until overcome by such predominant contradictory evidence.

5. “Escrow” means written instruments, money or other items deposited by one party with a depository, escrow agent or escrowee for delivery to another party upon the performance of a specified condition or the happening of a certain event.

6. “Escrow, settlement or closing fee” means the consideration for supervising or handling the actual execution, delivery or recording of transfer and lien documents and for disbursing funds.

7. “Net retained liability” means the total liability retained by a title insurer for a single risk, after taking into account any ceded liability and collateral, acceptable to the commissioner, maintained by the insurer.

8. “Person” means any natural person, partnership, association, cooperative, corporation, trust or other legal entity.

9. “Security” or “security deposit” means funds or other property received by the title insurer as collateral to secure an indemnitor’s obligation under an indemnity agreement pursuant to which the insurer is granted a perfected security interest in the collateral in exchange for agreeing to provide coverage in a title insurance policy for a specific title exception to coverage.

10. “Title insurance agent” or “agent” means an authorized person, other than a bona fide employee of the title insurer who, on behalf of the title insurer, performs the following acts, in conjunction with the issuance of a title insurance report or policy:

© 1999-2023 National Association of Insurance Commissioners

a. Determines insurability and issues title insurance reports or policies, or both, based upon the performance or review of a search or abstract of title; and

b. Performs one or more of the following functions:

i. Collects or disburses premiums, escrow or security deposits or other funds;

ii. Handles escrows, settlements or closings;

iii. Solicits or negotiates title insurance business; or

iv. Records closing documents.

11. "Title insurance business" or "business of title insurance" means:

a. Issuing as insurer or offering to issue as insurer a title insurance policy;

b. Transacting or proposing to transact by a title insurer any of the following activities when conducted or performed in contemplation of or in conjunction with the issuance of a title insurance policy:

i. Soliciting or negotiating the issuance of a title insurance policy;

ii. Guaranteeing, warranting or otherwise insuring the correctness of title searches for all instruments affecting titles to real property, any interest in real property, cooperative units and proprietary leases and for all liens or charges affecting the same;

iii. Handling of escrows, settlements or closings;

iv. Executing title insurance policies;

v. Effecting contracts of reinsurance; or

vi. Abstracting, searching or examining titles;

c. Guaranteeing, warranting or insuring searches or examinations of title to real property or any interest in real property; or

d. Guaranteeing or warranting the status of title as to ownership of or liens on real property and personal property by any person other than the principals to the transaction; or

e. Doing or proposing to do any business substantially equivalent to any of the activities listed in this paragraph in a manner designed to evade the provisions of this Appendix.

12. "Title insurance policy" or "policy" means a contract insuring or indemnifying owners of, or other persons lawfully interested in, real or personal property or any interest in real property, against loss or damage arising from any or all of the following conditions existing on or before the policy date and not excepted or excluded:

a. Defects in or liens or encumbrances on the insured title;

b. Unmarketability of the insured title;

c. Invalidity, lack of priority or unenforceability of liens or encumbrances on the stated property;

© 1999-2023 National Association of Insurance Commissioners

d. Lack of legal right of access to the land; or

e. Unenforceability of rights in title to the land.

13. "Title insurance report" or "report" means a preliminary report, commitment or binder issued prior to the issuance of a title insurance policy containing the terms, conditions, exceptions and any other matters incorporated by reference under which the title insurer is willing to issue its title insurance policy.

14. "Title insurer" or "insurer" means a company organized for the purpose of transacting the business of title insurance.

15. "Title plant" means a set of records consisting of documents, maps, surveys or entries affecting title to real property or any interest in or encumbrance on the property, which have been filed or recorded in the jurisdiction for which the title plant is established or maintained.

Admitted Asset Standards

16. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate amount of the investment shall not exceed the lesser of twenty percent (20%) of admitted assets or forty percent (40%) of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

Reserves

17. A title insurer shall establish and maintain:

a. A known claim reserve in an amount estimated to be sufficient to cover all unpaid losses, claims and allocated loss adjustment expenses arising under title insurance policies, guaranteed certificates of title, guaranteed searches and guaranteed abstracts of title, and all unpaid losses, claims and allocated loss adjustment expenses for which the title insurer may be liable, and for which the insurer has received notice by or on behalf of the insured, holder of a guarantee or escrow or security depositor.

b. A Statutory or Unearned Premium Reserve consisting of:

i. The amount of the statutory or unearned premium or reinsurance reserve legally held at December 31, 2000. The balance of this reserve shall be released in accordance with the state laws in effect prior to January 1, 2001; and

ii. For those title insurance policies and guarantees written after January 1, 2001, reserves shall be established that are equal to the sum of the following items, as set forth in the title insurer's most recent annual statement:

(a) For each title insurance policy on a single risk written or assumed, an amount, as determined by the insurer's state of domicile, per $1,000 of net retained liability for policies under $500,000 and for policies of $500,000 or greater, or any other reasonable method as required by the insurer's state of domicile; and

(b) An amount as determined by the insurer's state of domicile for the escrow, settlement and closing fees collected in contemplation of the issuance of title insurance policies or guarantees.

© 1999-2023 National Association of Insurance Commissioners

iii. The aggregate of the amounts set aside in this reserve in any calendar year pursuant to paragraph 17.b.ii. shall be released from the reserve and restored to net profits over a period of twenty (20) years pursuant to the following formula: thirty-five percent (35%) of the aggregate sum on July 1 of the year next succeeding the year of addition; fifteen percent (15%) of the aggregate sum on July 1 of each of the succeeding two (2) years; ten percent (10%) of the aggregate sum on July 1 of the next succeeding year; three percent (3%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; two percent (2%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; and one percent (1%) of the aggregate sum on July 1 of each of the next succeeding ten (10) years.

iv. The insurer shall calculate a retroactive adjusted statutory or unearned premium reserve on an aggregate basis at January 1, 2001. The adjusted aggregate reserve shall be calculated as if Subsection b. ii. had been in effect for all years beginning twenty (20) years prior to January 1, 2001. If the adjusted aggregate reserve exceeds the aggregate amount set aside for statutory or unearned premiums in the insurer's December 31, 2000 annual statement, the insurer shall–increase its statutory or unearned premium reserve by an amount equal to one-sixth of that excess in each of the succeeding six years, commencing with the 2001 calendar year.

v. The aggregate of the amounts set aside in this reserve in any calendar year as adjustments to the insurer's statutory or unearned premium reserve pursuant to Subsection b. iv. shall be released from the reserve and restored to net profits, or equity if the additions required by paragraph 17.b.iv. of this section reduced equity directly, over a period not exceeding ten (10) years pursuant to the following table:

Year of Addition	Release
2001	Equally over 10 years
2002	Equally over 9 years
2003	Equally over 8 years
2004	Equally over 7 years
2005	Equally over 6 years
2006	Equally over 5 years

c. A supplemental reserve shall be established consisting of any other reserves necessary, when taken in combination with the reserves required by paragraphs 17.a. and 17.b. to cover the company's liabilities with respect to all losses, claims and loss adjustment expenses.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-630

Mortgage Guaranty Insurance

Relevant SSAPs:
SSAP No. 58—Mortgage Guaranty Insurance

Definitions

1. “Mortgage guaranty insurance” is:

    a. Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on such real estate is a residential building or a condominium unit or buildings designed for occupancy by not more than four families.

    b. Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, providing the improvement on such real estate is a building or buildings designed for occupancy by five (5) or more families or designed to be occupied for industrial or commercial purposes.

    c. Insurance against financial loss by reason of nonpayment of rent or other sums agreed to be paid under the terms of a written lease for the possession, use or occupancy of real estate, provided the improvement on such real estate is a building or buildings designed to be occupied for industrial or commercial purposes.

2. “Authorized real estate security” for the purpose of this Appendix means an amortized note, bond or other evidence of indebtedness, not exceeding ninety-five percent (95%) of the fair market value of the real estate, secured by a mortgage, deed of trust, or other instrument which constitutes, or is equivalent to, a first lien or charge on real estate; provided:

    a. The real estate loan secured in such manner is one of a type which a bank, savings and loan association, or an insurance company, which is supervised and regulated by a state department or the federal government, is authorized to make, or would be authorized to make, disregarding any requirement applicable to such an institution that the amount of the loan not exceed a certain percentage of the value of the real estate.

    b. The improvement on such real estate is a building or buildings designed for occupancy as specified by paragraphs 1.a. and 1.b. of this Appendix.

    c. The lien on such real estate may be subject to and subordinate to the following:

        i. The lien of any public bond, assessment or tax, when no installment, call or payment of or under such bond, assessment or tax is delinquent.

        ii. Outstanding mineral, oil, water or timber rights, rights-of-way, easements or rights-of-way of support, sewer rights, building restrictions or other restrictions or covenants, conditions or regulations of use, or outstanding leases upon such real property under which rents or profits are reserved to the owner thereof.

© 1999-2023 National Association of Insurance Commissioners

3. “Contingency reserve” means an additional premium reserve established to protect policyholders against the effect of adverse economic cycles.

Investment Limitation

4. A mortgage guaranty insurance company shall not report as an admitted asset notes or other evidences of indebtedness secured by mortgage or other lien upon real property. This provision shall not apply to obligations secured by real property, or contracts for the sale of real property, which obligations or contracts of sale are acquired in the course of the good faith settlement of claims under policies of insurance issued by the mortgage guaranty insurance company, or in the good faith disposition of real property so acquired.

Reserves

5. Unearned Premium Reserves – A mortgage guaranty insurance company shall compute and maintain an unearned premium reserve.

6. Loss Reserve – A mortgage guaranty insurance company shall compute and maintain adequate case basis and other loss reserves which accurately reflect loss frequency and loss severity and shall include components for claims reported and for claims incurred but not reported, including estimated losses on:

a. Insured loans which have resulted in the conveyance of property which remains unsold;

b. Insured loans in the process of foreclosure;

c. Insured loans in default for four (4) months or for any lesser period which is defined as default for such purposes in the policy provisions; and

d. Insured leases in default for four (4) months or for any lesser period which is defined as default for such purposes in policy provisions.

7. Contingency Reserve – Each mortgage guaranty insurance company shall compute and maintain a contingency reserve.

8. Reinsurance – Whenever a mortgage guaranty insurance company obtains reinsurance from an insurance company which is properly licensed to provide such reinsurance or from an appropriate governmental agency, the mortgage guaranty insurer and the reinsurer shall establish and maintain the reserves required in this Appendix in appropriate proportions in relation to the risk retained by the original insurer and ceded to the assuming reinsurer so that the total reserves established shall not be less than the reserves required by this Appendix.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-641

Long-Term Care Insurance

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 54R—Individual and Group Accident and Health Contracts

Relevant NAIC Model Laws/Regulations:
Health Insurance Reserves Model Regulation (#010)
Standard Valuation Law (#820)

Definitions

1. “Long-term care insurance” means any insurance policy or rider advertised, marketed, offered or designed to provide coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis; for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Such term includes group and individual annuities and life insurance policies or riders which provide directly or which supplement long-term care insurance. Such term also includes a policy or rider which provides for payment of benefits based upon cognitive impairment or the loss of functional capacity. The term shall also include qualified long-term care insurance contracts. Long-term care insurance may be issued by insurers; fraternal benefit societies; nonprofit health, hospital, and medical service corporations; prepaid health plans; health maintenance organizations or any similar organization to the extent they are otherwise authorized to issue life or health insurance. Long-term care insurance shall not include any insurance policy which is offered primarily to provide basic Medicare supplement coverage, basic hospital expense coverage, basic medical-surgical expense coverage, hospital confinement indemnity coverage, major medical expense coverage, disability income or related asset-protection coverage, accident only coverage, specified disease or specified accident coverage, or limited benefit health coverage. With regard to life insurance, this term does not include life insurance policies which accelerate the death benefit specifically for one or more of the qualifying events of terminal illness, medical conditions requiring extraordinary medical intervention, or permanent institutional confinement, and which provide the option of a lump-sum payment for those benefits and in which neither the benefits nor the eligibility for the benefits is conditioned upon the receipt of long-term care. Notwithstanding any other provision contained herein, any product advertised, marketed or offered as long-term care insurance shall be subject to the provisions of this Appendix.

2. “Applicant” means:

   a. In the case of an individual long-term care insurance policy, the person who seeks to contract for benefits, and

   b. In the case of a group long-term care insurance policy, the proposed certificate holder.

3. “Certificate” means, for the purposes of this Appendix, any certificate issued under a group long-term care insurance policy, which policy has been delivered or issued for delivery.

4. “Group long-term care insurance” means a long-term care insurance policy which is delivered or issued for delivery to:

   a. One or more employers or labor organizations, or to a trust or to the trustees of a fund established by one or more employers or labor organizations, or a combination thereof, for employees or former employees or a combination thereof or for members or former members or a combination thereof, of the labor organizations; or

© 1999-2023 National Association of Insurance Commissioners

b. Any professional, trade or occupational association for its members or former or retired members, or combination thereof, if such association:

i. Is composed of individuals all of whom are or were actively engaged in the same profession, trade or occupation; and

ii. Has been maintained in good faith for purposes other than obtaining insurance; or

c. An association or a trust or the trustee(s) of a fund established, created or maintained for the benefit of members of one or more associations. Prior to advertising, marketing or offering such policy, the association or associations, or the insurer of the association or associations, shall evidence that the association or associations have at the outset a minimum of 100 persons and have been organized and maintained in good faith for purposes other than that of obtaining insurance; have been in active existence for at least one year; and have a constitution and bylaws which provide that:

i. The association or associations hold regular meetings not less than annually to further purposes of the members;

ii. Except for credit unions, the association or associations collect dues or solicit contributions from members; and

iii. The members have voting privileges and representation on the governing board and committees.

5. “Policy” means, for the purposes of this Appendix, any policy, contract, subscriber agreement, rider or endorsement delivered or issued for delivery by an insurer; fraternal benefit society; nonprofit health, hospital, or medical service corporation; prepaid health plan; health maintenance organization or any similar organization.

6. a. “Qualified long-term care insurance contract” or “federally tax-qualified long-term care insurance contract” means an individual or group insurance contract that meets the requirements of Section 7702B(b) of the Internal Revenue Code of 1986, as amended, as follows:

i. The only insurance protection provided under the contract is coverage of qualified long-term care services. A contract shall not fail to satisfy the requirements of this subparagraph by reason of payments being made on a per diem or other periodic basis without regard to the expenses incurred during the period to which the payments relate;

ii. The contract does not pay or reimburse expenses incurred for services or items to the extent that the expenses are reimbursable under Title XVIII of the Social Security Act, as amended, or would be so reimbursable but for the application of a deductible or coinsurance amount. The requirements of this subparagraph do not apply to expenses that are reimbursable under Title XVIII of the Social Security Act only as a secondary payor. A contract shall not fail to satisfy the requirements of this subparagraph by reason of payments being made on a per diem or other periodic basis without regard to the expenses incurred during the period to which the payments relate;

iii. The contract is guaranteed renewable, within the meaning of section 7702B(b)(1)(C) of the Internal Revenue Code of 1986, as amended;

© 1999-2023 National Association of Insurance Commissioners

iv. The contract does not provide for a cash surrender value or other money that can be paid, assigned, pledged as collateral for a loan, or borrowed except as provided in subparagraph 6.a.v. below;

v. All refunds of premiums, and all policyholder dividends or similar amounts, under the contract are to be applied as a reduction in future premiums or to increase future benefits, except that a refund on the event of death of the insured or a complete surrender or cancellation of the contract cannot exceed the aggregate premiums paid under the contract; and

vi. The contract meets the consumer protection provisions set forth in Section 7702B(g) of the Internal Revenue Code of 1986, as amended.

b. "Qualified long-term care insurance contract" or "federally tax-qualified long term care insurance contract" also means the portion of a life insurance contract that provides long-term care insurance coverage by rider or as part of the contract and that satisfies the requirements of Sections 7702B(b) and (e) of the Internal Revenue Code of 1986, as amended.

Valuation Requirements

7. When long-term care benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves for the benefits shall be determined in accordance with Appendix A-820. Claim reserves shall also be established in the case when the policy or rider is in claim status.

8. Reserves for policies and riders subject to this Appendix should be based on the multiple decrement model utilizing all relevant decrements except for voluntary termination rates. Single decrement approximations are acceptable if the calculation produces essentially similar reserves, if the reserve is clearly more conservative, or if the reserve is immaterial. The calculations may consider the reduction in life insurance benefits due to the payment of long-term care benefits. However, in no event shall the reserves for the long-term care benefit and the life insurance benefit be less than the reserves for the life insurance benefit assuming no long-term care benefit.

9. In the development and calculation of reserves for policies and riders subject to this Appendix, due regard shall be given to the applicable policy provisions, marketing methods, administrative procedures and all other considerations which have an impact on projected claim costs, including, but not limited to, the following:

a. Definition of insured events;

b. Covered long-term care facilities;

c. Existence of home convalescence care coverage;

d. Definition of facilities;

e. Existence or absence of barriers to eligibility;

f. Premium waiver provision;

g. Renewability;

h. Ability to raise premiums;

© 1999-2023 National Association of Insurance Commissioners

i. Marketing method;

j. Underwriting procedures;

k. Claims adjustment procedures;

l. Waiting period;

m. Maximum benefit;

n. Availability of eligible facilities;

o. Margins in claim costs;

p. Optional nature of benefit;

q. Delay in eligibility for benefit;

r. Inflation protection provisions; and

s. Guaranteed insurability option.

10. When long-term care benefits are provided other than as in the above, reserves shall be determined in accordance with Appendix A-010.

Appendix A-695

Synthetic Guaranteed Investment Contracts

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 52—Deposit-Type Contracts
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)
Actuarial Opinion and Memorandum Regulation (#822)

Scope and Application

1. This appendix applies to that portion of a group annuity contract or other agreement described in paragraph 25 and issued by a life insurer:

   a. That functions as an accounting record for an accumulation fund; and

   b. That has benefit guarantees relating to a principal amount and levels of interest at a fixed rate of return specified in advance.

2. The fixed rates of return:

   a. Shall be constant over the applicable rate periods;

   b. May reflect prior and current market conditions with respect to the segregated portfolio; and

   c. Shall not reference future changes in market conditions.

3. The updates to the appendix related to interest rates, including revisions to the method for determining the discount rate applied to the calculation of the minimum value of guaranteed contract liabilities, as primarily reflected in paragraph 29, and the definition of the blended spot rate are effective on or after January 1, 2016, for all[1] contracts inforce and contracts issued on or after the effective date.

Definitions

4. "Account assets" means the assets in the segregated portfolio plus any assets held in the general account or a separate account to meet the asset maintenance requirements.

5. "Actuarial opinion and memorandum" means the valuation actuary's opinion and memorandum covering synthetic guaranteed investment contract liabilities that is required to be submitted to the commissioner.

[1] This appendix is not intended to apply to contingent deferred annuities (CDAs), defined in the Contingent Deferred Annuity (A) Working Group recommendation on CDAs adopted by the Life Insurance and Annuities (A) Committee on April 7, 2013, (NAIC Proceedings, Spring 2013, Volume 1, pdf page 416) as "an annuity contract that establishes a life insurer's obligation to make periodic payments for the annuitant's lifetime at the time designated investments, which are not owned or held by the insurer, are depleted to a contractually defined amount due to contractually permitted withdrawals, market performance, fees and/or other charges."

© 1999-2023 National Association of Insurance Commissioners

6. “Appointed actuary” means the qualified actuary appointed or retained either directly by or by the authority of the board of directors through an executive officer of the company to prepare the annual statement of actuarial opinion for the company as a whole.

7. “Asset maintenance requirement” means the requirement to maintain assets to fund contract benefits in accordance with paragraph 29 of this appendix.

8. “Class of contracts” means the set of all contracts to which a given plan of operation pertains.

9. “Contract value record” means an accounting record, provided by the contract in relation to a segregated portfolio of assets, that is credited with a fixed rate of return over regular periods, and that is used to measure the extent of the insurer’s obligation to the contractholder. The fixed rate of return credited to the contract value record is determined by means of a crediting rate formula or declared at the inception of the contract and valid for the entire term of the contract.

10. “Crediting rate formula” means a mathematical formula used to calculate the fixed rate of return credited to the contract value record during any rate period and based in part upon the difference between the contract value record and the market value record amortized over an appropriate period. The fixed rate of return calculated by means of this formula may reflect prior and current market conditions with respect to the segregated portfolio, but may not reference future changes in market conditions.

11. “Duration” means, with respect to the segregated portfolio assets or guaranteed contract liabilities, a measure of price sensitivity to changes in interest rates, such as the Macaulay duration or option-adjusted duration.

12. “Fair market value” means a reasonable estimate of the amount that a knowledgeable buyer of an asset would be willing to pay, and a knowledgeable seller of an asset would be willing to accept, for the asset without duress in an arm's length transaction. In the case of a publicly traded security, the fair market value is the price at which the security is traded or, if no price is available, a price that appropriately reflects the latest bid and asked prices for the security. In the case of a debt instrument that is not publicly traded, the fair market value is the discounted present value of the asset calculated at a reasonable discount rate. For all other non-publicly traded assets, fair market value will be determined in accordance with valuation practices customarily used within the financial industry.

13. “Guaranteed minimum benefits” means contract benefits on a specified date that may be either:

  a. A principal guarantee, with or without a fixed minimum interest rate guarantee, related to the segregated portfolio;

  b. An assurance as to the future investment return or performance of the segregated portfolio; or

  c. The fair market value of the segregated portfolio, to the extent that the fair market value of the assets determines the contractholder’s benefits.

14. a. “Hedging instrument” means:

    i. An interest rate futures agreement or foreign currency futures agreement, an option to purchase or sell an interest rate futures agreement or foreign currency futures agreement, or any option to purchase or sell a security or foreign currency, used in a bona fide hedging transaction; or

    ii. A financial agreement or arrangement entered into with a broker, dealer or bank, qualified under applicable federal and state securities or banking law and regulation, in connection with investment in one or more securities in order to

© 1999-2023 National Association of Insurance Commissioners

reduce the risk of changes in market valuation or to create a synthetic investment that, when added to the portfolio, reduces the risk of changes in market valuation.

b. An instrument shall not be considered a hedging instrument or a part of a bona fide hedging transaction if it is purchased in conjunction with another instrument where the effect of the combined transaction is an increase in the portfolio's exposure to market risk.

15. "Investment guidelines" means a set of written guidelines, established in advance by the person with investment authority over the segregated portfolio, to be followed by the investment manager. The guidelines shall include a description of:

a. The segregated portfolio's investment objectives and limitations;

b. The investment manager's degree of discretion;

c. The duration, asset class, quality, diversification, and other requirements of the segregated portfolio; and

d. The manner in which derivative instruments may be used, if at all, in the segregated portfolio.

16. "Investment manager" means the person (including the contractholder) responsible for managing the assets in the segregated portfolio in accordance with the investment guidelines in a fiduciary capacity to the owner of the assets.

17. "Market value record" means an accounting record provided by the contract to reflect the fair market value of the segregated portfolio.

18. "Nationally Recognized Statistical Rating Organization (NRSRO)" means a rating organization so designated by the Securities and Exchange Commission of the United States of America (SEC) which has applied to, and whose NRSRO status has been confirmed by, the NAIC Securities Valuation Office.

19. "Permitted custodial institution" means a bank, trust company or other licensed fiduciary services provider.

20. "Plan of operation" means a written plan meeting the requirements of paragraph 28 of this appendix.

21. "Qualified actuary" means an individual who meets the qualification standards set forth in Appendix A-820.

22. "Rate period" means the period of time during which the fixed rate of return credited to the contract value record is applicable between crediting rate formula adjustments.

23. "Segregated portfolio" means:

a. A portfolio or sub-portfolio of assets to which the contract pertains that is held in a custody or trust account by the permitted custodial institution and identified on the records of the permitted custodial institution as special custody assets held for the exclusive benefit of the retirement plans or other entities on whose behalf the contractholder holds the contract; and

b. Any related cash or currency received by the permitted custodial institution for the account of the contractholder and held in a deposit account for the exclusive benefit of

© 1999-2023 National Association of Insurance Commissioners

the retirement plans or other entities on whose behalf the contractholder holds the contract.

24. "Spot rate"

a. "Treasury-based spot rate" corresponding to a given time of benefit payment means the yield on a zero-coupon non-callable and non-prepayable United States government obligation maturing at that time, or the zero-coupon yield implied by the price of a representative sampling of coupon-bearing, non-callable and non-prepayable United States government obligations in accordance with a formula set forth in the plan of operation.

b. "Index spot rate" corresponding to a given time of benefit payment means the zero-coupon yield implied by (x) the Barclays Short-Term Corporate Index (for a given time of benefit payment under one year) or (y) the zero-coupon yield implied by the Barclays U.S. Corporate Investment Grade Bond Index (for a given time of benefit payment greater than or equal to one year).

c. "Blended spot rate" corresponding to a given time of benefit payment means a blend of 50% each of (i) the treasury-based spot rate, and (ii) the index spot rate. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country rated in one of the two (2) highest rating categories by an independent nationally recognized United States rating agency acceptable to the NAIC Securities Valuation Office and are supported by investments denominated in the currency of the foreign country, the treasury-based spot rate component of the blended spot rate may be determined by reference to substantially similar obligations of the government of the foreign country.

25. "Synthetic guaranteed investment contract" or "contract" means a group annuity contract or other agreement that establishes the insurer's obligations by reference to a segregated portfolio of assets that is not owned by the insurer. The contract functions as an accounting record for an accumulation fund and the fixed rate of return credited to the fund reflects an amortization of the segregated portfolio's market gains and losses based on the period specified in the crediting formula, subject to any minimum interest rate guarantee.

26. "United States government obligation" means a direct obligation issued, assumed, guaranteed or insured by the United States of America or by an agency or instrumentality of the United States government.

27. "Valuation actuary" means the appointed actuary or, alternatively, a qualified actuary designated by the appointed actuary to render the actuarial opinion. Written documentation of any such designation shall be on file at the company and available for review upon request.

Plan of Operation

28. The plan of operation for a class of contracts shall describe the financial implications for the insurer of the issuance of contracts in the class, and shall include at least the following:

a. A statement describing the methods and procedures used to value statutory liabilities for purposes of paragraph 29;

b. A description of the allowable investment parameters (such as objectives, derivative strategies, asset classes, quality, duration and diversification requirements applied to the assets held within the segregated portfolio) to be reflected in the investment guidelines applicable to each contract issued in the class to which the submitted plan of operation applies; and a description of the procedures that will be followed by the insurer in

evaluating the appropriateness of any specific investment guidelines submitted by the contractholder;

c. A description of the criteria used by the insurer in approving for contract issuance a pooled fund representing multiple employer-sponsored plans and in approving the investment manager for the segregated portfolio of assets associated with such pooled fund contract;

d. A description of risk-mitigation techniques used by the insurer in connection with contracts issued to pooled funds representing multiple employer-sponsored plans.

Reserves and Documentation

29. Asset maintenance requirements for segregated portfolios covered by this appendix.

a. At all times an insurer shall hold minimum reserves in the general account or one or more separate accounts, as appropriate, equal to the excess, if any, of the value of the guaranteed contract liabilities, determined in accordance with paragraphs 29.f. and 29.g., over the market value of the assets in the segregated portfolio less the deductions provided for in paragraph 29.b. These reserve requirements shall be applied on a contract-by-contract basis.

b. In determining compliance with the asset maintenance requirement and the reserve for guaranteed contract liabilities specified in paragraph 29.a., the insurer shall deduct a percentage of the market value of an asset as follows:

i. For debt instruments, the percentage shall be the NAIC asset valuation reserve "reserve objective factor," but the factor shall be increased by fifty percent (50%) for the purpose of this calculation if the difference in durations of the assets and liabilities is more than one-half year. The above notwithstanding, in the event that under the terms of the synthetic guaranteed investment contract, the asset default risk for debt instruments is borne solely by the contractholder, there shall be no asset valuation reserve percentage deduction from the market value of an asset, for purposes of complying with the asset maintenance requirement and the reserve for guaranteed contract liabilities specified in paragraph 29.a.

ii. For assets that are not debt instruments, the percentage shall be the NAIC asset valuation reserve “maximum reserve factor.”

c. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by segregated portfolio assets denominated in the currency of the foreign country, the percentage deduction for these assets under paragraph 29.b. shall be that for a substantially similar investment denominated in the currency of the United States.

d. To the extent that guaranteed contract liabilities are denominated in the currency of the United States and are supported by segregated portfolio assets denominated in the currency of a foreign country, and to the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by segregated portfolio assets denominated in the currency of the United States, the deduction for debt instruments under paragraph 29.b. shall be increased by fifteen percent (15%) of the market value of the assets unless the currency exchange risk on the assets has been adequately hedged, in which case the percentage deduction under paragraph 29.b. shall be increased by one-half percent (.5%). No guaranteed contract liabilities denominated in

© 1999-2023 National Association of Insurance Commissioners

the currency of a foreign country shall be supported by segregated portfolio assets denominated in the currency of another foreign country. For purposes of this paragraph, the currency exchange risk on an asset is deemed to be adequately hedged if:

i. It is an obligation of

(a) A jurisdiction that is rated in one of the two (2) highest rating categories by an NRSRO;

(b) Any political subdivision or other governmental unit of such a jurisdiction, or any agency or instrumentality of jurisdiction, political subdivision or other governmental unit; or

(c) An institution that is organized under the laws of any such jurisdiction; and

ii. At all times the principal amount of the obligation and scheduled interest payments on the obligation are hedged against the United States dollar pursuant to contracts or agreements that are:

(a) Issued by or traded on a securities exchange or board of trade regulated under the laws of the United States or Canada or a province of Canada;

(b) Entered into with a United States banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations outstanding, that are rated in one of the two (2) highest rating categories by an NRSRO, or with a broker-dealer registered with the Securities and Exchange Commission that has net capital in excess of $250 million; or

(c) Entered into with any other banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations outstanding, that are rated in one of the two (2) highest rating categories by an NRSRO and that is organized under the laws of a jurisdiction that is rated in one of the two (2) highest rating categories by an NRSRO.

e. These contracts may provide for the allocation to one or more separate accounts of all or any portion of the amount needed to meet the asset maintenance requirement. If the contract provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurer, the insurer shall maintain in a distinct separate account that is so chargeable:

i. That portion of the amount needed to meet the asset maintenance requirement that has been allocated to separate accounts; less

ii. The amounts contributed to separate accounts by the contractholder in accordance with the contract and the earnings on the contract.

f. For purposes of this paragraph, the minimum value of guaranteed contract liabilities is defined to be the sum of the expected guaranteed contract benefits, each discounted at a rate corresponding to the expected time of payment of the contract benefit that is not greater than the spot rate supportable by the expected return from the segregated portfolio assets, and in no event greater than the blended spot rate as described in the plan of operation or the actuary's opinion and memorandum, except that if the expected time of

payment of a contract benefit is more than thirty (30) years, it shall be discounted from the expected date of payment to year thirty (30) at a rate of no more than eighty percent (80%) of the thirty-year spot rate and from year thirty (30) to the date of valuation at a rate not greater than the thirty-year blended spot rate.

g. In calculating the minimum value of guaranteed contract benefits:

i. All guaranteed benefits potentially available to the contractholder on an ongoing basis shall be considered in the valuation process and analysis, and the reserve held must be sufficient to fund the greatest present value of each independent guaranteed contract benefit. For purposes of this subparagraph, the right granted to the contractholder to exit the contract by discharging the insurer of its guarantee obligation under the contract and taking control of the assets in the segregated portfolio shall not be considered a guaranteed benefit.

ii. To the extent that future guaranteed cash flows are dependent upon the benefit responsiveness of an employer-sponsored plan, a best estimate based on company experience, or other reasonable criteria if company experience is not available, shall be used in the projections of future cash flows.

iii. The minimum value of guaranteed contract benefits under a contract issued to a pooled fund representing multiple employer-sponsored plans shall be determined so as to reflect projected plan sponsor contract value withdrawals available to the member plans in the pooled fund.

Projections of such future cash flows shall take into account (i) known plan sponsor withdrawals, and (ii) a prudent estimate of future plan sponsor withdrawals. The prudent estimate shall be based on company experience and other relevant criteria.

A single valuation rate shall be determined, consistent with paragraph 29.f., equal to the lesser of:

(a) The expected return from the segregated portfolio of assets, or

(b) The blended spot rate based on the duration of the segregated portfolio of assets.

This single valuation rate shall be used to model future market values of the segregated portfolio of assets. Future credited interest rates shall be modeled according to the contractually defined crediting rate formula. Modeled future contract values shall reflect modeled future market values, modeled future credited interest rates, known future plan sponsor withdrawals, the prudent estimate of future plan sponsor withdrawals, future withdrawals consistent with paragraph 29.g.ii. of this subsection and any remaining final payment at the modeled contract termination date.

All such modeled withdrawals and termination payments shall be discounted using the single valuation rate and the modeled times of those withdrawals and payments. The sum of these present values shall be deemed the minimum value of the guaranteed contract liabilities for a pooled fund contract.

© 1999-2023 National Association of Insurance Commissioners

30. Account assets shall make adequate provision for contract liabilities, taking into account any risk charge payable, the segregated portfolio assets, and the amount of any reserve liability with respect to the asset maintenance requirement.

31. The fixed-income segregated portfolio shall conform to and justify the rates used to discount contract liabilities for valuation pursuant to paragraph 29.f.

32. The company shall document whether any rates used pursuant to paragraph 29.f. to discount guaranteed contract liabilities and other items applicable to the segregated portfolio were modified from the rate or rates described in the plan of operation.

33. The level of risk charges, if any, retained in the general account shall be appropriate in view of such factors as the nature of the guaranteed contract liabilities and losses experienced in connection with account contracts and other pricing factors.

34. The company shall substantially conform with Appendix A-822 and maintain internal documentation to either:

a. Demonstrate the adequacy of account assets based upon cash flow analysis, or

b. Explain why cash flow testing analysis is not appropriate, describe the alternative methodology of asset adequacy testing used, and demonstrate the adequacy of account assets under that methodology;

35. The company's internal documentation pertaining to reserves for synthetic guaranteed investment contract liabilities shall also:

a. Clearly describe the assumptions used in projecting cash flows under each class of assets, and any dynamic portfolio hedging techniques utilized and the tests performed on the utilization of the techniques;

b. Clearly describe how the company has reflected the cost of capital;

c. Clearly describe how the company has reflected the risk of default on obligations and mortgage loans, including obligations and mortgage loans that are not investment grade;

d. Clearly describe how the company has reflected withdrawal risks, if applicable, including a discussion of the positioning of the contracts within the benefit withdrawal priority order pertaining to the contracts, the impact of any dynamic lapse assumption and the results of sensitivity testing the prudent estimate of future plan sponsor withdrawals pursuant to paragraph 29.g.iii.;

e. If the plan of operation provides for investments in segregated portfolio assets other than United States government obligations, demonstrate that the rates used to discount contract liabilities pursuant to paragraph 29.f. conservatively reflect expected investment returns, taking into account any foreign exchange risks;

f. If the contracts provide that in certain circumstances they would cease to be funded by a segregated portfolio and, instead would become contracts funded by the general account, clearly describe how any increased reserves would be provided for if and to the extent these circumstances occurred;

g. Document the amount of account assets maintained in a separate account that are not chargeable with liabilities arising out of any other business of the insurance company;

© 1999-2023 National Association of Insurance Commissioners

h. Document the amount of reserves and supporting assets as of December 31 and where the reserves are shown in the annual statement;

i. Document the amount of any contingency reserve carried as part of surplus;

j. Document the market value of the segregated asset portfolio; and

k. Where separate account assets are not chargeable with liabilities arising out of any other business of the insurance company, describe how the level of risk charges payable to the general account provides an appropriate compensation for the risk taken by the general account.

36. When the insurer issues a synthetic guaranteed investment contract and complies with the asset maintenance requirements of paragraph 29, it need not maintain an asset valuation reserve with respect to those account assets.

37. This paragraph describes the reserve valuation requirements for contracts subject to this appendix.

a. Reserves for synthetic investment contracts subject to this appendix shall be an amount equal to the sum of the following:

i. The amounts determined as the minimum reserve as required under paragraph 29; and

ii. Any additional amount determined by the insurer's valuation actuary as necessary to make adequate provision for all contract liabilities.

b. The amount of any reserves required by paragraph 37.a. may be established by either:

i. Allocating sufficient assets to one or more separate accounts; or

ii. Setting up the additional reserves in the general account.

Appendix A-785

Credit for Reinsurance

Relevant SSAPs:
SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance
SSAP No. 62R—Property and Casualty Reinsurance
SSAP No. 66—Retrospectively Rated Contracts

Definitions

1. “Commissioner” refers to the commissioner of insurance in the state where credit or a reduction from liability is taken.

2. “Jurisdiction” refers to any state, district or territory of the United States and also to territories, provinces or jurisdictions other than the United States.

3. “Liabilities” shall mean the assuming insurer’s gross liabilities attributable to reinsurance ceded by U. S. domiciled insurers that are not otherwise secured by acceptable means.

4. “Beneficiary” means the entity for whose sole benefit the trust has been established and any successor of the beneficiary by operation of law. If a court of law appoints a successor in interest to the named beneficiary, then the named beneficiary includes and is limited to the court appointed domiciliary receiver (including conservator, rehabilitator or liquidator).

5. “Grantor” means the entity that has established a trust for the sole benefit of the beneficiary. When established in conjunction with a reinsurance agreement, the grantor is the unlicensed, unaccredited assuming insurer.

6. “Obligations,” as used in paragraph 30 of this appendix means:

   a. Reinsured losses and allocated loss expenses paid by the ceding company, but not recovered from the assuming insurer;

   b. Reserves for reinsured losses reported and outstanding;

   c. Reserves for reinsured losses incurred but not reported; and

   d. Reserves for allocated reinsured loss expenses and unearned premiums.

Credit Allowed a Domestic Ceding Insurer

7. Credit for reinsurance shall be allowed a domestic ceding insurer as either an asset or a reduction from liability on account of reinsurance ceded only when the reinsurer meets the requirements of paragraphs 8, 9, 10, 11, 12, 13 or 14 of this appendix. Credit shall be allowed under paragraphs 8, 9, or 10 of this appendix only as respects cessions of those kinds or classes of business which the assuming insurer is licensed or otherwise allowed to write or assume in its state of domicile or, in the case of a U.S. branch of an alien assuming insurer, in the state through which it is entered and licensed to transact insurance or reinsurance. Credit shall be allowed under paragraphs 10 or 11 of this appendix only if the applicable requirements of paragraph 15 have been satisfied.

8. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is licensed to transact insurance or reinsurance in the domiciliary state of the ceding insurer.

© 1999-2023 National Association of Insurance Commissioners

9. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is accredited as a reinsurer by the domiciliary state of the ceding insurer. In order to be eligible for accreditation, a reinsurer must:

a. File with the commissioner evidence of its submission to the domiciliary state's jurisdiction;

b. Submit to the domiciliary state's authority to examine its books and records;

c. Be licensed to transact insurance or reinsurance in at least one state, or in the case of a U.S. branch of an alien assuming insurer, is entered through and licensed to transact insurance or reinsurance in at least one state;

d. File annually with the commissioner a copy of its annual statement filed with the insurance department of its state of domicile and a copy of its most recent audited financial statement; and

e. Demonstrate to the satisfaction of the commissioner that it has adequate financial capacity to meet its reinsurance obligations and is otherwise qualified to assume reinsurance from domestic insurers. An assuming insurer is deemed to meet this requirement as of the time of its application if it maintains a surplus as regards policyholders in an amount not less than $20,000,000 and its accreditation has not been denied by the commissioner within ninety (90) days after submission of its application.

10. a. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is domiciled in, or in the case of a U.S. branch of an alien assuming insurer is entered through, a state that employs standards regarding credit for reinsurance substantially similar to those of the domiciliary state of the ceding insurer and the assuming insurer or U.S. branch of an alien assuming insurer:

i. Maintains a surplus as regards policyholders in an amount not less than $20,000,000; and

ii. Submits to the authority of the domiciliary state to examine its books and records.

b. The requirement of paragraph 10.a.i. does not apply to reinsurance ceded and assumed pursuant to pooling arrangements among insurers in the same holding company system.

11. a. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that maintains a trust fund in a qualified U.S. financial institution, as defined in paragraph 54, for the payment of the valid claims of its U.S. ceding insurers, their assigns and successors in interest. The assuming insurer shall report annually information substantially the same as that required to be reported on the NAIC Annual Statement form by licensed insurers. The assuming insurer shall submit to examination of its books and records by the commissioner and bear the expense of examination.

b. i. Credit for reinsurance shall not be granted under this paragraph 11 unless the form of the trust and any amendments to the trust have been approved by:

(a) The commissioner of the state where the trust is domiciled; or

(b) The commissioner of another state who, pursuant to the terms of the trust instrument, has accepted principal regulatory oversight of the trust.

© 1999-2023 National Association of Insurance Commissioners

ii. The trust instrument shall provide that:

(a) Contested claims shall be valid and enforceable out of funds in trust to the extent remaining unsatisfied thirty (30) days after entry of the final order of any court of competent jurisdiction in the United States;

(b) Legal title to the assets of the trust shall be vested in the trustee for the benefit of the grantor's U.S. ceding insurers, their assigns and successors in interest;

(c) The trust shall be subject to examination as determined by the commissioner;

(d) The trust shall remain in effect for as long as the assuming insurer, or any member or former member of a group of insurers, shall have outstanding obligations under reinsurance agreements subject to the trust; and

(e) No later than February 28 of each year the trustee of the trust shall report to the commissioner in writing setting forth the balance in the trust and listing the trust's investments at the preceding year-end, and shall certify the date of termination of the trust, if so planned, or certify that the trust shall not expire prior to the following December 31.

c. The following requirements apply to the following categories of assuming insurer:

i. The trust fund for a single assuming insurer shall consist of funds in trust in an amount not less than the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers, and, in addition, the assuming insurer shall maintain a trusteed surplus of not less than $20,000,000, except as provided in paragraph 11.c.ii. of this appendix.

ii. At any time after the assuming insurer has permanently discontinued underwriting new business secured by the trust for at least three full years, the commissioner with principal regulatory oversight of the trust may authorize a reduction in the required trusteed surplus, but only after a finding, based on an assessment of the risk, that the new required surplus level is adequate for the protection of U.S. ceding insurers, policyholders and claimants in light of reasonably foreseeable adverse loss development. The risk assessment may involve an actuarial review, including an independent analysis of reserves and cash flows, and shall consider all material risk factors, including when applicable the lines of business involved, the stability of the incurred loss estimates and the effect of the surplus requirements on the assuming insurer's liquidity or solvency. The minimum required trusteed surplus may not be reduced to an amount less than thirty percent (30%) of the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers covered by the trust.

iii. (a) In the case of a group including incorporated and individual unincorporated underwriters:

(1) For reinsurance ceded under reinsurance agreements with an inception, amendment or renewal date on or after January 1, 1993, the trust shall consist of a trusteed account in an amount not less than the respective underwriters' several liabilities

© 1999-2023 National Association of Insurance Commissioners

attributable to business ceded by U.S. domiciled ceding insurers to any underwriter of the group;

(2) For reinsurance ceded under reinsurance agreements with an inception date on or before December 31, 1992, and not amended or renewed after that date, not-withstanding the other provisions contained herein, the trust shall consist of a trusteed account in an amount not less than the respective underwriters' several insurance and reinsurance liabilities attributable to business written in the United States; and

(3) In addition to these trusts, the group shall maintain in trust a trusteed surplus of which $100,000,000 shall be held jointly for the benefit of the U.S. domiciled ceding insurers of any member of the group for all years of account; and

(b) The incorporated members of the group shall not be engaged in any business other than underwriting as a member of the group and shall be subject to the same level of regulation and solvency control by the group's domiciliary regulator as are the unincorporated members.

(c) Within ninety (90) days after its financial statements are due to be filed with the group's domiciliary regulator, the group shall provide to the commissioner an annual certification by the group's domiciliary regulator of the solvency of each underwriter member; or if a certification is unavailable, financial statements, prepared by independent public accountants, of each underwriter member of the group.

iv. In the case of a group of incorporated underwriters under common administration, the group shall:

(a) Have continuously transacted an insurance business outside the United States for at least three (3) years immediately prior to making application for accreditation;

(b) Maintain aggregate policyholders' surplus of at least $10,000,000,000;

(c) Maintain a trust fund in an amount not less than the group's several liabilities attributable to business ceded by U.S. domiciled ceding insurers to any member of the group pursuant to reinsurance contracts issued in the name of the group;

(d) In addition, maintain a joint trusteed surplus of which $100,000,000 shall be held jointly for the benefit of U.S. domiciled ceding insurers of any member of the group as additional security for these liabilities; and

(e) Within ninety (90) days after its financial statements are due to be filed with the group's domiciliary regulator, make available to the commissioner an annual certification of each underwriter member's solvency by the member's domiciliary regulator and financial statements of each underwriter member of the group prepared by its independent public accountant.

© 1999-2023 National Association of Insurance Commissioners

d. For the purposes of this paragraph 11., the term "liabilities" shall mean the assuming insurer's gross liabilities attributable to reinsurance ceded by U.S. domiciled insurers excluding liabilities that are otherwise secured by acceptable means, and shall include:

i. For business ceded by domestic insurers authorized to write accident and health, and property and casualty insurance:

(a) Losses and allocated loss expenses paid by the ceding insurer, recoverable from the assuming insurer;

(b) Reserves for losses reported and outstanding;

(c) Reserves for losses incurred but not reported;

(d) Reserves for allocated loss expenses; and

(e) Unearned premiums.

ii. For business ceded by domestic insurers authorized to write life, health and annuity insurance:

(a) Aggregate reserves for life policies and contracts net of policy loans and net due and deferred premiums;

(b) Aggregate reserves for accident and health policies;

(c) Deposit funds and other liabilities without life or disability contingencies; and

(d) Liabilities for policy and contract claims.

12. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that has been certified as a reinsurer in the domestic state of the ceding insurer and secures its obligations in accordance with the requirements of this paragraph 12.

a. In order to be eligible for certification, the assuming insurer shall meet the following requirements:

i. The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a qualified jurisdiction, as determined by the domestic state of the ceding insurer pursuant to paragraphs 12.c. and 12.k. of this subsection;

ii. The assuming insurer must maintain minimum capital and surplus, or its equivalent, in an amount as provided in paragraph 12.i.iii.(b) of this appendix;

iii. The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the domestic state of the ceding insurer, as provided in paragraph 12.i.iii.(c) of this appendix;

iv. The assuming insurer must agree to submit to the jurisdiction of the domestic state of the ceding insurer, appoint the commissioner of the domestic state of the ceding insurer as its agent for service of process in that state, and agree to provide security for 100 percent of the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers if it resists enforcement of a final U.S. judgment;

© 1999-2023 National Association of Insurance Commissioners

v. The assuming insurer must agree to meet applicable information filing requirements as determined by the domestic state of the ceding insurer, both with respect to an initial application for certification and on an ongoing basis; and

vi. The assuming insurer must satisfy any other requirements for certification deemed relevant by the domestic state of the ceding insurer.

b. An association including incorporated and individual unincorporated underwriters may be a certified reinsurer. In order to be eligible for certification, in addition to satisfying requirements of paragraph 12.a. of this appendix:

i. The association shall satisfy its minimum capital and surplus requirements through the capital and surplus equivalents (net of liabilities) of the association and its members, which shall include a joint central fund that may be applied to any unsatisfied obligation of the association or any of its members, in an amount determined by the domestic state of the ceding insurer to provide adequate protection;

ii. The incorporated members of the association shall not be engaged in any business other than underwriting as a member of the association and shall be subject to the same level of regulation and solvency control by the association's domiciliary regulator as are the unincorporated members; and

iii. Within ninety (90) days after its financial statements are due to be filed with the association's domiciliary regulator, the association shall provide to the domestic state of the ceding insurer an annual certification by the association's domiciliary regulator of the solvency of each underwriter member; or if a certification is unavailable, financial statements, prepared by independent public accountants, of each underwriter member of the association.

c. The domestic state of the ceding insurer shall create and publish a list of qualified jurisdictions, under which an assuming insurer licensed and domiciled in such jurisdiction is eligible to be considered for certification by the domestic state of the ceding insurer as a certified reinsurer.

i. In order to determine whether the domiciliary jurisdiction of a non-U.S. assuming insurer is eligible to be recognized as a qualified jurisdiction, the domestic state of the ceding insurer shall evaluate the appropriateness and effectiveness of the reinsurance supervisory system of the jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the non-U.S. jurisdiction to reinsurers licensed and domiciled in the U.S. A qualified jurisdiction must agree to share information and cooperate with the domestic state of the ceding insurer with respect to all certified reinsurers domiciled within that jurisdiction. A jurisdiction may not be recognized as a qualified jurisdiction if the domestic state of the ceding insurer has determined that the jurisdiction does not adequately and promptly enforce final U.S. judgments and arbitration awards. Additional factors may be considered in the discretion of the domestic state of the ceding insurer.

ii. A list of qualified jurisdictions shall be published through the NAIC Committee Process. The domestic state of the ceding insurer shall consider this list in determining qualified jurisdictions. If the domestic state of the ceding insurer approves a jurisdiction as qualified that does not appear on the list of qualified

© 1999-2023 National Association of Insurance Commissioners

jurisdictions, the state shall provide thoroughly documented justification in accordance with criteria to be developed under regulations.

iii. U.S. jurisdictions that meet the requirement for accreditation under the NAIC financial standards and accreditation program shall be recognized as qualified jurisdictions.

iv. If a certified reinsurer's domiciliary jurisdiction ceases to be a qualified jurisdiction, the domestic state of the ceding insurer has the discretion to suspend the reinsurer's certification indefinitely, in lieu of revocation.

d. The domestic state of the ceding insurer shall assign a rating to each certified reinsurer, giving due consideration to the financial strength ratings that have been assigned by rating agencies deemed acceptable to the commissioner pursuant to regulation. The domestic state of the ceding insurer shall publish a list of all certified reinsurers and their ratings.

e. A certified reinsurer shall secure obligations assumed from U.S. ceding insurers under this subsection at a level consistent with its rating, as specified in paragraph 12.h.i. of this appendix.

i. In order for a domestic ceding insurer to qualify for full financial statement credit for reinsurance ceded to a certified reinsurer, the certified reinsurer shall maintain security in a form acceptable to the domestic state of the ceding insurer and consistent with the provisions of paragraph 19 of this appendix, or in a multibeneficiary trust in accordance with paragraph 11 of this appendix, except as otherwise provided in paragraph 12.e.ii. through 12.e.v. of this appendix.

ii. If a certified reinsurer maintains a trust to fully secure its obligations subject to paragraph 11 of this appendix, and chooses to secure its obligations incurred as a certified reinsurer in the form of a multibeneficiary trust, the certified reinsurer shall maintain separate trust accounts for its obligations incurred under reinsurance agreements issued or renewed as a certified reinsurer with reduced security as permitted by paragraph 12, or comparable laws of other U.S. jurisdictions, and for its obligations subject to paragraph 11 of this appendix. It shall be a condition to the grant of certification under paragraph 12 of this appendix that the certified reinsurer shall have bound itself, by the language of the trust and agreement with the commissioner with principal regulatory oversight of each such trust account, to fund, upon termination of any such trust account, out of the remaining surplus of such trust any deficiency of any other such trust account.

iii. The minimum trusteed surplus requirements provided in paragraph 11 of this appendix are not applicable with respect to a multibeneficiary trust maintained by a certified reinsurer for the purpose of securing obligations incurred under this subsection, except that such trust shall maintain a minimum trusteed surplus of $10,000,000.

iv. With respect to obligations incurred by a certified reinsurer under paragraph 12 of this appendix, if the security is insufficient, the allowable reinsurance credit shall be reduced by an amount proportionate to the deficiency, and the domestic state of the ceding insurer has the discretion to impose further reductions in allowable credit upon finding that there is a material risk that the certified reinsurer's obligations will not be paid in full when due.

© 1999-2023 National Association of Insurance Commissioners

v. For purposes of paragraph 12, a certified reinsurer whose certification has been terminated for any reason shall be treated as a certified reinsurer required to secure 100 percent of its obligations.

(a) As used in paragraph 12.e.v., the term "terminated" refers to revocation, suspension, voluntary surrender and inactive status.

(b) If the domestic state of the ceding insurer continues to assign a higher rating as permitted by other provisions of paragraph 12, this requirement does not apply to a certified reinsurer in inactive status or to a reinsurer whose certification has been suspended.

f. If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the domestic state of the ceding insurer has the discretion to defer to that jurisdiction's certification, and has the discretion to defer to the rating assigned by that jurisdiction, and such assuming insurer shall be considered to be a certified reinsurer in the domestic state of the ceding insurer.

g. A certified reinsurer that ceases to assume new business in this state may request to maintain its certification in inactive status in order to continue to qualify for a reduction in security for its in-force business. An inactive certified reinsurer shall continue to comply with all applicable requirements of paragraph 12, and the domestic state of the ceding insurer shall assign a rating that takes into account, if relevant, the reasons why the reinsurer is not assuming new business.

h. The credit allowed under paragraph 12 shall be based upon the security held by or on behalf of the ceding insurer in accordance with a rating assigned to the certified reinsurer by the commissioner. The security shall be in a form consistent with the provisions of paragraph 12 and paragraph 19 of this appendix, and paragraphs 20-51 of this appendix, as applicable. The amount of security required in order for full credit to be allowed shall correspond with the following requirements:

i.

Ratings	**Security Required**
Secure – 1	0%
Secure – 2	10%
Secure – 3	20%
Secure – 4	50%
Secure – 5	75%
Vulnerable – 6	100%

ii. Affiliated reinsurance transactions shall receive the same opportunity for reduced security requirements as all other reinsurance transactions.

iii. The commissioner shall require the certified reinsurer to post one hundred percent (100%), for the benefit of the ceding insurer or its estate, security upon the entry of an order of rehabilitation, liquidation or conservation against the ceding insurer.

iv. In order to facilitate the prompt payment of claims, a certified reinsurer shall not be required to post security for catastrophe recoverables for a period of one year from the date of the first instance of a liability reserve entry by the ceding company as a result of a loss from a catastrophic occurrence as recognized by the commissioner. The one year deferral period is contingent upon the certified

© 1999-2023 National Association of Insurance Commissioners

reinsurer continuing to pay claims in a timely manner. Reinsurance recoverables for only the following lines of business as reported on the NAIC annual financial statement related specifically to the catastrophic occurrence will be included in the deferral:

(a) Line 1: Fire

(b) Line 2: Allied Lines

(c) Line 3: Farmowners multiple peril

(d) Line 4: Homeowners multiple peril

(e) Line 5: Commercial multiple peril

(f) Line 9: Inland Marine

(g) Line 12: Earthquake

(h) Line 21: Auto physical damage

v. Credit for reinsurance under paragraph 12 of this appendix shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer. Any reinsurance contract entered into prior to the effective date of the certification of the assuming insurer that is subsequently amended after the effective date of the certification of the assuming insurer, or a new reinsurance contract, covering any risk for which collateral was provided previously, shall only be subject to this section with respect to losses incurred and reserves reported from and after the effective date of the amendment or new contract.

vi. Nothing in paragraph 12 of this appendix shall prohibit the parties to a reinsurance agreement from agreeing to provisions establishing security requirements that exceed the minimum security requirements established for certified reinsurers under this section.

i. Certification Procedure

i. The commissioner of the domestic state of the ceding insurer shall post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least thirty (30) days after posting the notice required by this paragraph.

ii. The commissioner of the domestic state of the ceding insurer shall issue written notice to an assuming insurer that has made application and been approved as a certified reinsurer. Included in such notice shall be the rating assigned the certified reinsurer in accordance with paragraph 12.h. of this appendix. The commissioner shall publish a list of all certified reinsurers and their ratings.

iii. In order to be eligible for certification, the assuming insurer shall meet the following requirements:

© 1999-2023 National Association of Insurance Commissioners

(a) The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction, as determined by the commissioner pursuant to paragraph 12.c. and 12.k. of this appendix.

(b) The assuming insurer must maintain capital and surplus, or its equivalent, of no less than $250,000,000 calculated in accordance with paragraph 12.i.iv.(h) of this appendix. This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

(c) The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner. These ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. These financial strength ratings will be one factor used by the commissioner in determining the rating that is assigned to the assuming insurer. Acceptable rating agencies include the following:

(1) Standard & Poor's;

(2) Moody's Investors Service;

(3) Fitch Ratings;

(4) A.M. Best Company; or

(5) Any other Nationally Recognized Statistical Rating Organization.

(d) The certified reinsurer must comply with any other requirements reasonably imposed by the commissioner of the domestic state of the ceding insurer.

iv. Each certified reinsurer shall be rated on a legal entity basis, with due consideration being given to the group rating where appropriate, except that an association including incorporated and individual unincorporated underwriters that has been approved to do business as a single certified reinsurer may be evaluated on the basis of its group rating. Factors that may be considered as part of the evaluation process include, but are not limited to, the following:

(a) The certified reinsurer's financial strength rating from an acceptable rating agency. The maximum rating that a certified reinsurer may be assigned will correspond to its financial strength rating as outlined in the table below. The commissioner shall use the lowest financial strength rating received from an approved rating agency in establishing the maximum rating of a certified reinsurer. A failure to obtain or maintain at least two financial strength ratings from acceptable rating agencies will result in loss of eligibility for certification:

© 1999-2023 National Association of Insurance Commissioners

Ratings	Best	S&P	Moody's	Fitch
Secure – 1	A++	AAA	Aaa	AAA
Secure – 2	A+	AA+, AA, AA-	Aa1, Aa2, Aa3	AA+, AA, AA-
Secure – 3	A	A+, A	A1, A2	A+, A
Secure – 4	A-	A-	A3	A-
Secure – 5	B++, B+	BBB+, BBB, BBB-	Baa1, Baa2, Baa3	BBB+, BBB, BBB-
Vulnerable – 6	B, B-C++, C+, C, C-, D, E, F	BB+, BB, BB-, B+, B, B-, CCC, CC, C, D, R	Ba1, Ba2, Ba3, B1, B2, B3, Caa, Ca, C	BB+, BB, BB-, B+, B, B-, CCC+, CC, CCC-, DD

(b) The business practices of the certified reinsurer in dealing with its ceding insurers, including its record of compliance with reinsurance contractual terms and obligations;

(c) For certified reinsurers domiciled in the U.S., a review of the most recent applicable NAIC annual statement blank, either Schedule F (for property/casualty reinsurers) or Schedule S (for life and health reinsurers);

(d) For certified reinsurers not domiciled in the U.S., a review annually of Form CR-F (for property/casualty reinsurers) or Form CR-S (for life and health reinsurers);

(e) The reputation of the certified reinsurer for prompt payment of claims under reinsurance agreements, based on an analysis of ceding insurers' Schedule F reporting of overdue reinsurance recoverables, including the proportion of obligations that are more than ninety (90) days past due or are in dispute, with specific attention given to obligations payable to companies that are in administrative supervision or receivership;

(f) Regulatory actions against the certified reinsurer;

(g) The report of the independent auditor on the financial statements of the insurance enterprise, on the basis described in paragraph (h) below;

(h) For certified reinsurers not domiciled in the U.S., audited financial statements, regulatory filings, and actuarial opinion (as filed with the non-U.S. jurisdiction supervisor, with a translation into English). Upon the initial application for certification, the commissioner will consider

© 1999-2023 National Association of Insurance Commissioners

audited financial statements for the last two (2) years filed with its non-U.S. jurisdiction supervisor;

(i) The liquidation priority of obligations to a ceding insurer in the certified reinsurer's domiciliary jurisdiction in the context of an insolvency proceeding;

(j) A certified reinsurer's participation in any solvent scheme of arrangement, or similar procedure, which involves U.S. ceding insurers. The commissioner shall receive prior notice from a certified reinsurer that proposes participation by the certified reinsurer in a solvent scheme of arrangement; and

(k) Any other information deemed relevant by the commissioner.

v. Based on the analysis conducted under paragraph 12.i.iv.(e) of a certified reinsurer's reputation for prompt payment of claims, the commissioner may make appropriate adjustments in the security the certified reinsurer is required to post to protect its liabilities to U.S. ceding insurers, provided that the commissioner shall, at a minimum, increase the security the certified reinsurer is required to post by one rating level under paragraph 12.h. if the commissioner finds that:

(a) more than fifteen percent (15%) of the certified reinsurer's ceding insurance clients have overdue reinsurance recoverables on paid losses of ninety (90) days or more which are not in dispute and which exceed $100,000 for each cedent; or

(b) the aggregate amount of reinsurance recoverables on paid losses which are not in dispute that are overdue by ninety (90) days or more exceeds $50,000,000.

vi. The assuming insurer must submit a properly executed Form CR-1 as evidence of its submission to the jurisdiction of this state, appointment of the commissioner as an agent for service of process in this state, and agreement to provide security for one hundred percent (100%) of the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers if it resists enforcement of a final U.S. judgment. The commissioner shall not certify any assuming insurer that is domiciled in a jurisdiction that the commissioner has determined does not adequately and promptly enforce final U.S. judgments or arbitration awards.

vii. The certified reinsurer must agree to meet applicable information filing requirements as determined by the commissioner, both with respect to an initial application for certification and on an ongoing basis. All information submitted by certified reinsurers which are not otherwise public information subject to disclosure shall be exempted from disclosure under [cite state law equivalent of Freedom of Information Act] and shall be withheld from public disclosure. The applicable information filing requirements are, as follows:

(a) Notification within ten (10) days of any regulatory actions taken against the certified reinsurer, any change in the provisions of its domiciliary license or any change in rating by an approved rating agency, including a statement describing such changes and the reasons therefore;

© 1999-2023 National Association of Insurance Commissioners

(b) Annually, Form CR-F or CR-S, as applicable;

(c) Annually, the report of the independent auditor on the financial statements of the insurance enterprise, on the basis described in paragraph 12.i.vii.(d) below;

(d) Annually, the most recent audited financial statements, regulatory filings, and actuarial opinion (as filed with the certified reinsurer's supervisor, with a translation into English). Upon the initial certification, audited financial statements for the last two (2) years filed with the certified reinsurer's supervisor;

(e) At least annually, an updated list of all disputed and overdue reinsurance claims regarding reinsurance assumed from U.S. domestic ceding insurers;

(f) A certification from the certified reinsurer's domestic regulator that the certified reinsurer is in good standing and maintains capital in excess of the jurisdiction's highest regulatory action level; and

(g) Any other information that the commissioner may reasonably require.

j. Change in Rating or Revocation of Certification

i. In the case of a downgrade by a rating agency or other disqualifying circumstance, the commissioner shall upon written notice assign a new rating to the certified reinsurer in accordance with the requirements of paragraph 12.i.

ii. The commissioner shall have the authority to suspend, revoke, or otherwise modify a certified reinsurer's certification at any time if the certified reinsurer fails to meet its obligations or security requirements under this section, or if other financial or operating results of the certified reinsurer, or documented significant delays in payment by the certified reinsurer, lead the commissioner to reconsider the certified reinsurer's ability or willingness to meet its contractual obligations.

iii. If the rating of a certified reinsurer is upgraded by the commissioner, the certified reinsurer may meet the security requirements applicable to its new rating on a prospective basis, but the commissioner shall require the certified reinsurer to post security under the previously applicable security requirements as to all contracts in force on or before the effective date of the upgraded rating. If the rating of a certified reinsurer is downgraded by the commissioner, the commissioner shall require the certified reinsurer to meet the security requirements applicable to its new rating for all business it has assumed as a certified reinsurer.

iv. Upon revocation of the certification of a certified reinsurer by the commissioner, the assuming insurer shall be required to post security in accordance with paragraph 19 in order for the ceding insurer to continue to take credit for reinsurance ceded to the assuming insurer. If funds continue to be held in trust in accordance with paragraph 11, the commissioner may allow additional credit equal to the ceding insurer's *pro rata* share of such funds, discounted to reflect the risk of uncollectibility and anticipated expenses of trust administration. Notwithstanding the change of a certified reinsurer's rating or revocation of its certification, a domestic insurer that has ceded reinsurance to that certified

© 1999-2023 National Association of Insurance Commissioners

reinsurer may not be denied credit for reinsurance for a period of three (3) months for all reinsurance ceded to that certified reinsurer, unless the reinsurance is found by the commissioner to be at high risk of uncollectibility.

k. Qualified Jurisdictions

i. If, upon conducting an evaluation with respect to the reinsurance supervisory system of any non-U.S. assuming insurer, the commissioner of the domestic state of the ceding insurer determines that the jurisdiction qualifies to be recognized as a qualified jurisdiction, the commissioner shall publish notice and evidence of such recognition in an appropriate manner. The commissioner may establish a procedure to withdraw recognition of those jurisdictions that are no longer qualified.

ii. In order to determine whether the domiciliary jurisdiction of a non-U.S. assuming insurer is eligible to be recognized as a qualified jurisdiction, the commissioner shall evaluate the reinsurance supervisory system of the non-U.S. jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the non-U.S. jurisdiction to reinsurers licensed and domiciled in the U.S. The commissioner shall determine the appropriate approach for evaluating the qualifications of such jurisdictions, and create and publish a list of jurisdictions whose reinsurers may be approved by the commissioner as eligible for certification. A qualified jurisdiction must agree to share information and cooperate with the commissioner with respect to all certified reinsurers domiciled within that jurisdiction. Additional factors to be considered in determining whether to recognize a qualified jurisdiction, in the discretion of the commissioner, include but are not limited to the following:

(a) The framework under which the assuming insurer is regulated.

(b) The structure and authority of the domiciliary regulator with regard to solvency regulation requirements and financial surveillance.

(c) The substance of financial and operating standards for assuming insurers in the domiciliary jurisdiction.

(d) The form and substance of financial reports required to be filed or made publicly available by reinsurers in the domiciliary jurisdiction and the accounting principles used.

(e) The domiciliary regulator's willingness to cooperate with U.S. regulators in general and the commissioner in particular.

(f) The history of performance by assuming insurers in the domiciliary jurisdiction.

(g) Any documented evidence of substantial problems with the enforcement of final U.S. judgments in the domiciliary jurisdiction. A jurisdiction will not be considered to be a qualified jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

© 1999-2023 National Association of Insurance Commissioners

(h) Any relevant international standards or guidance with respect to mutual recognition of reinsurance supervision adopted by the International Association of Insurance Supervisors or successor organization.

(i) Any other matters deemed relevant by the commissioner.

iii. A list of qualified jurisdictions shall be published through the NAIC Committee Process. The commissioner shall consider this list in determining qualified jurisdictions. If the commissioner approves a jurisdiction as qualified that does not appear on the list of qualified jurisdictions, the commissioner shall provide thoroughly documented justification with respect to the criteria provided under paragraphs 12.k.ii.(a) to (i).

iv. U.S. jurisdictions that meet the requirements for accreditation under the NAIC financial standards and accreditation program shall be recognized as qualified jurisdictions.

l. Recognition of Certification Issued by an NAIC Accredited Jurisdiction

i. If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the commissioner has the discretion to defer to that jurisdiction’s certification, and to defer to the rating assigned by that jurisdiction, if the assuming insurer submits a properly executed Form CR-1 and such additional information as the commissioner requires. The assuming insurer shall be considered to be a certified reinsurer in this State.

ii. Any change in the certified reinsurer’s status or rating in the other jurisdiction shall apply automatically in this State as of the date it takes effect in the other jurisdiction. The certified reinsurer shall notify the commissioner of any change in its status or rating within 10 days after receiving notice of the change.

iii. The commissioner may withdraw recognition of the other jurisdiction’s rating at any time and assign a new rating in accordance with paragraph 12.j. of this appendix.

iv. The commissioner may withdraw recognition of the other jurisdiction’s certification at any time, with written notice to the certified reinsurer. Unless the commissioner suspends or revokes the certified reinsurer’s certification in accordance with paragraph 12.j. of this appendix, the certified reinsurer’s certification shall remain in good standing in the domestic state of the ceding insurer for a period of three (3) months, which shall be extended if additional time is necessary to consider the assuming insurer’s application for certification in this State.

m. Mandatory Funding Clause. In addition to the clauses required under *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance* and *SSAP No. 62R—Property and Casualty Reinsurance*, reinsurance contracts entered into or renewed under paragraph 12 of this appendix shall include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurer under this section for reinsurance ceded to the certified reinsurer.

n. The commissioner shall comply with all reporting and notification requirements that may be established by the NAIC with respect to certified reinsurers and qualified jurisdictions.

© 1999-2023 National Association of Insurance Commissioners

13. Credit shall be allowed when the reinsurance is ceded to an assuming insurer meeting each of the conditions set forth in paragraphs 13.a. through 13.h. Credit shall be allowed for reinsurance ceded by a domestic insurer to an assuming insurer that is licensed to write reinsurance by, and has its head office or is domiciled in, a Reciprocal Jurisdiction, and which meets the other requirements of paragraph 13.

a. The assuming insurer must have its head office or be domiciled in, as applicable, and be licensed in a Reciprocal Jurisdiction. A "Reciprocal Jurisdiction" is a jurisdiction that meets one of the following:

i. A non-U.S. jurisdiction that is subject to an in-force covered agreement with the United States, each within its legal authority or, in the case of a covered agreement between the United States and European Union, is a member state of the European Union. For purposes of this subsection, a "covered agreement" is an agreement entered into pursuant to Dodd-Frank Wall Street Reform and Consumer Protection Act, 31 U.S.C. §§ 313 and 314, that is currently in effect or in a period of provisional application and addresses the elimination, under specified conditions, of collateral requirements as a condition for entering into any reinsurance agreement with a ceding insurer domiciled in this state or for allowing the ceding insurer to recognize credit for reinsurance;

ii. A U.S. jurisdiction that meets the requirements for accreditation under the NAIC financial standards and accreditation program; or

iii. A qualified jurisdiction, as determined by the commissioner, which is not otherwise described in paragraphs 13.a.i. or 13.a.ii. and which the commissioner determines meets all of the following additional requirements:

(a) Provides that an insurer which has its head office or is domiciled in such qualified jurisdiction shall receive credit for reinsurance ceded to a U.S.-domiciled assuming insurer in the same manner as credit for reinsurance is received for reinsurance assumed by insurers domiciled in such qualified jurisdiction;

(b) Does not require a U.S.-domiciled assuming insurer to establish or maintain a local presence as a condition for entering into a reinsurance agreement with any ceding insurer subject to regulation by the non-U.S. jurisdiction or as a condition to allow the ceding insurer to recognize credit for such reinsurance;

(c) Recognizes the U.S. state regulatory approach to group supervision and group capital, by providing written confirmation by a competent regulatory authority, in such qualified jurisdiction, that insurers and insurance groups that are domiciled or maintain their headquarters in this state or another jurisdiction accredited by the NAIC shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the commissioner or the commissioner of the domiciliary state and will not be subject to group supervision at the level of the worldwide parent undertaking of the insurance or reinsurance group by the qualified jurisdiction; and

(d) Provides written confirmation by a competent regulatory authority in such qualified jurisdiction that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to

© 1999-2023 National Association of Insurance Commissioners

the commissioner in accordance with a memorandum of understanding or similar document between the commissioner and such qualified jurisdiction, including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

b. The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction, and confirmed as set forth in paragraph 13.g. according to the methodology of its domiciliary jurisdiction, in the following amounts:

i. No less than $250,000,000; or

ii. If the assuming insurer is an association, including incorporated and individual unincorporated underwriters:

(a) Minimum capital and surplus equivalents (net of liabilities) or own funds of the equivalent of at least $250,000,000; and

(b) A central fund containing a balance of the equivalent of at least $250,000,000.

c. The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio, as applicable, as follows:

i. If the assuming insurer has its head office or is domiciled in a Reciprocal Jurisdiction as defined in paragraph 13.a.i., the ratio specified in the applicable covered agreement;

ii. If the assuming insurer is domiciled in a Reciprocal Jurisdiction as defined in paragraph 13.a.ii., a risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, calculated in accordance with the formula developed by the NAIC; or

iii. If the assuming insurer is domiciled in a Reciprocal Jurisdiction as defined in paragraph 13.a.iii., after consultation with the Reciprocal Jurisdiction and considering any recommendations published through the NAIC Committee Process, such solvency or capital ratio as the commissioner determines to be an effective measure of solvency.

d. The assuming insurer must agree and provide adequate assurance to the commissioner, in a form of a properly executed Form RJ-1, as follows:

i. The assuming insurer must provide prompt written notice and explanation to the commissioner if it falls below the minimum requirements set forth in paragraphs 13.b. or 13.c., or if any regulatory action is taken against it for serious noncompliance with applicable law;

ii. The assuming insurer must consent in writing to the jurisdiction of the courts of this state and to the appointment of the commissioner as agent for service of process. The commissioner may require that consent for service of process be provided to the commissioner and included in each reinsurance agreement. Nothing in this provision shall limit, or in any way alter, the capacity of parties to

© 1999-2023 National Association of Insurance Commissioners

a reinsurance agreement to agree to alternative dispute resolution mechanisms, except to the extent such agreements are unenforceable under applicable insolvency or delinquency laws;

iii. The assuming insurer must consent in writing to pay all final judgments, wherever enforcement is sought, obtained by a ceding insurer or its legal successor, that have been declared enforceable in the jurisdiction where the judgment was obtained;

iv. Each reinsurance agreement must include a provision requiring the assuming insurer to provide security in an amount equal to one hundred percent (100%) of the assuming insurer's liabilities attributable to reinsurance ceded pursuant to that agreement if the assuming insurer resists enforcement of a final judgment that is enforceable under the law of the jurisdiction in which it was obtained or a properly enforceable arbitration award, whether obtained by the ceding insurer or by its legal successor on behalf of its resolution estate; and

v. The assuming insurer must confirm that it is not presently participating in any solvent scheme of arrangement which involves this state's ceding insurers, and agree to notify the ceding insurer and the commissioner and to provide security in an amount equal to one hundred percent (100%) of the assuming insurer's liabilities to the ceding insurer, should the assuming insurer enter into such a solvent scheme of arrangement. Such security shall be in a form consistent with the provisions of paragraph 12 and paragraph 19. The term "solvent scheme of arrangement" means a foreign or alien statutory or regulatory compromise procedure subject to requisite majority creditor approval and judicial sanction in the assuming insurer's home jurisdiction either to finally commute liabilities of duly noticed classed members or creditors of a solvent debtor, or to reorganize or restructure the debts and obligations of a solvent debtor on a final basis, and which may be subject to judicial recognition and enforcement of the arrangement by a governing authority outside the ceding insurer's home jurisdiction.

vi. The assuming insurer must agree in writing to meet the applicable information filing requirements as set forth in paragraph 13.e.

e. The assuming insurer or its legal successor must provide, if requested by the commissioner, on behalf of itself and any legal predecessors, the following documentation to the commissioner:

i. For the two years preceding entry into the reinsurance agreement and on an annual basis thereafter, the assuming insurer's annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report;

ii. For the two years preceding entry into the reinsurance agreement, the solvency and financial condition report or actuarial opinion, if filed with the assuming insurer's supervisor;

iii. Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, an updated list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States; and

© 1999-2023 National Association of Insurance Commissioners

iv. Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, information regarding the assuming insurer's assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer to allow for the evaluation of the criteria set forth in paragraph 13.f.

f. The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements. The lack of prompt payment will be evidenced if any of the following criteria is met:

i. More than fifteen percent (15%) of the reinsurance recoverables from the assuming insurer are overdue and in dispute as reported to the commissioner;

ii. More than fifteen percent (15%) of the assuming insurer's ceding insurers or reinsurers have overdue reinsurance recoverable on paid losses of 90 days or more which are not in dispute and which exceed for each ceding insurer $100,000, or as otherwise specified in a covered agreement; or

iii. The aggregate amount of reinsurance recoverable on paid losses which are not in dispute, but are overdue by 90 days or more, exceeds $50,000,000, or as otherwise specified in a covered agreement.

g. The assuming insurer's supervisory authority must confirm to the commissioner on an annual basis, as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction, that the assuming insurer complies with the requirements set forth in paragraphs 13.b. and 13.c.

h. Nothing in this provision precludes an assuming insurer from providing the commissioner with information on a voluntary basis.

i. The commissioner shall timely create and publish a list of Reciprocal Jurisdictions.

i. A list of Reciprocal Jurisdictions is published through the NAIC Committee Process. The commissioner's list shall include any Reciprocal Jurisdiction as defined under paragraphs 13.a.i. and 13.a.ii., and shall consider any other Reciprocal Jurisdiction included on the NAIC list. The commissioner may approve a jurisdiction that does not appear on the NAIC list of Reciprocal Jurisdictions.

ii. The commissioner may remove a jurisdiction from the list of Reciprocal Jurisdictions upon a determination that the jurisdiction no longer meets one or more of the requirements of a Reciprocal Jurisdiction, except that the commissioner shall not remove from the list a Reciprocal Jurisdiction as defined under paragraphs 13.a.i. and 13.a.ii. Upon removal of a Reciprocal Jurisdiction from this list credit for reinsurance ceded to an assuming insurer domiciled in that jurisdiction shall be allowed, if otherwise allowed pursuant to this appendix.

j. The commissioner shall timely create and publish a list of assuming insurers that have satisfied the conditions set forth in paragraph 13 and to which cessions shall be granted credit in accordance with paragraph 13.

i. If an NAIC accredited jurisdiction has determined that the conditions set forth in paragraph 13 have been met, the commissioner has the discretion to defer to that jurisdiction's determination, and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit in accordance with

© 1999-2023 National Association of Insurance Commissioners

this subsection. The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC in satisfaction of the requirements of paragraph 13.b., 13.c. and 13.d.

ii. When requesting that the commissioner defer to another NAIC accredited jurisdiction's determination, an assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require. A state that has received such a request will notify other states through the NAIC Committee Process and provide relevant information with respect to the determination of eligibility.

k. If the commissioner determines that an assuming insurer no longer meets one or more of the requirements under this section, the commissioner may revoke or suspend the eligibility of the assuming insurer for recognition under this section.

i. While an assuming insurer's eligibility is suspended, no reinsurance agreement issued, amended or renewed after the effective date of the suspension qualifies for credit except to the extent that the assuming insurer's obligations under the contract are secured in accordance with paragraph 19.

ii. If an assuming insurer's eligibility is revoked, no credit for reinsurance may be granted after the effective date of the revocation with respect to any reinsurance agreements entered into by the assuming insurer, including reinsurance agreements entered into prior to the date of revocation, except to the extent that the assuming insurer's obligations under the contract are secured in a form acceptable to the commissioner and consistent with the provisions of paragraph 19.

l. Before denying statement credit or imposing a requirement to post security with respect to paragraph 13.k. or adopting any similar requirement that will have substantially the same regulatory impact as security, the commissioner shall:

i. Communicate with the ceding insurer, the assuming insurer, and the assuming insurer's supervisory authority that the assuming insurer no longer satisfies one of the conditions listed in paragraphs 13.a., 13.b. and 13.c.;

ii. Provide the assuming insurer with 30 days from the initial communication to submit a plan to remedy the defect, and 90 days from the initial communication to remedy the defect, except in exceptional circumstances in which a shorter period is necessary for policyholder and other consumer protection;

iii. After the expiration of 90 days or less, as set out in paragraph 13.l.ii., if the commissioner determines that no or insufficient action was taken by the assuming insurer, the commissioner may impose any of the requirements as set out in this subsection; and

iv. Provide a written explanation to the assuming insurer of any of the requirements set out in paragraph 13.l.

m. If subject to a legal process of rehabilitation, liquidation or conservation, as applicable, the ceding insurer, or its representative, may seek and, if determined appropriate by the court in which the proceedings are pending, may obtain an order requiring that the assuming insurer post security for all outstanding liabilities.

© 1999-2023 National Association of Insurance Commissioners

n. Nothing in this subsection shall limit or in any way alter the capacity of parties to a reinsurance agreement to agree on requirements for security or other terms in that reinsurance agreement, except as expressly prohibited by this appendix.

o. Credit may be taken under this subsection only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements pursuant to paragraphs 13.a. through 13.h., and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

i. This paragraph does not alter or impair a ceding insurer's right to take credit for reinsurance, to the extent that credit is not available under this subsection, as long as the reinsurance qualifies for credit under any other applicable provision of this appendix.

ii. Nothing in this subsection shall authorize an assuming insurer to withdraw or reduce the security provided under any reinsurance agreement except as permitted by the terms of the agreement.

iii. Nothing in this subsection shall limit, or in any way alter, the capacity of parties to any reinsurance agreement to renegotiate the agreement.

14. Credit shall be allowed when the reinsurance is ceded to an assuming insurer not meeting the requirements of paragraphs 8, 9, 10, 11, 12 or 13 of this appendix, but only as to the insurance of risks located in jurisdictions where the reinsurance is required by applicable law or regulation of that jurisdiction.

15. If the assuming insurer is not licensed, accredited or certified to transact insurance or reinsurance in the domiciliary state of the ceding insurer, the credit allowed by paragraphs 10 and 11 of this appendix shall not be allowed unless the assuming insurer agrees in the reinsurance agreements:

a. i. That in the event of the failure of the assuming insurer to perform its obligations under the terms of the reinsurance agreement, the assuming insurer, at the request of the ceding insurer, shall submit to the jurisdiction of any court of competent jurisdiction in any state of the United States, will comply with all requirements necessary to give the court jurisdiction, and will abide by the final decision of the court or of any appellate court in the event of an appeal.

ii. To designate the commissioner or a designated attorney as its true and lawful attorney upon whom may be served any lawful process in any action, suit or proceeding instituted by or on behalf of the ceding insurer.

b. This paragraph 15 is not intended to conflict with or override the obligation of the parties to a reinsurance agreement to arbitrate their disputes, if this obligation is created in the agreement.

16. If the assuming insurer does not meet the requirements of paragraphs 8, 9 or 10, the credit allowed by paragraph 11 or 12 of this appendix shall not be allowed unless the assuming insurer agrees in the trust agreements to the following conditions:

a. Notwithstanding any other provisions in the trust instrument, if the trust fund is inadequate because it contains an amount less than the amount required by paragraph 11 c. of this appendix, or if the grantor of the trust has been declared insolvent or placed into

receivership, rehabilitation, liquidation or similar proceedings under the laws of its state or country of domicile, the trustee shall comply with an order of the commissioner with regulatory oversight over the trust or with an order of a court of competent jurisdiction directing the trustee to transfer to the commissioner with regulatory oversight all of the assets of the trust fund.

b. The assets shall be distributed by and claims shall be filed with and valued by the commissioner with regulatory oversight in accordance with the laws of the state in which the trust is domiciled that are applicable to the liquidation of domestic insurance companies.

c. If the commissioner with regulatory oversight determines that the assets of the trust fund or any part thereof are not necessary to satisfy the claims of the U.S. ceding insurers of the grantor of the trust, the assets or part thereof shall be returned by the commissioner with regulatory oversight to the trustee for distribution in accordance with the trust agreement.

d. The grantor shall waive any right otherwise available to it under U.S. law that is inconsistent with this provision.

17. If an accredited or certified reinsurer ceases to meet the requirements for accreditation or certification, the domestic state of the ceding insurer may suspend or revoke the reinsurer’s accreditation or certification.

a. The domestic state of the ceding insurer must give the reinsurer notice an opportunity for hearing. The suspension or revocation may not take effect until after the state’s order on hearing, unless:

i. The reinsurer waives its right to hearing;

ii. The state’s order is based on regulatory action by the reinsurer’s domiciliary jurisdiction or the voluntary surrender or termination of the reinsurer’s eligibility to transact insurance or reinsurance business in its domiciliary jurisdiction or in the primary certifying state of the reinsurer under paragraph 12.f. of this appendix; or

iii. The domestic state of the ceding insurer finds that an emergency requires immediate action and a court of competent jurisdiction has not stayed the state’s action.

b. While a reinsurer’s accreditation or certification is suspended, no reinsurance contract issued or renewed after the effective date of the suspension qualifies for credit except to the extent that the reinsurer’s obligations under the contract are secured in accordance with paragraph 19. If a reinsurer’s accreditation or certification is revoked, no credit for reinsurance may be granted after the effective date of the revocation except to the extent that the reinsurer’s obligations under the contract are secured in accordance with paragraph 12.e. or paragraph 19.

Valuation of and Requirements for Trust Assets

18. Assets deposited in the trust shall be valued according to their current fair market value and shall consist only of cash in U.S. dollars, certificates of deposit issued by a U.S. financial institution as defined in paragraph 53, clean, irrevocable, unconditional and “evergreen” letters of credit issued or confirmed by a qualified U.S. financial institution, as defined in paragraph 53, and investments of the type specified in this paragraph, but investments in or issued by an entity controlling, controlled by or under common

© 1999-2023 National Association of Insurance Commissioners

control with either the grantor or beneficiary of the trust shall not exceed five percent (5%) of total investments. No more than twenty percent (20%) of the total of the investments in the trust may be foreign investments authorized under paragraphs 18.a.v., 18.c., 18.f.ii. or 18.g., and no more than ten percent (10%) of the total of the investments in the trust may be securities denominated in foreign currencies. For purposes of applying the preceding sentence, a depository receipt denominated in U.S. dollars and representing rights conferred by a foreign security shall be classified as a foreign investment denominated in a foreign currency. The assets of a trust shall be invested only as follows:

a. Government obligations that are not in default as to principal or interest, that are valid and legally authorized and that are issued, assumed or guaranteed by:

i. The United States or by any agency or instrumentality of the United States;

ii. A state of the United States;

iii. A territory, possession or other governmental unit of the United States;

iv. An agency or instrumentality of a governmental unit referred to in paragraphs 18.a.i. and 18.a.ii. if the obligations shall be by law (statutory of otherwise) payable, as to both principal and interest, from taxes levied or by law required to be levied or from adequate special revenues pledged or otherwise appropriated or by law required to be provided for making these payments, but shall not be obligations eligible for investment under this paragraph if payable solely out of special assessments on properties benefited by local improvements; or

v. The government of any other country that is a member of the Organization for Economic Cooperation and Development and whose government obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC;

b. Obligations that are issued in the United States, or that are dollar denominated and issued in a non-U.S. market, by a solvent U.S. institution (other than an insurance company) or that are assumed or guaranteed by a solvent U.S. institution (other than an insurance company) and that are not in default as to principal or interest if the obligations:

i. Are rated A or higher (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC, or if not so rated, are similar in structure and other material respects to other obligations of the same institution that are so rated;

ii. Are insured by at least one authorized insurer (other than the investing insurer or a parent, subsidiary or affiliate of the investing insurer) licensed to insure obligations in this state and, after considering the insurance, are rated AAA (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC; or

iii. Have been designated as Class One or Class Two by the Securities Valuation Office of the NAIC;

c. Obligations issued, assumed or guaranteed by a solvent non U.S. institution chartered in a country that is a member of the Organization for Economic Cooperation and Development or obligations of U.S. corporations issued in a non-U.S. currency, provided that in either case the obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC;

© 1999-2023 National Association of Insurance Commissioners

d. An investment made pursuant to the provisions of paragraphs 18.a., 18.b. or 18.c. shall be subject to the following additional limitations:

i. An investment in or loan upon the obligations of an institution other than an institution that issues mortgage-related securities shall not exceed five percent (5%) of the assets of the trust;

ii. An investment in any one mortgage-related security shall not exceed five percent (5%) of the assets of the trust;

iii. The aggregate total investment in mortgage-related securities shall not exceed twenty-five percent (25%) of the assets of the trust; and

iv. Preferred or guaranteed shares issued or guaranteed by a solvent U.S. institution are permissible investments if all of the institution's obligations are eligible as investments under paragraphs 18.b.i. and 18.b.iii., but shall not exceed two percent (2%) of the assets of the trust.

e. As used in this appendix:

i. "Mortgage-related security" means an obligation that is rated AA or higher (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC and that either:

(a) Represents ownership of one or more promissory notes or certificates of interest or participation in the notes (including any rights designed to assure servicing of, or the receipt or timeliness of receipt by the holders of the notes, certificates, or participation of amounts payable under, the notes, certificates or participation), that:

(1) Are directly secured by a first lien on a single parcel of real estate, including stock allocated to a dwelling unit in a residential cooperative housing corporation, upon which is located a dwelling or mixed residential and commercial structure, or on a residential manufactured home as defined in 42 U.S.C.A. Section 5402(6), whether the manufactured home is considered real or personal property under the laws of the state in which it is located; and

(2) Were originated by a savings and loan association, savings bank, commercial bank, credit union, insurance company, or similar institution that is supervised and examined by a federal or state housing authority, or by a mortgagee approved by the Secretary of Housing and Urban Development pursuant to 12 U.S.C.A. Sections 1709 and 1715-b, or, where the notes involve a lien on the manufactured home, by an institution or by a financial institution approved for insurance by the Secretary of Housing and Urban Development pursuant to 12 U.S.C.A. Section 1703; or

(b) Is secured by one or more promissory notes or certificates of deposit or participations in the notes (with or without recourse to the insurer of the notes) and, by its terms, provides for payments of principal in relation to payments, or reasonable projections of payments, or notes meeting the requirements of paragraphs 18.e.i.(a)(1) and 18.e.i.(a)(2);

© 1999-2023 National Association of Insurance Commissioners

ii. "Promissory note," when used in connection with a manufactured home, shall also include a loan, advance or credit sale as evidenced by a retail installment sales contract or other instrument.

f. Equity interests

i. Investments in common shares or partnership interests of a solvent U.S. institution are permissible if:

(a) Its obligations and preferred shares, if any, are eligible as investments under this paragraph; and

(b) The equity interests of the institution (except an insurance company) are registered on a national securities exchange as provided in the Securities Exchange Act of 1934, 15 U.S.C. §§ 78a to 78kk or otherwise registered pursuant to that Act, and if otherwise registered, price quotations for them are furnished through a nationwide automated quotations system approved by the Financial Industry Regulatory Authority, or successor organization. A trust shall not invest in equity interests under this paragraph an amount exceeding one percent (1%) of the assets of the trust even though the equity interests are not so registered and are not issued by an insurance company.

ii. Investments in common shares of a solvent institution organized under the laws of a country that is a member of the Organization for Economic Cooperation and Development, if:

(a) All its obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC; and

(b) The equity interests of the institution are registered on a securities exchange regulated by the government of a country that is a member of the Organization for Economic Cooperation and Development.

iii. An investment in or loan upon any one institution's outstanding equity interests shall not exceed one percent (1%) of the assets of the trust. The cost of an investment in equity interests made pursuant to this paragraph, when added to the aggregate cost of other investments in equity interests then held pursuant to this paragraph, shall not exceed ten percent (10%) of the assets in the trust;

g. Obligations issued, assumed or guaranteed by a multinational development bank, provided the obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC.

h. Investment companies:

i. Securities of an investment company registered pursuant to the Investment Company Act of 1940, 15 U.S.C. § 802, are allowable investments if the investment company:

(a) Invests at least ninety percent (90%) of its assets in the types of securities that qualify as an investment under paragraphs 18.a., 18.b., or 18.c., or invests in securities that are determined to be substantively similar to the types of securities set forth in paragraphs 18.a., 18.b., or 18.c.; or

© 1999-2023 National Association of Insurance Commissioners

(b) Invests at least ninety percent (90%) of its assets in the types of equity interests that qualify as an investment under paragraph 18.f.i.;

ii. Investments made by a trust in investment companies under this paragraph shall not exceed the following limitations:

(a) An investment in an investment company qualifying under paragraph 18.h.i.(a) shall not exceed ten percent (10%) of the assets in the trust and the aggregate amount of investment in qualifying investment companies shall not exceed twenty-five percent (25%) of the assets in the trust; and

(b) Investments in an investment company qualifying under paragraph 18.h.i.(b) of this paragraph shall not exceed five percent (5%) of the assets in the trust and the aggregate amount of investment in qualifying investment companies shall be included when calculating the permissible aggregate value of equity interests pursuant to paragraph 18.f.i.

i. Letters of Credit

i. In order for a letter of credit to qualify as an asset of the trust, the trustee shall have the right and the obligation pursuant to the deed of trust or some other binding agreement (as duly approved by the commissioner), to immediately draw down the full amount of the letter of credit and hold the proceeds in trust for the beneficiaries of the trust if the letter of credit will otherwise expire without being renewed or replaced.

ii. The trust agreement shall provide that the trustee shall be liable for its negligence, willful misconduct or lack of good faith. The failure of the trustee to draw against the letter of credit in circumstances where such draw would be required shall be deemed to be negligence and/or willful misconduct.

Asset or Reduction from Liability for Reinsurance Ceded by a Domestic Insurer to an Assuming Insurer not Meeting the Requirements detailed above under "Credit Allowed a Domestic Ceding Insurer" (paragraphs 7-18)

19. An asset or a reduction from liability for the reinsurance ceded by a domestic insurer to an assuming insurer not meeting the requirements under "Credit Allowed a Domestic Ceding Insurer" (paragraphs 7-18) shall be allowed in an amount not exceeding the liabilities carried by the ceding insurer. The reduction shall be in the amount of funds held by or on behalf of the ceding insurer, including funds held in trust for the ceding insurer, under a reinsurance contract with the assuming insurer as security for the payment of obligations thereunder, if the security is held in the United States subject to withdrawal solely by, and under the exclusive control of, the ceding insurer; or, in the case of a trust, held in a qualified U.S. financial institution, as defined under "Qualified U.S. Financial Institutions" at paragraph 54. This security may be in the form of:

a. Cash;

b. Securities listed by the Securities Valuation Office of the National Association of Insurance Commissioners, including those deemed exempt from filing as defined by the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, and qualifying as admitted assets;

Drafting Note: The Purposes and Procedures Manual of the NAIC Securities Valuation Office has been renamed the Purposes and Procedures Manual of the NAIC Investment Analysis Office; however, the Model law refers to the previous name.

© 1999-2023 National Association of Insurance Commissioners

c. i. Clean, irrevocable, unconditional and evergreen letters of credit, issued or confirmed by a qualified U.S. financial institution, as defined in paragraph 53, effective no later than December 31 of the year for which the filing is being made, and in the possession of, or in trust for, the ceding insurer on or before the filing date of its annual statement;

ii. Letters of credit meeting applicable standards of issuer acceptability as of the dates of their issuance (or confirmation) shall, notwithstanding the issuing (or confirming) institution's subsequent failure to meet applicable standards of issuer acceptability, continue to be acceptable as security until their expiration, extension, renewal, modification or amendment, whichever first occurs.

d. An admitted asset or a reduction from liability for reinsurance ceded to an unauthorized assuming insurer pursuant to this appendix shall be allowed only when the requirements of paragraph 15 and the applicable portions under the sections below titled "Trust Agreements Qualified under Paragraph 19", "Letters of Credit Qualified under Paragraph 19", and "Other Security" at paragraph 51.

Trust Agreements Qualified under Paragraph 19

20. The trust agreement shall be entered into between the beneficiary, the grantor and a trustee, which shall be a qualified U.S. financial institution as defined in paragraph 54.

21. The trust agreement shall create a trust account into which assets shall be deposited.

22. All assets in the trust account shall be held by the trustee at the trustee's office in the United States.

23. The trust agreement shall provide that:

a. The beneficiary shall have the right to withdraw assets from the trust account at any time, without notice to the grantor, subject only to written notice from the beneficiary to the trustee;

b. No other statement or document is required to be presented to withdraw assets, except that the beneficiary may be required to acknowledge receipt of withdrawn assets;

c. It is not subject to any conditions or qualifications outside of the trust agreement; and

d. It shall not contain references to any other agreements or documents except as provided for in paragraph 30.

24. The trust agreement shall be established for the sole benefit of the beneficiary.

25. The trust agreement shall require the trustee to:

a. Receive assets and hold all assets in a safe place;

b. Determine that all assets are in such form that the beneficiary, or the trustee upon direction by the beneficiary, may whenever necessary negotiate any such assets, without consent or signature from the grantor or any other person or entity;

c. Furnish to the grantor and the beneficiary a statement of all assets in the trust account upon its inception and at intervals no less frequent than the end of each calendar quarter;

© 1999-2023 National Association of Insurance Commissioners

d. Notify the grantor and the beneficiary within ten (10) days, of any deposits to or withdrawals from the trust account;

e. Upon written demand of the beneficiary, immediately take any and all steps necessary to transfer absolutely and unequivocally all right, title and interest in the assets held in the trust account to the beneficiary and deliver physical custody of the assets to the beneficiary; and

f. Allow no substitutions or withdrawals of assets from the trust account, except on written instructions from the beneficiary, except that the trustee may, without the consent of but with notice to the beneficiary, upon call or maturity of any trust asset, withdraw such asset upon condition that the proceeds are paid into the trust account.

26. The trust agreement shall provide that at least thirty (30) days, but not more than forty-five (45) days, prior to termination of the trust account, written notification of termination shall be delivered by the trustee to the beneficiary.

27. The trust agreement shall be made subject to and governed by the laws of the state in which the trust is domiciled.

28. The trust agreement shall prohibit invasion of the trust corpus for the purpose of paying compensation to, or reimbursing the expenses of, the trustee. In order for a letter of credit to qualify as an asset of the trust, the trustee shall have the right and the obligation pursuant to the deed of trust or some other binding agreement, as duly approved by the commissioner, to immediately draw down the full amount of the letter of credit and hold the proceeds in trust for the beneficiaries of the trust if the letter of credit will otherwise expire without being renewed or replaced.

29. The trust agreement shall provide that the trustee shall be liable for its negligence, willful misconduct or lack of good faith. The failure of the trustee to draw against the letter of credit in circumstances where such draw would be required shall be deemed to be negligence and/or willful misconduct.

30. Notwithstanding other provisions of this appendix, when a trust agreement is established in conjunction with a reinsurance agreement covering risks other than life, annuities and accident and health, where it is customary practice to provide a trust agreement for a specific purpose, the trust agreement may provide that the ceding insurer shall undertake to use and apply amounts drawn upon the trust account, without diminution because of the insolvency of the ceding insurer or the assuming insurer, only for the following purposes:

a. To pay or reimburse the ceding insurer for the assuming insurer's share under the specific reinsurance agreement regarding any losses and allocated loss expenses paid by the ceding insurer, but not recovered from the assuming insurer, or for unearned premiums due to the ceding insurer if not otherwise paid by the assuming insurer;

b. To make payment to the assuming insurer of any amounts held in the trust account that exceed 102 percent of the actual amount required to fund the assuming insurer's obligations under the specific reinsurance agreement; or

c. Where the ceding insurer has received notification of termination of the trust account and where the assuming insurer's entire obligations under the specific reinsurance agreement remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the obligations and deposit those amounts in a separate account, in the name of the ceding insurer in any qualified U.S. financial institution as defined in paragraph 54 apart from its general assets, in trust for such uses and purposes

© 1999-2023 National Association of Insurance Commissioners

specified in paragraphs 30.a. and 30.b. as may remain executory after such withdrawal and for any period after the termination date.

31. Notwithstanding other provisions of this appendix, when a trust agreement is established to meet the requirements of paragraph 19 in conjunction with a reinsurance agreement covering life, annuities or accident and health risks, where it is customary to provide a trust agreement for a specific purpose, the trust agreement may provide that the ceding insurer shall undertake to use and apply amounts drawn upon the trust account, without diminution because of the insolvency of the ceding insurer or the assuming insurer, only for the following purposes:

a. To pay or reimburse the ceding insurer for:

i. The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurer, to the owners of policies reinsured under the reinsurance agreement on account of cancellations of the policies; and

ii. The assuming insurer's share under the specific reinsurance agreement of surrenders and benefits or losses paid by the ceding insurer, but not yet recovered from the assuming insurer, under the terms and provisions of the policies reinsured under the reinsurance agreement;

b. To pay to the assuming insurer amounts held in the trust account in excess of the amount necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer; or

c. Where the ceding insurer has received notification of termination of the trust and where the assuming insurer's entire obligations under the specific reinsurance agreement remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the assuming insurer's share of liabilities, to the extent that the liabilities have not yet been funded by the assuming insurer, and deposit those amounts in a separate account, in the name of the ceding insurer in any qualified U. S. financial institution apart from its general assets, in trust for the uses and purposes specified in paragraphs 31.a. and 31.b. as may remain executory after withdrawal and for any period after the termination date.

32. Either the reinsurance agreement or the trust agreement must stipulate that assets deposited in the trust account shall be valued according to their current fair market value and shall consist only of cash in United States dollars, certificates of deposit issued by a United States bank and payable in United States dollars, and investments permitted by the Insurance Code or any combination of the above, provided investments in or issued by an entity controlling, controlled by or under common control with either the grantor or the beneficiary of the trust shall not exceed five percent (5%) of total investments. The agreement may further specify the types of investments to be deposited. If the reinsurance agreement covers life, annuities or accident and health risks, then the provisions required by this paragraph must be included in the reinsurance agreement.

33. Notwithstanding any other provisions in the trust instrument, if the grantor of the trust has been declared insolvent or placed into receivership, rehabilitation, liquidation or similar proceedings under the laws of its state or country of domicile, the trustee shall comply with an order of the commissioner with regulatory oversight over the trust or court of competent jurisdiction directing the trustee to transfer to the commissioner with regulatory oversight or other designated receiver all of the assets of the trust fund. The assets shall be applied in accordance with the priority statutes and laws of the state in which the trust is domiciled applicable to the assets of insurance companies in liquidation. If the commissioner with regulatory oversight determines that the assets of the trust fund or any part thereof are not necessary to

© 1999-2023 National Association of Insurance Commissioners

satisfy claims of the U.S. beneficiaries of the trust, the assets or any part of them shall be returned to the trustee for distribution in accordance with the trust agreement.

34. The trust agreement may provide that the trustee may resign upon delivery of a written notice of resignation, effective not less than ninety (90) days after the beneficiary and grantor receive the notice and that the trustee may be removed by the grantor by delivery to the trustee and the beneficiary of a written notice of removal, effective not less than ninety (90) days after the trustee and the beneficiary receive the notice, provided that no such resignation or removal shall be effective until a successor trustee has been duly appointed and approved by the beneficiary and the grantor and all assets in the trust have been duly transferred to the new trustee.

35. The grantor may have the full and unqualified right to vote any shares of stock in the trust account and to receive from time to time payments of any dividends or interest upon any shares of stock or obligations included in the trust account. Any interest or dividends shall be either forwarded promptly upon receipt to the grantor or deposited in a separate account established in the grantor's name.

36. The trustee may be given authority to invest, and accept substitutions of, any funds in the account, provided that no investment or substitution shall be made without prior approval of the beneficiary, unless the trust agreement specifies categories of investments acceptable to the beneficiary and authorizes the trustee to invest funds and to accept substitutions that the trustee determines are at least equal in market value to the assets withdrawn and that are consistent with the restrictions in paragraph 39.b.

37. The trust agreement may provide that the beneficiary may at any time designate a party to which all or part of the trust assets are to be transferred. Transfer may be conditioned upon the trustee receiving, prior to or simultaneously, other specified assets.

38. The trust agreement may provide that, upon termination of the trust account, all assets not previously withdrawn by the beneficiary shall, with written approval by the beneficiary, be delivered over to the grantor.

39. A reinsurance agreement may contain provisions that:

a. Require the assuming insurer to enter into a trust agreement and to establish a trust account for the benefit of the ceding insurer, and specifying what the agreement is to cover;

b. Require the assuming insurer, prior to depositing assets with the trustee, to execute assignments or endorsements in blank, or to transfer legal title to the trustee of all shares, obligations or any other assets requiring assignments, in order that the ceding insurer, or the trustee upon the direction of the ceding insurer, may whenever necessary negotiate these assets without consent or signature from the assuming insurer or any other entity;

c. Require that all settlements of account between the ceding insurer and the assuming insurer be made in cash or its equivalent; and

d. Stipulate that the assuming insurer and the ceding insurer agree that the assets in the trust account, established pursuant to the provisions of the reinsurance agreement, may be withdrawn by the ceding insurer at any time, notwithstanding any other provisions in the reinsurance agreement, and shall be utilized and applied by the ceding insurer or its successors in interest by operation of law, including without limitation any liquidator, rehabilitator, receiver or conservator of such company, without diminution because of insolvency on the part of the ceding insurer or the assuming insurer, only for the following purposes:

© 1999-2023 National Association of Insurance Commissioners

i. To pay or reimburse the ceding insurer for:

(a) The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurer, to the owners of policies reinsured under the reinsurance agreement because of cancellations of such policies;

(b) The assuming insurer's share of surrenders and benefits or losses paid by the ceding insurer pursuant to the provisions of the policies reinsured under the reinsurance agreement; and

(c) Any other amounts necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer;

ii. To make payment to the assuming insurer of amounts held in the trust account in excess of the amount necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer.

40. The reinsurance agreement also may contain provisions that:

a. Give the assuming insurer the right to seek approval from the ceding insurer, which shall not be unreasonably or arbitrarily withheld, to withdraw from the trust account all or any part of the trust assets and transfer those assets to the assuming insurer, provided:

i. The assuming insurer shall, at the time of withdrawal, replace the withdrawn assets with other qualified assets having a current fair market value equal to the market value of the assets withdrawn so as to maintain at all times the deposit in the required amount; or

ii. After withdrawal and transfer, the current fair market value of the trust account is no less than 102 percent of the required amount.

b. Provide for the return of any amount withdrawn in excess of the actual amounts required for paragraph 39.d., and for interest payments at a rate not in excess of the prime rate of interest on such amounts;

c. Allow the award by any arbitration panel or court of competent jurisdiction of:

i. Interest at a rate different from that provided in paragraph 40.b.;

ii. Court or arbitration costs;

iii. Attorney's fees; and

iv. Any other reasonable expenses.

41. Financial Reporting - A trust agreement may be used to reduce any liability for reinsurance ceded to an unauthorized assuming insurer in statutory financial statements when established on or before the date of filing of the statutory financial statement of the ceding insurer. Further, the reduction for the existence of an acceptable trust account may be up to the current fair market value of acceptable assets available to be withdrawn from the trust account at that time, but such reduction shall be no greater than the specific obligations under the reinsurance agreement that the trust account was established to secure.

© 1999-2023 National Association of Insurance Commissioners

42. The failure of any trust agreement to specifically identify the beneficiary as defined in paragraph 4 shall not be construed to affect any actions or rights that the commissioner may take or possess pursuant to the provisions of the laws of the domiciliary state.

Letters of Credit Qualified under Paragraph 19

43. The letter of credit must be clean, irrevocable, unconditional and issued or confirmed by a qualified U.S. financial institution as defined in paragraph 53. The letter of credit shall contain an issue date and expiration date and shall stipulate that the beneficiary need only draw a sight draft under the letter of credit and present it to obtain funds and that no other document need be presented. The letter of credit also shall indicate that it is not subject to any condition or qualifications outside of the letter of credit. In addition, the letter of credit itself shall not contain reference to any other agreements, documents or entities, except as provided in paragraph 50.a. If a court of law appoints a successor in interest to the named beneficiary, then the named beneficiary includes and is limited to the court appointed domiciliary receiver (including conservator, rehabilitator or liquidator).

44. The heading of the letter of credit may include a boxed section containing the name of the applicant and other appropriate notations to provide a reference for the letter of credit. The boxed section shall be clearly marked to indicate that such information is for internal identification purposes only.

45. The letter of credit shall contain a statement to the effect that the obligation of the qualified U.S. financial institution under the letter of credit is in no way contingent upon reimbursement with respect thereto.

46. The term of the letter of credit shall be for at least one year and shall contain an "evergreen clause" that prevents the expiration of the letter of credit without due notice from the issuer. The "evergreen clause" shall provide for a period of no less than thirty (30) days prior to the expiration date or nonrenewal.

47. The letter of credit shall state whether it is subject to and governed by the laws of the ceding insurers state or the Uniform Customs and Practice for Documentary Credits of the International Chamber of Commerce (Publication 600) or International Standby Practices of the International Chamber of Commerce Publication 590 (ISP98), or any successor publication, and all drafts drawn thereunder shall be presentable at an office in the United States of a qualified U.S. financial institution.

48. If the letter of credit is made subject to the Uniform Customs and Practice for Documentary Credits of the International Chamber of Commerce Publication 600 (UCP 600) or International Standby Practices of the International Chamber of Commerce Publication 590 (ISP98), or any successor publication, then the letter of credit shall specifically address and provide for an extension of time to draw against the letter of credit in the event that one or more of the occurrences specified in Article 36 of Publication 600 or any other successor publication, occur.

49. If the letter of credit is issued by a financial institution authorized to issue letters of credit, other than a qualified U.S. financial institution as described in paragraph 43, then the following additional requirements shall be met:

a. The issuing financial institution shall formally designate the confirming qualified U.S. financial institution as its agent for the receipt and payment of the drafts; and

b. The "evergreen clause" shall provide for thirty (30) days notice prior to expiration date for nonrenewal.

© 1999-2023 National Association of Insurance Commissioners

50. Reinsurance agreement provisions:

a. The reinsurance agreement in conjunction with which the letter of credit is obtained may contain provisions that:

i. Require the assuming insurer to provide letters of credit to the ceding insurer and specify what they are to cover;

ii. Stipulate that the assuming insurer and ceding insurer agree that the letter of credit provided by the assuming insurer pursuant to the provisions of the reinsurance agreement may be drawn upon at any time, notwithstanding any other provisions in the agreement, and shall be utilized by the ceding insurer or its successors in interest only for one or more of the following reasons:

(a) To pay or reimburse the ceding insurer for:

(1) The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurers, to the owners of policies reinsured under the reinsurance agreement on account of cancellations of such policies;

(2) The assuming insurer's share, under the specific reinsurance agreement, of surrenders and benefits or losses paid by the ceding insurer, but not yet recovered from the assuming insurers, under the terms and provisions of the policies reinsured under the reinsurance agreement; and

(3) Any other amounts necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer;

(b) Where the letter of credit will expire without renewal or be reduced or replaced by a letter of credit for a reduced amount and where the assuming insurer's entire obligations under the reinsurance agreement remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the assuming insurer's share of the liabilities, to the extent that the liabilities have not yet been funded by the assuming insurer and exceed the amount of any reduced or replacement letter of credit, and deposit those amounts in a separate account in the name of the ceding insurer in a qualified U.S. financial institution apart from its general assets, in trust for such uses and purposes specified in paragraph 50.a.ii.(a) as may remain after withdrawal and for any period after the termination date.

iii. All of the provisions of paragraph 50.a. shall be applied without diminution because of insolvency on the part of the ceding insurer or assuming insurer.

b. Nothing contained in paragraph 50.a. shall preclude the ceding insurer and assuming insurer from providing for:

i. An interest payment, at a rate not in excess of the prime rate of interest, on the amounts held pursuant to paragraph 50.a.ii.; or

© 1999-2023 National Association of Insurance Commissioners

ii. The return of any amounts drawn down on the letters of credit in excess of the actual amounts required for the above or any amounts that are subsequently determined not to be due.

Other Security

51. A ceding insurer may take credit for unencumbered funds withheld by the ceding insurer in the United States subject to withdrawal solely by the ceding insurer and under its exclusive control.

52. Credit will not be granted, nor an asset or reduction from liability allowed, to a ceding insurer for reinsurance effected with assuming insurers meeting the requirements of this appendix or otherwise in compliance with this appendix unless the reinsurance agreement:

a. Includes a proper insolvency clause, which stipulates that reinsurance is payable directly to the liquidator or successor without diminution regardless of the status of the ceding company;

b. Includes a provision pursuant to Section [cite state law equivalent to Section 2 of the Credit for Reinsurance Model Law] whereby the assuming insurer, if an unauthorized assuming insurer, has submitted to the jurisdiction of an alternative dispute resolution panel or court of competent jurisdiction within the United States, has agreed to comply with all requirements necessary to give the court or panel jurisdiction, has designated an agent upon whom service of process may be effected, and has agreed to abide by the final decision of the court or panel; and

c. Includes a proper reinsurance intermediary clause, if applicable, which stipulates that the credit risk for the intermediary is carried by the assuming insurer.

Qualified U.S. Financial Institutions

53. For purposes of paragraphs 18, 19.c., 43 and 49, a "qualified U.S. financial institution" means an institution that:

a. Is organized or (in the case of a U.S. office of a foreign banking organization) licensed, under the laws of the United States or any state thereof;

b. Is regulated, supervised and examined by U.S. federal or state authorities having regulatory authority over banks and trust companies; and

c. Has been determined by either the commissioner or the Securities Valuation Office of the National Association of Insurance Commissioners to meet such standards of financial condition and standing as are considered necessary and appropriate to regulate the quality of financial institutions whose letters of credit will be acceptable to the commissioner.

54. A "qualified U.S. financial institution" means, for purposes of those provisions of this appendix specifying those institutions that are eligible to act as a fiduciary of a trust, an institution that:

a. Is organized, or in the case of a U.S. branch or agency office of a foreign banking organization, licensed, under the laws of the United States or any state thereof and has been granted authority to operate with fiduciary powers; and

b. Is regulated, supervised and examined by federal or state authorities having regulatory authority over banks and trust companies.

Accounting Requirements

1. This Appendix shall not apply to assumption reinsurance, yearly renewable term reinsurance or certain nonproportional reinsurance such as stop loss or catastrophe reinsurance.

Q – Aside from assumption reinsurance, what other types of reinsurance are exempt from the accounting requirements?

A – Yearly renewable term (YRT) and certain nonproportional reinsurance arrangements, such as stop loss and catastrophe reinsurance are exempt because these do not normally provide significant surplus relief and therefore are outside the scope of this Appendix. If a catastrophe arrangement takes a reserve credit for actual losses beyond the attachment point or the unearned premium reserve (UPR) of the current year's premium, there will most likely be no regulatory concern.

Similarly, if a YRT treaty provides incidental reserve credits for the ceding insurer's net amount at risk for the year with no other allowance to enhance surplus, there will most likely be no regulatory concern. For purposes of this exemption, a treaty labeled as YRT does not meet the intended definition of YRT if the surplus relief in the first year is greater than that provided by a YRT treaty with zero first year reinsurance premium and no additional allowance from the reinsurer.

Additional pertinent information applicable to all YRT treaties and to non-proportional reinsurance arrangements is contained in paragraphs 19 and 20 of SSAP No. 61R.

2. No insurer shall, for reinsurance ceded, reduce any liability or establish any asset in any statutory financial statement if, by the terms of the reinsurance agreement, in substance or effect, any of the following conditions exist:

   a. Renewal expense allowances provided or to be provided to the ceding insurer by the reinsurer in any accounting period are not sufficient to cover anticipated allocable renewal expenses of the ceding insurer on the portion of the business reinsured, unless a liability is established for the present value of the shortfall (using assumptions equal to the applicable statutory reserve basis on the business reinsured). Those expenses include commissions, premium taxes and direct expenses including, but not limited to, billing, valuation, claims and maintenance expected by the company at the time the business is reinsured;

Q – What should be included in the renewal expense allowances with regard to direct expenses? An allocation of salaries? Computer usage? Or just marginal expenses directly related to the business reinsured such as claim payment expenses, postage, etc.?

A – The primary purpose of the accounting requirements is to prohibit credit for reinsurance under financial arrangements where the ceding company enters into an agreement for the principal purpose of producing significant surplus aid for the ceding insurer on a temporary basis, while not transferring all of the significant risks inherent in the business being reinsured.

Paragraph 2.a. implements that purpose by prohibiting credit for reinsurance in certain instances where the ceding insurer is afforded a large ceding commission at the inception of the agreement resulting in a significant increase in surplus only to have such surplus increase be drained away in subsequent periods because renewal expense allowances provided under the agreement are insufficient to cover the direct allocable costs estimated at the time the business is reinsured, which are anticipated to be incurred by the ceding insurer in maintaining the business reinsured.

An exception to complete disallowance of credit for reinsurance is allowed in situations where the ceding insurer reflects a liability for the present value of the shortage between renewal expense allowances provided under the agreement and the direct allocable costs expected in the future by the insurer in maintaining the business reinsured. This liability must be calculated using actuarial assumptions that are consistent with those utilized in the statutory reserve calculation. The expenses to be accounted for in establishing this liability should represent all costs of the ceding insurer in servicing the business that is subject to the agreement.

In determining what the ceding insurer should include in the renewal expenses with regard to direct expenses, there should be an allocation of all renewal expenses anticipated at the time the business is reinsured including salaries, computer usage, postage, etc. This comprehensive calculation should recognize that the anticipated expense levels may be estimated; a comparison with pricing assumptions may be considered in determining the reasonableness of such assumptions.

When an agreement does not comply with paragraph 2.a., this area of non-compliance should be addressed by the posting of a reserve for the present value of the deficiency rather than denial for credit for reinsurance, assuming that no other area of non-compliance is encountered with the agreement and that the assets received corresponding to the ceding commission are in compliance with the Codification, including Appendix A-785. For example, the assets received corresponding to the ceding commission must be admissible and not subject to repayment to the reinsurer.

b. The ceding insurer can be deprived of surplus or assets at the reinsurer's option or automatically upon the occurrence of some event, such as the insolvency of the ceding insurer, except that termination of the reinsurance agreement by the reinsurer for nonpayment of reinsurance premiums or other amounts due, such as modified coinsurance reserve adjustments, interest and adjustments on funds withheld, and tax reimbursements, shall not be considered to be such a deprivation of surplus or assets;

Q – With regard to existing business, should the coinsurance reserve percentage or the coinsurance reserve amount not be allowed to increase in a combination coinsurance/modified coinsurance treaty? How would the rule be applicable to the difference between the total reserve and the amount of funds withheld in a coinsurance with funds withheld treaty?

A – Under a combination coinsurance/modified coinsurance (co/modco) arrangement the ceding company and the reinsurer both establish reserves for future claim payments. Treaty provisions which adjust the reserves each party holds in lieu of transferring funds owed to the reinsurer are acceptable. However, adjustment of reserves in lieu of payment when funds are due to the ceding company is a violation of the

© 1999-2023 National Association of Insurance Commissioners

accounting requirements since it is a depletion of the ceding company's assets. In other words, statutory gains can be used to increase the modified coinsurance reserve but statutory losses cannot be used to reduce the modified coinsurance reserve. This is the case even if the agreement provides for this adjustment at inception and never requires a payment to be owed by the reinsurer.

Under a coinsurance with funds withheld treaty the reinsurer establishes the entire amount of reserve liability on its share of reinsured policies, but the ceding company withholds a portion of the reinsurer's assets typically in an amount less than the reserves, to offset future obligations. Provided the withheld assets are not withheld for any purpose other than the payment of future claims, it is not a violation of the accounting requirements for the reinsurer to require full use of such withheld assets for the payment of claims prior to using any other assets owned by the reinsurer.

Paragraph 2.b. disallows reinsurance credit if the ceding company can be deprived of assets at the reinsurer's option or automatically upon the occurrence of some event. Thus, a provision in a coinsurance with funds withheld or modified coinsurance treaty which unilaterally or automatically allows the reinsurer to convert the treaty to coinsurance at some later date would be of concern. Although the parties could have entered a coinsurance agreement at inception, regulators are concerned that the reinsurer would take invested assets from the ceding company at a time which would be to the detriment of the ceding company's policyholders. Therefore, a conversion provision will not violate paragraph 2.b. only if all of the following are met:

i) the triggers for conversion are limited to ceding company violations of treaty provisions, including complying representations and warranties; the occurrence of a violation has been determined; and the ceding company has been given an opportunity and refuses to promptly remedy the violation;

ii) the conversion is structured so that the surplus of the ceding company will remain unchanged immediately following the conversion;

iii) the invested assets to be transferred upon conversion are less than or equal to the modco reserve, in the case of modco or co/modco, or to the Funds Withheld, in the case of coinsurance funds withheld, and have been maintained in a Trust or Escrow Account since inception of the agreement; and

iv) the reinsurance complies with Credit for Reinsurance requirements (see Appendix A-785) immediately upon conversion.

c. The ceding insurer is required to reimburse the reinsurer for negative experience under the reinsurance agreement, except that neither offsetting experience refunds against current and prior years' losses under the agreement nor payment by the ceding insurer of an amount equal to the current and prior years' losses under the agreement upon voluntary termination of in force reinsurance by the ceding insurer shall be considered such a reimbursement to the reinsurer for negative experience. Voluntary termination does not include situations where termination occurs because of unreasonable provisions which allow the reinsurer to reduce its risk under the agreement. An example of such a provision is the right of the reinsurer to increase reinsurance premiums or risk and expense charges to excessive levels forcing the ceding company to prematurely terminate the reinsurance treaty;

© 1999-2023 National Association of Insurance Commissioners

Q – If group term life business is reinsured under a YRT reinsurance agreement (which includes risk-limiting features such as with an experience refund provision which offsets refunds against current and/or prior years' losses (i.e., a "loss carryforward" provision), under what circumstances would any provisions of the reinsurance agreement be considered "unreasonable provisions which allow the reinsurer to reduce its risk under the agreement" thereby violating subsection 2.c.?

A – Unlike individual life insurance where reserves held by the ceding insurer reflect a statutorily prescribed valuation premium above which reinsurance premium rates would be considered unreasonable, group term life has no such guide. So long as the reinsurer cannot charge premiums in excess of the premium received by the ceding insurer under the provisions of the YRT reinsurance agreement, such provisions would not be considered unreasonable. Any provision in the YRT reinsurance agreement which allows the reinsurer to charge reinsurance premiums in excess of the proportionate premium received by the ceding insurer would be considered unreasonable. The revisions to this QA regarding group term life yearly renewable term agreements is effective for contracts in effect as of January 1, 2021.

d. The ceding insurer must, at specific points in time scheduled in the agreement, terminate or automatically recapture all or part of the reinsurance ceded;

e. The reinsurance agreement involves the possible payment by the ceding insurer to the reinsurer of amounts other than from income realized from the reinsured policies. For example, it is improper for a ceding company to pay reinsurance premiums, or other fees or charges to a reinsurer which are greater than the direct premiums collected by the ceding company;

Q – Should a reinsurer have a unilateral right to establish underlying cost of insurance rates or credited interest rates for policies which are wholly or partially reinsured?

A – No, only the ceding company has the right to set the cost of insurance rates charged policyholders and to set the rates of interest credited to them. However, a representation (but not a warranty) that the ceding company shall vary nonguaranteed elements reinsured in a manner consistent with the ceding company's documented procedures, in effect at the time the agreement was entered into, does not violate the accounting requirements.

Q – May a reinsurance contract allow the reinsurer to change the cost of insurance that the ceding company must pay under the treaty?

A – So long as the aggregate amounts payable by the ceding company in any settlement period do not exceed the income of the reinsured policies during that period, the treaty's structure would not be in violation of paragraph 2.e. There is not compliance if any changes could cause payments made by the ceding company to exceed income from the reinsured business, unless the change is necessary to conform to the documented procedures represented to the reinsurer at the time the treaty was entered into and as long as the ceding company has the ability to change the insurance rates it charges policyholders by at least as much as was included in the original representation.

Q – If a reinsured policy allows the ceding company to guarantee rates of interest to be credited to the policyholder which are greater than those guaranteed by the policy, may a reinsurance contract allow the reinsurer to limit its participation in such credited rate as long as it at least provides for the amount based on the rate guaranteed in the contract?

A – So long as the aggregate amounts payable by the ceding company in any settlement period do not exceed the income of the reinsured policies during that period, the treaty's structure would not be in violation of paragraph 2.e. There is not compliance if any changes could cause payments made by the

ceding company to exceed income from the reinsured business, unless the limited participation reflects a change in declared interest rates which is necessary to conform to the documented procedures represented to the reinsurer at the time the treaty was entered into and as long as the ceding company has the ability to change the declared interest rates to be credited to policyholders by at least as much as was included in the original representation.

f. The treaty does not transfer all of the significant risk inherent in the business being reinsured. The following table identifies for a representative sampling of products or type of business, the risks which are considered to be significant. For products not specifically included, the risks determined to be significant shall be consistent with this table.

Risk categories:

i. Morbidity

ii. Mortality

iii. Lapse

This is the risk that a policy will voluntarily terminate prior to the recoupment of a statutory surplus strain experienced at issue of the policy.

iv. Credit Quality

This is the risk that invested assets supporting the reinsured business will decrease in value. The main hazards are that assets will default or that there will be a decrease in earning power. It excludes market value declines due to changes in interest rate.

v. Reinvestment

This is the risk that interest rates will fall and funds reinvested (coupon payments or monies received upon asset maturity or call) will therefore earn less than expected. If asset durations are less than liability durations, the mismatch will increase.

vi. Disintermediation

This is the risk that interest rates rise and policy loans and surrenders increase or maturing contracts do not renew at anticipated rates of renewal. If asset durations are greater than the liability durations, the mismatch will increase. Policyholders will move their funds into new products offering higher rates. The company may have to sell assets at a loss to provide for these withdrawals.

Q – If a company cedes health insurance business that is subject to a Medical Loss Ratio (MLR), or similar statutorily required refunds / rebates, must the reinsurer participate in the payment of any refunds / rebates?

A – The reinsurer needs to participate in the payment of its share of any statutorily required MLR or similar refund or rebate based on loss ratio calculations to the extent that the experience of the health business reinsured, during the period that it is reinsured, contributes to the calculation of the refund. Although the payment of such a refund based on the experience of business that is currently reinsured could result in a reduction of surplus on the part of the ceding insurer, if the reduction in surplus of the ceding insurer is entirely attributable to the experience prior to the effective date of the reinsurance, then it is outside of the contract requirements. Accordingly, such a provision should not cause a reinsurance agreement to be out of compliance with Appendix A-791 of the Accounting Practices and Procedure Manual. It is recognized that some refund calculations may involve multiple years.

Furthermore, just as an experience refund is not considered in the determination as to whether a reinsurance agreement is proportional, the requirement for the payment of a refund to policyholders based on a Medical Loss Ratio requirement should also not be considered.

Note: This Q&A only applies to refunds related to a statutory MLR or similar refund or rebate requirement for health insurance and should not be applied to any other situation.

© 1999-2023 National Association of Insurance Commissioners

g. i. The credit quality, reinvestment, or disintermediation risk is significant for the business reinsured and the ceding company does not (other than for the classes of business excepted in paragraph g.ii.) either transfer the underlying assets to the reinsurer or legally segregate such assets in a trust or escrow account or otherwise establish a satisfactory mechanism which legally segregates, by contract or contract provision, the underlying assets.

Q – Is asset segmentation an acceptable mechanism for legal segregation of assets?

A – Generally no. Segmentation involves the allocation of a company's general account investment earnings over several lines of business, or various groups of policies within those lines, such that the performance of one corporate bond, for example, may affect the earnings of several segments within a company. The accounting for the segmentation is largely internal, and the detail of the record keeping varies from company to company.

The fundamental purpose of the requirement for a reinsurance treaty to employ the use of a segregated asset portfolio ("SAP") is that all payments (interest, benefits, allowances, etc.) must be made from the SAP, so as to eliminate any problems that could arise in determining what asset or assets should be sold, and to avoid disputes in the event of insolvency. Any sale of assets that could affect policies not subject to reinsurance, or policies subject to reinsurance with other reinsurers is problematic.

In addition, auditing the performance of a treaty using traditional segmentation methods would be extremely difficult and prone to disagreement, which could provide a reinsurer with broad leverage to contest amounts due that reinsurer, especially in the event of insolvency or rehabilitation of the ceding company.

It is important to determine that the arrangement in place does in fact transfer all of the risks of the underlying assets supporting the reinsured business to the reinsurer.

Q – If a percentage of all policies in a block of business is reinsured, must the company segregate that percentage of the assets supporting the business, or can it segregate all the assets?

A – The company may segregate only assets supporting the reinsured portion or the segregated asset portfolio may represent the entire block of business if the reinsured portion is the same for all policies. In the latter case, the reinsurer would take its proportionate share of the SAP performance.

Q – If the ceding company cedes a portion of each policy in a block of business to one reinsurer and a portion to another, while retaining some itself, does it have to segregate assets separately for each reinsurer, or is it acceptable to have all the assets segregated together with each reinsurer responsible for its portion of the investment risk?

A – The ceding company does not need to segregate assets separately for each reinsurer if the treaties are virtually identical.

Q – At the time assets are legally segregated under a coinsurance with funds withheld treaty, should they be valued at market value, statutory value, or some combination?

A – The assets should be valued at their statutory admitted value.

© 1999-2023 National Association of Insurance Commissioners

Q – When the assets are legally segregated, how are the funds withheld payables and receivables reported?

A – The payables and receivables are recorded in the same manner as in a funds withheld treaty where the assets are not legally segregated and will usually mirror the value of the funds withheld account. However, the funds withheld account, which reflects the statutory admitted value of the assets in the SAP, will fluctuate, and thus may differ from the reserves on the reinsured business.

ii. Notwithstanding the requirements of paragraph g.i., the assets supporting the reserves for the following classes of business and any classes of business which do not have a significant credit quality, reinvestment or disintermediation risk may be held by the ceding company without segregation of such assets:

(a) Health Insurance - LTC/LTD

(b) Traditional Non-Par Permanent

(c) Traditional Par Permanent

(d) Adjustable Premium Permanent

(e) Indeterminate Premium Permanent

(f) Universal Life Fixed Premium

(no dump-in premiums allowed)

The associated formula for determining the reserve interest rate adjustment must use a formula which reflects the ceding company's investment earnings and incorporates all realized and unrealized gains and losses reflected in the statutory statement. The following is an acceptable formula:

$$\text{Rate} = \frac{2\,(I + CG)}{X + Y - I - CG}$$

Where:
I is the net investment income
CG is capital gains less capital losses
X is the current year cash and invested assets plus investment income due and accrued less borrowed money
Y is the same as X but for the prior year

h. Settlements are made less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date.

i. The ceding insurer is required to make representations or warranties not reasonably related to the business being reinsured.

j. The ceding insurer is required to make representations or warranties about future performance of the business being reinsured.

k. The reinsurance agreement is entered into for the principal purpose of producing significant surplus aid for the ceding insurer, typically on a temporary basis, while not transferring all of the significant risks inherent in the business reinsured and, in substance or effect, the expected potential liability to the ceding insurer remains basically unchanged.

© 1999-2023 National Association of Insurance Commissioners

3. Any increase in surplus net of federal income tax resulting from reinsurance agreements entered into or amended after the effective date of the Codification which involve the reinsurance of business issued prior to the effective date of the agreements shall be identified separately on the insurer's statutory financial statement as a surplus item and recognition of the surplus increase as income shall be reflected on a net of tax basis as earnings emerge from the business reinsured.

> {For example, on the last day of calendar year N, company XYZ pays a $20 million initial commission and expense allowance to company ABC for reinsuring an existing block of business. Assuming a 34% tax rate, the net increase in surplus at inception is $13.2 million ($20 million - $6.8 million) which is reported on the "Aggregate write-ins for gains and losses in surplus" line in the Capital and Surplus account. $6.8 million (34% of $20 million) is reported as income on the "Commissions and expense allowances on reinsurance ceded" line of the Summary of Operations.
>
> At the end of year N+1 the business has earned $4 million. ABC has paid $.5 million in profit and risk charges in arrears for the year and has received a $1 million experience refund. Company ABC's annual statement would report $1.65 million (66% of ($4 million - $1 million - $.5 million) up to a maximum of $13.2 million) on the "Commissions and expense allowance on reinsurance ceded" line of the Summary of Operations, and -$1.65 million on the "Aggregate write-ins for gains and losses in surplus" line of the Capital and Surplus account. The experience refund would be reported separately as a miscellaneous income item in the Summary of Operations.}

Written Agreements

4. No reinsurance agreement or amendment to any agreement may be used to reduce any liability or to establish any asset in any financial statement, unless the agreement, amendment or a binding letter of intent has been duly executed by both parties no later than the "as of date" of the financial statement.

5. In the case of a letter of intent, a reinsurance agreement or an amendment to a reinsurance agreement must be executed within a reasonable period of time, not exceeding ninety (90) days from the execution date of the letter of intent, in order for credit to be granted for the reinsurance ceded.

6. The reinsurance agreement shall contain provisions which provide that:

   a. The agreement shall constitute the entire agreement between the parties with respect to the business being reinsured thereunder and that there are no understandings between the parties other than as expressed in the agreement; and

   b. Any change or modification to the agreement shall be null and void unless made by amendment to the agreement and signed by both parties.

Appendix A-812

Smoker/Nonsmoker Mortality Tables for Use in Determining Minimum Reserve Liabilities

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 56—Separate Accounts
SSAP No. 59—Credit Life and Accident and Health Insurance Contracts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Purpose

1. The purpose of this Appendix is to permit the use of mortality tables that reflect differences in mortality between smokers and nonsmokers in determining minimum reserve liabilities for plans of insurance with separate premium rates for smokers and nonsmokers.

Definitions

2. As used in this Appendix, "1980 CSO Table, with or without Ten-Year Select Mortality Factor" means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the Society of Actuaries Committee to Recommend New Mortality Tables for Valuation of Standard Individual Ordinary Life Insurance, referred to as the Commissioners 1980 Standard Ordinary Mortality Table. The same select factors will be used for both smokers and nonsmokers tables.

3. As used in this Appendix, "1980 CET Table" means that mortality table consisting of separate rates of mortality for male and female lives, developed by the Society of Actuaries Committee to Recommend New Mortality Tables for Valuation of Standard Individual Ordinary Life Insurance, and referred to as the Commissioners 1980 Extended Term Insurance Table.

4. As used in this Appendix, the phrase "smoker and nonsmoker mortality tables" refers to the mortality tables with separate rates of mortality for smokers and nonsmokers derived from the tables defined in paragraphs 2-3 which were developed by the Society of Actuaries Task Force on Smoker/Nonsmoker Mortality and the California Insurance Department staff and recommended by the NAIC Technical Staff Actuarial Group.

5. As used in this Appendix, the phrase "composite mortality tables" refers to the mortality tables defined in paragraphs 2-3 as they were originally published with rates of mortality that do not distinguish between smokers and nonsmokers.

Alternate Tables

6. For any policy of insurance delivered or issued for delivery after the effective date of Codification, at the option of the company and subject to the conditions stated in paragraph 7 of this Appendix;

   a. The 1980 CSO Smoker and Nonsmoker Mortality Tables, with or without Ten-Year Select Mortality Factors, may be substituted for the 1980 CSO Table, with or without Ten-Year Select Mortality Factors, and

   b. The 1980 CET Smoker and Nonsmoker Mortality Tables may be substituted for the 1980 CET Table for use in determining minimum reserve liabilities.

© 1999-2023 National Association of Insurance Commissioners

Conditions

7. For each plan of insurance with separate rates for smokers and nonsmokers an insurer may

   a. Use composite mortality tables to determine minimum reserve liabilities,

   b. Use smoker and nonsmoker mortality tables to determine the valuation net premiums and additional minimum reserves, if any, required by Appendix A-820 and use composite mortality tables to determine the basic minimum reserves, or

   c. Use smoker and nonsmoker mortality to determine minimum reserve liabilities.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-815

Model Regulation Permitting the Recognition of Preferred Mortality Tables for Use in Determining Minimum Reserve Liabilities

Relevant SSAPs:
SSAP No. 51R—Life Contracts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)
Valuation of Life Insurance Policies Model Regulation (#830)

Purpose

1. The purpose of this regulation is to recognize, permit and prescribe the use of mortality tables that reflect differences in mortality between preferred and standard lives in determining minimum reserve liabilities in accordance with paragraph 3.a.iii. of Appendix A-820 Standard Valuation Law and paragraphs 16 and 17 of Appendix A-830 Valuation of Life Insurance Model Regulation.

2. **Definitions**

a. "2001 CSO Mortality Table" means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the American Academy of Actuaries CSO Task Force from the Valuation Basic Mortality Table developed by the Society of Actuaries Individual Life Insurance Valuation Mortality Task Force, and adopted by the NAIC in December 2002. The 2001 CSO Mortality Table is included in the *Proceedings of the NAIC (2nd Quarter 2002)* and supplemented by the 2001 CSO Preferred Class Structure Mortality Table defined below in Subsection B. Unless the context indicates otherwise, the "2001 CSO Mortality Table" includes both the ultimate form of that table and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality tables. Mortality tables in the 2001 CSO Mortality Table include the following:

i. "2001 CSO Mortality Table (F)" means that mortality table consisting of the rates of mortality for female lives from the 2001 CSO Mortality Table.

ii. "2001 CSO Mortality Table (M)" means that mortality table consisting of the rates of mortality for male lives from the 2001 CSO Mortality Table.

iii. "Composite mortality tables" means mortality tables with rates of mortality that do not distinguish between smokers and nonsmokers.

iv. "Smoker and nonsmoker mortality tables" means mortality tables with separate rates of mortality for smokers and nonsmokers.

b. "2001 CSO Preferred Class Structure Mortality Table" means mortality tables with separate rates of mortality for super preferred nonsmokers, preferred nonsmokers, residual standard nonsmokers, preferred smokers, and residual standard smoker splits of the 2001 CSO Nonsmoker and Smoker Tables, as adopted by the NAIC at the September, 2006 national meeting and published in the *NAIC Proceedings {3rd Quarter 2006}*. Unless the context indicates otherwise, the "2001 CSO Preferred Class Structure Mortality Table" includes both the ultimate form of that table and the select and ultimate

form of that table. It includes both the smoker and nonsmoker mortality tables. It includes both the male and female mortality tables and the gender composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality table.

c. "Statistical agent" means an entity with proven systems for protecting the confidentiality of individual insured and insurer information; demonstrated resources for and history of ongoing electronic communications and data transfer ensuring data integrity with insurers, which are its members or subscribers; and a history of and means for aggregation of data and accurate promulgation of the experience modifications in a timely manner.

2001 CSO Preferred Class Structure Table

3. At the election of the company, for each calendar year of issue, for any one or more specified plans of insurance and subject to satisfying the conditions stated in this regulation, the 2001 CSO Preferred Class Structure Mortality Table may be substituted in place of the 2001 CSO Smoker or Nonsmoker Mortality Table as the minimum valuation standard for policies issued on or after January 1, 2007. For policies issued on or after January 1, 2004 (effective date of adoption of the 2001 CSO Mortality Table for Use in Determining Minimum Reserve Liabilities and Nonforfeiture Benefits), and prior to January 1, 2007, these tables may be substituted with the consent of the commissioner and subject to the conditions of paragraph 4. In determining such consent, the commissioner may rely on the consent of the commissioner of the company's state of domicile. No such election shall be made until the company demonstrates at least 20% of the business to be valued on this table is in one or more of the preferred classes. A table from the 2001 CSO Preferred Class Structure Mortality Table used in place of a 2001 CSO Mortality Table, pursuant to the requirements of this rule, will be treated as part of the 2001 CSO Mortality Table only for purposes of reserve valuation pursuant to the requirements of the NAIC model regulation, "Recognition of the 2001 CSO Mortality Table For Use In Determining Minimum Reserve Liabilities And Nonforfeiture Benefits Model Regulation."

4. **Conditions**

a. For each plan of insurance with separate rates for preferred and standard nonsmoker lives, an insurer may use the super preferred nonsmoker, preferred nonsmoker, and residual standard nonsmoker tables to substitute for the nonsmoker mortality table found in the 2001 CSO Mortality Table to determine minimum reserves. At the time of election and annually thereafter, except for business valued under the residual standard nonsmoker table, the appointed actuary shall certify that:

i. The present value of death benefits over the next ten years after the valuation date, using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

ii. The present value of death benefits over the future life of the contracts, using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

© 1999-2023 National Association of Insurance Commissioners

b. For each plan of insurance with separate rates for preferred and standard smoker lives, an insurer may use the preferred smoker and residual standard smoker tables to substitute for the smoker mortality table found in the 2001 CSO Mortality Table to determine minimum reserves. At the time of election and annually thereafter, for business valued under the preferred smoker table, the appointed actuary shall certify that:

i. The present value of death benefits over the next ten years after the valuation date, using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the preferred smoker valuation basic table corresponding to the valuation table being used for that class.

ii. The present value of death benefits over the future life of the contracts, using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the preferred smoker valuation basic table.

c. Unless exempted by the commissioner, every authorized insurer using the 2001 CSO Preferred Class Structure Table shall annually file with the commissioner, with the NAIC, or with a statistical agent designated by the NAIC and acceptable to the commissioner, statistical reports showing mortality and such other information as the commissioner may deem necessary or expedient for the administration of the provisions of this regulation. The form of the reports shall be established by the commissioner or the commissioner may require the use of a form established by the NAIC or by a statistical agent designated by the NAIC and acceptable to the commissioner.

d. The use of the 2001 CSO Preferred Class Structure Table for the valuation of policies issued prior to January 1, 2007 shall not be permitted in any statutory financial statement in which a company reports, with respect to any policy or portion of a policy coinsured, either of the following:

i. In cases where the mode of payment of the reinsurance premium is less frequent than the mode of payment of the policy premium, a reserve credit that exceeds, by more than the amount specified in this paragraph as Y, the gross reserve calculated before reinsurance. Y is the amount of the gross reinsurance premium that (a) provides coverage for the period from the next policy premium due date to the earlier of the end of the policy year and the next reinsurance premium due date, and (b) would be refunded to the ceding entity upon the termination of the policy.

ii. In cases where the mode of payment of the reinsurance premium is more frequent than the mode of payment of the policy premium, a reserve credit that is less than the gross reserve, calculated before reinsurance, by an amount that is less than the amount specified in this paragraph as Z. Z is the amount of the gross reinsurance premium that the ceding entity would need to pay the assuming company to provide reinsurance coverage from the period of the next reinsurance premium due date to the next policy premium due date minus any liability established for the proportionate amount not remitted to the reinsurer.

For purposes of this condition, both the reserve credit and the gross reserve before reinsurance (i) for the mean reserve method shall be defined as the mean reserve minus the deferred premium asset, and (ii) for the mid-terminal reserve method shall include the unearned premium reserve. A company may estimate and adjust its accounting on an

© 1999-2023 National Association of Insurance Commissioners

aggregate basis in order to meet the conditions to use the 2001 CSO Preferred Class Structure Table.

Effective Date

5. The effective date of this regulation is after January 1, 2007.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-817

Preneed Life Insurance Minimum Standards for Determining Reserve Liabilities and Nonforfeiture Values

Relevant SSAPs:
SSAP No. 51R—Life Contracts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Scope

1. This rule applies to preneed insurance contracts, as defined in paragraph 5 and to similar policies and certificates.

Purpose

2. The purpose of this appendix is to establish for preneed insurance products minimum mortality standards for reserves and nonforfeiture values, and to require the use of the 1980 Commissioners Standard Ordinary (CSO) Life Valuation Mortality Table for use in determining the minimum standard of valuation of reserves and the minimum standard nonforfeiture values for preneed insurance products.

Definitions

3. The term "**2001 CSO Mortality Table**" means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the American Academy of Actuaries CSO Task Force from the Valuation Basic Mortality Table developed by the Society of Actuaries Individual Life Insurance Valuation Mortality Task Force, and adopted by the NAIC in December 2002. The 2001 CSO Mortality Table is included in the *Proceedings of the NAIC (2nd Quarter 2002)*. Unless the context indicates otherwise, the "2001 CSO Mortality Table" includes both the ultimate form of that table and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality tables.

4. The term "**Ultimate 1980 CSO**" means the Commissioners' 1980 Standard Ordinary Life Valuation Mortality Tables (1980 CSO) without ten-year (10-year) selection factors, incorporated into the 1980 amendments to the NAIC Standard Valuation Law approved in December 1983.

5. For the purposes of this guidance, preneed insurance is any life insurance policy or certificate that is issued in combination with, in support of, with an assignment to, or as a guarantee for a prearrangement agreement for goods and services to be provided at the time of and immediately following the death of the insured. Goods and services may include, but are not limited to embalming, cremation, body preparation, viewing or visitation, coffin or urn, memorial stone, and transportation of the deceased. The status of the policy or contract as preneed insurance is determined at the time of issue in accordance with the policy form filing.

Minimum Valuation Mortality Standards

6. For preneed insurance contracts, as defined in paragraph 5, and similar policies and contracts, the minimum mortality standard for determining reserve liabilities and nonforfeiture values for both male and female insureds shall be the Ultimate 1980 CSO.

© 1999-2023 National Association of Insurance Commissioners

Minimum Valuation Interest Rate Standards

7. The interest rates used in determining the minimum standard for valuation of preneed insurance shall be the calendar year statutory valuation interest rates as defined in *Appendix A-820—Minimum Life and Annuity Reserve Standards*, paragraphs 5-8.

8. The interest rates used in determining the minimum standard for nonforfeiture values for preneed insurance shall be the calendar year statutory nonforfeiture interest rates.

Minimum Valuation Method Standards

9. The method used in determining the standard for the minimum valuation of reserves of preneed insurance shall be the method defined in *Appendix A-820—Minimum Life and Annuity Reserve Standards*, paragraphs 9-11.

Transition Rules

10. For preneed insurance policies issued on or after the effective date of this appendix and before January 1, 2012, the 2001 CSO may be used as the minimum standard for reserves and minimum standard for nonforfeiture benefits for both male and female insureds.

11. If an insurer elects to use the 2001 CSO as a minimum standard for any policy issued on or after the effective date of this appendix and before January 1, 2012, the insurer shall provide, as a part of the actuarial opinion memorandum submitted in support of the company's asset adequacy testing, an annual written notification to the domiciliary commissioner. The notification shall include:

a. A complete list of all preneed policy forms that use the 2001 CSO as a minimum standard;

b. A certification signed by the appointed actuary stating that the reserve methodology employed by the company in determining reserves for the preneed policies issued after the effective date and using the 2001 CSO as a minimum standard, develops adequate reserves (For the purposes of this certification, the preneed insurance policies using the 2001 CSO as a minimum standard cannot be aggregated with any other policies.); and

c. Supporting information regarding the adequacy of reserves for preneed insurance policies issued after the effective date of this guidance and using the 2001 CSO as a minimum standard for reserves.

12. Preneed insurance policies issued on or after January 1, 2012, must use the Ultimate 1980 CSO in the calculation of minimum nonforfeiture values and minimum reserves.

Effective Date

13. This rule is applicable to preneed insurance policies and certificates and similar contracts and certificates, as specified in paragraph 5, issued on or after January 1, 2011.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-818

Determining Reserve Liabilities for Credit Life Insurance Model Regulation

Relevant SSAPs:
SSAP No. 59—Credit Life and Accident and Health Insurance Contracts

Definitions

1. “2001 CSO Mortality Table” means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the American Academy of Actuaries CSO Task Force from the Valuation Basic Mortality Table developed by the Society of Actuaries Individual Life Insurance Valuation Mortality Task Force, and adopted by the NAIC in December 2002. The 2001 CSO Mortality Table is included in the *Proceedings of the NAIC (2nd Quarter 2002)*. Unless the context indicates otherwise, the “2001 CSO Mortality Table” includes both the ultimate form of that table and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality tables.

2. “Composite mortality tables” means mortality tables with rates of mortality that do not distinguish between smokers and nonsmokers.

3. “Credit life insurance” means insurance on a debtor or debtors, pursuant to or in connection with a specific loan or other credit transaction, to provide for satisfaction of a debt, in whole or in part, upon the death of an insured debtor.

4. Credit life insurance does NOT include:

   a. Insurance written in connection with a credit transaction that is:

      i. Secured by a first mortgage or deed of trust; and

      ii. Made to finance the purchase of real property or the construction of a dwelling thereon, or to refinance a prior credit transaction made for such a purpose;

   b. Insurance sold as an isolated transaction on the part of the insurer and not related to an agreement or a plan for insuring debtors of the creditor.

   c. Insurance for which no identifiable charge is made to the debtor.

   d. Insurance on accounts receivable.

5. This rule applies to credit life insurance policies and certificates, and those similar policies and certificates where there is no identifiable charge made to the debtor.

2001 CSO Male Composite Ultimate Mortality Table

6. The minimum standard for both male and female insureds shall be 2001 CSO Male Composite Ultimate Mortality Table.

7. Where the credit life insurance policy or certificate insures two lives, the minimum standard shall be twice the mortality in the 2001 CSO Male Composite Ultimate Mortality Table based on the age of the older insured.

© 1999-2023 National Association of Insurance Commissioners

Minimum Standards

8. Appendix A-830 shall not apply to credit life insurance.

9. The interest rates used in determining the minimum standard for valuation shall be the calendar year statutory valuation interest rates as defined in Appendix A-820, paragraphs 7-10.

10. The method used in determining the minimum standard for valuation shall be the commissioners reserve valuation method as defined in Appendix A-820, paragraphs 11-13.

SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

Relevant NAIC Model Laws/Regulations:
Preneed Life Insurance Minimum Standards for Determining Reserve Liabilities and Nonforfeiture Values Model Regulation (#817)
NAIC Model Rule for Recognizing a New Annuity Mortality Table for Use in Determining Reserve Liabilities for Annuities (#821)

Definitions

1. For the purposes of this Appendix, the following definitions shall apply on or after the operative date of the *Valuation Manual*:

a. The term "accident and health insurance" means contracts that incorporate morbidity risk and provide protection against economic loss resulting from accident, sickness, or medical conditions and as may be specified in the *Valuation Manual*.

b. The term "appointed actuary" means a qualified actuary who is appointed in accordance with the *Valuation Manual* to prepare the actuarial opinion.

c. The term "company" means an entity, which (a) has written, issued, or reinsured life insurance contracts, accident and health insurance contracts, or deposit-type contracts in a U.S. State, district or territory and has at least one such policy in force or on claim or (b) has written, issued, or reinsured life insurance contracts, accident and health insurance contracts, or deposit-type contracts in any U.S. State, district or territory and is required to hold a certificate of authority to write life insurance, accident and health insurance, or deposit-type contracts in a U.S. State, district or territory.

d. The term "deposit-type contract" means contracts that do not incorporate mortality or morbidity risks and as may be specified in the *Valuation Manual*.

e. The term "life insurance" means contracts that incorporate mortality risk, including annuity and pure endowment contracts, and as may be specified in the *Valuation Manual*.

f. The term "NAIC" means the National Association of Insurance Commissioners.

g. The term "policyholder behavior" means any action a policyholder, contract holder or any other person with the right to elect options, such as a certificate holder, may take under a policy or contract subject to this Appendix including, but not limited to, lapse, withdrawal, transfer, deposit, premium payment, loan, annuitization, or benefit elections prescribed by the policy or contract but excluding events of mortality or morbidity that result in benefits prescribed in their essential aspects by the terms of the policy or contract.

© 1999-2023 National Association of Insurance Commissioners

h. The term "principle-based valuation" means a reserve valuation that uses one or more methods or one or more assumptions determined by the insurer and is required to comply with paragraphs 25-27 of this Appendix as specified in the *Valuation Manual*.

i. The term "qualified actuary" means an individual who is qualified to sign the applicable statement of actuarial opinion in accordance with the American Academy of Actuaries qualification standards for actuaries signing such statements and who meets the requirements specified in the *Valuation Manual*.

j. The term "tail risk" means a risk that occurs either where the frequency of low probability events is higher than expected under a normal probability distribution or where there are observed events of very significant size or magnitude.

k. The term "*Valuation Manual*" means the manual of valuation instructions adopted by the NAIC as specified in this Appendix or as subsequently amended.

Valuation Requirements

2. Reserves reported in the financial statements shall:

a. Be computed in accordance with presently accepted actuarial standards;

b. Be based on actuarial assumptions that produce reserves at least as great as those called for in any contract provision as to reserve basis and method, and are in accordance with all other contract provisions. The reported reserves and related actuarial items held in support of the policies and contracts when considered in light of the assets held by the company with respect to the reserves and related actuarial items, including but not limited to the investment earnings on the assets and the considerations anticipated to be received and retained under the policies and contracts, make adequate provision for the company's obligations under the policies and contracts, including but not limited to the benefits under and expenses associated with the policies and contracts;

c. Be computed on the basis of assumptions consistent with those used in computing the corresponding items in the annual statement of the preceding year-end with any exceptions disclosed in the notes to the financial statements; and

d. Include provision for all actuarial reserves and related statement items which ought to be established.

Policies and Contracts Issued On or After the Operative Date of the Valuation Manual

3. The provisions set forth in paragraphs 23-27 of this Appendix shall apply to all policies and contracts issued on or after the January 1, 2017, operative date of the *Valuation Manual*.

Policies and Contracts Issued Prior to the Operative Date of the Valuation Manual

4. The provisions set forth in paragraphs 5-22 of this Appendix shall apply to all policies and contracts, as appropriate, subject to this Appendix prior to the January 1, 2017, operative date of the *Valuation Manual* and the provisions set forth in paragraphs 23-27 of this Appendix shall not apply to any such policies and contracts.

© 1999-2023 National Association of Insurance Commissioners

Computation of Minimum Standard for Life Insurance and Endowment Benefits – Policies and Contracts Issued Prior to the Operative Date of the Valuation Manual

5. The minimum standard for the valuation of all life insurance and endowment policies and contracts shall be the commissioners reserve valuation methods defined in paragraphs 11-13, valuation interest rates provided in paragraphs 7-10, and the following tables:

a. For ordinary policies of life insurance issued on the standard basis on or after January 1, 2004, excluding preneed policies (which follow Appendix A-817) any disability and accidental death benefits in the policies:

i. The Commissioners 2001 Standard Ordinary Mortality Table;

ii. At the election of the company for any one or more specified plans of life insurance, the Commissioners 2001 Standard Ordinary Mortality Table with 25-Year Select Mortality Factors; or

iii. Any ordinary mortality table adopted subsequently by the NAIC for use in determining the minimum standard for valuation for such policies;

b. For ordinary policies of life insurance issued on the standard basis, prior to January 1, 2004, excluding any disability and accidental death benefits in the policies and including preneed policies issued on or after January 1, 2012 (see A-817):

i. The Commissioners 1980 Standard Ordinary Mortality Table;

ii. At the election of the company for any one or more specified plans of life insurance, the Commissioners 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors;

c. For industrial life insurance policies issued on the standard basis, excluding any disability and accidental death benefits in the policies, the Commissioners 1961 Standard Industrial Mortality Table or any industrial mortality table adopted after 1980 by the NAIC for use in determining the minimum standard of valuation for the policies;

d. For total and permanent disability benefits in or supplementary to ordinary policies or contracts, the tables of Period 2 disablement rates and the 1930 to 1950 termination rates of the 1952 Disability Study of the Society of Actuaries, with due regard to the type of benefit or any tables of disablement rates and termination rates adopted after 1980 by the NAIC, for use in determining the minimum standard of valuation for those policies. Any such table shall, for active lives, be combined with a mortality table permitted for calculating the reserves for life insurance policies;

e. For accidental death benefits in or supplementary to policies, the 1959 Accidental Death Benefits Table or any accidental death benefits table adopted after 1980 by the NAIC for use in determining the minimum standard of valuation for those policies. The table shall be combined with a mortality table for calculating the reserves for life insurance policies; and

f. For group life insurance, life insurance issued on the substandard basis and other special benefits: tables which provide for an adequate reserve.

© 1999-2023 National Association of Insurance Commissioners

Computation of Minimum Standard for Annuities

6. The minimum standard of valuation for individual annuity and pure endowment contracts and for annuities and pure endowments purchased under group annuity and pure endowment contracts, shall be the commissioners annuity reserve valuation methods defined in paragraphs 14 and 15, valuation interest rates provided in paragraphs 7-10, and the tables defined in Appendix A-821.

Computation of Minimum Standard Valuation Interest Rates by Calendar Year of Issue - All Business

7. The interest rates used in determining the minimum standard for the valuation of policies issued on or after the effective date of the Codification shall be the calendar year statutory valuation interest rates as defined below:

a. Calendar Year Statutory Valuation Interest Rates

i. The calendar year statutory valuation interest rates, I, shall be determined as follows and the results rounded to the nearer one-quarter of one percent (1/4 of 1%):

(a) For life insurance:

$$I = .03 + W(R_1 - .03) + \frac{W}{2}(R_2 - .09);$$

(b) For single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and from guaranteed interest contracts with cash settlement options:

$$I = .03 + W(R - .03)$$

Where R_1 is the lesser of R and .09,

R_2 is the greater of R and .09,

R is the reference interest rate defined in paragraph 9,

and W is the weighting factor defined in paragraph 8;

(c) For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on an issue year basis, except as stated in subparagraph (b) above, the formula for life insurance stated in subparagraph (a) above shall apply to annuities and guaranteed interest contracts with guarantee durations in excess of ten (10) years and the formula for single premium immediate annuities stated in subparagraph (b) above shall apply to annuities and guaranteed interest contracts with guarantee duration of ten (10) years or less;

(d) For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the formula for single premium immediate annuities stated in subparagraph (b) above shall apply.

(e) For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a change in fund basis,

© 1999-2023 National Association of Insurance Commissioners

the formula for single premium immediate annuities stated in subparagraph (b) above shall apply.

ii. However, if the calendar year statutory valuation interest rate for a life insurance policy issued in any calendar year determined without reference to this sentence differs from the corresponding actual rate for similar policies issued in the immediately preceding calendar year by less than one-half of one percent (1/2 of 1%), the calendar year statutory valuation interest rate for the life insurance policies shall be equal to the corresponding actual rate for the immediately preceding calendar year.

Weighting Factors

8. The weighting factors referred to in the formulas stated above are given in the following tables:

a. Weighting Factors for Life Insurance:

Guarantee Duration (Years)	Weighting Factors
10 or less	.50
More than 10, but not more than 20	.45
More than 20	.35

For life insurance, the guarantee duration is the maximum number of years the life insurance can remain in force on a basis guaranteed in the policy or under options to convert to plans of life insurance with premium rates or nonforfeiture values or both which are guaranteed in the original policy;

b. Weighting factor for single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and guaranteed interest contracts with cash settlement options:

.80

c. Weighting factors for other annuities and for guaranteed interest contracts, except as stated in subparagraph (b) above, shall be as specified in items i., ii. and iii. below, according to the rules and definitions in items iv., v. and vi. below:

i. For annuities and guaranteed interest contracts valued on an issue year basis:

Guarantee Duration (Years)	Weighting Factor for Plan Type		
	A	B	C
5 or less:	.80	.60	.50
More than 5, but not more than 10:	.75	.60	.50
More than 10, but not more than 20:	.65	.50	.45
More than 20:	.45	.35	.35

		Plan Type		
		A	B	C
ii.	For annuities and guaranteed interest contracts valued on a change in fund basis, the factors shown in item i. above increased by:	.15	.25	.05

		Plan Type		
		A	B	C
iii.	For annuities and guaranteed interest contracts valued on an issue year basis (other than those with no cash settlement options) that do not guarantee interest on considerations received more than one year after issue or purchase and for annuities and guaranteed interest contracts valued on a change in fund basis that do not guarantee interest rates on considerations received more than twelve (12) months beyond the valuation date, the factors shown in item i. or derived in item ii. increased by:	.05	.05	.05

iv. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, the guarantee duration is the number of years for which the contract guarantees interest rates in excess of the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty (20) years. For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the guaranteed duration is the number of years from the date of issue or date of purchase to the date annuity benefits are scheduled to commence.

v. Plan type as used in the above tables is defined as follows:

(a) Plan Type A: At any time policyholder may withdraw funds only (l) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without an adjustment but installments over five years or more, or (3) as an immediate life annuity, or (4) no withdrawal permitted.

(b) Plan Type B: Before expiration of the interest rate guarantee, policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without an adjustment but in installments over five years or more, or (3) no withdrawal permitted. At the end of interest rate guarantee, funds may be withdrawn without an adjustment in a single sum or installments over less than five years.

© 1999-2023 National Association of Insurance Commissioners

(c) Plan Type C: Policyholder may withdraw funds before expiration of interest rate guarantee in a single sum or installments over less than five years either (1) without adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) subject only to a fixed surrender charge stipulated in the contract as a percentage of the fund.

vi. A company may elect to value guaranteed interest contracts with cash settlement options and annuities with cash settlement options on either an issue year basis or on a change in fund basis. Guaranteed interest contracts with no cash settlement options and other annuities with no cash settlement options must be valued on an issue year basis. An issue year basis of valuation refers to a valuation basis under which the interest rate used to determine the minimum valuation standard for the entire duration of the annuity or guaranteed interest contract is the calendar year valuation interest rate for the year of issue or year of purchase of the annuity or guaranteed interest contract, and the change in fund basis of valuation refers to a valuation basis under which the interest rate used to determine the minimum valuation standard applicable to each change in the fund held under the annuity or guaranteed interest contract is the calendar year valuation interest rate for the year of the change in the fund.

Reference Interest Rate

9. The reference interest rate referred to in paragraph 7 of this Appendix shall be defined as follows:

a. For life insurance, the lesser of the average over a period of thirty-six (36) months and the average over a period of twelve (l2) months, ending on June 30 of the calendar year preceding the year of issue, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

b. For single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or year of purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

c. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a year of issue basis, except as stated in subparagraph (b) above, with guarantee duration in excess of ten (10) years, the lesser of the average over a period of thirty-six (36) months and the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

d. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a year of issue basis, except as stated in subparagraph (b) above, with guarantee duration of ten (10) years or less, the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

e. For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the average over a period of twelve (12) months, ending

© 1999-2023 National Association of Insurance Commissioners

on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody's Investors Service, Inc.;

f. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a change in fund basis, except as stated in subparagraph b. above, the average over a period of twelve (12) months, ending on June 30 of the calendar year of the change in the fund, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody's Investors Service, Inc.

10. Alternative Method for Determining Reference Interest Rates – In the event that the monthly average of the composite yield on seasoned corporate bonds is no longer published by Moody's Investors Service, Inc. or in the event that the NAIC determines that the monthly average of the composite yield on seasoned corporate bonds as published by Moody's Investors Service, Inc. is no longer appropriate for the determination of the reference interest rate, then an alternative method for determination of the reference interest rate adopted by the NAIC may be substituted.

Reserve Valuation Method—Life Insurance and Endowment Benefits

11. Except as otherwise provided in this Appendix, reserves according to the commissioners reserve valuation method, for the life insurance and endowment benefits of policies providing for a uniform amount of insurance and requiring the payment of uniform premiums shall be the excess, if any, of the present value, at the date of valuation, of the future guaranteed benefits provided for by those policies, over the then present value of any future modified net premiums therefore. The modified net premiums for a policy shall be the uniform percentage of the respective contract premiums for the benefits such that the present value, at the date of issue of the policy, of all modified net premiums shall be equal to the sum of the then present value of the benefits provided for by the policy and the excess of a. over b., as follows:

a. A net level annual premium equal to the present value, at the date of issue, of the benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per annum payable on the first and each subsequent anniversary of the policy on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan for insurance of the same amount at an age one year higher than the age at issue of the policy.

b. A net one-year term premium for the benefits provided for in the first policy year.

12. For a life insurance policy for which the contract premium in the first policy year exceeds that of the second year and for which no comparable additional benefit is provided in the first year for the excess and which provides an endowment benefit or a cash surrender value or a combination in an amount greater than the excess premium, the reserve according to the commissioners reserve valuation method as of any policy anniversary occurring on or before the assumed ending date defined herein as the first policy anniversary on which the sum of any endowment benefit and any cash surrender value then available is greater than the excess premium shall, except as otherwise provided in paragraphs 19 and 20, be the greater of the reserve as of the policy anniversary calculated as described in the preceding paragraph and the reserve as of the policy anniversary calculated as described in those paragraphs, but with (i) the value defined in that paragraph being reduced by fifteen percent (15%) of the amount of such excess first year premium, (ii) all present values of benefits and premiums being determined without reference to premiums or benefits provided for by the policy after the assumed ending date, (iii) the policy being assumed to mature on that date as an endowment, and (iv) the cash surrender value provided on that date being considered as an endowment benefit. In making the above comparison the mortality stated in paragraph 5 and interest bases stated in paragraphs 7-10 shall be used.

© 1999-2023 National Association of Insurance Commissioners

13. Reserves according to the commissioners reserve valuation method shall be calculated by a method consistent with the principles of paragraphs 11 and 12 for:

a. Life insurance policies providing for a varying amount of insurance or requiring the payment of varying premiums;

b. Group annuity and pure endowment contracts purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended;

c. Disability and accidental death benefits in all policies and contracts; and

d. All other benefits, except life insurance and endowment benefits in life insurance policies and benefits provided by all other annuity and pure endowment contracts.

Reserve Valuation Method—Annuity and Pure Endowment Benefits

14. Paragraph 15 shall apply to all annuity and pure endowment contracts other than group annuity and pure endowment contracts purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended.

15. Reserves according to the commissioners annuity reserve method for benefits under annuity or pure endowment contracts, excluding any disability and accidental death benefits in the contracts, shall be the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, provided for by the contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of the contract, that become payable prior to the end of the respective contract year. The future guaranteed benefits shall be determined by using the mortality table, if any, and the interest rate, or rates, specified in the contracts for determining guaranteed benefits. The valuation considerations are the portions of the respective gross considerations applied under the terms of the contracts to determine nonforfeiture values.

Minimum Reserves

16. In no event shall a company's aggregate reserves for all life insurance policies, excluding disability and accidental death benefits be less than the aggregate reserves calculated in accordance with the methods set forth in paragraphs 11-15, paragraphs 19-21, and the mortality table or tables and rate or rates of interest used in calculating nonforfeiture benefits for the policies.

Optional Reserve Calculation

17. Reserves for any category of policies, contracts or benefits, may be calculated, at the option of the company, according to any standards that produce greater aggregate reserves for the category than those calculated according to the minimum standard provided herein, but the rate or rates of interest used for policies and contracts, other than annuity and pure endowment contracts, shall not be greater than the corresponding rate or rates of interest used in calculating any nonforfeiture benefits provided in the policies or contracts.

18. A company which adopts at any time a standard of valuation producing greater aggregate reserves than those calculated according to the minimum standard provided herein may, adopt a lower standard of

© 1999-2023 National Association of Insurance Commissioners

valuation, but not lower than the minimum provided herein; provided that the holding of additional reserves previously determined by the appointed actuary shall not be deemed to be the adoption of a higher standard of valuation.

Reserve Calculation—Valuation Net Premium Exceeding the Gross Premium Charged

19. If in any contract year the gross premium charged by a company on a policy or contract is less than the valuation net premium for the policy or contract calculated by the method used in calculating the reserve but using the minimum valuation standards of mortality and rate of interest, the minimum reserve required for the policy or contract shall be the greater of either the reserve calculated according to the mortality table, rate of interest, and method actually used for the policy or contract, or the reserve calculated by the method actually used for the policy or contract but using the minimum valuation standards of mortality and rate of interest and replacing the valuation net premium by the actual gross premium in each contract year for which the valuation net premium exceeds the actual gross premium. The minimum valuation standards of mortality and rate of interest to be used are those standards stated in paragraph 5 and paragraphs 7-10 of this Appendix.

20. For a life insurance policy for which the gross premium in the first policy year exceeds that of the second year and for which no comparable additional benefit is provided in the first year for the excess and which provides an endowment benefit or a cash surrender value or a combination in an amount greater than the excess premium, the provisions of paragraphs 19 and 20 shall be applied as if the method actually used in calculating the reserve for the policy were the method described in paragraph 11. The minimum reserve at each policy anniversary of such a policy shall be the greater of the minimum reserve calculated in accordance with paragraphs 11 and 12 and the minimum reserve calculated in accordance with paragraphs 19 and 20.

Reserve Calculation—Indeterminate Premium Plans

21. In the case of a plan of life insurance that provides for future premium determination, the amounts of which are to be determined by the insurance company based on then estimates of future experience, or in the case of a plan of life insurance or annuity that is of such a nature that the minimum reserves cannot be determined by the methods described above, the reserves that are held under the plan shall:

a. Be appropriate in relation to the benefits and the pattern of premiums for that plan; and

b. Be computed by a method that is consistent with the principles of this Appendix.

Minimum Standard for Accident and Health Insurance Contracts On or After the Operative Date of the Valuation Manual

22. For accident and health insurance contracts issued on or after the operative date of the *Valuation Manual*, the standard prescribed in the *Valuation Manual* is the minimum standard of valuation required under paragraph 3. For [disability, accident and sickness, accident and health] insurance contracts issued on or after January 1, 2017, and prior to the operative date of the *Valuation Manual* the minimum standard of valuation is the standard adopted by the commissioner by regulation.

Valuation Manual for Policies Issued On or After the Operative Date of the Valuation Manual

23. For policies issued on or after the operative date of the *Valuation Manual*, the standard prescribed in the *Valuation Manual* is the minimum standard of valuation required under paragraph 3.

© 1999-2023 National Association of Insurance Commissioners

24. The *Valuation Manual* must specify all of the following:

a. Minimum valuation standards for and definitions of the policies or contracts subject to paragraph 3. Such minimum valuation standards shall be:

i. The commissioners reserve valuation method for life insurance contracts, or other than annuity contracts, subject to paragraph 3;

ii. The commissioners annuity reserve valuation method for annuity contracts subject to paragraph 3; and

iii. Minimum reserves for all other policies or contracts subject to paragraph 3.

b. Which policies or contracts or types of policies or contracts that are subject to the requirements of a principle-based valuation in paragraph 25 and the minimum valuation standards consistent with those requirements;

c. For policies and contracts subject to a principle-based valuation under paragraphs 25-27:

i. Requirements for the format of reports to the commissioner under paragraph 26.c. and which shall include information necessary to determine if the valuation is appropriate and in compliance with this Appendix;

ii. Assumptions shall be presecribed for risks over which the company does not have significant control or influence; and

iii. Procedures for corporate governance and oversight of the actuarial function, and a process for appropriate waiver or modification of such procedures.

d. For policies not subject to a principle-based valuation under paragraph 25-27, the minimum valuation standard shall either:

i. Be consistent with the minimum standard of valuation prior to the operative date of the *Valuation Manual*; or

ii. Develop reserves that quantify the benefits and guarantees, and the funding, associated with the contracts and their risks at a level of conservatism that reflects conditions that include unfavorable events that have a reasonable probability of occurring.

e. Other requirements, including, but not limited to, those relating to reserve methods, models for measuring risk, generation of economic scenarios, assumptions, margins, use of company experience, risk measurement, disclosure, certifications, reports, actuarial opinions and memorandums, transition rules and internal controls; and

f. The data and form of the data required under paragraph 28, with whom the data must be submitted, and may specify other requirements including data analyses and reporting of analyses.

Requirements of a Principle-Based Valuation

25. A company must establish reserves using a principle-based valuation that meets the following conditions for policies or contracts as specified in the *Valuation Manual*:

© 1999-2023 National Association of Insurance Commissioners

a. Quantify the benefits and guarantees, and the funding, associated with the contracts and their risks at a level of conservatism that reflects conditions that include unfavorable events that have a reasonable probability of occurring during the lifetime of the contracts. For polices or contracts with significant tail risk, reflects conditions appropriately adverse to quantify the tail risk.

b. Incorporate assumptions, risk analysis methods and financial models and management techniques that are consistent with, but not necessarily identical to, those utilized within the company's overall risk assessment process, while recognizing potential differences in financial reporting structures and any prescribed assumptions or methods.

c. Incorporate assumptions that are derived in one of the following manners:

i. The assumption is prescribed in the *Valuation Manual*.

ii. For assumptions that are not prescribed, the assumptions shall:

(a) Be established utilizing the company's available experience, to the extent it is relevant and statistically credible; or

(b) To the extent that company data is not available, relevant, or statistically credible, be established utilizing other relevant, statistically credible experience.

d. Provide margins for uncertainty including adverse deviation and estimation error, such that the greater the uncertainty, the larger the margin and resulting reserve.

26. A company using a principle-based valuation for one or more policies or contracts subject to paragraphs 25-27 as specified in the *Valuation Manual* shall:

a. Establish procedures for corporate governance and oversight of the actuarial valuation function consistent with those described in the *Valuation Manual*.

b. Provide to the commissioner and the board of directors an annual certification of the effectiveness of the internal controls with respect to the principle-based valuation. Such controls shall be designed to assure that all material risks inherent in the liabilities and associated assets subject to such valuation are included in the valuation, and that valuations are made in accordance with the *Valuation Manual*. The certification shall be based on the controls in place as of the end of the preceding calendar year.

c. Develop, and file with the commissioner upon request, a principle-based valuation report that complies with standards prescribed in the *Valuation Manual*.

27. A principle-based valuation may include a prescribed formulaic reserve component.

Experience Reporting for Policies In Force On or After the Operative Date of the Valuation Manual

28. A company shall submit mortality, morbidity, policyholder behavior, or expense experience and other data as prescribed in the *Valuation Manual*.

Appendix A-821

Annuity Mortality Table for Use in Determining Reserve Liabilities for Annuities

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 56—Separate Accounts

Purpose

1. The purpose of this Appendix is to recognize the following mortality tables for use in determining the minimum standard of valuation for annuity and pure endowment contracts: the 1983 Table "a," the Annuity 2000 Mortality Table, the 2012 Individual Annuity Reserving (2012 IAR) Table and the 1994 Group Annuity Reserving (1994 GAR) Table.

Definitions

2. As used in this Appendix "1983 Table 'a'" means that mortality table developed by the Society of Actuaries Committee to Recommend a New Mortality Basis for Individual Annuity Valuation and adopted as a recognized mortality table for annuities in June 1982 by the National Association of Insurance Commissioners.

3. As used in this Appendix "1994 GAR Table" means that mortality table developed by the Society of Actuaries Group Annuity Valuation Table Task Force and shown in the *Proceedings of the NAIC*.

4. As used in this Appendix "Annuity 2000 Mortality Table" means that mortality table developed by the Society of Actuaries Committee on Life Insurance Research and shown in the Proceedings of the NAIC.

5. As used in this Appendix, "Period table" means a table of mortality rates applicable to a given calendar year (the Period).

6. As used in this Appendix, "Generational mortality table" means a mortality table containing a set of mortality rates that decrease for a given age from one year to the next based on a combination of a Period table and a projection scale containing rates of mortality improvement.

7. As used in this Appendix, "2012 IAR Table" means that Generational mortality table developed by the Society of Actuaries Committee on Life Insurance Research and containing rates, qx2012+n, derived from a combination of the 2012 IAM Period Table and Projection Scale G2, using the methodology stated in paragraphs 13 and 14.

8. As used in this Appendix, "2012 Individual Annuity Mortality Period Life (2012 IAM Period) Table" means the Period table containing loaded mortality rates for calendar year 2012. This table contains rates, qx2012, developed by the Society of Actuaries Committee on Life Insurance Research and is shown in Appendices I and II.

9. As used in this Appendix, "Projection Scale G2 (Scale G2)" is a table of annual rates, $G2_x$, of mortality improvement by age for projecting future mortality rates beyond calendar year 2012. This table was developed by the Society of Actuaries Committee on Life Insurance Research and is shown in Appendices III and IV.

Individual Annuity or Pure Endowment Contracts

10. Except as provided in paragraph 12 of this Appendix, the Annuity 2000 Mortality Table shall be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract issued on or after January 1, 2001, through December 31, 2014.

11. Except as provided in paragraph 12, the 2012 IAR Mortality Table shall be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract issued on or after January 1, 2015.

12. The 1983 Table "a" without projection is to be used for determining the minimum standards of valuation for an individual annuity or pure endowment contract solely when the contract is based on life contingencies and is issued to fund periodic benefits arising from:

a. Settlements of various forms of claims pertaining to court settlements or out of court settlements from tort actions;

b. Settlements involving similar actions such as workers' compensation claims; or

c. Settlements of long term disability claims where a temporary or life annuity has been used in lieu of continuing disability payments.

Application of the 2012 IAR Mortality Table

13. In using the 2012 IAR Mortality Table, the mortality rate for a person age x in year (2012 + n) is calculated as follows:

$$q_x^{2012+n} = q_x^{2012} (1 – G2_x)^n$$

14. The resulting q_x^{2012+n} shall be rounded to three decimal places per 1,000, e.g., 0.741 deaths per 1,000. Also, the rounding shall occur according to the formula above, starting at the 2012 period table rate. For example, for a male age 30, $q_x^{2012} = 0.741$.

$q_x^{2013} = 0.741 * (1 – 0.010) ^ 1 = 0.73359$, which is rounded to 0.734
$q_x^{2014} = 0.741 * (1 – 0.010) ^ 2 = 0.7262541$, which is rounded to 0.726

A method leading to incorrect rounding would be to calculate q_x^{2014} as $q_x^{2013} * (1 – 0.010)$, or 0.734 * 0.99 = 0.727. It is incorrect to use the already rounded q_x^{2013} to calculate q_x^{2014}.

Group Annuity or Pure Endowment Contracts

15. The 1994 GAR Table shall be used for determining the minimum standard of valuation for any annuity or pure endowment purchased under a group annuity or pure endowment contract.

Application of the 1994 GAR Table

16. In using the 1994 GAR Table, the mortality rate for a person age x in year (1994 + n) is calculated as follows:

$$q_x^{1994+n} = q_x^{1994} (1 - AA_x)^n$$

where the q_x^{1994} and AA_xs are as specified in the 1994 GAR Table.

© 1999-2023 National Association of Insurance Commissioners

Appendix A-822

Asset Adequacy Analysis Requirements

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 52—Deposit-Type Contracts
SSAP No. 54R—Individual and Group Accident and Health Contracts
SSAP No. 56—Separate Accounts
SSAP No. 59—Credit Life and Accident and Health Insurance Contracts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)

Definitions

1. "Asset adequacy analysis" means an analysis of the adequacy of reserves and related actuarial items, in light of the assets supporting such reserves and related items, to meet the obligations of an insurer.

Asset Adequacy Analysis

2. The reserves and related items, when considered in light of the assets held by the company with respect to such reserves and related actuarial items including, but not limited to, the investment earnings on the assets, and the considerations anticipated to be received and retained under the policies and contracts, shall make adequate provision, according to presently accepted actuarial standards of practice, for the anticipated cash flows required by the contractual obligations and related expenses of the company.

3. If the company determines as the result of asset adequacy analysis that a reserve should be held in addition to the aggregate reserve held and calculated in accordance with methods set forth in Appendix A-820, the company shall establish the additional reserve.

4. Additional reserves established above and deemed not necessary in subsequent years may be released. The release of such reserves would not be deemed an adoption of a lower standard of valuation.

Appendix A-830

Valuation of Life Insurance Policies (Including the Introduction and Use of New Select Mortality Factors)

Relevant SSAPs:
SSAP No. 51R—Life Contracts
SSAP No. 52—Deposit-Type Contracts
SSAP No. 56—Separate Accounts

Relevant NAIC Model Laws/Regulations:
Standard Valuation Law (#820)
Actuarial Opinion and Memorandum Regulation (#822)

Purpose

1. The purpose of this appendix is to provide:

   a. Tables of select mortality factors and rules for their use;

   b. Rules concerning a minimum standard for the valuation of plans with nonlevel premiums or benefits; and

   c. Rules concerning a minimum standard for the valuation of plans with secondary guarantees.

2. The method for calculating basic reserves defined in this appendix will constitute the Commissioners' Reserve Valuation Method for policies to which this appendix is applicable.

Applicability

3. This appendix shall apply to all life insurance policies, with or without nonforfeiture values, issued on or after the effective date of this appendix, subject to the following exceptions and conditions. Nothing in this section shall be construed to expand the applicability of the Valuation of Life Insurance Policies Model Regulation to include life insurance policies exempted under this section.

   a. Exceptions

      i. This appendix shall not apply to any individual life insurance policy issued on or after the effective date of this appendix if the policy is issued in accordance with and as a result of the exercise of a reentry provision contained in the original life insurance policy of the same or greater face amount, issued before the effective date of this appendix, that guarantees the premium rates of the new policy. This appendix also shall not apply to subsequent policies issued as a result of the exercise of such a provision, or a derivation of the provision, in the new policy.

      ii. This appendix shall not apply to any universal life policy that meets all the following requirements:

         (a) Secondary guarantee period, if any, is five (5) years or less;

         (b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables as defined in paragraph 9 and the applicable

valuation interest rate. For contracts issued beginning January 1, 2004, the net level reserve premium is based on the ultimate mortality rates in the 2001 CSO Mortality Table; and

(c) The initial surrender charge is not less than 100 percent of the first year annualized specified premium for the secondary guarantee period.

Drafting Note: Policies with a secondary guarantee are described in paragraph 29.

iii. This appendix shall not apply to any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

iv. This appendix shall not apply to any variable universal life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

v. This appendix shall not apply to a group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year.

vi. This appendix shall not apply to preneed policies, which follow the requirements of A-817.

b. Conditions

i. Calculation of the minimum valuation standard for policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits (other than universal life policies), or both, shall be in accordance with the provisions of paragraphs 21-28.

ii. Calculation of the minimum valuation standard for flexible premium and fixed premium universal life insurance policies, that contain provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period shall be in accordance with the provisions of paragraphs 29-32.

Definitions

4. "Basic reserves" means reserves calculated in accordance with Appendix A-820, paragraphs 11-13.

5. "Contract segmentation method" means the method of dividing the period from issue to mandatory expiration of a policy into successive segments, with the length of each segment being defined as the period from the end of the prior segment (from policy inception, for the first segment) to the end of the latest policy year as determined below. For contracts beginning January 1, 2004, all calculations are made using the 2001 CSO Mortality Rate, and, if elected, the optional minimum mortality standard for deficiency reserves stipulated in paragraph 17. (or any other valuation mortality table adopted by the National Association of Insurance Commissioners (NAIC) after the effective date of this appendix for this purpose), and, if elected, the optional minimum mortality standard for deficiency reserves stipulated in paragraph 17 of this appendix. The length of a particular contract segment shall be set equal to the minimum of the value t for which G_t is greater than R_t (if G_t never exceeds R_t the segment length is deemed to be the number of years from the beginning of the segment to the mandatory expiration date of the policy), where G_t and R_t are defined as follows:

© 1999-2023 National Association of Insurance Commissioners

Attachment 1

$$G_t = \frac{GPx+k+t}{GP_{x+k+t-1}}$$

where: x = original issue age;

k = the number of years from the date of issue to the beginning of the segment;

t = 1, 2, ...; *t* is reset to 1 at the beginning of each segment;

$GP_{x+k+t-1}$ = Guaranteed gross premium per thousand of face amount for year *t* of the segment, ignoring policy fees only if level for the premium paying period of the policy.

$$R_t = \frac{q_{x+k+t}}{q_{x+k+t-1}}$$

However, R_t may be increased or decreased by one percent in any policy year, at the company's option, but R_t shall not be less than one;

where: x, k and t are as defined above, and

The value of "$q_{x+k+t-1}$" is the valuation mortality rate for deficiency reserves in policy year k+t, but using the unmodified select mortality rates if modified select mortality rates are used in the computation of deficiency reserves.

However, if GP_{x+k+t} is greater than 0 and $GP_{x+k+t-1}$ is equal to 0, G_t shall be deemed to be 1000. If GP_{x+k+t} and $GP_{x+k+t-1}$ are both equal to 0, G_t shall be deemed to be 0.

Drafting Note: The purpose of the one percent tolerance in the R factor is to prevent irrational segment lengths due to such things as premium rounding. For example, consider a plan in which gross premiums are designed at some point to be a ratio times the underlying ultimate mortality rates, where the ratio varies by issue age. The resulting segments may be greater than one year, because the guaranteed gross premiums are not expressed in fractional cents. The tolerance factor allows the creation of one year segments for a plan in which premiums parallel the underlying valuation mortality table.

6. "Deficiency reserves" means the excess, if greater than zero, of

   a. Minimum reserves calculated in accordance with Appendix A-820, paragraphs 19 and 20, over

   b. Basic reserves.

7. "Guaranteed gross premiums" means the premiums under a policy of life insurance that are guaranteed and determined at issue.

8. "Maximum valuation interest rates" means the interest rates defined in Appendix A-820, paragraphs 7-10 (Computation of Minimum Standard by Calendar Year of Issue – All Business) that are to be used in determining the minimum standard for the valuation of life insurance policies.

9. "1980 CSO valuation tables" means the Commissioners' 1980 Standard Ordinary Mortality Table (1980 CSO Table) without ten-year selection factors, referenced in Appendix A-820, and variations of the 1980 CSO Table approved by the NAIC, such as the smoker and nonsmoker versions approved in

© 1999-2023 National Association of Insurance Commissioners

December 1983.

Drafting Note: This appendix defines the 1980 CSO Tables without the existing ten -year select mortality factors to assure that, if select mortality factors are elected, only one set of factors may be applied to the base valuation mortality table.

10. "Scheduled gross premium" means the smallest illustrated gross premium at issue for other than universal life insurance policies. For universal life insurance policies, scheduled gross premium means the smallest specified premium described in paragraph 29.c., if any, or else the minimum premium described in paragraph 29.d.

11. a. "Segmented reserves" means reserves, calculated using segments produced by the contract segmentation method, equal to the present value of all future guaranteed benefits less the present value of all future net premiums to the mandatory expiration of a policy, where the net premiums within each segment are a uniform percentage of the respective guaranteed gross premiums within the segment. The uniform percentage for each segment is such that, at the beginning of the segment, the present value of the net premiums within the segment equals:

i. The present value of the death benefits within the segment, plus

ii. The present value of any unusual guaranteed cash value (see paragraph 24) occurring at the end of the segment, less

iii. Any unusual guaranteed cash value occurring at the start of the segment, plus

iv. For the first segment only, the excess of the Item (a) over Item (b), as follows:

(a) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for in the first segment after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary within the first segment on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.

(b) A net one-year term premium for the benefits provided for in the first policy year.

b. The length of each segment is determined by the "contract segmentation method," as defined in paragraph 5.

c. The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the sum of the lengths of all segments of the policy.

d. For both basic reserves and deficiency reserves computed by the segmented method, present values shall include future benefits and net premiums in the current segment and in all subsequent segments.

Drafting Note: The segmentation requirement should not be limited to plans with no cash surrender values; otherwise companies could avoid segmentation entirely by designing policies with minimal (positive) cash values. Segmentation for plans with cash surrender values should be based solely upon

gross premium levels. Basing segmentation upon the level of cash surrender values introduces complications because of the inter-relationship between minimum cash surrender values and gross premium patterns. The requirements of this appendix relating to reserves for plans with unusual cash values and to reserves if cash values exceed calculated reserves serve to link required reserves and cash surrender values. The calculation of segmented reserves shall not be linked to the occurrence of a positive unitary terminal reserve at the end of a segment. The requirement of this appendix to hold the greater of the segmented reserve or the unitary reserve eliminates the need for any linkage.

12. “Tabular cost of insurance” means the net single premium at the beginning of a policy year for one-year term insurance in the amount of the guaranteed death benefit in that policy year.

13. “Ten-year select factors” means the select factors referenced in Appendix A-820.

14. a. “Unitary reserves” means the present value of all future guaranteed benefits less the present value of all future modified net premiums, where:

i. Guaranteed benefits and modified net premiums are considered to the mandatory expiration of the policy; and

ii. Modified net premiums are a uniform percentage of the respective guaranteed gross premiums, where the uniform percentage is such that, at issue, the present value of the net premiums equals the present value of all death benefits and pure endowments, plus the excess of Item (a) over Item (b), as follows:

(a) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary of the policy on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.

(b) A net one year term premium for the benefits provided for in the first policy year.

b. The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the length from issue to the mandatory expiration of the policy.

Drafting Note: The purpose of this paragraph is to define as specifically as possible what has become commonly called the unitary method. Appendix A-820 does not define the term “unitary” for policies with nonlevel premiums or benefits; its requirement for reserves “computed by a method that is consistent with the principles of Appendix A-820” has not been uniformly interpreted.

15. “Universal life insurance policy” means any individual life insurance policy under the provisions of which separately identified interest credits (other than in connection with dividend accumulations, premium deposit funds, or other supplementary accounts) and mortality or expense charges are made to the policy.

General Calculation Requirements for Basic Reserves and Premium Deficiency Reserves

16. Prior to January 1, 2004, at the election of the company for any one or more specified plans of

life insurance, the minimum mortality standard for basic reserves may be calculated using the 1980 CSO valuation tables with select mortality factors. Effective January 1, 2004, the 2001 CSO Mortality Table is the minimum standard for basic reserves (or any other valuation mortality table adopted by the NAIC after the effective date of the 2001 CSO table for this purpose). Prior to January 1, 2004 if select mortality factors are elected, they may be:

a. The ten-year select mortality factors referenced in Appendix A-820;

b. The select mortality factors in Attachment 1 of this appendix; or

Drafting Note: The select mortality factors for duration 1 through 15 in Attachment 1 of this appendix reflect the Society of Actuaries' data for the years 1983 through 1986, split by sex and smoking status, with fifteen years of mortality improvement, based on Society of Actuaries' Projection Scale A applied. A 50% margin was added. The factors were then graded to the 1980 CSO Tables over the next five durations. A 50% margin was deemed appropriate to provide a reasonable margin, with little likelihood that actual experience for significant blocks of business would exceed it.

c. Any other table of select mortality factors adopted by the NAIC after the effective date of this appendix for the purpose of calculating basic reserves.

17. Deficiency reserves, if any, are calculated for each policy as the excess, if greater than zero, of the quantity A over the basic reserve. The quantity A is obtained by recalculating the basic reserve for the policy using guaranteed gross premiums instead of net premiums when the guaranteed gross premiums are less than the corresponding net premiums. At the election of the company for any one or more specified plans of insurance, the quantity A and prior to January 1, 2004 the corresponding net premiums used in the determination of quantity A may be based upon the 1980 CSO valuation tables with select mortality factors (or any other valuation mortality table adopted by the NAIC after the effective date of this appendix). If select mortality factors are elected, they may be:

a. The ten-year select mortality factors referenced in Appendix A-820;

b. The select mortality factors in Attachment 1 of this appendix;

Effective January 1, 2004, the 2001 CSO Mortality Table is the minimum standard for deficiency reserves. If select mortality rates are used, they may be multiplied by X percent for durations in the first segment, subject to the conditions specified in Sections 17c. to iv. (a). In demonstrating compliance with those conditions, the demonstrations may not combine the results of tests that utilize the 1980 CSO Mortality Table with those tests that utilize the 2001 CSO Mortality Table, unless the combination is explicitly required by regulation or necessary to be in compliance with relevant Actuarial Standards of Practice.

Drafting Note: The select mortality factors in Attachment 1 of this appendix do not reflect the underwriting risk classes that have evolved since the period of the underlying experience. In light of this consideration and the recent recognition of the regulatory value of actuarial opinions, this appendix allows actuarial judgment to be used for deficiency reserves.

c. For durations in the first segment, X percent of the select mortality factors in Attachment 1 of this appendix, subject to the following:

i. X may vary by policy year, policy form, underwriting classification, issue age, or any other policy factor expected to affect mortality experience;

ii. X is such that, when using the valuation interest rate used for basic reserves, Item (a) is greater than or equal to Item (b);

Attachment 1

(a) The actuarial present value of future death benefits, calculated using the mortality rates resulting from the application of X;

(b) The actuarial present value of future death benefits calculated using anticipated mortality experience without recognition of mortality improvement beyond the valuation date;

iii. X is such that the mortality rates resulting from the application of X are at least as great as the anticipated mortality experience, without recognition of mortality improvement beyond the valuation date, in each of the first five (5) years after the valuation date;

iv. The appointed actuary shall increase X at any valuation date where it is necessary to continue to meet all the requirements of paragraph 17.c.;

v. The appointed actuary may decrease X at any valuation date as long as X continues to meet all the requirements of paragraph 17.c.; and

vi. The appointed actuary shall specifically take into account the adverse effect on expected mortality and lapsation of any anticipated or actual increase in gross premiums.

(a) If X is less than 100 percent at any duration for any policy, the following requirements shall be met:

(i) The appointed actuary shall annually prepare an actuarial opinion and memorandum for the company in conformance with the asset adequacy analysis requirements as outlined in Appendix A-822;

(ii) The appointed actuary shall disclose, in the Regulatory Asset Adequacy Issues Summary, the impact of the insufficiency of assets to support the payment of benefits and expenses and the establishment of statutory reserves during one or more interim periods; and

(iii) The appointed actuary shall annually opine for all policies subject to this appendix as to whether the mortality rates resulting from the application of X meet the requirements of paragraph 17.c. This opinion shall be supported by an actuarial report, subject to appropriate Actuarial Standards of Practice promulgated by the Actuarial Standards Board of the American Academy of Actuaries. The X factors shall reflect anticipated future mortality, without recognition of mortality improvement beyond the valuation date, taking into account relevant emerging experience.

d. Any other table of select mortality factors adopted by the NAIC after the effective date of this appendix for the purpose of calculating deficiency reserves.

18. This paragraph applies to both basic reserves and deficiency reserves. Any set of select mortality factors may be used only for the first segment. However, if the first segment is less than ten (10) years, the appropriate ten-year select mortality factors referenced in Appendix A-820 may be used thereafter

© 1999-2023 National Association of Insurance Commissioners

through the tenth policy year from the date of issue.

Drafting Note: This appendix does not allow the use of select mortality factors beyond the first segment. The rationale is that the result of a premium increase that is sufficient to require a new segment will be increased lapsation, leading to mortality deterioration after the increase. Also, for policies that have reentry provisions, select mortality factors shall not be used in segments beginning after reentry unless a new policy is actually issued. However, this appendix allows the use of the ten-year select mortality factors referenced in Appendix A-820 beyond the first segment (but in no case beyond the tenth policy year) in recognition that the mortality deterioration is unlikely to occur to a significant degree within the first ten (10) years.

19. In determining basic reserves or deficiency reserves, guaranteed gross premiums without policy fees may be used where the calculation involves the guaranteed gross premium but only if the policy fee is a level dollar amount after the first policy year. In determining deficiency reserves, policy fees may be included in guaranteed gross premiums, even if not included in the actual calculation of basic reserves.

20. Reserves for policies that have changes to guaranteed gross premiums, guaranteed benefits, guaranteed charges, or guaranteed credits that are unilaterally made by the insurer after issue and that are effective for more than one year after the date of the change shall be the greatest of the following: (1) reserves calculated ignoring the guarantee, (2) reserves assuming the guarantee was made at issue, and (3) reserves assuming that the policy was issued on the date of the guarantee.

Calculation of Minimum Valuation Standard for Policies with Guaranteed Nonlevel Gross Premiums or Guaranteed Nonlevel Benefits (Other than Universal Life Policies)

21. Basic Reserves

a. Basic reserves shall be calculated as the greater of the segmented reserves and the unitary reserves. Both the segmented reserves and the unitary reserves for any policy shall use the same valuation mortality table and selection factors. At the option of the insurer, in calculating segmented reserves and net premiums, either of the adjustments described in subparagraph i. or ii. below may be made:

i. Treat the unitary reserve, if greater than zero, applicable at the end of each segment as a pure endowment and subtract the unitary reserve, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.

ii. Treat the guaranteed cash surrender value, if greater than zero, applicable at the end of each segment as a pure endowment; and subtract the guaranteed cash surrender value, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.

22. Deficiency Reserves

a. The deficiency reserve at any duration shall be calculated:

i. On a unitary basis if the corresponding basic reserve determined by paragraph 21 is unitary;

ii. On a segmented basis if the corresponding basic reserve determined by paragraph 21 is segmented; or

Attachment 1

iii. On the segmented basis if the corresponding basic reserve determined by paragraph 21 is equal to both the segmented reserve and the unitary reserve.

b. Paragraph 22 shall apply to any policy for which the guaranteed gross premium at any duration is less than the corresponding modified net premium calculated by the method used in determining the basic reserves, but using the minimum valuation standards of mortality (specified in paragraph 17) and rate of interest.

c. Deficiency reserves, if any, shall be calculated for each policy as the excess if greater than zero, for the current and all remaining periods, of the quantity A over the basic reserve, where A is obtained as indicated in paragraph 17.

d. For deficiency reserves determined on a segmented basis, the quantity A is determined using segment lengths equal to those determined for segmented basic reserves.

23. Minimum Value

a. Basic reserves may not be less than the tabular cost of insurance for the balance of the policy year, if mean reserves are used. Basic reserves may not be less than the tabular cost of insurance for the balance of the current modal period or to the paid-to-date, if later, but not beyond the next policy anniversary, if mid-terminal reserves are used. The tabular cost of insurance shall use the same valuation mortality table and interest rates as that used for the calculation of the segmented reserves. However, if select mortality factors are used, they shall be the ten-year select factors referenced in Appendix A-820. In no case may total reserves (including basic reserves, deficiency reserves and any reserves held for supplemental benefits that would expire upon contract termination) be less than the amount that the policyowner would receive (including the cash surrender value of the supplemental benefits, if any, referred to above), exclusive of any deduction for policy loans, upon termination of the policy. Effective January 1, 2004, the valuation mortality table used in determining the tabular cost of insurance shall be the ultimate mortality rates in the 2001 CSO Mortality Table.

24. Unusual Pattern of Guaranteed Cash Surrender Values

Drafting Note: This requirement is independent of both the segmentation process and the unitary process. After the greater of the segmented or the unitary reserve has been determined, then this paragraph imposes an additional floor on the ultimate reserve. The purpose of this paragraph is to assure adequate funding of significant increases in guaranteed cash surrender values.

a. For any policy with an unusual pattern of guaranteed cash surrender values, the reserves actually held prior to the first unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the first unusual guaranteed cash surrender value as a pure endowment and treating the policy as an n year policy providing term insurance plus a pure endowment equal to the unusual cash surrender value, where n is the number of years from the date of issue to the date the unusual cash surrender value is scheduled.

b. The reserves actually held subsequent to any unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the policy as an n year policy providing term insurance plus a pure endowment equal to the next unusual guaranteed cash surrender value, and treating any unusual guaranteed cash surrender value at the end of the prior segment as a net single premium, where

© 1999-2023 National Association of Insurance Commissioners

i. *n* is the number of years from the date of the last unusual guaranteed cash surrender value prior to the valuation date to the earlier of:

(a) The date of the next unusual guaranteed cash surrender value, if any, that is scheduled after the valuation date; or

(b) The mandatory expiration date of the policy; and

ii. The net premium for a given year during the *n* year period is equal to the product of the net to gross ratio and the respective gross premium; and

iii. The net to gross ratio is equal to Item (a) divided by Item (b) as follows:

(a) The present value, at the beginning of the *n* year period, of death benefits payable during the *n* year period plus the present value, at the beginning of the n year period, of the next unusual guaranteed cash surrender value, if any, minus the amount of the last unusual guaranteed cash surrender value, if any, scheduled at the beginning of the *n* year period.

(b) The present value, at the beginning of the *n* year period, of the scheduled gross premiums payable during the *n* year period.

c. For purposes of this paragraph, a policy is considered to have an unusual pattern of guaranteed cash surrender values if any future guaranteed cash surrender value exceeds the prior year's guaranteed cash surrender value by more than the sum of:

i. One hundred ten percent (110%) of the scheduled gross premium for that year;

ii. One hundred ten percent (110%) of one year's accrued interest on the sum of the prior year's guaranteed cash surrender value and the scheduled gross premium using the nonforfeiture interest rate used for calculating policy guaranteed cash surrender values; and

iii. Five percent (5%) of the first policy year surrender charge, if any.

25. Optional Exemption for Yearly Renewable Term Reinsurance. At the option of the company, the following approach for reserves on YRT reinsurance may be used:

Drafting Note: Traditional reserves for yearly renewable term (YRT) reinsurance, the calculations of which this section describes, are already adequate and sufficient. However, without this option in the appendix, YRT reinsurance would be subject to the more complex segmentation calculations.

a. Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.

b. Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in paragraph 23.

c. Deficiency reserves.

i. For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective maximum guaranteed gross premium.

© 1999-2023 National Association of Insurance Commissioners

ii. Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with subparagraph i. above.

d. Prior to January 1, 2004, for purposes of this paragraph, the calculations use the maximum valuation interest rate and the 1980 CSO mortality tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this appendix by the NAIC for this purpose. Effective January 1, 2004, the calculations specified in this paragraph (25) shall use the ultimate mortality rates in the 2001 CSO Mortality Table.

e. A reinsurance agreement shall be considered YRT reinsurance for purposes of this paragraph if only the mortality risk is reinsured.

f. If the assuming company chooses this optional exemption, the ceding company's reinsurance reserve credit shall be limited to the amount of reserve held by the assuming company for the affected policies.

26. Optional Exemption for Attained-Age-Based Yearly Renewable Term Life Insurance Policies. At the option of the company, the following approach for reserves for attained-age-based YRT life insurance policies may be used:

Drafting Note: Traditional reserves for attained-age-based YRT policies, the calculations of which this subsection describes, are already adequate and sufficient. However, without this option in the appendix, these policies would be subject to the more complex segmentation calculations.

a. Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.

b. Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in paragraph 23.

c. Deficiency reserves.

i. For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective maximum guaranteed gross premium.

ii. Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with subparagraph i. above.

d. Prior to January 1, 2004, for purposes of this paragraph, the calculations use the maximum valuation interest rate and the 1980 CSO valuation tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this appendix by the NAIC for this purpose. Effective January 1, 2004, the calculations specified in this paragraph shall use the ultimate mortality rates in the 2001 CSO Mortality Table.

e. A policy shall be considered an attained-age-based YRT life insurance policy for purposes of this subsection if:

i. The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are based upon the attained age of the insured such

© 1999-2023 National Association of Insurance Commissioners

that the rate for any given policy at a given attained age of the insured is independent of the year the policy was issued; and

ii. The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are the same as the premium rates for policies covering all insureds of the same sex, risk class, plan of insurance and attained age.

f. For policies that become attained-age-based YRT policies after an initial period of coverage, the approach of this subsection may be used after the initial period if:

i. The initial period is constant for all insureds of the same sex, risk class and plan of insurance; or

ii. The initial period runs to a common attained age for all insureds of the same sex, risk class and plan of insurance; and

iii. After the initial period of coverage, the policy meets the conditions of paragraph 26.e. above.

g. If this election is made, this approach shall be applied in determining reserves for all attained-age-based YRT life insurance policies issued on or after the effective date of this appendix.

27. Exemption from Unitary Reserves for Certain *n*-Year Renewable Term Life Insurance Polices. Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met:

Drafting Note: Without this exemption, companies issuing certain *n*-year renewable term policies could be forced to hold reserves higher than *n*-year term reserves, even though in many cases gross premiums are well above valuation mortality rates.

a. The policy consists of a series of *n*-year periods, including the first period and all renewal periods, where *n* is the same for each period, except that for the final renewal period, n may be truncated or extended to reach the expiry age, provided that this final renewal period is less than 10 years and less than twice the size of the earlier n-year periods, and for each period, the premium rates on both the initial current premium scale and the guaranteed maximum premium scale are level;

b. Prior to January 1, 2004, the guaranteed gross premiums in all *n*-year periods are not less than the corresponding net premiums based upon the 1980 CSO Table with or without the ten-year select mortality factors. Effective January 1, 2004, the calculations specified in this paragraph shall use the ultimate mortality rates in the 2001 CSO Mortality Table; and

c. There are no cash surrender values in any policy year.

28. Exemption from Unitary Reserves for Certain Juvenile Policies. Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met, based upon the initial current premium scale at issue:

a. At issue, the insured is age twenty-four (24) or younger;

b. Until the insured reaches the end of the juvenile period, which shall occur at or before age twenty-five (25), the gross premiums and death benefits are level, and there are no cash surrender values; and

© 1999-2023 National Association of Insurance Commissioners

c. After the end of the juvenile period, gross premiums are level for the remainder of the premium paying period, and death benefits are level for the remainder of the life of the policy.

Drafting Note: The jumping juvenile policy described has traditionally been valued in two segments. This exemption will allow that practice to continue without requiring the calculation of reserves on a unitary basis. However, within each segment, both basic and deficiency reserves shall comply with the segmented reserve requirements.

Calculation of Minimum Valuation Standard for Flexible Premium and Fixed Premium Universal Life Insurance Policies That Contain Provisions Resulting in the Ability of a Policyowner to Keep a Policy in Force Over a Secondary Guarantee Period

29. General

a. Policies with a secondary guarantee include:

i. A policy with a guarantee that the policy will remain in force at the original schedule of benefits, subject only to the payment of specified premiums;

ii. Prior to January 1, 2004 a policy in which the minimum premium at any duration is less than the corresponding one year valuation premium, calculated using the maximum valuation interest rate and the 1980 CSO valuation tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this appendix by the NAIC for this purpose. Effective January 1, 2004, the one-year valuation premium shall be calculated using the ultimate mortality rates in the 2001 CSO Mortality Table; or

iii. A policy with any combination of subparagraph i. and ii.

Drafting Note: Universal life and variable universal life policies with secondary guarantees that meet the requirements of paragraph 3.a.ii. are not subject to this appendix.

b. A secondary guarantee period is the period for which the policy is guaranteed to remain in force subject only to a secondary guarantee. When a policy contains more than one secondary guarantee, the minimum reserve shall be the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees. Secondary guarantees that are unilaterally changed by the insurer after issue shall be considered to have been made at issue. Reserves described in paragraphs 30 and 31 below shall be recalculated from issue to reflect these changes.

c. Specified premiums mean the premiums specified in the policy, the payment of which guarantees that the policy will remain in force at the original schedule of benefits, but which otherwise would be insufficient to keep the policy in force in the absence of the guarantee if maximum mortality and expense charges and minimum interest credits were made and any applicable surrender charges were assessed.

d. For purposes of this paragraph, the minimum premium for any policy year is the premium that, when paid into a policy with a zero account value at the beginning of the policy year, produces a zero account value at the end of the policy year. The minimum premium calculation shall use the policy cost factors (including mortality charges, loads and expense charges) and the interest crediting rate, which are all guaranteed at issue.

© 1999-2023 National Association of Insurance Commissioners

e. The one-year valuation premium means the net one-year premium based upon the original schedule of benefits for a given policy year. The one-year valuation premiums for all policy years are calculated at issue. The select mortality factors defined in paragraphs 17.b., 17.c. and 17.d. may not be used to calculate the one-year valuation premiums.

f. The one-year valuation premium should reflect the frequency of fund processing, as well as the distribution of deaths assumption employed in the calculation of the monthly mortality charges to the fund.

30. Basic Reserves for the Secondary Guarantees. Basic reserves for the secondary guarantees shall be the segmented reserves for the secondary guarantee period. In calculating the segments and the segmented reserves, the gross premiums shall be set equal to the specified premiums, if any, or otherwise to the minimum premiums, that keep the policy in force and the segments will be determined according to the contract segmentation method as defined in paragraph 5.

31. Deficiency Reserves for the Secondary Guarantees. Deficiency reserves, if any, for the secondary guarantees shall be calculated for the secondary guarantee period in the same manner as described in paragraph 22 with gross premiums set equal to the specified premiums, if any, or otherwise to the minimum premiums that keep the policy in force.

32. Minimum Reserves. The minimum reserves during the secondary guarantee period are the greater of:

a. The basic reserves for the secondary guarantee plus the deficiency reserve, if any, for the secondary guarantees; or

b. The minimum reserves required by other appendices governing universal life plans.

© 1999-2023 National Association of Insurance Commissioners

Attachment 1

SELECT MORTALITY FACTORS

This Attachment contains tables of select mortality factors that are the bases to which the respective percentage of paragraphs 16.b., 17.b. and 17.c. are applied.

The six tables of select mortality factors contained herein include: (1) male aggregate, (2) male nonsmoker, (3) male smoker, (4) female aggregate, (5) female nonsmoker, and (6) female smoker.

These tables apply to both age last birthday and age nearest birthday mortality tables.

For sex-blended mortality tables, compute select mortality factors in the same proportion as the underlying mortality. For example, for the 1980 CSO-B Table, the calculated select mortality factors are eighty percent (80%) of the appropriate male table in this Attachment, plus twenty percent (20%) of the appropriate female table in this Attachment.

Appendix B
Interpretations of Statutory Accounting Principles

Introduction

Appendix B includes the final interpretations (INTs) of statutory accounting principles (SAPs) through December 2022. Reporting entities should note that interpretations are generally effective when finalized; therefore, the *Accounting Practices and Procedures Manual* (Manual) may not include every interpretation currently in effect due to the fact that it is published annually. As revisions are adopted, updates to the interpretations are tracked in the subsequent version of the Manual.

Historical

EITF Review/Rejected EITF Tracking

Beginning January 1, 1999, the Emerging Accounting Issues (E) Working Group (EAIWG) began addressing the Emerging Issues Task Force (EITF) opinions issued subsequent to 1996. In 2009, the EAIWG reached a consensus to incorporate rejected and non-applicable FASB EITFs that do not provide additional statutory accounting guidance in a listing within a designated interpretation. This interpretation (INT 99-00) included reference to all FASB EITFs, including those previously included in Appendix B as a statutory accounting interpretation, that were 1) rejected as not applicable to statutory accounting; 2) rejected without providing additional statutory guidance; or 3) rejected on the basis of issues rejected in a statement of statutory accounting principles (SSAP). In 2014, the Statutory Accounting Principles (E) Working Group (SAPWG) adopted a proposal to move all references to rejected GAAP material from INT 99-00 into *Issue Paper No. 99—Nonapplicable GAAP Pronouncements*. In 2015, Issue Paper No. 99 was moved to *Appendix D, Nonapplicable GAAP Pronouncements*.

Superseded SSAPs and Nullified INTs

In 2013, the SAPWG adopted a proposal to remove *Appendix H, Superseded SSAPs and Nullified Interpretations* from the Manual. Currently, these items are posted for public reference on the Statutory Accounting Principles (E) Working Group web page at https://content.naic.org/cmte_e_app_sapwg.htm.

Development Responsibilities

In 2015, the EAIWG was disbanded and its duties were absorbed by the SAPWG. The SAPWG is responsible for developing interpretations to address issues requiring interpretation, application or clarification of existing SAP.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-03: Illustration of the Accounting/Reporting of Deposit-Type Contracts in Accordance with SSAP Nos. 51R, 52 and 56

INT 00-03 Dates Discussed

December 6, 1999; March 13, 2000

INT 00-03 References

Current:
SSAP No. 51R—Life Contracts
SSAP No. 52—Deposit-Type Contracts
SSAP No. 56—Separate Accounts

INT 00-03 Issue

1. Deposit-type contracts, as defined in SSAP No. 52 may be maintained in the general account or transferred to the separate account of an insurance company. During the process of preparing Blanks proposals to conform the reporting requirements to the SSAPs, the Impact of Codification on NAIC Publications Working Group noted an inconsistency in the reporting of deposit-type contracts between SSAP No. 52 and SSAP No. 56. At the 1999 NAIC Fall National Meeting, SSAP No. 56 was amended to clarify that the requirements of SSAP No. 52 are applicable to separate account deposit-type contracts.

2. Exhibit A is included as an illustration of accounting/reporting of separate account deposit-type contracts in accordance with SSAP Nos. 51, 52 and 56. Is this illustration consistent with the intent of the Codification of Statutory Accounting Principles (E) Working Group?

INT 00-03 Discussion

3. The Working Group reached a consensus that Exhibit A is consistent with the intent of the SSAPs.

INT 00-03 Status

4. No further discussion is planned.

Illustrative Example of the Accounting/Reporting of Deposit-Type Contracts in Accordance with SSAPs 51R/52

NOTE: Entries presented in this illustration may not reflect all accounting entries associated with the activity, e.g., some "due from" or "due to" entries are eliminated to simplify the example.

1. Contractholder surrendered an ordinary life insurance policy and elected to place the proceeds ($100,000) under a supplementary contract without life contingencies (SCWOLC).

General Account Statement

	Account	Debit	Credit
a.	Surrender Benefits & Withdrawals	$100,000	
	Liability for Deposit –Type Contracts		$100,000
b.	Aggregate Reserves for Life Policies	$100,000	
	Increase in Aggregate Reserves for Life Policies		$100,000

2. Insurer transfers, pursuant to contract provisions, $95,000 to separate account fund for SCWOLC contracts from general account fund for SCWOLC contracts; $5,000 is retained in the general account.

General Account Statement

	Account	Debit	Credit
a.	Liability for Deposit –Type Contracts	$95,000	
	Transfers to Separate Accounts		$95,000
b.	Transfers to Separate Account	$95,000	
	Cash		$95,000

Separate Accounts Statement

	Account	Debit	Credit
c.	Other transfers from General Account (net)	$95,000	
	Transfers on account of deposit-type contracts		$95,000
d.	Cash	$95,000	
	Other Transfers from General Account		$95,000
e.	Increase in liability for deposit-type contracts	$95,000	
	Liability for Deposit-Type Contracts		$95,000

3. Insurer establishes a $4,000 CARVM valuation allowance for this contract in the separate account fund.

Separate Accounts Statement

	Account	Debit	Credit
a.	Liability for Deposit-Type Contracts	$4,000	
	Increase in liability for deposit-type contracts		$4,000
b.	Change in expense allowances recognized in reserves	$4,000	
	Other transfers from General Account (net)		$4,000

General Account Statement

	Account	Debit	Credit
c.	Transfers to Separate Accounts (net)	$4,000	
	Transfer to/or (from) Separate Accounts		$4,000

4. Insurer's separate account fund for SCWOLC contracts assets earns $2,000 investment income that is immediately credited to the separate account fund for SCWOLC contracts.

Separate Accounts Statement

	Account	Debit	Credit
a.	Cash	$2,000	
	Net investment income		$2,000
b.	Increase in liability for deposit-type contracts	$2,000	
	Liability for Deposit-Type Contracts		$2,000

5. Contractholder is paid a $1,000 SCWOLC contract benefit from the separate account fund. The example has been simplified to show the cash flows from the Separate Account to the General Account and the payment to the contractholder from the General Account.

General Account Statement

	Account	Debit	Credit
a.	Cash	$1,000	
	Liability for Deposit-Type Contracts		$1,000
b.	Liability for Deposit-Type Contracts	$1,000	
	Cash		$1,000

Separate Accounts Statement

	Account	Debit	Credit
c.	Transfers on account of deposit-type contracts	$1,000	
	Cash		$1,000
d.	Liability for Deposit-type Contracts	$1,000	
	Increase in liability for deposit-type contracts		$1,000

6. Contractholder requests the insurer to purchase a variable annuity contract (insurance product) with $25,000 drawn from the separate account fund supporting the SCWOLC contract (deposit-type contract) and transfer it to a separate fund supporting variable annuities. This example has been simplified and ignores the internal cash exchange.

General Account Statement

	Account	Debit	Credit
a.	Transfers to Separate Accounts	$25,000	
	Premiums and Annuity Considerations		$25,000

Separate Accounts Statement

	Account	Debit	Credit
b.	Liability for Deposit-Type Contracts	$25,000	
	Increase in liability for deposit-type contracts		$25,000
c.	Transfers on account of deposit-type contracts	$25,000	
	Other transfers to general account (net)		$25,000
d.	Other transfers to general account (net)	$25,000	
	Net Premiums and Annuity Considerations		$25,000
e.	Increase in aggregate reserve for life, annuity	$25,000	
	Aggregate Reserve for life, annuity		$25,000

7. Contractholder in accordance with a Group GIC contract requests that $15,000 be withdrawn from the Group GIC Separate Account fund maintained by the insurer and transferred to the contractholder's Separate Account fund supporting the SCWOLC contract.

SUMMARY OF OPERATIONS (Excluding Unrealized Capital Gains and Losses)	1 Current Year	2 Prior Year
1. Premiums and annuity considerations for life and accident and health policies and contracts (Exhibit 1, Part 1, Line 20.4, Col. 1, less Col. 11)	25,000	
2. Considerations for supplementary contracts with life contingencies		
3. Net investment income (Exhibit 2, Line 16)		
4. Amortization of Interest Maintenance Reserve (IMR) (Page 33, Line 5)		
5. Separate Accounts net gain from operations excluding unrealized gains or losses		
6. Commissions and expense allowances on reinsurance ceded (Exhibit 1, Part 2, Line 26.1, Col. 1)		
7. Reserve adjustments on reinsurance ceded		
8. Miscellaneous Income:		
8.1 Income from fees associated with investment management, administration and contract guarantees from Separate Accounts	100	
8.2 Charges and fees for deposit-type contracts		
8.3 Aggregate write-ins for miscellaneous income		
9. Totals (Lines 1 to 8.3)	25,100	
10. Death benefits		
11. Matured endowments (excluding guaranteed annual pure endowments)		
12. Annuity benefits (Exhibit 11, Part 2, Line 6.4, Cols. 4 + 8)		
13. Disability benefits and benefits under accident and health policies		
14. Coupons, guaranteed annual pure endowments and similar benefits		
15. Surrender benefits and withdrawals for life contracts	100,000	
16. Group conversions		
17. Interest and adjustments on policy or deposit-type contract funds		
18. Payments on supplementary contracts with life contingencies		
19. Increase in aggregate reserves for life and accident and health policies and contracts	(100,000)	
20. Totals (Lines 10 to 19)	0	
21. Commissions on premiums, annuity considerations and deposit-type contract funds (direct business only) (Exhibit 1, Part 2, Line 31, Col. 1, less Col. 11)		
22. Commissions and expense allowances on reinsurance assumed (Exhibit 1, Part 2, Line 26.2, Col. 1, less Col. 11)		
23. General insurance expenses (Exhibit 5, Line 10, Cols. 1 + 2 + 3)		
24. Insurance taxes, licenses and fees, excluding federal income taxes (Exhibit 6, Line 7, Cols. 1 + 2 + 3)		
25. Increase in loading on deferred and uncollected premiums		
26. Net transfers to or (from) Separate Accounts	21,000	
27. Aggregate write-ins for deductions		
28. Totals (Lines 20 to 27)	21,000	
29. Net gain from operations before dividends to policyholders and federal income taxes (Line 9 minus Line 28)	4,100	
30. Dividends to policyholders		
31. Net gain from operations after dividends to policyholders and before federal income taxes (Line 29 minus Line 30)		
32. Federal and foreign income taxes incurred (excluding tax on capital gains)		
33. Net gain from operations after dividends to policyholders and federal income taxes and before realized capital gains or (losses) (Line 31 minus Line 32)		
34. Net realized capital gains or (losses) less capital gains tax and transferred to the IMR (Exhibit 3, Footnote (a), Line 3C)		
35. Net income (Line 33 plus Line 34)		
CAPITAL AND SURPLUS ACCOUNT		
36. Capital and surplus, December 31, prior year (Page 3, Line 38, Col. 2)		
37. Net income (Line 35)		
38. Change in net unrealized capital gains (losses)		
39. Change in net unrealized foreign exchange capital gain (loss)		
40. Change in net deferred income tax		
41. Change in nonadmitted assets and related items (Exhibit 12, Line 6, Col. 3)		
42. Change in liability for reinsurance in unauthorized companies		
43. Change in reserve on account of change in valuation basis, (increase) or decrease (Exhibit 8A, Line 9999999, Col. 4)		
44. Change in asset valuation reserve (Page 34, Lines 2 through 4 plus 8, 11 and 12, Col. 7)		
45. Change in treasury stock (Page 3, Lines 36.1 and 36.2 Col. 2 minus Col. 1)		
46. Surplus (contributed to) withdrawn from Separate Accounts during period		
47. Other changes in surplus in Separate Accounts statement		
48. Change in surplus notes		
49. Cumulative effect of changes in accounting principles		
50. Capital changes:		
50.1 Paid in		
50.2 Transferred from surplus (Stock Dividend)		
50.3 Transferred to surplus		
51. Surplus adjustment:		
51.1 Paid in		
51.2 Transferred to capital (Stock Dividend)		
51.3 Transferred from capital		
51.4 Change in surplus as a result of reinsurance		
52. Dividends to stockholders		
53. Aggregate write-ins for gains and losses in surplus		
54. Net change in capital and surplus for the year (Lines 37 through 53)		
55. Capital and surplus, December 31, current year (Lines 36 + 54) (Page 3, Line 38)

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-20: Application of SEC SAB No. 99, Materiality to the Preamble of the AP&P Manual

INT 00-20 Dates Discussed

June 12, 2000; September 20, 2000; June 11, 2001; October 16, 2001

INT 00-20 References

Current:
Preamble to the NAIC *Accounting Practices and Procedures Manual* (Preamble)

INT 00-20 Issue

1. In summary, SEC Staff Accounting Bulletin No. 99, *Materiality* (SAB No. 99) addresses two issues; 1) may a company or auditor assume the immateriality of items that fall below a percentage threshold set by management or its auditors to determine whether amounts and items are material to the financial statements? and 2) may a company make intentional immaterial misstatements in its financial statements? The SEC staff answers each question as NO and gives numerous references to FASB guidelines to support their opinion.

2. The issue is whether the responses outlined in SAB No. 99 can be applied to statutory accounting and the concept of materiality as defined in paragraphs 48-53 of the Preamble.

INT 00-20 Discussion

3. At the 2000 Spring National Meeting, the Statutory Accounting Principles (E) Working Group (SAPWG) reviewed SAB No. 99 for incorporation into the *Accounting Practices and Procedures Manual* (AP&P Manual or Manual). The SAPWG determined that no modifications to the Preamble were warranted and referred the issue to the NAIC/AICPA Working Group for their consideration. The SAPWG felt the SAB had applicability to management of reporting entities, independent auditors and State Examiners. The NAIC/AICPA WG reviewed the SAB and determined that an interpretation of the Preamble was a more effective way to adopt the SAB for statutory accounting. The NAIC/AICPA WG felt that the AP&P Manual reached a larger audience than the A/S Instructions or Examiner's Handbook.

4. The Working Group reached a consensus to adopt an interpretation of the concept of materiality based on certain matters outlined in SAB No. 99. The Working Group believes the responses below provide additional support for the concepts delineated in Section VII of the Preamble. The SAB contains numerous references to SEC guidelines and GAAP pronouncements that are not reflected in this interpretation as such matters are not necessarily applicable or appropriate for statutory financial reporting. The interpretative responses (as modified by this interpretation) are as follows:

> **QUESTION:** Paragraph 53 of the Preamble states "The provisions of this Manual need not be applied to immaterial items." May a reporting entity's management, state examiner or independent auditor of the entity's financial statements assume the immateriality of items that fall below a percentage threshold set by management, state examiner or independent auditor to determine whether amounts and items are material to the financial statements?
>
> **INTERPRETIVE RESPONSE** No. Over time, the NAIC is aware that reporting entities have developed quantitative thresholds as "rules of thumb" to assist in the preparation of their financial statements, and that state examiners and independent auditors also have used these thresholds in

their evaluation of whether items might be considered material to users of a reporting entity's financial statements. One rule of thumb in particular suggests that the misstatement or omission of an item that falls under a 5% of surplus threshold is not material in the absence of particularly egregious circumstances, such as self-dealing or misappropriation by senior management. Exclusive reliance on this or any percentage or numerical threshold has no basis in the accounting literature or the law.

The use of a percentage as a numerical threshold, such as 5% of surplus, may provide the basis for a preliminary assumption that - without considering all relevant circumstances - a deviation of less than the specified percentage with respect to a particular item on the reporting entity's financial statements is unlikely to be material. The NAIC has no objection to such a "rule of thumb" as an initial step in assessing materiality. But quantifying, in percentage terms, the magnitude of a misstatement is only the beginning of an analysis of materiality; it cannot appropriately be used as a substitute for a full analysis of all relevant considerations. Materiality concerns the significance of an item to users of the reporting entity's financial statements. A matter is "material" if there is a substantial likelihood that a reasonable person would consider it important.

QUESTION: May a reporting entity make intentional immaterial misstatements in its financial statements?

INTERPRETIVE RESPONSE No. In certain circumstances, intentional immaterial misstatements are unlawful.

Each reporting entity must make and keep books, records, and accounts, that, in reasonable detail, accurately and fairly reflect the acquisitions and dispositions of assets of the reporting entity and must maintain internal control that is sufficient to provide reasonable, but not absolute, assurances that, among other things, transactions are recorded as necessary to permit the preparation of financial statements in conformity with the revised *Accounting Practices and Procedures Manual*. In this context, determinations of what constitutes "reasonable assurance" and "reasonable detail" are based not on a "materiality" analysis but on the level of detail and degree of assurance that would satisfy prudent individuals in the conduct of their own affairs. It is unlikely that it is ever "reasonable" for a reporting entity to record misstatements or not to correct known misstatements as part of an ongoing effort directed by or known to senior management for the purpose of "managing" reported results or financial position.

The National Commission on Fraudulent Financial Reporting, also known as the Treadway Commission, in its 1987 report:

> The tone set by top management - the corporate environment or culture within which financial reporting occurs - is the most important factor contributing to the integrity of the financial reporting process. Notwithstanding an impressive set of written rules and procedures, if the tone set by management is lax, fraudulent financial reporting is more likely to occur.

Statement on Auditing Standards No. ("SAS") 54, "Illegal Acts by Clients," and SAS No. 82, "Consideration of Fraud in a Financial Statement Audit" provide guidance to the independent auditor. Pursuant to paragraph 38 of SAS 82, if the independent auditor determines there is evidence that fraud may exist, the independent auditor must discuss the matter with the appropriate level of management. The auditor must report directly to the audit committee fraud involving senior management and fraud that causes a material misstatement of the financial statements. Paragraph 4 of SAS No. 82 states that "misstatements arising from fraudulent financial reporting are intentional misstatements or omissions of amounts or disclosures in financial statements to deceive financial statement users." SAS No. 82 further states that

© 1999-2023 National Association of Insurance Commissioners

fraudulent financial reporting may involve falsification or alteration of accounting records; misrepresenting or omitting events, transactions or other information in the financial statements; and the intentional misapplication of accounting principles relating to amounts, classifications, the manner of presentation, or disclosures in the financial statements. The clear implication of SAS No. 82 is that immaterial misstatements may be fraudulent financial reporting.

Independent auditors that learn of intentional misstatements may also be required to (1) re-evaluate the degree of audit risk involved in the audit engagement, (2) determine whether to revise the nature, timing, and extent of audit procedures accordingly, and (3) consider whether to resign.

Intentional misstatements also may signal the existence of reportable conditions or material weaknesses in the reporting entity's system of internal accounting control designed to detect and deter improper accounting and financial reporting.

An auditor is required to report to the audit committee any reportable conditions or material weaknesses in a reporting entity's system of internal accounting control that the auditor discovers in the course of the examination of the registrant's financial statements.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses

INT 00-24 Dates Discussed

June 12, 2000; September 11, 2000

INT 00-24 References

Current:
SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

Superseded:
SSAP No. 46—Investments in Subsidiary, Controlled, and Affiliated Entities
SSAP No. 88—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 46

INT 00-24 Issue

1. EITF 98-13 and Topic No. D-68, *Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of an Investee* (EITF 98-13 or Topic D-68) provides the FASB staff position that Accounting Principles Board Opinion No. 18, *The Equity Method of Accounting for Investments in Common Stock* (APB No. 18) requires an investor that owns common (or other voting) stock and also (a) owns debt securities (including mandatorily redeemable preferred stock), (b) owns preferred stock, or (c) has extended loans to the investee to continue to report losses. Paragraph 13 of FASB Statement 114, *Accounting by Creditors for Impairment of a Loan* (FAS 114) as amended by FASB Statement 118, *Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures* (FAS 118) provides that when a loan is impaired, a creditor shall measure impairment based on the present value of expected future cash flows discounted at the loan's effective interest rate. Paragraph 12 of FASB Statement 115, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115) provides that investments in both debt securities not held to maturity and equity securities that have readily determinable fair values shall be carried at fair value.

2. EITF 99-10, *Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of an Investee* (EITF 99-10) and Topic No. D-68 provides the FASB staff position on an investor's accounting when more than one type of interest is held. Specifically, the FASB staff announced that APB No. 18 requires that when an investor owns common stock and also (a) owns debt securities (including mandatorily redeemable preferred stock), (b) owns preferred stock, or (c) has extended loans to the investee (collectively referred to as "other investments"), the equity method investor should continue to report losses up to the investor's investment carrying value, including any additional financial support made or committed to by the investor. EITF 98-13 provides guidance on the interaction between the applicable literature for those instruments and APB No. 18 for situations in which an investee is incurring losses and (a) an investor is not required to advance additional funds to the investee and (b) previous losses have reduced the common stock investment account to zero. However, neither Topic D-68 nor EITF 98-13 provides guidance on how an investor should calculate the amount of equity method losses or subsequent income in that circumstance.

3. The issue is, when an investor is required to account for a common stock investment using the equity method, how the equity method loss pickup from the application of APB No. 18 (when the

carrying amount of the common stock has been reduced to zero) interacts with the applicable literature relating to investments in the other securities of the investee (either FAS 114 or FAS 115), and if an investor owns common stock and "other investments" in an investee and is not required to advance additional funds to the investee and if previous losses have reduced the common stock investment account to zero, how additional equity method losses should be measured and recognized by the investor.

INT 00-24 Discussion

4. The Working Group reached a consensus to adopt the final conclusions reached in EITF 98-13 and 99-10 with modification as follows:

5. The EITF reached a consensus that in situations where (a) an investor is not required to advance additional funds to the investee and (b) previous losses have reduced the common stock investment account to zero, the investor should continue to report its share of equity method losses in its statement of operations to the extent of and as an adjustment to the adjusted basis of the other investments in the investee. The order in which those equity method losses should be applied to the other investments should follow the seniority of the other investments (that is, priority in liquidation). For each period, the adjusted basis of the other investments should be adjusted for the equity method losses, then the investor should apply SSAP No. 97 to the other investments, as applicable.

6. For purposes of this consensus, other investments in the investee include, but are not limited to, preferred stock, debt securities, and loans to the investee (collectively referred to as loans and securities). The cost basis of the other investments is the original cost of those investments adjusted for the effects of other-than-temporary write-downs, unrealized gains and losses, and amortization of any discount or premium on debt securities or loans. The adjusted basis is the cost basis adjusted for the valuation allowance account for an investee loan and the cumulative equity method losses applied to the other investments. Equity method income subsequently recorded should be applied to the adjusted basis of the other investments in reverse order of the application of the equity method losses (that is, equity method income is applied to the more senior securities first).

7. When the investor has loans and securities of the investee that are within the scopes of SSAP No. 97, the investor should perform the following in order to determine the amount of equity method loss to report at the end of a period:

a. Apply SSAP No. 97 to determine the maximum amount of equity method losses.

b. Determine whether the adjusted basis of the other investment(s) in the investee is positive.

   i. When the adjusted basis is positive, the adjusted basis of the other investments should be adjusted for the amount of the equity method loss based on its seniority. For investments accounted for in accordance with *SSAP No. 30R—Unaffiliated Common Stock*, this adjusted basis becomes the security's basis from which subsequent changes in fair value are measured.

   ii. When the adjusted basis reaches zero, equity method losses should cease being reported; however, the investor should continue to track the amount of unreported equity method losses for purposes of applying SSAP No. 97. (If one of the other investments is sold at a time when its carrying value exceeds its adjusted basis, the difference between the cost basis of that other investment and its adjusted basis at the time of sale represents equity method losses that were originally applied to that other investment but effectively reversed upon its sale. Accordingly, that excess represents unreported equity method losses that should continue to be tracked before future equity method income can be reported.

© 1999-2023 National Association of Insurance Commissioners

c. After applying SSAP No. 97, apply SSAP No. 30R to the adjusted basis of the other investments in the investee, as applicable. Apply appropriate statutory accounting principles to other investments that are not within the scope of SSAP No. 30R.

8. The EITF reached a consensus that an investor should not recognize equity method losses based solely on the percentage of investee common stock held by the investor.

9. The EITF observed that an entity should utilize a single entity-wide approach to determine the amount of its equity method losses when previous losses have reduced the common stock investment account to zero and that the selected policy should be disclosed in the footnotes to the financial statements.

10. The provisions of these consensuses are effective for interim or annual periods beginning after January 1, 2001.

11. Refer to Exhibit 00-24A for an example that illustrates application of these consensuses.

INT 00-24 Status

12. No further discussion is planned.

Exhibit 00-24A
ILLUSTRATION OF THE APPLICATION OF THE INT 00-24 CONSENSUS'S

XYZ Investment in ABC Company

1. ABC Company is a life insurance company, formed January 2, 20X1 to sell health insurance in the state of New York. On January 2, 20X1, XYZ Insurance Company invested $500,000 in ABC, and purchased 100,000 shares of common stock at par, and 40,000 shares of preferred stock at par. ABC Preferred stock is non-voting, 5% cumulative.

2. XYZ determined it has obtained a controlling interest in ABC as XYZ owns 50% of the voting interests of ABC. XYZ accounted for its investment in ABC Insurance Company under the statutory equity method of accounting. The following table is selected information from the financial statements of ABC Insurance Company.

	1/2/20X1	12/31/20X1	12/31/20X2	12/31/20X3	12/31/20X4
Capital and Surplus:					
Common stock, $1 par, 200,000 shares issued and outstanding	$ 200,000	$ 200,000	$ 200,000	$ 200,000	$ 200,000
Preferred stock, $10 par, 100,000 shares issued and outstanding	$1,000,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Surplus Notes			$ 500,000	$ 500,000	$ 500,000
Unassigned Funds (Surplus)		$ 130,000	($ 180,000)	($ 630,000)	($1,430,000)
Total Capital and Surplus	$1,200,000	$1,330,000	$1,520,000	$ 1,070,000	$ 270,000

	12/31/20X5	12/31/20X6	12/31/20X7	12/31/20X8	12/31/20X9
Capital and Surplus:					
Common stock, $1 par, 200,000 shares issued and outstanding	$ 200,000	$ 200,000	$ 200,000	$ 200,000	$ 200,000
Preferred stock, $10 par, 100,000 shares issued and outstanding	$1,000,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Surplus Notes	$ 500,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Unassigned Funds (Surplus)	($1,980,000)	($1,830,000)	($1,280,000)	($ 430,000)	$ 820,000
Total Capital and Surplus	($280,000)	$ 370,000	$ 920,000	$1,770,000	$3,020,000

3. At 1/2/20X1, XYZ recorded the following entry to record its investment in ABC:

	Debit	Credit
Investment in ABC Common stock	$ 100,000	
Investment in ABC Preferred stock	$ 400,000	
Cash		$ 500,000

To record initial investment in ABC Insurance Company.

4. During the year ended 12/31/20X1, ABC had statutory net income before dividends of $200,000. At 12/31/20X1, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.10 per share. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X1.

Investment in ABC Common stock	$ 75,000	
Unrealized Gain/Loss		$ 75,000

To record 20X1 unrealized gain on investment in ABC Common. (($200,000 - $50,000) * 50%)

Cash	$ 10,000	
Unrealized Gain/Loss	$ 10,000	
Dividend Income		$ 10,000
Investment in ABC Common stock		$ 10,000

To record 20X1 dividend on ABC Common. (100,000 shares * $.10)

5. During the year ended 12/31/20X2, ABC issued an 8% surplus note of $500,000. XYZ purchased 100% of the surplus note. During that same year, ABC incurred a statutory net loss before dividends of $250,000. At 12/31/20X2, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.05 per share. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Investment in ABC Surplus Notes	$ 500,000	
Cash		$ 500,000

To record investment in ABC Insurance Company surplus notes.

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X2.

Unrealized Gain/Loss	$ 150,000	
Investment in ABC Common stock		$ 150,000

To record 20X2 unrealized loss on investment in ABC Common. (($-250,000 - $50,000) * 50%)

Cash	$ 5,000	
Unrealized Gain/Loss	$ 5,000	
Dividend Income		$ 5,000
Investment in ABC Common stock		$ 5,000

To record 20X2 dividend on ABC Common. (100,000 shares * $.05)

© 1999-2023 National Association of Insurance Commissioners

6. During the year ended 12/31/20X3, ABC Insurance Company incurred a statutory net loss before dividends of $400,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X3.

Unrealized Gain/Loss	$ 182,000	
Investment in ABC Preferred stock		$ 172,000
Investment in ABC Common stock		$ 10,000

To record 20X3 unrealized loss on investment in ABC Common and Preferred.

Total net loss and preferred stock dividend ($450,000).
Common stock component reduces the Investment in ABC Common stock component to $0. (20,000 * 50%)

Total net loss and preferred dividend (-$400,000 - $50,000)	$450,000
Less amount used to reduce common stock investment to $0	20,000
Amount remaining to be allocated to investment in preferred	430,000
XYZ ownership % of preferred	40%
XYZ reduction in investment in preferred	$172,000

7. During the year ended 12/31/20X4, ABC Insurance Company incurred a statutory net loss before dividends of $750,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X4.

Unrealized Gain/Loss	$ 458,000	
Investment in ABC Preferred stock		$ 228,000
Investment in ABC Surplus note		$ 230,000

To record 20X4 unrealized loss on investment in ABC Preferred and Surplus Notes.

Total net loss and preferred stock dividend ($800,000).
Common stock component reduces the Investment in ABC Preferred stock component to $0. (570,000 * 40%)
Preferred stock component calculated as:

Total net loss and preferred dividend (-$750,000 - $50,000)	$800,000
Less amount used to reduce preferred stock investment to $0	570,000
Amount remaining to be allocated to investment in surplus note	230,000
XYZ ownership % of surplus note	100%
XYZ reduction in investment in ABC Surplus Notes	$230,000

© 1999-2023 National Association of Insurance Commissioners

8. During the year ended 12/31/20X5, ABC Insurance Company incurred a statutory net loss before dividends of $500,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X5.

Unrealized Gain/Loss	$ 270,000	
Investment in ABC Surplus note		$ 270,000

To record 20X5 unrealized loss on investment in ABC Surplus Notes.

Total ABC net loss and preferred stock dividend (-$500,000 - $50,000).
Surplus Note component calculated as:

Total net loss and preferred dividend (-$500,000 - $50,000)	$550,000
XYZ ownership % of ABC Surplus Note	100%
	$550,000
Amount of unrealized loss recognized in 20X5	$270,000
Amount of unrealized loss suspended	$280,000

9. Since XYZ has not guaranteed any liabilities of ABC, the reduction they would recognize is limited to their remaining investment in ABC Surplus Notes. Therefore, they would only recognize a 20X5 unrealized loss on their investment in ABC of $270,000.

10. During the year ended 12/31/20X6, ABC Insurance Company realigned their marketing efforts and modified the products they were selling. ABC also issued an additional 8% surplus note of $500,000. This surplus note was purchased by an unaffiliated third party. During the year ended 12/31/X6, ABC Insurance Company had statutory net income before dividends of $200,000. ABC Insurance Company did not declare any dividends on common stock, but declared and paid current and dividends in arrears on preferred. XYZ recorded the following entries:

Cash	$ 80,000	
Dividends Receivable		$ 60,000
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X6, and receipt of preferred dividends receivable for 20X3, 20X4 and 20X5.

11. XYZ did not record any change in their investment in ABC Surplus Notes, ABC Preferred or ABC Common, since ABCs' net income after preferred dividends did not exceed the losses accumulated during the period that XYZ suspended recording unrealized losses.

12. The following amounts were tracked:

Total ABC net income and preferred stock dividend ($200,000 - $50,000).
Surplus Note component calculated as:

Total net income and preferred dividend ($200,000 - $50,000)	$150,000
XYZ ownership % of ABC Surplus Note	50%
Amount of unrealized loss suspended in 20X5	$ 75,000
Remaining amount of unrealized loss suspended	$280,000
	$205,000

© 1999-2023 National Association of Insurance Commissioners

13. During the year ended 12/31/20X7, ABC Insurance Company had statutory net income before dividends of $600,000. At 12/31/20X7, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X7.

Investment in ABC Surplus Notes	$ 70,000	
Unrealized Gain/Loss		$ 70,000

To record 20X7 unrealized gain on investment in ABC Surplus Notes.

Total ABC net income and preferred stock dividend ($600,000 - $50,000).
Surplus Note component calculated as:

Total net income and preferred dividend ($600,000 - $50,000)	$550,000
XYZ ownership % of ABC Surplus Note	50%
	$275,000
Remaining amount of unrealized loss suspended in 20X5	$205,000
20X7 amount of unrealized gain on investment in ABC Surplus Note	$ 70,000

14. During the year ended 12/31/20X8, ABC Insurance Company had statutory net income before dividends of $900,000. At 12/31/20X8, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X8.

Total ABC net income and preferred stock dividend ($900,000 - $50,000).
Surplus Note component calculated as:

Total net income and preferred dividend ($900,000 - $50,000)	$850,000
XYZ ownership % of ABC Surplus Note	50%
20X8 amount of unrealized gain on investment in ABC Surplus Note	$425,000

Investment in ABC Surplus Notes	$ 425,000	
Unrealized Gain/Loss		$ 425,000

To record 20X8unrealized gain on investment in ABC Surplus Notes.

15. During the year ended 12/31/20X9, ABC Insurance Company had statutory net income, before interest on surplus notes and dividends, of $1,400,000. The Commissioner approved one year's interest payment on the surplus notes. At 12/31/20X9, ABC declared and paid a 5% preferred dividend, and a $.10 dividend per share on Common stock. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X9.

Cash	$ 40,000	
Interest Income		$ 40,000

To record surplus notes interest income from ABC Insurance Company for 20X9. ($500,000 * 8%)

© 1999-2023 National Association of Insurance Commissioners

Investment in ABC Surplus Notes	$ 5,000	
Investment in ABC Preferred Stock	$ 400,000	
Investment in ABC Common Stock	$ 130,000	
Unrealized Gain/Loss		$ 535,000

To record 20X9 unrealized gain on investment in ABC Common, Preferred and Surplus Notes.

Components computed as follows:

Total Net Income net of preferred stock dividend and interest on surplus notes ($1,400,000 - $50,000 - $80,000)	$ 1,270,000
Less amount needed to restore investment in surplus notes	($ 10,000)
Amount available for preferred stock and common stock investment restoration	$ 1,260,000
Amount needed to restore preferred stock component	($ 1,000,000)
Amount available to restore common stock component	$ 260,000
Surplus Notes component ($10,000 * 50%)	$ 5,000
Preferred Stock component ($1,000,000 * 40%)	$ 400,000
Common stock component ($260,000 * 50%)	$ 130,000

Cash	$ 10,000	
Unrealized Gain/Loss	$ 10,000	
Dividend Income		$ 10,000
Investment in ABC Common stock		$ 10,000

To record 20X9 dividend on ABC Common. (100,000 shares * $.10)

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transaction Involves Receipt of Productive Assets or of a Business

INT 00-26 Dates Discussed

June 12, 2000; September 11, 2000; March 5, 2006; June 11, 2006; December 10, 2006; March 10, 2007

INT 00-26 References

Current:
SSAP No. 95—Nonmonetary Transactions

Superseded:
SSAP No. 28—Nonmonetary Transactions

INT 00-26 Issue

1. The basic principle contained in APB Opinion No. 29, *Accounting for Nonmonetary Transactions* (APB No. 29) is that an exchange of nonmonetary assets should be recorded at fair value. Certain modifications to that basic principle are contained in paragraphs 20-23 of APB No. 29. Paragraph 21.b. provides that accounting for an exchange of productive assets for similar productive assets should be based on the recorded amount of the nonmonetary assets relinquished. Paragraph 4 of APB No. 29 states that Opinion is not applicable to business combinations.

2. APB Opinion No. 16, *Business Combinations* (APB No. 16) provides accounting guidance for business combinations. Paragraph 1 of APB No. 16 states that "a business combination occurs when a corporation and one or more incorporated or unincorporated businesses are brought together into one accounting entity. The single entity carries on the activities of the previously separate, independent enterprises."

3. It is not clear whether exchanges of certain types of assets, for example, radio stations, cable systems, and hotels, are considered exchanges of productive assets or business combinations.

4. The issues are whether the exchange of assets or groups of assets involving the receipt of a consolidated business can be considered an exchange of similar productive assets accounted for at historical cost pursuant to paragraph 21 of APB No. 29 and how a "business" should be defined.

5. In December of 2004, the Financial Accounting Standards Board (FASB) issued *FAS 153: Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (FAS 153), which addresses the measurement of exchanges of nonmonetary assets. It eliminates the exception from fair value measurement for nonmonetary exchanges of similar productive assets in paragraph 21.b. of APB No. 29, and replaces it with an exception for exchanges that do not have commercial substance. This statement specifies that a nonmonetary exchange has commercial substance if the future cash flows of the entity are expected to change significantly as a result of the exchange. While the guidance referred to above has been amended, the statutory accounting guidance included in the following discussion is not impacted and remains in effect.

INT 00-26 Discussion

6. The Working Group reached a consensus to update the description of the issue by adding an explanatory paragraph 5, which discusses amendments to APB No. 29 resulting from FAS 153.

7. The Working Group reached a consensus to adopt the conclusions reached in EITF 98-3 with modification. APB No. 29 is adopted with SSAP No. 95. Although APB No. 16 is rejected in SSAP No. 68, the issues raised in EITF 98-3 are applicable to statutory accounting and SSAP No. 95. The modified conclusions of EITF 98-3 are outlined in paragraphs 8-15.

8. The EITF reached a consensus that the guidance below should be used to evaluate whether a business has been received in a nonmonetary exchange transaction.

9. A business is a self-sustaining integrated set of activities and assets conducted and managed for the purpose of providing a return to investors. A business consists of (a) inputs, (b) processes applied to those inputs, and (c) resulting outputs that are used to generate revenues. For a transferred set of activities and assets to be a business, it must contain all of the inputs and processes necessary for it to continue to conduct normal operations after the transferred set is separated from the transferor, which includes the ability to sustain a revenue stream by providing its outputs to customers.

10. The elements necessary for a transferred set to continue to conduct normal operations will vary by industry and by the operating strategies of the transferred set. An evaluation of the necessary elements should consider:

Inputs

a. Long-lived assets, including intangible assets, or rights to the use of long-lived assets.
b. Intellectual property.
c. The ability to obtain access to necessary materials or rights.
d. Employees.

Processes

e. The existence of systems, standards, protocols, conventions, and rules that act to define the processes necessary for normal, self-sustaining operations, such as (i) strategic management processes, (ii) operational processes, and (iii) resource management processes.

Outputs

f. The ability to obtain access to the customers that purchase the outputs of the transferred set.

11. A transferred set of activities and assets fails the definition of a business if it excludes one or more of the above items such that it is not possible for the set to continue normal operations and sustain a revenue stream by providing its products and/or services to customers. However, if the excluded item or items are only minor (based on the degree of difficulty and the level of investment necessary to obtain access to or to acquire the missing item(s)), then the transferred set is capable of continuing normal operations and is a business. The assessment of whether excluded items are only minor should be made without regard to the attributes of the transferee and should consider such factors as the uniqueness or scarcity of the missing element, the time frame, the level of effort, and the cost required to obtain the missing element. If goodwill is present in a transferred set of activities and assets, it should be presumed that the excluded items are minor and that the transferred set is a business.

12. The assessment of whether a transferred set is a business should be made without regard to how the transferee intends to use the transferred set. In other words, it is not relevant to the evaluation of whether the transferred set is a business whether the transferee will actually operate the set on a stand-alone basis or intends to continue using the transferred set in the same manner as the transferor.

© 1999-2023 National Association of Insurance Commissioners

13. If all but a de minimis amount of the fair value of the transferred set of activities and assets is represented by a single tangible or identifiable intangible asset, the concentration of value in the single asset is an indicator that an asset rather than a business is being received.

14. The level of working capital or the adequacy of financing necessary to conduct normal operations in the transferred set is not an indicator either way as to whether the set meets the definition of a business. Likewise, if the planned principal operations of the transferred set have commenced, the presence and/or expectation of continued operating losses while the set seeks to achieve the level of market share necessary to attain profitability is not an indicator of whether or not the set is a business. However, if the transferred set is in the development stage and has not commenced planned principal operations, the set is presumed not to be a business.

15. The determination of whether a transferred set of assets and activities is or is not a business is a three-step process. First, one must identify the elements included in the transferred set. Second, one must compare the identified elements in the transferred set to the complete set of elements necessary for the transferred set to conduct normal operations in order to identify any missing elements. Third, if there are missing elements, one must make an assessment as to whether the missing elements cause one to conclude that the transferred set is not a business. That assessment is based on the degree of difficulty or the level of investment (relative to the fair value of the transferred set) necessary to obtain access to or to acquire the missing elements. If the degree of difficulty and level of investment necessary to obtain access to or to acquire the missing elements are not significant, then the missing elements are considered minor and their absence would not cause one to conclude that the transferred set is not a business. The determination of the degree of difficulty or level of investment necessary to obtain access to or to acquire the missing elements requires significant judgment and is dependent on the particular facts and circumstances.

INT 00-26 Status

16. On March 10, 2007, the Working Group reached a consensus to remove SSAP No. 68 from the references section of this interpretation; as it should not be used to interpret SSAP No. 68. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-28: EITF 99-12: Determination of the Measurement Date for the Market Price of Acquirer Securities Issued in a Purchase Business Combination

INT 00-28 Dates Discussed

June 12, 2000; September 11, 2000

INT 00-28 References

Current:
SSAP No. 68—Business Combinations and Goodwill

INT 00-28 Issue

1. APB No. 16, *Business Combinations* (APB No. 16) appears to include contradictory guidance about the date that should be used to value equity securities issued to effect a business combination accounted for using the purchase method. Paragraph 74 of APB No. 16 states that "the market price for a reasonable period before and after the date the terms of the acquisition are agreed to and announced should be considered in determining the fair value of securities issued." However, paragraph 94 of APB No. 16 refers to determining the cost of an acquired company as of the date of acquisition, which is defined in paragraph 93 as, "ordinarily . . . the date assets are received and other assets are given or securities are issued." This Issue addresses that apparent contradiction.

2. The interval between initiating and completing a business combination may involve an extended period of time. Although management of the companies involved may agree to and announce the terms of a business combination at the initiation date, internal or external contingencies, such as the need to obtain shareholder or regulatory approvals, may exist and prevent concurrent consummation of the combination. Because of the length of time that may be required to resolve those contingencies, the market price of the securities that are expected to be issued to effect a purchase business combination may fluctuate. As a result, the total cost of the acquired company assigned by the acquirer may vary significantly depending on the date that is used to value the securities that are issued.

3. The issues are:

a. The date that should be used to value marketable equity securities of the acquirer issued to effect a business combination accounted for using the purchase method when the number of the acquirer's shares or amount of other consideration is not subject to change pursuant to the existing terms of the acquisition agreement

b. The date that should be used as the measurement date to value equity securities of the acquirer issued in a purchase business combination if the number of the acquirer's shares or amount of other consideration to be issued could change pursuant to a formula in the initial acquisition agreement.

INT 00-28 Discussion

4. The Working Group reached a consensus to adopt the final conclusions reached in EITF 99-12, *Determination of the Measurement Date for the Market Price of Acquirer Securities Issued in a Purchase Business Combination* (EITF 99-12) with modification. Although APB 16 is rejected in SSAP No. 68, the issues identified in EITF 99-12 are applicable to paragraph 3 of SSAP No. 68. The issue of cost is defined as:

© 1999-2023 National Association of Insurance Commissioners

> 3. The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another. It shall be used for all purchases of SCA entities including partnerships, joint ventures, and limited liability companies. The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of: (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition. Contingent consideration issued in a purchase business combination that is embedded in a security or that is in the form of a separate financial instrument shall be recorded by the issuer at fair value at the acquisition date.

5. As shown in subsection b of the excerpted paragraph above, SSAP No. 68 does not address the timing issues raised in EITF 99-12 of "other assets distributed".

6. The modifications to the conclusions reached in EITF 99-12 are as follows:

7. The EITF reached a consensus on Issue 1 that the value of the acquirer's marketable equity securities issued to effect a purchase business combination should be determined, pursuant to the guidance in paragraph 74 of APB No. 16, based on the market price of the securities over a reasonable period of time before and after the terms of the acquisition are agreed to and announced. In other words, the date of measurement of the value of the acquirer's marketable equity securities should not be influenced by the need to obtain shareholder or regulatory approvals. EITF members observed that the reasonable period of time referred to in paragraph 74 of APB No. 16 is intended to be very short, such as a few days before and after the acquisition is agreed to and announced. EITF members also observed that in transactions involving a hostile tender offer, the measurement date for the value of the acquirer's marketable equity securities occurs when the proposed transaction is announced and sufficient shares have been tendered to make the offer binding or when the proposed acquisition becomes nonhostile, as evidenced by the target company's agreement to the purchase price.

8. The EITF also reached a consensus that if the purchase price (the number of shares or the amount of other consideration) is subsequently changed as a result of further negotiations or a revised acquisition agreement, a new measurement date for valuing the acquirer's marketable equity securities that will be issued to effect the combination is established as of the date of the change. The Working Group clarified that if the change in the number of shares or other consideration is not substantive, a new measurement date does not result from the change.

9. The EITF addressed the accounting for contingent consideration issued to effect a purchase business combination in Issue No. 97-8, *Accounting for Contingent Consideration Issued in a Purchase Business Combination* (EITF 97-8). The measurement guidance in this Issue is to be applied to the acquirer's equity securities issued to effect a business combination accounted for using the purchase method, including those instruments that meet the criteria in EITF 97-8 for recording as part of the cost of the business acquired. (EITF 97-8 was adopted by the Working Group in SSAP No. 68.)

10. The EITF reached a consensus on Issue 2 that if the application of the formula results in a change to the number of shares or the amount of other consideration to be issued in the purchase business combination, then the first date on which the number of acquirer shares and the amount of other consideration become fixed without subsequent revision is the measurement date. That is, the measurement date is the earliest date, from the date the terms of the acquisition are agreed to and announced to the date of final application of the formula pursuant to the acquisition agreement, on which subsequent applications of the formula do not result in a change in the number of shares or the amount of other consideration. For example, assume the terms of a purchase business combination are agreed to and announced on March 1, 1999. Also assume that the purchase agreement includes a formula arrangement that specifies that an adjustment will be made to the number of shares issued in the business combination if the average closing security price for the 10 days ending June 30, 1999, is less than $16. If the 10-day average closing security price drops below $16 for the first time on June 1, 1999, and does not subsequently recover to an amount equal to or greater than $16 from June 1, 1999 through June 30, 1999, June 1, 1999 is the measurement date. However, if the originally announced number of shares or amount

of other consideration does not change as a result of final application of the formula, then the initial date that the terms were agreed to and announced is the measurement date. The EITF noted that a new measurement date does not occur as a result of the application of a nonsubstantive formula in the original agreement.

11. As another example, assume that the terms of the acquisition are agreed to and announced on March 31, 1999. The number of shares to be issued in the business combination is equal to $20 million divided by the June 30, 1999 closing market price of the acquirer's common stock; however, if the June 30, 1999 closing market price of the acquirer’s common stock is less than $16 or greater than $24, the exchange ratio is adjusted as follows: (a) if the closing market price is less than $16, the acquirer will issue 1,250,000 shares of its common stock for the outstanding common shares of the target company, and (b) if the closing market price is greater than $24, the acquirer will issue 833,000 shares of its common stock for the outstanding common shares of the target company. The variable exchange ratio represents a formula and, as a result, if the stock price changes during the period from March 31, 1999 through June 30, 1999, but remains within the $16-$24 range, the measurement date is June 30, 1999. However, if the acquirer’s closing common stock price exceeds $24 on June 1, 1999, and remains above $24 through June 30, 1999, the number of shares to be issued in the transaction becomes fixed on June 1, 1999, and that date is the measurement date.

12. The EITF also reached a consensus that the securities should be valued based on market prices a few days before and after the measurement date determined in Issue 2 but that the measurement period would not include any dates after the date the business combination is consummated.

13. The EITF reached a consensus that the consensus reached on Issue 1 should only be applied prospectively to purchase business combinations consummated on or after January 1, 2001. The EITF reached a consensus that the consensuses reached on Issue 2 should be applied prospectively to purchase business combinations initiated on or after January 1, 2001. An entity should apply its existing policy prior to the effective date of the consensus on Issue 2.

INT 00-28 Status

14. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 01-18: Consolidated or Legal Entity Level – Limitations on EDP Equipment, Goodwill and Deferred Tax Assets Admissibility

INT 01-18 Dates Discussed

March 26, 2001; June 11, 2001

INT 01-18 References

Current:
SSAP No. 16R—Electronic Data Processing Equipment and Software
SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements
SSAP No. 68—Business Combinations and Goodwill
SSAP No. 101—Income Taxes

Superseded:
SSAP No. 79—Depreciation of Nonoperating System Software – An Amendment to SSAP No. 16—Electronic Data Processing Equipment and Software
SSAP No. 10R—Income Taxes—A Temporary Replacement of SSAP No. 10

INT 01-18 Issue

1. Case Number 1: The reporting entity has several wholly-owned insurance company subsidiaries. The reporting entity will account for its investment in these subsidiaries at their underlying statutory equity in accordance with *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.

2. Case Number 2: A reporting entity has deferred tax assets (DTAs) in excess of those that are allowed to be admitted in accordance with the guidance in SSAP No. 101 paragraph 11. The reporting entity files a consolidated tax return with one or more affiliates. Those affiliates have deferred tax liabilities (DTLs) that exceed the remaining DTAs available for admission after application of paragraphs 11.a. and 11.b. of SSAP No. 101 at the affiliates' legal entity level.

3. The accounting issues are:

Case Number 1:

When applying the limitations described in paragraph 11 of SSAP No. 101, paragraph 4 of SSAP No. 16R, and paragraph 7 of SSAP No. 68 to the parent reporting entity's adjusted capital and surplus, is the reporting entity required to exclude any net deferred tax assets, EDP equipment and operating system software, and net positive goodwill included in its insurance subsidiaries' valuation? Or, is the limitation calculated solely based on the legal entity's adjusted capital and surplus?

The effect of looking solely at the legal entity is to allow for the "stacking" of intangibles, so that the parent reporting entity may effectively have more than the defined limitations "invested" in deferred tax assets, EDP equipment and operating system software and goodwill. These assets are limited at each subsidiary legal entity level.

Case Number 2:

Can the reporting entity offset its DTAs against existing gross DTLs of an affiliated entity? This offset would be pursuant to the allowance of an offset against existing DTLs under SSAP No. 101

paragraph 11.c. This offset would occur only after application of paragraphs 11.a. and 11.b. for both the reporting entity and the affiliate. The premise for the offset is that both entities file a consolidated federal income tax return and that future deductible items of the reporting entity are, by current tax law, able to offset future income items of the affiliate. The affiliates for this purpose would have to have a tax sharing agreement that required payment from one affiliate to another for loss usage.

INT 01-18 Discussion

4. The Working Group reached a consensus as follows:

   Case Number 1:

   The Working Group reached a consensus that in applying the limitations described in paragraph 11.b.ii. of SSAP No. 101, paragraph 4 of SSAP No. 16R, and paragraph 7 of SSAP No. 68 to the parent reporting entity's adjusted capital and surplus, the reporting entity shall not exclude any net deferred tax assets, EDP equipment, operating system software, and net positive goodwill included in its insurance subsidiaries valuation.

   Case Number 2:

   The Working Group reached a consensus that the reporting entity shall not offset it's DTAs against existing gross DTLs of an affiliated entity.

INT 01-18 Status

5. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 01-25: Accounting for U.S. Treasury Inflation-Indexed Securities

INT 01-25 Dates Discussed

June 11, 2001; October 16, 2001; September 10, 2002; December 8, 2002; December 10, 2016; April 8, 2017

INT 01-25 References

Current:
SSAP No. 26R—Bonds

INT 01-25 Issue

1. Treasury inflation-indexed securities are direct obligations of the United States government, and are backed by the full faith and credit of the government.[1] The principal is protected against inflation. Since the principal is indexed to the Consumer Price Index and grows with inflation, the investor is guaranteed that the real purchasing power of the principal will keep pace with the rate of inflation (Based on the Reference CPI-U, which has a three-month lag). Although deflation could cause the principal to decline, Treasury will pay at maturity an amount that is no less than the par amount as of the date the security was first issued.

2. Interest is also protected from inflation. The investor will receive semiannual interest payments, based on a fixed semiannual interest rate applied to the inflation-adjusted principal, so that the investor is guaranteed a real rate of return above inflation.

> Summary of the Structure and Index:
>
> Principal amount. The principal amount of Treasury inflation-indexed securities will be adjusted for changes in the level of inflation. The inflation-adjusted principal amount of the securities can be calculated daily. However, the inflation adjustment will not be payable by Treasury until maturity, when the securities will be redeemed at the greater of their inflation-adjusted principal amount or the principal amount of the securities on the date of original issuance (i.e., par).
>
> Index. The index for measuring the inflation rate will be the nonseasonally adjusted CPI-U (U.S. City Average All Items Consumer Price Index for All Urban Consumers). CPI-U was selected by Treasury because it is the best known and most widely accepted measure of inflation.
>
> Interest payments. Every six months Treasury will pay interest based on a fixed rate of interest determined at auction. Semiannual interest payments are determined by multiplying the inflation-adjusted principal amount by one-half the stated rate of interest on each interest payment date.
>
> Payment at maturity. If at maturity the inflation-adjusted principal is less than the par amount of the security (due to deflation), the final payment of principal of the security by Treasury will not be less than the par amount of the security at issuance. In such a circumstance, Treasury will pay an additional amount at maturity so that the additional amount plus the inflation-adjusted principal amount will equal the par amount of the securities on the date of original issuance. Initially, the securities will be issued with a 10-year maturity; however, Treasury expects to issue other maturities over time.

---

[1] The guidance prescribed within this interpretation is limited to treasury inflation-indexed securities backed by the full faith and credit of the United States Government. Inflation-indexed securities of foreign governments shall not follow the guidance within this interpretation and shall be accounted for and reported according to the applicable SSAP without adjustments for the inflation factor.

© 1999-2023 National Association of Insurance Commissioners

Stripping. The securities will be eligible for the STRIPS program (Separate Trading of Registered Interest and Principal of Securities) as of the first issue date. Unlike the conventional STRIPS program, however, interest components stripped from different inflation-indexed securities, at least initially, will not be interchangeable or fungible with interest components from other securities, even if they have the same payment or maturity date.

3. The accounting issue is how should changes to inflation-adjusted principal be recorded?

4. At the September 10, 2002 and December 8, 2002 the Working Group expanded this interpretation to address specific questions regarding U.S. Treasury Inflation-Indexed Securities purchased at either a premium or discount and how the inflation adjustment interacts with any such premium or discount, as well as the calculation of each of these amounts.

5. The following example will be used to highlight issues concerning the amortization of premium and inflation adjustment for a typical security:

Assume:	
Par value of TIP security	$500,000
Inflation factor at date of purchase	1.12075
Price at date of purchase	102.96875
Original issue date 6/30/X0	
Purchase date 06/30/X6	
Maturity date 06/30/X10	
Amount of inflation adjustment at date of purchase ($500,000 * .12075)	$60,375
Total purchase price ($500,000*1.12075*1.0296875)	$577,011
Premium at date of purchase ($577,011 - $500,000 - $60,375)	$16,636

6. The issues are:

Issue a. – If accretion or amortization should be recognized over the period of time the security is owned.

Issue b. – Assuming that at the end of the accounting period, 12/31/X6, the inflation factor is 1.13000, what the correct book value of the security would be.

Issue c. – Assuming that at the end of the accounting period, 12/31/X6, the inflation factor is 1.12000, what the correct value of the security would be.

Issue d. – How changes in accounting treatment would be handled.

INT 01-25 Discussion

7. At its October 16, 2001 meeting, the Working Group reached a consensus that the inflation adjustment be recognized as an unrealized gain until such time as it is paid, at which time it should be recognized as a realized gain. If there is a deflation adjustment, such amounts should only be recognized to the extent of any previously recognized inflation adjustment for that particular security, (reduce any unrealized gain on that security to zero) as the investor is guaranteed at maturity to receive at least the par amount of the security. (See paragraph 8.c. below for amendments to this paragraph adopted at the December 8, 2002 meeting.)

© 1999-2023 National Association of Insurance Commissioners

8. At its December 8, 2002 meeting, the Working Group reached a consensus on the following issues related to the purchase of a treasury inflation-indexed security at either a premium or a discount, how the inflation adjustment interacts with any such premium or discount, as well as the calculation of each of these amounts.

Issue a. – The $16,636 premium paid for the security should be amortized over the remaining life of the security. Therefore, if the inflation adjustment factor never changed from the 1.12075 at date of purchase, the security would have a book value at maturity of $560,375, the amount the reporting entity would receive at maturity date ($500,000*1.12075).

Issue b. – The reporting entity should record the unrealized gain/loss based on the difference in the inflation factor times the par amount, and amortize the premium over the remaining life of the security.

Issue c. – In the case where the inflation factor is reduced to a factor not less than 1.0000, the reporting entity should reflect the change in the inflation adjustment as well as amortization of premium. Paragraph 7 of this interpretation is amended as follows:

> 7. The Working Group reached a consensus that the inflation adjustment be recognized as an unrealized gain until such time as it is paid, at which time it should be recognized as a realized gain. If there is a deflation adjustment, such amounts should only be recognized to the extent the inflation factor is not reduced to an amount less than 1.0000 as the investor is guaranteed at maturity to receive at least the par amount of the security.

Issue d. - A change in accounting principle should be recorded per the requirements of *SSAP No. 3—Accounting Changes and Corrections of Errors*, paragraph 5:

> 5. The cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods.

In the specific question noted, if the reporting entity is currently recognizing both amortization of premium as well as the change in the inflation adjustment factor as amortization of premium, there should not be a cumulative effect on surplus to record.

INT 01-25 Status

9. No further discussion is planned.

10. On April 8, 2017, the Statutory Accounting Principles (E) Working Group modified this interpretation, adding footnote 1 to clarify that the guidance within this interpretation is only applicable to Treasury inflation-indexed securities backed by the full faith and credit of the United States Government.

Current:
SSAP No. 4—Assets and Nonadmitted Assets
SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities
INT 20-06: Participation in the 2020 TALF Program

Superseded/Nullified:
SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities
SSAP No. 33—Securitization
SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements
SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities
INT 99-02: Accounting for Collateral in Excess of Debt Principal

INT 01-31 Issue

1. Insurers may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. The arrangement is commonly referred to as a pledge, typically accomplished by delivery of assets to the secured party or to an independent custodian. In these transactions, the pledging insurer typically (1) continues to receive the income on the pledged collateral and (2) can remove and substitute other securities with little or no advance notice to the secured party as long as they comply with related investment quality and market value agreement provisions. Examples include collateral pledged under investment, derivative, debt obligations and policyholder transactions.

2. Specific examples of collateral pledged for derivative and investment transactions include but are not limited to: (1) securities posted with a broker as margin for futures and options transactions, (2) securities pledged to secure credit exposure with swap counterparties, (3) securities pledged under reverse repurchase agreements or securitizations that are accounted for as secured borrowing transactions and (4) securities pledged under securities lending transactions.

3. Specific examples of collateral pledged for debt obligations and policyholder transactions include but are not limited to assets pledged to secure (1) debt borrowings from or insurance contracts issued to banking entities and (2) insurance contracts issued to governmental entities such as municipalities.

4. Under these transactions, the fair value of the securities pledged as collateral may exceed the contract balance (swap fair value, advance balance, policyholder account balance, etc). For this interpretation, this excess carrying value of securities pledged over the corresponding asset or contract balance is called the "overcollateralization" amount.

5. The accounting issue is whether the assets pledged as collateral under the various transactions mentioned above should be considered admitted assets.

© 1999-2023 National Association of Insurance Commissioners

INT 01-31 Discussion

6. The Working Group reached a consensus that if the collateral had not been pledged in the examples described above, it is assumed the underlying asset would be recorded as an admitted asset under SSAP No. 4 (e.g. they are readily marketable assets available to meet both current and future policyholder obligations). In addition, it is assumed that the asset would not be considered impaired under SSAP No. 5R due to a default, fair value decline, or other loss contingency.

7. Therefore, for the examples described above, the pledging insurer would record the collateral (including the overcollateralization amount) as an admitted asset until they have committed a contract default that has not been cured in accordance with the contract provisions. This accounting is in accordance with the provisions of SSAP No. 103R. This consensus of reporting collateral as an admitted asset is further supported by SSAP Nos. 4 and 5 since generally, the insurer can readily substitute pledged assets. Additionally, an insurer may typically unwind the transaction allowing the assets to be available to the pledging insurer to meet policyholder obligations. Furthermore, no event has occurred to indicate an impairment or potential loss contingency with respect to such pledged assets. The fact that some pledged assets may constitute an overcollaterlization amount does not change this analysis. Accordingly, all assets pledged in support of these type transactions should also be admitted.

8. At the time of an uncured default, the provisions of paragraph 20 of SSAP No. 103R shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging insurer as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset should be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer should only record an admitted asset for the amount of collateral that it can redeem.

INT 01-31 Status

9. As of March 18, 2002, the consensus position of this interpretation is consistent with the position of the NAIC Invested Asset (E) Working Group. This interpretation will be reviewed by the FAS 140 Subgroup of the NAIC Statutory Accounting Principles (E) Working Group in conjunction of its consideration of incorporating GAAP pronouncement *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, a replacement of FASB Statement 125* into the statutory accounting model. As such, this interpretation is subject to amendment pending disposition of the FAS 140 Subgroup's review of collateral and FAS 140 in its entirety.

10. On September 12, 2004, the Working Group noted that the review of FAS 140 was complete and INT 01-31 was listed as an interpretation of SSAP No. 91R. On March 3, 2012, the Working Group adopted with modification *FAS 166—Accounting for Transfers of Financial Assets, an Amendment of FAS 140* (FAS 166). With this adoption, there was no change to the consensus opinion within this interpretation, and this INT was listed as an interpretation of SSAP No. 103R.

11. No further discussion is planned.

© 1999-2023 National Association of Insurance Commissioners

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 02-22: Accounting for the U.S. Terrorism Risk Insurance Program

INT 02-22 Dates Discussed

December 8, 2002; March 9, 2003; March 24, 2018

INT 02-22 References

Current:
SSAP No. 35R—Guaranty Fund and Other Assessments
SSAP No. 62R—Property and Casualty Reinsurance

INT 02-22 Issue

1. The Terrorism Risk Insurance Act of 2002 establishes a temporary Federal program in the Department of the Treasury that provides for a system of shared public and private compensation for insured losses resulting from acts of terrorism, i.e., subject losses. The Terrorism Insurance Program (or the "Program") requires that all entities that meet the definition of an insurer under the act (generally, commercial property/casualty insurers that are licensed in the U.S.) participate in the Program. The Program becomes effective upon enactment and runs through December 31, 2005. (For purposes of the act, there is a "Transition Period" that runs from enactment through December 31, 2002, and three "Program Years" that run from January 1st through December 31st of 2003, 2004, and 2005, respectively.) The amount of compensation paid to participating insurers under the Program is 90% of subject losses, after an insurer deductible, and subject to an annual cap. The deductible under the Program is 1% for the Transition Period, 7% for Program Year 1, 10% for Program Year 2, and 15% for Program Year 3. In each case, the deductible percentage is multiplied times the insurer's direct earned premiums from the calendar year immediately preceding the respective Transition or Program year. The annual cap limits the amount of terrorism losses paid by insurers and the amount of Federal reimbursement and is $100 billion for Program Year 1 (combined with the Transition Period), Program Year 2, and Program Year 3

2. The Program provides for the establishment of a mandatory surcharge on all covered policyholders to provide for recoupment of defined losses paid by the Department of Treasury. To the extent that the amount of Federal financial assistance exceeds the amount recovered through the mandatory surcharge, the Department of Treasury may impose a second surcharge. The two surcharges combined may not exceed 3% of the annual premium charged for the insured policy. The Program provides that the Department of the Treasury shall collect the surcharges and further provides that insurers shall collect the surcharges and remit such amounts collected to the Department of Treasury.

3. The issues are:

   Issue 1: Does the Program result in a transfer of underwriting risk for terrorism losses to the Department of Treasury and, if so, how should the recovery from the Department of Treasury for terrorism losses be accounted for by insurers?

   Issue 2: How should the imposition of the surcharges on policyholders by the Department of Treasury be accounted for by insurers?

© 1999-2023 National Association of Insurance Commissioners

INT 02-22 Discussion

4. The Working Group reached a consensus as follows:

> Issue 1: Because the Program results in losses from acts of terrorism (above the defined insurer deductibles) being paid by the Department of Treasury, there is a transfer of insurance risk and accordingly, the recovery of such losses should be reported as reinsured losses.
>
> Issue 2: Because the terrorism loss risk-spreading premium is imposed on policyholders as a surcharge and the Department of Treasury provides for insurers to collect the surcharge "and remit amounts collected to the Secretary," the surcharge generally meets the requirements of paragraph 16 of SSAP No. 35R and should be accounted for as such.

INT 02-22 Status

5. No further discussion is planned.

6. This interpretation will remain in effect as long as the Terrorism Risk Insurance Act is authorized by the U.S. Congress.

© 1999-2023 National Association of Insurance Commissioners

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 03-02: Modification to an Existing Intercompany Pooling Arrangement

INT 03-02 Dates Discussed

March 9, 2003; June 22, 2003

INT 03-02 References

Current:
SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance
SSAP No. 62R—Property and Casualty Reinsurance
SSAP No. 63—Underwriting Pools

INT 03-02 Issue

1. Insurance groups that utilize intercompany pooling arrangements often modify these arrangements from time to time for various business reasons. These business reasons commonly include mergers, acquisitions, dispositions or a restructuring of the group's legal entity structure. As an insurance group's business objectives and strategies evolve, it may be necessary for the insurance group's legal entity structure to similarly evolve in order to address the insurance group's business needs.

2. SSAP No. 63, paragraphs 5 and 7, defines and describes intercompany pooling as an arrangement among affiliated entities whereby "all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares." This arrangement is established through "a conventional quota share reinsurance agreement…" Arrangements whereby there is one lead company that retains 100% of the pooled business and all or some of the affiliated companies have a 0% net share of the pool may qualify as intercompany pooling."

3. Therefore, in order to effectuate a modification to the existing intercompany pooling arrangement, companies must either 1) amend the existing reinsurance agreement, or 2) execute new agreements. The latter scenario may entail executing at least two agreements: a commutation of the existing agreement, and a new quota share agreement(s) that covers both past and future periods.

4. To illustrate, in order to effectuate a relatively simple modification, such as changing pooling participation percentages without changing the pool participants, companies often simply amend the existing pooling agreement. Alternatively, in order to effectuate a more complex modification, such as changing (by adding or removing) the number of pool participants, a company must commute the existing pooling agreement and execute a new quota share agreement(s). In conjunction with executing the appropriate reinsurance agreements, a transfer of assets and liabilities amongst the impacted affiliates is also required in order to implement the new reinsurance agreement(s). At issue is the appropriate valuation basis to be used for assets and liabilities that are transferred pursuant to the new reinsurance agreement(s).

5. Since SSAP No. 63 does not specifically address modifications to intercompany pooling arrangements, insurance groups that modify their intercompany pooling arrangements must refer elsewhere in Statutory Accounting Principles (SAP) for relevant guidance. The obvious guidance for such transactions is SSAP No. 62R since an intercompany pooling arrangement is, by definition, affiliated reinsurance. There is, however, a minority opinion that *SSAP No. 25—Affiliates and Other Related Parties* appears to apply due to the affiliated nature of these transactions. Since the guidance and intent of SSAP No. 62R and SSAP No. 25 provide for different valuation bases, this interpretation serves to provide definitive guidance as to which SSAP is relevant for these transactions and, therefore, clarify the

appropriate valuation basis to be used for assets and liabilities transferred pursuant to a modification to an intercompany pooling arrangement.

SSAP No. 62R Approach:

6. This approach refers to the guidance and statutory accounting intent from SSAP No. 62R since intercompany pooling arrangements are defined and established through reinsurance. Further, since modifications to intercompany pooling agreements typically involve the transfer of net liabilities incurred since the inception of the existing pooling agreement (i.e., prior to the effective date of the new agreement), the retroactive reinsurance accounting guidance in paragraphs 33-39 of SSAP No. 62R is applicable. Paragraph 33 states that this special accounting treatment is warranted "due to the potential abuses involving the creation of surplus to policyholders and the distortion of underwriting results…" However, paragraph 36.d. specifically applies to intercompany reinsurance arrangements, and amendments to intercompany reinsurance agreements, since the reinsurance agreement is among companies 100% owned by a common parent. This paragraph allows prospective accounting treatment for intercompany reinsurance agreements that do not result in a gain in surplus as a result of the transaction.

7. To provide historical perspective, prior to the adoption (with modification) of FASB *Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113) as SAP, paragraph 36.d. was added as one of the SAP modifications. The intent of adding paragraph 36.d. was to specifically exclude intercompany reinsurance agreements among entities 100% owned by a common parent from retroactive reinsurance accounting requirements as a result of amending or modifying these agreements, provided there is no surplus gain. The presumption in this intent was that there would be no gains to the ceding entity resulting from implementing amendments or modifications to these types of reinsurance agreements.

8. Therefore, based on the foregoing guidance and background, the statutory accounting intent is to avoid surplus gains for the ceding entity as a result of implementing a modification to an intercompany pooling arrangement. On that basis, such a modification does not represent an economic transaction to the insurance group or to the impacted companies. As such, the transfer of both the assets and the liabilities valued at statutory book value ensures that there is no impact to surplus as a result of implementing a modification to an existing pooling arrangement.

SSAP No. 25 Approach:

9. An approach different from that which refers to reinsurance accounting guidance is to refer to the guidance in SSAP No. 25 since some may view a modification to an intercompany pooling agreement as a related party transaction involving the exchange of assets or liabilities. In this case, paragraphs 14-18 of SSAP No. 25 would appear applicable. This guidance specifies differing valuation bases, depending on whether the transaction is considered an economic or a non-economic transaction. SSAP No. 25, paragraph ~~14~~15, states that "…The appearance of permanence is also an important criterion is assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed …" Since insurance groups often modify intercompany pooling arrangements, this type of transaction is not permanent, and may be construed as a non-economic transaction. SSAP No. 25, paragraph ~~18~~19.b., states that "non-economic transactions … shall be recorded at the lower of existing book value or fair value at the date of the transaction."

10. It appears that this guidance is intended to address matters involving discrete or isolated transfers of assets and/or liabilities between affiliates rather than transfers of assets and liabilities effected in relation to executing reinsurance transactions (the guidance for which is SSAP No. 62R). Additionally, application of this guidance would result in a change to the surplus of the insurance group as a result of implementing a modification to an existing intercompany pooling arrangement. As previously stated, the

© 1999-2023 National Association of Insurance Commissioners

statutory accounting intent is to avoid surplus gains for the insurance group as a result of implementing a modification to an intercompany pooling arrangement.

11. The accounting issues are:

    a. What is the relevant guidance for modifications to intercompany pooling arrangements?

    b. What is the appropriate valuation basis to be used for assets and liabilities that are transferred among affiliates in conjunction with the execution of a new reinsurance agreement(s) that serves to substantively modify an existing intercompany pooling arrangement?

INT 03-02 Discussion

The Working Group reached a consensus as follows:

12. SSAP No. 62R provides accounting for property and casualty reinsurance agreements including specific guidance on intercompany pooling agreements. SSAP No. 62R provides two methods of accounting for changes in intercompany pooling agreements, depending on whether or not the pooling results in a gain in surplus.

13. The appropriate valuation basis to be used for assets and liabilities that are transferred among affiliates in conjunction with the execution of a new reinsurance agreement(s) that serves to substantively modify an existing intercompany pooling arrangement is statutory book value for assets and statutory value for liabilities. Book value is defined in the glossary of the *Accounting Practices and Procedure Manual*.

INT 03-02 Status

14. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 04-17: Impact of Medicare Modernization Act on Postretirement Benefits

INT 04-17 Dates Discussed

September 14, 2004; December 5, 2004

INT 04-17 References

Current:
SSAP No. 92—Postretirement Benefits Other Than Pensions

Superseded:
SSAP No. 10R—Income Taxes
SSAP No. 14—Postretirement Benefits Other Than Pensions
SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8

INT 04-17 Issue

1. In December 2003, the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the Act) became law. Under the Act, starting in 2006, retirees will have the ability to obtain prescription drug benefits through a new Medicare Part D program and companies that continue to provide postretirement prescription drug benefits to their retirees may be eligible to receive a new federal subsidy.

2. In May 2004, FASB adopted the Board directed FASB Staff Position (FSP) *FAS 106-2, Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003* (FSP FAS 106-2). The guidance found in FSP FAS 106-2 superseded the earlier guidance in *FSP FAS 106-1, Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003* and was intended as being the final guidance on this subject.

3. Questions have arisen regarding whether an employer that provides postretirement prescription drug coverage should recognize the effects of the Act on the plan's accumulated postretirement benefit obligation (APBO) and the employer's postretirement benefit costs and, if so, when and how to account for those effects.

INT 04-17 Discussion

4. The Working Group reached a consensus to adopt the final conclusions reached in FSP FAS 106-2 with the following modifications:

a. Postretirement benefits should be accounted for in accordance with SSAP No. 92.

b. Income Taxes should be accounted for in accordance with SSAP No. 101.

c. Calculations shall not exclude non-vested employees.

d. Any references to *FSP FAS 106-1, Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003* are removed as this guidance was superseded by FSP FAS 106-2.

e. The effective date is universal for both public and non-public entities.

© 1999-2023 National Association of Insurance Commissioners

5. Per FSP FAS 106-2:

> 3. The guidance in this FSP related to accounting for the subsidy applies only to the sponsor of a single-employer defined benefit postretirement health care plan for which (a) the employer has concluded that prescription drug benefits available under the plan to some or all participants for some or all future years are "actuarially equivalent" to Medicare Part D and thus qualify for the subsidy under the Act and (b) the expected subsidy will offset or reduce the employer's share of the cost of the underlying postretirement prescription drug coverage on which the subsidy is based. This interpretation also provides guidance for the disclosures about the effects of the subsidy for an employer that sponsors a postretirement health care benefit plan that provides prescription drug coverage but for which the employer has not yet been able to determine actuarial equivalency.
>
> 4. Although this FSP provides limited guidance on certain other related aspects of accounting and disclosure necessitated by the Act (for example, changes in assumed participation rates and health care cost trend rates, as well as income tax accounting) that guidance is not intended to supersede or in any way limit the application of other relevant authoritative literature. This FSP does not address the accounting for the subsidy in situations that may arise in which the expected subsidy exceeds the employer's share of the cost of the underlying postretirement prescription drug coverage on which the subsidy is based. It also does not address accounting for the subsidy by multiemployer health and welfare benefit plans or by the sponsors or participating employers of those plans.

6. The Act introduces two new features to Medicare that an employer needs to consider in determining those measurements: (a) a subsidy that is based on 28 percent of an individual beneficiary's annual prescription drug costs between $250 and $5,000 (subject to indexation and the provisions of the Act as to "allowable retiree costs") and (b) the opportunity for a retiree to obtain a prescription drug benefit under Medicare.

7. Per FSP FAS 106-2:

> 9. An employer's eligibility for the 28 percent subsidy depends on whether the prescription drug benefit available under its plan is at least "actuarially equivalent" to the Medicare Part D benefit. At present, detailed regulations necessary to implement the Act have not been issued, including those that would specify the manner in which actuarial equivalency must be determined, the evidence required to demonstrate actuarial equivalency, and the documentation requirements necessary to be entitled to the subsidy.[1] In addition, the magnitude of the subsidy for an employer depends on how many of the employer's Medicare-eligible retired Plan participants choose not to enroll in the *voluntary* Medicare Part D plan. Further, specific regulations regarding the payment/reimbursement mechanism for the subsidy are yet to be defined by the appropriate administrative agency. Accordingly, questions have been raised regarding whether the subsidy is substantively similar to other Medicare benefits that existed when Statement 106 was issued and therefore should be accounted for as a reduction of the APBO and net periodic postretirement benefit cost, or whether the subsidy represents a payment to the employer that is determined by reference to its plan's benefit payments but is not, in and of itself, a direct reduction of postretirement benefit costs. Under either view, there is also a question as to when the subsidy should be given accounting recognition.
>
> Effect on Per Capita Claims Cost
>
> 10. Regardless of the impact of the subsidy, the existence of prescription drug coverage under Medicare Part D may have an effect on an employer's per capita claims cost for a plan that currently provides a prescription drug benefit. That effect depends on (a) whether current and future retirees (or their beneficiaries under the employer-sponsored plan) enroll in the voluntary

[1] Section 1860D-11(c) of the Social Security Act, as amended by the Act, states that "the Secretary [of Health and Human Services] shall establish processes and methods for determining the actuarial valuation of prescription drug coverage."

Medicare Part D plan and (b) the Act's macro-socioeconomic effects on health care cost trends and consumers' behavior.

Plan Amendments

11. In response to the Act, or for other reasons, an employer may amend an existing plan (or establish a new one). To the extent that an employer amends a plan (positively or negatively), the APBO will be affected by the direct effects of the change in benefits attributed to employee services already rendered. If an amendment changes the determination as to the actuarial equivalency of benefits available under the plan, the expected subsidy to the employer also will change.

Income Tax Accounting

12. The Act excludes receipt of the subsidy from the taxable income of the employer for federal income tax purposes.[2] Accordingly, this interpretation addresses how that provision affects the accounting for the temporary difference related to the employer's accrued postretirement benefit cost under Statement 109, *Accounting for Income Taxes.*

FASB Staff Position

13. Paragraph 35 of Statement 106 specifies that health care coverage provided by Medicare shall be taken into account in measuring the employer's postretirement health care benefit obligation. Paragraph 40 of Statement 106 requires presently enacted changes in relevant laws to be considered in current period measurements of net periodic postretirement benefit cost and the APBO. Therefore, under that guidance, measures of the APBO and net periodic postretirement benefit cost on or after the date of enactment shall reflect the effects of the Act.

Effect of the Subsidy on Benefits Attributable to Past Service

14. When an employer initially accounts for the subsidy pursuant to the effective date and transition guidance in paragraphs 23–32, its effect on the APBO shall be accounted for as an actuarial experience gain pursuant to paragraphs 56 and 59 or 60 of Statement 106.

Effect of the Subsidy on Current Measures of Net Periodic Postretirement Benefit Cost

15. Because the subsidy affects the employer's share of its plan's costs, the subsidy is included in measuring the costs of benefits attributable to current service. Therefore, the subsidy reduces service cost (as defined in paragraph 47 of Statement 106) when it is recognized as a component of net periodic postretirement benefit cost.

Changes in Estimates

16. If an estimate of the expected subsidy subsequently changes—as a result of changes in regulations or legislation, changes in the underlying estimates of postretirement prescription drug costs, or for reasons other than a plan amendment—the effect of the change in estimate is an actuarial experience gain or loss pursuant to paragraph 56 of Statement 106.

Plan Amendments

17. If prescription drug benefits currently available under an existing plan are deemed not actuarially equivalent as of the date of enactment of the Act, but the plan is subsequently amended to provide actuarially equivalent benefits, the direct effect of the plan amendment on the APBO (that is, the effect of only the change in prescription drug coverage) and the effect on the APBO from any resulting subsidy to which the employer is expected to be entitled as a result of the amendment shall be combined. If that combined effect reduces the APBO, it is deemed to be an actuarial experience gain pursuant to paragraph 56 of Statement 106. If the combined effect

[2] New Section 139A of the Internal Revenue Code established by Section 1202 of the Act.

increases the APBO, it is deemed to be prior service cost that shall be accounted for pursuant to paragraphs 50-54 of Statement 106.

18. A plan that provides prescription drug benefits that previously were deemed actuarially equivalent under the Act may be subsequently amended to reduce its prescription drug coverage and that reduced coverage may not be considered actuarially equivalent. In that circumstance, any actuarial experience gain related to the subsidy previously recognized is unaffected. However, the combined net effect on the APBO of (a) the subsequent plan amendment that reduces benefits under the plan and thus disqualifies the benefits as actuarially equivalent and (b) the elimination of the subsidy shall be accounted for as prior service cost (credit) as of the date the amendment is adopted.

Income Tax Accounting

19. In the periods in which the subsidy affects the employer's accounting for the plan, it shall have no effect on any plan-related temporary difference accounted for under Statement 109 because the subsidy is exempt from federal taxation. That is, the measure of any temporary difference shall continue to be determined as if the subsidy did not exist. To illustrate, consider the following simple example.

> Prior to the adoption of this FSP, an employer's carrying amount of accrued postretirement benefit cost (the amount recognized in the statement of financial position) is $100 for a noncontributory, unfunded prescription drug benefit plan with only inactive participants who are not yet eligible to collect benefits. Assuming a tax rate of 35 percent and no corresponding tax basis for the accrued postretirement benefit cost, the employer would report a $35 deferred tax asset related to that $100 deductible temporary difference. Because the employer has a policy of amortizing gains and losses under paragraph 59 of Statement 106, upon adoption of the FSP and recognition of a $28 actuarial gain resulting from the subsidy, neither the carrying amount of accrued postretirement benefit cost nor the deferred tax asset would change. Subsequently, ignoring interest on the APBO (which includes interest on the subsidy), as the actuarial gain related to the subsidy is amortized as a component of net periodic postretirement benefit cost, the carrying amount of accrued postretirement cost would be reduced. However, the associated temporary difference and deferred tax asset would remain unchanged. That is, after the gain related to the subsidy is amortized in its entirety, the carrying amount of accrued postretirement benefit cost would be $72, and the deferred tax asset would remain at $35.

For purposes of simplicity, this example ignores complexities regarding the amount and timing of the subsidies reflected in the carrying amount of accrued postretirement benefit cost arising from any of the following: (a) netting gains and losses and application of the corridor amortization approach described in paragraph 59 of Statement 106, (b) recognition of additional subsidies through amortization of prior service costs that include effects of the subsidy, or (c) reduction in future service and interest costs. Those complexities must be considered in determining the temporary difference on which the deferred tax effects under Statement 109 will be based. However, providing detailed guidance on the application of Statement 109 to postretirement benefits other than pensions is beyond the scope of this FSP.

INT 04-17 Disclosures

8. Per FSP FAS 106-2:

20. Until an employer is able to determine whether benefits provided by its plan are actuarially equivalent, it shall disclose the following in financial statements for interim or annual periods:

a. The existence of the Act

b. The fact that measures of the APBO or net periodic postretirement benefit cost do not reflect any amount associated with the subsidy because the employer is unable to conclude whether the benefits provided by the plan are actuarially equivalent to Medicare Part D under the Act.

9. In interim and annual financial statements for the first period in which an employer includes the effects of the subsidy in measuring the net postretirement benefit cost and the first period in which an employer includes the effects of the subsidy in measuring net periodic postretirement benefit cost, it shall disclose the following:

a. The reduction in the net postretirement benefit cost for the subsidy related to benefits attributed to former employees.

b. The effect of the subsidy on the measurement of net periodic postretirement benefit cost for the current period. That effect includes (1) any amortization of the actuarial experience gain in (a) as a component of the net amortization called for by paragraph 49 of SSAP No. 92, (2) the reduction in current period service cost due to the subsidy, and (3) the resulting reduction in interest cost on the net postretirement benefit cost as a result of the subsidy.

c. Any other disclosures required by paragraph 66.p. of SSAP No. 92 which requires disclosure of "An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this statement."

10. For purposes of the disclosures required by paragraph 66.a. of SSAP No. 92, an employer shall disclose gross benefit payments (paid and expected, respectively), including prescription drug benefits, and separately the gross amount of the subsidy receipts (received and expected, respectively).

INT 04-17 Effective Date and Transition

11. This interpretation is effective for reporting years beginning on or after January 1, 2005 with early adoption allowed. A change resulting from adoption of this interpretation should be accounted for as detailed in paragraphs 12 and 13. A change resulting from the adoption of this interpretation shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

12. Per FSP FAS 106-2:

> 24. … If the effects of the Act—including the subsidy, if any, changes in participation rates, and changes in estimated health care costs—cause the employer to conclude that enactment of the Act was not a "significant event" pursuant to paragraph 73 of Statement 106, the effects of the Act shall be incorporated in the next measurement of plan assets and obligations otherwise required by Statement 106 following the effective date of this FSP. If an employer concludes that enactment of the Act was a significant event, but either (a) benefits available under its plan are not actuarially equivalent to Medicare Part D or (b) the employer is unable to conclude (refer to paragraph 33) whether any benefits are actuarially equivalent, it shall measure any effects of the Act other than the subsidy (for example, changes in estimated participation rates or health care costs) at the next measurement date for plan assets and obligations required by paragraphs 28–32 of this FSP.

13. Per FSP FAS 106-2:

> 27. For a plan (a) that provides benefits that are considered actuarially equivalent as of the date of enactment, based on information that is available as of the date of adoption of this interpretation, and (b) for which enactment of the Act was a significant event, this interpretation provides two alternative methods of transition—retroactive application to the date of enactment (paragraphs 28–29) or prospective application from the date of adoption (paragraph 30).

© 1999-2023 National Association of Insurance Commissioners

Retroactive application to date of enactment

28. When this FSP is initially adopted, a remeasurement of the plan's assets and APBO, including the effects of the subsidy, if applicable, as well as the other effects of the Act, shall be made as of the earlier of (a) the plan's measurement date that normally would have followed enactment of the Act or (b) the end of the employer's interim or annual period that includes the date of the Act's enactment. As an alternative, employers are permitted, but not required, to perform that remeasurement as of the date of enactment. The measurement of the APBO shall be based on the plan provisions in place on the measurement date. Plan amendments occurring after the measurement date pursuant to (a) or (b) above shall not be anticipated in performing that measurement. However, if prior to the effective date of this FSP, a plan is amended so as to not be considered actuarially equivalent, the employer shall not reflect any effects of the subsidy in the transitional measurements required by this FSP. If the prescription drug coverage provided by a plan was amended after December 8, 2003, but before January 31, 2004 (the date before which plan amendments would not cause the deferral provided by FSP FAS 106-1 to expire), the effects of the prescription drug plan amendment and the consequential effects of the subsidy shall be accounted for pursuant to the applicable guidance in either paragraph 17 or 18 of this FSP.

29. The effects of measuring plan assets and obligations under paragraph 28 generally will not affect the accrued or prepaid postretirement benefit cost reported in the employer's statement of financial position as of the measurement date.[3] However, those measurements will affect net periodic postretirement benefit cost for periods subsequent to the date of the re-measurement.[4] To the extent that previously issued financial reports for periods prior to the effective date of this FSP would have been affected by the remeasurement of plan assets and obligations under paragraph 28, the requirements in paragraph 20 of APB Opinion No. 20, Accounting Changes, and paragraph 10 of FASB Statement No. 3, Reporting Accounting Changes in Interim Financial Statements, as applicable, shall be followed.[5] In calculating the effects on prior periods, the guidance in paragraphs 17 and 18 of this FSP applies to plan amendments adopted subsequent to the measurement date described in paragraph 28 but before the effective date of this FSP. The effects of any such amendment shall be determined as of the date the plan amendment is adopted. The following examples illustrate the application of the provisions in this paragraph.

Example A—Calendar Year-End, September 30 Measurement Date

Calendar Company, a public company, sponsors a postretirement health care benefit plan that provides prescription drug coverage. It has a December 31 year-end for financial reporting purposes and uses a September 30 measurement date pursuant to paragraph 72 of Statement 106. Calendar Company elected to defer any accounting for the effects of the Act pursuant to FSP FAS 106-1 and made that election in the quarter ending March 31, 2004, the first period in which the plan's accounting for the effects of the Act normally would have been reflected in Calendar Company's financial statements.

Calendar Company adopts the guidance in this FSP as of July 1, 2004, the beginning of its third quarter. Calendar Company and its actuarial advisors determine that benefits provided by the plan as of the date of enactment were at least actuarially equivalent to

[3] The paragraph 28 measurement would affect the statement of financial position if, pursuant to paragraph 60 of Statement 106, the employer has a policy of immediately recognizing gains and losses.

[4] Depending on the measurement date selected for the plan pursuant to paragraph 72 of Statement 106, the net periodic postretirement benefit cost may not be affected by the Act in the employer's reporting period immediately following the measurement required by paragraph 28. For example, for a public company with a December 31 fiscal year-end, the end of the employer's interim period that includes the date of enactment would be December 31, 2003. If that employer uses a September 30 measurement date pursuant to paragraph 72 of Statement 106, the effects of the Act on the plan would first affect net periodic postretirement benefit cost in the employer's interim period that begins April 1, 2004.

[5] Paragraph 10 of Statement 3 states that no cumulative effect of a change in accounting principle shall be included in net income of the interim period, other than the first interim period, in which the change is adopted. However, financial information for the pre-change interim periods of the fiscal year in which the change is made shall be restated on the basis of the new accounting principle whenever those pre-change interim periods are subsequently presented.

Medicare Part D, and, accordingly, Calendar Company will be entitled to the subsidy. Calendar Company performs an interim measurement of the effects of the Act on the APBO as of December 31, 2003, the end of its interim (and annual) period that includes the date of the Act's enactment and determines that the aggregate effect on service cost, interest cost, and amortization of gains and losses results in a reduction of $500 in annual net periodic postretirement benefit cost compared to that amount calculated without considering the effects of the Act.

The effect of applying this FSP has no cumulative effect on Calendar Company's retained earnings as of December 31, 2003. Because Calendar Company uses a September 30 measurement date, the accounting for the plan is reflected in Calendar Company's financial statements on a one-quarter lag. Therefore, the Act had no effect on net periodic postretirement benefit cost for the first quarter. Accordingly, in applying the guidance in Statement 3, Calendar Company reports net periodic postretirement benefit cost for the nine-month period ending September 30, 2004, reflecting $250 (the second and third quarter amounts) of the $500 annual reduction. Net periodic postretirement benefit cost included in third quarter results of operations reflects only that quarter's $125 reduction due to the Act. When presented for comparative purposes, for example in summary quarterly financial information in the annual report or for comparative purposes in the 2005 second quarter financial report, the results of operations for the second quarter of 2004 will be restated to reflect a $125 reduction in net periodic postretirement benefit cost due to the Act.

<u>Example B—April 30 Year-End, April 30 Measurement Date</u>

Spring Company, a public company, sponsors a postretirement health care benefit plan that provides prescription drug coverage. It has an April 30 year-end for financial reporting purposes and uses April 30 as the measurement date for plan assets and obligations under Statement 106. Spring Company elected to defer any accounting for the effects of the Act pursuant to FSP FAS 106-1 and made that election in the quarter ending January 31, 2004, the first period in which the plan's accounting for the effects of the Act normally would have been reflected in Spring Company's financial statements.

Spring Company adopts the guidance in this FSP as of August 1, 2004, the beginning of its second quarter. Spring Company and its actuarial advisors determine that benefits provided by the plan as of the date of enactment were at least actuarially equivalent to Medicare Part D, and, accordingly, Spring Company will be entitled to the subsidy. Spring Company measures the effects of the Act on the APBO as of January 31, 2004, the end of its interim period that includes the date of the Act's enactment and determines that the aggregate effect on service cost, interest cost, and amortization of gains and losses results in a reduction of $500 in annual net periodic postretirement benefit cost compared to that amount calculated without considering the effects of the Act.

Because the date for remeasuring the plan's assets and obligations required by this FSP—for an employer that elects retroactive application—occurs in Spring Company's prior fiscal year, the cumulative effect of applying the guidance in this FSP on Spring Company's retained earnings as of April 30, 2004, is $125 (the fourth quarter effect on net periodic postretirement cost, ignoring any deferred income tax effects, which may be none). That cumulative effect of a change in accounting principle is recognized in Spring Company's net income for the six months ending October 31, 2004. Assuming no other changes in assumptions or other gains and losses arise in the regularly scheduled April 30, 2004 measurement of the plan, pursuant to the guidance in Statement 3, Spring Company reports net periodic postretirement benefit cost for the six-month period ending October 31, 2004, reflecting $250 (the first and second quarter amounts) of the $500 annual reduction. Net periodic postretirement benefit cost included in second quarter results of operations reflects only that quarter's $125 reduction due to the Act. When presented for comparative purposes, for example in summary quarterly financial information in the annual report or for comparative purposes in the next fiscal year's first quarter financial report, the results of operations for the quarter ended July 31, 2004, will

© 1999-2023 National Association of Insurance Commissioners

be restated to reflect the $125 reduction in net periodic postretirement benefit cost due to the Act and the $125 cumulative effect of the change in accounting principle.

Prospective application as of date of adoption

30. When this FSP is initially adopted, a remeasurement of the plan's assets and APBO, including the effects of the subsidy, if applicable, as well as the other effects of the Act, shall be made as of the beginning of the period of adoption pursuant to the guidance in paragraph 73 of Statement 106. The measurement of the APBO shall be based on the plan provisions in place on the measurement date and shall incorporate the best available current information regarding actuarial assumptions and discount rates. The results of that measurement shall be used to determine net periodic postretirement benefit cost in interim periods following the date of adoption until the next measurement date otherwise required by Statement 106. The following example illustrates the application of the provisions of this paragraph.

Example C—Calendar Year-End, September 30 Measurement Date

Calendar Company, a public company, sponsors a postretirement health care benefit plan that provides prescription drug coverage. It has a December 31 year-end for financial reporting purposes and uses a September 30 measurement date pursuant to paragraph 72 of Statement 106. Calendar Company elected to defer any accounting for the effects of the Act pursuant to FSP FAS 106-1 and made that election in the quarter ending March 31, 2004, the first period in which the plan's accounting for the effects of the Act normally would have been reflected in Calendar Company's financial statements.

Calendar Company adopts the guidance in this FSP as of July 1, 2004, the beginning of its third quarter. Calendar Company and its actuarial advisors determine that benefits provided by the plan as of the date of enactment were at least actuarially equivalent to Medicare Part D, and, accordingly, Calendar Company will be entitled to the subsidy. Calendar Company measures the effects of the Act on the APBO as of April 1, 2004, the beginning of the plan's interim period that corresponds to the plan sponsor's first reporting period beginning after June 15, 2004, and determines that the aggregate effect on service cost, interest cost, and amortization of gains and losses results in a reduction of $500 in annual net periodic postretirement benefit cost compared to that amount calculated without considering the effects of the Act.

Net periodic postretirement benefit cost for the quarters ending September 30 and December 31, 2004, reflecting the activity in the plan for the quarters ending June 30 and September 30, 2004, will include a $125 per quarter reduction in net periodic postretirement benefit cost due to the effects of the Act.

Nonpublic entity with only small plans

31. If enactment of the Act constitutes a significant event for a plan, a nonpublic entity that meets the criteria in paragraph 23 may follow the guidance in paragraph 28, including the related transition guidance described in paragraph 29, or may incorporate the effects of the Act prospectively in measures of net periodic postretirement benefit cost and plan assets and obligations for fiscal years beginning after December 15, 2004.

Employer That Did Not Elect Deferral

32. For an employer that did not elect the deferral option provided under FSP FAS 106-1 and whose previous accounting for the effects of the Act differs from the guidance in this FSP, the adoption of this FSP constitutes a change in accounting principle under Opinion 20. Accordingly, the cumulative effect of retroactive application of this FSP to the date of the Act's enactment shall be reflected in the financial statements following the provisions of paragraph 20 of Opinion 20 and paragraphs 9 and 10 of Statement 3, as applicable.

© 1999-2023 National Association of Insurance Commissioners

Subsequent Determination of Actuarial Equivalence Absent a Plan Amendment

33. When adopting this FSP, an employer and its actuarial consultants may be unable to determine the extent to which the benefits provided by a plan are actuarially equivalent as of the date of the initial measurement applying the guidance in this FSP. If clarifying regulations related to the Act or new information about the interpretation or determination of *actuarial equivalency* under the Act becomes available, the employer shall reconsider whether the benefits provided under its plan, as presently constructed, are actuarially equivalent.[6] If that reconsideration results in a conclusion that benefits provided by the plan are actuarially equivalent (or that additional benefits provided by the plan are actuarially equivalent in the case of a plan under which an employer previously had determined that some benefits were actuarially equivalent), that conclusion could be a significant event pursuant to paragraph 73 of Statement 106.[7] If the effects of the subsidy on the plan are significant, a measurement of plan assets and obligations shall be performed as of the date that actuarial equivalency is determined. Any effect on the APBO due to the subsidy shall be reflected as an actuarial gain consistent with the guidance in paragraph 14 of this FSP. Measures of net periodic postretirement benefit cost for subsequent periods would reflect the effects of those measurements (reported on a lag basis, if appropriate; refer to footnote 6). Prior financial statements shall not be retroactively adjusted nor shall a cumulative effect for prior periods be recognized in income.

INT 04-17 Status

14. No further discussion is planned.

[6] The guidance in this paragraph does not apply if a plan amendment is the event that gives rise to the employer's reconsideration of actuarial equivalency. The guidance in paragraphs 17 and 18 of this FSP apply to plan amendments.

[7] To the extent that some benefits under a plan are determined to be actuarially equivalent at the date of adoption of the FSP, the provisions of paragraphs 24–32 apply.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 04-21: EITF 02-9: Accounting for Changes That Result in a Transferor Regaining Control of Financial Assets Sold

INT 04-21 Dates Discussed

December 5, 2004; March 13, 2005; March 3, 2012; August 31, 2012

INT 04-21 References

Current:
SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

Superseded:
SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

INT 04-21 Issue

1. EITF No. 02-9, *Accounting for Changes That Result in a Transferor Regaining Control of Financial Assets Sold* (EITF 02-9) expands on a key concept presented in FASB Statement No. 140, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140), paragraph 55. This key concept requires a transferred financial asset that has been accounted for as sold to be accounted for as "re-purchased" if the basis for that sale accounting subsequently becomes invalid.

2. The following is excerpted from EITF 02-9:

> 1. …One circumstance that has raised questions about the application of paragraph 55 occurs when the provisions of paragraph 55 are triggered because the transferor holds a contingent right such as a contingent call option on the transferred financial assets (for example, a removal of accounts provision or "ROAP") and the contingency has been met. This issue assumes that the transferee is not consolidated by the transferor.
>
> 2. Under Statement 140, rights held by the transferor (typically in the form of purchased options or forward purchase contracts) only preclude sale accounting under paragraph 9.c.(2) if they provide the transferor with (a) the unilateral right to cause the holder to return specific transferred financial assets, and (b) more than a trivial benefit. One class of contingent rights (including certain ROAPs 1) does not preclude sale accounting because it does not include unilateral rights. The most common type of ROAP is a default ROAP, which gives the holder the right but not the obligation to purchase (call) a loan that is in default (the meaning of default typically is specifically defined in each transaction). Such rights are common in credit card securitizations and in securitizations sponsored by the Government National Mortgage Association (GNMA) 2 and other governmental or quasi-governmental agencies. Once the contingency is met (in this case, when a given loan goes into default), the call option on that asset (loan) is no longer contingent. At that point, the transfer fails the criterion in paragraph 9.c.(2) of Statement 140 because the transferor has the unilateral right to purchase a specific transferred financial asset and obtains more than a trivial benefit. Under the requirements of paragraph 55, when a contingency related to a transferor's contingent right has been met, the transferor generally must account for the "re-purchase" of a specific subset of the financial assets transferred to and held by the qualifying entity. The transferor must do so regardless of whether it intends to exercise its call option.

3. Per EITF 02-9, the issues are:

Issue 1—How the transferor should account for the transferor's beneficial interests when the underlying assets are re-recognized under the provisions of paragraph 55 because the transferor's contingent right (for example, a ROAP or other contingent call option on the transferred financial assets) becomes exercisable, including whether any gain or loss should be recognized by the transferor when paragraph 55 is applied.

Issue 2—Whether under any circumstances a loan loss allowance should initially be recorded for loans that do not meet the definition of a security when they are re-recognized under the provisions of paragraph 55

Issue 3—How re-recognition under paragraph 55 of assets sold affects the accounting for the related servicing asset.

Issue 4—After a paragraph 55 event, how the transferor should account for the transferor's interests (other than the servicing asset).

INT 04-21 Discussion

4. EITF 02-9 consensus on each issue is as follows:

5. The Task Force reached a consensus on Issue 1 that upon application of paragraph 55, no gain or loss should be recognized in earnings with respect to any of the transferor's beneficial interests. Beneficial interests should be evaluated periodically for possible impairment, including at the time paragraph 55 is applied. A gain or loss may be recognized upon the exercise of a ROAP or similar contingent right with respect to the "re-purchased" transferred financial assets that were sold if the ROAP or similar contingent right held by the transferor is not accounted for as a derivative under Statement 133 and is not at-the-money, resulting in the fair value of those repurchased assets being greater or less than the related obligation to the transferee.

6. The Task Force reached a consensus on Issue 3 that under no circumstances should a loan loss allowance be initially recorded for loans that do not meet the definition of a security when they are re-recognized pursuant to paragraph 55.

7. The Task Force reached a consensus on Issue 4 that when a paragraph 55 event occurs, the accounting for the servicing asset related to the previously sold financial assets does not change as a result of the application of paragraph 55. That is, even though the transferor has regained control over the previously sold assets, the cash flows from those assets will contractually be paid to the SPE, which will then distribute the proceeds to satisfy its contractual obligations (including obligations to the beneficial interest holders). Because the transferor, as servicer, is still contractually required to collect the asset's cash flows for the benefit of the SPE and otherwise service the assets, it should continue to recognize the servicing asset and assess the asset for impairment as required by Statement 140.

8. The Task Force reached a consensus on Issue 5 that when a paragraph 55 event occurs, the transferor should continue to account for the transferor's interests in those underlying financial assets apart from any re-recognized financial assets. That is, the transferor's interests should not be combined with and accounted for with the re-recognized financial assets. However, a subsequent event that results in the transferor reclaiming those financial assets from the transferee—for example, the exercise of a ROAP or the consolidation by the transferor of the securitization entity in accordance with applicable generally accepted accounting principles, including Interpretation 46R—would result in a recombination of the transferor's interests with the underlying financial assets.

© 1999-2023 National Association of Insurance Commissioners

5. The Working Group reached a consensus to adopt EITF 02-9 as an interpretation of SSAP No. 103R, with modification as follows:

a. Change references to FAS 140 to SSAP No. 103R including paragraph-specific references. Modify FAS 140, paragraph 55 references to refer to SSAP No. 103R, paragraph 59.

b. Change references to FASB Statement No. 133, *Accounting for Derivative Instruments and Hedging Activities* to SSAP No. 86 as an interpretation of SSAP No. 91R.

c. Remove reference to Interpretation 46R as FASB Interpretation No. 46, *Consolidation of Variable Interest Entities,* is pending review for statutory accounting. (The prior GAAP guidance in FASB Interpretation FIN 46 was rejected for statutory accounting in *SSAP No. 3—Accounting Changes and Corrections of Errors*.)

d. Limit the applicability of EITF 02-9, Issue 3 to only valuation allowances applicable to statutory accounting for mortgage loans and real estate under development as provided in *SSAP No. 37—Mortgage Loans* and real estate under development as discussed in *SSAP No. 38—Acquisition, Development and Construction Arrangements*.

6. This interpretation was originally effective for years beginning January 1, 2005, to be consistent with the original effective date of SSAP No. 91R. Revisions adopted to this interpretation on March 3, 2012, are in accordance with the adoption with modification of FAS 166 in a new SSAP to superseded SSAP No. 91R.

INT 04-21 Status

7. In 2009, *FAS 166, Accounting for Transfers of Financial Assets, an Amendment of FAS 140*, was issued. In addition to amending FAS 140, it also amended FASB EITF 02-9. FAS 166 was adopted for statutory accounting in SSAP No. 103R to supersede SSAP No. 91R. On March 3, 2012, corresponding revisions to INT 04-21 were also adopted to reflect the updated GAAP guidance adopted for statutory accounting interpreting SSAP No. 103R. These changes will not be tracked in subsequent editions of the Manual.

8. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group and Statutory Accounting Principles (E) Working Group

INT 05-05: Accounting for Revenues Under Medicare Part D Coverage

INT 05-05 Dates Discussed

September 28, 2005; December 3, 2005; March 24, 2018; August 4, 2018

INT 05-05 References

Current:
SSAP No. 47—Uninsured Plans
SSAP No. 54R—Individual and Group Accident and Health Contracts
SSAP No. 66—Retrospectively Rated Contracts
SSAP No. 84—Health Care and Government Insured Plan Receivables

INT 05-05 Issue

1. The Medicare Modernization Act of 2003 (MMA) created a new program, commonly known as Medicare Part D, whereby Medicare recipients may obtain prescription coverage offered by insurers who have been approved by the Centers for Medicare and Medicaid Services (CMS). Insurers who offer Medicare Part D coverage will, starting in January 2006, receive several different types of funds relating to the program. Some of these funds relate to portions of the coverage that require an annual reconciliation, resulting in the return of any excess funds received. Other funds may be received (or may be required to be returned) to offset experience that is especially unfavorable (or, respectively, favorable).

2. How should the various components of the funds received or receivable by an insurer from Medicare Part D coverage be accounted for?

INT 05-05 Discussion

3. The attached appendix provides a listing of terms to which CMS ascribes a specific meaning. This list has been enhanced to include other terms in order to facilitate consistent application for accounting and the NAIC's risk-based capital (RBC) formula. It should be noted that the terms included in the attached appendix are, for the most part, defined by CMS. Consequently, the term "reinsurance payment" does not represent actual reinsurance as defined by *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance*.

4. The Emerging Accounting Issues (E) Working Group reached a consensus to adopt the following guidance as it applies to the various funds to be received under the Medicare Part D program. The funds should be accounted for in accordance with one of the three SSAP's outlined below:

   a. Specific funds received as reimbursements (or advance payments) for uninsured claims under a partially uninsured plan should be accounted for under SSAP No. 47. These funds include "reinsurance payments," "Coverage Gap Discount Program" payments and "low-income subsidy (cost-sharing portion)." These funds are paid by the government for a portion of claims above the out-of-pocket threshold or relate to prescription drug plan (PDP) payments for all or a portion of the deductible, the coinsurance and the co-payment amounts for low-income beneficiaries. CMS provides advance funding to the Part D sponsors. The Part D sponsor uses those advances to provide point-of-sale drug discounts to participants. CMS invoices the prescription drug manufacturers. The payment reconciliation process ensures that the Part D sponsor is paid dollar for dollar for coverage gap discounts advanced at the point of sale, based on accepted prescription drug

event (PDE) data, and that any unused excess advances from the government are repaid. The Coverage Discount Gap Program does not apply to low-income beneficiaries.

b. Specific funds received by the PDP sponsor from either the Medicare Part D enrollee or the government as payment for standard coverage that will be subject to retrospective premium adjustments should be accounted for under SSAP No. 66. These funds include "direct subsidy," "low-income subsidy (premium portion)," "beneficiary premium (standard coverage portion)," "Part D payment demonstration" and "risk corridor payment adjustment." The funds noted above have a final policy amount that is calculated based on the loss experience of the insured during the term of the policy, therefore should be treated as such.

c. Specific funds received as premiums for coverage that is not retrospectively rated should be accounted for under SSAP No. 54R. These funds include "beneficiary premium (supplemental benefit portion)" as these payments are considered to be standard premium payments that do not meet the definitions under SSAP No. 47 or SSAP No. 66 as defined in paragraph 4.a. and paragraph 4.b. of this interpretation.

5. The collectibility and any nonadmission of amounts receivable from the government insured or uninsured plans are addressed in SSAP No. 84, paragraph 22, and SSAP No. 47, paragraph 10 and paragraph 11, respectively.

INT 05-05 Status

6. On August 4, 2018, the Statutory Accounting Principles (E) Working Group updated this interpretation to add a description of the Coverage Gap Discount Program, amend existing guidance on program payments and update definitions. No further discussion is planned.

© 1999-2023 National Association of Insurance Commissioners

Appendix – Commonly Used Terms for Medicare Part D Coverage

The federal Centers for Medicare and Medicaid Services (CMS) oversees the Medicare Part D prescription drug coverage, including coverage provided through a stand-alone prescription drug plan (PDP) and coverage provided as part of a Medicare Advantage plan. CMS ascribed specific meaning to most of the following terms. Other terms have been defined below in order to facilitate consistent application.

Beneficiary Premium (Standard Coverage Portion) – The amount received from the Part D enrollee (directly, or from CMS after being withheld from Social Security benefits) as payment for the standard coverage. This includes any late enrollment penalties that the PDP sponsor receives for an enrollee. The beneficiary premium is accounted for as health premium.

Beneficiary Premium (Supplemental Benefit Portion) – The amount received from the Part D enrollee (directly, or from CMS after being withheld from Social Security benefits) as payment for supplemental benefits. The beneficiary premium is accounted for as health premium.

Coverage Gap Discount Program – The federal Affordable Care Act amended the Health Care and Education Act of 2010 (H. R. 4872) (HCERA) in 2011 to establish a discount program that would make manufacturer discounts available to applicable Medicare beneficiaries receiving applicable covered Part D drugs while in the coverage gap. Part D sponsors must provide the discounts for the applicable drugs in the coverage gap at point-of-sale. CMS coordinates the collection of discount payments from manufacturers and payment to Part D sponsors that provided the discount to applicable beneficiaries through a contractor. The coordination involves a standard process for paying Part D sponsors based on new information submitted to CMS on prescription drug event data. The Coverage GAP Discount Program is reconciled quarterly.

Coverage Year Reconciliation – A reconciliation made after the close of each calendar year to determine the amounts that a PDP sponsor is entitled to for the low-income subsidy (cost-sharing portion), the reinsurance payment, and the risk corridor payment adjustment. To the extent that interim payments (if any) from CMS exceeded the amounts determined by the reconciliation, the PDP sponsor must return the excess to the government; to the extent that interim payments (if any) from CMS fell short of the amounts determined by the reconciliation, the government will make an additional payment to the PDP sponsor. The coverage year reconciliation results in the low-income subsidy (cost-sharing portion) and the reinsurance payment being essentially a self-insured (by the government) component of the Part D coverage, subject to SSAP No. 47. The coverage year reconciliation also results in the treatment of the risk corridor payment adjustment as a retrospective premium adjustment, subject to SSAP No. 66.

Direct Subsidy – The amount the government pays to the PDP sponsor for the standard coverage. These payments are accounted for as health premium.

Low-Income Subsidy (Cost-Sharing Portion) – The amount the government pays to the PDP sponsor for additional benefits provided to low-income enrollees. The additional benefits may include payment for some or all of the deductible, the coinsurance, and the co-payment above the out-of-pocket threshold. These payments are accounted for as payments made under a self-insured plan.

Low-Income Subsidy (Premium Portion) – The amount the government pays to the PDP sponsor for low-income enrollees in lieu of part or all of the beneficiary premium (standard coverage portion). These payments are accounted for as health premium.

PDP Sponsor – The entity that provides stand-alone Part D coverage (as opposed to Part D coverage provided through a Medicare Advantage plan).

Reinsurance Payment – An amount paid by the government for benefit costs above the out-of-pocket threshold (see "Standard Coverage"). Generally, when costs exceed the out-of-pocket threshold, the government pays a specified percentage of the costs, the enrollee pays a percentage (or the specified co-

© 1999-2023 National Association of Insurance Commissioners

payments which are updated based on cost trends for generic and for brand-name prescriptions), and the PDP sponsor pays the remainder. The amount paid by the government is treated as a claim payment made by a self-insured benefit plan rather than as revenue to the PDP sponsor, and the claims do not flow through the PDP sponsor's income statement. In cases where the government prepays the reinsurance payment on an estimated basis, the prepayment is treated as a deposit, which again does not pass through the PDP sponsor's income statement. The amount paid by the enrollee is paid directly to the pharmacy; therefore there is no required accounting for this amount by the PDP sponsor.

Part D Payment Demonstration – A payment from the government to a PDP sponsor participating in CMS's Part D Payment Demonstration. The payment demonstration is a special arrangement in which the PDP sponsor receives a predetermined per-enrollee capitation payment and the government no longer provides reinsurance for the specified percentage (example 80%) of costs in excess of the out-of-pocket threshold. Rather, the PDP sponsor assumes the risk for the specified percentage (example 80%) of costs, in addition to its normal percentage (example 15%) share of costs in excess of this threshold. However, risk corridor protection does still apply to this specified percentage (example 80%) share of costs. These payments are accounted for as health premium.

Reinsurance Coverage – The Medicare Part D provision under which the PDP sponsor may receive a reinsurance payment. This does not include payments under the Part D Payment Demonstration.

Risk Corridor Payment Adjustment – An amount by which the government adjusts its payments to the PDP sponsor, based on how actual benefit costs vary from the costs anticipated in the PDP sponsor's bid for the Part D contract (the "target amount" of costs). The government establishes thresholds for symmetric risk corridors around the target amount, using percentages of the target amount. If actual costs exceed the target amount but are less than the first threshold upper limit, then no adjustment is made. Risk corridor payment adjustments are accounted for as retrospective premium adjustments on retrospectively rated contracts.

Risk Corridor Protection – The Medicare Part D provision under which the PDP sponsor may receive (or pay) a Risk Corridor Payment Adjustment. Most employer plans providing Medicare Part D are not eligible for Risk Corridor Protection.

Standard Coverage – The Part D benefit design that conforms to certain standards prescribed by the government. The standard coverage comprises: no coverage for an annual initial deductible; coverage net of a coinsurance provision (the percentage of costs are payable by the insured) for costs up to an initial coverage limit; a range beyond the initial coverage limit (sometimes called the "coverage gap") in which the insured drug manufacturers and the PDP sponsor (for example, by 2020 insureds who are eligible for drug manufacturer discounts will pay 25% for qualifying brand and generic drugs, the PDP sponsor will be responsible for 25% of qualifying brand and 75% of generic drugs, and the drug manufacturer will be responsible for 50% of qualifying brand drugs); and an annual out-of-pocket threshold above which the insured pays the greater of a specified co-payment or a specified percentage of the drug cost. The various limits and thresholds are set at specified dollar amounts, which will be increased in later years based on the growth in drug expenditures. Wherever the term "standard coverage" is used as part of these instructions, the same treatment would be applied to coverage that has been approved as actuarially equivalent coverage. With respect to amounts above the out-of-pocket threshold, see the definitions of "Reinsurance Payment" and "Part D Payment Demonstration."

Supplemental Benefits – Benefits in excess of the standard coverage. These benefits typically will cover some portion of the deductible, the co-payments, or the coverage gap between the initial coverage limit and the out-of-pocket threshold. Supplemental benefits are part of an enrollee's Part D coverage, so they are not placed in the "Other" category in the RBC formula. However, they are not subject to either the reinsurance payment or the risk corridor payment adjustment, so they receive less favorable RBC treatment than the standard coverage.

© 1999-2023 National Association of Insurance Commissioners

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)

INT 06-02 Dates Discussed

March 5, 2006; June 11, 2006; September 10, 2006

INT 06-02 References

Current:
SSAP No. 26R—Bonds
SSAP No. 30R—Unaffiliated Common Stock
SSAP No. 32R—Preferred Stock
SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies

INT 06-02 Issue

1. A certified capital company (CAPCO) is a state legislated venture capital firm that can be a partnership, corporation, trust or limited liability company, profit or not-for-profit, for which investors who invest cash to acquire an equity interest or qualified debt instrument receive state premium or income tax credit. Although these investments are sometimes termed by different acronyms, they will be referred to as a CAPCO for purposes of this issue.

2. A reporting entity that qualifies as a certified investor typically earns, in the year the investment is made, a vested credit against state premium or income taxes equal to greater than 100% of the investor's investment of certified capital, of which a certain percent (varies by state; example: 10%, 25%) may be taken in any taxable year. The credit to be applied in any one year may not exceed the entity's state premium or income tax liability for the taxable year. Any unused tax credit may be carried forward until the premium or income tax credit is used (varies by state; some indefinitely, in other instances there is a specified expiration date, such as 2010; 2020). In some cases, a certified investor may transfer or assign unused premium or income tax credits. In addition to tax credits, the CAPCO often pays a nominal amount of interest and has a specified principal repayment date. The CAPCO often provides for a mechanism that guarantees the principal repayment.

3. Depending on the terms of the agreement, a CAPCO may make prepayments of principal and interest on its indebtedness.

4. The accounting issues are:

Issue 1: How should investments in a CAPCO be accounted for?

Issue 2: If the CAPCO agreement provides for the majority of interest to be paid in advance, how should it be earned?

INT 06-02 Discussion

5. For Issue 1, the Working Group came to a consensus that reporting entities should account and report for investments in CAPCO's consistent with the agreement structure within the guidance provided below:

a. Investment in a debt instrument of a CAPCO shall be reported as a bond in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the

© 1999-2023 National Association of Insurance Commissioners

NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 26R, paragraph 11.

b. Investment in an equity interest of a CAPCO shall be reported as common stock and reported at fair value as stated in SSAP No. 30R, paragraph 8.

c. Investment in preferred stock interest of a CAPCO shall be reported as preferred stock in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 32R, paragraphs 19-22.

d. Investment in a Joint Venture, Partnership and Limited Liability Company (LLC) shall be reported in accordance with SSAP No. 48, paragraphs 5-6. The reported value of the investment shall be decreased in proportion to the premium tax credits utilized.

e. The tax credits shall be recognized as a reduction of the tax liabilities as they are utilized. Tax credits received are not to be included in investment income.

6. For Issue 2, the Working Group came to a consensus that reporting entities should account for any prepaid interest received by the insurer to be recorded as an unearned interest liability and should be amortized over the life of the security. This is consistent with the treatment of prepaid interest in SSAP No. 37 and SSAP No. 49. This is also consistent with SSAP No. 34, which states that gross investment income should be reported as earned, and includes a change in unearned investment income.

INT 06-02 Status

7. No further discussion is planned.

Superseded:
SSAP No. 88—Investments in Subsidiary, Controlled, and Affiliated Entities, A Replacement of SSAP No. 46
SSAP No. 98—Treatment of Cash Flows When Quantifying Changes in Valuation and Impairments, an Amendment of SSAP No. 43—Loan-Backed and Structured Securities
SSAP No. 99—Accounting for Certain Securities Subsequent to an Other-Than-Temporary Impairment

Affects:
Nullifies the prior interpretation on this topic, *INT 02-07 Definition of Phrase "Other Than Temporary"*

INT 06-07 Issue

1. The *Accounting Practices and Procedures Manual* contains guidance for determining when an investment is considered impaired within each of the above identified statements. Those statements should also be used to determine the measurement of an impairment loss. Each of the above statements also makes reference to an "other than temporary" decline in fair value. This interpretation is designed to address questions related to that phrase, as well as summarize the statutory accounting process for determining when an investment is considered impaired.

Step 1: Determine Whether an Investment Is Impaired

2. The decision for determining when an investment is considered impaired is dictated by the applicable SSAP and the respective impairment indicators included in each of the SSAPs. If an impairment indicator is present, the determination of an impairment shall be assessed at the individual security or investment level as reported in the annual statement and supporting schedules. For those SSAPs that require the reporting entity to use the fair value to determine if an impairment has occurred, the determination of that value shall be consistent with how the term fair value is defined within *SSAP No. 100—Fair Value*. Once a reporting entity has determined that an impairment indicator is present, the reporting entity shall continue to evaluate whether the investment is impaired each subsequent reporting

© 1999-2023 National Association of Insurance Commissioners

period until either (a) the investment experiences a recovery of the fair value up to (or beyond) its carrying value or (b) the investor recognizes an other-than-temporary impairment loss.

Step 2: Evaluate Whether an Impairment Is Other Than Temporary

3. There are numerous factors to be considered when determining whether an impairment is other than temporary and their relative significance will vary from case to case. The Emerging Accounting Issues (E) Working Group (Working Group) has been asked if the phrase "other than temporary" should be interpreted to mean "permanent." The Working Group[1] believes the Statutory Accounting Principles (E) Working Group consciously chose the phrase "other than temporary" as the analysis was not intended to determine whether an individual security or investment was "permanently impaired." The fair value of assets may decline for various reasons. The market price may be affected by general market conditions, which reflect prospects for the economy as a whole, or by specific information pertaining to an industry or an individual company. Such declines require further investigation by management. Acting upon the premise that a write-down may be required, management should consider all available evidence to evaluate the fair value of its investment.

4. The Working Group believes that the following items are only a few examples of the factors, which, individually or in combination, indicate that a security's decline in value is specific to an issuer's fundamental credit difficulties, or that a non-interest related decline is other than temporary and that a write-down of the carrying value is required:

a. The length of time and the extent to which the fair value has been less than cost;

b. The financial condition and short-term prospects of the issuer, including any specific events that may influence the operations of the issuer, such as changes in technology, that may impair the earnings potential of the asset or the discontinuance of a segment of the business that may affect the future earnings potential; or

c. The intent and ability of the holder to retain its investment in the issuer for a period of time sufficient to allow for any anticipated recovery in value.

5. An interest related impairment should be deemed other-than-temporary when an investor has the intent to sell an investment, at the reporting date, before recovery of the cost of the investment. The investor should consider whether its cash or working capital requirements and contractual or regulatory obligations indicate that the investment may need to be sold before the forecasted recovery occurs. The term "interest related" includes a declining value due to both increases in the risk free interest rate and general credit spread widening. Credit spreads can widen or contract for a variety of reasons, including supply/demand imbalances in the marketplace or perceived higher/lower risk of an entire sector. If the declining value is caused, in whole or in part, due to credit spreads widening, but not due to fundamental credit problems of the issuer, the change in credit spreads is deemed to be interest related. Fundamental credit problems exist with the issuer when there is evidence of financial difficulty that may result in the issuer being unable to pay principal or interest when due.

6. Unless evidence exists to support the assertion that the decline in fair value below carrying value is temporary, a write-down, accounted for as a realized loss, should be recorded. In accordance with the guidance of the SSAPs, such loss should be recognized in income for the period in which other than temporary impairment is determined to have occurred. The adjusted carrying value reflecting the impairment loss of the individual security or investment shall be the new cost basis of the individual security or investment.

---

1 The recommendations provided by the Working Group were developed in part from SEC Staff Accounting Bulletin No. 59–*Noncurrent Marketable Equity Securities* (SAB 59). As such, readers of this interpretation should understand that SAB 59 has not been adopted as part of Statutory Accounting Principles as SAB's are not part of the Statutory Hierarchy (see Preamble).

© 1999-2023 National Association of Insurance Commissioners

7. The Working Group has also been asked if it is appropriate for reporting entities, independent auditors or state examiners to apply predefined thresholds to the phrase "other than temporary"? The Working Group is aware that certain insurers, independent auditors and state examiners, over time, have developed quantitative thresholds as "rules of thumb" to assist in the evaluation of asset impairment. One rule of thumb in particular suggests that if the fair value is less than its carrying value by 20 percent or more, then it is considered to be other than temporarily impaired. Another suggests that an asset is other than temporarily impaired if the fair value has been less than cost for more than 6 months. The use of a numerical threshold may provide the basis for a preliminary assumption that – without considering all relevant circumstances – an impairment may have occurred. Identifying the impairment is only the beginning of the analysis; it cannot appropriately be used as a substitute for a full analysis of all relevant qualitative considerations. Exclusive reliance on such thresholds removes the ability of management to apply its judgment, a concept inherent to the impairment model.

Step 3: If the Impairment is Other Than Temporary, the Cost Basis of the Individual Asset Shall Be Written Down to a New Cost Basis and the Amount of the Write-Down Is Accounted for as a Realized Loss

8. If an impairment is considered other than temporary, the cost or carrying value of the asset should be written down to reflect its value in accordance with the relevant SSAP. A company's management should follow the impairment guidance in the SSAP pertaining to that particular asset class while considering various factors on a case-by-case basis in determining the amount of the realized loss that should be recorded.

INT 06-07 Discussion

9. The Working Group reached a consensus to adopt with modification paragraph 6, 7 and 11 of *FSP FAS115-1/124-1: The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments* (FSP FAS 115-1/124-1). This INT rejects paragraphs 1-5, 8-10, 12-15, and 19 of FSP FAS 115-1/124-1. This INT does not address paragraphs 16-18 and footnote 1 to paragraph 7 of FSP FAS115-1/124-1.

10. Paragraphs 3-8 of this interpretation incorporate the guidance that was in *INT 02-07: Definition of Phrase "Other Than Temporary*," paragraphs 3-9, with an addition to clarify the general credit spread widening that was discussed in INT 02-07, paragraph 6. On final adoption of this interpretation, INT 02-07 is nullified.

11. FSP FAS 115-1/124-1 nullified the requirements of paragraphs 10-18 of EITF 03-01: *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments* (EITF 03-1) and carried forward the requirements of paragraphs 8, 9, 21 and 22 of the EITF to the FSP. The Working Group notes that the remaining paragraphs of EITF 03-01 either primarily related to the EITF process or are inconsistent with the current statutory model for impairment and are rejected. The Statutory Accounting Principles (E) Working Group is separately considering the disclosures related to the FSP.

12. FSP EITF 03-1-1: Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1 (FSP EITF 03-1-1) was issued by the EITF on September 30, 2004, and delayed the effective date for the measurement and recognition guidance contained in paragraphs 10-20 of EITF 03-1. The delay of the effective date for paragraphs 10-20 of Issue 03-1 was superseded concurrent with the final issuance of FSP FAS 115-1/124-1 and as such, is rejected.

INT 06-07 Status

13. INT 06-07 nullifies *INT 02-07: Definition of Phrase "Other Than Temporary."*

14. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 06-12: Tax Deposits Submitted in Accordance with Section 6603 of the Internal Revenue Service (IRS) Code

INT 06-12 Dates Discussed

September 10, 2006; December 10, 2006

INT 06-12 References

Current:
SSAP No. 101—Income Taxes

Superseded:
SSAP No. 10R—Income Taxes – A Temporary Replacement of SSAP No. 10

INT 06-12 Issue

1. The American Jobs Creation Act of 2004 enacted on October 22, 2004, added new section 6603 to the Internal Revenue Service Code (the Code) to permit a taxpayer to make a deposit with the Internal Revenue Service to suspend the running of interest under section 6601 on a potential underpayment of tax. A deposit may be made with respect to certain underpayments of tax that have not been assessed at the time of the deposit.

2. Section 6603(a) provides that a taxpayer may make a deposit with the Service that may be used by the Secretary to pay any income, gift, estate, or generation-skipping taxes imposed on the taxpayer under the Code, or certain excise taxes imposed on the taxpayer under the Code. Section 6603(b) provides that, to the extent that a deposit is used by the Service to pay tax, the tax shall be treated as paid on the date the deposit is made for purposes of computing interest on underpayments under section 6601.

3. Section 6603(c) provides that the Service will return to the taxpayer any amount of a deposit that the taxpayer requests in writing be returned unless the amount has previously been used to pay tax or the Service determines that collection of tax is in jeopardy.

4. The accounting issue is whether protective tax deposits meet the definition of current income tax recoverable as that term is used in SSAP No. 101, paragraph 9.

INT 06-12 Discussion

5. The Working Group reached a consensus that deposits made with the Internal Revenue Service, as described in paragraphs 1-3 of this interpretation, meet the definition of a current income tax recoverable as defined in SSAP No. 101, paragraph 9, as the reporting entity has made the deposit under its substantial authority and the deposit can be recovered upon written request.

6. Section 6603 tax deposits are admitted assets to the extent the section 6603 tax deposit complies with SSAP No. 101 and this guidance. The reporting entity shall report section 6603 tax deposits as assets within the caption "Current Federal and Foreign Income Tax Recoverable and Interest thereon." The section 6603 tax deposit asset and any related tax liability shall be presented on a gross basis for statutory reporting purposes.

© 1999-2023 National Association of Insurance Commissioners

Calculating Nonadmission

7. The reporting entity shall expense amounts previously used to pay tax.

8. The reporting entity shall nonadmit:

   a. amounts the Service has determined, or the reporting entity estimates it is probable the Service will determine, that collection of the tax from the reporting entity is in jeopardy for section 6603 tax deposit amounts in excess of the specifically established tax liability, or

   b. any portion of the deposit that the reporting entity does not reasonably expect to be recovered in a subsequent accounting period for section 6603 tax deposit amounts in excess of specifically established tax liability.

9. The term “specifically established tax liability” is a liability, that for financial reporting purposes, the reporting entity has recognized relating to the IRS Section 6603 tax deposit. The reporting entity intends this “specifically established tax liability” to be settled by applying the section 6603 tax deposit. In calculating nonadmission discussed in the paragraph 8, the reporting entity shall deduct the specifically accrued tax liability prior to the determination of whether the remaining amounts should be nonadmitted.

10. To illustrate the nonadmission criteria, consider the following two situations:

   a. IAOA insurer has a 6603 tax deposit of $100,000 and a federal income tax liability of $30,000 that IAOA intends to pay in the normal course of business. IAOA would not consider the tax liability when determining nonadmission of the section 6603 tax deposit. IAOA is not aware of any situations which would indicate that use of the deposit is in question and would admit the entire $100,000 tax deposit.

   b. TAI insurer has a $110,000 section 6603 tax deposit and has been notified by its tax department that an adverse tax finding of $45,000 was probable and may result in significant interest penalties. TAI recorded a “specifically established tax liability” of $45,000 and intends to use the section 6603 tax deposit to settle the $45,000 adverse tax finding. In determining the amount of the 6603 tax deposit to nonadmit, TAI would determine the amount in excess of the “specifically established tax liability, which is $65,000 ($110,000 – $45,000). This net amount of $65,000 is then evaluated for nonadmission, based on other relevant factors, if any. To continue the illustration, TAI became aware of an additional situation at the reporting date, which indicated that $10,000 of the section 6603 tax deposit is not reasonably expected to be recovered in a subsequent accounting period . As a result, TAI would nonadmit $10,000 of the tax deposit.

INT 06-12 Status

11. No further discussion is planned. The Working Group noted that *FIN 48: Accounting for Uncertainty in Income Tax, an interpretation of FASB Statement No. 109* (FIN 48) is pending review by the Statutory Accounting Principles (E) Working Group has the potential to impact the consensus in this interpretation. The Working Group will consider if the interpretation requires updating after the review of FIN 48 is complete.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 06-13: EITF 01-2: Interpretations of APB Opinion No. 29

INT 06-13 Dates Discussed

September 10, 2006; December 10, 2006

INT 06-13 References

Current:
SSAP No. 40R—Real Estate Investments
SSAP No. 95—Nonmonetary Transactions

Superseded:
SSAP No. 77—Real Estate Sales – An Amendment to SSAP No. 40, Real Estate Investments

INT 06-13 Issue

1. The introduction to issues as described in *EITF 01-2: Interpretations of APB Opinion No. 29* is as follows:

> 1. The basic principle in Opinion 29 is that the accounting for nonmonetary transactions should be based on the fair values of the assets (or services) exchanged. The cost of a nonmonetary asset acquired in exchange for another nonmonetary asset is the fair value of the asset surrendered to obtain it, and a gain or loss for the difference between the carrying amount of the surrendered asset and its fair value should be recognized on the exchange. The fair value of the asset received should be used to measure the fair value of the asset surrendered (and the cost of the asset received) if it is more clearly evident than the fair value of the asset surrendered. Opinion 29 includes several modifications to that principle in circumstances in which (a) fair values of the assets exchanged are not readily determinable (paragraph 20.a. of Opinion 29), (b) the assets exchanged are products or properties held for sale in the same line of business to facilitate sales to customers other than the parties to the exchange (paragraph 20.b. of Opinion 29), (c) the assets exchanged are similar productive assets not held for sale in the ordinary course of business, [Note: See paragraph 44 of the STATUS section.] (d) the exchange involves an amount of monetary consideration (paragraph 22 of Opinion 29), and (e) the transaction represents a nonreciprocal transfer to owners (paragraph 23 of Opinion 29). Over the years, the Task Force has addressed several issues relating to the guidance in Opinion 29. The purpose of this Issue is to codify and reconcile the following Issues:
>
> *Issue No. 86-29, "Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value"* (paragraphs 4-6, and 18-19)
>
> *Issue No. 87-17, "Spinoffs or Other Distributions of Loans Receivable to Shareholders"* (paragraphs 28-29)
>
> *Issue No. 87-29, "Exchange of Real Estate Involving Boot"* (paragraphs 25-27)
>
> *Issue No. 89-7, "Exchange of Assets or Interest in a Subsidiary for a Noncontrolling Equity Interest in a New Entity"* (paragraphs 21-24)
>
> *Issue No. 96-2, "Impairment Recognition When a Nonmonetary Asset Is Exchanged or Is Distributed to Owners and Is Accounted for at the Asset's Recorded Amount*" (paragraphs 33-39)
>
> *Issue No. 96-4, "Accounting for Reorganizations Involving a Non–Pro Rata Split-off of Certain Nonmonetary Assets to Owners"* (paragraphs 30-32)

© 1999-2023 National Association of Insurance Commissioners

Issue No. 98-7, "Accounting for Exchanges of Similar Equity Method Investments" (paragraph 11)

Issue No. 00-5, "Determining Whether a Nonmonetary Transaction Is an Exchange of Similar Productive Assets" (paragraphs 2-3, 9-10, and 12-17).

The Task Force observed that the transition guidance for the above Issues is governed by the original consensuses on those Issues.

2. As described in paragraph 44 in the STATUS section of *EITF 01-2, FAS 153: Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (FAS 153), was issued in December 2004 and eliminated the fair value measurement exception for nonmonetary exchanges of similar productive assets provided in APB 29 and replaces it with an exception from fair value measurement for nonmonetary exchanges that lack commercial substance. As a result, FAS 153 nullifies Issues 1(b), 1(c), 2-5, and 7 since those issues interpret the exception to fair value measurement for similar productive assets that was eliminated by FAS 153. FAS 153 was adopted with modification in *SSAP No. 95—Nonmonetary Transactions*. *FAS 144: Accounting for the Impairment or Disposal of Long-Lived Assets*, also amended APB 29 and resolved issues 13(a) and 13(b) of EITF 01-2. FAS 144 was adopted with modification in *SSAP No. 90—Impairment or Disposal of Real Estate Investments*. This interpretation addresses the remaining issues of EITF 01-2.

3. The following EITF issues listed above were adopted, rejected or determined to be not applicable to statutory accounting principles in their entirety, as follows:

- *EITF Issue No. 86-29, "Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value*" – adopted in *SSAP No. 95—Nonmonetary Transactions*
- *EITF Issue No. 87-17, "Spinoffs or Other Distributions of Loans Receivable to Shareholders"* – determined to be not applicable to statutory accounting principles
- *EITF Issue No. 87-29, "Exchange of Real Estate Involving Boot*" – adopted in *SSAP No. 40R—Real Estate Investments*
- *EITF Issue No. 89-7, "Exchange of Assets or Interest in a Subsidiary for a Noncontrolling Equity Interest in a New Entity"* – rejected in *SSAP No. 68—Business Combinations and Goodwill*
- *EITF Issue No. 96-4, "Accounting for Reorganizations Involving a Non-Pro Rata Split-off of Certain Nonmonetary Assets to Owners"* – rejected in *SSAP No. 95—Nonmonetary Transactions*

4. As EITF 01-2 was adopted to codify or reconcile the issues included in paragraph 1 of this interpretation, each issue will be described and discussed in paragraphs 5-18 of this interpretation.

INT 06-13 Discussion

5. Issue 6 and guidance per EITF 01-2:

Issue 6—If a nonmonetary exchange is required to be accounted for at fair value, whether full or partial gain recognition is appropriate in a circumstance in which one entity (Entity A) transfers its ownership of either a controlled productive asset or assets or a controlled business to another entity (Entity B) in exchange for a noncontrolling ownership interest in that entity (Entity B).

16. The Task Force reached a consensus on Issue 6 that if the fair value of the asset(s) given up (or of the ownership interest received if the fair value of that asset is more readily determinable) is less than its carrying value, that difference should be recognized as a loss. [Note: See STATUS

section.] If the fair value of the asset(s) given up (or of the ownership interest received if that asset's fair value is more readily determinable) is greater than its carrying value, then (a) a gain in the amount of that difference should be recognized if the entity accounts for the ownership interest received using the cost method, or (b) a partial gain should be recognized if the entity accounts for the ownership interest received using the equity method. The partial gain should be calculated as the amount described in (a), above, less the portion of that gain represented by the economic interest (which may be different from the voting interest) retained. For example, if Entity A exchanges an asset with a carrying value of $1,000 and a fair value of $2,000 for a 30 percent economic interest in Entity B, Entity A should recognize a gain of $700 [($2,000 - $1,000) × 70%]. Thus, the amount recorded for the ownership interest received is partially based on its fair value at the exchange date and partially based on the carryover amount of the asset(s) surrendered.

17. The Task Force observed that paragraph 20 of Opinion 29 requires that the accounting for a nonmonetary transaction subject to Opinion 29 should not be based on the fair values of the assets transferred unless those fair values are determinable within reasonable limits.

6. The STATUS section of EITF 01-2 states the following relative to Issue 6:

45. Issue 6 addresses whether full or partial gain recognition is appropriate in circumstances in which an entity transfers its ownership of either a controlled productive asset (or assets) or a controlled business to another entity in exchange for a noncontrolling ownership interest in that entity. Statement 153 amends the scope of Opinion 29 to exclude a transfer of assets to an entity in exchange for an equity interest in that entity. Statement 153 also amends Statement 140 to remove the scope exception in Statement 140 for exchanges of equity method investments for similar productive assets. Accordingly, transfers of equity method investments in exchange for other assets should be accounted for in accordance with Statement 140. However, Opinion 29 (as amended by Statement 153) and Statement 140 do not provide guidance on the accounting for transfers of nonfinancial assets in exchange for other assets. Therefore, the guidance in Issue 6 should continue to be applied in circumstances in which an entity transfers a nonfinancial asset (or assets) to another entity in exchange for a noncontrolling ownership interest in that entity and the exchange is required to be accounted for at fair value.

7. The Working Group reached a consensus to adopt the EITF 01-2 for Issue 6 guidance believing the economic interest relates to the ownership interest of Entity B in the above issue. This may or may not be different from the voting interest or controlling interest of Entity B. However, the GAAP guidance above for Issue 6 determines the proper accounting for the transactions between unrelated parties relative to the gain or loss on the nonmonetary transaction. This guidance establishes the cost basis for the ownership interest in Entity B to be recorded by Entity A. Subsequent to the transactions, existing guidance should apply for the ownership interest. For statutory purposes, the valuation of this ownership interest would then follow existing statutory guidance (e.g., *SSAP No. 30R—Unaffiliated Common Stock* for Common Stock, *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* for Joint Ventures, *SSAP No. 97—Investments in Subsidiary, Controlled, and Affiliated Entities* for investments in SCA entities, etc.)

8. Issue 8 and guidance per EITF 01-2:

Exchanges Involving Monetary Consideration (Paragraph 22 of Opinion 29)

Issue 8(a)—What level of monetary consideration in a nonmonetary exchange causes the transaction to be considered monetary in its entirety and, therefore, outside the scope of Opinion 29.

19. The Task Force discussed an exchange of nonmonetary assets that would otherwise be based on recorded amounts but that also involves monetary consideration (boot). The Task Force reached a consensus that that transaction should be considered monetary (rather than nonmonetary) if the boot is significant, and agreed that "significant" should be defined as at least 25 percent of the fair value of the exchange. As a monetary transaction, both parties would record

the exchange at fair value[1] (as discussed in Issue 8(b), below). If the boot in a transaction is less than 25 percent, the pro rata gain recognition guidance in paragraph 22 of Opinion 29 should be applied by the receiver of boot, and the payer of boot would not recognize a gain. The Task Force acknowledged that the ability to satisfactorily measure fair value is a prerequisite to the use of fair value.

---

[1] For real estate transactions, see Issue 10.

Issue 8(b)—In a monetary exchange (required to be accounted for at fair value), whether "full or partial" gain recognition is appropriate if an entity transfers its ownership of a controlled asset, group of assets, or business to another entity in exchange for a noncontrolling ownership interest in the other entity.

20. The Task Force reached a consensus on Issue 8(b) that the gain should be computed in a manner consistent with the consensus reached in Issue 6. The Task Force reached a consensus that application of the consensus on Issue 8(b) is required for exchange transactions committed to after April 19, 2001. A transaction is committed to if the parties to the transaction have signed a binding, written agreement that specifically sets forth the principal provisions of the transaction. If any of the principal provisions are yet to be negotiated, or are subsequently changed, such a preliminary agreement does not qualify as a commitment for purposes of this consensus.

9. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issues 8(a) and 8(b) without modification.

10. Issue 9 and guidance per EITF 01-2:

Issue 9—In the monetary exchange described below, whether the amount of gain recognized should exceed the amount that would be computed pursuant to the guidance for Issue 8(b).

21. An enterprise transfers its ownership of an individual asset (or assets) or its ownership interest in a subsidiary to a newly created entity in exchange for an ownership interest in that entity that will be accounted for by the equity method and monetary consideration. The monetary consideration received exceeds the fair value of the portion of the surrendered asset that has been sold in the exchange. The excess monetary consideration is funded by proceeds from nonrecourse financing within the newly created entity. Subsequent to the transfer, the enterprise does not control the entity. The specifics of the transaction are as follows:

- Company A owns equipment with a book basis of $100 and an appraised value of $400.
- Company B, previously unrelated to Company A, creates a new subsidiary, Company X, and transfers cash of $60 to Company X.
- Company A transfers the equipment to Company X in exchange for shares of Company X stock that represent a 40 percent ownership interest in Company X. Simultaneously, Company X borrows $300 with recourse to only the equipment and pays Company A $360 cash.

22. The Task Force reached a consensus that if the enterprise has no actual or implied commitment, financial or otherwise, to support the operations of the new entity in any manner, a gain of $260 should be recognized. The investor's basis in the new entity should be no less than zero. The gain calculation is illustrated as follows:

Fair value of interest in equipment sold ($400 × 60%)	$ 240
Less: Cost of interest in equipment sold ($100 × 60%)	(60)
	$ 180
Plus: Additional gain to the extent of the negative investment	80*
Total gain recognized	$ 260

* The additional gain is calculated as follows:

Cost of equipment	$100
Less: Cost of interest in equipment sold	(60)
Remaining cost	40
Less: Cash received in excess of 60% of the equipment's fair value	(120)
Negative investment	$ (80)

23. Task Force members noted that specific facts and circumstances may affect gain recognition and that it would be impractical for the Task Force to consider all possible variations of the basic transaction described above.

24. The SEC Observer emphasized that any gain recognition is heavily dependent on a careful analysis of specific facts and circumstances. Gain recognition would not be appropriate if a significant uncertainty exists regarding realization or the enterprise has an actual or implied commitment to support the operations of the new entity in any manner (see, for example, SAB 81).

11. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issue 9 without modification. The Working Group also noted the following facts are important to this consensus:

- The monetary consideration in the example is considered significant under the consensus of Issue 8(b), and as such, Issue 9 is considered a **monetary exchange**.
- The monetary consideration received by Entity A in the transaction **exceeds the fair value of the portion of the surrendered asset**.
- The excess monetary consideration is funded by proceeds from nonrecourse financing within Company X. The $300 borrowing with recourse described in the example explicitly states **the recourse is only to the equipment and is not related to Entity A**.
- Prior to the transaction, Entity A and Entity B are unrelated parties. In exchange for the equipment, **Entity A receives shares of Company X stock representing a 40 percent ownership interest**.

In the example above, the monetary consideration received exceeds the fair value of the portion of the surrendered asset that has been sold in the exchange. When this occurs, additional gain should be recognized to ensure the basis in the ownership interest is not less than zero.

12. Issue 10 and guidance per EITF 01-2:

Exchanges of Real Estate Involving Monetary Consideration (Paragraph 22 of Opinion 29)

25. Statement 66 indicates that the accounting for exchanges of real estate is covered by Opinion 29 and not by Statement 66. However, as discussed above in Issue 8(a), the Task Force reached a consensus that an exchange of nonmonetary assets that would otherwise be based on recorded amounts under paragraph 21 of Opinion 29 but that involves boot should be considered a monetary (rather than nonmonetary) transaction if the boot is at least 25 percent of the fair value of the exchange. As a result, the Task Force reached a different consensus for exchanges

© 1999-2023 National Association of Insurance Commissioners

of either (a) real estate held for sale in the ordinary course of business for real estate to be sold in the same line of business or (b) real estate not held for sale in the ordinary course of business for similar real estate when the boot is at least 25 percent of the fair value of the exchange. (Those types of exchanges are referred to in Issues 10(a) and 10(b) as exchanges of similar real estate.)

Issue 10(a)—Whether Statement 66 applies to an exchange of similar real estate that is not subject to Opinion 29 because the transaction involves enough boot for the exchange to be considered monetary under the consensus for Issue 8(a).

26. The Task Force reached a consensus that a transaction involving an exchange of similar real estate that is considered a monetary transaction under Issue 8(a) because boot is at least 25 percent of the fair value of the exchange would be allocated between two components: a monetary portion and a nonmonetary portion. [Note: See STATUS section.] The allocation between the monetary and nonmonetary portions of the transaction should be based on their relative fair values at the time of the transaction. A Task Force member noted that Interpretation 43 provides guidance on when an asset is considered real estate.

Issue 10(b)—If applicable, how Statement 66 should be applied.

27. The Task Force reached a consensus that for the receiver of boot, the monetary portion would be accounted for under Statement 66 as the equivalent of a sale of an interest in the underlying real estate, and the nonmonetary portion would be accounted for based on the recorded amount (after reduction, if appropriate, for an indicated impairment in value) of the nonmonetary asset relinquished pursuant to paragraph 21 of Opinion 29. [Note: See STATUS section.] For the payer of boot, the monetary portion would be accounted for as an acquisition of real estate, and the nonmonetary portion would be accounted for pursuant to paragraph 21 of Opinion 29. Following is an example of the application of this consensus:

Assumptions

- Party A transfers real estate with a fair value of $2,000,000 (Party A's net book value of $1,500,000) to Party B and receives $400,000 cash, a $400,000 note from Party B payable to Party A, and real estate with a fair value of $1,200,000 (Party B's net book value of $800,000).
- The initial investment requirement for full accrual profit recognition under Statement 66 is 20 percent.
- The terms of the note from Party B to Party A would satisfy the continuing investment provisions necessary for application of the full accrual method. The interest rate on the note from Party B is a market rate, and the note is considered fully collectible.
- The values of the real estate transferred by both parties are readily determinable and clearly realizable at the exchange date.
- Neither party has any continuing involvement with the real estate transferred to the other.

Computation of Allocation by Both Party A and Party B

Monetary Portion of Transaction:

Total monetary consideration divided by total fair value of exchange	$800,000 ÷ $2,000,000 = 40%

For this example, the monetary portion of the transaction is the exchange of $400,000 cash and a $400,000 note for real estate with a fair value of $800,000 ($2,000,000 x 40%).

© 1999-2023 National Association of Insurance Commissioners

Nonmonetary Portion of Transaction:

Fair value of real estate exchanged divided by total fair value of exchange	$1,200,000 ÷ $2,000,000 = 60%

For this example, the nonmonetary portion of the transaction is the exchange of real estate with a fair value of $1,200,000 for similar real estate with a fair value of $1,200,000 ($2,000,000 x 60%).

Accounting by Party A (the Receiver of Monetary Consideration)

The monetary portion of the transaction qualifies for full accrual profit recognition because the cash down payment of $400,000 and the $400,000 note meet the criteria in paragraphs 9-12 of Statement 66 for a buyer's initial and continuing investment when applied to the monetary portion of the transaction. Accordingly, a gain of $200,000 ($800,000 total monetary consideration less $600,000 [$1,500,000 total net book value x 40%] pro rata portion of net book value) would be recorded at the date of sale.

The nonmonetary portion of the transaction does not qualify for gain recognition because the exchange involves similar real estate. The accounting basis of the new property equals $900,000 ($1,500,000 total net book value of the real estate exchanged less the $600,000 pro rata portion of net book value sold).

Accounting by Party B (the Payer of Monetary Consideration)

The monetary portion of the transaction represents an acquisition of real estate for the monetary consideration paid of $800,000.

The nonmonetary portion of the transaction does not qualify for gain recognition because the exchange involves similar real estate. The accounting basis of the new property equals $1,600,000 ($800,000 net book value of the real estate exchanged plus $800,000 total monetary consideration paid).

13. The STATUS section of EITF 01-2 states the following relative to Issues 10(a) and 10(b):

> 46. Issues 10(a) and 10(b) previously addressed circumstances in which an entity is involved in a real estate exchange that meet the following conditions: (1) the exchange includes boot that is at least 25 percent of the fair value of the exchange and (2) the exchange is either (a) real estate held for sale in the ordinary course of business for real estate to be sold in the same line of business or (b) real estate not held for sale in the ordinary course of business for similar real estate. Statement 153, however, eliminates the fair value measurement exception for nonmonetary exchanges of similar productive assets provided in Opinion 29 and replaces it with an exception from fair value measurement for nonmonetary exchanges that lack commercial substance. Therefore, Issues 10(a) and 10(b) address circumstances in which an entity is involved in a real estate exchange that meets the following conditions: (1) the exchange includes boot that is at least 25 percent of the fair value of the exchange and (2) the exchange meets one of the conditions set forth in paragraph 20 of Opinion 29.

14. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issues 10(a) and 10(b) with the modification to replace references to FAS 66: *Accounting for Sales of Real Estate* with references to *SSAP No. 40R—Real Estate Investments*. In addition, reporting entities should note that as a result of the issuance of FAS 153, Issues 10(a) and 10(b) address circumstances in which an entity is involved in a real estate exchange that meets the following conditions: (1) the exchange includes boot that is at least 25 percent of the fair value of the exchange and (2) the exchange meets one of the conditions set forth in paragraph 20 of Opinion 29.

15. Issue 11 and guidance per EITF 01-2:

Nonreciprocal Transfers to Owners (Paragraph 23 of Opinion 29)

Spinoffs or Other Distributions of Loans Receivable to Shareholders

28. An enterprise distributes loans receivable to its owners by forming a subsidiary, transferring those loans receivable to the subsidiary, and then distributing the stock of that subsidiary to shareholders of the parent.

Issue 11—Whether the enterprise should report the distribution at book value as a spinoff or at fair value as a dividend-in-kind if the book value of the loans receivable, which may be either the "recorded investment in the receivable" or the "carrying amount of the receivable," is in excess of their fair value, and how the recipient should record the transaction.

29. The Task Force reached a consensus that the distribution should be reported at fair value by the enterprise and the recipient. Task Force members noted that the transaction is not a spinoff because the subsidiary does not constitute a business.[4] Rather, the transaction should be considered a dividend-in-kind. Under paragraph 23 of Opinion 29, dividends-in-kind are nonreciprocal transfers of nonmonetary assets to owners that should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of distribution. On July 5, 1989, subsequent to the date of the consensus, the SEC staff issued SAB 82, which discusses accounting for transfers of nonperforming assets by financial institutions and disclosure of the impact of financial assistance from regulators. In discussing the value at which a transfer of nonperforming assets should be recorded by the transferor financial institution, SAB 82 makes reference to the Task Force consensus on Issue 10, that an enterprise that distributes loans to its owners should report such distribution at fair value.

---

[4] Issue 98-3 provides guidance on determining whether an asset group constitutes a business.

---

16. The Working Group reached a consensus to adopt the EITF 01-2 guidance with the modification to replace the reference to paragraph 23 of APB Opinion 29 with paragraph 12 of SSAP No. 95, the reference in footnote 4 to EITF Issue 98-3 shall be replaced with INT 00-26: *EITF 98-3: Determining Whether a Nonmonetary Transaction Involves Receipt of Productive Assets or of a Business*.

17. Issue 12 and guidance per EITF 01-2:

Accounting for Reorganizations Involving a Non–Pro Rata Split-off of Certain Nonmonetary Assets to Owners

30. Some believe that paragraph 23 of Opinion 29 requires that nonreciprocal transfers of nonmonetary assets to owners on a non-pro rata basis be accounted for at fair value, without regard to the nature of the nonmonetary assets distributed. Others believe that Opinion 29 requires historical cost accounting for corporate liquidations or reorganizations involving the distribution to owners of all or a significant segment of the business, whether in a spinoff, split-off, or split-up and whether or not the distribution is on a pro rata basis.

31. Although Opinion 29 does not define the term split-off, federal income tax law states that a split-off is a transaction in which a parent company exchanges its stock in a subsidiary for parent company stock held by its shareholders. For federal income tax purposes, the exchange of shares need not be pro rata to all shareholders, or even include all shareholders, in order to be considered a tax-free split-off.

Issue 12—Whether a non-pro rata split-off of all or a significant segment of a business in a corporate plan of reorganization should be accounted for at historical cost or at fair value.

> 32. The Task Force reached a consensus that a non-pro rata split-off of a segment of a business in a corporate plan of reorganization should be accounted for at fair value. The Task Force also reached a consensus that a split-off of a targeted business, distributed on a pro rata basis to the holders of the related targeted stock, should be accounted for at historical cost. The Task Force observed that if the targeted stock was created in contemplation of the subsequent split-off, the two steps (creation of the targeted stock and the split-off) cannot be separated and should be viewed as one transaction with the split-off being accounted for at fair value.

18. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issue 12 with the modification to replace references to paragraph 23 of APB Opinion 29 with paragraph 12 of SSAP No. 95.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 07-01: Application of the Scientific (Constant Yield) Method in Situations of Reverse Amortization

INT 07-01 Dates Discussed

March 10, 2007; June 2, 2007

INT 07-01 References

Current:
SSAP No. 26R—Bonds
SSAP No. 43R—Loan-Backed and Structured Securities

Superseded:
SSAP No. 98—Treatment of Cash Flows When Quantifying Changes in Valuation and Impairments, an Amendment of SSAP No. 43—Loan-Backed and Structured Securities

INT 07-01 Issue

1. SSAP No. 26R and SSAP No. 43R both reference the use of the scientific or constant yield method of amortization of a premium or a discount. *SSAP No. 26R—Bonds* provides the following (bolding added for emphasis):

> **Amortized Cost**
>
> 9. **Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond.** Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).

SSAP No. 43R—Loan-Backed and Structured Securities provides the following (bolding added for emphasis):

> **Amortization**
>
> 8. **Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method** and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.
>
> **Collection of All Contractual Cashflows is Probable**
>
> 12. The following guidance applies to loan-backed and structured securities for which it is probable that the investor will be able to collect all contractually required payments receivable. (Paragraphs 17-19 provide guidance for securities in which collection of all contractual cash flows is not probable and paragraphs 20-24 provide guidance for beneficial interests.) Prepayments are a significant variable element in the cash flow of loan-backed securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially

less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security. Differences in cash flows can also result from other changes in the cash flows from the underlying assets. If assets are delinquent or otherwise not generating cash flow, which should be reflected in the cash flow analysis through diminishing security cash flows, even if assets have not been liquidated and gain/losses have not been booked.

13. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on loan-backed securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

14. Loan-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities. However, if at any time during the holding period, the reporting entity determines it is no longer probable that they will collect all contractual cashflows, the reporting entity shall apply the accounting requirements in paragraphs 17-19.

15. The prospective approach recognizes, through the recalculation of the **effective yield** to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.

16. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated **effective yield** will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

2. The following identifies three situations where, using a constant yield methodology for determining amortization or accretion, changes in amortized value move in the opposite direction of what is expected. That is, if a security is purchased at a premium, the constant yield methodology will, in certain cases, cause the amortized value to move to a discount during the life of the security. Conversely, if the security were purchased at a discount, the constant yield methodology will, in certain cases, cause the amortized value to move to a premium during the life of the security.

© 1999-2023 National Association of Insurance Commissioners

Accounting Issues:

3. The fundamental accounting questions are

Issue 1: When applying the constant yield method to loan-backed or structured securities, can amortized value be interpreted to represent the discounted cash flows?

Issue 2: Should a security purchased at a premium be allowed to move to a discount, or should a discount be allowed to move to a premium, if this occurs as a result of applying the scientific (constant yield) interest method."

Issue 3: On the subject of Parity (described in example 3), is it appropriate under statutory accounting guideline to "assume away" day delay and subsequently eliminate amortizing to a value less than par? If so, should a payment date assumption or a record date assumption be used?

4. Following are practical situations where a security purchased at a premium will have increases in amortized value, and where a security purchased at a discount will have decreases in amortized value. The question is should the scientific (constant yield) method be interpreted to allow these securities to be amortized as illustrated below.

Example 1

5. This first example examines a stepped coupon bond purchased at a discount. At time of acquisition the future interest rate adjustments are known, and so are taken into account in the yield calculation. This example illustrates how a (theoretical) stepped coupon bond, without a call schedule, could result in the amortized value changing from a discount to a premium.

Description: FEDERAL HOME LN MTG CORP MTN
Maturity: 03-18-2019
Int Type: Stepped Coupon not callable
03/18/2004 4.000%
03/18/2007 6.000%
03/18/2013 8.000%
Purchase Date: 3/18/2004
Purchase Price: 97.125
Based on this information, the effective annual yield at acquisition is: 6.3246%

6. The following illustrates the semiannual amortization schedule determined at time of acquisition. The amortized values represent the sum of the discounted future cash flows at each payment date. Based on the purchase price and cash flow assumptions, the semiannual yield is 3.1623%.

Pay Date	Par Value	Interest Rate Annual	Interest Payment	Total Payment	Income	Accr Disc	Amort Value
3/18/2004	1,000,000.00			(971,250.00)			971,250.00

9/18/2015	1,000,000.00	8.0000%	40,000.00	40,000.00	33,470.00	(6,530.00)	1,051,872.47
3/18/2016	1,000,000.00	8.0000%	40,000.00	40,000.00	33,263.50	(6,736.50)	1,045,135.97
9/18/2016	1,000,000.00	8.0000%	40,000.00	40,000.00	33,050.47	(6,949.53)	1,038,186.45
3/18/2017	1,000,000.00	8.0000%	40,000.00	40,000.00	32,830.71	(7,169.29)	1,031,017.16
9/18/2017	1,000,000.00	8.0000%	40,000.00	40,000.00	32,603.99	(7,396.01)	1,023,621.15
3/18/2018	1,000,000.00	8.0000%	40,000.00	40,000.00	32,370.11	(7,629.89)	1,015,991.26
9/18/2018	1,000,000.00	8.0000%	40,000.00	40,000.00	32,128.83	(7,871.17)	1,008,120.08
3/18/2019	1,000,000.00	8.0000%	40,000.00	1,040,000.00	31,879.92	(8,120.08)	1,000,000.00
Subtotal						28,750.00	

7. As can be seen from this schedule, the amortized value quickly changes from a discount situation to a premium situation. The question is should the accretion of the discount end when the discount is fully amortized, i.e. when Amortized Value = Par Value. In the above, this would occur somewhere between 3/18/05 and 9/18/05. Or, is it proper to report the amortized value as the sum of the discounted cash flows at a given point in time using the effective yield at acquisition? (Note: A prospective method is not applicable for this situation since the cash flows are known at time of acquisition, and those assumptions will not change over time.)

Example 2

8. The second situation explores a variable rate security using the Retrospective Method of Amortization. This example exemplifies the issue identified as "**Drift**." As variable interest rates are not known in advance, adjustments to yields must be made whenever a new interest rate becomes effective. Using the retrospective method, the effective yield is calculated based upon the purchase price, and the actual received and the projected future cash flows. For simplicity's sake, a bond with a single principal payment at maturity is used, but similar results would occur if the security were any type of variable rate instrument.

© 1999-2023 National Association of Insurance Commissioners

9. The situation presented below shows the cash flow assumptions at purchase when there is only one known interest rate. Immediately following, are the effects of using a retrospective adjustment, once the second interest rate is known and applied.

Original Purchase Assumptions:	
Par value:	1,000,000.00
Price:	98.000
Cost:	980,000.00

10. Based on the purchase assumptions, the amortization schedule for this security is normal. The accretion of discount is a smooth curve, and the amortized value approaches par value at maturity. As previously indicated, the following shows the interest rate adjusted for the accrual period ending 3/15/08. The original purchase assumptions are as stated above. The interest payments from 3/15/06 through 12/15/07 are paid based on the 2.000% annual interest rate effective from issue date (12/15/05) through 12/14/07. For accrual period beginning 12/15/07, however, the interest rate adjusts to 3.500%. Using a retrospective methodology, the following amortization schedule results:

Pay Date	Par Value	Int Rate	Int Recvd	Prin Recd	Total Cash	Income	Accretion Discount	Amortized Value
1/2/2006	1,000,000	2.00%	(944.44)		(980,944.44)			980,000.00
3/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	6,510.55	2,455.00	982,455.00
6/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,046.82	3,046.82	985,501.81
9/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,071.77	3,071.77	988,573.58
12/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,096.93	3,096.93	991,670.51
3/15/2007	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,122.30	3,122.30	994,792.81
6/15/2007	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,147.87	3,147.87	997,940.67
9/15/2007	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,173.65	3,173.65	1,001,114.33
12/15/2007	1,000,000	**2.00%**	**5,000.00**	**0.00**	**5,000.00**	**8,199.64**	**3,199.64**	**1,004,313.97**
3/15/2008	1,000,000	**3.50%**	**8,750.00**	**0.00**	**8,750.00**	**8,225.85**	**(524.15)**	**1,003,789.82**
6/15/2008	1,000,000	3.50%	8,750.00	0.00	8,750.00	8,221.56	(528.44)	1,003,261.38
9/15/2008	1,000,000	3.50%	8,750.00	0.00	8,750.00	8,217.23	(532.77)	1,002,728.61
12/15/2008	1,000,000	3.50%	8,750.00	0.00	8,750.00	8,212.87	(537.13)	1,002,191.48
3/15/2009	1,000,000	3.50%	8,750.00	0.00	8,750.00	8,208.47	(541.53)	1,001,649.94
6/15/2009	1,000,000	3.50%	8,750.00	0.00	8,750.00	8,204.03	(545.97)	1,001,103.98
9/15/2009	1,000,000	3.50%	8,750.00	0.00	8,750.00	8,199.56	(550.44)	1,000,553.54
12/15/2009	1,000,000	3.50%	8,750.00	1,000,000.00	1,008,750.00	8,195.05	(553.54)	-

11. From this, it is apparent that the amortized value quickly breaks out of the cost / par range and becomes a premium situation. The book value for the periods prior to 12/15/07 would have been reported at the original amortized values as determined in the prior spreadsheet. On the 12/31/07 annual statement there would be a retrospective catch-up adjustment.

12. Because of the variability of cash flows, recalculating a yield based on the retrospective method and applying that yield to calculate an amortized value can cause a security to bust out of the cost / par range, and the amortization (accretion) to move in the "wrong direction." For variable rate, interest only, and principal only asset backed securities, the additional complication caused by day delay would also come into play.

Example 3

13. The third example represents a mortgage backed security purchased at a slight premium. This situation illustrates what is described as **"Parity."** American Banker Online describes parity as "The parity price at which the yield of a mortgage-backed bond equals its net coupon rate. Securities with parity amortize to a value less than 100.

© 1999-2023 National Association of Insurance Commissioners

14. Parity occurs because the accrual date, usually the last day of the month, is many days prior to the payment date, typically 15, or 25 days for a mortgage backed security, and up to 45, or 55 days (or longer) for a collateralized mortgage obligation. The following is a simplified example using a mortgage backed security. The assumption is that the security is purchased at a slight premium (price = 100.1000). Because of day delay, however, the parity price is not 100, but is approximately 99.90.

CUSIP: 123456-AB-1 (Made up)
Description: Sample Mortgage Backed Security
Final payment date: 01/15/2006
Int Rate: 5.50%

© 1999-2023 National Association of Insurance Commissioners

15. By looking at the amortization factors, which represent amortized value / remaining principal, it is evident that the security quickly goes from a premium situation to a discount situation between 5/15/2005 and 6/15/2005. Due to Parity, the security does not amortize to a value of 100, but to a slight discount.

16. In addressing the issue of parity for REMICs, the tax code allows for accruing interest and calculating Original Issue Discount (OID) on a payment date to payment date basis, thereby eliminating the discrepancy between the accrual periods and the payment dates. Another method of eliminating parity would be to use the accrual end date (record date) plus one as the assumed payment date. Both methods sync up the accrual period and the payment date, essentially eliminating day delay.

17. Is it appropriate under statutory accounting guideline to “assume away” day delay and subsequently eliminate amortizing to a value less than par? If so, should a payment date assumption or a record date assumption be used?

INT 07-01 Discussion

18. The Working Group came to the following consensuses:

Issue 1: When applying the constant yield method to loan-backed or structured securities, can amortized value be interpreted to represent the discounted cash flows?

19. The Working Group noted that in the case of loan-backed or asset-backed securities; the unamortized balance of an issue at any point in time will represent the present value of all future cash flows discounted to the present using the constant yield.

Issue 2: Should a security purchased at a premium be allowed to move to a discount, or should a discount be allowed to move to a premium, if this occurs as a result of applying the scientific (constant yield) interest method.”

20. It has been noted that certain anomalies will exist with certain types of bonds, loan-backed and structured securities when applying the constant yield method. These anomalies can cause a premium to move to a discount, or a discount to move to a premium.

21. Some think that the value should be frozen once this occurs. However, both SSAP No. 26R and SSAP No. 43R are clear that the scientific (constant yield) interest method is required to be used when accreting/amortizing the discount/premium on a bond, loan-backed or structured security.

22. The Working Group noted that recording a discount or a premium and accreting/amortizing to par is consistent with a held to maturity approach that results in no gain or loss at maturity. Although it could be argued that freezing a discount or premium, or stopping at par at a particular point in time, would achieve the same result, this approach appears to ignore the fundamentals of the issue that have led to the anomalies. The Working Group noted that ignoring the facts of the issue in order to prevent the original premium or original discount from reversing is inappropriate, and that the above examples demonstrate that fact. Therefore, a security purchased at a premium is allowed to move to a discount, and that a discount is allowed to move to a premium, if this occurs as a result of applying a constant yield method.

Issue 3: On the subject of Parity (described in example 3), is it appropriate under statutory accounting guideline to “assume away” day delay and subsequently eliminate amortizing to a value less than par? If so, should a payment date assumption or a record date assumption be used?

23. It has been noted for mortgage backed securities; interest is often “earned” as of the end of the month but not paid until a later date. This delay known as the “day delay” is often 10-25 days depending on the contract. The yields as provided by “Bloomberg,” are Security Industry Association (SIA)

© 1999-2023 National Association of Insurance Commissioners

compliant yields, which do not “assume away ‘day delay’”, but produce amortization to a value of less than 100, as seen in the example. After discussion, the Working Group determined that the difference between amortizing to the earned record date or to the payment date for the securities described in issue 3 is typically immaterial. Therefore, the Working Group determined to continue to allow flexibility in amortization for the day delay.

24. The user of this interpretation should also note that amortization continues to apply the effective yield method in the above situations provided that doing so does not conflict with other statutory requirements in the SSAPs. For example, yield to worst is still a continuing requirement and other SVO requirements are still in effect, etc.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 08-05: EITF 02-11: Accounting for Reverse Spinoffs

INT 08-05 Dates Discussed

March 29, 2008; May 31, 2008

INT 08-05 References

Current:
SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items
SSAP No. 95—Nonmonetary Transactions

INT 08-05 Issue

1. *EITF 02-11: Accounting for Reverse Spinoffs* (EITF 02-11) was issued in September 2002 to address whether to account for spinoffs as reverse spinoffs based on the substance, instead of the legal form, of such transactions. In a reverse spinoff, the legal spinnee should be treated as though it were the spinnor for accounting purposes. *(In spinoff transactions, the 'spinnor' is the entity transferring assets, whereas the term 'spinnee' refers to the new entity.)*

2. As noted within EITF 02-11:

> 1. An entity may desire to reorganize its operations in response to its business needs. For example, an entity (the "spinnor") may transfer assets into a new legal spun-off entity (the "spinnee") and distribute the shares of the spinnee to its shareholders, without the surrender by the shareholders of any stock of the spinnor. Such a transaction is commonly referred to as a "spinoff." Consider the following example:
>
> > Big Company owns and operates a mall and a retail store that occupies the anchor store position in that mall. The mall and the store are managed by two separate divisions. The shareholders of Big Company would like to split Big Company into two companies so that each can focus on its own operations. To achieve this, Big Company transfers the mall's assets and operations into a newly created subsidiary, Mall Company, and distributes the shares of Mall Company to its shareholders on a pro rata basis in a spinoff.
>
> 2. A spinoff allows an entity to be reorganized in a manner that allows it to meet the needs of its owners. However, there may be other benefits as well. If the spinoff qualifies as a nontaxable reorganization, the distribution results in no taxable gain being recognized by either the spinnor or its shareholders. Additionally, if the spinnee is subsequently sold by the shareholders, the double taxation that would have occurred if a company sold its subsidiary directly and distributed the proceeds to its shareholders is avoided.
>
> 3. The accounting guidance for spinoffs is provided in Opinion 29. Although the basic principle underlying Opinion 29 is that the accounting for nonmonetary transactions should be based on the fair values of the assets (or services) involved, it provides a modification to that basic principle for nonreciprocal transfers to owners (such as spinoffs). Opinion 29, paragraph 23 (as amended by Statement 144), states:
>
> > Accounting for the distribution of nonmonetary assets to owners of an enterprise in a spin-off or other form of reorganization or liquidation or in a plan that is in substance the rescission of a prior business combination should be based on the recorded amount (after reduction, if appropriate, for an indicated impairment of value) of the nonmonetary assets distributed. A prorata distribution to owners of an enterprise of shares of a subsidiary or other investee company that has been or is being consolidated or that has been or is being accounted for under the equity method is to be considered to be

> equivalent to a spin-off. Other nonreciprocal transfers of nonmonetary assets to owners should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of the distribution.

4. Accordingly, under Opinion 29, an entity's distribution of the shares of a wholly owned or consolidated subsidiary to its shareholders should be recorded based on the carrying value of the subsidiary. Regardless of whether the spun-off operations will be sold immediately after the spinoff, the transaction should not be accounted for as a sale of the accounting spinnee followed by a distribution of the proceeds.

5. In certain cases, the spinoff of a subsidiary to its shareholders is such that the legal form of the transaction does not match its substance. That is, in certain circumstances, the spinnee will be the continuing entity. The issue is whether to account for a spinoff as a reverse spinoff based on the substance instead of the legal form of the transaction. In a reverse spinoff, the legal spinnee should be treated as though it were the spinnor for accounting purposes (accounting spinnor).

6. Consider the following example:

> Snack Food Company owns two subsidiaries—Ice Cream Subsidiary and Snack Subsidiary. Ice Cream Subsidiary is significantly larger and more profitable than Snack Subsidiary. The shareholders of Snack Food Company would like to continue the ice cream operations and dispose of the snack food operations. To facilitate this, Snack Food Company distributes the shares of Ice Cream Subsidiary to the shareholders thereby creating Ice Cream Company. The shareholders are then able to dispose of the operations of Snack Food Company (now solely comprising Snack Subsidiary operations) by selling the shares directly to a third party and, at the same time, retain ownership of the Ice Cream Company.

Accounting for the above transaction based upon its legal form would present Snack Food Company as the spinnor with Ice Cream Company as the spinnee. However, in substance, Snack Food Company has disposed of Snack Subsidiary and continued its ice cream operations. The legal form of the spinoff may have been driven primarily by tax planning strategies. Accounting for the transaction based on its substance depicts Ice Cream Company as the accounting spinnor and Snack Food Company as the accounting spinnee.

3. Per EITF 02-11, paragraph 5, the issue is whether to account for a spinoff as a reverse spinoff based on the substance instead of the legal form of the transaction. In a reverse spinoff, the legal spinnee should be treated as though it were the spinnor for accounting purposes (accounting spinnor).

4. The FASB Emerging Issues Task Force reached the following consensus in paragraphs 7-8 of EITF 02-11:

> 7. The Task Force reached a consensus that reverse spinoff accounting is appropriate when treatment of the legal spinnee as the accounting spinnor results in the most accurate depiction of the substance of the transaction for shareholders and other users of the financial statements. The Task Force observed that the determination of whether reverse spinoff accounting is appropriate is a matter of judgment that depends on an evaluation of all relevant facts and circumstances.
>
> 8. The Task Force reached a consensus that in determining whether reverse spinoff accounting is appropriate, a presumption should exist that a spinoff should be accounted for based on its legal form, in other words, that the legal spinnor is also the accounting spinnor. However, that presumption may be overcome. An evaluation of the following indicators should be considered in that regard. Nevertheless, no one indicator should be considered presumptive or determinative.

5. The FASB Emerging Issues Task Force identified the following indicators that a spinoff should be accounted for as a reverse spinoff in paragraph 8 of EITF 02-11:

- **The size of the legal spinnor and the legal spinnee**—All else being equal, in a reverse spinoff, the accounting spinnor (legal spinnee) is larger than the accounting spinnee (legal spinnor). The determination of which entity is larger is based on a comparison of the assets, revenues, and earnings of the two entities. There are no established "bright lines" that should be used to determine which entity is the larger of the two.

- **The fair value of the legal spinnor and the legal spinnee**—All else being equal, in a reverse spinoff, the fair value of the accounting spinnor (legal spinnee) is greater than that of the accounting spinnee (legal spinnor).

- **Senior management**—All else being equal, in a reverse spinoff, the accounting spinnor (legal spinnee) retains the senior management of the formerly combined entity. Senior management generally consists of the chairman of the board, chief executive officer, chief operating officer, chief financial officer, and those divisional heads reporting directly to them, or the executive committee if one exists.

- **Length of time to be held**—All else being equal, in a reverse spinoff, the accounting spinnor (legal spinnee) is held for a longer period than the accounting spinnee (legal spinnor). A proposed or approved plan of sale for one of the separate entities concurrent with the spinoff may identify that entity as the accounting spinnee.

INT 08-05 Discussion

6. The EITF consensus is that reverse spinoff accounting is appropriate when treatment of a legal spinnee as the accounting spinnor results in the most accurate depiction of the substance of the transaction for shareholders and other users of the financial statements. The Task Force observed that the determination of whether reverse spinoff accounting is appropriate is a matter of judgment that depends on an evaluation of all relevant facts and circumstances.

7. The Task Force consensus indicated that a presumption should exist that a spinoff should be accounted for based on its legal form (legal spinnor is the accounting spinnor); however that presumption can be overcome based on an evaluation of indicators that may suggest when a reverse spinoff exists (legal spinnee would be accounting spinnor).

8. In various instances within the statutory accounting guidelines, guidance is incorporated to promote accounting in accordance with the substance of transactions instead of their legal form. The Working Group reached a consensus to adopt EITF 02-11, indicating that reverse spinoff accounting is appropriate when treatment of a legal spinnee as the accounting spinnor results in the most accurate depiction of the substance of the transaction. In situations in which reverse spinoff accounting is judged to be most appropriate, this will result with the carrying value of the spinnee, instead of the spinnor, being utilized in determining the spinoff distribution to shareholders.

9. The following examples have been incorporated from EITF 02-11 to illustrate situations in which a spinoff should be accounted for in accordance with the legal form or as a reverse spinoff:

Example 1 - Retail Company, a retail store chain, has a wholly owned restaurant subsidiary. The retail and restaurant operations are operated independently with a small executive management team overseeing both. Since the two have unrelated operations, the shareholders believe that the two operations should be separated by way of a spinoff. They believe that this will allow those separate companies to pursue opportunities in their respective industries and maximize their individual value. In order to accomplish the spinoff, Retail Company creates a new legal entity, Restaurant Company, into which the assets and operations of the restaurant subsidiary are

transferred. The shares of Restaurant Company are then distributed to the shareholders of Retail Company on a pro rata basis.

The executive management team of Retail Company will be divided between the two entities. A comparison of the two companies is presented below:

(In 000s)	Assets	Revenues	Net Income	Fair Value
Retail	$500	$410	$150	$675
Restaurant	$100	$ 75	$21	$170

Evaluation: Based on an analysis of the indicators in this example, the spinoff should be accounted for in accordance with its legal form. That is, the transaction should not be accounted for as a reverse spinoff. Retail Company should be designated as the accounting spinnor based on the first two indicators listed below.

- Retail Company has substantially larger operations than Restaurant Company.
- The fair value of Retail Company is greater than Restaurant Company.
- The management team is allocated between the two operations.
- There are no planned or likely disposals of either Retail Company or Restaurant Company.

The designation of Retail Company as the accounting spinnor will provide the most accurate depiction of the transaction to shareholders and other users of the financial statements because, in substance, Retail Company has spun off its Restaurant Company into a separate company.

Example 2 - Retail Company, a retail store chain, has a wholly owned restaurant subsidiary. The retail and restaurant operations are operated independently, with a small executive management team overseeing both. While the restaurant subsidiary has grown rapidly, the retail operations have deteriorated steadily due to increased competition. The shareholders believe that the two operations should be separated by way of a spinoff. Management intends to dispose of the retail operations. In order to accomplish the spinoff, Retail Company creates a new legal entity, Restaurant Company, into which the assets and operations of the restaurant subsidiary are transferred. The shares of Restaurant Company are then distributed to the shareholders of Retail Company on a pro rata basis.

The executive management team of the combined entity will be assigned primarily to Restaurant Company, as the intent is to dispose of Retail Company (now solely comprising the retail operations). A comparison of certain statistics of the two companies is presented below:

(In 000s)	Assets	Revenues	Net Income	Fair Value
Retail	$300	$210	$ 35	$375
Restaurant	$600	$450	$150	$700

© 1999-2023 National Association of Insurance Commissioners

Evaluation: Based on an analysis of the indicators in this example, the spinoff should be accounted for as a reverse spinoff. Restaurant Company, although the legal spinnee, should be designated as the accounting spinnor based on the following:

- Restaurant Company has substantially larger operations than Retail Company.
- The fair value of Restaurant Company is greater than that of Retail Company.
- The management team is primarily assigned to Restaurant Company.
- Management intends to dispose of Retail Company upon finalizing the spinoff.

The designation of Restaurant Company as the accounting spinnor will provide the most accurate depiction of the transaction to shareholders and other users of the financial statements, as, in substance, Retail Company has disposed of its retail operations and continued its restaurant operations.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 15-01: ACA Risk Corridors Collectibility

INT 15-01 Dates Discussed

October 19, 2015; November 5, 2015

INT 15-01 References

Current:
SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act

INT 15-01 Issue

1. The federal Affordable Care Act (ACA) includes three types of risk sharing programs known as risk adjustment, reinsurance and risk corridors. The risk corridors program is a temporary program that is effective for benefit years beginning in 2014 through 2016 and applies to Qualified Health Plans (QHPs) in the individual and small group markets whether sold on or outside of an exchange.

2. The risk corridors program creates a mechanism for sharing risk for allowable costs between the federal government and QHP issuers – collecting charges from the issuer if the issuer's QHP premiums exceed claims costs of QHP enrollees by a certain amount, and making payments to the issuer if the issuer's premiums fall short by a certain amount, subject to certain adjustments for taxes, administrative expenses, and other costs and payments. The risk corridors program is intended to protect against inaccurate rate setting by limiting the extent of QHP issuer losses and gains. In the event that risk corridors program collections are not sufficient to cover all the required distributions, the ACA allows the use of other sources of federal funding for the required distributions, subject to the availability of appropriations.

3. On April 11, 2014, the U.S. Department of Health and Human Services (HHS) issued a bulletin titled ''Risk Corridors and Budget Neutrality," which described how it intended to administer risk corridors over the three-year life of the program. HHS stated that if risk corridors collections for a particular year are insufficient to make full risk corridors payments for that year, risk corridors payments for the year will be reduced pro rata to the extent of any shortfall. The HHS noted that lacking other appropriations or sources of funding, subsequent year program collections would first be applied to the unpaid program balances of preceding years. In December 2014, federal funds were not appropriated for the federal costs of the risk-sharing program.

4. On October 1, 2015, HHS announced proration results for 2014 risk corridors payments. Based on current data from QHP issuers' risk corridors submissions, issuers will pay $362 million in risk corridors charges, and have submitted for $2.87 billion in risk corridors payments for 2014. As of October 1, 2015, assuming full collections of risk corridors charges, this will result in a proration rate of 12.6 percent. HHS will begin collection of risk corridors charges in November 2015, and will begin remitting risk corridors payments to issuers starting December 2015. The announcement noted that the risk corridor payment and charge amounts reflected in the October 1, 2015, bulletin do not reflect any payment or charge adjustments due to resubmissions after September 15, 2015, or the effect of subsequent appeals.

5. There was diversity in practice regarding the accrual of 2014 risk corridors receivables for the first two quarters of 2015. Some entities did not accrue material amounts for the risk corridors receivables or did not accrue any amount due to the lack of federal government appropriations, and pursuant to the requirement in *SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act*, which requires that preparers be conservative and diligent in developing their estimates. Other entities appear to have accrued the full amount of funds estimated to be received under the risk corridors program. For some entities the

accrued receivables represent a material amount of surplus and uncollectibility or delayed collectibility represents a solvency concern.

6. At a minimum, impairment analysis and/or updated estimates are required under SSAP No. 107 for the 2014 risk corridors receivables. In determining the amount to be impaired, one issue identified is that 2015 and 2016 collections may not be sufficient to cover the full 2014 program requests.

7. The accounting issues are:

Issue 1: **Determining the Amount of Impairment –** The 2015 and 2016 program collections may not be sufficient to fund the shortfall of 2014 program requests. Therefore, the accounting issue identified is how to determine the required impairment amount.

Issue 2: **Nonadmittance** – The accounting questions regarding nonadmission have been focused on the amounts in excess of the confirmed proration payment of 12.6%, of which there is a reasonable and probable expectation that the 2015 and 2016 program collections will cover some portion of the 2014 benefit year shortfall.

An accounting issue identified is whether nonadmittance is required or permitted to be applied to the 2014 program benefits in excess of the 12.6% prorated amount for which reporting entities have a reasonable and probable expectation of future collection. Even if an entity has a reasonable and probable expectation of payment of the amount in excess of the confirmed proration of 12.6%, extended delays in payment are expected.

Issue 3: **Timing of Impairment or Nonadmittance Recognition** – The HHS notice of the 12.6% proration amount was provided on October 1, 2015; however, prior to October 1, there were other indicators that the risk corridors program would have 2014 benefit shortfalls (in April and December of 2014 as detailed above and other public reports). Doubts about program collectibility of receivables and problems with estimations are among the reasons many entities did not accrue risk corridors receivables or only accrued immaterial amounts. The accounting issue identified is whether impairment recognition is required to be reflected in the September 30, 2015, financial statements.

Issue 4: **Accrual of 2015 and 2016 Receivables** – Shall the accrual of receivables for the benefit years 2015 and 2016 continue to be estimated?

INT 15-01 Discussion

8. For Issue 1, impairment analysis and/or updated estimates for the 2014 risk corridors receivables are required under SSAP No. 107.

9. The Working Group determined that impairment is indicated if an entity accrued as of the reporting date under the 2014 Risk Corridors program more than they have a reasonable expectation of receiving. SSAP No. 107, paragraph 59.e. (quoted below), requires evaluation of the collectibility of all amounts receivable from the risk corridors program for each reporting period, and if in accordance with SSAP No. 5R it is probable that risk corridors receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

59. Risk corridors assessments meet the definition of liabilities as set forth in SSAP No. 5R. Risk corridors receivables due to the reporting entity meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this statement.

a. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent

commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

b. The additions or reductions to premium revenue resulting from the risk corridors program are recognized over the contractual period of coverage, to the extent that such additions or reductions are reasonably estimable. Reporting entities shall be aware of the significant uncertainties involved in preparing estimates and be both diligent and conservative in their estimations. Risk corridors payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk corridors program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient information to determine a reasonable estimate. Part of ensuring sufficient information requires that the reporting entity's estimate is based on demonstrated knowledge of the impacts of the other risk-sharing programs on the risk corridors program and the terms of the risk corridors program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.

c. The risk corridors receivables are from a federal governmental program. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.

d. Provided that the risk corridors receivables due the reporting entity are determined in a manner that is consistent with the requirements of this statement, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk adjustment amounts under appeal shall be reflected as a nonadmitted asset.

e. Evaluation of the collectibility of all amounts receivable from the risk corridors program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk corridors receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible, that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

f. Reporting shall be consistent with SSAP No. 66—Retrospectively Rated Contracts, paragraph 9 guidance on reporting for retrospective premium.

10. Current facts and circumstances must be taken into account when determining impairment. In accordance with SSAP No. 107, paragraph 59.e., any uncollectible receivable shall be written off and charged to income in the period the determination is made. The Working Group noted that the following are some, but not an all-inclusive list of the relevant factors to consider in determining the amount of impairment to include:

a. Amounts in excess of the proration amount of 12.6% must be evaluated for impairment.

b. Judgment is involved in the determination of the impairment amount.

c. Information used in determination of impairment shall be based on the most current and reliable information available.

© 1999-2023 National Association of Insurance Commissioners

d. Other known or probable changes in program collections or funding must also be evaluated, including the possibility of fewer contributors or lesser collections due to insolvencies.

e. The intent and ability of the reporting entity to remain in business for a period of time sufficient to allow for recovery of risk corridors receivables.

11. The Working Group noted that the impaired amount would be based on the facts and circumstances and is required to be evaluated at each reporting period by management.

12. For Issue 2, SSAP No. 107 addresses nonadmittance in paragraph 59.c., noting that, "Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging." However, SSAP No. 107 does not preclude nonadmittance for other reasons. In addition, SSAP No. 4 provides that:

> "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet, and are, therefore, considered nonadmitted."

13. The lack of appropriations, documented program shortfalls and known extended payment delays are indicative that some of the program receivables are not available to meet policyholder obligations when due, and therefore, evaluation for possible nonadmittance under SSAP No. 4 in addition to impairment evaluation is appropriate.

14. The Working Group discussed that nonadmission was appropriate for amounts that have a reasonable and probable expectation of recovery which are not currently available to pay claims. In this case, 2014 amounts in excess of the 12.6% proration amount which have not been written off for impairment, and have a reasonable expectation of delayed recovery shall be nonadmitted. The Working Group discussed that amounts in excess of the proration amount which are nonadmitted, shall remain nonadmitted until additional proration amounts are confirmed by HHS or other information of a sufficient nature supports that collectibility is probable and reasonable. Consistent with SSAP No. 107, paragraph 59, the statutory accounting concept of conservatism shall be followed when estimating amounts; reporting entities are required to have sufficient information to determine a reasonable estimate. Part of ensuring sufficient information requires that the reporting entity's estimate is based on demonstrated knowledge of the impacts of the other risk-sharing programs on the risk corridors program and the terms of the risk corridors program. Consistent with Issue 4, below, estimates shall not assume the availability of federal funds unless such federal funds are appropriated by Congress for the federal costs of the risk sharing program.

15. Such admitted amounts should also have a reasonably short time horizon to ensure that amounts will be available to pay policyholder claims. Some regulators and reporting entities may also take the position that it is probable that risk corridors receivables accrued during the 2014 plan year are uncollectible in excess of 12.6% proration, and therefore, any amounts in excess of proration would be fully written off. If this were the case, the 12.6% prorated balance would be admitted unless extended payment delays or other information cause a reevaluation of admissibility.

16. For Issue 3, the October 1 notification from HHS provided evidence of the estimated amount of proration for the underfunded program. The underfunded program was a condition that existed at the date of the September 30, 2015, balance sheet. Therefore, in accordance with *SSAP No. 9—Subsequent Events*, paragraph 11 (quoted below) this would be a Type I subsequent event that would be reflected in the financial statements for the third quarter. Type I events include estimates inherent in the process of preparing financial statements.

© 1999-2023 National Association of Insurance Commissioners

11. The following are examples of Type I recognized subsequent events:

a. If the events that gave rise to litigation had taken place before the balance sheet date and that litigation is settled, after the balance sheet date but before the financial statements are issued or are available to be issued, for an amount different from the liability recorded in the accounts, then the settlement amount should be considered in estimating the amount of liability recognized in the financial statements at the balance sheet date.

b. Subsequent events affecting the realization of assets, such as receivables and inventories or the settlement of estimated liabilities, should be recognized in the financial statements when those events represent the culmination of conditions that existed over a relatively long period of time. For example, a loss on an uncollectible trade account receivable as a result of a customer's deteriorating financial condition leading to bankruptcy after the balance sheet date but before the financial statements are issued or are available to be issued ordinarily will be indicative of conditions existing at the balance sheet date. Thus, the effects of the customer's bankruptcy filing shall be considered in determining the amount of uncollectible trade accounts receivable recognized in the financial statements at the balance sheet date.

17. For Issue 4, the Working Group determined that risk corridors receivables for the 2015 and 2016 benefit years estimated in accordance with SSAP No. 107, paragraphs 59.b. and 59.e. are nonadmitted 1) until such time that the prior benefit year is paid in full and 2) until additional proration amounts are confirmed by HHS or other information of a sufficient nature supports that collectibility is probable and reasonable. Consistent with SSAP No. 107, paragraph 59, the statutory accounting concept of conservatism shall be followed when estimating amounts; reporting entities are required to have sufficient information to determine a reasonable estimate. Part of ensuring sufficient information requires that the reporting entity's estimate is based on demonstrated knowledge of the impacts of the other risk-sharing programs on the risk corridors program and the terms of the risk corridors program. Estimates shall not assume the availability of federal funds unless such federal funds are appropriated by Congress for the federal costs of the risk corridors program.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 18-03: Additional Elements Under the Tax Cuts and Jobs Act

INT 18-03 Dates Discussed

May 14, 2018; August 4, 2018

INT 18-03 References

Current:
SSAP No. 101—Income Taxes

INT 18-03 Issue

1. This interpretation has been issued to provide statutory accounting and reporting guidance for the following items under the federal Tax Cuts and Jobs Act (TCJA) as additional guidance to *SSAP No. 101—Income Taxes*:

   a. Repatriation Transition Tax (RTT)

   b. Alternative Minimum Tax (AMT) Credit

   c. Global Intangible Low-Taxed Income (GILTI)

Issue 1 – Repatriation Transition Tax

2. The Repatriation Transition Tax (RTT) is a one-time transition tax on untaxed foreign earnings of foreign subsidiaries of U.S. companies. Under section 965 of the Internal Revenue Code (IRC), these earnings are deemed to be repatriated. Under the IRC guidance, foreign earnings held in the form of cash and cash equivalents are taxed at a 15.5% rate, and the remaining earnings are taxed at an 8% rate.

   a. The RTT is calculated in the 2017 and, in some cases, the 2018 tax return. It is not a temporary tax item and does not reverse in subsequent years.

   b. The RTT is an amount owed under the revised tax law, and is not impacted by future taxable income.

   c. Although the full amount of the calculated RTT is owed, companies can elect to pay the liability over eight years under a set IRC schedule. If electing to make installment payments, the future RTT payments are due regardless whether a company has future taxable income or losses.

Issue 2 – Alternative Minimum Tax Credit

3. The Alternative Minimum Tax (AMT) credit is, pursuant to the provisions of the TCJA, a tax refund of AMT amounts paid in prior periods. The AMT credit can be recovered through an offset to regular taxes or received as a refund.

   a. A reporting entity could realize all of its AMT receivable in the 2018 tax year if it is used to reduce its regular tax obligation. (It could also be used fully in 2019-2021 in this manner.)

© 1999-2023 National Association of Insurance Commissioners

b. If the AMT credit carryforward is not used to reduce regular taxes, it can be recovered as a refund (50%) to the extent not so used in tax years 2018 through 2020, with a 100% refund in 2021 to the extent not used to reduce 2021 regular tax liability.

c. If the AMT credit will be received as a refund (and not as an offset to tax liability), it may be subject to U.S. federal administrative sequestration requirements, which could reduce the amount paid by the federal government. (In 2017, the sequestration percentage was 6.6%, but this percentage varies yearly.)

d. U.S. GAAP guidance permits reporting the AMT credit as a current-year recoverable or as a deferred tax asset (DTA).

Issue 3 - Global Intangible Low-Taxed Income Tax - Description

4. The Global Intangible Low-Taxed Income (GILTI) tax is a new tax under the TCJA and is calculated each year on a portion of a controlled foreign corporation's active income.

a. GILTI is included in 2018 and subsequent year tax returns. An amount owed for GILTI in any tax year is not a temporary tax item and does not reverse in subsequent years. GILTI is a current income tax.

b. Assessments of changes in the basis differences in foreign entities could result in calculations of deferred tax items related to GILTI. The issue is whether existing basis differences will result in GILTI when they reverse. Although these deferred items may be theoretically correct, such calculations are expected to be very complex and require aggregate assessments that consider all companies within a consolidated tax group.

c. In January 2018, the *Financial Accounting Standards Board* (FASB) *Staff Q&A Topic 740, No. 5 Accounting for Global Intangible Low Taxed Income* identified that reporting entities may make an election to recognize deferred items under GILTI. (The recognition of the deferred items does not impact current tax recognition for GILTI, but whether basis differences for foreign controlled entities shall result in deferred tax assets or deferred tax liabilities.) The FASB Staff Q&A Topic 740, No. 5 also identified that FASB staff will be monitoring how entities that pay tax on GILTI are accounting for and disclosing these deferred effects over the next few quarters. The FASB staff will provide a subsequent update so the FASB can consider whether accounting and disclosure improvements are needed for U.S. GAAP.

INT 18-03 Discussion

5. The Statutory Accounting Principles (E) Working Group consensuses for accounting and reporting for the noted items are included below.

Issue 1 – Repatriation Transition Tax:

6. The Repatriation Transition Tax (RTT) is a current-year tax item captured in SSAP No. 101, paragraph 3. The amount payable shall be recognized as a current-year expense with a liability recognized as "current federal and foreign income taxes" and not as a deferred tax liability (DTL), regardless if an entity elects to make installment payments of the amount owed or pays the amount in full.

© 1999-2023 National Association of Insurance Commissioners

Disclosure

7. Reporting entities that are subject to the RTT shall include the following in a narrative disclosure as part of the income tax disclosures in Note 9:

a. RTT owed under the TCJA.

b. Schedule of payments made and expected future payments to satisfy the RTT liability. This disclosure shall explicitly identify whether the insurance entity has remitted full payment of the RTT, or whether the reporting entity is electing to pay the liability under the permitted installments. If the reporting entity fully remitted the RTT, disclosure of the RTT and the remitted payment is only required in the year-end 2018 financial statements. Reporting entities electing to make installment payments shall include the disclosure beginning in the year-end 2018 financial statements and continuing through the year-end statutory financial statements for the year in which the last installment payment was remitted.

Issue 2 – Alternative Minimum Tax Credit:

8. The Alternative Minimum Tax (AMT) credit qualifies as a current income tax recoverable pursuant to paragraph 9 of SSAP No. 101. Although qualifying as a current-year recoverable, some companies may elect to report the AMT credit as a DTA. Although the AMT refund qualifies as a current income tax recoverable, in order to mirror provisions permitted under U.S. GAAP, reporting entities may elect to report the AMT credit as either a current-year recoverable or as a DTA. If reported as a DTA, it would be subject to the statutory accounting admittance limitations for DTAs. If the AMT credit accounted for as a DTA exceeds statutory admittance provisions, it would be nonadmitted under SSAP No. 101.

Disclosure

9. Reporting entities with an AMT credit shall include the following narrative disclosure as part of the income tax disclosures in Note 9:

a. Identification of whether the AMT credit was recognized as a current-year recoverable or DTA.

b. The balance of the AMT credit carryforward as of the beginning of the year; the amount of the AMT credit recovered during the year; other current-year adjustments to the AMT credit carryforward; the balance of the AMT credit carryforward at the end of the year; the amount, if any, by which the ending balance has been reduced for sequestration; and the amount, if any, by which the reporting entity has elected to nonadmit. (This disclosure intends to capture any nonadmittance of the AMT credit by the reporting entity prior to application of the DTA admittance limitations reflected in SSAP No. 101.)

(These disclosures shall be made on an accrual basis beginning in the 2018 year-end statutory financial statements and continuing through the year-end statutory reporting period in which the AMT credit is fully utilized/received.)

Issue 3 – Global Intangible Low-Taxed Income Tax:

10. Under statutory accounting, reporting entities shall not recognize deferred GILTI tax for basis differences in foreign entities. GILTI tax from the current-year tax return is treated as a current-year tax item captured in SSAP No. 101, paragraph 3. The amount payable shall be recognized as a current-year expense with a liability recognized as a current federal and foreign income tax.

© 1999-2023 National Association of Insurance Commissioners

11. As an exception to this general rule, reporting entities are permitted to recognize deferred tax items for basis differences expected to reverse as GILTI in future years if they have recognized deferred tax items for basis differences expected to reverse as GILTI under U.S. GAAP. However, a reporting entity that has recognized deferred tax items for GILTI under U.S. GAAP may follow the statutory accounting general rule (no recognition of deferred tax items). Reporting entities that recognize deferred tax items for GILTI shall explicitly disclose this item in Note 9, beginning with the 2018 year-end statutory financial statements.

INT 18-03 Status

12. Any accounting change required by INT 18-03 shall, if not otherwise covered by *INT 18-01: Updated Tax Estimates Under the Tax Cuts and Jobs Act*, be recognized as a change in accounting estimate, pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors.*

13. The consensuses adopted in this interpretation provide information regarding the RTT, AMT credit and GILTI under the federal Tax Cuts and Jobs Act, and the statutory accounting assessment for reporting and disclosure for each of these items.

14. No further discussion is planned.

© 1999-2023 National Association of Insurance Commissioners

Interpretation of the
Statutory Accounting Principles (E) Working Group

INT 19-02: Freddie Mac Single Security Initiative

INT 19-02 Dates Discussed

February 6, 2019; April 6, 2019

INT 19-02 References

Current:
SSAP No. 26R—Bonds
SSAP No. 43R—Loan-Backed and Structured Securities

INT 19-02 Issue

1. This interpretation has been issued to provide a limited-scope exception to the exchange and conversion guidance in *SSAP No. 26R—Bonds* as well as prescribe guidance in *SSAP No. 43R—Loan-Backed and Structured Securities* (SSAP No. 43R) for instruments converted in accordance with the Freddie Mac Single Security Initiative. Under this initiative, reporting entities will be permitted to exchange "45-day securities" for "55-day securities" without any material change to the securities, or to the loans that back the securities. (With the exchange, there would be a 10-day delay in payment cycle.)

2. Information on the Freddie Mac Single Security Initiative (Freddie Mac Gold PC Exchange). Information is also available via the noted link: *http://www.freddiemac.com/mbs/exchange/faqs.html*.

a. Freddie Mac will offer holders of 45-day, TBA-eligible and non-TBA-eligible Gold PCs and Giants the option to exchange their eligible 45-day securities for 55-day Freddie Mac securities and float compensation. For the TBA-eligible security exchanges, the 55-day corresponding security will be a Uniform Mortgage-Backed Security (UMBS™) or Supers, while for non-TBA eligible exchanges, the corresponding security will be a 55-day Freddie Mac MBS or Giant MBS.

b. Most elements of the new 55-day security received upon exchange will exactly match those of the PC or Giant being exchanged – most fundamentally, the cash flows of the 55-day security will ultimately be backed by the same loans as the original PC or Giant. Each new 55-day security will mostly have the same characteristics as the corresponding PC such as unpaid principal balance, pool factor, and weighted average coupon. The 55-day security will have a new CUSIP, prefix, pool number, and issuance date.

c. Freddie Mac is offering the exchange to promote liquidity in the 55-day TBA-eligible market. The exchange of non-TBA eligible securities for 55-day Freddie Mac MBS will help provide greater consistency across Freddie Mac's fixed-rate securities population. After the Single Security Initiative's implementation, all new issue Freddie Mac Single Family fixed-rate securities will have a 55-day payment delay.

d. Exchanges will be initiated at the option of the investor and will not be mandatory. The exchange offer is expected to open in May 2019, the month prior to the Single Security Initiative go-live. The Dealer-facilitated path will stay open for the foreseeable future, while the Direct-to-Freddie Mac exchange path is expected to stay open for 3-5 years.

e. Investors will receive a one-time payment that will be the approximate fair value compensation for the 10 days' delay of the bond's payment, or float compensation. For the Direct-to-Freddie Mac exchange path, this compensation will be paid through a one-time cash payment. For the Dealer-facilitated path, it is anticipated that the dealer will likely net the float compensation payment from the buy-back price of the 55-day security. Freddie Mac will treat the float compensation payment as a tax-free adjustment to the security basis. As such, for those investors that execute their exchange through the Direct-to-Freddie Mac path, Freddie Mac does not intend to report the payment as taxable income to the investor or to the IRS. However, Freddie Mac is not dictating to investors how they must treat the payment. Some investors may conclude, after consulting with their tax advisors, that the float compensation is taxable income when received**.**

INT 19-02 Discussion

3. The Working Group reached a consensus to incorporate a limited-scope exception to *SSAP No. 26R—Bonds* and prescribe guidance for SSAP No. 43R specific to securities exchanged as part of the Freddie Mac Single Security Initiative. This limited-scope exception requires continuation of the amortized cost basis of the security surrendered to the new security received in the exchange. This is an exception to the guidance in SSAP No. 26R that requires fair value of the surrendered security to become the cost basis for the received security, unless the fair value of the security received is more clearly evident. Although there is not explicit guidance for exchanges in SSAP No. 43R, an entity referring to other statutory accounting standards for application, (such as *SSAP No. 95—Nonmonetary Transactions)* would infer a fair value measurement, rather than a continuation of the amortized cost basis.

4. By continuing the amortized cost basis, the reporting entity shall not recognize any gains or losses (from comparison of fair value to the amortized cost basis) as a result of the exchange. This is considered appropriate as most of the elements of the security held after the exchange will exactly match the security surrendered, including unpaid principal balance, pool factors and weighted average coupon. Furthermore, the cash flows of the new securities will be ultimately backed by the same loans as the original security.

5. This interpretation also permits reporting entities to adjust the security's basis (decrease) for the float compensation received. This treatment agrees to how Freddie Mac will treat the compensation payment. This treatment was determined by Freddie Mac after receiving confirmation from the Securities Exchange Commission (SEC) that the SEC does not object to the treatment of the exchange as a minor modification of an existing security. Freddie Mac has also identified that it does not intend to report the float compensation as taxable income to the investor or the IRS, but has identified that the holders of the securities must rely on their own tax and accounting advisors in determining the best course of action.

INT 18-03 Status

6. The consensus adopted in this interpretation shall remain applicable as long as securities are exchanged under the Freddie Mac Single Security Initiative. This interpretation is only applicable for the specific exchange program reviewed and shall not be inferred to other security exchanges.

7. No further discussion is planned.

SSAP No. 22R—Leases
SSAP No. 86—Derivatives

This INT applies to all SSAPs with contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

INT 20-01 Issue

1. This interpretation has been issued to provide statutory accounting and reporting guidance for the adoption with modification of *ASU 2020-04 – Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting* and *ASU 2021-01, Reference Rate Reform (Topic 848)* for applicable statutory accounting principles. The Financial Accounting Standards Board (FASB) issued both ASU 2020-04 and ASU 2021-01 to provide optional, transitional and expedient guidance as a result of reference rate reform.

2. Reference rate reform typically refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more *observable* or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it will no longer require banks to continue LIBOR submissions after 2021 – likely sunsetting both the use and publication of LIBOR. An important note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform.

3. With a significant number of financial contracts solely referencing IBORs, their discontinuance will require organizations to reevaluate and modify any contract that does not contain a substitute reference rate. A large *volume* of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a dedesignation of the transaction.

4. The overall guidance in ASU 2020-04 is that a qualifying modification (as a result of reference rate reform) should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination. FASB concluded that as reference rate changes are a market-*wide* initiative, one that is required primarily due to the discontinuance of LIBOR, it is outside the control of an entity and is the sole reason compelling an entity to make modifications to contracts or hedging strategies. As such, FASB determined that the traditional financial reporting requirements of discontinuing such contracts and treating the modified contract as an entirely new contract or hedging relationship would,

© 1999-2023 National Association of Insurance Commissioners

1) not provide decision-useful information to financial statement users, and 2) require a reporting entity to incur significant costs in the financial statement preparation and potentially reflect an adverse financial statement impact, one of which may not accurately reflect the intent or economics of a modification to a contract or hedging transaction.

5. Guidance in ASU 2020-04 allows a method to ensure that the financial reporting results would continue to reflect the intended continuation of contracts and hedging relationships during the period of the market-wide transition to alternative reference rates – thus, generally not requiring remeasurement or dedesignation if certain criteria are met.

6. Guidance in ASU 2021-01 expanded the scope of ASU 2020-04 by permitting the optional, transitional, expedient guidance to also include derivative contracts that undergo a similar transition but do not specifically reference a rate that is expected to be discontinued. While these contract modifications do not reference LIBOR (or another reference rate expected to be discontinued), the changes are the direct result of reference rate reform and were deemed to be eligible for similar exception treatment. ASU 2021-01 allows for modifications in interest rates indexes used for margining, discounting or contract price alignment, as a result of reference rate reform initiatives (commonly referred to as a “discounting transition”) to be accounted for as a continuation of the existing contract and hedge accounting.

7. The optional, expedient and exceptions guidance provided by the amendments in ASU 2020-04 and ASU 2010-01 are applicable for all entities. However, they are only effective as of March 12, 2020 through December 31, 2022. This is because the amendments are intended to provide relief related to the accounting requirements in generally accepted accounting principles (GAAP) due to the effects of the market-wide transition away from IBORs. The relief provided by the amendments is temporary in its application in alignment with the expected market transition period. However, the FASB will monitor the market-wide IBOR transition to determine whether future developments warrant any changes, including changes to the end date of the application of the amendments in this ASU. If such an update occurs, the Working Group may also consider similar action. It is not expected that the Working Group will take action prior to or in the absence of a FASB amendment.

8. The accounting issues are:

a. Issue 1: Should a reporting entity interpret the guidance in ASU 2020-04 as broadly accepted for statutory accounting?

b. Issue 2: Should the optional, expedient and exception guidance in ASU 2020-04 apply to debt and other service agreements addressed in SSAP No. 15?

c. Issue 3: Should the optional, expedient and exception guidance in ASU 2020-04 apply to lease transactions addressed in SSAP No. 22R?

d. Issue 4: Should the optional, expedient and exception guidance in ASU 2020-04 apply to derivative transactions addressed in SSAP No. 86?

e. Issue 5: Should the optional, expedient and exception guidance in ASU 2021-01 apply to derivative transactions addressed in SSAP No. 86?

INT 20-01 Discussion

9. For Issue 1, the Working Group came to the consensus that ASU 2020-04 shall be adopted, to include the same scope of applicable contracts or transactions for statutory accounting with the only modification related to a concept not utilized by statutory accounting, as noted below. The Working Group agreed the amendments provide appropriate temporary guidance that alleviate the following concerns due to reference rate reform:

a. Simplifies accounting analyses under current GAAP and statutory accounting principles (SAP) for contract modifications.

i. All contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

b. Allows hedging relationships to continue without dedesignation upon a change in certain critical terms.

c. Allows a change in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship.

d. Suspends the assessment of certain qualifying conditions for fair value hedging relationships for which the shortcut method for assuming perfect hedge effectiveness is applied.

e. Simplifies or temporarily suspends the assessment of hedge effectiveness for cash flow hedging relationships.

f. The only SAP modification to this ASU is related to the option to sell debt currently classified held-to-maturity. This concept is not employed by statutory accounting and thus is not applicable.

10. For Issue 2, the Working Group came to the consensus that debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as SSAP No. 15 states such liabilities should only be derecognized if extinguished. A reference rate modification should not generally require de-recognition and re-recognition under statutory accounting. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to the consensus that should an eligible contract be affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

11. For Issue 3, the Working Group came to the consensus that lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under statutory accounting. SSAP No. 22R, paragraph 17 states only modifications in which grant the lessee additional rights shall be accounted for as a new lease. These *changes* are outside the scope allowed for optional expedience in ASU 2020-04. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to a consensus that if an eligible lease affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

12. For Issue 4, the Working Group came to the consensus that ASU 2020-04 shall be applied to derivative transactions as the following considerations provided in the ASU are appropriate for statutory accounting:

a. For any hedging relationship, upon a change to the critical terms of the hedging relationship, allow a reporting entity to continue hedge accounting rather than dedesignate the hedging relationship.

b. For any hedging relationship, upon a change to the terms of the designated hedging instrument, allow an entity to change its systematic and rational method used to recognize the excluded component into earnings and adjust the fair value of the excluded component through earnings.

c. For fair value hedges, allow a reporting entity to change the designated hedged benchmark interest rate and continue fair value hedge accounting.

d. For cash flow hedges, adjust the guidance for assessment of hedge effectiveness to allow an entity to continue to apply cash flow hedge accounting.

© 1999-2023 National Association of Insurance Commissioners

13. For Issue 5, the Working Group came to a consensus on May 20, 2021, that ASU 2021-01 shall be applied to derivative transactions for statutory accounting. Accordingly, derivative instruments that are modified to change the reference rate used for margining, discounting, or contract price alignment that is a result of reference rate reform (regardless of whether the reference rate that is expected to be discontinued) are eligible for the exception guidance afforded in ASU 2020-04 in that such a modification is not considered a change in the critical terms that would require dedesignation of the hedging relationship. In addition, for all derivatives (those qualifying for hedge accounting, those that do not qualify for hedge accounting and replication (synthetic asset) transactions (RSAT)), a reporting entity may account for and report modifications (that are within the scope of INT 20-01) as a continuation of the existing contract even when the legal form of the modification is a termination of the original contract and its replacement with a new reference rate reform contract. This includes in-scope modifications of centrally cleared swap contracts whether they are automatically transitioned at a cessation date or voluntarily executed prior to cessation.

14. Additionally, for GAAP purposes, if an entity has not adopted the amendments in *ASU 2017-12, Derivatives and Hedging*, it is precluded from being able to utilize certain expedients for hedge accounting. For statutory accounting purposes, only the hedge documentation requirements were adopted from ASU 2017-12, while the remainder of the items are pending statutory accounting review. The Working Group concluded that all allowed expedient methods are permitted as elections for all reporting entities under statutory *accounting*. However, if a reporting entity is a U.S. GAAP filer, the reporting entity may only make elections under ASU 2017-12 if such elections were also made for their U.S. GAAP financials.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-06: Participation in the 2020 TALF Program

INT 20-06 Dates Discussed

May 5, 2020; May 20, 2020

INT 20-06 References

SSAP No. 64—Offsetting and Netting of Liabilities
SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities
INT 01-31: Assets Pledged as Collateral

INT 20-06 Issue

1. The Federal Reserve reestablished the Term Asset-Backed Securities Loan Facility (TALF) on March 23, 2020, to support the flow of credit to consumers and businesses. The TALF program will enable the issuance of asset-backed securities (ABS) backed by student loans, auto loans, credit card loans, loans guaranteed by the Small Business Administration (SBA), and certain other assets.

2. Under the TALF program, the Federal Reserve will lend on a non-recourse basis to holders of certain AAA-rated ABS backed by newly and recently originated consumer and small business loans. The Federal Reserve will lend an amount equal to the market value of the ABS less a haircut and will be secured at all times by the ABS. Treasury, using the Exchange Stabilization Fund (ESF), will also make an equity investment in the special purpose vehicle (SPV) established by the Federal Reserve for this facility.

3. The TALF is established by the Federal Reserve under the authority of Section 13(3) of the Federal Reserve Act, with approval of the Treasury Secretary.

4. Per review of public data available from the prior 2009 TALF program, there were a limited number of insurance reporting entities that were the actual borrower (entity that directly received the loan) under the TALF program. Rather, in most instances, insurance reporting entities were a material investor to the actual borrower. Per the TALF data, a material investor reflects the entity or individual with 10 percent or greater beneficial ownership interest in any class of securities of a borrower. Such ownership interest may be a direct, intermediate or ultimate interest. Due to the different methods of participating in the TALF program, this interpretation focuses on both reporting entity borrowers and reporting entity investors.

5. For reporting entity borrowers (entity that directly received the loan), the accounting issues addressed in this interpretation include:

   a. How the loan received, and collateral provided shall be reported within the statutory financial statements.

   b. Whether the pledged assets shall be reported as admitted assets as the collateral pledged to the TALF program is not permitted to be substituted.

6. For reporting entities that are not the direct borrowers, but represent investors to the direct borrower, the accounting issues addressed in this interpretation include:

   a. How the reporting entity shall report their investment to a TALF borrower.

   b. Whether the reporting entity investor is permitted to pledge assets under the TALF program, and retain admittance, when the reporting entity is not the direct borrower under the TALF program.

7. The April 9, 2020, term sheet for the 2020 TALF program:

   https://www.federalreserve.gov/newsevents/pressreleases/files/monetary20200409a1.pdf

Term Asset-Backed Securities Loan Facility

Effective April 9, 2020
(The Board of Governors of the Federal Reserve System ("Board") and Secretary of the Treasury may make adjustments to the terms and conditions described in this term sheet. Any changes will be announced on the Board's website.)

Facility:
The TALF is a credit facility authorized under section 13(3) of the Federal Reserve Act intended to help meet the credit needs of consumers and businesses by facilitating the issuance of asset-backed securities ("ABS") and improving the market conditions for ABS more generally.

The TALF will serve as a funding backstop to facilitate the issuance of eligible ABS on or after March 23, 2020. Under the TALF, the Federal Reserve Bank of New York ("Reserve Bank") will commit to lend to a special purpose vehicle ("SPV") on a recourse basis. The Department of the Treasury will make an equity investment of $10 billion in the SPV, as described below.

The TALF SPV initially will make up to $100 billion of loans available. The loans will have a term of three years; will be nonrecourse to the borrower; and will be fully secured by eligible ABS.

Eligible Borrowers:
All U.S. companies that own eligible collateral and maintain an account relationship with a primary dealer are eligible to borrow under the TALF. For the purpose of this document, a U.S. company is defined as a business that is created or organized in the United States or under the laws of the United States and that has significant operations in and a majority of its employees based in the United States.

Eligible Collateral:
Eligible collateral includes U.S. dollar denominated cash (that is, not synthetic) ABS that have a credit rating in the highest long-term or, in the case of non-mortgage backed ABS, the highest short-term investment-grade rating category from at least two eligible nationally recognized statistical rating organizations ("NRSROs") and do not have a credit rating below the highest investment-grade rating category from an eligible NRSRO. All or substantially all of the credit exposures underlying eligible ABS must have been originated by a U.S. company, and the issuer of eligible collateral must be a U.S. company. With the exception of commercial mortgage-backed securities ("CMBS"), eligible ABS must be issued on or after March 23, 2020. CMBS issued on or after March 23, 2020, will not be eligible. For CMBS, the underlying credit exposures must be to real property located in the United States or one of its territories. Eligible collateral must be ABS where the underlying credit exposures are one of the following:

1) Auto loans and leases;
2) Student loans;
3) Credit card receivables (both consumer and corporate);
4) Equipment loans and leases;
5) Floorplan loans;

6) Insurance premium finance loans;
7) Certain small business loans that are guaranteed by the Small Business Administration;
8) Leveraged loans; or
9) Commercial mortgages.

Eligible collateral will not include ABS that bear interest payments that step up or step down to predetermined levels on specific dates. In addition, the underlying credit exposures of eligible collateral must not include exposures that are themselves cash ABS or synthetic ABS.

To be eligible collateral, all or substantially all of the underlying credit exposures must be newly issued, except for legacy CMBS.

The feasibility of adding other asset classes to the facility or expanding the scope of existing asset classes will be considered in the future.

Conflicts of interest: Eligible borrowers and issuers of eligible collateral will be subject to the conflicts of interest requirements of section 4019 of the CARES Act.

Restriction on single-asset single-borrower ("SASB") CMBS and commercial real estate collateralized loan obligations ("CRE CLOs"): SASB CMBS and CRE CLOs will not be eligible collateral.

Restrictions on CLO loan substitution: Only static CLOs will be eligible collateral.

Collateral Valuation: Haircut schedule is below. The haircut schedule is consistent with the haircut scheduled used for the TALF established in 2008.

Pricing: For CLOs, the interest rate will be 150 basis points over the 30-day average secured overnight financing rate ("SOFR"). For SBA Pool Certificates (7(a) loans), the interest rate will be the top of the federal funds target range plus 75 basis points. For SBA Development Company Participation Certificates (504 loans), the interest rate will be 75 basis points over the 3-year fed funds overnight index swap ("OIS") rate. For all other eligible ABS with underlying credit exposures that do not have a government guarantee, the interest rate will be 125 basis points over the 2-year OIS rate for securities with a weighted average life less than two years, or 125 basis points over the 3-year OIS rate for securities with a weighted average life of two years or greater. The pricing for other eligible ABS will be set forth in the detailed terms and conditions.
Fees: The SPV will assess an administrative fee equal to 10 basis points of the loan amount on the settlement date for collateral.

Maturity: Each loan provided under this facility will have a maturity of three years.

Investment by the Department of the Treasury: The Department of the Treasury, using the Exchange Stabilization Fund, will make an equity investment of $10 billion in the SPV.

Non-Recourse: Loans made under the TALF are made without recourse to the borrower, provided the requirements of the TALF are met.

Prepayment: Loans made under the TALF will be pre-payable in whole or in part at the option of the borrower, **but substitution of collateral during the term of the loan generally will not be allowed.**

Program Termination: No new credit extensions will be made after September 30, 2020, unless the TALF is extended by the Board of Governors of the Federal Reserve System and the Department of the Treasury.

Other Terms and Conditions: More detailed terms and conditions will be provided at a later date, primarily based off of the terms and conditions used for the 2008 TALF. In addition, the Federal Reserve reserves the right to review and make adjustments to these terms and conditions –

© 1999-2023 National Association of Insurance Commissioners

including size of program, pricing, loan maturity, collateral haircuts, and asset and borrower eligibility requirements – consistent with the policy objectives of the TALF.

INT 20-06 Discussion

For Reporting Entity Borrowers - Insurance Reporting Entity Received the Loan

8. Reporting entity borrowers shall report the cash received under the TALF program with a corresponding liability. The liability shall be captured in scope of *SSAP No. 15—Debt and Holding Company Obligations* and reported as "borrowed money." The disclosures in SSAP No. 15 shall be completed. Once the cash received has been reinvested, the reporting entity shall report the acquired asset in accordance with the applicable statement of statutory accounting principle.

9. Reporting entity borrowers shall report asset-backed securities pledged to the TALF program as restricted assets with the appropriate code in the investment schedules and disclosed in accordance with *SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures*, and in General Interrogatory, Part 1: 25.30 – Pledged as Collateral. Assets pledged to the TALF program are subject to the underlying asset risk-based capital charge but are excluded from an additional "restricted asset" risk-based capital charge. (As a carryover from the 2009 TALF Program, existing provisions in the risk-based capital instructions instruct the removal of assets pledged to the TALF program reported as restricted assets in the General Interrogatories.)

10. Reporting entity borrowers are permitted to continue reporting pledged asset-backed securities as admitted assets in the statutory financial statements if the following two conditions are met:

a. Asset qualified as an admitted asset before it was pledged to the TALF program.

b. The reporting entity has not committed an uncured contract default.

11. As the TALF program specifically identifies that substitution of pledged collateral during the term of the loan will generally not be allowed, this interpretation provides an exception to existing statutory accounting requirements. Pursuant to *INT 01-31: Assets Pledged as Collateral*, a pledged asset shall be readily substitutable in order to be admitted in the statutory financial statements. With the exception in this interpretation, assets held by the insurance reporting entity (borrower) that are pledged to the TALF program can be admitted even though they are not generally substitutable.

12. Reporting entity borrowers shall not net the obligation to return the liability and the pledged collateral in the statutory financial statements. The criteria for a valid right of offset in *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* has not been met for these transactions. Specifically, the reporting entity does not have the right to offset the amount owed under the TALF program and the reporting entity does not intend to setoff the amount owed. Although the collateral pledged could be claimed under the TALF program in the event that the insurer reporting entity commits a loan repayment default, the ability to claim pledged collateral does not represent a "right of setoff" with the counterparty.

13. Although the transaction is similar to a repurchase agreement accounted for as a secured borrowing, the TALF transaction is not a repurchase transaction. As such, the provisions and disclosures for repurchase agreements are not applicable.

14. In the event that a reporting entity commits a contract default, and the pledged collateral is retained under the TALF program, the reporting entity shall follow the guidance in *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*, paragraph 20, in removing the pledged assets and liability from the statutory financial statements.

© 1999-2023 National Association of Insurance Commissioners

For Reporting Entity Investors - Insurance Reporting Entity Does Not Receive the Loan but is an "Investor" to an Entity that was the Direct TALF Borrower

15. Reporting entity investors shall report the investment in the borrower in accordance with the underlying nature of the investment and the relationship with the borrower. The underlying investments will be subject to the reporting and RBC requirements for the applicable SSAP and reporting schedule:

a. If the borrower is a limited liability company (LLC), the investment shall be reported in accordance with *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies.*

b. If the borrower is a private equity fund (e.g., joint venture), the investment shall be reported in accordance with *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies.*

c. If the borrower is an affiliate, the investment shall be reported in accordance with *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.*

16. Reporting entity investors are not permitted to admit assets pledged to the TALF program if they are not the direct borrower. This is because the return of the assets would be contingent on the action of the actual borrower to the TALF program and not the reporting entity. This provision is consistent with *SSAP No. 4—Assets and Nonadmitted Assets*, footnote 2:

> If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to SSAP No. 4, paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

INT 20-06 Consensus

17. The Working Group reached a consensus to prescribe statutory accounting guidance for insurance reporting entity involvement in the 2020 TALF Program. Pursuant to this consensus:

a. Reporting entities borrowers who directly receive the TALF loan shall follow guidance in paragraphs 8-14 of this interpretation for the statutory accounting and reporting. As detailed in paragraph 11, this interpretation provides an exception to allow admitted asset reporting for the pledged securities although the TALF program does not permit the pledged assets to be generally substitutable.

b. Reporting entities that do not directly receive the TALF loan, but are investors to borrowers that receive the TALF loan, shall follow the provisions in paragraphs 15-16 for the statutory accounting and reporting.

18. The provisions detailed in this interpretation are applicable for the duration of the 2020 TALF loan program.

INT 20-06 Status

19. No further discussion planned.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-09: Basis Swaps as a Result of the LIBOR Transition

INT 20-09 Dates Discussed

July 15, 2020; July 30, 2020

INT 20-09 References

Current:
SSAP No. 86—Derivatives

INT 20-09 Issue

1. This interpretation is to provide statutory accounting and reporting guidance for "basis swaps." Basis swaps within the scope of this interpretation are defined as compulsory derivatives issued by Central Clearing Parties (CCP), for certain cleared derivatives, issued solely in response to the market-wide transition away from the London Interbank Offered Rate (LIBOR) and toward the Secured Overnight Financing Rate (SOFR).

2. SOFR is a broad measure of the cost of borrowing cash overnight, generally collateralized by Treasury Securities. It represents nearly a risk-free rate that is correlated with other money market rates and is fully transaction based (thus ensuring full transparency), by reflecting a broad measure of overnight U.S. Treasury repurchase transactions. In conjunction with the transition from LIBOR, many alternative reference rates, such as the Effective Federal Funds Rate (EFFR), an interest rate typically utilized by banks representing a charge for overnight loans, used to meet regulatory reserve requirements, are also being transitioned to SOFR. Accordingly, under the general topic referred to as "Reference Rate Reform," contracts which reference or utilize LIBOR or EFFR, are anticipated to be modified to reference SOFR.

3. The Statutory Accounting Principles (E) Working Group previously adopted *INT 20-01: Reference Rate Reform,* which substantially adopted *ASU 2020-04 – Reference Rate Reform* and applies to all SSAPs with contracts within scope of ASU 2020-04. INT 20-01 allows for contract modifications, due to reference rate reform, to be accounted for as a continuation of the existing contract and thus not requiring remeasurement. Among other things, INT 20-01 allows for 1) certain hedging relationships to continue without requiring dedesignation upon a change in certain critical terms (i.e., changing reference rates), and 2) changes in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship. INT 20-01 recognized that many of these contracts, as part of the discontinuance of LIBOR, will transition to SOFR, an industry recognized preferred benchmark rate.

4. CCPs will make a similar transition, converting open derivative end-of-day valuation calculations from EFFR to SOFR. This transition will occur in two steps, both of which are anticipated to occur on October 16. First, the CCPs will conduct a *standard end-of day valuation* cycle based on EFFR. Then, the CCP will conduct a *special valuation cycle* on those same positions, however utilizing SOFR as the new, ongoing discounting rate. Based on the differences between EFFR and SOFR, the CCP will issue cash adjustments to each account to offset the value adjustments arising from the change in discount rates and additionally will issue mandatory EFFR/SOFR basis swaps, thus restoring the account holder's original risk profile.

5. *SSAP No. 86—Derivatives* addresses the recognition and measurement of derivatives used for hedging, income generation, and replication transactions. Additionally, guidance is provided for derivatives not utilized for one of these broad categories (known as "other derivatives"). Derivatives that are classified

© 1999-2023 National Association of Insurance Commissioners

as "other derivatives" are nonadmitted under SSAP No. 86, whereas derivatives in the other categories are admitted provided they conform to the requirements of the statement.

6. The accounting issues are:

  a. Issue 1: How should EFFR/SOFR basis swaps be classified and reported in the statutory financial statements?

  b. Issue 2: How should EFFR/SOFR basis swaps be valued in the statutory financial statements?

INT 20-09 Discussion

7. For Issue 1, the Working Group reached a consensus that mandatory basis swaps issued by CCPs, in response to reference rate reform, shall be classified as a derivative used for "hedging." In collaboration with industry representatives, Working Group support staff has confirmed that a significant majority of the derivatives transacted through a CCP meet the definition of a hedging transaction. By using this "used for hedging" classification, instead of an "other derivative" classification, the basis swap derivative received will be admitted under SSAP No. 86.

8. For Issue 2, the Working Group reached a consensus that although the instrument shall be considered a hedging derivative, the instrument shall not be considered or reported as an "effective" hedging derivative (using the "hedge accounting" measurement approach permitted in SSAP No. 86), unless the instrument qualifies, with the required documentation, as a highly effective hedge under SSAP No. 86. Unless the effective hedge requirements are met, the instruments shall be reported on Schedule DB, utilizing the category of "Hedging Other." Pursuant to the guidance in SSAP No. 86, if the basis swap derivative is not an effective hedge, the derivative shall be accounted for at fair value and the changes in fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting.)

INT 20-09 Status

8. No further discussion is planned.

© 1999-2023 National Association of Insurance Commissioners

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 21-01: Accounting for Cryptocurrencies

INT 21-01 Dates Discussed

March 15, 2021, May 20, 2021

INT 21-01 References

SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments

INT 21-01 Issue

1. This interpretation is to address questions regarding statutory accounting treatment for cryptocurrencies, which are defined as a digital currency in which transactions are verified and records maintained by a decentralized system using cryptography, rather than by a centralized authority. Cryptocurrencies are purchased and exchanged using a limited number of unregulated digital currency exchanges and are not held or offered by major banks.

2. The most valuable cryptocurrency as of February 2021 is Bitcoin, which has been in circulation since 2009, and there are approximately 4,000 different cryptocurrencies available on 200 different cryptocurrency exchanges. Cryptocurrencies have seen significant price volatility and have experienced an extreme increase in value over the past year, with the value of the total outstanding cryptocurrencies nearing $1 trillion as of February 2021. The total market value and increased popularity has led to increased interest in the market by traditional financial institutions and insurance companies.

3. No NAIC Committees or groups have taken any action or established a position on cryptocurrencies. Currently, auditors must rely on guidance provided by the American Institute of Certified Public Accountants through a nonauthoritative practice guide.

4. This Interpretation intends to clarify that directly held cryptocurrencies are nonadmitted assets for statutory accounting.

INT 21-01 Discussion

5. Directly held cryptocurrencies have not been identified in the *Accounting Practices and Procedures Manual* (AP&P Manual) as an admitted asset, and do not meet the definition of any admitted asset that is defined in the AP&P Manual. Accordingly, by default they are a nonadmitted asset per *SSAP No. 4—Assets and Nonadmitted Assets,* paragraph 3, as they are not specifically identified in the *Accounting Practices and Procedures Manual* as an admitted asset.

6. Cash is defined in *SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments* as a "medium of exchange that a bank or other similar financial institution will accept for deposit and allow an immediate credit to the depositor's account." Cryptocurrencies are currently not accepted by major banks and do not operate like a traditional currency, and as such do not meet the definition of cash in SSAP No. 2R.

INT 21-01 Consensus

7. The Statutory Accounting Principles (E) Working Group reached a consensus that directly held cryptocurrencies do not meet the definition of an admitted asset and are therefore considered to be a

© 1999-2023 National Association of Insurance Commissioners

nonadmitted asset for statutory accounting. The Working Group intends to rely on this interpretation for statutory accounting and will address cryptocurrencies further once FASB has provided definitive guidance.

INT 21-01 Status

8. No further discussion is planned.

9. The Statutory Accounting Principles (E) Working Group will continue to monitor the evolution of cryptocurrencies and subsequently review this interpretation as appropriate as part of the normal maintenance process.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates

INT 22-01 Dates Discussed

April 4, 2022; May 24, 2022

INT 22-01 References

Current:
SSAP No. 43R—Loan-Backed and Structured Securities
SSAP No. 86—Derivatives

INT 22-01 Issue

1. This interpretation is to address questions on the accounting and reporting for Freddie Mac "When-Issued K-Deal (WI Trust) Certificates" (WI Program). Ultimately, the question is whether the structure should be initially captured in scope of *SSAP No. 43R—Loan-Backed and Structured Securities* or as a forward contract in scope of *SSAP No. 86—Derivatives*.

2. The design of the WI Program is summarized as follows:

   a. Investor acquires WI Trust certificates, which are backed by cash held in the WI Trust and pay a fixed coupon amount funded from a Freddie Mac guarantee.

   b. Within 90 days, the trust uses the cash to acquire newly issued K-Deal structured pass-through certificates (SPCs) meeting certain pooling parameters laid out in the respective WI Offering Circular Supplement. K-Deal SPC (s) are Freddie Mac-issued structured pass-through certificates backed by the corresponding class of certificates issued by a separate REMIC trust that holds multifamily fixed-rate mortgage loans. The cash flows from the mortgage loans held by the REMIC trust provide pass-through payments to holders of the K-Deal SPCs.

   c. An investor can choose to continue to hold the WI Trust certificates or exchange dollar-for-dollar their WI-securities into the underlying K-Deal SPCs. In either case, the investor receives a pass-through of cash flows generated by the mortgages held in the REMIC trust and the performance of the K-Deal SPCs is guaranteed by Freddie Mac. If continuing to hold the WI Trust certificates – rather than convert the certificates to K-deal SPCs – the K-Deal SPCs are held by the WI Trust, who in turn passes the cashflows to WI Trust investors. The WI Trust certificates benefit from Freddie Mac payment guarantee which guarantees that any cashflows collected from the K-Deal SPCs will be paid to the WI certificate holders.

3. Additional characteristics on this program include the following:

   a. The WI Trust certificates are public securities and tradeable shortly after pricing.

   b. The WI Trust certificates are backed by a Freddie Mac guarantee from acquisition.

   c. From acquisition of the WI Trust certificates, the investor receives fixed coupon amounts reflective of the investment terms of the K-Deal SPCs.

© 1999-2023 National Association of Insurance Commissioners

d. The WI Trust is obligated to acquire, and Freddie Mac is required to sell, the K-Deal SPCs at the amount stated at the time of initial investment. Meaning, the investor is not at a risk of loss, nor will experience any variation in outcome due to underlying variables that occur from the time of initial investment in the WI Trust until the K-Deal SPCs are acquired. If market forces change the purchase price of the K-Deal SPCs during the 90-days after initial acquisition of the WI Trust certificates, then Freddie Mac is still required to sell the K-Deal certificates at the terms agreed to at original investment. Ultimately, the investor is guaranteed an investment in K-Deal SPCs that reflects the notional value of the WI Trust-certificates and coupon terms at initial acquisition. (For example, if the investor acquired $100 million of WI Trust certificates at acquisition, when the K-Deals are subsequently acquired, the entity will receive $100 million of K-Deal SPCs with the same payment terms regardless of any market impacts.)

e. In the event that Freddie Mac is unable to acquire the K-Deal SPCs within the 90-day period, Freddie Mac is required to return the principal to the investor as well as provide a yield maintenance payment calculated using the full coupon payments that would have been received over the course of the investment.

f. In the event that the investor elects to exchange the WI Trust certificates to the K-Deal SPCs, the investor receives an equivalent principal amount of the K-Deal SPCs of the same class. Although the investment will have a change in CUSIP, any such exchange is not deemed to be a taxable event as described in the respective Offering Circular Supplements for the WI Certificates. As such investors will not recognize a gain or loss on the exchange and investors will be treated as continuing to own the interests that were owned immediately prior to the exchange. Stated differently, any gains or losses on the exchanged WI-Certificates are "rolled into" the investors' new K-Deal Certificate position.

4. The question of whether the structure is a loan-backed or structured security, or a derivative is primarily focused on the initial acquisition and the 90-day (or less) timeframe before the WI Trust acquires K-Deal certificates. The question is whether the initial 90-day acquisition of the WI Trust certificate, prior to the trust's acquisition of the K-Deal certificates, represents a forward contract required to be accounted for under SSAP No. 86. Key excerpts from SSAP No. 86 are as follows:

a. The definition of a derivative instrument from SSAP No. 86, paragraph 4:

> 4. "Derivative instrument" means an agreement, option, instrument or a series or combination thereof:
>
> a. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or
>
> b. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

b. The definition of a forward contract from SSAP No. 86, paragraph 5.d.:

> 5.d. "Forwards" are agreements (other than futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument.

© 1999-2023 National Association of Insurance Commissioners

5. This interpretation intends to clarify whether investments in the Freddie Mac WI Program shall be initially captured in scope of SSAP No. 86 or captured in scope of SSAP No. 43R.

INT 21-01 Discussion

6. This interpretation clarifies that investments in the Freddie Mac WI Program shall be captured in scope of SSAP No. 43R from initial acquisition, and not as a derivative forward contract, for the following reasons:

a. The WI Program is fully guaranteed by Freddie Mac and ensures that the investor will receive pass-through certificates, backed my mortgage loans held in trust, that reflect the terms of the investment set at original acquisition. In the event that the K-Deal certificates cannot be acquired, Freddie Mac is guaranteed to provide payment to the investor that reflects the full principal and interest per the original terms of the agreement, which reflects the payments that would have been received overtime if K-Deal certificates had been acquired.

b. The definition of a forward contract in SSAP No. 86 reflects an agreement between two parties that commit one party to purchase and another party to sell the instrument underlying the contract at a specified future date. With the WI Trust Program, the investor does not have a future commitment to acquire securities, as the investor acquires the WI Trust certificate on day one of the transaction and the investor is not required to convert the WI Trust certificates at any time. This WI Trust certificate is not a derivative instrument, as at the time of acquisition, the certificate reflects a tradeable investment in a trust structure backed by cash and a Freddie Mac guarantee of cash flows in accordance with terms established at original acquisition. In addition to having no variation to the investor as a result of an underlying interest, there is no requirement on the investor to take delivery of a different investment. The ability to convert the WI Trust certificate to a K-Deal certificate is strictly an election to the investor and is not a requirement to receive the pass-through cash flows per the terms of the initial investment.

c. The WI Program, and resulting obligation of Freddie Mac, ultimately reflects an investment where the investor receives pass-through cash flows generated from mortgage loans acquired and held in trust. This investment dynamic is within the scope of SSAP No. 43R, paragraphs 2-4:

   2. Loan-backed securities are defined as securitized assets not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the payments received by the issuer from the underlying assets, including but not limited to pass-through securities, lease-backed securities, and equipment trust certificates.

   3. Structured securities are defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to payments received by the issuer from the underlying assets.

   4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer's obligation has been fully satisfied. The investor only has direct recourse to the issuer's assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing

the underlying assets. Some sponsors do guarantee the performance of the underlying assets.

d. The WI Program, and treatment as a SSAP No. 43R security, is consistent with the current guidance for TBA securities when an insurer intends to take possession of the resulting mortgage-backed security. A TBA security reflects the pre-purchase of mortgage-backed securities prior to the finalization of the security issuance. Pursuant to the annual statement instructions, TBA securities are to be reported on Schedule D-1: Long-Term Bonds unless the structure more closely resembles a derivative. This determination depends on how a company uses the TBA. (For example, if a company intended to assume the mortgage-backed security once issued, the TBA would be captured on Schedule D-1 at initial acquisition. If a reporting entity was to continually trade/roll TBA exposures, this would be more characteristics of a derivative and would be captured on Schedule DB as a derivative.)

INT 22-01 Consensus

5. The Statutory Accounting Principles (E) Working Group reached a consensus that investments in the WI Trust Program shall be captured in scope of SSAP No. 43R from initial acquisition.

6. If a reporting entity elects to convert WI Trust SPC securities into K-Deal SPC securities, the guidance in the Annual Statement Instructions, Schedule D, Part 3 and Part 4 shall be followed. Per that guidance, the transition from a WI Trust to a K-Deal shall not be reported as a disposal or acquisition. As the terms and cost basis of the SPC certificates would be identical, and the change would only reflect a CUSIP number change, a disposal and reacquisition shall not be recorded.

7. Excerpt from Annual Statement Instructions, Schedule D, Part 3 and 4:

> This schedule should include a detailed listing of all securities that were purchased/acquired during the current reporting year that are still owned as of the end of the current reporting year (amounts purchased and sold during the current reporting year are reported in detail on Schedule D, Part 5 and only in subtotal in Schedule D, Part 3). This should include all transactions that adjust the cost basis of the securities. Thus, it should not be used for allocations of TBAs to specific pools subsequent to initial recording in Schedule D, Part 3 or other situations such as CUSIP number changes.

INT 22-01 Status

8. No further discussion is planned.

Interpretation of the
Statutory Accounting Principles (E) Working Group

INT 22-02: Third Quarter 2022 through First Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax

INT 22-02 Dates Discussed

October 6, 2022; October 24, 2022, November 16, 2022; December 13, 2022

INT 22-02 References

Current:
SSAP No. 9—Subsequent Events
SSAP No. 101—Income Taxes

INT 22-02 Issue

Key Provisions of the Inflation Reduction Act

1. The Inflation Reduction Act (Act) was enacted on August 16, 2022, and included a new corporate alternative minimum tax (CAMT). The Act and the CAMT go into effect for tax years beginning after 2022. Reporting entities shall refer to the Act and the resulting regulations and other tax guidance to determine application, but a non-authoritative high-level summary based on information at the time of initial INT discussion regarding the CAMT is as follows:

   a. The CAMT is 15% of the corporation's "adjusted financial statement income" for the tax year, reduced by corporate alternative minimum foreign tax credit.

   b. The CAMT will only apply to "applicable corporations" (determined on an affiliated group basis) with average adjusted financial statement income in excess of $1 billion for the three prior tax years. This threshold is reduced to $100 million in the case of certain foreign-parented corporations. When a corporation becomes subject to the CAMT, it remains an applicable corporation for purposes of the CAMT, even if its average adjusted financial statement income is less than $1 billion, unless an exception applies.

   c. A corporation's adjusted financial statement income is the amount of net income or loss the corporation reports on its applicable financial statement. The income is adjusted for various purposes including certain adjustments in the case of consolidated returns or for foreign income.

   d. The Act includes references to the tax codes which provides a hierarchy for determining the "applicable financial statement." At a high level, the first choice is U.S. generally accepted accounting principles (GAAP) financial statements; the second choice is international financial reporting standards (IFRS) financial statements. If GAAP and IFRS financial statements are not available, the financial statements filed by the taxpayer with any other regulatory or government body is acceptable. If the taxpayer is part of an affiliated group of corporations filing a consolidated return, the adjustable financial statement income for the group considers the group's applicable financial statement.

   e. To determine its U.S. federal income tax liability, an applicable corporation will need to compute taxes under both systems—the regular tax system and the CAMT system. The CAMT is payable to the extent the tentative CAMT exceeds the regular corporate income

© 1999-2023 National Association of Insurance Commissioners

tax. Any CAMT paid is available indefinitely as a credit carryover that could reduce future regular tax in future years if the regular tax liability is in excess of CAMT tax liability.

f. The Act directs the Treasury to issue regulations and other guidance relate to implementing the CAMT, so several issues are pending detailed clarifications including clarifying the definition of an applicable corporation, and providing guidance on the starting point for, and adjustments to, adjusted financial statement income, as well as the handling of separate company tax returns when required under current tax law that are unique to the insurance industry.

Interpretation Issues

2. This interpretation is focused on addressing third quarter 2022 transition accounting and reporting aspects of the new CAMT. While most insurers will not be subject to the CAMT, for those that know that they are subject, and those that could be subject to the CAMT, there are a variety of reporting uncertainties, particularly regarding reporting for third quarter 2022.

3. The CAMT is effective for the tax years on or after 2023.

4. Both statutory accounting principles and U.S. GAAP require the effects of tax changes on deferred taxes, including the valuation allowance (future realizability of existing DTAs) in the period in which the legislation is enacted (third quarter 2022). *SSAP No. 101—Income Taxes,* paragraph 7.e. requires the statutory valuation allowance adjustment as a direct reduction in the gross DTA if, based on the weight of available evidence, it is more likely than not that some or all of the gross DTAs will not be realized. Gross DTA less the statutory valuation allowance results in adjusted gross DTAs. The statutory valuation allowance adjustment is not reported as a separate line in the statutory financial statements (it is an off-balance sheet item that reduces the gross DTAs). The statutory valuation allowance is disclosed.

5. The statutory accounting calculation for admissible DTAs is determined using adjusted gross DTAs (gross DTAs reduced by the valuation allowance). For statutory accounting, admittance of adjusted gross DTAs in SSAP No. 101 depends on a three-component calculation, for which the second step limits admittance of adjusted gross DTAs to those that are expected to be realized in a timeframe that does not exceed three years. The actual number of years permitted depends on specifics for each reporting entity (type and other information about the reporting entity), but the maximum timeframe is three years. The last step admits DTAs which can be offset by DTLs.

6. Guidance in *SSAP No. 9—Subsequent Events* requires consideration of Type I and Type II[1] subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued. For subsequent events identified after the statutory financial statements are filed (example, March 1), but before the audited financial statements are issued (example, June 1), reporting entities are generally required by their domestic state to amend their filed statutory financial statements to ensure that the statutory financial statements and the audited financial statements are consistent. Under this guidance, as additional information is made available on the impact of the Act, or information becomes available to update estimates and assessments, under existing statutory accounting guidance in SSAP No. 9, reporting entities would need to identify updated estimates as a Type I subsequent event in the audited financial statements.

[1] A Type I subsequent event relates to an event or transaction that provides additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. Under SSAP No. 9, entities shall recognize in the financial statements the effects of all material Type I subsequent events. A Type II subsequent event pertains to events or transactions that provide evidence to conditions that did not exist at the balance sheet date but arose after that date. Type II events are disclosed in the financial statements.

© 1999-2023 National Association of Insurance Commissioners

Issue 1 – Consideration of the Act for Third Quarter 2022 Financial Statements

7. During the period of enactment (third quarter 2022) reporting entities filing statutory financial statements would normally have to consider the applicability of the CAMT and if applicable, determine the impact on the statutory valuation allowance as well as assess DTAs for admissibility (e.g., realization timeframe). These elements will be collectively referred to as "calculations impacted by the Act" or "calculations impacted by the CAMT."

8. This interpretation will address the issue for what reporting entities are required to report or disclose regarding the calculations impacted by the CAMT for September 30, 2022, financial statements.

Issue 2 – Consideration of Subsequent Events for Third Quarter 2022 Financial Statements

9. SSAP No. 9 requires consideration of subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued.

10. For reporting entities that materially revise or establish calculations impacted by the CAMT subsequent to September 30, 2022 (including the statutory valuation allowance, the timing of determination of net admitted DTAs, and the determination of the applicability of the CAMT), this interpretation will address the extent a Type I or Type II subsequent event assessment is required for third quarter 2022 financial reporting.

INT 22-02 Discussion

11. The Statutory Accounting Principles (E) Working Group consensuses to the noted issues are included below.

Response: Issue 1 – Consideration of the Act for Third Quarter 2022 Financial Statements

12. Reporting entities that are aware they will be subject to the CAMT would normally reflect the effects of the Act on the calculations impacted by the CAMT if reasonably estimable for third quarter 2022. Because of the timing of the adoption of the Act and the considerable number of unknown variables for September 30, 2022, reporting, the Working Group has determined that a reasonable estimate is not determinable for third quarter 2022 interim financial statements for the calculations impacted by the CAMT.

13. Because reasonable estimates of calculations impacted by the CAMT are not determinable, reporting entities shall not recognize impacts related to CAMT for third quarter 2022 financial statements, but shall make the following disclosures regarding the CAMT and the Act:

a. The Act was enacted during the reporting period on August 16, 2022.

b. A statement regarding whether the reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined if it expects to be liable for CAMT in 2023. For example:

i. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it does not expect to be liable for CAMT in 2023.

ii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has not determined as of the reporting date if it will be liable

for CAMT in 2023. The third quarter 2022 financial statements do not include an estimated impact of the CAMT because a reasonable estimate cannot be made.

iii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it expects to be liable for CAMT in 2023. The third quarter 2022 financial statements do not include an estimated impact of the CAMT, because a reasonable estimate cannot be made.

Response: Issue 2 – Consideration of Subsequent Events for Third Quarter 2022 Financial Statements

14. For third quarter 2022 reporting, CAMT updated estimates or other calculations affected by the Act determined subsequent to third quarter statutory financial statement or filing date shall not be recognized as Type I subsequent events. Meaning, amended financial statements are not required to reflect updated estimates subsequent to the third quarter filing date and prior to the filing the third quarter financial statements. With the disclosure required under Issue 1, additional subsequent event disclosure (such as what would be required for Type II event) is not required.

15. Reporting entities shall be working in good faith to complete the accounting for the changes adopted under the Act.

INT 22-02 Status

16. The consensuses in this interpretation were adopted on October 24, 2022, to provide reporting guidance regarding the calculations impacted by the CAMT and provide limited-scope, limited-time exceptions to the valuation allowance and DTA calculations in response to legislation under SSAP No. 101 as well as Type I subsequent event requirements in SSAP No. 9 for September 30, 2022, statutory reporting. As detailed, the exceptions to SSAP No. 101 and SSAP No. 9 are effective for third quarter 2022.

17. On December 13, 2022, the Working Group adopted a consensus to extend this interpretation for December 31, 2022, and first quarter 2023 statutory financial statements. For application as of year-end 2022 and first quarter 2023:

a. Consistent with paragraphs 12 and 13, the Working Group has concluded that a reasonable estimate is not determinable for December 31, 2022, and March 31, 2023, therefore impacts related to the CAMT in the year-end 2022 and March 31, 2023, financial statements are not required.

b. The reporting entity shall include disclosures in paragraph 13 in the year-end 2022 and March 31, 2023, financial statements. In addition, the reporting entity shall disclose the following:

i. If, based on information regarding the projected adjusted financial statement income for 2023, the entity or the controlled group of corporations of which the reporting entity is a member has determined if it is an “applicable corporation” to determine if CAMT exceeds the regular federal income tax payable. That is, disclose if the reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined if average “adjusted financial statement income” is above the thresholds for 2023 tax year that they expect to be required to perform the CAMT calculations. This disclosure is about being applicable corporation, not if the entity is required to pay.

© 1999-2023 National Association of Insurance Commissioners

c. Consistent with paragraph 14, CAMT updated estimates or other calculations affected by the Act determined subsequent to filing the December 31, 2022, and March 31, 2023, financial statements shall not be recognized as Type I subsequent events.

d. For year-end 2022 financial statements, the subsequent event exception is expanded to encompass events that occur prior to the issuance of statutory financial statements as well as events that occur before the date the audited financial statements are issued, or available to be issued. This provision intends to prevent reporting entities from having to amend statutory financial statements from material Type I subsequent events as a result of updated information / estimates received after the reporting date of year-end 2022 statutory financial statements pertaining to the accounting for the enactment of the Act.

18. With the extension, this interpretation will be automatically nullified on June 15, 2023.

19. No further discussion is planned.

APPENDIX C
ACTUARIAL GUIDELINES

Introduction

The NAIC Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force, formerly known as the Life and Health Actuarial Task Force, have been asked on many occasions to assist a particular state insurance department in interpreting a statute dealing with an actuarial topic relative to an unusual policy form or situation not contemplated at the time of original drafting of a particular statute. The Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force, in developing an interpretation or guideline, must often consider the intent of the statute, the reasons for initially adopting the statute and the current situation. The Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force feel that for those situations which are sufficiently common to all states, that the publishing of actuarial guidelines on these topics would be beneficial to the regulatory officials in each state and would promote uniformity in regulation which is beneficial to everyone. To this end, the Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force have developed certain actuarial guidelines and will continue to do so as the need arises. The guidelines are not intended to be viewed as statutory revisions but merely a guide to be used in applying a statute to a specific circumstance.

Actuarial Guideline I

INTERPRETATION OF THE STANDARD VALUATION LAW WITH RESPECT TO THE VALUATION OF POLICIES WHOSE VALUATION NET PREMIUMS EXCEED THE ACTUAL GROSS PREMIUM COLLECTED

1. The purpose of this guideline (items 2 and 3 below) is to clarify the intent of the Standard Valuation Law.

2. The method of valuation promulgated by the model legislation adopted by the NAIC in December 1976 for the valuation of life insurance policies whose valuation net premiums exceeds the actual gross premiums collected is a change in method of reserve calculation and not a change in reserve standards.

3. For policies so valued the maximum permissible valuation interest rate and the applicable mortality basis specified is that in effect at the date of issue of such policies.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline II

RESERVE REQUIREMENTS WITH RESPECT TO INTEREST RATE GUIDELINES ON ACTIVE LIFE FUNDS HELD RELATIVE TO GROUP ANNUITY CONTRACTS

As part of the determination of the aggregate minimum group annuity reserves, a computation must be made of minimum reserves for deposit administration group annuity funds with interest rate guarantees including all such funds pertaining to possible purchase of group annuities whether such funds are held in a separate account or in a general account, whether shown as premiums, advance premiums, auxiliary funds, etc. and whether the liability is shown in Exhibit 8 or elsewhere. In making such computations, the procedure and minimum standards described below shall be applicable for the December 31 calendar year "y" valuation giving recognition to the dates deposits were made. Where appropriate and with the approval of the commissioner, recognition may be given to the extent and time of application of active life funds to purchase annuities, expense assessments against the funds, and excess of purchase price over minimum reserves. In no event shall the reserve be less than the transfer value, if any, of the fund. Approximate methods and averages may be employed with the approval of the commissioner.

To the extent that the application of these valuation procedures and standards would require a company to establish aggregate minimum reserves for group annuities and related funds in excess of reserves which it would not otherwise hold if these valuation procedures and standards did not apply, such company shall set up additional reserve liability shown in its general account or in a separate account, whether shown in Exhibit 8 or elsewhere.

The valuation procedures and standards specified in this guideline shall not be applicable to the extent that the valuation procedures and standards relating to reserves for deposit administration group annuity funds with interest rate guarantees (i.e., group annuity and guaranteed interest contracts) in the amendments to the Standard Valuation Law adopted by the National Association of Insurance Commissioners in December 1980, or in later NAIC amendments, have become applicable in a jurisdiction.

For funds receive:

(1) Prior to calendar year 1976, follow the procedure used at that time.

(2) In calendar year 1976 or later, follow the minimum standards described below:

(a) Contracts having no guaranteed interest rates in excess of 6% on future contributions to be received more than one year subsequent to the valuation date.

The minimum reserve shall be equal to the sum of the minimum reserves for funds attributable to contributions received in each calendar year.

Where V_y = Minimum reserve for funds attributable to contributes received in calendar year y.

V_y = $[C_y \text{ x } (1 + i_{gy})^n]/(1 + i_{py})^n$

C_y = Portion of guaranteed fund attributable to contributions received in calendar year y

i_{gy} = Interest rate guaranteed under the contract with respect to funds attributable to contributions received in calendar year y.

i_{py} = Lowest of:

(1) The net new money rate credited by the company on group annuity funds attributable to contributions received in calendar year y less .005; or

(2) i_{gy}; or

(3) i_{my}; where

(i) i_{my} = for calendar years y + 1 through y + 10, the values shown in the table of values of i_{my} distributed each year by the Central Office of the National Association of Insurance Commissioners;

(ii) i_{my} = for calendar years y + 11 and later, .060.

n = Number of guarantee years, and fractions thereof, remaining as of the December 31 valuation.

(b) Contracts having guaranteed interest rates in excess of 6% on future contributions to be received more than one year subsequent to the valuation date.

The same procedures as set forth under (a) above shall be used except that the deduction under (1) of i_{py} shall be .01 instead of .005 and i_{my} for calendar years y + 1 through y + 10 shall be reduced by .005.

Table of Values of i_{my}

(Effective for the December 31, 1977 Valuation)

Calendar Year y in Which Contributions Were Received	Value of i_{my} for Calendar Years y + 1 Through y + 10
1976	.089
1977	.087
1978	.081
1979	.084
1980	.100
1981	.124
1982	.145

Actuarial Guideline III

INTERPRETATION OF MINIMUM CASH SURRENDER BENEFIT UNDER STANDARD NONFORFEITURE LAW FOR INDIVIDUAL DEFERRED ANNUITIES

Section 6 of the model bill as written does not require that cash surrender benefits to be paid; but where they are paid, it requires that such cash surrender benefits grade into maturity value using an interest rate not more than one percent higher than the rate specified in the contract for accumulating net considerations. While this method will be suited for contracts having a sales load at issue, it may create a problem for contracts having surrender charges for cash surrender.

For contracts providing cash surrender values, the cash surrender value at maturity shall be at least equal to the minimum nonforfeiture amount at maturity as defined in Section 4. For purposes of calculating cash surrender values prior to maturity, the term “maturity value” in the Standard Nonforfeiture Law for Individual Deferred Annuities shall mean the cash surrender value at maturity.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline IV

ACTUARIAL INTERPRETATION REGARDING MINIMUM RESERVES FOR CERTAIN FORMS OF TERM LIFE INSURANCE

Scope

This interpretation recommended by the NAIC Technical Task Force to Review Valuation and Nonforfeiture Value Regulation deals only with term life insurance without cash values which the owner has the unilateral right to maintain in force until its stated expiry date, subject only to the payment of required premiums which vary (generally increasing on a per $1000 basis) during the term of the policy and under which premium rates are guaranteed to the stated final expiry. This interpretation applies only to such term plans valued on the 1958 CSO Mortality Table for the current term period.

Ten-year renewable term, five-year renewable term and one-year renewable term to a stated age with generally increasing premiums are titles commonly given to such policies, but this interpretation concerns itself with the actual coverage provided and is not controlled by the name given the coverage.

Background Information

Historically, reserves on one-year renewable term policies have consisted of a basic reserve for the current term period of one-half the cost of insurance for the current term period, plus a deficiency reserve, if any. The application of the Commissioners Reserve Valuation Method to determine basic reserves and deficiency reserves for such policies is subject to varying interpretations as noted in Walter O. Menge's paper, "Commissioners Reserve Valuation Method" written at the time of construction of the Standard Valuation Law.

> ...the adaptation of the commissioners reserve valuation method to fit policies for which the gross premium varies from year to year becomes a problem of generalization which, from a purely theoretical viewpoint, has an infinite number of possible solutions, some of which are practical and others of which are impractical.[1]

and

> For these reasons, it seems desirable not to formulate at this time any fixed rules for the valuation of these unusual types of policies and riders. The second paragraph of Section 4 of the Standard Valuation Law does not define the method of valuation of such contracts but requires that the method used, whatever it may be, must be consistent with that employed for uniform premium policies providing uniform insurance benefits, thus leaving open the possibility of a choice of several consistent methods.[2]

Acceptable Approaches

Two approaches to "consistent" reserves are suggested. The unitary policy approach considers such policies as variable premium policies up to the mandatory expiry date. Under this approach the valuation net premiums are a uniform percentage of gross premiums with the percentage fixed at issue date. If appropriate deficiency reserves are held, this approach has great appeal. However, it is susceptible to manipulation and illogical results. Reserves according to this approach should be acceptable only if the company can demonstrate that actual reserves, including deficiency reserves, for all renewable term business valued using this approach are of the same general magnitude as would occur using an approved method as defined below.

The other approach is to hold policy reserves for only the current period of years (not necessarily equal to the renewal period) during which the required premium per $1000 remains level, including deficiency reserves if appropriate. Additional reserves are established where net premiums, calculated on a basis

© 1999-2023 National Association of Insurance Commissioners

which reflects current mortality, exceed gross premiums for future periods of level premiums. Although not speaking directly to valuation problems in this instance, the Hooker Committee report said:

> The question was raised whether a policy providing term insurance for several years, automatically followed by permanent insurance, should be considered as two separate policies for the purpose of the Act. In the Committee's opinion, the respective portions may be treated separately if the portion providing permanent insurance takes the Company's regular rate at the then attained age. The rated age provision in the law appears to cover this point. However, the Committee draws a distinction between policies providing purely term insurance followed by permanent insurance at the company's published rate at the attained age of conversion, and the policies providing for an initial premium such that the increased premium at a subsequent duration differs from that for a new policy at the attained age. The latter case obviously constitutes a single policy to which the formula should be applied at the outset[3]

The second sentence of the above quotation lends support to the approach of separating successive periods of level premiums.

Under this interpretation, an approved method is any method which produces reserves greater than or equal to the sum of policy reserves, including deficiency reserves, for the current period of level premiums calculated on the basis of the applicable mortality and interest standards and reserve method specified in the Standard Valuation Law plus additional reserves calculated according to the following applied uniformly to all such policies.

> The present value of the excess of test premiums for future periods of level premiums for which gross premiums are guaranteed over the respective gross premiums, such test premiums and present values being calculated on the Commissioners' 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors and 4 1/2 percent interest. For each plan of insurance with separate rates for smokers and nonsmokers an insurer may substitute the 1980 CSO Smoker and Nonsmoker Mortality Tables with Ten-Year Select Mortality Factors for the Commissioners' 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors.

In case a future gross premium exceeds the test premium, the excess shall be considered zero and not a negative amount. This is in accordance with the principle of anticipating no future profits but providing for all future losses.

Reinsured Business

If reinsurance is assumed under an agreement in which the reinsurer reserves the right to raise premiums to a level at least as great as the net valuation premiums, the reinsurer is not required to establish deficiency reserves or additional reserves, and the ceding company is not permitted to take credit for such reserves on the portion of the business which is required.

If a reinsurance agreement guarantees future reinsurance premiums, the reinsurer should establish deficiency reserves and additional reserves as required by this interpretation for the period for which reinsurance premiums are guaranteed, and the ceding company may take credit for such reserves against its deficiency and additional reserves on the portion of the business which is reinsured to the extent permitted by law.

© 1999-2023 National Association of Insurance Commissioners

Adequacy of Reserves

Although the above alternative is acceptable as meeting the intent of the Standard Valuation Law, this does not in any way relieve the certifying actuary of the insurance company from exercising his own best judgment with respect to the appropriate reserves. In particular, the actuary should consider term contracts of this nature when he states his opinion that aggregate reserves "make a good and sufficient provision for all unmatured obligations of the company guaranteed under the terms of its policies" and "include provision for all actuarial reserves and related statement items which ought to be established."[4]

Actuarial Guideline V

INTERPRETATION REGARDING ACCEPTABLE APPROXIMATIONS FOR CONTINUOUS FUNCTIONS

Text

For reserves and values using continuous functions:

(a) $\overline{D}_x = \int_0^1 D_{x+t}\,dt$

By assuming that D_{x+t} is linear for $0<t<1$

$\overline{D}_x = (D_x + D_{x+1})/2.$

By assuming that the deaths in the year of age x to x+1 are uniformly distributed over that year of age,

$\overline{D}_x = [(\delta - d)/\delta^2]D_x + [(i-\delta)/\delta^2]D_{x+1}$

where: $d = iv = i/(1+i)$

δ = force of interest

i = interest rate

(b) $\overline{C}_x = \int_0^1 D_{x+t}\,\mu_{x+t}\,dt$

By assuming that deaths in the year of age x to x+1 are uniformly distributed over that year of age,

$\overline{C}_x = (i/\delta)C_x.$

By assuming that the total deaths are concentrated at the middle of the year of age,

$\overline{C}_x = (1+i)^{1/2}C_x$ or $(1+i/2)C_x.$

Background Material

The actuarial mathematics used in calculating net premiums, reserves, and nonforfeiture values for life insurance policies was first developed using two basic assumptions. These basic assumptions are: (1) that all death benefits are payable at the end of the policy year of death and (2) that all gross premiums due under the policy are payable annually at the beginning of the policy year. Actuarial values which are calculated under these two basic assumptions are described as being calculated using curtate functions. For any specific mortality table and interest rate, all the necessary actuarial values are uniquely defined for a policy using curtate functions.

The Standard Valuation Law and the Standard Nonforfeiture Law define minimum reserves and minimum nonforfeiture values, respectively, for life insurance policies using curtate functions. These two model laws originated in the early 1940s when almost all insurance companies were using the two basic assumptions inherent in the curtate functions. However, the wording of the model laws does not prohibit

© 1999-2023 National Association of Insurance Commissioners

insurance companies from using other assumptions if the resulting reserves and nonforfeiture values will always be at least as large as the minimum amounts defined in these laws.

Nowadays, many insurance companies do prefer to use alternative assumptions in computing the reserves and nonforfeiture values for their life insurance policies. These companies consider the alternative assumptions more appropriate for their policies. These alternative assumptions are: (1) that all death benefits are payable immediately upon death and (2) that all gross premiums due under the policy are payable continuously throughout the policy year.

Actuarial values which are calculated under both of the alternative assumptions, pertaining to death benefits and gross premiums, are described as being calculated using continuous functions. However, the underlying mathematics for continuous functions involves two integrals, representing the actuarial functions C_x and D_x, which must be approximated. In the past, there has been some disagreement among actuaries as to which approximations for the two integrals are the most suitable. Because of the use of different approximations for these two integrals, actuaries have obtained different numerical amounts for the necessary actuarial values using continuous functions even though these actuaries were working with the same mortality table and interest rate.

Some insurance companies prefer to calculate their reserves and nonforfeiture values assuming: (1) that death benefits are payable immediately upon death and (2) that all gross premiums due under the policy are payable annually at the beginning of the policy year. Thus, these companies are using the alternative assumption pertaining to death benefits and the basic assumption pertaining to gross premiums. The underlying mathematics for the combination of these two assumptions involves the integral C_x, which must be approximated. Thus, the use of these two assumptions together gives rise to essentially the same problem as using continuous functions.

Actuarial Guideline VI

INTERPRETATION REGARDING USE OF SINGLE LIFE OR JOINT LIFE MORTALITY TABLES 20 JUNE 1983

The Standard Valuation Law and the Standard Nonforfeiture Law for Life Insurance apply to policies which provide joint life insurance benefits as well as to policies which provide single life insurance benefits. References in these laws to plans such as "nineteen-year premium whole life" or "a whole life policy...with uniform premiums for the whole of life" are to be interpreted as references to such plans based on the same life status(es) as the policy for which minimum reserves or nonforfeiture benefits are being determined. For example, if the net level annual premium on the nineteen-year premium whole life plan is needed to calculate the minimum reserve for a policy which insures two lives and pays a death benefit at the first death, the premium is to be that for a policy which insures two lives and pays a benefit at the first death. The same principle would apply to a policy which insures only one life, or a policy which pays a benefit at the first death of more than two lives. The principle also applies to a policy that pays a benefit on the death of t-th life of n lives (t is greater than 1 but less than or equal to n).

Background Material

The great majority of life insurance policies provide single life insurance benefits. These policies identify one specific individual as the named insured. A death benefit under the basic policy is payable if this named insured dies while the policy is in force. Usually, there are no further gross premiums due on and after the death of this named insured. The basic policy may provide endowment benefits which are conditional on the survival of this named insured. The policy does not contain any provisions whereby the amount of the death benefits, endowment benefits or gross premiums are affected by the survival or nonsurvival of any other persons besides the insured, except possibly in the settlement option provisions or in the provisions of an attached term insurance rider which requires an extra premium.

In contrast to policies which provide single life insurance benefits, policies which provide joint life insurance benefits depend on the survival or nonsurvival of two or more named insureds. Until quite recently, virtually all policies which provided joint life insurance benefits were written on the whole life insurance plan. Such policies paid the face amount as a death benefit on the death of the first of the named insureds to die, provided that the policy was then in full force. No further gross premiums were due after the death, and the policy terminated upon payment of the death benefit.

Recently, there has been increasing interest in plans providing joint life insurance benefits, and insurance companies have developed a variety of new life insurance plans. For example, some policies provide for payment of a death benefit only on the death of the last to die of the named insureds.

The Standard Valuation Law and the Standard Nonforfeiture Law clearly apply to policies which provide joint life insurance benefits as well as to policies which provide single life insurance benefits. Both of these model laws define an "expense allowance" which is added to the present value of the future guaranteed insurance benefits under the policy, and which affects the modified premiums used for computing minimum reserves and the adjusted premiums used for computing minimum nonforfeiture values. A different amount of "expense allowance" is defined for nonforfeiture values than that defined for reserves, but the principle is much the same.

Insurance companies are allowed to select "expense allowances" for use in computing their reserves and nonforfeiture values up to the level of the "expense allowances" defined in these model laws. A higher "expense allowance" would produce reserves or nonforfeiture values which are less than the minimum defined in the model laws, and therefore state insurance departments cannot permit companies to use a higher amount as an "expense allowance."

The wording of these model laws is generally clear and precise in defining the "expense allowances" which are permitted for policies which provide single life benefits. However, the proper level of the

© 1999-2023 National Association of Insurance Commissioners

"expense allowances" for policies providing joint life insurance benefits is not so clear. The "expense allowance" defined in the Standard Valuation Law depends on the modified net premium for a policy on the 20-payment whole life insurance plan, and the "expense allowance" defined in the Standard Nonforfeiture Law depends on the adjusted premium for a policy on the ordinary life plan.

Actuaries have had different opinions as to how to apply the joint life insurance mortality tables in order to obtain the modified net premium and the adjusted premium required by model laws, so as to calculate the "expense allowances" which are appropriate under those laws. The question has become increasingly important with the development of the new plans providing joint life insurance benefits.

Actuarial Guideline VII

INTERPRETATION REGARDING CALCULATION OF EQUIVALENT LEVEL AMOUNTS

Text

Pure endowments will not be considered in the determination of equivalent level amounts for valuation and nonforfeiture purposes.

Background Material

The "Background Material" section relating to the previous actuarial guideline went into some detail concerning the "expense allowances" defined in the Standard Valuation Law and the Standard Nonforfeiture Law. See Actuarial Guideline VI, "Interpretation Regarding Use of Joint Life Insurance Tables."

This Actuarial Guideline VII is also concerned with the level of these "expense allowances" defined in these model laws. The most common plans of life insurance provide a level face amount as the death benefit, during the period the policy is in full force. These plans do not provide for any benefit which is payable as a pure endowment. (A pure endowment benefit pays a specified amount of pure endowment to the policyholder if the insured is still alive on the specified maturity date and if the policy is still in full force on this maturity date.) However, policies which provide for a death benefit which varies with the duration and policies which provide one or more endowment benefits can be legally written in most states.

The Standard Valuation Law and the Standard Nonforfeiture Law do apply to such policies with varying death benefits or pure endowment benefits. In fact, the wording of the model laws shows that considerable thought was given to the treatment of these kinds of policies. In the case of both model laws, the present value of future guaranteed benefits under the policy clearly includes both the death benefits and the "expense allowances" defined under these model laws.

The Standard Nonforfeiture Law includes a paragraph which reads as follows:

> In the case of a policy providing an amount of insurance varying with duration of the policy, the equivalent uniform amount thereof for the purpose of this Section shall be deemed to be the uniform amount of insurance provided by an otherwise similar policy, containing the same endowment benefit or benefits, if any, issued at the same age and for the same term, the amount of which does not vary with duration and the benefits under which have the same present value at the date of issue as the benefits under the policy; provided, however, that in the case of a policy providing a varying amount of insurance issued on the life of a child under age ten, the equivalent uniform amount may be computed as though the amount of insurance provided by the policy prior to the attainment of age ten were the amount provided by such policy at age ten.

While the wording of the above paragraph is rather complex, the meaning seems to be actuarially precise. The paragraph defines an "equivalent uniform amount" which affects the "expense allowance" defined in the law. The phrase "containing the same endowment benefit or benefits, if any" effectively means that pure endowment benefits are to be ignored in computing this "equivalent uniform amount." This "equivalent uniform amount" or "equivalent level amount" becomes a sort of weighted average of the death benefits provided by the policy, an average which is not affected in any way by the pure endowment benefits which may be provided by the policy.

The Standard Valuation Law is not nearly so clear on this point. It contains wording as follows:

> Reserves according to the Commissioners Reserve Valuation Method for (1) life insurance policies providing for a varying amount of insurance----shall be calculated by a method consistent with the principles of the preceding paragraph-----.

© 1999-2023 National Association of Insurance Commissioners

(Note that the quoted wording refers back to the preceding paragraph in the Standard Valuation Law. It does not intend to refer to the paragraph quoted from the Standard Nonforfeiture Law.)

Most actuaries have interpreted the Standard Valuation Law so as to use an "equivalent level amount" which is not affected by any pure endowments included in the policy. They would then use this "equivalent level amount" to calculate the "expense allowance" defined in the model law. This "equivalent level amount" is also a weighted average of the death benefits provided by the policy, in the same fashion as the "equivalent uniform amount" used in applying the Standard Nonforfeiture Law. Some insurance companies use the same "equivalent level amount," for the purpose of the Standard Valuation Law, as the "equivalent uniform amount" defined in the Standard Nonforfeiture Law. Other companies use a very similar calculation to obtain a special "equivalent level amount," for the purpose of the Standard Valuation Law, based only on the death benefits provided on and after the first policy anniversary.

Some actuaries have felt that the wording of the Standard Valuation Law permits an alternate calculation of the "equivalent level amount" which would be affected by pure endowment benefits. Such an "equivalent level amount" would be used to calculate an "expense allowance" under the Standard Valuation Law, even though the "equivalent level amount" no longer has the character of a weighted average of the death benefits provided by the policy.

The inclusion of the pure endowment benefits in the calculation of the "equivalent level amount" would affect the level of the "expense allowance" defined in the Standard Valuation Law, and therefore, it would affect the level of the minimum reserves required by the policy. Typically, the denominator of the fraction used in calculating the "equivalent level amount" would remain the same, but the numerator of this fraction would be increased because of this inclusion. Thus, the "equivalent level amount" itself and the resulting "expense allowance" defined in the Standard Valuation Law would also be increased with the inclusion. The end result of the inclusion would be lower minimum reserves at every duration.

If the amounts and maturity dates of the new pure endowment benefits were carefully selected, a considerable degree of reduction in the reserve factors would probably be possible.

This actuarial guideline would expressly prohibit including the pure endowment benefits in determining the "equivalent level amount" for either valuation or nonforfeiture purposes. As explained under "Background," the need for this actuarial guideline arises primarily for valuation purposes under the Standard Valuation Law. The wording of the Standard Nonforfeiture Law is sufficiently precise that this actuarial guideline is virtually a truism for the purpose of calculating nonforfeiture values.

The purpose of this actuarial guideline is to assist state insurance departments and insurance company actuaries by identifying a method of calculating "equivalent uniform amounts" and "expense allowances" which is not considered proper and which will not be accepted.

Actuarial Guideline VIII

THE VALUATION OF INDIVIDUAL SINGLE PREMIUM DEFERRED ANNUITIES

Text

With respect to those states which have enacted the 1976 amendments to the Standard Valuation Law; individual single premium deferred annuity reserves shall at least equal the greatest of any of the discounted values of all guaranteed future benefits including cash surrender values available after the date of valuation, such benefits discounted to the valuation date at the maximum permissible statutory interest rate. This method applies to all individual single premium deferred annuities which are subject to the provisions of the Standard Valuation Law in those states which have enacted the 1976 amendments. For those states which have not yet enacted the 1976 amendments this interpretation is a method of valuing individual single premium deferred annuities.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline IX

FORM CLASSIFICATION OF INDIVIDUAL SINGLE PREMIUM IMMEDIATE ANNUITIES FOR APPLICATION OF THE VALUATION AND NONFORFEITURE LAWS

Text

Solely for the purposes of the applicable Valuation and Nonforfeiture Laws, an individual single premium annuity shall be considered to be immediate, as opposed to deferred, provided:

1. The first annuity payment is due not more than thirteen months from the annuity issue date;

2. succeeding payments under the annuity, after the initial payment, are due at regular intervals no less frequently than annually;

3. in the case of a fixed benefit annuity, the total guaranteed payments due in any contract year are not greater than 115% of the total guaranteed payments due in the immediately preceding contract year. In the case of variable annuities and indexed annuities, the same characteristic would be required for the underlying pattern of payments, before adjustments which are made solely because of the performance of the separate account associated with a variable annuity or the changes in the associated index. (This characteristic is not intended to prevent or reduce any lawful nonguaranteed payments under the annuity which are in the nature of dividends or excess interest credits.)

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline IX–A

USE OF SUBSTANDARD ANNUITY MORTALITY TABLES IN VALUING IMPAIRED LIVES UNDER STRUCTURED SETTLEMENTS

Text

The Standard Valuation Law permits modifications of annuity mortality tables. Solely for the purpose of valuing:

1. Periodic benefits arising from settlements of various forms of claims pertaining to court settlements or out of court settlements from tort actions, such as arising from accidents or medical malpractice;

2. Settlements involving similar action such as workers' compensation; or

3. Settlements of long term disability claims where a temporary or life annuity has been used in lieu of continuing disability payments.

A substandard annuity mortality table may be used where the annuitant (or measuring life) is the injured party and there are relevant hospital records, treating physicians' reports, and/or independent medical evaluations from those medical doctors that are or have been involved in the care of the injured party, that have been used during the underwriting process and have been retained in the underwriting file of the company as proof of the individual's impaired health and shortened longevity.

In such case the insurer may modify the statutory annuity mortality table or tables cited in Section 3a of the Standard Valuation Law or in any regulation promulgated pursuant to such section so as to reflect the longevity based on a medical doctor's written evaluation or records as indicated above. The table may be modified by a percentage of standard mortality or by a specified number of extra deaths or by a combination thereof, provided that the mortality table so adjusted produces reserves that are at least as great as the minimum reserves indicated below. The percentage extra mortality or the specified number of extra deaths may vary by duration. A rated up age with the standard annuity table which is approximately equivalent to the actual age on the substandard annuity table may be used only if the procedure is modified to produce reserves that at each duration are at least as great as the minimum reserves indicated below.

The fact that a company has held minimum reserves as herein described shall in no way relieve the actuary from considering whether such reserves are adequate.

Minimum Reserves

The minimum reserves for applicable annuity contracts are the reserves obtained by making a constant addition to the mortality rate of the otherwise applicable valuation mortality table such that the expectation of life on the adjusted valuation table is greater than or equal to the average of the expectations of life indicated by or obtained from information given by the company's medical directors or underwriters during the underwriting and pricing process. The constant addition to the mortality table herein described shall be made as of the issue date and, once determined, held constant for the period of time that the contract remains in force. The addition of a constant to the valuation mortality rate produces a gradually declining percentage extra mortality such that reserves will grade into standard reserves at the end of the standard valuation mortality table thereby making the reserve more conservative (closer to standard) each year that the annuitant or measuring life lives.

For annuitants (measuring lives) other than the injured person in such settlements, the actual age and a standard annuity mortality table specified in Section 3A of the Standard Valuation Law or in any subsequent regulation promulgated thereto or any modification of such table which produces reserves at

© 1999-2023 National Association of Insurance Commissioners

least as high as those that would be produced under the standard table based on the actual age must be used.

For contracts not included in one of the three categories described in the first paragraph of the Guideline, standard reserves at the actual age shall be held.

Where an insurer uses a modified table with higher mortality rates or a rated age with an unmodified table for impaired lives under structured settlements, such insurer shall maintain records of actual to expected mortality to monitor the appropriateness of the substandard mortality.

Background

Structured settlements take their name from the fact that the settlements, which arise from tort action, including workers' compensation claims, are frequently structured to fit the circumstances of the injured party and/or the injured party's dependents. The injured party and/or dependents are apt to be much younger than normal retirement age such that the payments may well stretch out for 30, 40, and 50 years or more. Some payments are certain; others are contingent upon the measuring life being alive at the time of payment.

The volume of structured settlement business has boomed in recent years. Periodic and deferred payments have been encouraged and even mandated in some states as a means of controlling costs under malpractice claims and ensuring that the monies would be available in future years and not squandered as could happen with lump sum payments. Periodic and deferred payments may be a result of settlement of automobile claims, other accidents involving tort action, as well as workers' compensation claims and medical malpractice claims, where the individual(s) upon which the tort or other action was based may well be substandard.

At the time of the adoption of the NAIC 1980 revisions of the Standard Valuation Law (SVL), structured settlement business was relatively minor, and how to treat such business was not explicitly covered in the SVL.

The SVL allows for modification of the standard annuity mortality table specified in the minimum valuation standard. Any modification had traditionally been such as to result in higher reserves. If lower reserves were produced, it could render the minimum meaningless.

In case of structured settlements, the injured party may be highly substandard. If an insurance company had to set up reserves on a standard table, or on a basis that grades into standard mortality too rapidly, it could result in either an excessive price for the payments or it could result in such a level of surplus strain to the insurer. If the price reflects the actual expected mortality, that the coverage might not be offered at all. To encourage settlements involving periodic payments, it is recommended that, in the limited area involving the injured party, the table may be modified so as to reflect the expected mortality based on the relevant medical records, reports and/or evaluations described earlier.

Since this is an area with little experience, it is required that an insurer monitor the experience in order to be able to justify its choice of adjusted mortality assumption.

It is recognized that at issue the vast bulk of the liability normally pertains to payments that are certain and not contingent upon survival, since the vast majority of substandard contracts contain a certain period and most of the benefits either fall within that certain period or are guaranteed to be paid. It is also noted that the interest discount factor in the early durations is far more important than the mortality element. The selection of the interest discount factor is the subject of Guideline IX-B.

Because experience and methodology are still emerging for substandard annuities, it is expected that this whole subject will be reviewed again in the not too distant future, both as it applies to whether the criteria

© 1999-2023 National Association of Insurance Commissioners

herein established for settlement annuities are too conservative and also whether or how it might be acceptable to apply similar standards to substandard non-settlement annuities.

Effective Date

Where the requirements of this Guideline produce higher reserves than those calculated by an insurer, such insurer may continue its present procedures for the 1989 year end valuation, but must comply with this Guideline for 1990 and later issues for the 1990 and later valuations and for all of its business by the 1993 year end valuation.

Actuarial Guideline IX–B

CLARIFICATION OF METHODS UNDER STANDARD VALUATION LAW FOR INDIVIDUAL SINGLE PREMIUM IMMEDIATE ANNUITIES, ANY DEFERRED PAYMENTS ASSOCIATED THEREWITH, SOME DEFERRED ANNUITIES, AND STRUCTURED SETTLEMENTS CONTRACTS

Text

1. Solely for the purpose of applying the Standard Valuation Law, an annuity shall be considered as a series of payments not less frequently than annually over five years or more wherein the payments in any one contract or calendar year (at the option of the insurer) do not exceed 115% of the payments in the immediately preceding contract or calendar year. An immediate annuity is an annuity wherein the first payment begins in thirteen months or less from issue and a deferred annuity is an annuity wherein the first payment begins more than thirteen months after issue. A series of payments over less than five years otherwise qualifying as an annuity shall be considered equivalent to a lump sum. Any payments in a year in excess of 115% of the prior year's payments may be considered as a lump sum or equivalent thereto or may be considered as part of a new annuity depending on the circumstances. Some contracts may consist of combinations of annuities and of lump sums.

2. Where the deferred income payments are guaranteed and there are no cash settlement options, the reserve shall be based on the present value of the income payments based on an appropriate annuity mortality table and the valuation rate of interest in accordance with the Standard Valuation Law based on the issue year method and a guarantee duration equal to the number of years from the date of issue to the date the first payment begins.

3. At the time benefit payments begin, whether under single premium immediate annuity contracts, supplementary contracts providing for annuity payments or deferred annuity contracts (with the first payment deferred more than thirteen months), the insurer may use the valuation interest rate for the calendar year in which (a) the deferred contract was issued or (b) the consideration was received or (c) the payments begin, but must apply such procedure elected in a consistent manner

4. Individual structured settlements vary considerably in payment pattern and duration. These contracts may provide for both level and/or increasing periodic payment schedules, as well as lump sum benefit payments. In valuing individual structured settlements, a split of all or a portion of the lump sum payments from the annuity payments may be appropriate. Such splits should be at the discretion of the valuation actuary. However, splits not in accordance with (5)(a) or (5)(b) and with (6)(a) below would require valuation in accordance with procedure (6)(b) or (6)(c) below.

5. For a block of single premium immediate annuities, deferred annuities without cash settlement options, structured settlement business with the annuity portion having no cash settlement options, or other contracts having some portion with periodic payments without cash settlement options, issued in a given calendar year, the calendar year valuation interest rate appropriate for single premium immediate annuities where the first payment begins in thirteen months or less after issue and for Plan Type A contracts without cash settlement options based on the date to first payment where the first payment begins more than thirteen months after issue may be used provided:

    a. The guaranteed payment under each contract in the block due in any contract or calendar year (at the option of the insurer) after the first is not greater than 115% of the guaranteed payment due in the immediately preceding contract or calendar year, and once payments

begin such payments are not less frequent than annually and are payable over five years or more; or

b. The total guaranteed payments under all contracts combined included in the block due in any calendar year after the first are not greater than 110% of the total guaranteed payments due in the immediately preceding calendar year but only contracts having payments not less frequent than annually for at least five years shall be included.

The year to year comparison of benefits may be made before or after considering the effect of mortality or any certain period, but the actuary should be prepared to indicate which method is used.

6. If a block of immediate annuities, deferred annuities without cash settlement options, structured settlement contracts with the annuity portion having no cash settlement options, or other contracts having some portion with periodic payments without cash settlement options fails the test described in (5) above, then one of the following procedures must be used:

a. The block must be divided into components so that the contracts/payments satisfying the tests are included in one or more components and those not satisfying the tests are included in another component or other components. The Plan Type A valuation interest rate or rates may be used for the component or components which satisfies the test. The Plan Type A guarantee duration is the number of years from the date of issue or date of purchase to the date that the first annuity payment is due. The maximum valuation interest rate for any payment included in a component which does not satisfy the test shall be determined using the guarantee duration of the lump sum payment including installments over less than five years and on the assumption that the payment is made under a contract of Plan Type A. The Plan Type A guarantee duration of a lump sum payment is the number of years from the date of issue or date of purchase to the date that payment or the first installment payment is due. Year of issue valuation interest factors must be used. The actuary should be prepared to describe the components and justify the choice of valuation interest rate or rates for the component or components of the block which, if included, would cause the block to fail the test.

b. The reserves for each contract for each valuation year shall be the greater of the "level interest rate reserves" and of the "graded interest rate reserves." Graded interest rate reserve factors for each separate year of issue for all future payments of such year of issue, whether periodic or lump sum payments, shall be graded in a manner that produces reserves at least as great as the method described in the balance of this paragraph.

(i) Step one, calculate the present value of future benefits at issue for each contract using the appropriate level Plan Type A interest rate for contracts without cash settlement options for the guarantee duration corresponding to the number of years from the date of issue or date of purchase to the date that the first payment is due. Call this value PV (0), and call reserves at successive durations using the appropriate (level) Plan Type A interest rate "level interest rate reserves."

(ii) Step two, solve for "X percent" such that the present value of future benefits at issue for each contract is equal to PV (0) (calculated in Step one), using "X percent" as the valuation interest rate for the first twenty contract years after issue and thereafter the Type A interest rate for contracts without cash settlement options for guarantee durations of more than twenty years. However, "X percent" shall not be greater than 115% of the appropriate Type A interest rate in step one; where such limit is effective, the present value at issue will be greater than PV (0).

© 1999-2023 National Association of Insurance Commissioners

(iii) For each valuation year calculate "graded interest rate reserves" based on the assumption that the valuation interest rate during the first twenty contract years is "X percent" as calculated in step two and thereafter is the Plan Type A interest rate for contracts without cash settlement options for guarantee durations of more than twenty years.

(iv) In lieu of the individual contract valuation above, a group valuation may be made as for example on the assumption that all contracts issued during a given year are issued as a single contract on July 1, and once X% is determined for such year, it need not be redetermined; or

c. Any other method producing reserves at least as great as (a) or (b) and specifically approved by the Commissioner.

7. Where the requirements of this guideline produce higher reserves than those calculated by an insurer in good faith based on a more liberal interpretation, such insurer may continue its present procedures for the 1989 year end valuation but must comply with this guideline for 1990 and later issues for the 1990 and later year end valuations and for all its inforce, subject to the 1980 amendments to the NAIC Model Standard Valuation Law, by the 1993 year-end valuation.

8. The examiner should request that the insurer demonstrate that the assets are sufficient for the liabilities by cash flow projections of the supporting assets and the liabilities under various interest scenarios, in particular for declining interest rates.

9. The examiner should note that date of acquisition and the yields of the supporting assets and compare such with the date of issue of the structured settlements and the valuation interest rates. If such differ, the examiner may request a new valuation using the date of acquisition of the majority of the supporting assets as the date of issue of remaining payments. This is especially important where, for example, an insurer during 1986 exchanged high yielding assets originally acquired in 1982 for low yielding assets acquired in 1986. Also, many of the high yielding assets may have been called during 1986. Also, due to the long-term nature, often as many as 30, 40, and 50 years, the increasing nature of the payments and the lump sum payments, the value of future payments with a single fixed interest rate may actually increase after issue. The result is that there is a large reinvestment risk and large liabilities may exist after all the original supporting investments have matured and new investments acquired.

10. The procedures above are interim procedures pending a reconstitution of the valuation laws.

Background

Current Actuarial Guideline IX provides guidance for determining what is an immediate annuity but it does not advise how contracts failing to meet the test should be treated for valuation purposes. Three examples of failing contracts are: (1) annual payments increasing 120% each year, (2) level payments payable biannually, (3) level annual payments with extra lump sum payments equal to four times a regular annual payment payable every five years. These examples are not practical examples for annuity payments beginning at normal retirement ages such as 60, 65 or 70 under individual or group retirement programs, but combinations of irregular payments and increasing regular payments are practical under structured settlements.

At the time of the adoption of the NAIC 1980 revisions of the Standard Valuation Law, structured settlement business was relatively minor, and how to treat such business was not explicitly covered in the SVL. The volume of structured settlement business has boomed in recent years. Periodic and deferred payout was encouraged and even mandated in some states as a means of controlling costs under malpractice claims and ensuring that the monies would be available in future years and not squandered as

could happen with lump sum payments. Periodic and deferred payments may result in settlement on automobile claims, other accidents involving tort action as well as medical malpractice claims and workers' compensation claims such that the individuals may well be substandard.

Where payments are contingent on the individual being alive, under a related guideline, substandard annuity mortality tables may be recognized for valuation based on a written evaluation of the injured individual's longevity by a medical doctor. For all other annuitants, substandard annuity mortality tables should not be recognized as such is contrary to the establishment of minimum reserves for such annuitants. However, the vast bulk of reserves for structured settlements is based on certain payments, such that the valuation interest rate is by far the more important factor. This guideline covers valuation procedures and valuation interest rates leaving application of substandard annuity mortality table to Guideline IX-A.

Structured settlements take their name from the fact that the settlements are frequently structured to fit the circumstances of the injured party and/or the injured party's dependents. The injured party and/or dependents are apt to be much younger than normal retirement age such that the payments may well stretch out for 30, 40, and 50 years or more. Lump sum payments may be scheduled to coincide with particular events such as college for dependent children.

The 1980 changes in the SVL initiated a set of valuation interest factors for each year of issue so as to roughly have the factor correspond to the investment rates at the time at which monies are received and invested. In 1980 the emphasis in the dynamic valuation interest rate was on the valuation interest rates for group guaranteed interest contracts (GIC). Group GIC's generally have had a guaranteed interest period of 5-10 years with a lump sum available at the end of the period. Any renewal of an interest guarantee and period is generally considered as a new issue for valuation purposes, whether the year of issue or the change in fund method is used.

Most retirement annuities under individual or group programs had level or slightly increasing payments with payments beginning at age 60, 65 or 70, such that for annuities in course of payments, there should be little reinvestment risk and reserves should decrease.

There is a large reinvestment risk in case of structured settlements. There is also a risk that the original assets may be called or exchanged for lower yielding assets.

Guideline IX-B would split up the contract and treat that portion of the payments meeting the test as an annuity and any excess payments separately for purposes of determining the appropriate valuation interest factors based on the duration to first payment of such excess. The guideline also offers a new dual interest procedure as an alternative to splitting the payments.

The guideline recognizes that the use of the statutory formulae with the rates determined based on the date of purchase may be inappropriate where the assets have been exchanged or acquired in later years. It is suggested that the examiner may wish to adjust the issue year for selection of the valuation interest factors so as to make them consistent with the date of investment.

It is recognized that these procedures for determining statutory formulae reserves are only temporary while the Special Committee on Valuation is developing a new statutory formula to go along with a valuation of liabilities based on the supporting assets and the actuary's best judgment to account for reasonable deviations.

Actuarial Guideline IX–C

USE OF SUBSTANDARD ANNUITY MORTALITY TABLES IN VALUING IMPAIRED LIVES UNDER INDIVIDUAL SINGLE PREMIUM IMMEDIATE ANNUITIES

The NAIC model Standard Valuation Law, Section 4a, A(2), permits modifications of annuity mortality tables approved by the commissioner. In states which have adopted this or similar Standard Valuation Law language, this guideline provides for modifications of annuity mortality tables solely for the purpose of valuing:

> Individual single premium immediate annuities not covered by Guideline IX-A, but for which medical records indicate the expectation of life has been reduced and for which the premium charged reflects such reduction,

A substandard annuity mortality table may be used where the annuitant (or measuring life) has relevant hospital records, treating physicians' reports, and/or independent medical evaluations from those medical doctors that have been used during the underwriting process and have been retained in the underwriting file of the company as proof of the individual's impaired health and shortened longevity. The medical assessment must support at least a 25% reduction in the expectation of life (based on either the current valuation table or the company's pricing table, consistently applied) compared to a normally healthy individual at the same age and gender.

In such case the insurer may modify the statutory annuity mortality table or tables cited in Section 3a of the Standard Valuation Law or in any regulation promulgated pursuant to such section so as to reflect the longevity based on a medical doctor's written evaluation or records as indicated above. The table may be modified by a percentage of standard mortality or by a specified number of extra deaths or by a combination thereof, provided that the mortality table so adjusted produces reserves that are at least as great as the minimum reserves indicated below. The percentage extra mortality or the specified number of extra deaths may vary by duration. A rated up age with the standard annuity table which is approximately equivalent to the actual age on the substandard annuity table may be used only if the procedure is modified to produce reserves that at each duration are at least as great as the minimum reserves indicated below.

The fact that a company has held minimum reserves as herein described shall in no way relieve the actuary from considering whether such reserves are adequate.

Minimum Reserves

The minimum reserves for applicable annuity contracts are the reserves obtained by making a constant addition to the mortality rate of the otherwise applicable valuation mortality table. The amount of the constant addition is determined as follows:

1) Calculate the present value of future benefits at issue for each contract using a rated up age, the applicable valuation mortality table, and the appropriate level Plan Type A interest rate for contracts without cash settlement options. The rated up age must produce an expectation of life under this valuation mortality table whose percent reduction from the actual age expectation of life under this table is not greater than the percent reduction in the expectation of life, supported by the medical assessment above, which qualified the contract to utilize the mortality adjustments provided by this actuarial guideline.

2) Solve for the constant addition to the true age mortality rates such that the present value of future benefits at issue is equal to or greater than the present value obtained in 1). The base mortality table and the valuation interest rate shall be the same as used in 1).

© 1999-2023 National Association of Insurance Commissioners

The constant addition to the mortality table herein described shall be made as of the issue date and, once determined, held constant for the period of time that the contract remains in force. The addition of a constant to the valuation mortality rate produces a gradually declining percentage extra mortality such that reserves will grade into standard reserves at the end of the standard valuation mortality table thereby making the reserve more conservative (closer to standard) each year that the annuitant or measuring life lives.

Where an insurer uses a modified table with higher mortality rates or a rated age with an unmodified table for impaired lives under individual single premium immediate annuities, such insurer shall maintain records of actual to expected mortality to monitor the appropriateness of the substandard mortality. The appointed actuary must comment on the appropriateness of the substandard mortality and report any material deviations. Such comments and report should be provided in the actuarial memorandum which supports the annual actuarial opinion.

Background

Guideline IX-A provides a methodology to allow less than a standard reserve to be held at issue for certain kinds of pay-out annuities and for grading the reserve toward standard reserves over the remaining lifetime of the annuitant using the "constant extra death" method (CED). The longer the annuitant lives, the closer reserves get to standard reserves.

Guideline IX-A says, "Because experience and methodology are still emerging for substandard annuities, it is expected that this whole subject will be reviewed again in the not too distant future, both as it applies to whether the criteria herein established for settlement annuities are too conservative and also whether or how it might be acceptable to apply similar standards to substandard non-settlement annuities".

It has now been almost 11 years since Guideline IX-A was adopted and it appears the industry has done a responsible job of underwriting and valuing substandard annuities covered by Guideline IX-A. Structured settlement mortality studies done by the Society of Actuaries bear this out. (See the 1995-1996 Reports of the Society of Actuaries, starting on page 395.)

Guideline IX-A has been successful in allowing structured settlements to be priced fairly and has benefited injured parties and society in general. There is no evidence that there has been any strain to insurance companies from under reserving due to Guideline IX-A.

For some time, a number of companies have had a significant and increasing opportunity to provide immediate annuities at less than a standard price to a growing number of potential clients not covered by Guideline IX-A. However, the potential price reductions that the industry can give consumers, perhaps 15% to 25% of the single premium on some cases, depending on the benefit stream desired, are greatly reduced because of the current requirement to hold standard reserves. The initial statutory strain (loss) on highly substandard cases can easily exceed 50% or 100% of the single premium, which requires a significantly increased price to the customer over what could be charged if less than standard reserves were permitted. With Guideline IX-A type reserves, the strain might be reduced to something closer to 10%.

The population is aging and the need for fairly priced single premium immediate annuity benefits is substantially increasing. Forcing companies to hold standard reserves results in many people being overcharged (for the extra cost of capital associated with the higher reserve) at a time in their life when they may have the greatest need.

Since this is an area with little experience, it is required that an insurer monitor the experience in order to be able to justify its choice of an adjusted mortality assumption. It is recognized that the initial liability pertains to a large extent to payments that are certain and not contingent upon survival. This is because the majority of non-settlement substandard contracts contain a certain period and most of the benefits fall

© 1999-2023 National Association of Insurance Commissioners

within that certain period. It is also noted that the interest discount factor in the early durations is far more important than the mortality element. The selection of the interest discount factor is the subject of Guideline IX-B.

Because the standard annuity valuation table is an aggregate table, there is some concern that carving out the substandard lives may cause the table to be inadequate for the remaining lives. As a result, it is recommended that an individual life have a significant impairment before use of a substandard valuation table is allowed. For this purpose, significant has been defined as a medical condition that reduces the expectation of life of the individual by at least 25% compared to a normal, healthy life. The reasoning is that not very many lives that are significantly substandard (i.e. greater than a 25% reduction in the expectation of life) are contained in the underlying mortality of individual non-settlement annuity mortality tables. Thus, treating them separately will not diminish the adequacy of the standard table. For convenience, either the applicable individual annuity valuation table or the company's pricing table can be used to measure the change in the expectation of life.

A public policy issue was discussed wherein this actuarial guideline could be viewed as rewarding unhealthy behavior. However, this actuarial guideline would benefit others who were simply unfortunate to be in an impaired condition. It was noted that it would be difficult or impossible to carve out those with intentionally unhealthy behavior. Ultimately it was believed that this actuarial guideline provides for reasonable public policy to facilitate lower single premiums for substandard annuitants.

Effective Date

This Guideline will be effective for contracts issued on or after January 1, 2001.

Actuarial Guideline X

GUIDELINE FOR INTERPRETATION OF NAIC STANDARD NONFORFEITURE LAW FOR INDIVIDUAL DEFERRED ANNUITIES

Text

For contracts which provide cash surrender benefits, the NAIC Model Law prescribes a basis for determination of minimum cash surrender benefits. That law does not require that a company grant additional amounts in excess of the amounts guaranteed in the contract, either in the form of excess interest credits or otherwise. When such additional amounts have been credited to the contract, the question of how the Model Law applies to such amounts must be considered.

Under one interpretation the portion of the maturity values which would arise from such amounts may be discounted to the date of surrender at an interest rate 1% higher than the rate specified in the contract for accumulating such amounts. This interpretation would permit a surrender charge against such amounts on the same basis as the surrender charge which may be applied to the contractually guaranteed portion of the interest credited to the contract.

Under another interpretation such amounts could not be treated as providing a portion of the maturity value and, therefore, would be included in the phrase "any additional amounts credited by the company to the contract." This interpretation would require that the cash surrender value be increased by 100% of the accrued value of such amounts.

By providing for a surrender charge to be made in determining the minimum cash surrender value, the Model Law enables a company to provide for recovery of all or part of any (1) excess first year expenses not yet recovered, and (2) potential investment losses at surrender. The reason for permitting surrender charges to be made against accumulated amounts of contractually guaranteed interest are equally valid reasons for permitting surrender charges against any non-guaranteed interest credited. If such surrender charges were not permitted, companies offering such contracts may be discouraged from crediting as much additional interest as they might if the additional interest were to contribute to the minimum cash surrender value in the same manner as do the interest amounts derived from the rates guaranteed in the contract.

In view of the above considerations, the following guidelines are recommended:

I. Treatment of Amounts of Excess Interest Credited to Deferred Annuity Contracts

The NAIC Standard Nonforfeiture Law for Individual Deferred Annuities shall be interpreted to permit the portion of the maturity value which would arise from the amounts of interest credited in excess of the minimum rates guaranteed in the contract to be discounted to the date of surrender at an interest rate 1% higher than the rate specified in the contract for accumulating such amounts, provided such excess interest is declared prior to the period for which it is to be effective, and provided such excess interest accrues over the effective period. Amounts of excess interest treated in accordance with the above interpretation shall not be included by the phrase "additional amounts credited by the company to the contract" in Section 6 of the Model Law.

II. Treatment of Dividends Credited to Deferred Annuity Contracts

No single rule can be given for the treatment of dividends credited to deferred annuity contracts. The contractual wording of the applicable dividend option must be taken into account together with the appropriate provisions of the NAIC Standard Nonforfeiture Law for Individual Deferred Annuities.

If the dividend option in effect provides that dividends be left on deposit at interest, without any further qualification, then the cash surrender value should be increased by the full accumulated amount. In this

© 1999-2023 National Association of Insurance Commissioners

case, the phrase "increased by any additional amounts credited by the company to the contract" applies and no surrender charge may be made.

In other cases, the dividends may be added, directly or indirectly, to the contractual value and made subject to the surrender charge provision. This would be the case when dividends are applied to purchase additional paid-up benefits or applied as premiums.

Contracts may contain other provisions or variations of these provisions. In such cases, the terms of the contract and the provision of the NAIC Standard Nonforfeiture Law for Individual Deferred Annuities should be taken into account.

Actuarial Guideline XI

EFFECT OF AN EARLY ELECTION BY AN INSURANCE COMPANY OF AN OPERATIVE DATE UNDER SECTION 5-C OF THE STANDARD NONFORFEITURE LAW FOR LIFE INSURANCE

Section 5-C of the Standard Nonforfeiture Law for Life Insurance May be Made Operational for One or More Plans at a Time Provided That:

A. Sales are discontinued in this state on all like plans using rates and values generated by past requirements;

B. Sales are discontinued in all other states which have enacted the new legislation on all like plans using rates and values generated by past standards, provided the state of sale has allowed changes to 1980 requirements on a plan-by-plan basis;

C. Once the new law has been made operational for one plan, the new law shall be operational for all subsequent new plans of the same generic form to be marketed in this state unless the insurer can demonstrate to the Commissioner's satisfaction the need to continue the prior set of requirements;

"Like plans," as mentioned in Sections A and B, refers to plans with the same benefits, including cash values, and with the same premium paying period and pattern of premiums;

"Generic form," as mentioned in Section C, refers to generic groups, such as ordinary vs. group, term vs. permanent, flexible cash value vs. fixed cash value, separate account vs. fixed account.

Actuarial Guideline XIII

GUIDELINE CONCERNING THE COMMISSIONERS' ANNUITY RESERVE VALUATION METHOD

Preamble

At its December 1976 meeting, the NAIC adopted the Commissioners' Annuity Reserve Valuation Method (CARVM) and incorporated it in its Model Standard Valuation Law. CARVM is now included in the laws of nearly all of the states. Differences in interpretation of CARVM have developed in practice, particularly on whether and under what conditions surrender charges may be taken into account in determining CARVM reserves. This guideline is intended to clarify which surrender charge factors may be taken into account and which are to be disregarded under CARVM.

Reserves according to CARVM depend in part upon the present values of "future guaranteed benefits, including guaranteed nonforfeiture benefits." It has always been recognized that this phrase, as used in the NAIC Model Standard Valuation Law, includes cash surrender values based on contractual guarantees after reduction for any contractual surrender charges available to the insurer. This is illustrated in the Proceedings. See *Proceedings of the National Association of Insurance Commissioners*, Vol. 1 (1977), 538-45.

Guideline

The phrase, "future guaranteed benefits, including guaranteed nonforfeiture benefits," as used in CARVM include the cash surrender values based on contractual guarantees after reduction for any surrender charges available under the contract.

In recent years, annuity contracts with contingent surrender charges have become more prevalent. For example, a contract may provide the option to surrender without surrender charge if the rate at which interest is credited falls below a specified rate, referred to in this guideline as the "bail-out" rate. Contingent surrender charges may not be available upon cash surrender at future contract anniversaries, and it is not consistent with the conservative nature of CARVM to reduce the value of future guaranteed benefits on account of such contingent surrender charges.

The value of future guaranteed benefits under CARVM may not be reduced by contingent surrender charges which may not be available upon cash surrender.

There may be some contracts with contingent surrender charges with bail-out rates which are so low that it would not be contrary to the conservative intent of CARVM to treat such surrender charges as available. The calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years, which is used in the Standard Valuation Law in connection with the definition of guaranteed duration for most annuities and guaranteed interest contracts, provides an appropriate measure for this purpose. Whether or not such surrender charges should be treated as available should be determined as of December 31, 1984 for contracts in force at the date and as of the date of issue for contracts subsequently issued.

For contracts issued on and after January 1, 1985, contingent surrender charges with bail-out rates less than or equal to the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years issued in the same year may be treated as available. For contracts issued prior to January 1, 1985, contingent surrender charges with bail-out rates less than or equal to 6.00% (the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years issued in 1984) may be treated as available.

There are some contracts with contingent surrender charges with bail-out rates which are a function of an external index whose future values are not known. Judgment is required to determine whether or not such

© 1999-2023 National Association of Insurance Commissioners

surrender charges may be treated as available. Comparison to the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years may be useful.

For contracts with contingent surrender charges with bail-out rates which are a function of an external index, a judgment as to the availability of the surrender charges may be made by comparing historical values of the function with corresponding values of the calendar year statutory valuation interest rate for life insurance with guarantee duration in excess of twenty years. If the values of the function have generally been less than or equal to the valuation rates, then the surrender charges may be treated as available.

For the purpose of this guideline, in the case of a variable annuity that offers the policyholder a choice of multiple investment options, a surrender charge that may be waived for all the accounts of the contract by reference to one or more of the accounts will be treated as a contingent surrender charge that may not be available upon cash surrender with respect to the entire contract. If no surrender charge is imposed on transfers among the accounts, and the surrender charge may be waived for one account, provided the formula for the availability of the waiver is set at the date of issuance, then the surrender charge will be treated as a contingent surrender charge that may not be available upon cash surrender with respect to the entire contract.

Since this guideline is intended to apply to all contracts in force that are subject to CARVM, its application may work an undue hardship on some insurers who have, on the basis of a good faith interpretation of CARVM, held reserves less than required by this guideline. In cases of severe hardship, state insurance commissioners may wish to permit insurers to conform on a gradual basis.

Actuarial Guideline XIV

SURVEILLANCE PROCEDURE FOR REVIEW OF THE ACTUARIAL OPINION FOR LIFE AND HEALTH INSURERS

To assist regulators in their responsibility for surveillance of life and health insurers, the NAIC adopts the following interim procedure for use of the Actuarial Opinion to be used until such time as model legislation and/or regulations are adopted and become effective.

1. The regulator should accept Actuarial Opinions only from qualified actuaries. The educational and experience standards established by the American Academy of Actuaries for this purpose offers evidence that an individual is so qualified.

2. The regulator should determine if an opinion is qualified in any respect, or omits items from the outline provided in the Instructions to the Blank. If so, a follow up with the actuary rendering the opinion as to the nature of the qualification or omission is appropriate if the opinion does not provide a satisfactory explanation.

3. The regulator should examine the circumstances where the actuary rendering the opinion differs from the prior actuary, and ascertain the reasons for the change. In some cases the regulator may wish to discuss the change with the current and prior actuaries.

4. The regulator should, if desired, obtain for reviews, documentation supporting the Actuarial Opinion. Except in matters of professional discipline, the regulator's use of these documents should be considered within the department's guidelines for confidential information.

5. The regulator may require that the actuary furnish an Actuarial Report supporting the Actuarial Opinion. The report should conform to the standards of the American Academy of Actuaries with respect to Actuarial Reports (Opinion 3 to the Guides to Professional Conduct). It should document the methodology and approach to assumptions used in making the opinions and, additionally, provide specific details in reference to items in 6 through 10 below if such details are required by the regulator.

6. In the Actuarial Report, the actuary providing the opinion should refer to the NAIC Insurance Regulatory Information System (IRIS) ratios, point out ratio values outside the prior year's range of usual values, and provide explanations for those which are significant.

7. In the Actuarial Report, the actuary providing the opinion should make specific reference to the extent to which the good and sufficient analysis considered all the unmatured obligations of the company, in aggregate, guaranteed under the terms of its policies. (Note: To the extent that the insurer declares guarantees more favorable than those in the policy, such declared guarantees shall be used in the calculation of all the unmatured obligations.)

8. In the Actuarial Report, the actuary providing the opinion should make specific reference as to whether the good and sufficient analysis, with respect to annuities and other products with benefits (guaranteed or non-guaranteed) sensitive to interest rates, considered future insurance and investment cash flows as they would emerge under a reasonable range of future interest rate scenarios, and, if so, what those considerations were.

9. In the Actuarial Report, the actuary providing the opinion should make specific reference as to whether the good and sufficient analysis considered the inter-relationships of assumptions with respect to guaranteed benefit payments, future expenses, policyowner dividends, and post-issue premium or benefit adjustments, especially among persistency, mortality, morbidity, inflation, and interest rates, and, if so, what those consideration were.

© 1999-2023 National Association of Insurance Commissioners

10. In the Actuarial Report, the actuary providing the opinion should document the extent to which the opinion is influenced by a continuing business assumption, and, if the impact is material, comment on the company's plan of operations with regard to this assumption as it affects assumed expenses and interest rates, and future reserve requirements.

11. A review of the documentation obtained in (4) above, undertaken or sponsored by the regulator, should:

    a. Be done by a qualified reviewer;

    b. Emphasize an examination of the appropriateness of the actuary's work process, methodology, and approach to assumptions.

12. If at any time during the review, the regulator requires more information deemed to be material to the development of the opinion, the company would be expected to comply with requests for such information.

Actuarial Guideline XV

ILLUSTRATIONS GUIDELINE FOR VARIABLE LIFE INSURANCE MODEL REGULATION

Any sales illustration shown or furnished in connection with the sale of variable life insurance must conform with the following requirements except that these requirements only apply to the variable portion of contracts with fixed and variable funding options. Item 9 specifically pertains to variable life insurance contracts offering both fixed and variable funding options.

1. The hypothetical interest rates used to illustrate accumulated policy values must be an annual effective gross rate after brokerage expenses and prior to any deduction for taxes, expenses and contract charges.

2. If illustrations of accumulated policy values are shown then for the highest interest rate used, one illustration must be based solely upon guarantees contained in the policy contract being illustrated. (For example, if the illustration includes the effect of mortality charges and administrative charges which are below the guaranteed maximums for such charges, an illustration must be prepared which involves the effect of the maximum charges.)
