3. Except for illustrations contained in the prospectus, the pattern of premium payments used in an illustration should be the initial pattern requested by the proposed policyholder at inception or upon changes in face amount requested by the policyholder.

4. If the illustrated policy contract provides for a variety of investment options, the illustration may either use an asset charge which is reasonably representative or use the asset charge of a particular option. The illustration should clearly identify the asset charge and either label it "hypothetical" or identify the fund.

5. The illustration must disclose the transaction charges which will be levied against the contract because of transactions requested in accordance with rights and privileges specified in the policy contract. Any charge for the exercise of a right or privilege upon which the illustration is based must be reflected in the illustrated values. The nature of any other such charges must be disclosed in a clear statement accompanying such illustrations. (For example, a charge to switch from one investment option or death benefit option to another.)

6. A clear statement must be made following the Table of Illustrated Accumulated Policy Values that use of hypothetical investment results does not in any way represent actual results or suggest that such results will be achieved and must indicate that the policy values which actually arise will differ from those shown whenever the actual investment results differ from the hypothetical rates illustrated. Assumptions upon which illustrations are based must be clearly disclosed.

7. Any sales illustration to a prospective policyholder must reflect the policy being presented accurately. Misleading statements or captions or other misrepresentations are prohibited.

8. The requested sales illustration must be printed clearly and legibly on hard paper copy. An illustration displayed on a computer screen may be used in addition to, but not as a substitute for, hard paper copy.

9. In connection with variable life insurance contracts offering both fixed and variable funding options:

    a. An illustration of the variable funding option must comply with these guidelines;

b. If an illustration of the fixed funding option is shown, accumulated policy values must be shown on the basis of guaranteed rates. One or more additional rates may also be shown but such rates may not exceed current rates;

c. A summary illustration may be given in which results from comparable illustrated and hypothetical interest rates are combined. Such summary must cross-reference to the accompanying separate illustrations of the fixed and variable funding options.

10. Nothing herein shall prohibit the distribution to the prospective policyholder of illustrations in addition to those required by Article VII of the NAIC Model Variable Life Insurance Regulation provided that, except for Item 3 which shall only apply to required illustrations under Article VII, such additional illustrations comply with the standards set forth herein.

Actuarial Guideline XVI

CALCULATION OF CRVM RESERVES ON SELECT MORTALITY AND/OR SPLIT INTEREST

Text

When CRVM reserves are being calculated, it is necessary to determine the value of ${}_{19}P_{x+1}$. The Standard Valuation Law permits the use of Select Mortality Factors with the 1980 CSO Table. While the maximum valuation interest rate for any policy is level for all durations, the law permits the use of other interest rates as long as the resulting reserves are not less than those according to the minimum standard. Thus, it is possible to calculate reserves by the CRVM method using split interest rates, i.e., interest rates that are not the same at all durations.

When either Select Mortality Factors or split interest are involved, the "net level annual premium on the nineteen-year premium whole life plan" is the renewal net level premium for a 20-payment life valued on the full preliminary term basis. That is ${}_{19}P_{[x]+1}$ should be used instead of, for example, ${}_{19}P_{[x+1]}$.

Background Information

The Report of the Society of Actuaries Committee on Specifications for Monetary Values - 1980 CSO Tables recommended this approach. This Report was accepted by the Board of Governors of the Society and forwarded to the NAIC early in 1984. This approach is logical because it is consistent with the calculation of the "net level annual premium equal to the present value, at the date of issue, of such benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per annum payable on the first and each subsequent anniversary of such policy on which a premium falls due....." (See Section 4 of the Standard Valuation Law, emphasis added.)

Actuarial Guideline XVII

CALCULATION OF CRVM RESERVES WHEN DEATH BENEFITS ARE NOT LEVEL

Text

In the definition of the Commissioners' Reserve Valuation Method, the Standard Valuation Law (Section 4) refers to the "net level annual premium on the nineteen-year premium whole life plan for insurance of the same amount...." The law does not define "the same amount" for cases when death benefits are not level. For policies issued after the operative date of Section 5-c of the Standard Nonforfeiture Law for Life Insurance (Section 5-c provides for the use of the 1980 CSO Table, among other things) "the same amount" is to be taken as the renewal nine-year arithmetic average, i.e., the arithmetic average of the death benefit at the beginning of each of policy years 2 through 10, inclusive.

Background Information

The Report of the Society of Actuaries Committee recommended this approach. Walter O. Menge in his paper Commissioners Reserve Valuation Method, RAIA XXXV (see p 277ff, especially p 283), defined an "equivalent level renewal amount" which has been accepted and still is the appropriate function for policies issued before the operative date of Section 5-c of the Standard Nonforfeiture Law for Life Insurance. The Society Committee indicated that the strongest factor that weighed in its conclusion was the effect on reserves for such plans as jumping juvenile. Menge noted the similarity between his definition of "equivalent level renewal amount" and the definition of "equivalent uniform amount" in Section 5 of the Standard Nonforfeiture Law for Life Insurance. In the same way, the function prescribed above is consistent with the "average amount of insurance" in Section 5-c of the Standard Nonforfeiture Law for Life Insurance. A principal reason for the change in the Standard Nonforfeiture Law was to simplify calculations, and this guideline will also have that result.

Actuarial Guideline XVIII

CALCULATION OF CRVM RESERVES ON SEMI-CONTINUOUS, FULLY CONTINUOUS OR DISCOUNTED CONTINUOUS BASIS

Text

The Standard Valuation Law uses the "excess of (a) over (b)" in the definition of the modified net premiums in Section 4. If reserves are calculated on a basis other than curtate, i.e., using semi-continuous, fully continuous or discounted continuous functions, the excess of (a) over (b) may be calculated using the same basis (semi-continuous, etc.).

Background Information

The Report of the Society of Actuaries Committee recommended this approach. The excess of (a) over (b) is sometimes referred to as the initial expense allowance. Basing this expense allowance on curtate functions is conservative as this results in the smallest amount of expense allowance. Also, the expense allowance is the same regardless of which type of functions are used. On the other hand, the use of curtate functions when the basic calculation is based on other functions can result in complications in calculation. The difference in the resulting reserves does not justify the additional complication.

Actuarial Guideline XIX

1980 CSO MORTALITY TABLE WITH TEN-YEAR SELECT MORTALITY FACTORS

Text

The Standard Valuation Law and the Standard Nonforfeiture Law for Life Insurance make reference to the Commissioners' 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors. The Ten-Year Select Mortality Factors referred to are those developed by the Society of Actuaries Special Committee to Recommend New Mortality tables for Valuation (see Report on p. 617ff and table of Ten-Year Select Mortality Factors on p. 669 of TSA XXXIII).

The NAIC model regulation regarding mortality tables independent of sex refers to certain specific tables which are blends of the male and female mortality rates of the 1980 CSO Table and specifies that these tables may be used with or without Ten-Year Select Mortality Factors. The Ten-Year Select Mortality Factors to be used with these blended tables are to be determined by use of the formula in the letter from Robert J. Johansen to Ted Becker reproduced on p. 457 of NAIC Proceedings 1984 Vol. I.

Background Information

The published report of a committee of the Society of Actuaries contains two sets of alternative select mortality factors. While that committee recommended that the alternative factors not be adopted, their publication has caused some confusion.

Actuarial Guideline XX

JOINT LIFE FUNCTIONS FOR 1980 CSO MORTALITY TABLE

Text

The tables of uniform seniority and the "Ultimate 1xx Tables" in Appendix 5 of the Report of the Society of Actuaries Committee on Specifications for Monetary Values - 1980 CSO Tables are acceptable for use in calculating reserves or nonforfeiture values for joint life policies on the 1980 CSO basis. These tables from Appendix 5 of the report are reproduced on the following pages of this Actuarial Guideline. These tables are numbered A5-1, A5-6 and A5-7 to coincide with the page numbers of those tables in Appendix 5 of the Society Committee report. (These are the only tables considered necessary for the purpose of this guideline.)

Other methods of calculating joint life functions may also be acceptable. In particular, it is acceptable to calculate "exact" joint life functions using published 1980 CSO mortality rates for the actual ages and genders of the lives to be insured.

Actuarial Guideline XXI

CALCULATION OF CRVM RESERVES WHEN (B) IS GREATER THAN (A) AND SOME RULES FOR DETERMINATION OF (A)

Text

The Standard Valuation Law used the "excess of (a) over (b)" in the definition of the modified net premiums in Sec. 4. If the excess of (a) over (b) is negative, and the policy is issued on or after January 1, 1987, the excess is to be taken as zero.

The Standard Valuation Law defines (a) as a net level premium, subject to a maximum. The net level premiums for the policy are a uniform percentage of the respective gross premiums such that the present value at issue of the net level premiums payable on and after the first anniversary is equal to the present value at issue of the benefits provided for by the policy after the first anniversary. The net level premium used in determining (a) is the net level premium payable on the first anniversary. The maximum for (a) is the net level premium on the 19-year premium whole life plan for a policy with level premiums issued at an age one year higher than the age at issue of the policy.

The value of (a) is to be calculated as defined in the Standard Valuation Law, even if the resulting reserves are not equal to reserves according to the full preliminary term method.

Background Information

The Report of the Society of Actuaries Committee on Specifications for Monetary Values—1980 CSO Tables recommended that a negative excess of (a) over (b) be taken as zero. Walter O. Menge in his paper Commissioners Reserve Valuation Method, RAIA XXXV (see pp. 260 and 261) pointed out the illogic of a negative excess of (a) over (b). A negative excess, if used, would result in CRVM reserves that are greater than net level premium reserves. This principle has been recognized since Menge wrote his paper, but some actuaries are not aware of the paper.

Defining the net level premiums as being a uniform percentage of the respective gross premiums is consistent with the definition in Menge's paper. Since the denominator of (a) is the present value of an annuity commencing on the first anniversary, the logical value for (a) is the net level premium (as defined) payable on the first anniversary.

In his paper, Menge indicates that CRVM reserves are equal to full preliminary term reserves unless the value of (a) is the maximum defined in the Standard Valuation Law, or unless the excess of (a) over (b) is negative. Menge does not appear to have considered the case where the gross premium for the first policy year does not equal the gross premium for the second policy year. For such policies a literal application of the Standard Valuation Law does not result in full preliminary term reserves.

Actuarial Guideline XXII

INTERPRETATION REGARDING NONFORFEITURE VALUES FOR POLICIES WITH INDETERMINATE PREMIUMS

Text

Indeterminate premium policies provide that premiums after issue will be determined by the insurer based on then current assumptions as to future experience. The policies also provide a schedule of maximum premiums which the premiums actually charged will not exceed.

The minimum nonforfeiture values for an indeterminate premium policy are the greater of those assuming that the gross premiums for the policy are (i) those according to the schedule of gross premiums based on current assumptions at issue and illustrated to prospective policyholders, or (ii) those according to the schedule of maximum gross premiums included in the policy:

Background Information

Indeterminate premium policies are a fairly recent development in life insurance. They can serve a legitimate function by enabling a nonparticipating policy to include a safety margin that need not be called upon unless it is needed. Indeterminate premiums are sometimes used to avoid deficiency reserve requirements. In general, regulators have not objected to this.

Section 6 of the Standard Nonforfeiture Law for Life Insurance refers to "any plan of life insurance which provides for future premium determination, the amounts of which are to be determined by the insurance company based on then estimates of future experience...." This is a direct reference to the types of life insurance policies commonly known as indeterminate premium plans (see "Detailed Analysis of Recommended Changes in the Standard Valuation Law and the Standard Nonforfeiture Law for Life Insurance; NAIC Proceedings - 1981 Vol. II, p. 831). The Standard Nonforfeiture Law for Life Insurance provides that minimum nonforfeiture values for such policies are to be computed by a method consistent with the principles of the Law as determined by regulations promulgated by the commissioner.

Section 5 and Section 5-c of the Standard Nonforfeiture Law for Life Insurance each provide that "the adjusted premiums for any policy shall be calculated on an annual basis and shall be....(a) uniform percentage of the respective premiums specified in the policy for each policy year..." Indeterminate premium policies provide for two amounts of premiums for each year: the actual premium to be charged and the maximum amount of the actual premium. This raises the question of which premium is to be used in setting adjusted premiums as a uniform percentage of the gross premiums.

The maximum premiums have the advantage that they are known at the time the policy is issued. However, use of maximum premiums to determine minimum values can lead to manipulation. A level premium whole life policy has a readily determined set of minimum values in accordance with the Standard Nonforfeiture Law for Life Insurance. If the policy has indeterminate premiums and the premiums illustrated to the customer (with proper disclosure of their indeterminate nature) are level for life, there should be no change in the minimum values. If the minimum values were determined by reference to the maximum premiums and not to the schedule of premiums on the current assumptions, introduction of maximum premiums that increase by duration would result in lower minimum values.

This guideline was written with policies other than universal life insurance in mind. However, it is possible to design a fixed premium universal life insurance policy to which this guideline would be applicable.

Actuarial Guideline XXIII

GUIDELINE CONCERNING VARIABLE LIFE INSURANCE SEPARATE ACCOUNT INVESTMENTS

A variable life insurance separate account shall be deemed to have sufficient net investment income and readily marketable assets to meet anticipated obligations under policies funded by the account, as required by [statutory reference for state], if, and only if, it can be demonstrated to the satisfaction of the Commissioner that the sum of the market value of readily marketable assets in the account at the date of valuation, plus the anticipated net investment income for the calendar year following the date of valuation exceeds by at least 15% the anticipated death benefits, surrenders, withdrawals and other such obligations payable from current account values during the same period. For the purposes of this demonstration, readily marketable assets means cash or those investments which have readily ascertainable market value and which can be marketed before the close of the next business day; net investment income excludes capital gains or losses; and the value of the anticipated death benefits, surrenders, withdrawals and other such obligations payable during the calendar year following the date of the valuation shall not be estimated at less than 10% of the market value of the account assets at the date of valuation.

If a variable life insurance separate account is divided into separate series, portfolios or other investment subdivisions, each series, portfolio or investment subdivision shall comply with this subsection.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XXIV

GUIDELINES FOR VARIABLE LIFE NONFORFEITURE VALUES

Minimum cash surrender values for variable life insurance policies shall be determined separately for the basic policy and any benefits and riders for which premiums are paid separately. The methods pertain to a basic policy and any benefits and riders for which premiums are not paid separately.

Minimum cash surrender values for variable life polices may be determined using option B (Retrospective Method), C (Prospective Method), or D (Maximum Charge Method).

A. Definitions

(1) "Valuation Rate" as used in this guideline means the higher of the Assumed Investment Rate (AIR) or guaranteed interest rate included in the policy, if any, otherwise the highest valuation interest rate allowed under the Standard Nonforfeiture Law.

(2) "Net Cash Surrender Value" means the maximum amount payable to the policyowner upon surrender.

(3) "Cash Surrender Value" means the Net Cash Surrender Value plus any amounts outstanding as policy loans.

(4) "Policy Value" means the amount to which separately identified interest credits and or investment return and mortality, expense, or other charges are made under a variable life insurance policy.

(5) "Accumulation Rate" means the net investment return and/or any interest credits applied towards the policy value.

B. Retrospective Method

The minimum cash surrender value (before adjustment for indebtedness and dividend credits) available on a valuation date shall be equal to the value using the Accumulation Rate through that date of the premiums paid minus the accumulation through that date of (i) the benefit charges, (ii) the averaged administrative expense charges for the first policy year and any insurance-increase years, (iii) actual administrative expense charges for other years, (iv) initial and additional acquisition expense charges not exceeding the initial or additional expense allowances, respectively, (v) any service charges actually made (excluding charges for cash surrender or election of a paid-up nonforfeiture benefit) and (vi) any deductions made for partial withdrawals; all accumulations being at the Accumulation Rate at which changes in policy values have been made unconditionally to the policy (or has been made conditionally, but for which the conditions have since been met), and minus any unamortized unused initial and additional expense allowance.

Accumulation for the premiums and for all charges referred to in items (i)-(vi) above shall be based on the Accumulation Rate for the applicable account(s) from and to such dates as are consistent with the manner in which such Accumulation Rate is credited in determining the policy value.

The benefit charges shall include the charges made for mortality and any charges made for riders or supplementary benefits for which premiums are not paid separately. If benefit charges are substantially level by duration and develop low or no cash values, then the Commissioner shall have the right to require higher cash values unless the insurer provides adequate justification that the cash values are appropriate in relation to the policy's other characteristics.

© 1999-2023 National Association of Insurance Commissioners

The administrative expense charges shall include charges per premium payment, charges per dollar of premium paid, periodic charges per thousand dollars of insurance, periodic per policy charges, and any other charges permitted by the policy to be imposed without regard to the policyowner's request for services. The averaged administrative expense charges for any year shall be those which would have been imposed in the year if the charge rate or rates for each transaction or period within the year had been equal to the arithmetic average of the corresponding charge rates which the policy states will be imposed in policy years through twenty in determining the policy value.

The initial acquisition expense charges shall be the excess of the expense charges, other than service charges, actually made in the first policy year over the averaged administrative expense charges for that year. Additional acquisition expense charges shall be the excess of the expense charges, other than service charges, actually made in an insurance-increase year over the averaged administrative expense charges for that year. An insurance-increase year shall be the year beginning on the date of increase in the amount of insurance by policyowner request (or by the terms of the policy).

Service charges shall include charges permitted by the policy to be imposed as a result of a policyowner's request for a service by the insurer (such as the furnishing of future benefit illustrations) or of special transactions.

The initial expense allowance shall be the allowance provided by Items (ii), (iii), (iv) of Section 5, or by Items (ii) and (iii) of Section 5c(1), as applicable, of the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, for a fixed premium, fixed benefit endowment policy with a face amount equal to the initial face amount of the variable life insurance policy, with level premiums paid annually until the highest attained age at which a premium may be paid under the variable life insurance policy, and maturing on the latest date permitted under the policy, if any, otherwise at the highest age in the valuation mortality table. The unused initial expense allowance shall be the excess, if any, of the initial expense allowance over the initial acquisition expense charges as defined above.

If the amount of insurance is subsequently increased upon request of the policyowner (or by the terms of the policy), an additional expense allowance and an unused additional expense allowance shall be determined on a basis consistent with the above and with Section 5c(5) of the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, using the face amount and the latest maturity date permitted at that time under the policy.

The unamortized unused initial expense allowance during the policy year beginning on the policy anniversary at age x + t (where "x" is the issue age) shall be the unused initial expense allowance multiplied by $\ddot{a}_{x+t}/\ddot{a}_x$ where $\ddot{a}_{x+t}$ and $\ddot{a}_x$ are present value of an annuity of one per year payable on policy anniversaries beginning at ages x + t and x, respectively, and continuing until the highest attained age at which a premium may be paid under the policy, both on the morality guaranteed in the policy and the Valuation Rate for the policy. An unamortized unused additional expense allowance shall be the unused additional expense allowance multiplied by a similar ratio of annuities, with $\ddot{a}_x$ replaced by an annuity beginning on the date as of which the additional expense allowance was determined.

(Note: The drafters chose a whole life initial expense allowance for several reasons. Variable life insurance is generally considered a permanent life insurance plan and most companies encourage a premium level which will provide lifetime insurance protection. Every variable life insurance policy of which the drafters are aware has a "net level premium" that could be computed which would guarantee permanent protection using some suitable interest assumption. As a result, it is expected that most variable life insurance policies will be sold as permanent plans.

Traditional whole life insurance, which is accorded a permanent plan expense allowance by the Standard Nonforfeiture Law (SNFL), is much more flexible than is often realized. Premiums may be stopped with term coverage resulting, policy loans can result in "stop and go" premiums, or a vanishing premium arrangement can be effected, all without the permanent plan expense allowance being affected. The SNFL

© 1999-2023 National Association of Insurance Commissioners

does not require cash values for many forms of term insurance. All other permanent plans develop an expense allowance greater than that for whole life insurance under the SNFL.

The alternative of basing the initial expense allowance on a policyowner's "planned premium" was considered but rejected as artificial and subject to substantial manipulation by agents and/or insurers.)

C. Prospective Method

The minimum cash surrender value (before adjustment for indebtedness and dividend credits) available on a date as of which interest is credited to the policy shall be equal to [(1) - (2) - (3) - (4)] where:

(1) is the present value of all future benefits;

(2) is the present value of future adjusted premiums. The adjusted premiums are calculated as described in Sections 5 and 5a or in Section 5c(1), as applicable, of the Standard Nonforfeiture Law for Life Insurance, as amended in 1980. If Section 5c(1) is applicable, the nonforfeiture net level premium is equal to the quantity $PVFB/\ddot{a}_x$, where PVFB is the present value of all benefits at issue assuming future premiums are paid by the policyowner and all guarantees contained in the policy or declared by the insurer, and using the Valuation Rate.

$\ddot{a}_x$ is the present value of an annuity of one per year payable on policy anniversaries beginning at age x and continuing until the highest attained age at which a premium may be paid under the policy.

(3) is the present value of any quantities analogous to the nonforfeiture net level premium which arise because of guarantees declared by the insurer after the issue date of the policy. $\ddot{a}_x$ shall be replaced by an annuity beginning on the date as of which the declaration became effective and payable until the end of the period covered by the declaration.

(4) is the sum of any quantities analogous to (2) which arise because of structural changes in the policy.

(Note: Structural changes are those changes which are separate from the automatic workings of the policy. Such changes usually would be initiated by the policyowner and include changes in the guaranteed benefits, changes in latest maturity date, or changes in allowable premium payment period.)

Future benefits are determined by (1) projecting the policy value, taking into account future premiums, if any, and using the guaranteed interest rate, if any; otherwise, the lesser of the AIR, if any, or the highest state approved nonforfeiture interest rate, and using the mortality, expense deductions, etc. contained in the policy or declared by the insurer; and (2) taking into account any benefits guaranteed in the policy or by declaration which do not depend on the policy value.

All present values shall be determined using (i) an interest rate (or rates) specified by the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, for policies issued in the same year and (ii) the mortality rates specified by the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, for policies issued in the same year or contained in such other table as may be approved by the Commissioner for this purpose.

(Note: The types of quantities included in (3) are increased current interest rate credits guaranteed for a future period, decreased current mortality rate charges guaranteed for a future period, or decreased current expense charges guaranteed for a future period.)

© 1999-2023 National Association of Insurance Commissioners

D. Maximum Charge Method

(1) Definitions: Wherever used in this Section, the terms have the respective meanings set forth or indicated in this paragraph.

(a) Policy Value is equal to gross premiums paid (excluding separate identified premiums for riders or supplementary benefits which are not credited to policy value) plus net investment income (which may be positive or negative and may vary based on policy loans) less the following as specified in the policy: (i) administrative charges (which may be taken in part from premiums and in part from policy value), (ii) acquisition and other charges, (iii) deferred acquisition and other charges, (iv) benefit charges, (v) service charges, (vi) partial withdrawals, and (vii) partial surrender charges.

(b) Benefit Charges made to the Policy Value are mortality charges made for life insurance on the insured person or persons and any charge made for riders and supplementary benefits.

(c) Service Charges made to the Policy Value are charges for transactional costs such as partial withdrawals, reallocations of policy values and benefit illustrations. Transactional charges shall not be assessed unless specifically permitted by law or regulation for transactions made under mandatory policy provisions.

(d) Administrative Charges is a per policy charge made regularly to the Policy Value (or deducted from premiums on scheduled premium policies) for the cost of administration. This charge may not exceed $5.00 per month in 1986. In subsequent years the limit for any new or in force policy shall be the product of $5.00 and the ratio (not to exceed 2.00) of (1) the Consumer Price Index (for all urban households) for the September preceding the year for which the determination is being made to (2) the Consumer Price Index for September 1986. The Commissioner may allow a higher charge upon an insurer demonstrating a justification.

(e) Acquisition and Other Charges are deducted from gross premiums before they are credited to Policy Value and/or made to the Policy Value. They may be expressed as a percentage of premium or a dollar amount per $1,000 of insurance or a dollar amount per premium payment or a per policy charge (other than the Administrative Charge). They do not include charges made as a reduction in investment return. These charges may vary by premium size, policy size and by policy year.

(f) Excess First Year Acquisition and Other Charges shall be the maximum excess of (A) over (B) based on the assumption that any premium (other than a single premium) payable in the first policy year is also payable during the entire premium paying period. (A) is the Acquisition and Other Charge made in the first policy year and (B) is the arithmetic average of the corresponding charges which the policy states would be made in policy years two through twenty.

(g) Excess Acquisition and Other Charges for a Face Amount Increase shall be the maximum excess of (A) over (B) based on the assumption that the net level whole life annual premium for the increase (as defined in (j) below) applies throughout the remaining premium paying period. (A) is the Acquisition and Other Charge for the increase, and (B) is the arithmetic average of the

corresponding charges which the policy states would be made in the nineteen policy years following the increase.

(h) Net Investment Return is the actual amount credited to Policy Value net of investment expenses and/or other charges made as a reduction in investment return.

(i) The net level whole life annual premium at issue is based on the assumption of level insurance and level annual premium for life, the mortality table rate used to calculate the maximum mortality charges and an interest rate based on the higher of 4% or that specified in the policy.

(j) The net level whole life annual premium for an increase in the face amount of insurance shall be determined as of the date of the increases as though such increase were a separate policy under (i) above. Only increases in the face amount requested by the policyowner and increases in the face amount pursuant to the terms of the policy (e.g. an option to purchase or a cost of living increase) shall give rise to such a premium and the associated Excess Acquisition and Other Charges for a Face Amount Increase. Increases for this purpose shall not include increases in face amount resulting from a change in the death benefit option or changes in death benefit pursuant to policy terms that do not affect the face amount. Increases for this purpose shall be reduced by the amounts of any earlier decrease by reason of a partial withdrawal, but not a decrease resulting from a change in the death benefit option.

(k) Surrender Charge is a deferred charge made to the Policy Value in the event of a full or partial surrender of the policy, reduction in the face amount of insurance or premium, or a lapse.

(l) Cash Surrender Value is the Policy Value less any Surrender Charge, before reduction for outstanding loans or other amounts due under the policy.

(m) Deferred Acquisition and Other Charges are Acquisition and Other Charges deducted from the Policy Value after the first policy year.

(2) Cash Surrender Values determined in accordance with this subparagraph shall meet minimum requirements.

(a) If Acquisition and Other Charges do not exceed the sum of:

(1) 90% of premiums received up to the net level whole life annual premium at issue (regardless of when received).

(2) 10% of all other premiums received.

(3) 90% of the net level whole life annual premium for increases in the face amount of insurance as defined in 1(j).

(4) $10 per $1,000 of initial face amount in the first policy year.

(5) $1 per $1,000 of face amount in subsequent policy years.

(6) $10 per $1,000 of any increase in the face amount of insurance other than an increase resulting from a change in the death benefit option. Increases

© 1999-2023 National Association of Insurance Commissioners

up to the amount of earlier decreases are included here but not in (3) above.

(7) $200 per policy in the first year.

(b) A surrender charge may be established provided that the initial surrender charge together with the actual Acquisition and Other Charges made in the first policy year (and on premiums up to the net level whole life annual premium if received after the first year) do not exceed the sum of (1), (2) in the first year, (4) and (7) in (a) above. Additional surrender charges may be established after issue in connection with an increase in face amount provided that any such additional surrender charge and any Acquisition and Other Charges made in connection with such increase do not exceed the sum of (3) and (6) in (a) above.

(c) A Deferred Acquisition and Other Charge may be charged against the Policy Value in any policy year after the first, such that the total of all such charges imposed to date plus the surrender charge for that year does not exceed the maximum initial surrender charge. The Deferred Acquisition and Other Charges in any one year may not exceed the maximum allowable surrender charge for that year. Similar Deferred Acquisition and Other Charges may be imposed with respect to an increase in face amount.

(d) The maximum allowable surrender charge for any year shall be the maximum initial surrender charge multiplied by $\ddot{a}_{x+t}/\ddot{a}_x$, where "x" is the issue age and "t" is the number of years since issue. Similar maximums shall be determined with respect to any additional surrender charges, with x and t based on the date of increase.

(Note: The minimum cash value methods B, C, or D are not intended to prohibit the current practice of allowing the imposition of additional surrender charges defined as follows. In the case of combination general account and separate account variable life products, additions or amounts derived from more favorable interest, mortality, and expense than those guaranteed in the policy on the general account fund and credited within 12 months prior to surrender may be subject to forfeiture upon surrender.)

E. Minimum Paid-Up Nonforfeiture Benefits

If a variable life insurance policy provides for the optional election of a paid-up nonforfeiture benefit, it shall be such that its present value shall be at least equal to the cash surrender value provided by the policy on the effective date of the election. The present value shall be based on mortality and interest standards at least as favorable to the policyowner as (1) the mortality and interest basis, if any, specified in the policy for determining the policy value, or (2) the mortality and interest standards permitted for paid-up nonforfeiture benefits by the Standard Nonforfeiture Law for Life Insurance, as amended in 1980. In lieu of the paid-up nonforfeiture benefit, the insurer may substitute, upon proper request not later than sixty days after the due date of the premium in default, an actuarially equivalent alternative paid-up nonforfeiture benefit which provides a greater amount or longer period of death benefits, or, if applicable, a greater amount or earlier payment of endowment benefits.

(Note: It is possible that policies will have secondary guarantees. Such guarantees should be taken into consideration when computing minimum paid-up nonforfeiture benefits.)

Ever since the adoption of the original Standard Nonforfeiture Law (SNFL) in 1942, provision has been made for nonforfeiture calculations on the basis of substandard mortality. (See Sections 5.5a. and 5c, Paragraph 8(e) of SNFL.)

© 1999-2023 National Association of Insurance Commissioners

While this provision has been used infrequently in the past, it is anticipated the substandard mortality will be more frequently utilized in variable life insurance, given its flexible nature, to reflect the mortality classification assigned to the policy by the insurer.

A charge may be made at the surrender of the policy provided that the result after the deduction of the charge is not less than the minimum cash surrender value required by this guideline.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XXV

CALCULATION OF MINIMUM RESERVES AND MINIMUM NONFORFEITURE VALUES FOR POLICIES WITH GUARANTEED INCREASING DEATH BENEFITS BASED ON AN INDEX

A. Valuation - Text

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum reserve at any time shall be based on the maximum valuation interest rate for the year of issue and an acceptable mortality table for life insurance statutory reserves and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%

2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%.

3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%.

4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%.

5. 1.0% For all other plans.

The term “annual and non-cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term “annual and cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

This guideline for valuation shall be effective immediately for policies issued on or after January 1, 1991.

B. Nonforfeiture – Text

The threshold amount shall be $10,000 until December 31, 2009. For years beginning after December 31, 2009, the threshold amount for a calendar year shall be the product of $10,000 and the ratio of 1) the index for June of the prior year to 2) 136.0 (the index as of June 30, 1991), rounded to the nearest $25. If this calculation would result in an increase in the threshold amount of less than $500, the unadjusted

© 1999-2023 National Association of Insurance Commissioners

threshold amount from the prior year shall continue in effect for the next calendar year. In no calendar year shall the increase in threshold amount exceed 5% of the prior calendar year threshold amount.

The index used to determine the threshold amount for years beginning after December 31, 2009, shall be the Consumer Price Index for All Urban Consumers (CPI-U) as of June 30 of that year. If this index is no longer available, another index which, in the actuary's opinion, reflects the change in general consumer prices for the year should be substituted.

I. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD EXCEED THE THRESHOLD AMOUNT EVEN IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum nonforfeiture benefit at any time shall be based on the maximum nonforfeiture interest rate for the year of issue and an acceptable mortality table for life insurance nonforfeiture and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%.

2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%.

3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%.

4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%.

5. 1.0% For all other plans.

The term "annual and non-cumulative maximum" refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term "annual and cumulative maximum" refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

© 1999-2023 National Association of Insurance Commissioners

II. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD NOT EXCEED THE THRESHOLD AMOUNT IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the unadjusted value of the minimum nonforfeiture benefit at any time shall be based on a level death benefit, an acceptable mortality table for life insurance nonforfeiture and a nonforfeiture interest rate equal to the greater of (a) and (b):

(a) The nonforfeiture interest rate defined in Section 3 of VM-02, Minimum Nonforfeiture Mortality and Interest, less:

1. 0bp If the annual increase based on the index is limited to a maximum of 0% through 5.0%.

2. 25bp If the annual increase based on the index is limited to a maximum of 5.01% through 10.0%.

3. 50bp For all other plans.

(b) The Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under IRS Section 7702 *(Life Insurance Contract Defined)* of the U.S. Internal Revenue Code.

The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit.

For purposes of this guideline multiple policies on a single life shall be aggregated and only those policies aggregating not more than $10,000 (or the threshold amount[1] after December 31, 2009), shall be considered under B.II.

This guideline for nonforfeiture shall be effective immediately for policies issued on or after January 1, 1991.

BACKGROUND

A number of companies are marketing individual life insurance policies with guaranteed increasing death benefits tied in to a consumer price index or another cost of living index and are for low initial amounts of insurance sold through funeral directors to provide for burial expenses. Some of the policies provide for graded death benefits such as the return of premium with or without interest for the early policy years or for a fixed scheduled increase in death benefits prior to the operation of the index. In some cases there is a maximum on the increase for any year. The vast majority of such policies are single premium policies but some are annual premium policies (generally limited payment). The annual premium may or may not be subject to adjustment with the index.

Since the changes in the index are not known at issue, but from past experience, increases within a given range can be expected with a high probability, it is necessary to assume some increases and then to

[1] In 2010, the actuarial guideline was modified to substitute a threshold amount for 10,000, such threshold being increased by the change in the CPI-U, the CPI for All Urban Consumers.

© 1999-2023 National Association of Insurance Commissioners

continually adjust the present value of future benefits component and, if appropriate, the present value of future premiums component in the reserve and nonforfeiture calculation.

Theoretically the same assumed increases in the death benefits should be used for both valuation and nonforfeiture. This guideline so provides for policies where the amount of death benefit in any given policy year would exceed $10,000 (or the threshold amount[1] after December 31, 2009), even if there were no increases based on the index. For practical purposes this may mean that such policies are not marketable for higher amounts as it is most likely that such policies will not qualify under the IRS Section 7702. The cash value accumulation test to qualify thereunder requires a minimum interest rate and an assumed level amount of death benefits.

In the case of policies for an initial amount of insurance of $5,000 or less, the IRS rules provide an exception to the prohibition of assuming increasing death benefits. However, since many of the policies for very low amounts of initial face amount of insurance would require relatively high expenses if underwritten, many of the policies are issued with simplified underwriting or on a guaranteed issue basis with lower amounts of death benefits in the early policy years, some of the resulting annual increases are such as would disqualify many of the policies for the exception. Therefore it is recommended that policies for low amounts of insurance be allowed to qualify under the cash value accumulation test by permitting the nonforfeiture values to be based on a level death benefit and an interest rate not less than the Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under IRS Section 7702 and requiring such values to be updated as increases based on the index take place. The amount in this guideline is set at $10,000 (or the threshold amount[1] after December 31, 2009), to allow for future adjustments and for different patterns of benefits for low amounts.

For single premium policies, the value of nonforfeiture benefits based on a level death benefit and a net assumed nonforfeiture interest rate equal to the maximum nonforfeiture interest rate less an assumed increase based on the index and such factors then adjusted by the projected increases will approximate factors based on assumed increases and the maximum nonforfeiture interest rate. The procedure of assuming a level death benefit and a net assumed rate of not less than the Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under IRS Section 7702 for policies of low amounts of insurance is apt to produce lower cash values than the procedure for large amounts of insurance. Such lower values can be justified based upon the fact that the highly specialized market is prearranged funeral expenses for very small amounts of insurance per policy.

To emphasize the qualification with the IRS rules for the very low amounts of insurance, the nonforfeiture guideline for small amount policies is stated in terms of the net rate, a level death benefit and continual adjustment.

For solvency purposes, reserves should be conservative. The same rules apply for reserve regardless of the size of the policy. That is, lower reserves are not permitted for policies with very low amounts of insurance per policy.

Paragraph 5c(3) of the Model Standard Nonforfeiture Law states that unscheduled changes do not need to be taken into account until the time of the change. The changes guaranteed according to an index are a hybrid, i.e. the changes are scheduled but the amount of the change is not known until the index is determined. Thus the changes must be recognized at issue. This guideline is a hybrid with increases assumed at issue either explicitly or implicitly but with further adjustments made at the time the increase based on the index is determined.

Actuarial Guideline XXVI

ELECTION OF OPERATIVE DATES UNDER STANDARD VALUATION LAW AND STANDARD NONFORFEITURE LAW

June 3, 1989

Preamble

The model Standard Nonforfeiture Law for Life Insurance contains Section 5-C, which defines new mortality and interest rate components to be used as the minimum standard for nonforfeiture values for life insurance policies. The Commissioners 1980 Standard Ordinary Table, or that table with Ten-Year Select Factors, is identified in Section 5-C as the applicable mortality table component for ordinary life insurance policies (although there is a provision for other alternate mortality tables to be permitted by regulation). Section 5-C also incorporates "dynamic" interest rates, as the applicable interest rate component. In addition, Section 5-C contains a new and different formula to be used in computing the adjusted premiums that define minimum nonforfeiture values.

Section 5-C contains a mandatory operative date, but there is also language permitting companies to elect an early operative date under certain conditions.

The model Standard Valuation law contains a cross reference to operative date for Section 5-C of the Standard Nonforfeiture Law for Life Insurance. After such operative date, there are mortality and interest rate components defined for use as the minimum standard for computing reserves. The Commissioners 1980 Standard Ordinary Table, or that table with Ten-Year Select Factors, is identified as the applicable mortality table component for ordinary life insurance policies (although there is a provision for other alternate mortality tables to be permitted by regulation). "Dynamic" interest rates determine the applicable interest rate component, but a lower maximum interest rate is defined for reserves than for nonforfeiture values.

Generally, the applicable mortality rates are lower and the applicable interest rates higher after the operative date. Thus, the reserves defined under the minimum standard would be lower for policies issued on or after the operative date.

Text

Under no circumstances can an insurance company elect an operative date for the purpose of Section 5-C of the Standard Nonforfeiture Law for Life Insurance, if such operative date would be in a calendar year prior to the calendar year in which that company furnished written notice of election of an operative date under that law.

Background Material

The purpose of this actuarial guideline is to ensure consistency and provide guidance in the election of this operative date.

Historically, insurance companies have been allowed to elect early operative dates so as to pass along the benefits of improved mortality rates and current interest rates to policyholders who purchase new life insurance policies. These new policies would typically have lower nonforfeiture values and would require lower reserves, and net premiums would be lower also. The expectation is that the lower net premiums might allow the company to reconsider its gross premium rates for these new policies issued after the operative date, and in many cases to lower the new gross premium rates.

© 1999-2023 National Association of Insurance Commissioners

A second reason for allowing the election of an early operative date would be to allow insurance companies and state insurance departments more time to prepare and review new life insurance policies, which are to be introduced into them marketplace. If every life insurance policy had to be changed over on the same mandatory operative date, it would be a great burden on the resources of all the parties involved.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XXVII

ACCELERATED BENEFITS

PURPOSE

This guideline is designed to cover the actuarial aspects of accelerated benefits. Three general categories of accelerated benefits are covered:

I) non-discounted acceleration of benefits

II) actuarially discounted acceleration of benefits

III) interest accrual approach to financing acceleration of benefits

In addition, there is a separate section to cover the special considerations for a policy lien approach, which is Section IV.

General considerations which apply to any method of determining accelerated benefits are given in Section V.

I. NON-DISCOUNTED ACCELERATION OF BENEFITS

A. Description

The type of plans considered in this subsection are those which provide for a defined event triggering one time acceleration of some or all of the death benefit of the base contract or rider, in such a way that every dollar of acceleration has a non-discounted matching reduction in the amount payable on death. These plans have been available in four forms, via

1. A contract integrating the acceleration feature with other, more traditional, features;

2. A rider attached to a regular contract at time of issue, to provide acceleration;

3. A rider, as in (2), but which may be attached to inforce contracts of the same company; or

4. A policy acting similar to the rider in (3) above, but for which the acceleration is applicable to inforce contract of other companies.

B. Reserves

1. Reserving Approach

Payment of benefits earlier than death itself is an early payment rather than a different payment. The basic reserve structure and requirements for regular life insurance need not be disturbed. Therefore, the CRVM methodology is acceptable, as is any other reserving methodology allowable for life insurance when determining the reserves needed for policies with an accelerated benefit or when determining the reserves for the accelerated benefit by itself.

© 1999-2023 National Association of Insurance Commissioners

2. General Consideration

A reserve formula should consider all relevant factors.

Approximations to develop a single decrement table which utilize all relevant factors except for voluntary termination rates are acceptable for policies and riders subject to this subsection provided it can be demonstrated that the approximations used produce essentially similar reserves, conservative reserves, or immaterial reserves. The calculations should take into account the reduction in life insurance benefits due to prior acceleration. However, in no event shall the reserves for the accelerated benefit and the life insurance benefit when taken together be less than the reserves for the life insurance benefit assuming no acceleration feature prior to payment of any accelerated benefits.

In the development and calculation of reserves for policies and riders subject to this subsection, due regard shall be given to the applicable policy provisions, marketing methods, administrative procedures and all other considerations which have an impact on projected claims costs, including, but not limited to the following:

a. Definition of acceleration events,

b. Premium waiver provision,

c. Marketing method,

d. Underwriting procedures,

e. Delay in eligibility for benefit,

f. Maximum benefit,

g. Optional nature of benefit, and/or

h. Guaranteed insurability options.

II. ACTUARIALLY DISCOUNTED ACCELERATION OF BENEFIT

A. Description

The products that are allowable under this type of approach generally provide for an acceleration of the death benefit payable under a life insurance policy, with an appropriate actuarial adjustment in the amount of money paid to the policyholder that represents the amount of money foregone by the Company by paying out the death benefit early. These products have no additional premium payable. This product can be made available at issue of the contract or after issue of the contract. It can either be a separate rider or part of the integrated policy. The interest rate or interest rate methodology used for discounting must be specified in the contract or rider or in the actuarial memorandum.

B. Reserves

The application of standard valuation law and CRVM reserves is appropriate for these policies. No additional reserves need be held as long as the actuary is convinced that the method used to discount the death benefit reflects sound actuarial principles.

© 1999-2023 National Association of Insurance Commissioners

If the actuary is convinced that the discounting procedure does not appropriately reflect these conditions, he or she should determine a reserve such that reserves are adequate for the life insurance benefits based on aggregates. There is nothing in this benefit design that changes that equation.

III. INTEREST ACCRUAL APPROACH TO FINANCING ACCELERATION OF BENEFITS

A. Description

Under this approach, the insurer accrues an interest charge on the accelerated benefit to account for lost investment income from the date of acceleration to the date of death. The interest may be accrued until death or may be required to be paid in cash periodically, or may be offset against the policy's remaining death benefit.

1. Alternative methods of including an interest accrual option:

    a. A benefit of this type may be provided either as an integral part of a life insurance policy or as a rider to a life insurance policy.

    b. If offered as a rider to a life insurance policy, such rider may be attached to either a new policy or to an existing policy.

2. Alternative Benefit Designs using this option: The rider or policy form should specify whether interest accruing on prior accelerated benefit payment needs to be paid in cash or whether additional accelerated benefit payments will be made to cover such interest accruals as they become due. Either approach is equally acceptable.

B. Interest Accrual Rate

1. The rider or policy form or the actuarial memorandum should specify the method used to determine the rate(s) of interest to be charged.

2. The specification of the method should be clear and unambiguous.

3. The method used for determining the interest rate should be included in the Actuarial memorandum.

C. Reserves

1. Prior to the occurrence of an event qualifying the policy for accelerated benefits, minimum statutory reserves for policies containing interest accrual provisions are the same as for policies with identical death benefits that do not contain interest accrued lien provisions, provided that the method of determining the interest rate to be charged, as specified in the rider or policy provisions or actuarial memorandum, results in an interest rate at least equal to the valuation interest rate applicable to the policy. If such is not the case, an extra reserve may be necessary on such policies, if it is determined that the aggregate reserves are not good and sufficient.

2. Following the occurrence of a qualifying event, accrued interest is an asset of the company for statutory reporting purposes. However, the valuation actuary should make certain that reserves in the aggregate are adequate to assure that such aggregate accrued interest is provided for. This will assure that such accrued interest assets can be held as admitted assets. The insurer's valuation actuary may

© 1999-2023 National Association of Insurance Commissioners

voluntarily increase the statutory reserve liability on each such policy in order to eliminate the need to non-admit a portion of the accrued interest policy lien or policy loan.

IV. BENEFIT PAYMENT LIENS

This section deals specifically with benefit payment liens and their effect on future policy premiums and benefits.

A. The presence of a lien against the policy does not require a pro-rata reduction in the policy premiums or other values.

B. Amount of lien computed as of the date of death may be deducted from the death benefit.

C. Access to non-forfeiture benefits upon surrender or through future policy loans may be restricted to any excess of the cash surrender value over the sum of any outstanding loans and the lien.

D. If the lien approach is used and RPU is available as a non-forfeiture benefit, the amount of RPU may be calculated as if no lien existed and the lien may continue to apply, provided that the lien continues to satisfy any percentage and dollar maximums and minimums specified in the contract. Alternatively, RPU may be made unavailable while the lien exists, provided an ETI benefit is available. Alternatively, the excess, if any, of the cash surrender value over the sum of outstanding loans and the lien may be applied in calculating the amount of the RPU, provided an ETI benefit is available. If the choice of methods is not left as an option to be the policyholder, the rider or policy form should specify which method will apply.

E. If the lien approach is used an ETI is available as a non-forfeiture benefit, the period of ETI may be calculated as if no lien existed and the lien may continue to apply, provided that the lien continues to satisfy any percentage and dollar maximums and minimums specified in the contract.

F. If the lien approach is used, any accelerated death benefit payment may first be applied toward repaying the portion of any outstanding policy loans which causes the sum of the accelerated death benefit and policy loans to exceed the cash value. Alternatively, outstanding policy loans may be retained and the lien that would otherwise be allowed may be reduced by any outstanding policy loans at the time of acceleration. If the choice of methods is not left as an option to the policyholder, the rider or policy form should specify which method will apply.

G. The rider or policy form accelerated benefit lien provisions may specify that the existence of a benefit lien will not prevent termination of the policy in accordance with the regular policy termination provisions.

H. If a policy terminates while subject to a lien, the insurer shall extinguish the lien without further recourse to the policyholder unless the policy or rider clearly indicates otherwise. In the event that the policy is reinstated, the lien may also be reinstated with interest accrued as if the policy had never terminated.

I. The policyholder should have the option of paying all or part of any premium or accrued interest that would be capitalized under the terms of the rider or policy provisions in cash, as well as the option of repaying all or part of any lien in cash, in order to prevent the lien from causing the policy to terminate.

© 1999-2023 National Association of Insurance Commissioners

V. GENERAL CONSIDERATIONS

The items below should be considered, where applicable, for all types of accelerated benefits:

A. The rider or policy form should specify whether any premium becoming due after the initial accelerated benefit payment is established needs to be paid in cash or whether additional accelerated benefit payment will be made to cover such premiums as they become due. Either approach is equally acceptable.

B. The rider or policy form may specify any percentage and dollar minimum and maximum payments that may be accelerated. Any dollar or percentage minimums or maximums is equally acceptable. If no maximum is specified, it will be assumed to be 100% of the death benefit.

C. The accelerated benefit may include a reasonable expense charge for administrative expenses and risks assumed by the company. If the available amount of the initial accelerated benefit is less than the maximum allowed, the rider or policy form should specify how such initial amount will be determined.

D. The rider or policy form should specify the actions required, if any, to prevent policy termination if premium or interest expected to be capitalized would result in a total accelerated benefit payment exceeding the percentage or dollar maximum amount specified in the rider or policy form. Any such excess may be required to be paid in cash within an appropriate grace period in order to prevent policy termination. The rider or policy form may also specify that future premiums or interest becoming due must be paid in cash. If not specifically addressed, the rider or policy should remain inforce and be administered with no change from the premium or interest requirement that existed immediately prior to the time at which the maximum was reached and the accelerated benefit would not be increased beyond the maximum specified in the rider or policy form.

E. The rider or policy form may specify whether the accelerated benefit provision would apply to the original base insurance policy death benefit or the current insurance policy death benefit. If not specifically addressed, the rider or policy form should be administered as if maximums are automatically increased, but not automatically decreased.

F. The rider or policy form may specify that an accelerated benefit is not available unless established prior to the policyholder's election of or lapse to ETI or RPU. If not specifically addressed, the rider or policy forms should be administered to provide an accelerated benefit after election of or lapse to ETI or RPU.

G. The rider or policy form may specify that an accelerated benefit is not available if the policy has an irrevocable beneficiary or is assigned when accelerated benefits are initially claimed. Alternatively, the irrevocable beneficiary or assignee must provide a signed acknowledgement of concurrence for payout. The rider or policy form may specify that the policy may not be assigned (except to the insurer) after an accelerated benefit has been paid.

Actuarial Guideline XXVIII

STATUTORY CLAIM RESERVES FOR GROUP LONG-TERM DISABILITY CONTRACTS WITH A SURVIVOR INCOME BENEFIT PROVISION

Background

Many of the major writers of group long-term disability income insurance have included survivor benefits in such contracts. Provisions related to the survivor benefit include minimum disability periods, benefit amounts defined in terms of a number of months of disability benefits and a specified percentage of the monthly disability benefit.

This benefit is sometimes overlooked in the valuation process or ignored as being trivial in amount.

Drafting Note: Please see the 1990 "Proceedings," Vol. 2, Pages 995-999, and the 1991 "Proceedings," Vol. 1B, Pages 1321-1328.

Text

Claim reserves for survivor income benefits contained in group long-term disability contracts must be established based on the design of the survivor income benefit including the minimum period of disability before the spouse of a disabled person becomes eligible for a survivor income benefit and the amount of the benefit. A suitable approximation to the sum of the reserves for the basic disability benefit and the reserve for the survivor income benefit can be calculated by computing the reserve for the basic disability at an interest rate less than the maximum valuation interest rate.

Before any approximation can be accepted, rigorous testing of the approximation to the combined reserves for both the basic disability claim and the survivor income benefit must be performed. Tests indicated that basic disability reserves and survivor income benefit based on a 12-month disability requirement and a maximum survivor income benefit duration of 24 months with a survivor income benefit of .667 of the disability income with all reserves based on a valuation interest rate of 5.5% can be adequately approximated by basic disability reserves alone but calculated at a 3.5% valuation interest rate.

Actuarial Guideline XXIX

GUIDELINE CONCERNING RESERVES OF COMPANIES IN REHABILITATION

Preamble

The life insurance and annuity contracts of life insurance companies can be restructured by court order in rehabilitation proceedings. The contract restructuring may take the form of reduction in account values and/or guaranteed interest crediting premiums. Typically, the court order imposes restrictions on surrender of the contract while the company is in rehabilitation. These restrictions can include bans on surrenders while a rehabilitation plan is being developed and temporary limitations on the cash that can be obtained upon surrender. These restrictions are intended to prevent *en masse* surrenders while the company faces liquidity problems.

Several issues have arisen as to the interpretation of the Standard Valuation Law in these circumstances. The issues relate to the interpretation of the Commissioners' Reserve Valuation Method (CRVM) and the Commissioners' Annuity Reserve Valuation Method (CRVM), the determination of the guaranteed nonforfeiture benefits provided in the restructured contract and identification of the issue date of the contract after restructuring.

The Standard Valuation Law does not specifically address minimum reserve requirements after a contract has been restructured by court order. The minimum reserve requirements should be interpreted in the context of court-ordered contract restructuring to result in the most appropriate reserves under the particular circumstances. In general, this should be left to the regulators to determine.

Guideline

The phrase "future guaranteed benefits, including guaranteed nonforfeiture benefits," as used in CARVM, includes the cash surrender values based on contractual guarantees after reduction for any surrender charges available under the contract. In general, the value of future guaranteed benefits under CARVM may not be reduced by contingent surrender charges which may not be available upon cash surrender. See *Guideline Covering the Commissioners' Annuity Reserve Valuation Method (CARVM) (1985).*

Whether or not a court-imposed temporary restriction on the availability of cash on surrender is taken into account under CARVM depends upon whether the rehabilitation plan specifies that the restriction is a reduction in the guaranteed nonforfeiture benefits in the restructured contracts. If the rehabilitation plan imposes a distinct temporary charge to ensure liquidity as opposed to changing common surrender charges that are historically used to determining nonforfeiture benefits, the temporary charges will not reduce guaranteed nonforfeiture benefits for purposes of CARVM.

A similar rule applies for purposes of reporting those reserves on life insurance contracts entitled "For surrender values in excess of reserves otherwise required."

For life insurance contracts, CRVM does not dictate that a particular method must be applied after a contract has been restructured. In the case of policies providing for a varying amount of insurance or requiring the payment of varying premiums, reserves are calculated by a method consistent with CRVM applicable to policies providing for a uniform amount of insurance and requiring the payment of uniform premiums.

A method consistent with CRVM adopted for purposes of a rehabilitation program should consider the valuation bases and expense allowance prior to restructuring as well as after restructuring. Depending upon the types of changes to the restructured contract, it may or may not be appropriate to take into account the guaranteed benefits and premium structure prior to restructuring.

© 1999-2023 National Association of Insurance Commissioners

The issue date for purposes of determining the applicable mortality tables and interest rates also depends on the circumstances. For example, it may be appropriate to treat annuity contracts as newly issued so that reserves are required to be recomputed using more current discount rates. However, in the same rehabilitation plan it may be inappropriate to treat a restructured level premium whole life contract as newly issued. Accordingly, whether a contract is treated as having a new issue date after contract restructuring depends upon the terms of the rehabilitation plan and the restructured contracts. In general, contracts are not treated as newly issued unless the rehabilitation plan or state filing for the restructured contracts so provides.

Similarly, the appropriate CRVM expense allowance will depend upon the terms and the intent of the restructuring and rehabilitation plan. Depending upon the types of changes to the restructured contract, it may be appropriate to carry forward an unamortized expense allowance based on original policy date. In other cases, a new unamortized expense allowance would be calculated as of the restructure date. In general, a new unamortized expense allowance is not calculated unless the rehabilitation plan or the state filing for the restructured contract so provides.

Actuarial Guideline XXX

GUIDELINE FOR THE APPLICATION OF PLAN TYPE TO GUARANTEED INTEREST CONTRACTS (GICS) WITH BENEFIT RESPONSIVE PAYMENT PROVISIONS USED TO FUND EMPLOYEE BENEFIT PLANS

Background Material

Guaranteed Interest Contracts (GICs) that are used to fund employee benefit plans often times contain a provision that allows individual participants to voluntarily move funds on a book value basis to other investment opportunities. These contracts also allow for the withdrawal of funds on a book value basis to provide employee benefits such as a death benefit to a surviving beneficiary, disability benefits and benefits paid upon bona fide termination of employment. In the situations described above, the individual participant is to be distinguished from the policyholder. Typical contractual language is as follows:

1. Withdrawal for Redirection of Investments - Subject to the provisions of Subsection____above, the contract owner shall direct the withdrawal and transfer to the contract owner of the pro rata amounts from the accumulation accounts for the purpose of redirecting an employee investment to an equity fund in accordance with the provision of the Plan.

2. Withdrawal for Plan Benefit Payments - Subject to the provisions of Subsection____above, the contract owner shall direct the withdrawal and transfer to the contract owner of the pro rata amounts from the accumulation account due to distribution made to participants (or to their beneficiaries, in case of the participant's death) under the Plan.

Both examples of contractual language make reference to the "provisions of the Plan." Plan provisions reduce the disintermediation (C-3) risk, from the insurance company standpoint, associated with GICs. For example, plan provisions may restrict the opportunity for the 401 (k) plan participant to move funds from the GIC option to a competing "guarantee of principal" option within the plan.

The Standard Valuation Law utilizes a concept known as Plan Type to distinguish between different levels of voluntary withdrawal rights by policyholders. Voluntary withdrawal rights are contractual policyholder rights which may be exercised at the option of the policyholder and do not include such items as scheduled contractual payouts or payouts upon termination. The greater the level of voluntary withdrawal right afforded to the policyholder, the more conservative is the resulting valuation interest rate. Plan Types are designated in the Standard Valuation Law as with Plan Type A, Plan Type B or Plan Type C and are defined as follows:

1. Plan Type A is a plan under which the policyholder may not withdraw funds, or may withdraw funds at any time but only (a) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, (b) without such an adjustment but in installments over five years or more, or (c) as an immediate life annuity.

2. Plan Type B is a plan under which the policyholder may not withdraw funds before expiration of the interest rate guarantee, or may withdraw funds before such expiration but only (a) with an adjustment to reflect changes in interest rate or assets values since receipt of the funds by the insurance company, or (b) without such an adjustment but in installments over five years or more. At the end of the interest rate guarantee, funds may be withdrawn without such adjustment in a single sum or installments over less than five years.

© 1999-2023 National Association of Insurance Commissioners

3. Plan Type C is a plan under which the policyholder may withdraw funds before expiration of the interest rate guarantee in a single sum or installments over less than five years either (a) without adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (b) subject only to a fixed surrender charge stipulated in the contract as a percentage of the funds.

Text

For purposes of the application of the Standard Valuation Law to Guaranteed Interest Contracts (GICs) with benefit responsive provisions, the withdrawal of funds at book value for the purpose of redirecting or withdrawing an employee investment shall be considered a withdrawal by the policyholder unless the underlying plan or GIC contain written provisions which are designed to reduce the C-3 risk to the insurance company. As an example, a provision which meets this criteria would include both the following:

1. No direct transfer to competing funds, whether such funds are alternate funds of the insurance company or not. This provision prohibits direct transfer of funds from the GIC option to a competing plan option that offers either a guarantee of principal or to an option in which the risk of loss of principal is small such as a money market fund or short-term bond fund. Any transfer to such an option must first go through an non-competing plan option and reside there for at least 90 days or three months.

   and

2. For GICs that fund plan investment options where interest is allocated to plan participants based on how much of their account balance is in each particular interest rate "cell," participants are not allowed to redirect any of the balance they have in a GIC funding a particular cell to a competing fund until the GIC's maturity date.

In addition, the valuation actuary must be satisfied that the GIC provisions designed to reduce the C-3 risk are administered by the insurer in the designed manner.

This requirement may be fulfilled by obtaining from the appropriate insurance company officer a certificate of intent regarding the insurance company administration of the provisions.

In addition, the valuation actuary must periodically review the actual experience under the contract to verify the appropriateness of the Plan Type assumption with reference to this Guideline.

Actuarial Guideline XXXI

VALUATION ISSUES VS. POLICY FORM APPROVAL

Background

Occasionally, the NAIC Life and Health Actuarial Task Force addresses valuation (reserve) issues related to a policy form or benefit design that has not been accepted or approved by a particular state. The development of reserving methods or providing guidance concerning reserve questions for such policy forms is necessary because the annual statement filed in each state, including states for which a particular policy form has not been approved for use, must reflect appropriate reserve for all policy forms and associated benefits.

Text

The adoption of an Actuarial Guideline by the NAIC Life and Health Actuarial Task Force dealing with a reserve issue associated with a particular policy form or benefit does not represent an endorsement for the approval of the particular policy form or benefit.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XXXII

RESERVE FOR IMMEDIATE PAYMENT OF CLAIMS

Background Material

Section 5 Reserve Valuation Method—Life Insurance and Endowment Benefits of the NAIC Standard Valuation Law refers to an annual premium in defining the commissioners reserve valuation method. However, it has been general practice to hold an additional reserve where fractional premiums are paid and any fractional premium not yet due in the policy year of death is waived and to hold a further additional reserve for the refund of any premium paid beyond the end of the month in the policy year of death. These additional reserves are called for in the Miscellaneous Section of Exhibit 8 of the annual statement. These additional reserves are generally included in the basic reserves where an insurer uses an assumption of continuous payment of premiums.

Although Section 7 of the NAIC Standard Nonforfeiture Law for Life Insurance explicitly permits in calculating nonforfeiture "the assumption that any death benefit is payable at the end of the policy year of death," there is no similar explicit permission to use such assumption in the NAIC Standard Valuation Law. The annual statement instructions are silent on any adjustment. A long time ago some life insurance policies provided that claims would be paid at the end of the policy year of death. However, for many years many policies have provided that claims will be paid immediately upon satisfactory proof of death. In fact, some states require that interest shall accrue from date of death.

Many insurers have held a reserve for immediate payment of claims either by an adjustment to curtate reserves or by including provision therefore in the basic reserves calculated on a continuous payment of claims basis.

Text

RESERVES FOR IMMEDIATE PAYMENT OF CLAIMS

I. Reserves based on either fully continuous functions or on semi-continuous functions where the death portion reflects approximately one half of one year's valuation rate of interest are considered as making appropriate provision for immediate payment of claims.

II. Where the basic reserves are based on curtate functions with no provision for immediate payment of claims:

   1. For any policy where the contract calls for payment of death claims at the end of the policy year in which death occurs, no adjustment to curtate reserves need be made.

   2. For any policy where the contract calls for payment of death claims immediately upon receipt of due proof of death of the insured, the death portion of curtate reserves shall be increased by one third of one year's valuation rate of interest. (Approximations may be used to split the total curtate reserves into death portion and the pure endowment portion.)

   3. For any policy where the contract provides for payment of interest on the death proceeds from date of death to date of payment, the death portion of curtate reserves shall be increased by one half of one year's valuation rate of interest. (Approximations may be used to split the total curtate into the death portion.)

III. Where an insurer pays interest on death proceeds at an earlier point than as required by contract, it is appropriate that the statutory formula reflect such practice.

IV. Where the actual formula reserves are more conservative than minimum statutory formula reserves, an insurer using curtate functions without provision for immediate payment of claims must demonstrate compliance with minimum statutory formula reserves adjusted in accordance with II above.

V. This guideline shall apply to all new life insurance policies issued beginning January 1 following the date the guideline is adopted.

VI. The guideline shall be applicable to policies issued prior to the date the guideline is adopted with any additional reserve graded in as follows for the years following the date the guideline is adopted:

1. First year 20%

2. Second year 40%

3. Third year 60%

4. Fourth year 80%

5. Fifth and later years 100%

Actuarial Guideline XXXIII

DETERMINING CARVM RESERVES
FOR ANNUITY CONTRACTS WITH ELECTIVE BENEFITS

Background Information

1. Introduction

   The Standard Valuation Law (SVL) defines the methods and assumptions which are to be used in determining minimum statutory formula reserves. This law establishes the standards for annuity contracts (which therefore includes any annuity riders or endorsements, and any or all components of which, such as premiums, benefits, contract charges, primary or secondary accumulation values or other components, either relating to annuity benefits provided by the contract or providing separate annuity benefits) and includes the criteria for the interest and mortality assumptions to be used in determining minimum formula contract reserves. The 1980 revisions to the SVL provide for the maximum statutory formula reserve interest rate to be determined through a dynamic formula in order to incorporate changes in economic conditions, liquidity needs and the risks inherent in certain types of contracts.

   The SVL defined methodology for annuity contracts, the commissioners annuity reserve valuation method (CARVM), requires that reserves be the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, provided for by such contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of such contracts, that become payable prior to the end of such respective contract year. Such reserves are established to adequately fund all guaranteed contract obligations, including those obligations which are optional to the contract owner and which may not have yet been elected.

   Industry practices and methods of reserving under CARVM for annuity contracts with multiple benefit streams have not been found to be consistent. These range from a low reserve equal to the cash surrender value to a reserve representing the greatest actuarial present value of the future benefit streams under all potential annuity or other nonforfeiture benefit election options using a conservative rate of interest.

   The major purpose of this Actuarial Guideline is to provide clarification and consistency in applying CARVM to annuities with multiple benefit streams. Some of the areas requiring clarification include: the valuation of annuitization benefits; the application of incidence rates in CARVM; the application of the integrated benefit stream approach in CARVM; how to determine valuation interest rates and mortality tables for multiple benefit streams; and certain practical considerations regarding multiple benefit streams.

2. Annuitization Benefits

   Varying forms of contracts provide that the cash value available to the contract owner is less than the amount available to purchase an annuitization option under the terms of the contract.

   For purposes of this Actuarial Guideline, “accumulation fund” is defined as the policy value which is used to purchase an annuity option under the terms of the contract.

   Frequently there are significant discontinuities in the reserves, both upward and downward, at the time a settlement option is elected, between the reserve held immediately prior to the settlement as

compared to the reserve required for the greatest actuarial present value of the annuitization option elected.

One of the most significant reasons for discontinuities in the reserve patterns at the time of election is the difference in the SPIA valuation rate available at the time of election as compared to the valuation rate used based on the date of issue of the original SPDA contract. Another significant reason is the difference between the guaranteed purchase rate contained in the contract and used for reserve development as compared to the rate actually used to purchase the annuity option at the time of election.

3. Application of Incidence Rates in CARVM

Since CARVM was adopted, there has been an increase in the types of benefits offered under certain annuity contracts, including enhanced death benefits, nursing home benefits, and various partial withdrawal provisions, including some dependent on values other than those used to determine cash values and which may allow for benefits to continue past the point where the cash value is zero. For some of these benefit types, the SVL is not explicit as to whether incidence tables prescribed under the SVL may be used to determine such benefits, versus requiring consideration of all contract owner options available under the contract, and choosing the set of incidence rates which produce the greatest present value.

4. Integrated Benefit Stream Approach

CARVM requires that reserves be based on the greatest present value of all potential future guaranteed benefits. For annuity contracts offering more than one type of potential benefit stream, the SVL is not explicit regarding whether or how blends of more than one type of benefit must be considered under CARVM.

Under the integrated benefit stream approach, any potential benefit stream must be considered, including blends reflecting the interaction of more than one type of benefit. Such potential benefit streams include all types of benefits for which the greatest present value concept is required. Additionally, adjustments must be made to all such potential benefit streams to reflect those benefit types for which prescribed incidence tables are required (e.g., death benefits).

For example, consider an annuity contract offering surrender, annuitization and death benefits. Potential benefit streams that would be considered include surrender streams, annuitization streams, and streams reflecting blends of surrender and annuitization benefits. All such streams would also be adjusted to reflect death benefits and to discount all benefits for survivorship (based on the mortality table prescribed in the SVL).

5. Valuation Interest Rates

For annuities offering more than one type of benefit, the SVL is not explicit as to how valuation interest rates should be determined. The SVL is also not explicit as to how valuation interest rates should be determined for certain types of benefits offered under annuity contracts, such as death and nursing home benefits.

© 1999-2023 National Association of Insurance Commissioners

Purpose

The purpose of this Actuarial Guideline is to codify the basic interpretation of CARVM and does not constitute a change of method or basis from any previously used method, by clarifying the assumptions and methodologies which will comply with the intent of the SVL. This Actuarial Guideline shall apply to all annuity contracts subject to CARVM, where any elective benefits (as defined below) are available to the contract owner under the terms of the contract. However, life or health insurance riders attached to an annuity contract, where all components of the rider (e.g., premiums, benefits, contract charges, accumulation values and other components) are separate and distinct from the components of the annuity contract, should be treated as a separate life or health insurance contract not subject to this Actuarial Guideline. While this Actuarial Guideline applies to all annuity contracts subject to CARVM, in the event an actuarial guideline or regulation dealing with reserves is developed for a specific annuity product design, the product specific actuarial guideline or regulation will take precedence over the Actuarial Guideline.

Definitions

1. Elective and Non-Elective Benefits in CARVM

For purposes of determining reserves under CARVM, each benefit available under the annuity contract must be placed into one of the two categories defined as follows:

Non-Elective Benefits: Benefits that are payable to contract owners or beneficiaries only after the occurrence of a contingent or scheduled event independent of a contract owner's election of an option specified in the contract, including (but not limited to) death benefits, accidental death benefits, disability benefits, nursing home benefits, and benefits payable under either a deferred or immediate annuity contract (with or without life contingencies), where no benefit options are available under the terms of the contract.

Elective Benefits: Benefits that do not fall under the non-elective benefits category (i.e., benefit options that may be freely elected under the terms of the contract). Elective benefits include (but are not limited to) full surrenders, partial withdrawals, and full and partial annuitizations.

In some cases it may not be clear whether some benefits are elective or non-elective. The presence of certain types of non-elective benefits may affect other non-elective benefits and/or elective benefits. The Valuation Actuary should use judgment in making these determinations by considering factors such as the degree to which contract owner actions would be influenced by the availability of each benefit in the contract.

2. Elective and Non-Elective Incidence Rates in CARVM

For non-elective benefits, incidence rates from tables prescribed by the SVL should be applied to determine the payment of non-elective benefits and to discount, for survivorship, all benefit payments included in an Integrated Benefit Stream, as defined below. If no incidence tables are prescribed by the SVL, then company or industry experience (with margins for conservatism) may be used, as appropriate. Annuity mortality tables prescribed by the SVL should be used to determine all mortality based benefits under the contract (including, but not limited to, annuitizations and death benefits) and to discount other types of benefit payments for survivorship.

Actuarial judgment should be used as to the appropriateness of applying any non-elective incidence rates other than mortality. For non-elective waiver-of-surrender-charge benefits other than mortality-based benefits and for similar non-elective benefits, incidence rates greater than zero are not to be applied at any time in the projection after the earlier of: (a) the end of the surrender charge period

applicable immediately after the first premium is paid; and (b) when the projected cash value has been depleted.

For elective benefits, incidence rates should not be based on tables reflecting past company experience, industry experience or other expectations. Instead, every potential guaranteed elective benefit stream required to be reserved by CARVM must be considered in the determination of integrated benefit streams as defined below. This is accomplished by considering trial sets of guaranteed elective benefit incidence rates, either through numerical testing or analytical means, to determine which trial set produces the "greatest present value" as described in Text paragraph 1 below. Theoretically, this means that all possible elective benefit incidence rates between 0% and 100% should be considered. However, in practice, such a greatest present value will typically occur by assuming an incidence rate of either 0% or 100%.

3. Integrated Benefit Stream

   An integrated benefit stream is one potential blend of guaranteed elective and non-elective benefits available under the contract, determined as the combination of A and B, where:

   A equals one potential stream of one or more types of guaranteed elective benefits available under the terms of the contract, based upon a chosen set of elective benefit incidence rates; and

   B equals the stream of all guaranteed non-elective benefits provided under the terms of the contract, recognizing the guaranteed elective benefit stream under consideration in A above, and the non-elective incidence rates defined in 2. above.

   Both A and B above should be discounted for survivorship, based on the non-elective incidence rates defined in 2. above.

Text

1. Greatest Present Value

   All guaranteed benefits potentially available under the terms of the contract must be considered in the valuation process and analysis and the ultimate policy reserve held must be sufficient to fund the greatest present value of all potential integrated benefit streams, reflecting all guaranteed elective and non-elective benefits available to the contract owner. Each integrated benefit stream available under the contract must be individually valued and the ultimate reserve established must be the greatest of the present values of these values, based on valuation interest rate(s) as defined in Section 3 below.

2. Examples of Integrated Benefit Streams That Must Be Considered

   A. Cash Value Streams

      One mandatory set of integrated benefit streams for a deferred annuity with cash settlement values which must always be considered is any possible blend of future guaranteed partial withdrawals and full surrenders available under the contract, as specified in the SVL, accumulated at the guaranteed credited interest rate(s) and discounted at the valuation rate(s) of interest defined in section 3 below, with appropriate recognition of all guaranteed non-elective benefits available under the contract.

© 1999-2023 National Association of Insurance Commissioners

B. Annuitization Streams

A second mandatory set of integrated benefit streams that must be considered is any possible blend of future guaranteed full or partial annuitization elections, as specified in the SVL, available to the contract owner at each election date required by CARVM, with appropriate recognition of all guaranteed non-elective benefits available under the terms of the contract. In determining the integrated benefit streams to value the annuitization option, the guaranteed purchase rates contained in the contract, as well as any other contract provisions, excluding any current purchase rates which may be applicable, are applied to the accumulation fund.

C. Other Elective Benefit Streams

In addition to the cash value and annuitization streams described above, all other possible guaranteed elective benefits available under the contract, including blends of more than one type of guaranteed elective benefit, must be considered in a manner consistent with the mandatory cash value and annuitization streams, with appropriate recognition of all guaranteed non-elective benefits available under the contract.

3. Determination of Valuation Interest Rates

Section 4b of the SVL determines valuation rates for an annuity contract based on the following Parameters:

A. The basis of valuation (issue year or change in fund);

B. Whether or not the annuity provides for cash settlement options;

C. Whether interest is guaranteed on premiums received more than 12 months following issue (or the valuation date for change in fund basis);

D. The guarantee duration; and

E. The Plan Type.

Parameters A, B and C above should be determined at a contract level. Additional requirements regarding the change in fund basis of valuation are set forth in Section 5 below. Parameters D and E should be determined at a benefit level, as set forth in Section 4 below.

Under a contract level determination, parameters are set based on the characteristics of the contract as a whole. Under a benefit level determination, parameters are set based on the characteristics of each benefit, resulting in potentially different valuation rates for each benefit type comprising the integrated benefit stream.

4. Determination of Guarantee Duration and Plan Type

Guarantee duration and Plan Type are based upon the specific characteristics of each individual benefit type that comprise the integrated benefit stream, as follows:

A. For portions of the integrated benefit stream attributable to full surrender and partial withdrawal benefits, the Plan Type should be based upon the withdrawal characteristics of the benefit, as stated in the contract. This may result in a Plan Type A, B or C under the 1980 amendments of the SVL. The guarantee duration is the number of years for which interest rates are guaranteed in

© 1999-2023 National Association of Insurance Commissioners

excess of the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty (20) years.

B. For portions of the integrated benefit stream attributable to full and partial annuitization benefits, the determination of the valuation interest rate involves the use of the appropriate Plan Type and weighting factor as determined by the SVL, with the guarantee duration as the number of years from the original date of issue or date of purchase, to the date the annuitization is assumed to commence. If the underlying assumption is that the contract owner may withdraw funds only as an immediate life annuity or as installments over 5 years or more, this will generally result in a Plan Type A, under the 1980 amendments of the SVL, with the valuation interest rate changing as different assumed annuitization dates determine guarantee durations which will fall into different guarantee duration bands under the SVL. An assumed annuitization option which has a non-life contingent payout period of less than five (5) years shall be considered a Plan Type C, with the valuation interest rate changing as different assumed annuitization dates determine guarantee durations which will fall into different guarantee duration bands under the SVL.

C. For portions of the integrated benefit stream attributable to non-elective benefits, since the underlying assumption is that no withdrawal is permitted, Plan Type A should generally be used, with a guarantee duration determined as the number of years from issue or purchase to the date non-elective benefits may first be paid. In most cases, the guarantee duration should be less than five years, since non-elective benefit coverage usually begins immediately after issue, with benefits payable commencing in the first contract year.

For benefit types incorporating multiple payments, paragraphs 4(A), 4(B), and 4(C) above should be applied to each separate payment according to the withdrawal, annuitization, or non-elective benefit characteristics of the contract and payment provisions at the time each payment is to be made. If a portion of the integrated benefit stream is part of an immediate life annuity or a series of installments over five (5) years or more, but can be changed directly or indirectly by exercise of contract owner withdrawal options, then it would be inappropriate to apply paragraph 4(B) to that portion of the integrated benefit stream, since the contractholder may withdraw funds other than as a life annuity or in installments of five (5) years or more.

For example, a Guaranteed Lifetime Income Benefit (GLIB) is a guarantee to the owner of a fixed deferred annuity contract, whether traditional or indexed to an external referent such as an equity index, that the owner can have a defined income for life in an amount determined by formula, while the owner retains traditional rights (such as withdrawal) to the other values provided by the underlying deferred annuity and while such values continue to exist. Income benefits are typically deducted from one or more of the annuity's defined values to the extent such values remain positive. Once the GLIB is elected, the contract owner may have rights to stop and restart the income benefit and may also request full or partial surrender of any remaining annuity value, though doing so may negatively impact or eliminate subsequent guaranteed income benefits. Thus, applying 4(A) and 4(B) above, the GLIB benefit stream is seen to be composed of two portions to determine the Plan Type and guarantee duration, as follows:

The first portion consists of the series of defined payments to the extent that the payments, or any fraction thereof, are withdrawals that reduce or deplete the annuity's defined values. Applying paragraph 4(A) to this portion would result in Plan Type A, Plan Type B, or Plan Type C, by following the definitions of such contained within the Standard Valuation Law and reflecting the specific contract provisions, especially with regard to withdrawal. Paragraph 4(A) would also apply to any residual withdrawals that can be made following election of the GLIB benefit.

© 1999-2023 National Association of Insurance Commissioners

The second portion is a life annuity without option to take or receive additional amounts under the contract, and consists of the payments not included in the above portion. Applying paragraph 4(B), Plan Type A would generally apply to this segment with the guarantee duration determined using the period from contract issue to commencement of payments in this second portion.

5. Change in Fund Basis

As indicated by section 4b.C.(1)(c)(vi) of the SVL, a company may elect to value annuity contracts with cash settlement options on either an issue year basis or on a change in fund basis. Annuity contracts with no cash settlement options must be valued on an issue year basis. The issue year basis or change in fund basis should be determined for the contract as a whole, and thus must be consistently applied to all portions of all integrated benefit streams available under the annuity contract. The election of issue year or change in fund basis must be made at the issuance of the contract and must not change during the term of the contract without the prior written approval of the commissioner.

6. Purchase Rates

Contracts may provide, as contractual guarantees, the use of preferential purchase rates to those listed in the contract. As an example, a contract may provide that the company will offer, at the time of annuitization, the rates offered to new purchasers of immediate annuities if such rates will provide a higher annuity benefit than would result from the contractually guaranteed rates provided in the contract. This creates a contract guarantee which must be valued under CARVM. Ignoring this benefit in determining reserves will produce reserves less than the statutory formula reserves required under CARVM. Valuation of this benefit, however, is complicated by the fact that the company does not currently know what the exact rate will be at the time of the settlement election. In order to determine conservative statutory formula reserves, if use of future unknown rates are guaranteed, the company shall establish reserves not less than the contract's accumulation fund value, on the valuation date, reduced by an "expense allowance" not to exceed 7% of such fund. This section does not require the calculation of a reserve for the annuitization of business based upon current purchase rates pursuant to the "annuitization streams" described in Paragraph 2.B. above.

Likewise for contracts which provide for additional amounts during the payout period over those guaranteed at the commencement of the annuity payments, the reserve during the deferred period shall not be less than the contract's accumulation fund reduced by an expense allowance not to exceed 7% of such fund.

7. Practical Considerations

The major purpose of this Actuarial Guideline is to provide clarification and consistency in applying CARVM to annuities with multiple benefit streams. However, in practice there may be other acceptable methods of applying CARVM which are substantially consistent with the methods described in this Actuarial Guideline. Such methods may also be used, with prior regulatory approval.

Additionally, in applying this Actuarial Guideline there may theoretically be an infinite number of contract owner options that are possible under the contract. However, it may not be practical, possible or even appropriate to test every conceivable combination of potential integrated benefit streams theoretically available under the contract. This Actuarial Guideline requires that the actuary consider, not necessarily test, all potential integrated benefit streams to determine to what extent each contract owner option has a material impact on the reserve. In practice, the actuary may be able to eliminate some potential integrated benefit streams by analytical methods. The actuary may also be able to demonstrate the reserve adequacy of certain approximations. For example, in certain situations it may

© 1999-2023 National Association of Insurance Commissioners

be shown that a CARVM reserve ignoring non-elective benefits, plus an “add-on” reserve for non-elective benefits, is a reasonable approximation for the theoretically correct CARVM reserve.

Effective Date

This guideline shall be effective on December 31, 1998, affecting all contracts issued on or after January 1, 1981. A company may request a grade-in period for contracts issued prior to December 31, 1998 from the domiciliary commissioner upon satisfactory demonstration that the method and level of current reserves held for such contracts are adequate in the aggregate. This phase-in will require establishment of no less than 33 1/3% of the additional reserves resulting from the application of this guideline on December 31, 1998, no less than 66 2/3% on December 31, 1999, and 100% by December 31, 2000.

Actuarial Guideline XXXIV

VARIABLE ANNUITY MINIMUM GUARANTEED DEATH BENEFIT RESERVES

Actuarial Guideline XXXIV was repealed December 30, 2009, and was replaced by *Actuarial Guideline XVIII—CARVM for Variable Annuities*, effective December 31, 2009.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XXXV

THE APPLICATION OF THE COMMISSIONERS ANNUITY RESERVE METHOD TO EQUITY INDEXED ANNUITIES

Background

The purpose of this Actuarial Guideline is to interpret the standards for the valuation of reserves for equity indexed annuities. This Guideline codifies the interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the computational methodologies which will comply with the intent of the Standard Valuation Law (SVL).

Equity indexed deferred annuity products provide policyholders with a minimum guaranteed interest accumulation rate on a portion of all premium payments and a portion of the growth, if any, of an equity based index such as the S&P 500. While there is no "typical" equity indexed product, there are design features that are common to most products. Some of these features are a participation rate guaranteed for one or more years, a cap on the portion of the index growth that is credited to policyholders, and a policy term which defines a time period for which current guarantees are applicable.

Equity indexed immediate annuity products provide policyholders with a minimum guaranteed annuitization rate and an opportunity to receive larger periodic payments based on the growth, if any, in an equity index. The product design may include features such as a participation rate, cap or term.

While contract parameters such as participation rate and cap are guaranteed for a period of time, growth of the underlying index is not. Index growth may be positive or negative. This combination of guaranteed parameters and unknown equity index growth makes the application of CARVM to these products problematic.

CARVM defines minimum statutory reserves as "the greatest of the respective excesses of the present value, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, … over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of such contract, that become payable prior to the end of such respective contract year. The future guaranteed benefits shall be determined by using the mortality table, if any, and the interest rate, or rates, specified in such contracts for determining guaranteed benefits."

In order that all insurers issuing equity indexed annuity products establish reserves for statutory reporting purposes that are consistent with CARVM minimum statutory formula reserves requirements, this actuarial guideline identifies a computational method that is deemed to be consistent with CARVM in situations when specific operational criteria called "Hedged as Required" criteria are met. In addition, two computational methods are defined that are deemed to be consistent with CARVM in the event the "Hedged as Required" criteria are not met.

Two forms of the "Hedged as Required" criteria are provided. The "basic" criteria are applicable when an insurer uses long dated options to hedge the equity risk embedded in an equity indexed annuity. The second set of criteria is applicable when an insurer uses an option replication strategy.

Scope

This Actuarial Guideline applies to all equity indexed annuity contracts, regardless of the date of issue, that are subject to CARVM.

© 1999-2023 National Association of Insurance Commissioners

Computational Methods

Computational methods deemed to be consistent with CARVM can be classified into two groups, Type 1 methods and Type 2 methods. The following computational method is considered a Type 1 method: the Enhanced Discounted Intrinsic Method (EDIM). Type 1 computational methods are deemed to be consistent with CARVM if the applicable "Hedged as Required" are met. The following methods are considered Type 2 methods: the Commissioners Annuity Reserve Method with Updated Market Values (CARVM with UMV) and the Market Value Reserve Method (MVRM). Also, an adaptation of the MVRM, known as the Black-Scholes Projection Method (BSPM), is recognized. For a complete description of these methods, please consult Attachment 1.

General Requirements on the Use of Certain Computational Methods

The MVRM and EDIM computational methods are both based on a future value. In the case of MVRM, a projected index is determined. The projected index is then used to determine end of term and interim benefit amounts. CARVM is applied to these benefit amounts. In the case of EDIM, the end of term guaranteed value (a future value) is used to determine an interest rate for calculating terminal reserves for the guaranteed benefits after the initial terminal reserve. Determination of the "term" is an essential component of both computational methods.

The EDIM, MVRM and the BSPM adaptation of the MVRM computational methods are considered acceptable interpretations of CARVM under the following conditions:

1. The policy form design features a single dominant benefit which is the most likely benefit to be provided under the policy form with the determination of the single dominant benefit based on a consideration of product features such as the pattern of guaranteed participation rates, surrender charges, vesting rates, spread deductions, and marketing/advertising material.

2. The point in time associated with the single dominant benefit most likely to be provided under the contract is used as the terminal point of the current term for purposes of applying the computational method and complying with the "Hedged as Required" criteria, if applicable.

3. The appointed actuary has demonstrated to the satisfaction of the regulatory officials in each state in which the insurer is required to submit a statutory financial statement, prior to the use of the MVRM or EDIM computational methods, that the requirements above have been met.

Variations from the MVRM and EDIM as described in Attachment 1, are not acceptable interpretations of CARVM. The BSPM is considered an acceptable adaptation of the MVRM.

Type 1 Methods

A Type 1 computational method is deemed to be consistent with CARVM if an insurer using the method complies with the applicable "Hedged as Required" criteria (Attachment 2) and provides a certification as to compliance with the criteria. The certification must be signed by the appointed actuary. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer does business.

For purposes of determining compliance with the "equivalence of characteristics" requirement in the "Hedged as Required" criteria, the current term of an equity indexed deferred annuity policy will be determined based on the requirements in the section captioned "General Requirements on Use of Certain Computational Methods." For purposes of applying a Type 1 computational method, the time horizon for

© 1999-2023 National Association of Insurance Commissioners

present value calculations should be based on the current term of the policy based on the requirements in the section captioned “General Requirements on Use of Certain Computational Methods.”

The Enhanced Discounted Intrinsic Method (EDIM) requires an initial reserve amount that is determined by methods that are not specifically included in the EDIM. For purposes of compliance with statutory minimum formula reserve requirements, the initial reserve under EDIM must be set at least equal to the initial reserve produced by either CARVM with UMV, or the MVRM with assumptions used to compute any necessary option market values reasonable as of the date of issue of the policy. The insurer must provide a certification (Attachment 3) as to the reasonableness of the assumptions.

Type 2 Methods

The use of Type 2 method is not conditioned upon the requirement to meet the “Hedged as Required” criteria. However, an insurer using a Type 2 method must provide a certification (Attachment 4) signed by the appointed actuary with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer does business. This certification deals with the assumptions underlying the option market values included in the calculation of reserves using a Type 2 method and the consistency in assumptions between these option market values and the statement value of any options owned by the insurer to support the equity indexed annuity business being valued.

For purposes of applying the MVRM and the BSPM recognized adaptation computational methods, the time horizon for present value calculations should be based on the requirements in the section captioned “General Requirements on Use of Certain Computational Methods.”

Required Change in Method

In the event an insurer that is using a Type 1 computational method for a block of business fails to meet the applicable “Hedged as Required” criteria, the required actuarial certification must disclose this fact. If the reason for failing the “Hedged as Required” criteria is not corrected within one quarterly financial reporting of the initial disclosure of the failure in the actuarial certification, the insurer must use a Type 2 computational method for determining minimum statutory formula reserves for this block of business.

If at a later date, the insurer can demonstrate to the satisfaction of its domiciliary commissioner that it is meeting the applicable “Hedged as Required” criteria, the insurer may, with the approval of the domiciliary commissioner, resume using a Type 1 computational method. In addition, the insurer must notify the appropriate regulatory official in each state in which the insurer does business subject to the change in computational method.

Optional Change in Method

An insurer using either a Type 1 or Type 2 computational method for a block of business, may with the approval of its domiciliary commissioner and after notifying the appropriate regulatory official in all the other states in which the insurer writes this block of business, use a computational method of the other type. If the change in computational methods involves a change from a Type 2 computational method to a Type 1 computational method, the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the applicable “Hedged as Required” criteria.

© 1999-2023 National Association of Insurance Commissioners

Plan Type

The use of either a Type 1 computational method or a Type 2 computational method requires a determination of Plan Type for purposes of determining the maximum valuation interest rate. Design features unique to equity indexed annuities, such as an equity enhanced surrender values, vesting schedules, or participation rate, should not used to determine the Plan Type of a policy form. Only those design features specifically identified in Section 4b. Paragraph C of the NAIC Model SVL may be used to assign a Plan Type to a policy form.

The definition of Plan Type A and Plan Type B in the NAIC Model SVL includes the phrase "with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company..." The reference to "change in ... asset values" does not include changes in policy values due to changes in the equity index underlying the policy form.

Other Regulatory Requirements

The guidance provided in this Actuarial Guideline concerning statutory minimum formula reserves for equity indexed annuity products supersedes the valuation guidance in Sections 5 and 6 of the NAIC Interest-Indexed Annuity Contracts Model Regulation.

Asset Adequacy Testing of Reserves

To the extent required by law, regulation, or regulatory requirements, reserves established for equity indexed annuity policies must be tested for adequacy using appropriate methods and assumptions.

© 1999-2023 National Association of Insurance Commissioners

ATTACHMENT 1
Description of Computational Methods

CARVM-UMV

Step 1: For each duration and each benefit at which an index-based benefit is available, determine the market value of the appropriate call option. The appropriate call option is one that exactly hedges the floor of the benefit at that point in time. This means that the payoff of the call option should exactly equal the difference between the specific benefit available at that point in time (reflecting all relevant contract features) and the guaranteed floor of that benefit. The market value should be determined using an appropriate option pricing technique, such as Black-Scholes or a stochastic scenario method.

Step 2: The market value of all of the call options are projected forward at the appropriate valuation interest rate to the point in time at which the call option would expire. The valuation interest rate should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B.

Step 3: The future guaranteed benefits for each benefit at each time point are determined by adding the guaranteed floors of the benefit to the amounts determined in Step 2.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

MVRM

Step 1: Calculate the projected index value at the end of the "term" which would produce a benefit at the end of the "term" equal to the sum of (1) the contract guarantee at that time, and (2) the current market value of the call option(s) which would fully hedge the index-based benefit, accumulated at the appropriate valuation interest rate. This calculation should be performed assuming equal annual percentage increases in the index. The call options used are those with maturity dates coterminous with the setting of participation rates, spread, or any other method of determining index-based benefits. The valuation interest rate used to accumulate the call options should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B. Note that the "term" referred to above should be consistent with the "term" described in this Actuarial Guideline.

Step 2: From the current level of the index and the projected level of the index at the end of the term, calculate an implied compound constant growth rate of the index from the valuation date to the end of the term. Use this implied growth rate to project the level of the index at intermediate anniversaries.

Step 3: All annuity benefits can now be determined from the index levels.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

MVRM Using Black-Scholes Projection Method

This is an adaptation of the basic MVRM approach to accommodate products for which the participation rate, spread, or any other benefit determination method is redetermined during the term (particularly annually).

Step 1: Calculate the cost of a full hedging call option as a percentage of the account value for the period that the benefit determination is guaranteed, accumulate the percentage to the end of that period at the risk-free interest rate, and use the accumulated percentage cost as the projected growth rate of the account value during the period. Perform the same type of calculation for each successive period within the term,

© 1999-2023 National Association of Insurance Commissioners

giving recognition to the benefit guarantees, forward interest rates, forward index volatility, and index dividend levels.

Step 2: Determine the index level which would provide the projected account level on each anniversary on the basis of the participation rate, spread, or other benefit determination method used.

Step 3: All annuity benefits can now be determined from the index levels.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

EDIM

Step 1: The Fixed Component at issue is the formula reserve produced by either CARVM-UMV or MVRM. The Fixed Component at the end of the term is the floor of the benefit actually being hedged.

Step 2: The intermediate values of the Fixed Component are found by solving for an interest rate that would accumulate the initial value to the ending value. For example, assume you purchase options assuming that 90% of policyholders will surrender at maturity, and that 10% of policyholders will annuitize at maturity. The Fixed Component is the sum of (1) 90% of the Fixed Component that grows to the floor of the surrender benefit; and (2) 10% of the Fixed Component that grows to the floor of the annuitization benefit.

Step 3: The Equity Component is equal to the discounted intrinsic value of the options. The discounted intrinsic value of the options is found by taking the intrinsic value at the valuation date, and discounting at the valuation rate for the number of years from the valuation date to the end of the term. The valuation interest rate used to discount the intrinsic value of the call options should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B.

Step 4: The reserve is the sum of a Fixed Component and an Equity Component.

ATTACHMENT 2
Hedged as Required Criteria

In order to use a Type 1 computational method, the appointed actuary needs to certify quarterly that it meets either the “Basic” or “Option Replication” criteria.

Basic

1. Required equivalence of characteristics between the option contracts held and the options imbedded in the products with respect to specific contract features such as: Index, averaging features, option type, strike price, term, etc.

2. The amount of hedge purchased, at or near the contract issuance, must be greater than or equal to a Specified Percentage of the product’s account value, at contract issuance. The Specified Percentage varies by the length of the option guarantee (some annual ratchet products may have a term of several years, but the participation rates are only guaranteed for one year, so the “term” for this purpose is 1 year), and allows the company to assume no more than 3% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. For example, for a five-year point-to-point product, the Specified Percentage would be: SP% = (1 - .03) ^ 5 = 86%.

3. The Company must have a specific plan for hedging risks associated with interim death benefits, early surrenders, etc.

4. The Company must have a system in place that is used to monitor the effectiveness of the company’s hedging strategy.

5. The Company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge.

Option Replication

1. Required equivalence of characteristics between the target of an option replication strategy employed, and the options imbedded in the liabilities with respect to specific contract features such as: index, averaging features, option type, strike price, term, etc.

2. At the end of each quarter, the notional amount of the target of the option replication strategy must be greater than or equal to the sum of the Specified Percentages of each contract's account value. The Specified Percentage varies by the length of the remaining option guarantee (some annual ratchet products may have a term of several years, but the participation rates are only guaranteed for one year, so the “term” for this purpose is 1 year), and allows the company to assume no more than 3% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. For example, if a point-to-point contract has five years remaining, the Specified Percentage for that contract would be: SP% = $(1 - .03)^5$ = 86%. Appropriate assumptions for non-elective decrements such as mortality may be added to the assumption for elective decrements.

3. The company must have a specific plan for hedging risks associated with interim death benefits, early surrenders, etc.

4. The Company must have system in place that is used to monitor the effectiveness of the company’s hedging strategy.

5. The Company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge. The maximum tolerance test and compliance evaluation test must meet the following minimum requirements. The compliance evaluation criteria will be a retrospective correlation test performed at least on a weekly basis.

© 1999-2023 National Association of Insurance Commissioners

The Company will compare the change in the market value, from the beginning of the calendar quarter, of the hedge portfolio with the change in the market value of the options embedded in the liability portfolio. The maximum dollar amount of difference permitted between these two changes is 10% of the beginning of period market value of the options embedded in the liabilities. If the difference exceeds this limit, the following steps must be taken:

- If for a second time during a quarter the dollar amount of difference exceeds 10% of the beginning of period market value of the options embedded in the liabilities, but is less than 25% of the beginning of period market value of the options embedded in the liabilities, the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy.

- If at any of the weekly intervals, the difference between the two changes exceeds 25% of the beginning of period market value of the options embedded in the liabilities, the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CARVM-UMV.

- If at any point in time during the quarter the difference between the two changes exceeds 35% of the beginning of period market value of options embedded in the liabilities, the insurer is deemed to be out of compliance with the "Hedged as Required" criteria, and the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CARVM-UMV.

Drafting Note: The requirements discussed above deal with the situation in which the actual hedge underperforms relative to the expected hedge performance. The ability of an insurer to over-hedge may be constrained by other components of a state’s regulatory framework including the state’s investment article and regulations concerning the use of derivative instruments. For purposes of this Drafting Note, over-hedged means that at a particular point in time, the hedge portfolio exceeds the portfolio of liabilities being hedged. If over-hedged, the excess hedging instruments are excluded from the measurements required in Item 5 of the Hedged as Required Criteria.

ATTACHMENT 3
Reasonableness of Assumptions Certification

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The certification must be signed by the appointed actuary.

I, (state name and professional designation), am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity options used in the determination of the initial statutory reserves under the Enhanced Discounted Intrinsic Method for all equity indexed deferred annuity products issued or reinsured by (company name) and reported in the statutory financial statement as of (the date of valuation). The assumptions used to determine such option market values are reasonable in light of the relevant economic conditions prevalent at the time of issue of each policy valued using the Enhanced Discounted Intrinsic Method.

ATTACHMENT 4
Reasonableness and Consistency of Assumptions Certification

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The certification must be signed by the appointed actuary.

I, (state name and professional designation), am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity options used in the determination of statutory reserves for all equity indexed annuity products issued or reinsured by (company name) insurance company and reported in the statutory financial statement as of (the date of valuation). The assumptions used to determine such option market values are:

1. reasonable in light of current relevant economic conditions as of the date of valuation, and

2. are consistent with the comparable assumptions used to determine the statement value of any derivative instruments used to hedge the equity indexed based obligations embedded in the equity indexed annuities subject to this certification.

Actuarial Guideline XXXVI

THE APPLICATION OF THE COMMISSIONERS RESERVE VALUATION METHOD TO EQUITY INDEXED LIFE INSURANCE POLICIES

Background

The purpose of this Actuarial Guideline is to clarify statutory and regulatory requirements for the valuation of reserves for equity indexed universal life insurance policies. This Guideline codifies the interpretation of the Commissioners Reserve Valuation Method (CRVM) by clarifying the computational methodologies that are deemed to comply with the intent of the Standard Valuation Law (SVL) and the Universal Life Insurance Model Regulation. These methodologies will be deemed to be consistent with CRVM.

Equity indexed universal life insurance policies include interest credits that are a combination of a guaranteed interest rate and an interest rate based on a percentage of the increase in an equity index, such as the S&P 500. Currently, there are only a few products in the market and the product designs have been straightforward. As new product designs emerge, this Actuarial Guideline may have to be revised.

In order that all insurers issuing equity indexed universal life insurance policies establish reserves for statutory reporting purposes that are consistent with CRVM minimum statutory formula reserves, this Actuarial Guideline identifies a computational method deemed to be consistent when specific operational criteria called "Hedged as Required" criteria are met. In addition, two other computational methods are defined that are deemed to be consistent with CRVM in the event the "Hedged as Required" criteria are not met.

Scope

This Actuarial Guideline applies to all equity indexed universal life insurance policies, regardless of the date of issue, that are subject to CRVM and would otherwise be subject to the reserve requirements under the Universal Life Insurance Model Regulation.

Definitions

Appointed Actuary. The appointed actuary, for purposes of this guideline, is the actuary appointed by the company's board of directors to provide opinions in accordance with Standard Valuation Law and the model Actuarial Opinion and Memorandum regulation.

Credited. Index-based benefits will be considered to be credited when they are added to the fund and treated in the same manner as other interest credits to the fund.

Term. An index-based benefit crediting period.

Computational Methods

Computational methods deemed to be consistent with CRVM can be classified into three groups, Type 1 methods, Type 2a methods and Type 2 methods. The following computational method is considered a Type 1 method: the Implied Guarantee Rate Method (IGRM). Type 1 computational methods are deemed to be consistent with CRVM only if the "Hedged as Required" criteria are met. The following is considered a Type 2a method: the Commissioners Reserve Valuation Method with Updated Average Market Value (CRVM with UAMV). The following is considered a Type 2 method: the Commissioners Reserve Valuation Method with Updated Market Value (CRVM with UMV). For a complete description of these methods, consult Attachment 1.

© 1999-2023 National Association of Insurance Commissioners

The minimum reserve for equity indexed life insurance policies is the statutory reserve calculated under the Universal Life Insurance Model Regulation for an identical policy with no guaranteed index-based benefits. If the reserve produced by Type 1, Type 2a or Type 2, as appropriate, is greater than the minimum reserve, then that Type 1, Type 2a or Type 2 reserve is the minimum reserve.

Type 1 Methods

A Type 1 computational method is deemed to be consistent with CRVM if an insurer using the method complies with the "Hedged as Required" Criteria (Attachment 2) and provides a certification (Attachment 3) as to compliance with the criteria. The appointed actuary must sign the certification. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business.

For purposes of determining compliance with the "equivalence of characteristics" requirement in the "Hedged as Required" criteria, the current term of an equity indexed universal life insurance policy is one year or less. This should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

The IGRM computational method is deemed to be consistent with CRVM under the following conditions:

1. The implied guaranteed rate for terms after the first, determined at issue using the method of Attachment 1, paragraph 3 of the IGRM method, is less than or equal to the appropriate maximum valuation interest rate.

2. Index-based benefit terms cannot be greater than one year. This should be interpreted consistently when a separate index- based benefit guarantee is made on each premium received.

3. The appointed actuary has demonstrated at time of filing or in conjunction with a change to a Type 1 Method, to the satisfaction of the regulatory officials in each state in which the insurer writes or reinsures equity indexed universal life insurance business, prior to the use of the IGRM that the requirements in (1) and (2) above have been met.

Type 2a Methods

A Type 2a computational method is deemed to be consistent with CRVM if an insurer using the method complies with Type 2a Prerequisite Criteria below, and provides Reasonableness and Consistency of Assumptions Certification (Attachment 4). The appointed actuary must sign the certification. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business.

Type 2a Prerequisite Criteria are as follows:

1. At issue, the policy satisfies (a) or (b) as follows:

    (a) The implied guaranteed rate for terms after the first, determined at issue using the method of Attachment 1, paragraph 3 of the CRVM with UAMV method, is less than or equal to the appropriate maximum valuation interest rate; or

    (b) Policies with identical renewal guarantees issued in three of the past five years would have satisfied condition 1 for the Type 1 method.

2. Index-based benefit terms cannot be greater than one year. This should be interpreted consistently when a separate index- based benefit guarantee is made on each premium received.

© 1999-2023 National Association of Insurance Commissioners

3. The appointed actuary has demonstrated at time of filing or in conjunction with a change to a Type 2a Method, to the satisfaction of the regulatory officials in each state in which the insurer writes or reinsures equity indexed universal life insurance business, prior to the use of the CRVM with UAMV that the requirements in (1) and (2) above have been met.

Type 2 Methods

The use of a Type 2 method is not conditioned upon the requirement to meet the "Hedged as Required" criteria or the Type 2a Prerequisite Criteria. However, an insurer using a Type 2 method must provide a certification (Attachment 5) signed by the appointed actuary with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business. This certification deals with the assumptions underlying the option market values included in the calculation of reserves using a Type 2 method and the consistency in assumptions between these option market values and the statement value of any options owned by the insurer to support the equity indexed universal life insurance business being valued.

Required Change in Method

In the event an insurer that is using a Type 1 computational method for a block of business fails to meet the applicable "Hedged as Required" criteria, the required actuarial certification must disclose this fact. If the reason for failing the "Hedged as Required" criteria is not corrected within one quarterly financial reporting period of the initial disclosure of the failure in the actuarial certification, the insurer must choose to use a Type 2a or a Type 2 computational method for determining minimum statutory formula reserves for this block of business.

If, at a later date, the insurer can demonstrate to the satisfaction of its domiciliary commissioner that it is meeting the applicable "Hedged as Required" criteria, the insurer may, with the approval of the domiciliary commissioner, resume using a Type 1 computational method. In addition, the insurer must notify the appropriate regulatory official in each state in which the insurer does business subject to the change in computational method.

Optional Change in Method

An insurer using either a Type 1, Type 2a or Type 2 computational method for a block of business may, with the approval of its domiciliary commissioner and after notifying the appropriate regulatory official in all the other states in which the insurer writes this block of business, use a computational method of another type. If the change in computational methods involves a change from a Type 2 or Type 2a computational method to a Type 1 computational method the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the applicable "Hedged as Required" criteria. If the change in computational methods involves a change from a Type 2 computational method to a Type 2a or Type 1 computational method, the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the "Type 2a Prerequisite Criteria" or the requirements specified in the section captioned "Type 1 Methods."

Asset Adequacy Testing of Reserves

To the extent required by law, regulation, or regulatory requirements, reserves established for equity indexed life policies must be tested for adequacy using appropriate methods and assumptions.

© 1999-2023 National Association of Insurance Commissioners

Attachment 1
Description of Computational Methods

Implied Guaranteed Rate Method (IGRM)

To use this computational method, companies must satisfy the "Hedged as Required" criteria, which are set out in Attachment 2. On the asset side, options will be held in accordance with the rules of the NAIC Accounting and Procedures Manual.

The following describes how the IGRM works:

1. Issue date calculations:

    Calculate an implied guaranteed rate, determined at issue, for the period of the initial term equal to: (a) the guaranteed interest rate for the period of the initial term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost, determined at issue, is the option cost, which will provide the index-based benefit in excess of any other interest rate guarantee for the initial term, accumulated to the end of the term at the appropriate maximum valuation rate. The option cost should be as of the issue date.

    Calculate an implied guaranteed rate, determined at issue, for the terms after the first. The implied guaranteed rates for terms after the first term will be based on historical moving average option costs according to (3) below.

    Using the Universal Life Insurance Model Regulation, with the guaranteed interest rates equal to the implied guaranteed rates, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

    Calculate the implied guaranteed rate for the current term based on the current term's index-based benefit and the option cost at the start of the current term that will provide the indexed benefit, in excess of any other interest rate guarantee, for the current term. The method of calculating the current term implied guaranteed rate is the same as for calculating the rate for the initial term. The implied guaranteed rate for terms after the current is not recalculated as long as neither the interest rate guarantees nor the index-based benefit guarantee have changed. (If guarantees have improved, then the new implied guaranteed rates for future terms will be based on option costs determined at issue according to (3) below.)

    Continue the calculation of the reserve according to the Universal Life Insurance Model Regulation. Use the recalculated current term implied guaranteed rate and the implied guaranteed rate for future terms, as determined according to (3) below, when computing future guaranteed benefits at the valuation date. Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

    In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

© 1999-2023 National Association of Insurance Commissioners

3. Index-based benefit guarantees beyond the current term should be handled as follows:

   Calculate an implied guaranteed rate, determined at issue, for the terms after the current term equal to: (a) the guaranteed interest rate for the period of the term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost is the historical moving average cost of the option whose term begins at the beginning of the term, which will provide the index-based benefit in excess of any other interest rate guarantee for the term, accumulated for the length of the term at the appropriate maximum valuation rate.

   The historical moving average cost of the option will be calculated based on the averages over the sixty months previous to the calendar year of issue of each of the following items: (a) 3% plus the annualized daily actual index volatility as the estimated implied volatility for a one year European At-The-Money option, e.g. if the average index volatility is 15%, the implied volatility for the base case option cost is 18%; (b) index dividend rate; and (c) risk free rate. The base case cost is for a one year European At-The–Money option and must be adjusted to the characteristics of the policy.

   In those states that require, by regulation, that the policy valuation interest rates not exceed the "minimum guaranteed interest rate" in the policy, the "minimum guaranteed interest rate" for IGRM is the implied guaranteed rate.

Commissioners Reserve Valuation Method Updated Average Market Value (CRVM with UAMV)

To use this computational method, companies must satisfy the Type 2a Prerequisite Criteria. On the asset side, options will be held in accordance with the rules of the NAIC Accounting and Procedures Manual. Similarly, reinsurance reserve credit will be in accordance with the rules of the NAIC Accounting and Procedures Manual.

The following describes how the CRVM with UAMV works:

1. Issue date calculations:

   Calculate an implied guaranteed rate, determined at issue, for the period of the initial term equal to: (a) the guaranteed interest rate for the period of the initial term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost, determined at issue, is the option cost that will provide the index-based benefit in excess of any other interest rate guarantee for the initial term, accumulated to the end of the term at the appropriate maximum valuation rate. The option cost should be as of the issue date.

   Calculate an implied guaranteed rate, determined at issue, for the terms after the first. The implied guaranteed rates for terms after the first term will be based on historical moving average option costs according to (3) below.

   Using the Universal Life Insurance Model Regulation, with the guaranteed interest rates equal to the implied guaranteed rates, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

   When calculating the present value of future guaranteed policy benefits at the valuation date by projecting a fund equal to the greater of the Guaranteed Maturity Fund or the policy value, this fund should be projected to the end of the current term at the guaranteed interest rate and added to

the accumulated option cost for the current term. The option cost should be determined as of the valuation date.

The option should provide for the index-based benefit in excess of any other interest rate guarantee for the current term based on a fund equal to the greater of the Guaranteed Maturity Fund or the policy value. The option cost should be accumulated to the end of the current term at the appropriate maximum valuation rate in accordance with the SVL.

This combined amount should then be projected forward using the implied guaranteed rates for future terms, as determined according to (3) below.

The implied guaranteed rates for terms after the current are recalculated on the valuation date. The implied guaranteed rates for future terms will be based on historical moving average option costs on the valuation date according to (3) below.

Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

Calculate an implied guaranteed rate, determined either at issue or at a valuation date, for the terms after the current term equal to: (a) the guaranteed interest rate for the period of the term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost is the historical moving average cost of the option whose term begins at the beginning of the term, which will provide the index-based benefit in excess of any other interest rate guarantee for the term, accumulated for the length of the term at the appropriate maximum valuation rate.

The historical moving average cost of the option will be set equal to the option cost calculated based on the averages of each of the following items over the sixty months previous to the calendar year of the determination date: (a) 3% plus the annualized daily actual index volatility as the estimated implied volatility for a one year European At-The-Money option, e.g. if the average index volatility is 15%, the implied volatility for the base case option cost is 18%; (b) index dividend rate; and (c) risk free rate. The base case cost is for a one year European At-The–Money option and must be adjusted to the characteristics of the policy.

In those states that require, by regulation, that the policy valuation interest rates not exceed the "minimum guaranteed interest rate" in the policy, the "minimum guaranteed interest rate" for CRVM with UAMV is the implied guaranteed rate.

CRVM with Updated Market Value (UMV) Method

CRVM with UMV applies the Universal Life Insurance Model Regulation to equity indexed life insurance policies using the following methods:

1. Issue date calculations:

When calculating the present value of future guaranteed policy benefits at issue by projecting fund values, the fund should be projected to the end of the initial term at the guaranteed interest rate and added to the accumulated option cost for the initial term. This combined amount should

then be projected forward, using the policy guarantees to determine future death and endowment benefits. The option should provide for the indexed benefit in excess of any other interest rate guarantee for the initial term. The option cost should be as of the issue date. The option cost should be accumulated to the end of the initial term at the appropriate maximum valuation rate in accordance with the SVL. Any index-based benefit guarantees beyond the initial term should be determined as described in (3) below.

Using this method of determining the present value of future guaranteed benefits, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

When calculating the present value of future guaranteed policy benefits at the valuation date by projecting a fund equal to the greater of the Guaranteed Maturity Fund or the policy value, this fund should be projected to the end of the current term at the guaranteed interest rate and added to the accumulated option cost for the current term. The option cost should be determined as of the valuation date. This combined amount should then be projected forward, using the policy guarantees to determine future death and endowment benefits. The option should provide for the index-based benefit in excess of any other interest rate guarantee for the current term, based on a fund equal to the greater of the Guaranteed Maturity Fund or the policy value. The option cost should be accumulated to the end of the current term at the appropriate maximum valuation rate in accordance with the SVL. Any index-based benefit guarantees beyond the current term should be treated as described in (3) below. Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

At the time of calculation, fund values projected to the end of the current term should be further projected to the end of the next term at the guaranteed interest rate. This should be added to the accumulated option cost for that term. This should be done successively for each subsequent term, using the appropriate option cost for each term. The option for each term should provide for the index-based benefit in excess of any other interest rate guarantee for the term. The cost for each option should recognize the current relevant economic condition on the calculation date and be priced as if the term began on that date. The option cost for each future term should be accumulated to the end of the term at the appropriate maximum valuation rate in accordance with the SVL.

© 1999-2023 National Association of Insurance Commissioners

Attachment 2
Hedged as Required Criteria - Life Products

In order to use a Type 1 computational method, the appointed actuary needs to certify quarterly that it meets either the "Basic" or "Option Replication" criteria.

Basic

1. Required equivalence of characteristics between the option policies held and the options embedded in the policies for the current term with respect to specific policy features such as: index; averaging features; option type; strike price; term; etc.

2. The amount of hedge owned must substantially cover the greater of the account value or reserve. "Substantially" is measured by the guarantees in the specific policy (some policies may have longer term guarantees than others), and allows the company to assume no more than 6% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. Benefit decrements due to charges in the policy should be taken into account in the same way as they are in the indexed interest formula in the policy (i.e., if indexed interest is credited on an average fund value, then it is the projected average fund value on each policy which should be hedged).

3. The company must have a specific plan for hedging risks associated with death benefits, early surrenders, unexpected premium payment patterns, and other potentialities. This plan must be available at issue and updated at every valuation date, or as often as the valuation actuary requirements may warrant.

4. The company must have a system in place that is used to monitor the effectiveness of its hedging strategy.

5. The company must have a stated maximum tolerance for differences between expected performance of the hedge and the actual results of the hedge.

Option Replication

1. Required equivalence of characteristics between the target of an option replication strategy employed and the options imbedded in the liabilities for the current term with respect to specific policy features such as: index; averaging features; option type; strike price; term; etc.

2. At the end of each quarter, the notional amount of the target of the option replication strategy must substantially cover the greater of the account value or reserve. "Substantially" is measured by the guarantees in the specific policy (some policies may have longer term guarantees than others), and allows the company to assume no more than 6% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. Benefit decrements due to charges in the policy should be taken into account in the same way as they are in the indexed interest formula in the policy (i.e., if indexed interest is credited on an average fund value, then it is the projected average fund value on each policy which should be hedged).

3. The company must have a specific plan for hedging risks associated with death benefits, early surrenders, unexpected premium payment patterns and other potentialities. This plan must be available at issue and updated at every valuation date, or as often as the valuation actuary requirements may warrant.

4. The company must have a system in place that is used to monitor the effectiveness of the company's hedging strategy.

© 1999-2023 National Association of Insurance Commissioners

5. The company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge. The maximum tolerance test and compliance evaluation test must meet the following minimum requirements. The compliance evaluation criterion will be a retrospective correlation test performed at least on a weekly basis. The company will compare the change in the market value, from the beginning of the calendar quarter, of the hedge portfolio with the change in the market value of the target of the option replication strategy. The maximum dollar amount of difference permitted between these two changes is 10% of the beginning of period market value of the target of the option replication strategy. If the difference exceeds this limit, the following steps must be taken:

    - If for a second time during a quarter the dollar amount of difference exceeds 10% of the beginning of period market value of the target of the option replication strategy, but is less than 25% of the beginning of period market value of the target of the option replication strategy, the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy.

    - If at any of the weekly intervals the difference between the two changes exceeds 25% of the beginning of period market value of the target of the option replication strategy, the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on CRVM with UMV, or CRVM with UAMV if the conditions for that method are satisfied.

    - If at any point in time during the quarter the difference between the two changes exceeds 35% of the beginning of period market value of target of the option replication strategy, the insurer is deemed to be out of compliance with the "Hedged as Required" criteria, and the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CRVM with UMV, or CRVM with UAVM if the conditions for that method are satisfied.

The requirements discussed above deal with the situation in which the actual hedge underperforms relative to the expected hedge performance. The ability of an insurer to over-hedge may be constrained by other components of a state's regulatory framework including the state's investment article and regulations concerning the use of derivative instruments. For purposes of this Guideline, over-hedged mean that at a particular point in time, the hedge portfolio exceeds the portfolio of liabilities being hedged. If over-hedged, the excess hedging instruments are excluded from the measurements required in Item 5 of the Hedged as Required Criteria.

Attachment 3
Reasonableness of Assumptions Certification
for Implied Guaranteed Rate Method

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The appointed actuary must sign the certification.

I, (state name and professional designation) am the appointed actuary for (company name). The company meets the Hedged as Required criteria for policies reserved under the Implied Guarantee Rate Method. I have reviewed the assumptions underlying the values assigned to all equity index options used in the determination of the implied guaranteed rate used in the calculation of reserves under the Implied Guaranteed Rate Method for all equity indexed universal life insurance policies issued or reinsured by (company name) and reported in the statutory financial statement as of (the date of valuation).

The assumptions at the start of the current term used to determine such option values for the current term are:

1. Reasonable in light of current relevant economic conditions at the start of the current term; and
2. Consistent with the comparable assumptions used to determine the statement of value of any derivative instruments as of the valuation date used to hedge the equity index-based obligations embedded in the equity indexed life policies subject to this certification.

The assumptions at issue used to determine equity index option values for terms subsequent to the current term are:

1. Determined in accordance with the Implied Guaranteed Rate Method
2. Based on quantitative data for the base case option (1-year European At-The-Money) of 3% plus ___._% average annualized daily actual volatility over the 60 months previous to the calendar year of issue.
3. Reasonably adjusted to reflect the following variances from the base case due to benefit design and capital market reasons (all material adjustments should be listed)
   a. skew adjustments
   b. _______________(to be described by appointed actuary)
4. Reliant on the following source(s) for assumptions not prescribed by this Actuarial Guideline:

Actuarial Guideline XXXVII

VARIABLE LIFE INSURANCE RESERVES FOR GUARANTEED MINIMUM DEATH BENEFITS

Background

This guideline's primary focus is to clarify the appropriate projection assumptions and methodologies used to determine statutory reserve liabilities for Guaranteed Minimum Death Benefits (GMDBs) offered with variable life insurance products.

For many years, insurance companies have not applied uniform reserve standards to variable life insurance policies in general, and to GMDBs in particular. Four regulatory sources are often looked to for guidance. First, the Standard Valuation Law (SVL) requires that CRVM be based on the present value of future guaranteed benefits. Second, the Variable Life Insurance Model Regulation as revised in 1983 and again in 1989 states "Reserve liabilities for variable life insurance policies shall be established under [SVL] in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees." Third is the Universal Life Insurance Model Regulation and most recently the Valuation of Life Insurance Policies Model Regulation.

GMDBs are common features of variable life products. Recently, reserve methods for universal life secondary guarantees have been clarified in the Valuation of Life Insurance Policies Model Regulation. These secondary guarantees are similar to GMDBs offered with variable life policies. A Guaranteed Minimum Death Benefit is any guarantee which provides death benefit protection which would not otherwise be provided in the absence of such a guaranteed benefit or provision. An example of a GMDB is a policy in which death benefits continue in-force even if the policy value is zero. This benefit may be contingent on additional qualifications being met, such as cumulative premiums meeting some limit.

Additional examples of GMDBs are provided below. This list is not intended to include all types of GMDBs.

- A Minimum Death Benefit Provision or No Lapse provision where death benefits are guaranteed to remain in-force for a period of time even if the policy value is not greater than zero subject only to certain conditions being met such as cumulative premiums meeting a minimum amount, or if a theoretical policy value is sufficient to meet a minimum amount.
- Death Benefits that are guaranteed to be at least as large as the original face amount, regardless of investment performance which might generate negative Paid Up Additions on a traditional fixed premium variable life insurance policy.

The Variable Life Insurance Model Regulation defines the reserve methodology for variable life policies. However, currently two versions of the model regulation exist and this results in inconsistent treatment by state. These two versions include the 1983 revisions and the 1989 revisions to the model regulation. Many states have not passed either revision and therefore require direct interpretation of SVL. In practice, companies have interpreted these regulations inconsistently with regard to assumptions and/or application to current products available today. The 1983 version of the regulation treats flexible premium policies differently than scheduled premium policies. The 1983 version of the regulation did not anticipate the types of GMDBs available today which require contingent conditions to be met to maintain a death benefit guarantee, for instance specified premiums must be paid. Thus, confusion exists with regard to which valuation method is appropriate. The 1989 version makes no distinction between the scheduled premium and flexible premium policies.

© 1999-2023 National Association of Insurance Commissioners

This Guideline codifies the basic interpretation of reserve liabilities for variable life GMDBs by clarifying the projection assumptions and methodologies that comply with the SVL. Minimum valuation standards that may be used to determine this reserve and are not specifically addressed in this guideline are defined by SVL and other applicable state regulations. This guideline focuses on the methodology of the 1989 revisions to interpret SVL, as we believe the 1989 revision more appropriately considers the types of products and GMDBs available today.

Interpretations of both the 1983 and 1989 versions reflect the comments made in the December 1972 report which concluded that an acceptable GMDB reserve system should have the following characteristics:

1. The GMDB reserve should be held in the general account of the company so that it will be backed by the general assets of the company, most of which are debt obligations valued at amortized cost and, therefore, are of a fixed dollar nature. It would not be proper to hold the GMDB reserve in the separate account, assuming the reserve is not supported by fixed dollar assets but by assets that are moving in the opposite direction from the risk, i.e. value moving downward while the risk increases and vice versa.

2. The GMDB reserve should be adequate to cover the GMDB death claims for the next year in all but the most extreme circumstances so that the regulatory authorities can be assured the company will not run into financial trouble from this source before the next annual statement is filed.

3. The GMDB reserve should react slowly but steadily through an extended period of poor investment experience of the separate account.

4. The GMDB reserve should not cause unnecessary fluctuations in surplus by increasing too rapidly in a sharp market downswing. Also, the reserve should not decrease too rapidly in a sharp market upswing after a period of poor market performance.

This guideline maintains the four principles above in interpreting the Standard Valuation Law as it relates to variable life business and the methods defined in both the 1983 and 1989 versions of the Variable Life Insurance Model Regulation.

Reserve methodologies which recognize the variable nature of GMDB are defined in the Variable Life Insurance Model Regulation and include a One-Year Term reserve recognizing a 1/3 drop in separate account assets, the Attained Age Level Reserve (AALR) methodology and in the 1983 version, a methodology for flexible premium policies. Reserves for GMDBs are held in the general account.

This guideline recognizes the following principles when determining appropriate reserves for GMDB.

- Determine the guaranteed death benefits which are not valued in the basic policy reserves.

- Establish a reserve for these benefits over the period of time in which revenue is collected to pay for such benefits; however, no greater than the period of time these guaranteed benefits are provided.

- Collected revenue should not be de-minimus in order to reduce the reserve.

- The reserve established is in addition to basic reserves

This guideline interprets the standards for applying these methodologies. This guideline also interprets the projection assumptions to be applied to determine excess guaranteed death benefits. The guideline clarifies the use of the AALR methodology for flexible premium variable life policies with contingent

GMDB benefit structures similar to specified premium contracts. This guideline is based on the belief that the 1983 revisions did not anticipate these types of GMDB benefits on flexible premium contracts. Thus, it makes sense to interpret the 1983 revisions for these types of GMDB benefits by applying the AALR methodology when there is a contingent GMDB structure. For flexible premium plans with other types of GMDBs, the flexible premium language of the 1983 revision is used where applicable.

The AALR methodology, along with the one-year term reserve is generally consistent with the principles above in that additional reserves are established in recognition of all death benefit guarantees not reflected in basic reserves. If multiple guarantees exist all guarantees must be valued and the greatest additional reserve is held. Consecutive GMDBs are treated as a single guarantee. These reserves are funded over the period of time GMDB Revenue will be collected through either policy charges or premiums, however, not to exceed the GMDB benefit period. The AALR methodology funds any GMDB Revenue deficiency over the period of time the Revenue is collected, however, no longer than the end of the guarantee period.

GMDB reserves are held in addition to basic reserves unless the appointed actuary provides satisfactory documentation to the state of domicile insurance department stating why such reserves are redundant. For example, for traditional variable life product designs where reserves are generally determined on a tabular basis and use an assumed interest rate (AIR), if basic reserves are determined based on at least the guaranteed face amount, (i.e. ignoring any negative additions) then the guaranteed death benefit is fully reflected in the basic reserves; therefore, an additional GMDB reserve is redundant. Neither this guideline nor the 1989 amendments specifically address traditional variable life product designs, nor does this guideline specifically exclude these designs from its scope.

An additional purpose of this guideline is to emphasize the impact of Sections 3A(3) and 3A(4) in the Valuation of Life Insurance Policies Model Regulation (“XXX”) relative to reserving for variable life and variable universal life products.

Scope

The guideline applies to all variable life insurance contracts to which the Standard Valuation Law applies and which provide Guaranteed Minimum Death Benefits (GMDBs) either explicitly or implicitly.

Definitions

Attained age level reserve (AALR): The AALR is a methodology described in the 1983 and 1989 revisions to the Variable Life Insurance Model Regulation.

Catch-up provision: A Catch-up provision is a provision in the policy that gives the policyholder the right to catch up on any contingent requirements in order to maintain the GMDB.

Guaranteed Period: The guaranteed period is the period of time over which a GMDB is guaranteed regardless of the basic guarantees in the policy. A policy may have multiple guaranteed periods and GMDBs.

Guaranteed Minimum Death Benefit (GMDB): A Guaranteed Minimum Death Benefit (GMDB) is any guarantee which provides continued death benefit protection which would not otherwise be provided in the absence of such a guaranteed benefit or provision. A policy may have multiple GMDBs.

One-Year Term (OYT) reserve: The OYT reserve covers a period of no more than one year following a 1/3-asset drop. This reserve is fully described in the 1989 revision to the Variable Life Insurance Model Regulation. This guideline clarifies the methodology and the assumptions used to determine OYT reserves.

Policy Value: Policy value means, as of the valuation date, the greater of (a) zero and (b) the amount to which separately identified interest credits and/or investment return and mortality, expense, or other

© 1999-2023 National Association of Insurance Commissioners

charges are made under a variable life insurance policy. Subsequent to the valuation date, "policy value" means the amount determined in accordance with the procedures specified in this guideline.

Projection Assumptions: The Projection Assumptions are used to determine guaranteed death benefits. This projection of policy values uses the following assumptions:

1. Cost of insurance rates are equal to the minimum valuation mortality.

2. The GMDB is assumed to be in effect for the maximum period of the GMDB. All minimum requirements necessary to maintain the GMDB in force subsequent to the valuation date are assumed to be met at the latest point in time sufficient to maintain the GMDB through its maximum period. Contingent requirements, if any, required to reinstate or catch-up as of the valuation date are assumed to occur on the valuation date. If the GMDB would continue in effect subsequent to the valuation date with no additional actions required, contingent requirements are assumed not to resume until the latest point in time which would prevent the termination of the GMDB.

3. The general account policy values and separate account policy values are projected at the valuation interest rate. The assumed investment rate, if any, is used when determining the OYT reserve.

4. The guaranteed period covered is determined assuming all contingent requirements are met.

5. Policy options and benefits are assumed to continue unchanged as of the valuation date. Examples include fixed and variable account allocation and the death benefit option.

6. The projection of policy values is made for the entire guarantee period, regardless of whether projected policy values are positive or negative at any point in the projection. Any negative policy value would be set to zero.

The policy value is projected forward from the valuation date with valuation interest rate credits, any payments required to maintain the guarantee and valuation mortality charges (and no other credits or charges). The Guideline stipulates that "A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero," and "Any negative policy value would be set to zero." An AALR need not be established for a VUL policy to provide for any period during which there would be a death benefit in the absence of the guarantee, since this benefit would be provided for by the policy's basic reserve. This means that for an AALR to develop, the mortality charges must exceed the required payments plus interest credits by enough to reduce the policy value to zero during the guarantee period. Surrender charges are not relevant to this determination.

GMDB Revenue: GMDB Revenue is policy charges or premium, either implicit or explicit. These charges or premiums may or may not be explicitly stated to cover GMDB benefits. An example of an implicit premium is a positive premium necessary to maintain a target policy value in order to maintain benefits.

Term cost: Term costs are based on the guaranteed minimum death benefits in excess of the death benefits that would be provided in absence of such guarantee based on a projection of policy values using the Projection Assumptions defined above. These costs are then discounted to the valuation date. The term costs are based on minimum valuation mortality standards and a discount rate not to exceed the maximum valuation interest rate.

1/3-Asset Drop: A 1/3 reduction in separate account assets that is used in the calculation of the one-year term reserve. This 1/3 drop is not applied to fixed account assets.

Text

© 1999-2023 National Association of Insurance Commissioners

1. Basic Reserves:

Basic Reserves include the reserve held for death benefits provided in the absence of a GMDB. Reserve liabilities for variable life insurance policies shall be established consistent with the methodologies described in the Standard Valuation Law and in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees. Reserve methods described in the Variable Life Insurance Model Regulation and the Universal Life Insurance Model Regulation may be appropriately utilized to determine reserve liabilities such that application of these methods is consistent with the principles of the Standard Valuation Law.

2. Guaranteed Minimum Death Benefit Reserves:

Additional reserves are required to provide for liabilities of GMDB provisions which provide benefits that would not be provided in the absence of the guarantee. In measuring these liabilities, the basic reserve provides for death benefits which occur in the absence of the guarantee. GMDB reserves provide for the contingency of death occurring when the guaranteed minimum death benefit exceeds the death benefit that would be paid in absence of the guarantee. A consistent reserve methodology should be used regardless of whether a contract has scheduled premiums or flexible premiums.

When a contract provides multiple GMDBs and/or multiple guarantee periods, a reserve is established based on the guaranteed period which produces the greatest reserve as of the valuation date. Consecutive GMDBs are treated as a single guarantee period. The reserve methodology reflects all potential guarantee periods assuming that contingent requirements are met such as: contingent premiums paid, Catch-up Provisions or any pre-funding of contingent requirements.

For a policy under the 1989 revisions or a flexible premium policy with contingent GMDBs similar to a specified premium contract under the 1983 revision, the GMDB reserve equals the greater of (1) and (2) where (1) equals “the aggregate total of term costs” (OYT) which covers a period of no more than one year following a 1/3-asset drop, and (2) equals the AALR as described below.

For a flexible premium policy under the 1983 revisions not covered above, (where the GMDB guarantee is not contingent on any policyholder requirement), reserve liabilities for any guaranteed minimum death benefit shall be maintained in the general account of the insurer and shall be not less than the aggregate total of the term costs, if any, covering the period provided for in the guarantee not otherwise provided for by the reserves held in the separate account assuming a 1/3-asset drop, projected at the valuation interest rate.

a) One Year Term Reserves (OYT):

This reserve component equals the “aggregate total of term costs”, if any, covering a period of one full year from the valuation date, or, if less, covering the period of time death benefits are provided which are not otherwise provided for by the basic reserves. This reserve assumes any contingent requirements to maintain the GMDB are met by reflecting any Catch-up Provisions or any pre-funding of contingent requirements.

“Aggregate total term costs” equals the present value of guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee, if any, prior to the end of one full year or the end of the guaranteed period if sooner. A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero. Death benefits are determined by projecting the policy value following a 1/3-asset drop and using the Projection Assumptions defined above. Present values are determined using valuation mortality rates and the maximum valuation interest rate.

© 1999-2023 National Association of Insurance Commissioners

b) Attained Age Level Reserves (AALR):

This reserve component allows for funding GMDBs over no longer than the guaranteed period. This reserve assumes contingent requirements are met to maintain the GMDB and reflect any prepaid contingent requirements or Catch-up provisions. A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero. This reserve component exists until no later than the end of the guarantee period if, on any prior valuation date, projected policy values resulted in guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee. To the extent long term favorable investment performance results in redundant reserves, the valuation actuary may request permission from the state of domicile insurance department to release all or a portion of the redundant GMDB reserves. This projection of policy value is based on the Projection Assumptions defined above and does not incorporate a 1/3-asset drop.

The AALR reserve component shall not be less than zero and shall equal the "residue," as described in paragraph (1) below, of the prior year's AALR on the contract, with any such "residue," increased or decreased by a "payment" computed on an attained age basis as described in paragraph (2) below.

(1) The "residue" of the prior year's AALR on each variable life insurance contract shall not be less than zero and shall be determined by adding interest at the maximum valuation interest rate to such prior year's reserve, deducting the tabular claims based on the "excess", if any, of the guaranteed minimum death benefit over the death benefit that would be payable in absence of such guarantee, and dividing the result by the tabular probability of survival. Hence, tabular costs are only deducted for years where, in the absence of the guarantee, coverage would be less than the guaranteed coverage.

(2) The "payment" used to increase or decrease the "residue" above shall be computed so that the present value of a level payment of that amount each year over the future period for which GMDB Revenue will be collected under the contract is equal to (A) minus (B) minus (C), where, (A) is the present value of future guaranteed minimum death benefits. The future guaranteed minimum death benefits are the projected future death benefits including the GMDB. (B) is the present value of the projected future death benefits that would be payable in the absence of the GMDB. The guaranteed benefit for (A) and (B) should be calculated for the life of the policy. Both (A) and (B) are calculated based on the Projection Assumptions. (C) is any "residue," as described in paragraph (1) above, of the prior year's AALR on such variable contract. Minimum standards of valuation mortality assumptions and maximum valuation interest rates are used to determine present values and net level payments. The period of time in which GMDB Revenue will be collected is limited to the period of time policy values are sufficient to collect policy charges or the period of time contingent requirements will be paid to maintain the GMDB. In no event will the time period be greater than the time to the end of the guarantee period. It should also be noted that the "payment" may be negative resulting in the reserve running off over the remaining guarantee period.

c) Other Flexible Premium Policies under the 1983 revisions not included above:

The present value of potential guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee is determined by using

© 1999-2023 National Association of Insurance Commissioners

minimum standards of valuation mortality assumptions and maximum valuation interest rates.

3. Issues:

Sections 3A(3) and 3A(4) of "XXX" state the following:

3A(3): This regulation shall not apply to any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

3A(4): This regulation shall not apply to any variable universal life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

The language of these sections is clear. The reserving for variable life and variable universal life is in no way affected by the provisions of "XXX." In particular, the 19-year select factors and the "X" factor are not applicable to the calculation of reserves for variable life and variable universal life products.

Effective Date

This guideline affects all variable life insurance contracts issued. Where the application of this Guideline produces higher reserves than the company had otherwise established by their previously used interpretation, such company must comply with this guideline effective December 31, 2001. However, such company may request a grade in period, not to exceed three (3) years, from the domiciliary Commissioner upon satisfactory demonstration of the previous interpretation and that such delay of implementation will not cause a hazardous financial condition or potential harm to its policyholders.

Retroactive application of the guideline to in-force policies to develop the current residue portion of the AALR will generally not be feasible. Therefore, the residue as of 12/31/2000 should be set equal to the greater of the amount established by the company under its current method or $0 if the company did not previously calculate an AALR.

Actuarial Guideline XXXVIII

THE APPLICATION OF THE VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION

Introduction

The revised version of the *Valuation of Life Insurance Policies Model Regulation* (Model #830) was adopted by the NAIC in March 1999. Since that date, some questions have been raised regarding whether and how Model #830 applies to various product designs. The purpose of this guideline is to provide direction as to the application of Model #830 to such products. Specifically, this guideline provides examples of various policy features that constitute "guarantees" and gives directions on how to reserve for these guarantees in accordance with Model #830.

Obviously, new policy designs will emerge subsequent to the development of this document. No statute, regulation, or guideline can anticipate every future product design, and common sense and professional responsibility are needed to assure compliance with both the letter and the spirit of the law. While Model #830 is a complex regulation, its intent is clear: reserves need to be established for the guarantees provided by a policy. Policy designs which are created to simply disguise those guarantees or exploit a perceived loophole must be reserved in a manner similar to more typical designs with similar guarantees.

Text

The following product designs have been brought to the attention of the NAIC Life Actuarial (A) Task Force. The list below specifies reserving approaches which the Task Force regards as being most consistent with the letter and spirit of Model #830. However, the specified reserving approaches should be modified as needed to comply with the intent of this guideline that similar reserves be established for policy designs that contain similar guarantees.

1. An initial level premium rate is guaranteed for 10 years followed by increased guaranteed premiums for an additional 20 years. However, the company cannot increase premiums after year 10 (i.e., the initial premium continues to be charged) unless some specified event occurs.

   The initial reserve segment is 30 years. Since the contract contains provisions that limit the company's ability to increase premiums, then the initial premium should be treated as guaranteed for the entire 30-year period. It would be contrary to the conservative nature of statutory accounting to treat this policy the same as one in which the ability to raise premiums is unrestricted.

2. A term policy has an illustrated level premium for 30 years, the first 10 of which are guaranteed. Additionally, there is a refund option which provides that a specified refund will be paid if the premium ever increases. The refund must be requested within a limited time (e.g., 30 days) of receiving notice of the increase. Coverage terminates if the option is exercised.

   This example differs from the one above in that there is no specified event that has to occur in order for the company to impose a premium increase; however, the company must provide an additional benefit to the policyholder if it exercises this right. Thus the company does not have an unrestricted right to impose an increase after 10 years. If the contract contains provisions that require that additional benefits be provided to the policyholder in the event of a premium increase, even if these benefits are lost if not claimed within a stated time frame, then the initial premiums should be treated as guaranteed for the entire 30 year period. It would be contrary to the conservative nature of statutory accounting to treat this policy the same as one in which the

© 1999-2023 National Association of Insurance Commissioners

ability to raise premiums does not require that additional benefits be provided. Therefore, the initial segment for this policy is 30 years.

3. An initial level premium rate is guaranteed for 10 years followed by increased guaranteed premiums for an additional 20 years. However, after year 10 the policyholder is protected against premiums being increased above the initial level, with the protection provided by a second company through either reinsurance, a second policy issued to the consumer, or an agreement between the companies.

   The combined reserves of the direct writer and the second company should be no less than the amount which the direct writer would hold if (a) there were no second company and (b) the initial reserve segment were 30 years. If this condition is not met, reserve credits for the direct writer should be disallowed. The reserve held by the direct writer should be based on the initial level premium being guaranteed for 30 years.

4. A product has relatively high gross premiums but with a guaranteed dividend or guaranteed refund schedule, or by some other means guarantees a low net cost to the policyholder.

   The net amount of premium (i.e., gross premium less dividends or refunds) should be used in the reserve calculation. That represents the amount the insured actually pays for coverage.

   For products reinsured on either a coinsurance or modified coinsurance basis, the reinsurer's reserve calculation should also be based on the net premium (i.e., gross premiums less dividends or refunds guaranteed to be paid to the policyholder).

5. a) A re-entry term product has an initial rate guarantee for 10 years, with loose or non-existent re-entry underwriting, allowing the policyholder to re-enter for an additional 20 years at specified favorable rates.

   b) A universal life policy has provisions such that, if the UL policy lapses prior to the 10th policy anniversary because the actual accumulation value (or cash value, depending on design) falls below zero but stipulated premiums have been paid, a substitute policy is guaranteed to be issued providing the same amount of insurance coverage at the same stipulated premium for the remainder of the 10-year period plus an additional 20 years.

   The reentry periods and premiums should be treated as a continuation of the initial guarantees for reserve calculation purposes. The initial reserve segment applicable to the original policy should be 30 years if the stipulated premium for the substitute policy is not high enough to trigger a new reserve segment. When the substitute policy is issued, reserves should be determined as if the coverage had been issued at the issue age and issue date of the original policy. Effectively, the company has guaranteed coverage for 30 years at the time the initial policy is issued, and the reserves established should reflect that guarantee.

6. A reinsurance treaty provides for 30 years of level premiums on a current scale but directly guarantees those premiums for only the first 10 years. However, if the reinsurer increases the premiums after 10 years, the reinsurer agrees to increase the expense allowance such that the net payments (premium minus allowance) by the direct writer remains unchanged.

   Relative to the reinsurer's reserve calculation, the initial reserve segment should be 30 years and the valuation premium should be level over that period. In this instance, the additional "expense allowance" has no relationship to the expenses actually incurred by the direct writer in administering the reinsured policies. Although a bona fide expense allowance would typically not be considered in determining the valuation premiums and reserve segments, in this instance the

additional "expense allowance" has no relationship to the expenses actually incurred by the direct writer in administering the reinsured policies.

7. A universal life policy has a cumulative "premium catch-up provision" in which the coverage is guaranteed to remain in force as long as a stipulated premium is paid each year, and if the insured is paying less than is required to maintain the guarantee, there is an unlimited right to make up past premium deficiencies.

Model #830 requires that "when a policy contains more than one secondary guarantee, the minimum reserve shall be the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees." Since secondary guarantees with "catch-up" provisions are capable of being reinstated up to the end of the secondary guarantee period, they constitute "unexpired secondary guarantees" which must be incorporated into the calculation of "the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees."

The basic and deficiency reserves for a secondary guarantee with a catch-up provision should be computed as if the stipulated premium requirement had been met. The basic reserve shall be reduced by the product of (a) the "catch-up amount," if any, which would be required on the valuation date and (b) the ratio of the "initial" (i.e., before adjustment) basic reserve to the sum of the "initial" basic and deficiency reserves. In no event shall the "reduced" basic reserve be reduced below zero. The deficiency reserve shall be reduced by the product of (a) the "catch-up amount," if any, which would be required on the valuation date and (b) the ratio of the "initial" deficiency reserve to the sum of the "initial" basic and deficiency reserves. In no event shall the "reduced" deficiency reserve be reduced below zero.

If a universal life policy with a "premium catch up provision" has a shadow account below the level necessary to maintain the secondary guarantee, then the reserve for the secondary guarantee shall be valued according to this example. The basic and deficiency reserves, before deduction for the catch-up amount, shall be calculated as specified in Section 8A, Section 8B, Section 8C or Section 8E, as applicable.

8A. For policies and certificates issued prior to July 1, 2005: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the "specified premiums" are the minimum gross premiums derived in "Step One."

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, a determination should be made of the single payment necessary at the valuation date to fully fund the remaining secondary guarantee assuming that the minimum gross premiums have been paid, up through the valuation date, during the secondary guarantee period. The result from "Step Three" should be divided by this number.

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830.

Sixth, the "net amount of additional premiums" is determined by multiplying the ratio from "Step Four" by the difference between the net single premium from "Step Five" and the basic and deficiency reserve, if any, computed in "Step Two."

Seventh, a "reduced deficiency reserve" should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from "Step Four," but not less than zero. This "reduced deficiency reserve" is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from "Step Five," and (2) the amount of the excess from "Step Six" plus the basic reserve and the deficiency reserve, if any, computed in "Step Two." Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) are those calculated in Step Two, and no further calculation is required.

Ninth, an "increased basic reserve" should be computed by subtracting the "reduced deficiency reserve" in "Step Seven" from the reserve computed in "Step Eight." This "increased basic reserve" is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

8B. For policies and certificates issued on or after July 1, 2005 and on or prior to December 31, 2006: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the "specified premiums" are the minimum gross premiums derived in "Step One." Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term "fully fund the guarantee" should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term "remainder of the secondary guarantee period" should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves.

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, as of the valuation date for the policy being valued, for policies utilizing shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For policies with no shadow accounts but which specify cumulative premium requirements, determine the amount of the cumulative premiums paid in excess of the cumulative

premium requirements that would result in no future premium requirements to fully fund the guarantee; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee). For any policy for which the secondary guarantee can not be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. The amount determined above for this step is to then be divided by one minus a 7% premium load allowance (0.93). The result from “Step Three” should be divided by this number, with the resulting ratio capped at 1. The ratio is intended to measure the level of prefunding for a secondary guarantee which is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount of the premium load allowance as defined in this step. As used here, “assumptions” include any factor or value, whether assumed or known, which is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at a level approximately equal to the current industry average.]

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830.

Sixth, the “net amount of additional premiums” is determined by multiplying the ratio from “Step Four” by the difference between the net single premium from “Step Five” and the basic and deficiency reserve, if any, computed in “Step Two.”

Seventh, a “reduced deficiency reserve” should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from “Step Four,” but not less than zero. This “reduced deficiency reserve” is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from “Step Five,” and (2) the amount of the excess from “Step Six” plus the basic reserve and the deficiency reserve, if any, computed in “Step Two.” Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves. However, if no future premiums are required to support the guarantee period being valued, there is no reduction for surrender charges. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) of Model #830 are those calculated in Step Two, and no further calculation is required.

Ninth, an “increased basic reserve” should be computed by subtracting the “reduced deficiency reserve” in “Step Seven” from the reserve computed in “Step Eight.” This “increased basic reserve” is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

© 1999-2023 National Association of Insurance Commissioners

8C. For all policies and certificates issued on or after January 1, 2007 and on or prior to December 31, 2012: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the "specified premiums" are the minimum gross premiums derived in "Step One." Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term "fully fund the guarantee" should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term "remainder of the secondary guarantee period" should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves. Additionally, for purposes of applying Sections 7B and 7C of Model #830, a lapse rate of no more than 2% per year for the first 5 years, followed by no more than 1% per year to the policy anniversary specified in the following table based on issue age, and 0% per year thereafter may be used. If the duration in the table is less than 5, then a lapse rate of no more than 2% per year may be used through that duration, and 0% per year thereafter.

Issue Age	Duration
0-50	30th policy anniversary
51-60	Policy anniversary age 80
61-70	20th policy anniversary
71-89	Policy anniversary age 90
90 and over	No lapse

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, as of the valuation date for the policy being valued, for policies utilizing shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For policies with no shadow accounts but which specify cumulative premium requirements, determine the amount of the cumulative premiums paid in excess of the cumulative premium requirements that would result in no future premium requirements to fully fund the guarantee; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee). For any policy for which the secondary guarantee can not be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. The amount determined above for this step is to then be divided by one minus a 7% premium load allowance (0.93). The result from "Step Three" should be divided by this number, with the resulting ratio capped at 1. The ratio is intended to measure the level of prefunding for a secondary guarantee which is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount

© 1999-2023 National Association of Insurance Commissioners

of the premium load allowance as defined in this step. As used here, "assumptions" include any factor or value, whether assumed or known, which is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at a level approximately equal to the current industry average.]

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830. For purposes of calculating the net single premium, a lapse rate subject to the same criteria as the lapse rate used in applying Step 2 of 8C above may be used.

Sixth, the "net amount of additional premiums" is determined by multiplying the ratio from "Step Four" by the difference between the net single premium from "Step Five" and the basic and deficiency reserve, if any, computed in "Step Two."

Seventh, a "reduced deficiency reserve" should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from "Step Four," but not less than zero. This "reduced deficiency reserve" is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from "Step Five," and (2) the amount of the excess from "Step Six" plus the basic reserve and the deficiency reserve, if any, computed in "Step Two." Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) of Model #830 are those calculated in Step Two, and no further calculation is required.

Ninth, an "increased basic reserve" should be computed by subtracting the "reduced deficiency reserve" in "Step Seven" from the reserve computed in "Step Eight." This "increased basic reserve" is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

Business reserved pursuant to Section 8C must be supported by an asset adequacy analysis specific to this business. This asset adequacy analysis must be performed pursuant to the requirements of Section 3 of the Standard Valuation Law. Reserves required by Section 8C shall be increased by any additional reserves required by the asset adequacy analysis.

8D. This Section 8D applies to policies and certificates (1) issued on and after July 1, 2005, (2) issued prior to January 1, 2013, and (3) in force on December 31, 2012, or on any valuation date thereafter: Under a universal life policy with a secondary guarantee, the coverage is guaranteed to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

Notwithstanding the requirements of any of the other sections of this Actuarial Guideline (and in addition to any testing that may be required under Section 8C), this Section 8D describes the

© 1999-2023 National Association of Insurance Commissioners

reserving requirements with respect to universal life with secondary guarantee products, with or without a shadow account, with multiple sets of interest rate or other credits, or multiple sets of cost of insurance, expense, or other charges that may become applicable to the calculation of the secondary guarantee measures in any one policy year. This Section 8D does not apply if the minimum gross premiums for the policies are determined by applying the set of charges and credits that produces the lowest premiums, regardless of the imposition of constraints, contingencies, or conditions that would otherwise limit the application of those credits and charges. The requirements of this Section 8D apply to a company on December 31, 2012, and on any subsequent valuation date if (1) on the applicable date, the in force face amount (direct plus assumed) of universal life insurance to which this Section 8D would otherwise apply exceeds 2% of the company's face amount of individual permanent life insurance in force, or (2) on the applicable date, the company's face amount of insurance in force subject to this Section 8D exceeds $1,000,000,000 (one billion dollars). Any company otherwise meeting these criteria may seek an exemption to the requirements under this Section 8D by filing an exemption request with its state of domicile, which will provide a copy of the request to the NAIC Financial Analysis (E) Working Group (FAWG). If the state of domicile agrees with the exemption request, then the requirements of this Section 8D do not apply to such company, provided FAWG does not conclude that the exemption would allow the company to use a reserving methodology that is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

a. Primary Reserve Methodology

The company's aggregate gross reserve before reinsurance for the business subject to this Section 8D to be reported in the December 31, 2012, and subsequent annual statutory financial statements of the company will be the aggregate reserve under 1 below, plus any excess of the aggregate reserve determined as defined in 2 below, over 1:

1. The basic and deficiency reserve as of the valuation date determined by the company according to the reserve methodology and assumptions used by the company for the statutorily-reported reserve for the business subject to this Section 8D as of December 31, 2011.

2. The reserve amount as of the valuation date determined according to the same requirements for determining the deterministic reserve in the version of the *Valuation Manual* specified under Section 11 of the *Standard Valuation Law* (Model #820) and adopted by the NAIC to govern the principle-based valuation on the valuation date, but with the two modifications identified below, determined as follows:

   a) First, future year-by-year cash flows for the block of business subject to this Section 8D are projected as of the valuation date. In making this projection:

      (I) the projected net investment earnings from the starting assets shall be the lesser of (i) the actual portfolio net investment returns and (ii) net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds.

      (II) the projected net investment rate for the reinvestment assets shall be the lesser of (i) the average over a period of 12 months, ending on the June 30 prior to the valuation date, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody's Investor Services, Inc. and (ii) 7% per annum.

b) Second, future year-by-year net investment returns are determined from the cash flows generated in Section 8D(a)(2)(a).

c) Third, the reserve for the policies is computed using the year-by-year net investment returns determined in Section 8D(a)(2)(b) to discount the cash flows applicable to those policies.

The company may calculate the reserves as of any December 31 as of a date no earlier than three months before that December 31 valuation date, using relevant company data, provided an appropriate method is used to adjust those reserves to the valuation date.

If the aggregate reserve determined pursuant to the second calculation above exceeds the aggregate reserve determined pursuant to the first calculation, the additional reserve to be held is deemed to be required pursuant to Model #820, Section 3 and Section 6, which provide for an analysis of reserves pursuant to an asset adequacy analysis with margins for moderately adverse assumptions. Any such excess shall be allocated to each policy in proportion to the Step 1 reserve for that policy.

b. Alternative Reserve Methodology

The requirements of subsection a. above shall not apply to a company that holds a total gross reserve amount, before reinsurance, for the business subject to this Section 8D at least equal to the total reserve determined in accordance with the November 1, 2011 Life Actuarial (A) Task Force Statement on Actuarial Guideline XXXVIII, except that for purposes of determining any deficiency reserves under Model #830, using mortality and lapse assumptions according to the same requirements for determining the deterministic reserve in the *Valuation Manual*.

c. Documentation and Reporting

Under the direction of one or more qualified actuaries, the company shall prepare a stand-alone Actuarial Memorandum covering the reserve analysis performed on the business described in this Section 8D in compliance with Section 7 of the *Actuarial Opinion and Memorandum Regulation* (Model #822) to document the assumptions, analyses and results of the reserve calculations described above. The Actuarial Memorandum shall be prepared regardless of whether the company used the Primary Reserve Methodology described in Section 8D(a) or the Alternative Reserve Methodology described in Section 8D(b). Documentation in the submitted Actuarial Memorandum must be sufficient for another actuary qualified in the same practice area to evaluate the assumptions, analyses and results, and to enable regulatory review and verification that the assumptions, analyses and results satisfy the requirements described above, as they relate to the company. In the event that the *Valuation Manual* is incomplete or unclear as to any matter, the actuary preparing the Actuarial Memorandum shall use his or her best judgment in applying the requirements of the *Valuation Manual* and shall document his or her decisions in the Actuarial Memorandum. For any business subject to this Section 8D that has been ceded by the company, the Actuarial Memorandum shall provide a listing of the assuming companies with face amount, reserve credit taken, and form of reinsurance for such business. The Actuarial Memorandum shall be submitted to the state of domicile of the company by the April 30 following the valuation date.

For reporting years prior to 2015: The state of domicile shall provide a copy of the Actuarial Memorandum to FAWG and, upon request, to any other state in which the company is licensed.

For reporting years 2015 and after: The state of domicile shall provide a copy of the Actuarial Memorandum to FAWG upon request and, upon request, to any other state in which the company is licensed.

© 1999-2023 National Association of Insurance Commissioners

For those companies that used the Primary Reserve Methodology described above, the Actuarial Memorandum shall also provide with respect to the business subject to this Section 8D a description of the simplifications, approximations and modeling efficiency (aggregation) techniques used to calculate the reserve amount set forth in Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)) and a clear indication that, upon request, information may be obtained that is adequate to permit the audit of any subgroup of the aggregated reserve amounts to ensure that the total of the seriatim (policy-by-policy) reserve calculations produces a reserve not materially different than the aggregated reserve amount determined pursuant to Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)).

Along with the filing of the Actuarial Memorandum pertaining to the December 31, 2012 valuation date, those companies using the Primary Reserve Methodology above shall also submit a report to its state of domicile indicating what the gross reserve before reinsurance for the business subject to this Section 8D would be as of December 31, 2012 if the reserve had been determined pursuant to the methodology and experience assumptions used to determine the reserve set forth in Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)), except using a net reinvestment return rate assumption not greater than the maximum valuation interest rate for the year of issue of each policy set forth in Model #820. The company shall include in this report what its (i) total adjusted capital and (ii) company action level risk based capital would be if the company held the reserve calculated pursuant to this methodology rather than the reserve actually reported for the applicable business in the annual statement submitted by the company to the NAIC. The report described in this paragraph will be provided by the company to the state of domicile, which will forward a copy to FAWG. Upon request, the state of domicile will also forward a copy of this report to any other state in which the company is licensed. The state of domicile, FAWG, and any other state receiving the report will treat it as containing confidential information. The report is to be provided for informational purposes only, and it is to be considered and used as one additional piece of information to be evaluated in the context of the company's overall financial position.

For reporting years prior to 2015: The domestic state will perform a review of the Actuarial Memorandum in consultation with FAWG to ensure the company's reserve calculations have been performed according to the requirements of this Section 8D.

If:

- the company reports in its financial statements the reserve level required above, adjusted for any phase-in period approved by the company's state of domicile, and
- the company complies with any applicable phase-in period made by the state of domicile with respect to such additional reserves, and
- FAWG agrees with the state of domicile's decisions,

FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is appropriate in relation to the benefits and the pattern of premiums for the plans covered. If FAWG does not agree with the state of domicile's decisions, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

For reporting years 2015 and after: The domestic state will perform a review of the Actuarial Memorandum to ensure the company's reserve calculations have been performed according to the requirements of this Section 8D and may consult with FAWG regarding this review.

© 1999-2023 National Association of Insurance Commissioners

If FAWG does not agree with the state of domicile's decisions, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

8E. For policies and certificates issued on or after January 1, 2013, except for ULSG policies and certificates for which the company elects or is required to apply VM-20 as the reserve standard, per *Valuation Manual* requirements: For a universal life policy or certificate that guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

Step 1: The first step is to derive the minimum gross premiums for the policy or certificate (to be determined at issue). Except as indicated for policies and certificates described in Method I Policy Design #3 (described below), the minimum premiums so derived must satisfy the secondary guarantee requirement. Model #830, Section 7A(4) does not apply in determining the minimum gross premiums for policies and certificates described in this Section 8E.

I) Methodology for determining the minimum gross premiums for certain designs ("Method I").

1. Policy Design #1: For a policy containing a secondary guarantee that uses a shadow account with a single set of charges and credits, the minimum gross premium for any policy year is the premium that, when paid into a policy with a zero shadow account value at the beginning of the policy year, produces a zero shadow account value at the end of the policy year, using the guaranteed shadow account charges and credits (e.g., interest credited rate, mortality charges, premium loads and expense charges) specified under the secondary guarantee.

2. Policy Design #2: For a policy that compares paid accumulated premiums to minimum required accumulated premiums (cumulative premium policy), with both accumulations based on a single set of charges and credits specified under the secondary guarantee, the minimum gross premium for any policy year is the premium that, when paid into a policy for which the accumulated premiums equals the minimum required accumulated premiums at the beginning of the policy year, results in the paid accumulated premiums being equal to the minimum required accumulated premiums at the end of the policy year.

3. Policy Design #3: If, for any policy year, a shadow account secondary guarantee, a cumulative premium secondary guarantee design, or other secondary guarantee design, provides for multiple sets of charges and/or credits, then the minimum gross premiums shall be determined by applying the set of charges and credits in that policy year that produces the lowest premiums, ignoring the constraint that such minimum premiums satisfy the secondary guarantee requirement and ignoring any contingencies or conditions that would otherwise limit the application of those charges and credits.

Notwithstanding the language in the approaches described above, the guaranteed (including conditionally guaranteed) policy credits for each year shall be limited as to magnitude in order for minimum gross premiums to be determined consistent with any of the policy designs above. The limitations must be met at the time of each product filing and also when guaranteed credits or charges for each such product are revised. For this purpose, policy credits based on the interest or accumulation rates in the policy shall not exceed the "Index" (defined in the next sentence) plus 3% per annum. The Index used to establish the limitation as to magnitude shall be either (i) the monthly average of the composite yield on seasoned corporate bonds as published by Moody's Investors Service, Inc., for the month immediately preceding the date of the Actuarial Opinion required under this Section 8E and described below, or (ii) the monthly average over a period of twelve months, ending on the June 30 preceding the date of the Actuarial Opinion required below, of the composite yield on seasoned corporate bonds, as published by Moody's Investors Service, Inc. The averaging period chosen by the company must be elected at time of product

© 1999-2023 National Association of Insurance Commissioners

filing and consistently used for that product thereafter even if guaranteed credits or charges are subsequently revised for that product.

II) Methodology for determining the minimum gross premiums for other designs ("Method II").

Unless otherwise provided in this Section 8E, the minimum gross premiums shall be the lowest schedule of premiums that keep the policy in force over the life of the secondary guarantee period and that produce the greatest deficiency reserve at issue. If deficiency reserves produced at issue are all zero, then the smallest absolute value of the difference between "quantity A" set forth in Model #830, Section 5B, over the basic reserve shall be considered the greatest deficiency reserve. For purposes of this Step 1, in deriving the deficiency reserve associated with a particular schedule of gross premiums, the X factors used shall be set equal to 1 for all durations, issue ages, and risk classes.

For policies that use a shadow account, and for cumulative premium policies, the schedule of premiums that keep the policy in force over the life of the secondary guarantee period and that produce the greatest deficiency reserve at issue shall be determined assuming the following premium-paying patterns for premiums actually paid under the policy:

- Level premiums for the life of the secondary guarantee but not beyond the duration that premiums may be paid under the policy, and
- Increasing premiums over the life of the secondary guarantee (including any resulting reserve segments created), but not beyond the durations that premiums may be paid under the policy, and
- Combinations of the above premium patterns including higher initial premiums for funding levels to have access to better charges and credits with combinations of level and increasing premium patterns thereafter.

For all policies and certificates subject to this Step 1 of Method II of this Section 8E, the company shall also perform a good faith high-level analytical review of the product design with respect to the premium payment patterns to be expected with respect to that design. The review should consider whether there are situations whereby the product design is likely to elicit a pattern of premium payments that, if paid, would provide the insured with access to lower charges and/or higher credits than those that would apply assuming the premium paying patterns required to be tested under this Section 8E and thereby result in the need for a deficiency reserve significantly in excess of that determined using the schedules of minimum gross premiums determined pursuant to the premium payment patterns required to be tested under this Section 8E. To the extent identified, the company shall use such other premium payment patterns it determines are likely to result in the need for a greater deficiency reserve than implied by the premium payment patterns required to be tested under this Section 8E in determining the schedule of minimum gross premiums and related deficiency reserve. In performing this analytic review, the company shall consider payment patterns which keep the policy in force over the lifetime of the secondary guarantee.

Step 2: For purposes of applying Section 7B and Section 7C of Model #830, the "specified premiums" are the minimum gross premiums derived in Step 1. Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term "fully fund the guarantee" should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term "remainder of the secondary guarantee period" should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves. Additionally, for purposes of applying Section 7B and Section 7C of Model #830, the lapse rate used shall be no more than 2% per year for the first 5 years,

© 1999-2023 National Association of Insurance Commissioners

followed by no more than 1% per year to the policy anniversary specified in the following table based on issue age, and 0% per year thereafter. If the duration in the table is less than 5, then a lapse rate of no more than 2% per year may be used through that duration, and 0% per year thereafter.

Issue Age	Duration
0-50	30th policy anniversary
51-60	Policy anniversary age 80
61-70	20th policy anniversary
71-89	Policy anniversary age 90
90 and over	No lapse

Step 3: A determination should be made of the amount of actual premium payments greater than or less than the minimum gross premiums. For policies using shadow accounts and qualifying under one of the Policy Designs of Method I, this will be the amount of the shadow account. For policies using shadow accounts whose minimum gross premium is determined under Method II, this will be the amount of the shadow account minus the amount that would be in the shadow account if the minimum gross premiums used to calculate basic and deficiency reserves in Step 2 were paid. This result may be negative. For cumulative premium policies whose minimum gross premiums are determined under Method I, this excess will be the amount of cumulative premiums paid over the cumulative premium requirements. For cumulative premium policies whose minimum gross premiums are determined under Method II, this excess will be the amount of the cumulative premiums paid minus the cumulative premium using the minimum gross premiums used to calculate basic and deficiency reserves in Step 2. This result may be negative. The cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Step 4: As of the valuation date for the policy being valued, for policies using shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For cumulative premium policies, determine the minimum amount of the cumulative premiums required to fully fund the guarantee less the cumulative premium requirements. For any policy for which the secondary guarantee cannot be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. For shadow account policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is positive then the amount determined above for this step is reduced by any positive shadow account based on minimum gross premiums. For cumulative premium policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is positive then the amount determined above for this step is reduced by the excess of cumulative premiums, assuming minimum gross premiums are paid, over the cumulative premium requirements. For shadow account policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is negative then the amount determined above for this step is replaced by the amount of the shadow account based on the minimum gross premiums. For cumulative premium policies, if the minimum gross premiums are determined by Method II and the Step 3 amount is negative then the amount determined above for this step is replaced by the excess of cumulative premiums, assuming minimum gross premiums are paid, over the cumulative premium requirements.

The amount determined above for this step is then divided by one minus a 7% premium load allowance (0.93).

© 1999-2023 National Association of Insurance Commissioners

The result from Step 3 should be divided by the number above, with the resulting ratio capped at 1 and no less than (-1). The ratio is intended to measure the level of prefunding for a secondary guarantee and is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount of the premium load allowance as defined in this step. As used here, "assumptions" include any factor or value, whether assumed or known, that is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at this 7% level, which is approximately equal to the current industry average.]

Step 5: Compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830. For purposes of calculating the net single premium, a lapse rate subject to the same criteria as the lapse rate used in applying Step 2 may be used.

Step 6: If the amount in Step 3 is positive the "net amount of additional premiums" is determined by multiplying the ratio from Step 4 by the difference between the net single premium from Step 5 and the basic and deficiency reserve, if any, computed in Step 2.

If the amount in Step 3 is negative, the "net amount of additional premiums" is determined by multiplying the ratio from Step 4 by the basic reserves, if any, computed in Step 2. This result will be negative or zero. Subtract the deficiency reserve calculated in Step 2 from this result and then add the following amount, depending on whether the policy is a shadow account policy or a cumulative premium policy:

a) If a shadow account policy add the following:
The deficiency reserve at issue calculated using X factors associated with the premium paying pattern used in determining the greatest deficiency reserve in Method II, Step 1, multiplied by one minus the ratio of the amount of the shadow account divided by minimum amount in the shadow account that would fully fund the guarantee. This amount in Step 6(a) is not to be less than zero.

b) If a cumulative premium policy add the following:
The deficiency reserve at issue calculated using X factors associated with the premium paying pattern used in determining the greatest deficiency reserve in Method II, Step 1, multiplied by one minus the ratio of the amount of cumulative premiums paid divided by the minimum amount of cumulative premiums required to fully fund the guarantee. This amount in Step 6(b) is not to be less than zero.

Step 7: A "reduced deficiency reserve" shall be computed by multiplying the deficiency reserve, if any, by one minus the ratio (such ratio not to be set less than zero) from Step 4; this final amount also not to be set less than zero. This "reduced deficiency reserve" is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

© 1999-2023 National Association of Insurance Commissioners

Step 8: The reserve used for purposes of Model #830, Section 7D(1), is as follows.

a) Take the lesser of:
1) the "net amount of additional premiums" from Step 6 plus the basic reserve and the deficiency reserve, if any, computed in Step 2, and
2) the net single premium from Step 5.

b) Reduce the result in Step 8(a) by the applicable policy surrender charges (i.e., the account value less the cash surrender value). Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves.

c) Calculate the reserve floor:
1) If the result in Step 3 is negative, then the reserve floor shall equal the sum of the Step 2 basic and deficiency reserves and the amount from Step 6.
2) If the result in Step 3 is not negative, then the reserve floor shall equal the sum of the Step 2 basic and deficiency reserves without any adjustment.

The reserve to be used for purposes of Model #830, Section 7D(1) is the greater of the resulting amount from Step 8(b) above and the reserve floor.

Step 9: An "increased basic reserve" shall be computed by subtracting the "reduced deficiency reserve" in Step 7 from the reserve computed in Step 8. This "increased basic reserve" is the basic reserve to be used for purposes of Model #830, Section 7D(1).

Actuarial Opinion and Company Representation Requirements

If a company uses one of the Policy Design methodologies described above in Method I of this Section 8E to determine the minimum gross premiums in Step 1, the company shall submit to its state of domicile at the time of filing/approval of a new product, or by December 31, 2012, for current products that will be issued in 2013 or thereafter, and at any time when rates and/or charges are changed, an Actuarial Opinion signed by the Appointed Actuary and a Representation of the Company signed by a Senior Officer of the company regarding the applicable policy form(s) that states:

Actuarial Opinion

"I, (name and professional designation), am the appointed actuary for (company name). I have examined the actuarial assumptions and actuarial methods used in determining the reserves described herein, and, in my opinion: (1) the product referenced herein meets the definition of Policy Design # ___ described in Method I in Section 8E of Actuarial Guideline XXXVIII (AG 38); (2) notwithstanding the language in Policy Design # ___, the guaranteed (including conditionally guaranteed) policy credits in the product available for any year do not exceed the "Index" defined in Method I in Section 8E of AG 38 plus 3% per annum; and (3) the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy."

(Name of actuary, printed or typed)
(Signature of actuary)
(Date signed)

Company Representation

"(company name) hereby represents: (1) that the product referenced herein meets the definition of Policy Design # ___ described in Method I in Section 8E of Actuarial Guideline XXXVIII (AG 38); (2) notwithstanding the language in Policy Design # ___, the guaranteed (including conditionally guaranteed) policy credits in the product available for any year do not exceed the "Index" defined in Method I in Section 8E of AG 38 plus 3% per annum; and (3) the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy."

(Name of company Officer, printed or typed)
(Signature of company Officer)
(Date signed)

For reporting years prior to 2015: The state of domicile shall provide a copy of the Actuarial Opinion and the Company Representation to FAWG and, upon request, to any state in which the company plans to issue the policy that is the subject of the Actuarial Opinion and Company Representation.

For reporting years 2015 and after: The state of domicile shall provide a copy of the Actuarial Opinion and the Company Representation to FAWG, upon request, and, upon request, to any state in which the company plans to issue the policy that is the subject of the Actuarial Opinion and Company Representation.

Policy Design

For reporting years prior to 2015: If a company develops reserves based on Method II of this Section 8E, the company shall submit a report from its Appointed Actuary prior to issuing policies on that form to its state of domicile, which will provide a copy to FAWG and (upon request) to any state in which the company plans to issue the product, that briefly describes the analytical review performed, the company's conclusions following the analytical review, and whether any additional premium payment patterns other than those required by this Section 8E were tested as a result of the review. If FAWG agrees with the state of domicile's decisions with respect to the company's Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is appropriate in relation to the benefits and the pattern of premiums for the plans covered. If FAWG does not agree with the state of domicile's decisions with respect to the company's Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

For reporting years 2015 and after: If a company develops reserves based on Method II of this Section 8E, the company shall submit a report from its Appointed Actuary prior to issuing policies on that form to its state of domicile, which will provide a copy to FAWG, upon request, and (upon request) to any state in which the company plans to issue the product, that briefly describes the analytical review performed, the company's conclusions following the analytical review, and whether any additional premium payment patterns other than those required by this Section 8E were tested as a result of the review. If FAWG does not agree with the state of domicile's decisions with respect to the company's Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

© 1999-2023 National Association of Insurance Commissioners

Effective Date

With the exception of Steps 3 through Step 9 of Section 8A and all of Section 8B, Section 8C, Section 8D and Section 8E, the scope of this guideline shall be inclusive of policies issued on and after the earlier of a state's adoption of the revised Model #830 (adopted by the NAIC in March 1999) or the statutory accounting practices and procedures as set forth in the NAIC *Accounting Practices and Procedures Manual*. All of Section 8A, Section 8B, Section 8C, Section 8D and Section 8E shall be applicable to policies and certificates issued on or after the later of the date of a state's adoption of the revised Model #830 and January 1, 2003, subject to the dates and/or applicable scope specified in Section 8A, Section 8B, Section 8C, Section 8D and Section 8E.

Actuarial Guideline XXXIX

RESERVES FOR VARIABLE ANNUITIES WITH GUARANTEED LIVING BENEFITS

Actuarial Guideilne XXXIX sunset on December 30, 2009, and was replaced by *Actuarial Guideline XVIII—CARVM for Variable Annuities*, effective December 31, 2009.

Actuarial Guideline XL

GUIDELINE FOR VALUATION RATE OF INTEREST FOR FUNDING AGREEMENTS AND GUARANTEED INTEREST CONTRACTS (GICS) WITH BAIL-OUT PROVISIONS

PURPOSE

The purpose of this Guideline is to interpret the Standard Valuation Law (SVL) for assignment of appropriate valuation interest rates to risks embedded in bail-out provisions under Funding Agreements and Guaranteed Interest Contracts.

BACKGROUND

Funding Agreements (FAs) and other types of Guaranteed Interest Contracts (GICs) typically issued to tax-exempt municipal bonds, money market funds and securities lending funds, often contain bail-out provisions that allow the contractholders to get their money back at full book value. Such provisions may be triggered by the credit rating downgrade of the issuer below a given level or may be at a given period's notice to the contractholder, e.g. 7, 30, 90 or 180 days' notice. The contract language for these provisions may be as follows:

1. In the event that the investment provider (i.e. the insurance company) is downgraded below *A-/A3* by S & P and/or Moody's respectively, the contract holder has the right to terminate the contract and receive the remaining principal and accrued interest without penalty. [In most cases the issuer has the alternate option to provide a replacement contract or post collateral or do a credit wrap.]

2. Each party has the right to terminate the contract before maturity by giving the other at least *7/30/90 or 180-days* notice in writing. At such termination the principal and accrued interest is payable with no penalty.

Contracts with downgrade provision

The bulk of the contracts issued with a downgrade provision are fixed rate FAs or GICs issued in connection with tax-exempt municipal bonds. These contracts can be short-term or long-term. Short-term contracts typically have an average life of around one-year, and are intended for municipal bond funds for construction, acquisition, housing, tax revenue anticipation notes (TRANS), etc. In these types of funds the cash-flow projections are provided when the case is underwritten, but there may be variability in the actual withdrawals. Any outstanding principal and interest is payable at maturity.

Long-term contracts are issued in connection with the debt service reserve (DSR) or the float fund of the bond issue, and mature at the same time as the bonds, which can be as long as 30 years. The float fund takes in deposits, and pays out the half-yearly interest and principal (if any is due) on the bonds. It runs to near zero about twice a year, after each half-yearly coupon payment. The DSR is a contingent fund for a rainy day to prevent a missed coupon or principal payment on the bond. The DSR has a single deposit that is typically 10% of the bond issue.

Contracts with put provision

FAs or GICs with put provisions are generally issued to money market funds subject to Rule 2a-7 of the Investment Company Act. Rule 2a-7 provides guidelines on liquidity, requiring funds available at book value subject to certain notification periods. Additionally, these contracts usually have downgrade provisions. Even if the downgrade provision is not in the contract, it can be assumed that the put will be exercised on downgrade, since a certain level of credit is also a Rule 2a-7 requirement.

© 1999-2023 National Association of Insurance Commissioners

Typically, these FAs or GICs guarantee a floating rate of interest linked to an index like LIBOR, which is paid out and reset periodically. Most contracts have fixed maturity dates when the principal is returned. Generally the FAs or GICs are the higher yielding assets of the money market funds, and therefore puts are not expected to be exercised.

Risks

Both the downgrade and the put provisions present liquidity or concentration type of risks to the issuer, i.e. if a critical event occurs, a substantial part of the whole block of business is likely to be liquidated. Sufficient asset liquidity, prudent A/L management, cash flow testing, hedging strategies, etc. can mitigate these risks. Also, companies generally have contractual provisions providing alternative options.

Downgrade provision:
The main risk here is that, upon downgrade to the trigger level, a company may have to realize its assets at a market loss in order to pay out at book. If the downgrade happens in a falling interest rate environment there is no risk of a market loss as the underlying assets are likely to be at a higher market value. On the other hand if the downgrade occurs in a rising interest rate environment, market value losses would occur when the company sells assets to pay out liabilities at book value.

Companies have written provisions in their contracts that provide alternate options to paying at book value in a rising interest rate environment:

"Novation/Assignment" option: The novation/assignment option allows the company to transfer its liabilities to another funding agreement provider that meets the credit rating requirements of the contractholder. In a rising interest rate environment, the new provider should be willing to pay a "premium" to assume a liability crediting a below market interest rate. In a perfectly efficient market this "premium" should precisely offset the market value loss upon the sale of the asset. In practice, however, it is less likely that the "premium" would fully offset the market value loss since:

- The new provider may view the liability risk somewhat differently
- The new provider may try and take advantage of the situation of the downgraded company
- There may be a large volume of these types of contracts in the market, etc.

However, the "premium" payable by the new provider could provide a substantial offset against the market value loss incurred by the downgraded company.

"Collateralization" option: This option allows the company to post assets as collateral for the benefit of the contractholder, as an alternative to payment at book value. The collateral posted would have to meet the credit requirements of the contractholder, which could be government or agency securities. Usually the collateral posted is required to have a cushion, typically ranging from 102% to 105%.

Upon trigger of the downgrade provision, the company would need to have suitable assets in its portfolio that are available for use as collateral, and also acceptable to the contractholder. In addition, there will be administrative and custodial expenses/fees of establishing and monitoring collateral levels. In some states there may also be legal restrictions on encumbering assets that back policyholder claims.

If the downgraded company can overcome the above constraints, then collateralization is another alternative of maintaining the contract and not having to pay out at book value.

"Credit Wrap" option: Under this arrangement the contract is issued out of a separate account which is guaranteed by a financial guarantee insurer. Effectively, the credit rating of the guarantor passes through to meet the credit requirement of the FA or GIC. [A number of FAs or GICs requiring a higher credit rating are currently being written in this way.]

© 1999-2023 National Association of Insurance Commissioners

The contract being wrapped has to meet certain criteria before the financial guarantee insurers are willing to wrap. Generally, the guarantor would also require higher credit rated securities in the separate account, which could be government or agency, and would require these in the 102% to 105% range. There will also be administrative and custodial expenses of establishing and monitoring the separate account in addition to the wrap fee payable to the mono-line insurer.

Although at significant cost, this option does provide the downgraded company a viable alternative to paying out at book value.

Put provision:
The put provision is not tied to a particular event but can contractually be exercised by giving the required days' notice. It has been argued that this provision is there to meet the Rule 2a-7 liquidity requirements and in practice is unlikely to be exercised, particularly since the FAs or GICs are one of the higher yielding assets of the money market portfolio. However, it is a contractual option and if, for example, the issuer were in financial difficulties, it will be exercised. Past experience suggests this is the case.

The put provision therefore presents a liquidity or concentration risk similar to that of downgrade——it is likely to be exercised in bulk upon happening of a critical event. Similar considerations apply, i.e. in a rising interest rate environment market value losses would occur when the company sells assets to pay out liabilities at book value.

Reserves

For reserving the Standard Valuation Law applies. However, when the SVL was enacted, these types of bail-out provisions did not exist, and were therefore not addressed explicitly. The purpose of this Guideline is to interpret the SVL for assignment of appropriate valuation interest rates to risks embedded in these bail-out provisions.

Other Actuarial Guidelines have provided similar interpretations. For example, Guideline XIII addresses interest bailout provisions under annuity contracts, Guideline XXX provides for participant directed withdrawal provisions under GICs, and Guideline XXXIII covers the elective and non-elective benefits under individual annuity contracts.

Plan Types

The SVL utilizes a concept known as Plan Type, which was designed to distinguish between the various levels of disintermediation risks—the greater the disintermediation risk for a company, the more conservative is the resulting valuation rate. Plan Types designated in the model SVL are defined as follows:

Plan Type A: At any time policyholder may withdraw funds only (l) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without such adjustment but in installments over five years or more, or (3) as an immediate life annuity, or (4) no withdrawal permitted.

Plan Type B: Before expiration of the interest rate guarantee, policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without such adjustment but in installments over five years or more, or (3) no withdrawal permitted. At the end of interest rate guarantee, funds may be withdrawn without an adjustment in a single sum or installments over less than five years.

Plan Type C: Policyholder may withdraw funds before expiration of interest rate guarantee in a single sum or installments over less than five years either (1) without adjustment to reflect changes in interest

© 1999-2023 National Association of Insurance Commissioners

rates or asset values since receipt of the funds by the insurance company, or (2) subject only to a fixed surrender charge stipulated in the contract as a percentage of the fund.

TEXT

For the purpose of the application of the Standard Valuation Law to FAs and GICs, the annuities and GIC valuation interest rates are to be used. The bailout provisions described above shall be treated as a withdrawal by the policyholder at book value, and the underlying contracts shall be classified as Plan Type C.

However, for contracts containing written provisions that allow the insurance company alternate options to paying out at book value, the valuation actuary may use a valuation rate of interest higher than Type C. In no event may the valuation interest rate be greater than that applicable to similar contracts with no put or bailout provisions. If a provision requires over-collateralization and/or use of high credit quality assets, this should be adequately reflected in the reserves.

If a higher interest rate than Type C is used, the valuation actuary must be satisfied and be able to demonstrate that the written provisions substantially reduce the liquidity risk. In addition, the valuation actuary must be satisfied, and should periodically review, that there are other risk management measures in place to reduce the liquidity or concentration risk, taking into consideration at least the following:

Readily liquidated assets at nil or minimal market-value loss
Cash-flow testing results
Standby lines of credit available and other liquidity facilities established
Hedges in place with liquidity options
High credit quality assets available for use as collateral.

Actuarial Guideline XLI

PROJECTION OF GUARANTEED NONFORFEITURE BENEFITS UNDER CARVM

I. Background

The following is an excerpt from the October 21, 2003, Report of the American Academy of Actuaries' Life Valuation Subcommittee:

> Annuity SNFL Impact on Reserves
>
> Per the Standard Valuation Law, Commissioner's Annuity Reserve Valuation Method (CARVM) is:
>
> "the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, *including guaranteed nonforfeiture benefits*, provided for by the contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of the contract, that become payable prior to the end of the respective contract year."
>
> Historically the guaranteed nonforfeiture benefit calculation has been determined at issue (e.g. 90 percent of premiums accumulated at three percent interest). The recent change to the Standard Nonforfeiture Law for Individual Deferred Annuities has changed this.
>
> Nonforfeiture Rate
>
> The new Standard Nonforfeiture Law for Individual Deferred Annuities has changed the nonforfeiture rate from being static to being dynamic. Under the old law, the nonforfeiture interest rate was three percent. The revised law bases the nonforfeiture rate on the five-year Constant Maturity Treasury Rate less 125 basis points (bps). The nonforfeiture rate is subject to a minimum of one percent and a maximum of three percent. Additional enhancements include the ability to reset the nonforfeiture rate at a date predetermined in the contract and allowing an additional reduction (offset) for Equity Indexed Annuities.
>
> The nonforfeiture rate can be reset at a date predetermined in the contract (e.g. five years from issue) and based on a formula specified in the contract. The same requirements applicable to the initial rate apply to the re-determined rate.
>
> The revised law allows an additional offset to the nonforfeiture rate for contracts that provide substantive participation in an equity indexed benefit. This offset ranges from 0 bps to 100 bps.
>
> The ability to re-determine the nonforfeiture rate and that the EIA offset may be reevaluated in the future raises some issues with the CARVM calculation.
>
> In doing a CARVM projection, what should be the assumed interest rate? Should the option depend on whether there are re-determination provisions? Should the option depend on whether the product relies on an equity indexed offset?

© 1999-2023 National Association of Insurance Commissioners

The Report further states:

> The minimum guaranteed interest rate in the contract might be different than the minimum nonforfeiture rate. To the extent that the guaranteed values in the contract are always greater than the minimum nonforfeiture benefits, then the nonforfeiture values do not come into play.

This Guideline specifies how to determine the nonforfeiture interest rate used in determining the minimum nonforfeiture benefits guaranteed under the contract. As noted in the Report, the minimum nonforfeiture benefits may be less the guaranteed values otherwise provided by the contract. Where this is the case, the higher guaranteed values are used in the CARVM calculation, and "the nonforfeiture values do not come into play."

It should also be noted that requirements for projecting guarantees exist in other regulations and guidelines, such as the specifications in Actuarial Guideline XXXV ("The Application of the Commissioners Annuity Reserve Method to Equity Indexed Annuities") for projecting equity-indexed guarantees. The specifications of this Guideline are in addition to any other requirements.

II. Scope

This Guideline applies to contracts subject to CARVM and the Standard Nonforfeiture Law for Individual Deferred Annuities ("SNLIDA").

III. Text

The following assumptions shall be made on the valuation date for purposes of determining the future nonforfeiture interest rate when this rate is not known in advance. For purposes of (B) below, "NI" shall refer to the nonforfeiture interest rate, "VI" shall refer to the valuation interest rate, and "CNI" shall refer to the current nonforfeiture interest rate which will be adjusted for any future durations pursuant to "A" below.

A. For the period of time during which the additional EIA offset is not known, the additional offset shall be zero.

B. For the period of time during which the nonforfeiture interest rate is not known,
NI = min [max {VI, CNI}, 3%]

If the redetermination of the nonforfeiture interest rate is based on changes to the value of the underlying index (this will be the five-year Constant Maturity Treasure Rate in the case of the nonforfeiture interest rate), then for purposes of this Guideline it shall be assumed that such rate is not known as of the first date on which the rate may be subject to redetermination.

IV. Applicability

This Guideline is effective December 31, 2006 and affects all contracts issued on or after January 1, 1981.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XLII

THE APPLICATION OF THE MODEL REGULATION PERMITTING THE RECOGNITION OF PREFERRED MORTALITY TABLES FOR USE IN DETERMINING MINIMUM RESERVE LIABILITIES

1. Purpose

The purpose of this Guideline is to provide rules and guidance in the selection of the proper set of mortality rates when a company chooses to use either the 2001 CSO Preferred Class Structure Mortality Table or the 2017 CSO Preferred Class Structure Mortality Table as authorized under a state's requirements.

2. Effective Date and Scope

The 2001 CSO Preferred Class Structure Mortality Table is available for valuation purposes for individual life policy forms (and certain group life products sold to individuals by certificate with premium rates guaranteed from issue for at least two years) for issues as provided by the state's requirements which may be based on the NAIC *Model Regulation Permitting The Recognition of Prefered Mortablity Tables for Use in Determining Minimum Reserve Liabilities* (Model #815) and which may use the NAIC *Valuation Manual*.

The 2017 CSO Preferred Class Structure Mortality Table is available for valuation purposes for individual life policy forms (and certain group life products sold to individuals by certificate with premium rates guaranteed from issue for at least two years), for issues as provided by a state's requirements which may use the NAIC *Valuation Manual*.

The applicable CSO Preferred Class Structure Mortality Table is either the 2001 CSO Preferred Class Structure Mortality Table or the 2017 CSO Preferred Class Structure Mortality Table as applicable in context.

3. Definitions

A. "Anticipated mortality" means the appointed actuary's assumption about the mortality to be experienced in the future on a group of insured lives.

B. "Appointed actuary" means any individual who is appointed or retained in accordance with the requirements set forth in the Actuarial Opinion and Memorandum Regulation.

C. "Basic reserves" means reserves calculated in accordance with Section 5 of the Standard Valuation Law.

D. "Class" means a group of policies under one or more plans of insurance that has similar anticipated mortality, as grouped together by the insurer.

E. "Credibility" means a measure of the predictive value in a given application that the appointed actuary attaches to a particular body of data (predictive is used here in the statistical sense and not in the sense of predicting the future).

F. "Deficiency reserves" means the excess over basic reserves, if any, of minimum reserves established in accordance with Section 8 of the Standard Valuation Law.

G. "Full credibility" means the level at which a particular body of data is assigned full predictive value based on a selected confidence interval.

© 1999-2023 National Association of Insurance Commissioners

H. “Preferred class certification” means the certification required by Section 5 of the Model.

I. “Underwriting-based justification” means the incorporation of underwriting criteria for use in setting the anticipated mortality assumption.

J. “Underwriting class” means the insurer’s designation of insureds into a particular premium rate structure, e.g. super preferred, preferred, or standard.

4. Selection of Table within the Applicable CSO Preferred Class Structure Mortality Table

VM-20, Section 3C of the *Valuation Manual* contains the requirements governing the set of mortality rates to be used for the purpose of calculating reserves based on the applicable CSO Preferred Class Structure Mortality Table. The election of the applicable CSO Preferred Class Structure Mortality Table is on a policy form and calendar year of issue basis, although once a calendar year cohort of policy forms is placed on the applicable CSO Preferred Class Mortality Structure Table basis, it may not subsequently revert back to the standard applicable CSO basis without the approval of the commissioner. This would be considered a basis change for annual statement reporting purposes. For those calendar years of issue in which a company opts to use the applicable CSO Preferred Class Structure Mortality Table, it must use the entire applicable CSO Preferred Class Structure Mortality Table for the chosen policy forms, i.e. a company may not use the preferred classes from the applicable CSO Preferred Class Structure Mortality Table and use the applicable Standard CSO Mortality Table for the non-preferred class(es). Additionally, if the company sells two similar policy forms in the same market the appointed actuary must use the same version of the table for both forms and may not use the applicable CSO Preferred Class Structure Mortality Table on one and the applicable Standard CSO Mortality Table on the other. A characteristic of this two-form scenario is that preferred lives would be attracted to one form and non-preferred lives would be attracted to the other.

The Model contains a requirement that at the time of election and annually thereafter, except for business valued under the applicable Residual Standard Nonsmoker Table or the applicable Residual Standard Smoker Table, the appointed actuary shall certify that the following tests of sufficiency were passed:

a. For each class, the present value of death benefits over the next ten years after the valuation date using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

b. For each class, the present value of death benefits over the future life of the contracts using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

In the event that the class does not contain any policies with expiry dates ten or more years into the future, the sufficiency test based on the present value over the future life of the contracts shall be the only test required.

© 1999-2023 National Association of Insurance Commissioners

In order to choose the proper set of mortality rates within the applicable CSO Preferred Class Structure Mortality Table and to develop the preferred class certification, the following considerations shall be made:

A. Creation of Classes

The appointed actuary should consider the composition and characteristics of the policies issued under a plan of insurance in determining the appropriate classes that will be applicable under that plan. The policies that comprise classes generally have similar underwriting or mortality experience characteristics. When classes are similar across various plans of insurance, these classes may be combined into a single aggregate class. The appointed actuary shall not combine classes that are expected to have dissimilar anticipated mortality as a means to produce reserves that are materially lower than those developed if the classes were not combined.

The appointed actuary should consider the presence of reinsurance in creating classes. Anticipated mortality should be assessed and classes should be created on a gross basis. To the extent that anticipated mortality on reinsurance ceded or assumed is materially different from that on direct business, the appointed actuary should consider creating separate classes to properly reflect the anticipated mortality.

If, due to differences in actual experience by policy form and underwriting class, groupings of classes are changed from those used in the prior actuarial certifications, the change and the effect of the change shall be disclosed to the commissioner in the actuarial certification.

Separate classes may be established for a single policy form if there are significant anticipated mortality differences for different cohorts of insured lives, such as age groups or policy sizes. For instance, if a company has different underwriting thresholds for policies with face amounts of $1 million or more, it may be appropriate to have a class for policies with face amounts of less than $1 million and a separate class for policies of $1 million or more.

B. Deriving Anticipated Mortality

i. If relevant company experience for a particular class is available and has full credibility, the appointed actuary shall use that experience as the basis for deriving anticipated mortality.

ii. In situations where relevant company experience for a particular class is available but does not have full credibility, the appointed actuary shall derive the anticipated mortality by blending the relevant company experience for the class with actual relevant, credible experience and past trends in experience of other similar types of business, either in the same company, in other companies (including reinsurance companies), or from other sources, generally in that order of preference provided that the appointed actuary supplies underwriting-based justification. The blending process shall be based on a credibility methodology that is recognized by the actuarial profession as acceptable practice as provided for in published transactions and scientific journals.

iii. In situations where relevant company experience for a particular class is not available (e.g. a new product), the appointed actuary may derive the anticipated mortality using actual relevant credible experience and past trends in experience of other similar types of business either in the same company, in other companies (including reinsurance companies), or from other sources, generally in that order

of preference, provided that the appointed actuary supplies underwriting-based justification.

iv. Underwriting-based justification shall include an analysis of the relationship between the underwriting-based criteria for the class where no experience data is available or does not have full credibility and the underwriting-based criteria that underlie the actual relevant credible experience data.

v. If no sufficient underwriting-based or experienced-based justification is made to derive anticipated mortality for a class, the company shall not use the applicable CSO Preferred Class Structure Mortality Table for valuation.

C. Periodic Assessment of Anticipated Mortality

The appointed actuary shall annually review relevant emerging experience and underwriting methods for the purpose of assessing the appropriateness of anticipated mortality for each class and, in aggregate, for all classes combined. If the results of statistical or other testing indicate that previously anticipated mortality for a given class is inappropriate, then the appointed actuary shall set a new anticipated mortality assumption for the class. After analyzing the appropriateness of the anticipated mortality for each class, the appointed actuary shall analyze the appropriateness of the anticipated mortality assumptions at the aggregate level. If the analysis at the aggregate level indicates that aggregate anticipated mortality is inadequate, then the appointed actuary shall adjust the anticipated mortality assumption for one or more of the classes until the appointed actuary is satisfied that the anticipated mortality assumptions are adequate at the aggregate level.

D. Tests of Sufficiency

After the anticipated mortality is established, each class must be tested for sufficiency. If a class fails any required sufficiency test, the class must be re-valued using a different set of mortality rates from the applicable CSO Preferred Class Structure Mortality Table. A company must choose a set of mortality rates under which all required tests of sufficiency can be passed.

E. Calculation of Present Value

When a class is tested for sufficiency, the calculation of the present value of death benefits shall be based on a projection of death benefits, without the effect of lapse, at the valuation interest rate used to determine basic reserves for the class. If the class contains policies with several valuation interest rates, the lowest valuation interest rate used to determine the base reserves for any policy within the class shall be used for that class.

F. Right of Commissioner to Change the Table Used by the Company

The commissioner may require a company to change the mortality table if it is determined by the commissioner that inadequate justification of anticipated mortality is provided by the company.

© 1999-2023 National Association of Insurance Commissioners

5. **Communications and Disclosures**

The appointed actuary shall provide to the commissioner an annual certification that, as of the valuation date, the anticipated mortality experience of each class of business (other than Residual Standard Class) meets the criteria of 4(a) and 4(b) above. Additionally, the appointed actuary shall prepare an annual report in support of the certification. The report shall include the following items:

A. The certification that the report supports;

B. The specified plans of insurance for which the company has elected to use the Preferred Class Structure Table, briefly describing each plan and the amount of in force business (count, face amount, and reserves) on each plan on the valuation date;

C. Compliance with the certification criteria;

D. Description of sources of information used as a basis for determining anticipated mortality;

E. Analysis performed to evaluate the credibility of relevant historical company experience when establishing anticipated mortality for each class;

F. Analysis performed to evaluate the relationship between the underwriting-based criteria and the anticipated mortality established in each class.

G. Statistical or other quantitative analyses performed in assessing the continued appropriateness of the anticipated mortality assumption for each class and for all classes in aggregate, and a summary of changes made as a result of the analyses;

H. Anticipated Mortality, without recognition of mortality improvement beyond the date of valuation, for each class and for all classes in aggregate;

I. For each class, the ratio of Anticipated Mortality to the mortality rates in the Valuation Basic Table corresponding to the set of valuation mortality rates being used for that class;

J. Any changes made in the approach or parameters applied to the statistical analyses or tests performed compared to those performed at the last annual valuation; and,

K. Disclosure of the financial impact of any change in the chosen set of valuation mortality rates

Drafting Note: Annual actuarial opinions, certifications and reports for the use of "X" factors have been required since the implementation of the NAIC *Valuation of Life Insurance Model Regulation*. The work and analysis to be performed for Preferred Class Certification is very similar to the requirements for the use of the "X" factors and the appointed actuary may combine the selection and analysis of "X" factors and the selection and analysis of applicable CSO Preferred Class Structure Mortality Table into one actuarial opinion, certification and annual experience report, if the appointed actuary wishes to do so.

6. Other Items of Note

A. If a class of business is assigned to a different set of mortality rates within the applicable CSO Preferred Class Structure Mortality Table (either a higher or lower level of mortality rates) from that used in the prior valuation, the change is not considered a basis change, and the reserve change must be accounted for in the calculation of gain from operations.

B. Multiple underwriting classes on a policy form can be mapped into the same set of mortality rates within the applicable CSO Preferred Class Structure Mortality Table, if, in aggregate, the underwriting classes can be shown to have anticipated mortality no greater than the valuation basic table underlying the set of mortality rates selected.

C. If a company chooses to use the applicable CSO Preferred Class Structure Mortality Table for basic reserves, the same table must be the basis for the calculation of deficiency reserves, if applicable.

Appendix 11	1994 Variable Annuity MGDB Mortality Table

Section I) Background

The purpose of this Actuarial Guideline (Guideline) is to interpret the standards for the valuation of reserves for variable annuity and other contracts involving certain guaranteed benefits similar to those offered with variable annuities. The Guideline codifies the basic interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the assumptions and methodologies that will comply with the intent of the Standard Valuation Law (SVL). It also applies similar assumptions and methodologies to contracts that contain characteristics similar to those described in the scope, but that are not directly subject to CARVM.

For many years regulators and the industry have struggled with the issue of applying a uniform reserve standard to these contracts and in particular some of the guaranteed benefits referenced above. Current approaches make assumptions about product design, contractholder behavior and economic relationships and conditions. The economic volatility seen over the last few decades, combined with an increase in the complexity of these products, have made attempts to use these approaches for measuring economic-related risk less successful.

The Guideline addresses these issues by including an approach that applies principles of asset adequacy analysis directly to the risks associated with these products and guarantees.

The NAIC is currently using a similar approach to calculate risk-based capital (RBC) for similar contracts (i.e., the C-3 Phase II project). The methodology in the Guideline is based on that approach, and the intent of the Guideline is to, where possible, facilitate a framework whereby companies may determine both reserve and RBC in a consistent calculation.

In developing the Guideline, two regulatory sources were looked to for guidance. First, the SVL requires that CARVM be based on the greatest present value of future guaranteed benefits. Second, the NAIC Model Variable Annuity Regulation (VAR) states that the “reserve liability for variable annuities shall be established pursuant to the requirements of the Standard Valuation Law in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.”

© 1999-2023 National Association of Insurance Commissioners

The Guideline requires that reserves for contracts falling within its scope be based on a minimum floor determined using a standard scenario (referred to as the Standard Scenario Amount) plus the excess over this minimum floor, if any, of a reserve calculated using a projection of the assets and estimated liabilities supporting these contracts over a broad range of stochastically generated projection scenarios and using prudent estimate assumptions (referred to as the Conditional Tail Expectation Amount). Within each of these scenarios, the greatest of the present values of accumulated losses ignoring Federal Income Tax is determined. The assumed fund performance for these scenarios must meet the mandated calibration standards contained in the Guideline. The reserve calculated using projections is based on a Conditional Tail Expectation measure of the results for each scenario.

Conditional Tail Expectation (CTE) is a statistical risk measure that provides enhanced information about the tail of a distribution above that provided by the traditional use of percentiles. Instead of only identifying a value at a particular percentile and thus ignoring the possibility of extremely large values in the tail, CTE recognizes a portion of the tail by providing the average over all values in the tail beyond the CTE percentile. Thus where the tail of the distribution of losses approximates that of a standard normal distribution, CTE (70) will approximate the 88th percentile; where the tail is “fatter” than that of a standard normal distribution, CTE (70) will exceed the 88th percentile; and where the tail is not as “fat” as a standard normal distribution, CTE (70) will be lower than the 88th percentile. Therefore, for distributions with “fat tails” from low probability, high impact events, such as those covered by the Guideline, the use of CTE will provide a more revealing measure than use of a single percentile requirement.

For certain products (e.g., variable annuities with Guaranteed Minimum Death Benefits only), a company can use an Alternative Methodology in place of the modeling approach outlined above to determine the Conditional Tail Expectation Amount.

The projection methodology used to calculate the Conditional Tail Expectation Amount, as well as the approach used to develop the Alternative Methodology, is based on the following set of principles. These principles should be followed when applying the methodology in the Guideline and analyzing the resulting reserves:[1]

> **Principle 1.** The objective of the approach used to determine the Conditional Tail Expectation Amount is to quantify the amount of statutory reserves needed by the company to be able to meet contractual obligations in light of the risks to which the company is exposed.

> **Principle 2.** The calculation of the Conditional Tail Expectation Amount is based on the results derived from an analysis of asset and liability cash flows produced by the application of a stochastic cash flow model to equity return and interest rate scenarios. For each scenario the greatest present value of accumulated surplus deficiency is calculated. The analysis reflects Prudent Estimate (see the definition of Prudent Estimate in Section III) assumptions for deterministic variables and is performed in aggregate (subject to limitations related to contractual provisions)[2] to allow the natural offset of risks within a given scenario. The methodology utilizes a projected total statutory balance sheet approach by including all projected income, benefit and expense items related to the business in the model and sets the Conditional Tail Expectation Amount at a degree of confidence using the conditional tail expectation measure applied to the set

[1] Note the following when considering these principles:
a. The principles should be considered in their entirety.
b. The Guideline requires companies to meet these principles with respect to only those contracts that fall within the scope of the Guideline and are inforce as of the valuation date to which the requirements are applied.

[2] Examples where full aggregation between contracts may not be possible include experience rated group contracts and the operation of reinsurance treaties.

of scenario specific greatest present values of accumulated statutory deficiencies that is deemed to be reasonably conservative over the span of economic cycles.

Principle 3. The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the actuary's confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually,[3] the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the Conditional Tail Expectation Amount at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the Conditional Tail Expectation Amount, the actuary should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Principle 4. While a stochastic cash flow model attempts to include all real world risks relevant to the objective of the stochastic cash flow model and relationships among the risks, it will still contain limitations because it is only a model. The calculation of the Conditional Tail Expectation Amount is based on the results derived from the application of the stochastic cash flow model to scenarios while the actual statutory reserve needs of the company arise from the risks to which the company is (or will be) exposed in reality. Any disconnect between the model and reality should be reflected in setting Prudent Estimate assumptions to the extent not addressed by other means.

Principle 5. Neither a cash flow scenario model, nor a method based on factors calibrated to the results of a cash flow scenario model, can completely quantify a company's exposure to risk. A model attempts to represent reality, but will always remain an approximation thereto and hence uncertainty in future experience is an important consideration when determining the Conditional Tail Expectation Amount. Therefore, the use of assumptions, methods, models, risk management strategies (e.g., hedging), derivative instruments, structured investments or any other risk transfer arrangements (such as reinsurance) that serve solely to reduce the calculated Conditional Tail Expectation Amount without also reducing risk on scenarios similar to those used in the actual cash flow modeling are inconsistent with these principles. The use of assumptions and risk management strategies should be appropriate to the business and not merely constructed to exploit 'foreknowledge' of the components of the required methodology.

The methodology prescribed in the Guideline is applied to a company's entire portfolio of variable annuities (whether or not they contain guaranteed benefits), as well as other affected products that contain guaranteed benefits. Current guaranteed benefits include Guaranteed Minimum Death Benefits, Guaranteed Minimum Accumulation Benefits, Guaranteed Minimum Income Benefits, Guaranteed Minimum Withdrawal Benefits, Guaranteed Lifetime Withdrawal Benefits, and Guaranteed Payout Annuity Floors. It is also expected that the methodology in the Guideline will be applied to future variations on these designs and to new guarantee designs.

Since statutory reporting requires companies to report reserves prior to reinsurance, the Guideline clarifies standards for adjusting the various components of the reserve so that the reserve may be reported both prior to and net of reinsurance.

The Guideline also requires an allocation of the total reported reserve between the General and Separate Accounts and prescribes a method for doing this allocation.

[3] The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Appendix 9 provides the requirements and guidance for setting contractholder behavior and includes alternatives to this framework if the actuary is unable to fully apply this principle.

© 1999-2023 National Association of Insurance Commissioners

Actuarial certification of the work done to calculate reserves is required by the Guideline. A qualified actuary (referred to throughout the Guideline as "the actuary") shall certify that the work has been done in a way that meets all applicable Actuarial Standards of Practice.

For more details on the development of these requirements, including the development of the calibration criteria, see the American Academy of Actuaries recommendation on C-3 Phase II risk-based capital.

This Guideline and its Appendices require the actuary to make various determinations, verifications and certifications. The company shall provide the actuary with the necessary information sufficient to permit the actuary to fulfill the responsibilities set forth in this Guideline and its Appendices and responsibilities arising from applicable Actuarial Standards of Practice, including ASOP No. 23, *Data Quality*.

The risks reflected in the calculation of reserves under this Guideline arise from actual or potential events or activities which are both:

a) Directly related to the contracts falling under the scope of this Guideline or their supporting assets; and
b) Capable of materially affecting the reserve.

Categories and examples of risks reflected in the reserve calculations include but are not necessarily limited to:

a) Asset Risks
    (i) Separate Account fund performance;
    (ii) Credit risks (e.g., default or rating downgrades);
    (iii) Commercial mortgage loan rollover rates (roll-over of bullet loans);
    (iv) Uncertainty in the timing or duration of asset cash flows (e.g., shortening (prepayment risk) and lengthening (extension risk));
    (v) Performance of equities, real estate, and Schedule BA assets;
    (vi) Call risk on callable assets;
    (vii) Risk associated with hedge instrument (includes basis, gap, price, parameter estimation risks, and variation in assumptions); and
    (viii) Currency risk.
b) Liability Risks
    (i) Reinsurer default, impairment or rating downgrade known to have occurred before or on the valuation date;
    (ii) Mortality/longevity, persistency/lapse, partial withdrawal and premium payment risks;
    (iii) Utilization risk associated with guaranteed living benefits;
    (iv) Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted;
    (v) Annuitization risks; and
    (vi) Additional premium dump-ins (high interest rate guarantees in low interest rate environments);
c) Combination Risks
    (i) Risks modeled in the company's risk assessment processes that are related to the contracts, as described above;
    (ii) Disintermediation risk (including such risk related to payment of surrender or partial withdrawal benefits); and
    (iii) Risks associated with Revenue Sharing Income.

The risks not necessarily reflected in the calculation of reserves under this Guideline are:

a) Those not reflected in the determination of Risk-Based Capital; and

© 1999-2023 National Association of Insurance Commissioners

b) Those reflected in the determination of Risk-Based Capital but arising from obligations of the company not directly related to the contracts falling under the scope of this Guideline, or their supporting assets, as described above.

Categories and examples of risks not reflected in the reserve calculations include but are not necessarily limited to:

a) Asset Risks
Liquidity risks associated with a "run on the bank."

b) Liability Risks
  - (i) Reinsurer default, impairment or rating downgrade occurring after the valuation date;
  - (ii) Catastrophic events (e.g., epidemics or terrorist events);
  - (iii) Major breakthroughs in life extension technology that have not yet fundamentally altered recently observed mortality experience; and
  - (iv) Significant future reserve increases as an unfavorable scenario is realized.

c) General Business Risks
  - (i) Deterioration of reputation;
  - (ii) Future changes in anticipated experience (reparameterization in the case of stochastic processes) which would be triggered if and when adverse modeled outcomes were to actually occur;
  - (iii) Poor management performance;
  - (iv) The expense risks associated with fluctuating amounts of new business;
  - (v) Risks associated with future economic viability of the company;
  - (vi) Moral hazards; and
  - (vii) Fraud and theft.

Section II) Scope

A) The Guideline applies to contracts, whether directly written or assumed through reinsurance, falling into any of the following categories:

1) Variable deferred annuity contracts subject to the Commissioner's Annuity Reserve Valuation Method (CARVM), whether or not such contracts contain Guaranteed Minimum Death Benefits (GMDBs), or Variable Annuity Guaranteed Living Benefits (VAGLBs);

2) Variable immediate annuity contracts, whether or not such contracts contain GMDBs or VAGLBs;

3) Group annuity contracts that are not subject to CARVM, but contain guarantees similar in nature[4] to GMDBs, VAGLBs, or any combination thereof; and

4) All other products that contain guarantees similar in nature to GMDBs or VAGLBs, even if the insurer does not offer the mutual funds or variable funds to which these guarantees relate, where there is no other explicit reserve requirement.[5]

---

[4] The term "similar in nature," as used in sections II)A)3) and II)A)4) is intended to capture both current products and benefits as well as product and benefit designs that may emerge in the future. Examples of the currently known designs are listed in footnote #5 below. Any product or benefit design that does not clearly fit the Scope should be evaluated on a case-by-case basis taking into consideration factors that include, but are not limited to, the nature of the guarantees, the definitions of GMDB and VAGLB in sections III)A)1) and III)A)2) and whether the contractual amounts paid in the absence of the guarantee are based on the investment performance of a market-value fund or market-value index (whether or not part of the company's separate account).

[5] For example, a group life contract that wraps a GMDB around a mutual fund would generally fall under the scope of the Guideline since there is not an explicit reserve requirement for this type of group life contract. However, for an individual

If such a benefit is offered as part of a contract that has an explicit reserve requirement and that benefit does not currently have an explicit reserve requirement:

a) The Guideline shall be applied to the benefit on a standalone basis (i.e., for purposes of the reserve calculation, the benefit shall be treated as a separate contract);

b) The reserve for the underlying contract is determined according to the explicit reserve requirement; and

c) The reserve held for the contract shall be the sum of a) and b).

B) The Guideline does not apply to contracts falling under the scope of the NAIC Model Modified Guaranteed Annuity Regulation (MGAs); however, it does apply to contracts listed above that include one or more subaccounts containing features similar in nature to those contained in MGAs (e.g., market value adjustments).

C) Separate account products that guarantee an index and do not offer GMDBs or VAGLBs are excluded from the scope of the Guideline.

Section III) Definitions

A) Definitions of Benefit Guarantees

1) Guaranteed Minimum Death Benefit (GMDB). A GMDB is a guaranteed benefit providing, or resulting in the provision that, an amount payable on the death of a contractholder, annuitant, participant, or insured will be increased and/or will be at least a minimum amount. Only such guarantees having the potential to produce a contractual total amount payable on death that exceeds the account value, or in the case of an annuity providing income payments, an amount payable on death other than continuation of any guaranteed income payments, are included in this definition. GMDBs that are based on a portion of the excess of the account value over the net of premiums paid less partial withdrawals made (e.g., an Earnings Enhanced Death Benefit) are also included in this definition.

2) Variable Annuity Guaranteed Living Benefit (VAGLB). A VAGLB is a guaranteed benefit providing, or resulting in the provision that, one or more guaranteed benefit amounts payable or accruing to a living contractholder or living annuitant, under contractually specified conditions (e.g., at the end of a specified waiting period, upon annuitization, or upon withdrawal of premium over a period of time), will increase contractual benefits should the contract value referenced by the guarantee (e.g., account value) fall below a given level or fail to achieve certain performance levels. Only such guarantees having the potential to provide benefits with a present value as of the benefit commencement date that exceeds the contract value referenced by the guarantee are included in this definition. Payout annuities without minimum payout or performance guarantees are neither considered to contain nor to be VAGLBs.

3) Guaranteed Minimum Income Benefit (GMIB). A GMIB is a VAGLB design for which the benefit is contingent on annuitization of a variable deferred annuity or similar contract. The benefit is typically expressed as a contractholder option, on one or more option dates, to have a minimum amount applied to provide periodic income using a specified purchase basis.

---

variable life contract with a GMDB and a benefit similar in nature to a VAGLB, the Guideline would generally apply only to the VAGLB-type benefit, since there is an explicit reserve requirement that applies to the variable life contract and the GMDB.

© 1999-2023 National Association of Insurance Commissioners

4) Guaranteed Payout Annuity Floor (GPAF). A GPAF is a VAGLB design guaranteeing that one or more of the periodic payments under a variable immediate annuity will not be less than a minimum amount.

B) Definitions of Reserve Methodology Terminology

1) Scenario. A scenario consists of a set of asset growth rates and investment returns from which assets and liabilities supporting a set of contracts may be determined for each year of a projection.

2) Cash Surrender Value. For purposes of the Guideline, the Cash Surrender Value for a contract is the amount available to the contractholder upon surrender of the contract. Generally, it is equal to the account value less any applicable surrender charges, where the surrender charge reflects the availability of any free partial surrender options. For contracts where all or a portion of the amount available to the contractholder upon surrender is subject to a market value adjustment, however, the Cash Surrender Value shall reflect the market value adjustment consistent with the required treatment of the underlying assets. That is, the Cash Surrender Value shall reflect any market value adjustments where the underlying assets are reported at market value, but shall not reflect any market value adjustments where the underlying assets are reported at book value.

3) Scenario Greatest Present Value. For a given scenario, the Scenario Greatest Present Value is the sum of:
   a) The greatest of the present values, as of the projection start date, of the projected Accumulated Deficiencies for the scenario; and
   b) The Starting Asset Amount, as defined below.

4) Conditional Tail Expectation Amount. The Conditional Tail Expectation Amount is equal to the numerical average of the 30 percent largest values of the Scenario Greatest Present Values.

5) Working Reserve. The Working Reserve is the assumed reserve used in the projections of Accumulated Deficiencies supporting the calculation of the Scenario Greatest Present Values. At any point in the projections, including at the start of the projection, the Working Reserve shall equal the projected Cash Surrender Value.

   For a variable payout annuity without a Cash Surrender Value, the Working Reserve shall equal the present value, at the valuation interest rate and the valuation mortality table specified for such a product by the Standard Valuation Law of future income payments projected using a return based on the valuation interest rate less appropriate asset based charges. For annuitizations that occur during the projection, the valuation interest rate as of the current valuation date may be used in determining the Working Reserve. Alternatively, if an integrated model of equity returns and interest rates is used, a future estimate of valuation interest rates may be incorporated into the Working Reserve.

   For contracts not covered above, the actuary shall determine the Working Reserve in a manner that is consistent with the above requirements.

6) Accumulated Deficiency. Accumulated Deficiency is an amount measured as of the end of a projection year and equals the projected Working Reserve less the amount of

© 1999-2023 National Association of Insurance Commissioners

projected assets, both as of the end of the projection year. Accumulated Deficiencies may be positive or negative.[6]

7) Starting Asset Amount. The Starting Asset Amount equals the value of the assets at the start of the projection, as defined in section A1.4)A) of Appendix 1.

8) Prudent Estimate. The deterministic assumptions to be used for projections are to be the actuary's Prudent Estimate. This means that they are to be set at the conservative end of the actuary's confidence interval as to the true underlying probabilities for the parameter(s) in question, based on the availability of relevant experience and its degree of credibility.

A Prudent Estimate assumption is developed by applying a margin for uncertainty to the "Anticipated Experience" assumption. The margin for uncertainty shall provide for estimation error and margins for adverse deviation. The resulting Prudent Estimate assumption shall be reasonably conservative over the span of economic cycles and over a plausible range of expected experience, in recognition of the Principles described in Section I. "Anticipated Experience" would typically be the actuary's reasonable estimate of future experience for a risk factor given all available, relevant information pertaining to the contingencies being valued. Recognizing that assumptions are simply assertions of future unknown experience, the margin should be directly related to uncertainty in the underlying risk factor. The greater the uncertainty, the larger the margin. Each margin should serve to increase the Aggregate Reserve that would otherwise be held in its absence (i.e., using only the Anticipated Experience assumption).

For example, assumptions for circumstances that have never been observed require more margins for error than those for which abundant and relevant experience data are available.

This means that valuation assumptions not stochastically modeled are to be consistent with the stated Principles in Section I, be based on any relevant and credible experience that is available, and should be set to produce, in concert with other Prudent Estimate assumptions, a Conditional Tail Expectation Amount that is consistent with the stated CTE level.

The actuary shall follow the principles discussed in Appendices 9 and 10 in determining Prudent Estimate assumptions.

9) Gross Wealth Ratio. The Gross Wealth Ratio is the cumulative return for the indicated time period and percentile (e.g., 1.0 indicates that the index is at its original level).

10) Clearly Defined Hedging Strategy. The designation of Clearly Defined Hedging Strategy applies to strategies undertaken by a company to manage risks through the future purchase or sale of hedging instruments and the opening and closing of hedging positions. In order to qualify as a Clearly Defined Hedging Strategy, the strategy must meet the principles outlined in the Background section of the Guideline (particularly Principle 5) and shall, at a minimum, identify:

a) The specific risks being hedged (e.g., delta, rho, vega, etc.),
b) The hedge objectives,

[6] Note that a positive Accumulated Deficiency means that there is a cumulative loss and a negative Accumulated Deficiency means that there is a cumulative gain.

© 1999-2023 National Association of Insurance Commissioners

c) The risks not being hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.),
d) The financial instruments that will be used to hedge the risks,
e) The hedge trading rules including the permitted tolerances from hedging objectives,
f) The metric(s) for measuring hedging effectiveness,
g) The criteria that will be used to measure effectiveness,
h) The frequency of measuring hedging effectiveness,
i) The conditions under which hedging will not take place, and
j) The person or persons responsible for implementing the hedging strategy.

The hedge strategy may be dynamic, static, or a combination thereof.

It is important to note that strategies involving the offsetting of the risks associated with variable annuity guarantees with other products outside of the scope of the Guideline (e.g., equity-indexed annuities) do not currently qualify as a Clearly Defined Hedging Strategy under the Guideline.

11) Revenue Sharing. Revenue Sharing, for purposes of the Guideline, means any arrangement or understanding by which an entity responsible for providing investment or other types of services makes payments to the company (or to one of its affiliates). Such payments are typically in exchange for administrative services provided by the company (or its affiliate), such as marketing, distribution and recordkeeping. Only payments that are attributable to charges or fees taken from the underlying variable funds or mutual funds supporting the contracts that fall under the scope of the Guideline shall be included in the definition of Revenue Sharing.

12) Domiciliary Commissioner. For purposes of the Guideline, this term refers to the chief insurance regulatory official of the state of domicile of the company.

13) Aggregate Reserve. The minimum reserve requirement as of the valuation date for the contracts falling within the scope of the Guideline.

14) 1994 Variable Annuity MGDB Mortality Table. This mortality table is shown in Appendix 11.

Section IV) Definition of General Reserve Methodology

A) General Description. The Aggregate Reserve for contracts falling within the scope of the Guideline shall equal the Conditional Tail Expectation Amount but not less than the Standard Scenario Amount, where the Aggregate Reserve is calculated as the Standard Scenario Amount plus the excess, if any, of the Conditional Tail Expectation Amount over the Standard Scenario Amount.

B) Impact of Reinsurance Ceded. Where reinsurance is ceded for all or a portion of the contracts, both components in the above general description (and thus the Aggregate Reserve) shall be determined net of any reinsurance treaties that meet the statutory requirements that would allow the treaty to be accounted for as reinsurance.

An Aggregate Reserve before reinsurance shall also be calculated if needed for regulatory reporting or other purposes, using methods described in Appendix 2.

C) The Standard Scenario Amount. The Standard Scenario Amount is the aggregate of the reserves determined by applying the Standard Scenario method to each of the contracts falling within the scope of the Guideline. The Standard Scenario method is outlined in Appendix 3.

D) The Conditional Tail Expectation Amount. The Conditional Tail Expectation Amount shall be determined based on a projection of the contracts falling within the scope of the Guideline, and the assets supporting these contracts, over a broad range of stochastically generated projection scenarios and using Prudent Estimate assumptions.

The stochastically generated projection scenarios shall meet the Scenario Calibration Criteria described in Appendix 5.

The Conditional Tail Expectation Amount may be determined in aggregate for all contracts falling within the scope of the Guideline (i.e., a single grouping). At the option of the company, it may be determined by applying the methodology outlined below to sub-groupings of contracts, in which case, the Conditional Tail Expectation Amount shall equal the sum of the amounts computed for each such sub-grouping.

The Conditional Tail Expectation Amount shall be determined using the following steps:

1) For each scenario, projected aggregate Accumulated Deficiencies are determined at the start of the projection (i.e., "time 0") and at the end of each projection year as the sum of the Accumulated Deficiencies for each contract grouping.

2) The Scenario Greatest Present Value is determined for each scenario based on the sum of the aggregate Accumulated Deficiencies[7] and aggregate Starting Asset Amounts for the contracts for which the Aggregate Reserve is being computed.

3) The Scenario Greatest Present Values for all scenarios are then ranked from smallest to largest and the Conditional Tail Expectation Amount is the average of the largest 30 percent of these ranked values.

The projections shall be performed in accordance with Appendix 1. The actuary shall document the assumptions and procedures used for the projections and summarize the results obtained as described in Appendix 2 and Appendix 8.

E) Alternative Methodology. For variable deferred annuity contracts that contain either no guaranteed benefits or only GMDBs (i.e., no VAGLBs), the Conditional Tail Expectation Amount may be determined using the Alternative Methodology described in Appendix 4 rather than using the approach described in subsection D) above. However, in the event the approach described in subsection D) has been used in prior valuations the Alternative Methodology may not be used without approval from the Domiciliary Commissioner.

The Conditional Tail Expectation Amount for the group of contracts to which the Alternative Methodology is applied shall not be less than the aggregate Cash Surrender Value of those contracts.

The actuary shall document the assumptions and procedures used for the Alternative Methodology and summarize the results obtained as described in Appendix 2 and Appendix 8.

---

[7] The Scenario Greatest Present Value is therefore based on the greatest projected Accumulated Deficiency, in aggregate, for all contracts for which the Aggregate Reserve is computed hereunder, rather than based on the sum of the greatest projected Accumulated Deficiency for each grouping of contracts.

© 1999-2023 National Association of Insurance Commissioners

F) Allocation of Results to Contracts. The Aggregate Reserve shall be allocated to the contracts falling within the scope of the Guideline using the method outlined in Appendix 6.

G) Reserve as of January 1, 2009. The reserve as of January 1, 2009 shall be the sum of the reserves from the asset adequacy analysis requirements in Actuarial Guideline XXXIV and Actuarial Guideline XXXIX.

Section V) Effective Date

The Guideline affects all contracts issued on or after January 1, 1981, effective December 31, 2009. Where the application of the Guideline produces higher reserves than the company had otherwise established by their previously used interpretation, such company may request a grade-in period, not to exceed three (3) years, from the Domiciliary Commissioner upon satisfactory demonstration of the previous interpretation and that such delay of implementation will not cause a hazardous financial condition or potential harm to its policyholders. The grading shall be done only on the reserves on the contracts in-force as of December 31, 2009. The reserves under the old basis and new basis shall be compared each year - 2/3 of the difference shall be subtracted from the reserve under the new basis in 2009 and 1/3 of the difference shall be subtracted from the reserve under the new basis in 2010.

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 1 - Determination of Conditional Tail Expectation Amount Based on Projections

A1.1) Projection of Accumulated Deficiencies

A) General Description of Projection. The projection of Accumulated Deficiencies shall be made ignoring Federal Income Tax and reflect the dynamics of the expected cash flows for the entire group of contracts, reflecting all product features, including the guarantees provided under the contracts. Insurance company expenses (including overhead and investment expense), fund expenses, contractual fees and charges, revenue sharing income received by the company (net of applicable expenses) and cash flows associated with any reinsurance or hedging instruments are to be reflected on a basis consistent with the requirements herein. Cash flows from any fixed account options shall also be included. Any market value adjustment assessed on projected withdrawals or surrenders shall also be included (whether or not the Cash Surrender Value reflects market value adjustments). Throughout the projection, where estimates are used, such estimates shall be on a Prudent Estimate basis.

Federal Income Tax shall not be included in the projection of Accumulated Deficiencies.

B) Grouping of Variable Funds and Subaccounts. The portion of the Starting Asset Amount held in the Separate Account represented by the variable funds and the corresponding account values may be grouped for modeling using an approach that recognizes the investment guidelines and objectives of the funds. In assigning each variable fund and the variable subaccounts to a grouping for projection purposes, the fundamental characteristics of the fund shall be reflected and the parameters shall have the appropriate relationship to the required calibration points of the S&P 500. The grouping shall reflect characteristics of the efficient frontier (i.e., returns generally cannot be increased without assuming additional risk).

An appropriate proxy for each variable subaccount shall be designed in order to develop the investment return paths. The development of the scenarios for the proxy funds is a fundamental step in the modeling and can have a significant impact on results. As such, the actuary must map each variable account to an appropriately crafted proxy fund normally expressed as a linear combination of recognized market indices (or sub-indices).

C) Grouping of Contracts. Projections may be performed for each contract inforce on the date of valuation or by grouping contracts into representative cells of model plans using all characteristics and criteria having a material impact on the size of the reserve. Grouping shall be the responsibility of the actuary but may not be done in a manner that intentionally understates the resulting reserve.

D) Modeling of Hedges. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline shall be included in the projections. If the company is following a Clearly Defined Hedging Strategy and the hedging strategy meets the requirements of Appendix 7, the projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of that strategy.

To the degree either the currently held hedge positions or the hedge positions expected to be held in the future introduce basis, gap, price, or assumption risk, a suitable reduction for effectiveness of hedges shall be made. The actuary is responsible for verifying compliance with a Clearly Defined Hedging Strategy and the requirements in Appendix 7 for all hedge instruments included in the projections.

© 1999-2023 National Association of Insurance Commissioners

While hedging strategies may change over time, any change in hedging strategy shall be documented and include an effective date of the change in strategy.

The use of products not falling under the scope of the Guideline (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of Accumulated Deficiencies.

These requirements do not supersede any statutes, laws, or regulations of any state or jurisdiction related to the use of derivative instruments for hedging purposes and should not be used in determining whether a company is permitted to use such instruments in any state or jurisdiction.

Upon request of the company's domiciliary commissioner and for information purposes to show the effect of including future hedge positions in the projections, the company shall show the results of performing an additional set of projections reflecting only the hedges currently held by the company in support of the contracts falling under the scope of the Guideline. Because this additional set of projections excludes some or all of the derivative instruments, the investment strategy used may not be the same as that used in the determination of the Conditional Tail Expectation Amount.

E) Revenue Sharing.

1) Projections of Accumulated Deficiencies may include income from projected future Revenue Sharing, as defined in Section III) net of applicable projected expenses ("Net Revenue Sharing Income") if the following requirements are met:
   a) The Net Revenue Sharing Income is received[8] by the company,[9]
   b) Signed contractual agreement or agreements are in place as of the valuation date and support the current payment of the Net Revenue Sharing Income; and
   c) The Net Revenue Sharing Income is not already accounted for directly or indirectly as a company asset.

2) The amount of Net Revenue Sharing Income to be used shall reflect the actuary's assessment of factors that include but are not limited to the following (not all of these factors will necessarily be present in all situations):
   a) The terms and limitations of the agreement(s), including anticipated revenue, associated expenses and any contingent payments incurred or made by either the company or the entity providing the Net Revenue Sharing as part of the agreement(s);
   b) The relationship between the company and the entity providing the Net Revenue Sharing Income that might affect the likelihood of payment and the level of expenses;
   c) The benefits and risks to both the company and the entity paying the Net Revenue Sharing Income of continuing the arrangement.

[8] For purposes of this section, Net Revenue Sharing Income is considered to be received by the company if it is paid directly to the company through a contractual agreement with either the entity providing the Net Revenue Sharing Income or an affiliated company that receives the Net Revenue Sharing Income. Net Revenue Sharing Income would also be considered to be received, if it is paid to a subsidiary that is owned by the company and if 100% of the statutory income from that subsidiary is reported as statutory income of the company. In this case the actuary needs to assess the likelihood that future Net Revenue Sharing Income is reduced due to the reported statutory income of the subsidiary being less than future Net Revenue Sharing Income received.

[9] As in other sections of the Guideline, the term "the company" is used exclusively as a reference to the insurance company writing the business falling under the scope of the Guideline. The term "entity providing the Net Revenue Sharing Income" is self-explanatory and is used consistently in this subsection.

© 1999-2023 National Association of Insurance Commissioners

d) The likelihood that the company will collect the Net Revenue Sharing Income during the term(s) of the agreement(s) and the likelihood of continuing to receive future revenue after the agreement(s) has ended;

e) The ability of the company to replace the services provided to it by the entity providing the Net Revenue Sharing Income or to provide the services itself, along with the likelihood that the replaced or provided services will cost more to provide; and

f) The ability of the entity providing the Net Revenue Sharing Income to replace the services provided to it by the company or to provide the services itself, along with the likelihood that the replaced or provided services will cost more to provide.

3) The amount of projected Net Revenue Sharing Income shall also reflect a margin (which decreases the assumed Net Revenue Sharing Income) directly related to the uncertainty of the revenue. The greater the uncertainty, the larger the margin. Such uncertainty is driven by many factors including the potential for changes in the securities laws and regulations, mutual fund board responsibilities and actions, and industry trends. Since it is prudent to assume that uncertainty increases over time, a larger margin shall be applied as time that has elapsed in the projection increases.

4) All expenses required or assumed to be incurred by the company in conjunction with the arrangement providing the Net Revenue Sharing Income, as well as any expenses assumed to be incurred by the company in conjunction with the assumed replacement of the services provided to it (as discussed in subsection 2)e) above) shall be included in the projections as a company expense under the requirements of section A1.1)A). In addition, expenses incurred by either the entity providing the Net Revenue Sharing Income or an affiliate of the company shall be included in the applicable expenses discussed in section A1.1)A) and A1.1)E)1) that reduce the Net Revenue Sharing Income.

5) The actuary is responsible for reviewing the revenue sharing agreements, verifying compliance with these requirements, and documenting the rationale for any source of Net Revenue Sharing Income used in the projections.

6) The amount of Net Revenue Sharing Income assumed in a given scenario shall not exceed the sum of a) and b), where:

a) Is the contractually guaranteed Net Revenue Sharing Income projected under the scenario, and

b) Is the actuary's estimate of non-contractually guaranteed Net Revenue Sharing Income before reflecting any margins for uncertainty multiplied by the following factors:

(i) 1.0 in the first projection year;
(ii) 0.9 in the second projection year;
(iii) 0.8 in the third projection year;
(iv) 0.7 in the fourth projection year;
(v) 0.6 in the fifth projection year;
(vi) 0.5 in the sixth and all subsequent projection years. The resulting amount of non-contractually guaranteed Net Revenue Sharing Income after application of this factor shall not exceed 0.25% per year on separate account assets in the sixth and all subsequent projection years.

© 1999-2023 National Association of Insurance Commissioners

F) Length of Projections. Projections of Accumulated Deficiencies shall be run for as many future years as needed so that no materially greater reserve value would result from longer projection periods.

G) AVR/IMR. The AVR and the IMR shall be handled consistently with the treatment in the company's cash flow testing.

A1.2) Determination of Scenario Greatest Present Values

A) Scenario Greatest Present Values. For a given scenario, the Scenario Greatest Present Value is the sum of:

1) The greatest present value, as of the projection start date, of the projected Accumulated Deficiencies defined in Section III)B)6); and

2) The Starting Asset Amount.

B) Discount Rates. In determining the Scenario Greatest Present Values, Accumulated Deficiencies shall be discounted using the same interest rates at which positive cash flows are invested, as determined in section A1.4)D). Such interest rates shall be reduced to reflect expected credit losses. Note that the interest rates used do not include a reduction for Federal Income Taxes.

A1.3) Projection Scenarios

A) Minimum Required Scenarios. The number of scenarios for which projected greatest present values of Accumulated Deficiencies shall be computed shall be the responsibility of the actuary and shall be considered to be sufficient if any resulting understatement in total reserves, as compared with that resulting from running additional scenarios, is not material.

B) Scenario Calibration Criteria. Returns for the groupings of variable funds shall be determined on a stochastic basis such that the resulting distribution of the Gross Wealth Ratios of the scenarios meets the Scenario Calibration Criteria specified in Appendix 5.

A1.4) Projection Assets

A) Starting Asset Amount. For the projections of Accumulated Deficiencies, the value of assets at the start of the projection shall be set equal to the approximate value of statutory reserves at the start of the projection. Assets shall be valued consistently with their annual statement values. The amount of such asset values shall equal the sum of the following items, all as of the start of the projection:

1) All of the Separate Account assets supporting the contracts;

2) An amount of assets held in the General Account equal to the approximate value of statutory reserves as of the start of the projections less the amount in 1), above.

In many instances the initial General Account assets may be negative, resulting in a projected interest expense. General Account assets chosen for use as described above shall be selected on a consistent basis from one reserve valuation hereunder to the next.

Any hedge assets meeting the requirements described in section A1.1)D) shall be reflected in the projections and included with other General Account assets under item 2) above. To the extent the sum of the value of such hedge assets and the value of assets in item 1) above is greater than

© 1999-2023 National Association of Insurance Commissioners

the approximate value of statutory reserves as of the start of the projections, then item 2) above may include enough negative General Account assets or cash such that the sum of items 1) and 2) above equals the approximate value of statutory reserves as of the start of the projections.[10]

The actuary shall document which assets were used as of the start of the projection, the approach used to determine which assets were chosen and shall verify that the value of the assets equals the approximate value of statutory reserves at the start of the projection.

B) Valuation of Projected Assets. For purposes of determining the projected Accumulated Deficiencies, the value of projected assets shall be determined in a manner consistent with their value at the start of the projection. For assets assumed to be purchased during a projection, the value shall be determined in a manner consistent with the value of assets at the start of the projection that have similar investment characteristics.

C) Separate Account Assets. For purposes of determining the Starting Asset Amounts in subsection A) and the valuation of projected assets in subsection B), assets held in a Separate Account shall be summarized into asset categories determined by the actuary as discussed in section A1.1)B).

D) General Account Assets. General Account assets shall be projected, net of projected defaults, using assumed investment returns consistent with their book value and expected to be realized in future periods as of the date of valuation. Initial assets that mature during the projection and positive cash flows projected for future periods shall be invested at interest rates, which, at the option of the actuary, are one of the following:

1) The forward interest rates implied by the swap curve[11] in effect as of the valuation date,

2) The 200 interest rate scenarios available as prescribed for Phase I, C-3 Risk Based Capital calculation, coupled with the Separate Account return scenarios by mating them up with the first 200 such scenarios and repeating this process until all Separate Account return scenarios have been mated with a Phase I scenario, or

3) Interest rates developed for this purpose from a stochastic model that integrates the development of interest rates and the Separate Account returns.

When the option described in 1) above (the forward interest rates implied by the swap curve) is used, an amount shall be subtracted from the interest rates to reflect the current market expectations about future interest rates using the process described in section A1.5)A).

The actuary may switch from 1) to 2), from 1) to 3) or from 2) to 3) from one valuation date to the next, but may not switch in the other direction without approval from the Domiciliary Commissioner.

A1.5) Projection of Annuitization Benefits (including GMIBs)

A) Assumed Annuitization Purchase Rates at Election. For purposes of projecting annuitization benefits (including annuitizations stemming from the election of a GMIB), the projected annuitization purchase rates shall be determined assuming that market interest rates available at the time of election are the interest rates used to project General Account Assets, as determined in

[10] Further elaboration on potential practices with regard to this issue may be included in a practice note.

[11] The swap curve is based on the Federal Reserve H.15 interest swap rates. The rates are for a Fixed Rate Payer in return for receiving three month LIBOR. One place where these rates can be found is *http://www.federalreserve.gov/releases/h15/default.htm*.

© 1999-2023 National Association of Insurance Commissioners

A1.4)D). However, where the interest rates used to project General Account Assets are based upon the forward interest rates implied by the swap curve in effect as of the valuation date (i.e., the option described in section A1.4)D)1) is used, herein referred to as a point estimate), the margin between the cost to purchase an annuity using the guaranteed purchase basis and the cost using the interest rates prevailing at the time of annuitization shall be adjusted as discussed below.

If a point estimate is being used, it is important that the margin assumed reflects the current market expectations about future interest rates at the time of annuitization, as described more fully below, and a downward adjustment to the interest rate assumed in the purchase rate basis. The latter adjustment is necessary since a greater proportion of contractholders will select an annuitization benefit when it is worth more than the cash surrender value then when it is not. As a practical matter, this effect can be approximated by using an interest rate assumption in the purchase rate basis that is 0.30 percent below that implied by the forward swap curve, as described below.

To calculate market expectations of future interest rates, the par or current coupon swap curve is used (documented daily in Federal Reserve H.15 with some interpolation needed). Deriving the expected rate curve from this swap curve at a future date involves the following steps:

1) Calculate the implied zero-coupon rates. This is a well documented "bootstrap" process. For this process we use the equation $100=C^n * (v + v^2 + \ldots +v^n) + 100v^n$ where the "v^t" terms are used to stand for the discount factors applicable to cash flows 1,2,…n years hence and C^n is the n-year swap rate. Each of these discount factors are based on the forward curve and therefore are based on different rates, however (i.e. "v^2" does not equal v times v). Given the one year swap rate, one can solve for v. Given v and the two year swap rate one can then back into v^2, and so on.

2) Convert the zero coupon rates to one year forward rates by calculating the discount factor needed to get from v^{t-1} to v^t.

3) Develop the expected rate curve.

   This recognizes that, for example, the five-year forward one-year rate is not the rate the market expects on one year instruments five years from now. The reason is that as the bond gets shorter the "risk premium" in the rate diminishes. This is sometimes characterized as "rolling down" the yield curve. Table A shows the historic average risk premium at various durations. From this table, one can see that to get the rate the market expects a 1 year swap to have five years from now; one must subtract the risk premium associated with six year rates (.95%) and add back that associated with 1 year rates (.50%). This results in a net reduction of .45%.

Table A: Risk Premium by Duration

Duration	Risk Premium	Duration	Risk Premium
1	0.500%	6	0.950%
2	0.750%	7	1.000%
3	0.750%	8	1.100%
4	0.850%	9+	1.150%
5	0.900%		

The Exhibit below combines the three steps. Columns A through D convert the swap curve to the implied forward rate for each future payment date. Columns E through H remove the current risk premium, add the risk premium t years in the future (the Exhibit shows the rate curve five years in the future), and uses that to get the discount factors to apply to the 1 year, 2 year,…5 year cash flows 5 years from now.

Exhibit: Derivation of discount rates expected in the future

A	B	C	D	E	F	G	H
Projection Years	Swap Curve Rate	PV of Zero Coupon	Forward 1 Year Rate	Risk Premium	Risk Premium 5 Years Out	Expected Forward Rate In 5 Years	PV of Zero Coupon In 5 Years
1	2.57%	0.97494	2.5700%	0.50000%			
2	3.07%	0.94118	3.5879%	0.75000%			
3	3.44%	0.90302	4.2251%	0.75000%			
4	3.74%	0.86231	4.7208%	0.85000%			
5	3.97%	0.82124	5.0010%	0.90000%			
6	4.17%	0.77972	5.3249%	0.95000%	0.50000%	4.8749%	0.95352
7	4.34%	0.73868	5.5557%	1.00000%	0.75000%	5.3057%	0.90547
8	4.48%	0.69894	5.6860%	1.10000%	0.75000%	5.3360%	0.85961
9	4.60%	0.66050	5.8209%	1.15000%	0.85000%	5.5209%	0.81463
10	4.71%	0.62303	6.0131%	1.15000%	0.90000%	5.7631%	0.77024
Cell formulas for Projection Year 10:		=(1-B13*SUM(C4:C12))/(1+B13)	=C12/C13-1		=E8	=D13-E13+F13	=H12/(1+G13)

Where interest rates are projected stochastically using an integrated model, although one would "expect" the interest rate n years hence to be that implied for an appropriate duration asset by the forward swap curve as described above, there is a steadily widening confidence interval about that point estimate with increasing time until the annuitization date. The "expected margin" in the

purchase rate is less than that produced by the point estimate based on the expected rate, since a greater proportion of contractholders will have an annuitization benefit whose worth is in excess of cash surrender value when margins are low than when margins are high. As a practical matter, this effect can be approximated by using a purchase rate margin based on an earnings rate .30 percent below that implied by the forward swap curve. If a stochastic model of interest rates is used instead of a point estimate then no such adjustment is needed.

B) Projected Election of Guaranteed Minimum Income Benefit and other Annuitization Options. For contracts projected to elect annuitization options (including annuitizations stemming from the election of a GMIB), the projections may assume one of the following at the actuary's option:

1) The contract is treated as if surrendered at an amount equal to the statutory reserve that would be required at such time for the payout annuity benefits, or

2) The contract is assumed to stay inforce, the projected periodic payments are paid, and the Working Reserve is equal to one of the following:
   a) The statutory reserve required for the payout annuity, if it is a fixed payout annuity, or
   b) If it is a variable payout annuity, the Working Reserve for a variable payout annuity as defined in Section III)B)5).

If the projected payout annuity is a variable payout annuity containing a floor guarantee (such as a GPAF) under a specified contractual option, only option 2) above shall be used.

Where mortality improvement is used to project future annuitization purchase rates, as discussed in A) above, mortality improvement shall also be reflected on a consistent basis in either the determination of the reserve in 1) above or the projection of the periodic payments in 2) above.

A1.6) Relationship to Risk Based Capital Requirements

A) The Guideline anticipates that the projections described herein may be used for the determination of Risk Based Capital (the "RBC requirements") for some or all of the contracts falling within the scope of the Guideline. There are several differences between the requirements of the Guideline and the RBC requirements, and among them are two major differences. First, the Conditional Tail Expectation level is different (CTE (70) for the Guideline and CTE (90) for the RBC requirements). Second, the projections described in the Guideline are performed on a basis that ignores Federal Income Tax. That is, under the Guideline, the Accumulated Deficiencies do not include projected Federal Income Tax and the interest rates used to discount the Scenario Greatest Present Value (i.e., the interest rates determined in section A1.4)D)) contain no reduction for Federal Income Tax. Under the RBC requirements, the projections do include projected Federal Income Tax and the discount interest rates used in the RBC requirement do contain a reduction for Federal Income Tax.

B) To further aid the understanding of the Guideline and any instructions relating to the RBC requirement, it is important to note the equivalence in meaning between the following terms, subject to the differences noted above:

1) The amount that is added to the Starting Asset Amount in Section III)B)6) of the Guideline is similar to the Additional Asset Requirement referenced in the RBC requirement.

© 1999-2023 National Association of Insurance Commissioners

2) The Conditional Tail Expectation Amount referenced in the Guideline is similar to the Total Asset Requirement referenced in the RBC requirement.

A1.7) Compliance with Actuarial Standards of Practice (ASOPs)

When determining the Conditional Tail Expectation Amount using projections, the analysis shall conform to the Actuarial Standards of Practice as promulgated from time to time by the Actuarial Standards Board.

A1.8) Compliance with Principles

When determining the Conditional Tail Expectation Amount using projections, any interpretation and application of the requirements of the Guideline shall follow the principles discussed in the Section I) Background.

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 2 - Reinsurance and Statutory Reporting Issues

A2.1) Treatment of Reinsurance Ceded in the Aggregate Reserve

A) Aggregate Reserve Net of and Prior to Reinsurance Ceded. As noted in Section IV)B), the Aggregate Reserve is determined net of reinsurance ceded. Therefore, it is necessary to determine the components needed to determine the Aggregate Reserve (i.e., the Standard Scenario Amount, and either the Conditional Tail Expectation Amount determined using projections or the Conditional Tail Expectation Amount determined using the Alternative Methodology) on a net of reinsurance basis. In addition, as noted in Section IV)B), it may be necessary to determine the Aggregate Reserve determined on a "direct" basis, or prior to reflection of reinsurance ceded. Where this is needed, each of these components shall be determined prior to reinsurance. Sections B) through D) below discuss methods necessary to determine these components on both a "net of reinsurance" and a "prior to reinsurance" basis. Note that due allowance for reasonable approximations may be used where appropriate.

B) Conditional Tail Expectation Amount Determined using Projections. In order to determine the Aggregate Reserve net of reinsurance ceded, Accumulated Deficiencies, Scenario Greatest Present Values, and the resulting Conditional Tail Expectation Amount shall be determined reflecting the effects of reinsurance treaties that meet the statutory requirements that would allow the treaty to be accounted for as reinsurance within the projections. This involves including, where appropriate, all anticipated reinsurance premiums or other costs and all reinsurance recoveries, where both premiums and recoveries are determined by recognizing any limitations in the reinsurance treaties, such as caps on recoveries or floors on premiums.

In order to determine the Conditional Tail Expectation Amount prior to reinsurance ceded, Accumulated Deficiencies, Scenario Greatest Present Values, and the resulting Conditional Tail Expectation Amount shall be determined ignoring the effects of reinsurance within the projections. One acceptable approach involves a projection based on the same Starting Asset Amount as for the Aggregate Reserve net of reinsurance and by ignoring, where appropriate, all anticipated reinsurance premiums or other costs and all reinsurance recoveries in the projections.

C) Conditional Tail Expectation Amount Determined using the Alternative Methodology. If a company chooses to use the Alternative Methodology, as allowed in Section IV)E), it is important to note that the methodology produces reserves on a prior to reinsurance ceded basis. Therefore, where reinsurance is ceded, the Alternative Methodology must be modified to reflect the reinsurance costs and reinsurance recoveries under the reinsurance treaties in the determination of the Aggregate Reserve net of reinsurance. In addition, the Alternative Methodology, unadjusted for reinsurance, shall be applied to the contracts falling under the scope of the Guideline to determine the Aggregate Reserve prior to reinsurance.

D) Standard Scenario Amount. Where reinsurance is ceded, the Standard Scenario Amount shall be calculated as described in Appendix 3 to reflect the reinsurance costs and reinsurance recoveries under the reinsurance treaties. If it is necessary, the Standard Scenario Amount shall be calculated prior to reinsurance ceded using the methods described in Appendix 3, but ignoring the effects of the reinsurance ceded.

A.2.2) Aggregate Reserve to be held in the General Account

The amount of the reserve held in the General Account shall not be less than the excess of the Aggregate Reserve over the sum of the Basic Reserve, as defined in section A3.2), attributable to the variable portion of all such contracts.

A.2.3) Actuarial Certification and Memorandum

A) Actuarial Certification. Actuarial Certification of the work done to determine the Aggregate Reserve shall be required. The actuary shall certify that the work performed has been done in a way that substantially complies with all applicable Actuarial Standards of Practice. The scope of this certification does not include an opinion on the adequacy of the Aggregate Reserve,[12] the company's surplus or the company's future financial condition. The actuary shall also note any material change in the model or assumptions from that used previously and the estimated impact of such changes.

Appendix 8 contains more information on the contents of the required Actuarial Certification.

B) Required Memorandum. An actuarial memorandum shall be constructed documenting the methodology and assumptions upon which the Aggregate Reserve is determined. The memorandum shall also include sensitivity tests that the actuary feels appropriate, given the composition of the company's block of business (i.e., identifying the key assumptions that, if changed, produce the largest changes in the Aggregate Reserve). This memorandum shall have the same confidential status as the actuarial memorandum supporting the actuarial opinion[13] and shall be available to regulators upon request.

Appendix 8 contains more information on the contents of the required memorandum.

C) Conditional Tail Expectation Amount Determined using the Alternative Methodology. Where the Alternative Methodology is used, there is no need to discuss the underlying assumptions and model in the required memorandum. Certification that expense, revenue, fund mapping, and product parameters have been properly reflected, however, shall be required.

Appendix 8 contains more information on the contents of the required Actuarial Certification and memorandum.

D) Material Changes. If there is a material change in results due to a change in assumptions from the previous year, the memorandum shall include a discussion of such change in assumptions and an estimate of the impact it has on the results.

---

[12] The adequacy of total company reserves, which includes the Aggregate Reserve, is addressed in the company's Actuarial Opinion as required by the NAIC Model Actuarial Opinion and Memorandum Regulation.

[13] This is consistent with Section 3D(8) of the Standard Valuation Law, which states: "Except as provided in Paragraphs (12), (13) and (14), documents, materials or other information in the possession or control of the Department of Insurance that are a memorandum in support of the opinion, and any other material provided by the company to the commissioner in connection with the memorandum, shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner's official duties."

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 3 - Standard Scenario Requirements

A3.1) Overview

A) Application to Determine Reserves. A Standard Scenario Reserve shall be determined for each of the contracts falling under the scope of the Guideline by applying section A3.3). This includes those contracts to which the Alternative Methodology is applied.

The Standard Scenario Reserve for a contract with guaranteed living benefits or guaranteed death benefits is based on a projection of the account value based on specified returns for supporting assets equal to the account value. An initial drop is applied to the supporting assets and account value on the valuation date. Subsequently, account values are projected at specified rates earned by the supporting assets less contract and fund charges. The assumptions for the projection of account values and margins are prescribed in section A3.3)C). For any contract with guarantees the Standard Scenario Reserve includes the greatest present value of the benefit payments in excess of account values applied over the present value of revenue produced by the margins.

B) The Standard Scenario Amount

1) The Standard Scenario Amount is defined in Section IV)C) of this Guideline as the aggregate of the reserves determined by applying the Standard Scenario Method to each of the contracts falling under the scope of the Guideline. Except as provided in subsection A3.3)B)1), the Standard Scenario Amount equals the sum over all contracts of the Standard Scenario Reserve determined for each contract as of the statement date as described in A3.1)B)2).

2) The Standard Scenario Method requires the Standard Scenario Amount to not be less than the sum over all contracts of the Standard Scenario Reserve determined for the contract as of the statement date as described in section A3.3), where the Discount Rate is equal to *DR*, which is defined as the valuation interest rate specified by the Standard Valuation Law for annuities valued on an issue year basis, using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years. The presence of guarantees of interest on future premiums and/or cash settlement options is to be determined using the terms of the contracts.

C) Illustrative Application of the Standard Scenario to a Projection or Model Office. If the Conditional Tail Expectation Amount is determined based on a projection of an inforce prior to the statement date and/or by the use of a model office, which is a grouping of contracts into representative cells, then additional determinations of A3.1)B)2) shall be performed on the prior inforce and/or model office. The calculations are for illustrative purposes to assist in validating the reasonableness of the projection and/or the model office.

The following table identifies the illustrative additional determinations required by this section using the Discount Rate, *DR*, as defined in A3.1)B)2). The additional determinations required are based on how the Conditional Tail Expectation projection or Alternative Methodology is applied. For completeness, the table also includes the determinations required by section A3.1)B)2).

1) Run A in the table is required for all companies by section A3.1)B)2). No additional determinations are required if a company's stochastic or alternative methodology result is calculated on individual contracts as of the statement date.

2) A company that uses a model office as of the statement date to determine its stochastic or alternative methodology result must provide an additional determination for the model office based on the Discount Rate *DR*, run B.

© 1999-2023 National Association of Insurance Commissioners

3) A company that uses a contract by contract listing of a prior inforce to determine its stochastic or alternative methodology with result PS and then projects requirements to the statement date with result S must provide an additional determination for the prior inforce based on the Discount Rate *DR*, run C.

4) A company that uses a model office of a prior inforce to determine its stochastic or alternative methodology requirements with result PM and then projects requirements to the statement date with result S must provide an additional determination for the prior model office based on the Discount Rate *DR*, run D.

Standard Scenario Run	Guideline Variations	Validation Measures	
		Model Office Projection	Projection of Prior Inforce
A. Valuation on the statement date on inforce contracts with discount rate *DR*	None	None	None
B. Valuation on the statement date on the model office with discount rate *DR*	If not material to model office validation	A/B compare to 1.00	None
C. Valuation on a prior inforce date on prior inforce contracts with discount rate *DR*	If not material to projection validation	None	A/C - S/PS compare to 0
D. Valuation on a prior inforce date on a model office with discount rate *DR*	If not material to model office or projection validation.	(A/D – S/PM) compare to 0	

Modification of the requirements in section A3.3) when applied to a prior inforce or a model office is permitted if such modification facilitates validating the projection of inforce or the model office. All such modifications should be documented.

A3.2) Basic and Basic Adjusted Reserve - Application of Actuarial Guideline XXXIII

A) The Basic Reserve for a given contract shall be determined by applying statutory statement valuation requirements applicable immediately prior to adoption of the Guideline to the contract ignoring any guaranteed death benefits in excess of account values or guaranteed living benefits applying proceeds in excess of account values.

B) The calculation of the Basic Reserve shall assume a return on separate account assets based on the year of issue statutory valuation rate less appropriate asset based charges, including charges for any guaranteed death benefits or guaranteed living benefits. It shall also assume a return for any fixed separate account and general account options equal to the rates guaranteed under the contract.

C) The Basic Reserve shall be no less than the Cash Surrender Value on the valuation date, as defined in Section III)B) of the Guideline.

D) The Basic Adjusted Reserve shall be that determined based on A3.2)A) and A3.2)B) except in A3.2)A) free partial withdrawal provisions shall be disregarded when determining surrender charges in applying the statutory statement valuation requirement prior to adoption of the Guideline. Section A3.2)C) shall not apply to the Basic Adjusted Reserve.

© 1999-2023 National Association of Insurance Commissioners

A3.3) Standard Scenario Reserve - Application of the Standard Scenario Method

A) General. Where not inconsistent with the guidance given here, the process and methods used to determine the Standard Scenario Reserve under the Standard Scenario Method shall be the same as required in the calculation of the Conditional Tail Expectation Amount as described in Section IV) of the Guideline. Any additional assumptions needed to determine the Standard Scenario Reserve shall be explicitly documented.

B) Results for the Standard Scenario Method. For each contract, the Standard Scenario Reserve is the reserve based on 1) or 2) where:

1) For contracts without any guaranteed benefits, as defined in Section III)A) of the Guideline and where not subsequently disapproved by the Domiciliary Commissioner, the Standard Scenario Reserve is the Basic Reserve described in section A3.2)A), A3.2)B) and A3.2)C).

2) For all other contracts the Standard Scenario Reserve is equal to the greater of Cash Surrender Value on the valuation date, as defined in Section III)B) of the Guideline, and the quantity a) + b) - c), where:

a) Is the Basic Adjusted Reserve calculated for the contract, as described in section A3.2)D);

b) Is the greater of zero and the greatest present value at the Discount Rate measured as of the end of each projection year of the negative of the Accumulated Net Revenue described below using the assumptions described in A3.3)C). The Accumulated Net Revenue at the end of a projection year is equal to (i) + (ii) - (iii), where:

(i) Is the Accumulated Net Revenue at the end of the prior projection year accumulated at the Discount Rate to the end of the current projection year; the Accumulated Net Revenue at the beginning of the projection (i.e., time 0) is zero;

(ii) Are the margins generated during the projection year on account values accumulated at the Discount Rate to the end of the projection year (the factors and assumptions to be used in calculating the margins and account values are in A3.3)C)); and

(iii) Are the contract benefits in excess of account values applied, Individual reinsurance premiums and Individual reinsurance benefits payable or receivable during the projection year accumulated at the Discount Rate to the end of the projection year. Individual reinsurance is defined in A3.3)C)2).

c) Is the contract's allocation of the value of hedges and Aggregate reinsurance as described in section A3.3)D). Aggregate reinsurance is defined in section A3.3)C)2).

No reinsurance shall be considered in the Standard Scenario Amount if such reinsurance does not meet the statutory requirements that would allow the treaty to be accounted for as reinsurance. The actuary shall determine the projected reinsurance premiums and benefits reflecting all treaty limitations and assuming any options in the treaty to the other party are exercised to decrease the value of reinsurance to the reporting company (e.g., options to increase premiums or terminate coverage). The positive value of any reinsurance treaty that is not guaranteed to the insurer or its successor shall be excluded from the value of reinsurance. The commissioner may require the exclusion of a reinsurance treaty or any portion of a reinsurance treaty if the terms of the

© 1999-2023 National Association of Insurance Commissioners

reinsurance) treaty or the portion required to be excluded serves solely to reduce the calculated Standard Scenario Reserve without also reducing risk on scenarios similar to those used to determine the Conditional Tail Expectation Reserve. Any reinsurance reflected in the Standard Scenario Reserve shall be appropriate to the business and not merely constructed to exploit 'foreknowledge' of the components of the Standard Scenario Method.

C) Assumptions for use in paragraph A3.3)B)2)b) for Accumulated Net Revenue and Account Values.

1) Account Value Return Assumptions. The bases for return assumptions on assets supporting the Account Value are shown in Table I. The "Initial" returns shall be applied to the account value supported by each asset class on the valuation date as immediate drops, resulting in the Account Value at time 0. The "Year 1," "Years 2 – 5," and "Year 6+" returns for the equity, bond and balanced classes are gross annual effective rates of return and are used (along with other decrements and/or increases) to produce the Account Value as of the end of each projection interval. For purposes of this section, money market funds supporting Account Value shall be considered part of the Bond class.

The Fixed Fund rate is the greater of the minimum rate guaranteed in the contract or 4% but not greater than the current rates being credited to Fixed Funds on the valuation date.

Account Values shall be projected using the appropriate gross rates from Table I for equity, bond and balanced classes applied to the supporting assets less all fund and contract charges according to the provisions of the funds and contract and applying the Fixed funds rate from Table I as if it were the resulting net rate after deduction for fund or contract charges.

The annual margins on Account Value are defined as follows:

a) During the Surrender Charge Amortization Period, as determined following the step outlined in section A3.3)E) below:
   (i) 0.20% of Account Value; plus
   (ii) Any Net Revenue Sharing Income, as defined in section A1.1)E), that is contractually guaranteed to the insurer and its liquidator, receiver, and statutory successor; plus
   (iii) For all of the guaranteed living benefits of a given contract combined,[14] the greater of:
      - 0.20% of Account Value; or
      - Explicit and optional contract charges for guaranteed living benefits; plus
   (iv) For all guaranteed death benefits of a given contract combined,[15] the greater of:
      - 0.20% of Account Value; or
      - Explicit and optional contract charges for guaranteed death benefits.

b) After the Surrender Charge Amortization Period:

[14] This excludes any guaranteed living benefit that is added to the contract simply for the purpose of increasing the revenue allowed under this section.

[15] This excludes any guaranteed death benefit that is added to the contract simply for the purpose of increasing the revenue allowed under this section.

The amount determined in a) above; plus 50% of the excess, if any, of all contract charges (excluding Net Revenue Sharing Income) over the sum of a)(i) , a)(iii) and a)(iv) above.

However, on fixed funds after the surrender charge period, a margin of up to the amount in a) above plus .4% may be used.

Table I

	Initial	Year 1	Years 2 – 5	Year 6+
Equity Class	-13.5%	0%	4.0%	5.50%
Bond Class	0%	0%	4.85%	4.85%
Balanced Class	-8.1%	0%	4.34%	5.24%
Fixed Separate Accounts and General Account (net)	0%	Fixed Fund Rate	Fixed Fund Rate	Fixed Fund Rate

2) <u>Reinsurance Credit</u>. Individual reinsurance is defined as reinsurance where the total premiums for and benefits of the reinsurance can be determined by applying the terms of the reinsurance to each contract covered without reference to the premiums or benefits of any other contract covered and summing the results over all contracts covered. Reinsurance that is not Individual is Aggregate.

Individual reinsurance premiums projected to be payable on ceded risk and receivable on assumed risk shall be included in the Projected Net Revenue. Similarly, Individual reinsurance benefits projected to be receivable on ceded risk and payable on assumed risk shall be included in the Projected Net Revenue. No Aggregate reinsurance shall be included in Projected Net Revenue.

3) <u>Lapses, Partial Withdrawals, and In-The-Moneyness</u>. Partial withdrawals elected as guaranteed living benefits, see A3.3)C)7), or required contractually (e.g., a contract operating under an automatic withdrawal provision on the valuation date) are to be deducted from the Account Value in each projection interval consistent with the projection frequency used, as described in A3.3)C)6), and according to the terms of the contract. No other partial withdrawals, including free partial withdrawals, are to be deducted from Account Value. All lapse rates should be applied as full contract surrenders.

For purposes of determining the dynamic lapse assumptions shown in Table II below, a guaranteed living benefit is in the money (ITM) for any projection interval if the Account Value at the beginning of the projection interval is less than the Current Value of the guaranteed living benefit (as defined below) also at the beginning of that projection interval.

The Current Value of the guaranteed living benefit at the beginning of any projection interval is either the amount of the current lump sum payment (if exercisable) or the present value of future lump sum or income payments. More specific guidance is provided below. For the purpose of determining the present value, the discount rate shall be equal *DR* as defined in A3.1)B)2). If future living benefit payments are life contingent (i.e., either the right of future exercise or the right to future income benefits expires with

© 1999-2023 National Association of Insurance Commissioners

the death of the annuitant or the owner), then the company shall determine the present value of such payments using the mortality table specified in A3.3)C)5).

If a guaranteed living benefit is exercisable (withdrawal can start or, in the case of a GMWB, has begun) at the beginning of the projection interval, then the Current Value of the guaranteed living benefit shall be determined assuming immediate or continued exercise of that benefit.

If a guaranteed living benefit is not exercisable (e.g., due to minimum age or duration requirements) at the beginning of that projection interval, then the Current Value of the guaranteed living benefit shall be determined assuming exercise of the guaranteed living benefit at the earliest possible future projection interval. If the right to exercise the guaranteed living benefit is contingent on the survival of the annuitant or the owner, then the Current Value of the guaranteed living benefit shall assume survival to the date of exercise using the mortality table specified in A3.3)C)5).

Determination of the Current Value of a guaranteed living benefit that is exercisable or payable at a future projection interval shall take account of any guaranteed growth in the basis for the guarantee (e.g., where the basis grows according to an index or an interest rate).

For a GMWB, the Current Value shall be determined assuming the earliest penalty-free withdrawal of guaranteed benefits after withdrawals begin and by applying the constraints of any applicable maximum or minimum withdrawal provisions. If the GMWB is currently exercisable and the right to future GMWB payments is contingent upon the survival of the annuitant or owner, then the Current Value shall assume survival using the mortality table specified in A3.3)C)5). After a GMWB that has payments that are contingent upon the survival of the annuitant or owner has commenced, then the Current Value shall assume survival using the Annuity 2000 Mortality Table.

For an unexercised GMIB, the Current Value shall be determined assuming the option with a reserve closest to the reserve for a 10 year certain and life option. The reserve values and the value of the GMIB on the assumed date of exercise shall be determined using the discount rate *DR* specified in A3.1)B)2) and for life contingent payments, the Annuity 2000 Mortality Table. The Current Value of an unexercised GMIB, however, shall be set equal to the Account Value if the contractholder can receive higher income payments on the assumed date of exercise by electing the same option under the normal settlement option provisions of the contract.

For the purpose of applying the lapse assumptions specified in Table II below or contractholder elections rates specified in A3.3)C)7), the contract shall be considered "out of the money" (OTM) for a projection interval if the Current Value of the guaranteed living benefit at the beginning of the projection interval is less than or equal to the Account Value at the beginning of the same projection interval. If the Current Value of the guaranteed living benefit at the beginning of the projection interval is greater than the Account Value also at the beginning of the projection interval, the contract shall be considered 'in the money' (ITM) and the percent ITM shall equal:

100 * ((Current Value of the guaranteed living benefit /Account Value) - 1)

If a contract has multiple living benefit guarantees then the guarantee having the largest Current Value shall be used to determine the percent in the money.

© 1999-2023 National Association of Insurance Commissioners

Table II - Lapse Assumptions

	During Surrender Charge Period	After Surrender Charge Period		
Death Benefit Only Contracts	5%	10%		
All Guaranteed Living Benefits OTM	5%	10%		
		ITM < 10%	10%<=ITM< 20%	20%<=ITM
Any Guaranteed Minimum Accumulation Benefit ITM	2%	2%	0%	0%
Any Other Guaranteed Living Benefits ITM	3%	7%	5%	2%

4) <u>Account Transfers and Future Deposits</u>. No transfers between funds shall be assumed in the projection used to the determine the greatest present value amount required under section A3.3)B)2)b) unless required by the contract (e.g., transfers from a dollar cost averaging fund or contractual rights given to the insurer to implement a contractually specified portfolio insurance management strategy or a contract operating under an automatic re-balancing option). When transfers must be modeled, to the extent not inconsistent with contract language, the allocation of transfers to funds must be in proportion to the contract's current allocation to funds.

Margins generated during a projection interval on funds supporting account value are transferred to the Accumulation of Net Revenue and are subsequently accumulated at the Discount Rate. Assets for each class supporting account values are to be reduced in proportion to the amount held in each asset classes at the time of transfer of margins or any portion of Account Value applied to the payment of benefits.

No future deposits to Account Value shall be assumed unless required by the terms of the contract to prevent contract or guaranteed benefit lapse, in which case they must be modeled. When future deposits must be modeled, to the extent not inconsistent with contract language, the allocation of the deposit to funds must be in proportion to the contract's current allocation to such funds.

5) <u>Mortality</u>. Mortality at 70% of the 1994 Variable Annuity MGDB Mortality Tables (1994 MGDB tables) through age 85 increasing by 1% each year to 100% of the 1994 MGDB tables at age 115 shall be assumed in the projection used to the determine the greatest present value amount required under section A3.3)B)2)b).

6) <u>Projection Frequency</u>. The projection used to determine the greatest present value amount required under section A3.3)B)2)b) shall be calculated using an annual or more frequent time step, such as quarterly. For time steps more frequent than annual, assets supporting Account Values at the start of a year may be retained in such funds until year-end (i.e., margin earned during the year will earn the fund rates instead of the Discount Rate until year end) or removed after each time step. However, the same approach shall be applied for all years. Similarly, projected benefits, lapses, elections and other contractholder activity can be assumed to occur annually or at the end of each time step, but the approach shall be consistent for all years.

© 1999-2023 National Association of Insurance Commissioners

7) Contractholder Election Rates. Contractholder election rates for exercisable ITM guaranteed living benefits other than GMWBs shall be 5% per annum in every projection interval where the living benefit is less than 10% ITM, 15% per annum in every projection interval where the living benefit is 10% or more ITM and less than 20% ITM, and 25% per annum in every projection interval where the living benefit is more than 20% ITM. In addition, the election rate for an exercisable ITM guaranteed living benefit shall be 100% at the last model duration to elect such benefit. This 100% election rate shall be used when a Guaranteed Minimum Accumulation Benefit is at the earliest date that the benefit is exercisable and in-the-money. However, the contractholder election rate for any exercisable ITM guaranteed living benefit shall be zero if exercise would cause the extinction of a guaranteed living benefit having a larger Current Value. For this purpose, GMDBs are not benefits subject to election.

For guaranteed minimum withdrawal benefits, a partial withdrawal, if allowed by contract provisions, equal to the applicable percentage in Table III applied to the contract's maximum allowable partial withdrawal shall be assumed. However, if the contract's minimum allowable partial withdrawal exceeds the partial withdrawal from applying the rate in Table III to the contract's maximum allowable partial withdrawal, then the contract's minimum allowable partial withdrawal shall be assumed.

Table III - Guaranteed Withdrawal Assumptions

	Attained Age less than 50	Attained Age 50 to 59	Attained Age 60 or Greater
Withdrawals do not reduce other elective Guarantees that are in the money	50%	75%	100%
Withdrawals reduce elective Guarantees that are in the money	25%	50%	75%

8) Indices. If an interest index is required to determine projected benefits or reinsurance obligations, the index must assume interest rates have not changed since the last reported rates before the valuation date. If an equity index is required the index shall be consistent with the last reported index before the valuation date, the initial drop in equity returns and the subsequent equity returns in the standard scenario projection. The sources of information and how they are used to determine the indexes shall be documented and, to the extent possible, consistent from year to year.

D) Assumptions for use in Section A3.3)B)2)c).

1) The Value of Aggregate Reinsurance. The value of Aggregate reinsurance shall be calculated separately from the Accumulated Net Revenue. The value of Aggregate reinsurance is the discounted value, using the statutory valuation rate described in the following paragraph, of the excess of (a) the projected benefit payments from the reinsurance; over (b) the projected gross reinsurance premiums, where (a) and (b) are determined under the assumptions described in section A3.3)C) for all applicable contracts in aggregate.

In order for the value of the Aggregate reinsurance to be consistent with the underlying Standard Scenario reserve, the discount rate shall be a weighted average of the valuation

rates (*DR*) of the contracts that are supported by the Aggregate reinsurance treaty. The weights used to determine this discount rate shall be reasonably related to the risks that are being covered by the Aggregate reinsurance (e.g., account value or values of guaranteed benefits) and shall be applied consistently from year to year. If an appropriate method to determine this discount rate does not exist, the value of the Aggregate reinsurance shall be determined using the statutory valuation rate in effect on the valuation date for annuities valued on an issue year basis using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years, determined assuming there are cash settlement options but no interest guarantees on future premiums.

2) The Value of Approved Hedges. The value of approved hedges shall be calculated separately from the Accumulated Net Revenue. The value of approved hedges is the difference between: a) the discounted value at the 1-year CMT[16] as of the valuation date of the pre-tax cash flows from the approved hedges; less b) their statement values on the valuation date.

To be an approved hedge for purposes of the Standard Scenario Reserve, a derivative or other investment has to be an actual asset held by the company on the valuation date, be used as a hedge supporting the contracts falling under the scope of the Guideline, and comply with any statutes, laws, or regulations (including applicable documentation requirements) of the domiciliary state or jurisdiction related to the use of derivative instruments.

The Domiciliary Commissioner may require the exclusion of any portion of the value of approved hedges upon a finding that the company's documentation, controls, measurement, execution of strategy or historical results are not adequate to support a future expectation of risk reduction commensurate with the value of approved hedges.

The cash flow projection for approved hedges that expire in less than one year from the valuation date should be based on holding the hedges to their expiration. For hedges with an expiration of more than 1 year, the value of hedges should be based on liquidation of the hedges one year from the valuation date. Where applicable, the liquidation value of hedges shall be consistent with the assumed returns in the Standard Scenario from the start of the projection to the date of liquidation, Black-Scholes pricing, a risk free rate equal to the 5-year CMT as of the valuation date and the annual volatility implicit as of the valuation date in the statement value of the hedges when the statement value of hedges are valued with Black-Scholes pricing and a risk-free rate equal to the 5-year CMT as of the valuation date.[17]

There is no credit in the Standard Scenario for dynamic hedging beyond the credit that results from hedges actually held on the valuation date.

3) Allocation of the Value of Hedges and the Value of Aggregate Reinsurance. The value of approved hedges and Aggregate reinsurance shall be allocated to the contracts which are

[16] For purposes of this Appendix, the term CMT refers to the nominal yields on actively traded non-inflation-indexed issues adjusted to constant maturities, as released daily by the Federal Reserve Board. As of this writing, the current and historical one-year rates may be found at *http://www.federalreserve.gov/datadownload/Build.aspx?rel=H15* and the current and historical five-year rates may be found at *http://www.federalreserve.gov/releases/h15/data/Business_ day/H15_TCMNOM_Y5.txt*.

[17] Conceptually, the item being hedged, the contract guarantees, and the approved hedges are accounted for at the average present value of the worst 30% of all scenarios, the tail scenarios for a CTE (70) measure. However, the statement value of approved hedges is at market. Therefore, the standard scenario value of approved hedges is a proxy of the adjustment needed to move approved hedges from a market value to a tail value.

© 1999-2023 National Association of Insurance Commissioners

supported by the applicable Aggregate reinsurance agreements and approved hedges. A contract's allocation shall be the lesser of the amount in A3.3)B)2)b) for the contract or the product of a) and b) where:

a) Is the sum of the value of the applicable approved hedges plus the value of the applicable Aggregate reinsurance for all contracts supported by the same hedges and/or the Aggregate reinsurance agreement; and

b) Is the ratio of the amount in A3.3)B)2)b) for the contract to the sum of the amount in A3.3)B)2)b) for all contracts supported by the same hedges and/or the Aggregate reinsurance agreement.

4) Retention of components. For the seriatim Standard Scenario Reserve on the statement date under each of Sections A3.1)B)1) and A3.1)B)2), the actuary should have available to the Commissioner the following values for each contract:

a) The Standard Scenario Reserve prior to adjustment under paragraph A3.3)D)3)

b) The Standard Scenario Reserve net of the adjustment in A3.3)D)3).

E) Determination of the Surrender Charge Amortization Period to be used in section A3.3)C)1)a) and b).

The purpose of the Surrender Charge Amortization Period is to help determine how much of the surrender charge is amortized in the Basic Adjusted Reserve portion of the Standard Scenario Amount and how much needs to be amortized in the Accumulated Net Revenue portion. Once determined, the Surrender Charge Amortization Period determines the duration over which the lower level of margins, as described in A3.3)C)1)a), is used. After that duration, the higher level of margins, as described in A3.3)C)1)b), is used.

A separate Surrender Charge Amortization Period is determined for each contract and is based on amounts determined in the calculation of the Basic Adjusted Reserve for that contract. A key component of the calculation is the amount of the surrender charge that is not amortized in the Basic Adjusted Reserve calculation for that contract. This is represented by the difference between the account value and the cash surrender value projected within the Basic Adjusted Reserve calculation for the contract.

The Surrender Charge Amortization Period for a given contract is determined by following the steps:

1) Measure the duration of the greatest present value used in the Basic Adjusted Reserve. The Basic Adjusted Reserve is determined for a contract by taking the greatest present value of a stream of projected benefits. The benefit stream that determines the greatest present value typically includes an "ultimate" event (e.g., 100% surrender, 100% annuitization, or maturity). The "BAR Duration" is the length of time between the valuation date and the projected "ultimate" event.

2) Determine the amount of the surrender charge not amortized in the Basic Adjusted Reserve. The surrender charge not amortized in the Basic Adjusted Reserve is the difference between the projected account value and the projected cash surrender value at the BAR Duration (i.e., at the time of that projected "ultimate" event). This value for a given contract shall not be less than zero.

3) Determine the Surrender Charge Amortization Period before rounding. This equals a) time b) plus c), where:

© 1999-2023 National Association of Insurance Commissioners

a) Equals the ratio of the amount determined in step 2 to the Account Value on the valuation date;
b) Equals 100; and
c) Equals the BAR Duration determined in step 1.

4) <u>Determine the Surrender Charge Amortization Period for the contract</u>. This is the amount determined in step 3, rounded to the nearest number that represents a projection duration, taking into account the projection frequency described in A3.3)C)6). For example, step 3 produces a value of 2.15 and the projection frequency is quarterly, the Surrender Charge Amortization Period for the contract is 2.25.

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 4 - Alternative Methodology

A4.1) General Methodology

A) General Methodology Description. For variable deferred annuity contracts that either contain no guaranteed benefits or only GMDBs[18] (i.e., no VAGLBs), the Conditional Tail Expectation Amount may be determined by using the method outlined below rather than by using the approach described in Section IV)D) (i.e., based on projections), provided the approach described in Section IV)D) has not been used in prior valuations or else approval has been obtained from the Domiciliary Commissioner.

The Conditional Tail Expectation Amount determined using the Alternative Methodology for a group of contracts with GMDBs shall be determined as the sum of amounts obtained by applying factors to each contract inforce as of a valuation date and adding this to the contract's Cash Surrender Value.[19] The resulting Conditional Tail Expectation Amount shall not be less than the Cash Surrender Value in aggregate for the group of contracts to which the Alternative Methodology is applied.

The Conditional Tail Expectation Amount determined using the Alternative Methodology for a group of contracts that contain no guaranteed benefits[20] shall be determined using an application of Actuarial Guideline XXXIII, as described below.

For purposes of performing the Alternative Methodology, materially similar contracts within the group may be combined together into subgroups to facilitate application of the factors. Specifically, all contracts comprising a "subgroup" must display substantially similar characteristics for those attributes expected to affect reserves (e.g., definition of guaranteed benefits, attained age, contract duration, years-to-maturity, market-to-guaranteed value, asset mix, etc.). Grouping shall be the responsibility of the actuary but may not be done in a manner that intentionally understates the resulting reserve.

B) Definitions of Terms Used in this Appendix.

1) Annualized Account Charge Differential. This term is the charge as percentage account value (revenue for the company) minus the expense as percentage of account value.

2) Asset Exposure. Asset Exposure refers to the greatest possible loss to the insurance company from the value of assets underlying general or separate account contracts falling to zero.

3) Benchmark. Benchmarks have similar risk characteristics to the entity (e.g., asset class, index, or fund) to be modeled.

4) Deterministic Calculations. In a Deterministic Calculation, a given event (e.g., asset returns going up by 7% then down by 5%) is assumed to occur with certainty. In a stochastic calculation, events are assigned probabilities.

---

[18] This includes "earnings enhanced death benefits," as discussed in Section III)A)1).

[19] The amount that is added to a contract's Cash Surrender Value may be negative, zero or positive, thus resulting in a reserve for a given contract that could be less than, equal to, or greater than, the Cash Surrender Value.

[20] The term "contracts that contain no guaranteed benefits" means that there are no guaranteed benefits at any time during the life of the contract (past, present or future).

© 1999-2023 National Association of Insurance Commissioners

5) Foreign Securities. Securities issued by entities outside the United States and Canada.

6) Grouped Fund Holdings. Grouped Fund Holdings relate to guarantees that apply across multiple deposits or for an entire contract instead of on a deposit-by-deposit basis.

7) Guaranteed Value. The Guaranteed Value is the benefit base or a substitute for the account value (if greater than the account value) in the calculation of living benefits or death benefits. The methodology for setting the Guaranteed Value is defined in the variable annuity contract.

8) High-Yield Bonds. High-Yield Bonds are below investment grade, with NAIC designations (if assigned) of 3, 4, 5, or 6. Compared to investment grade bonds, these bonds have higher risk of loss due to credit events. Funds containing securities predominately containing securities that are not NAIC designated as 1 or 2 (or similar agency ratings) are considered to be High-Yield.

9) Investment Grade Fixed Income Securities. Securities with NAIC designations of 1 or 2 are Investment Grade. Funds containing securities predominately with NAIC designations of 1 or 2 or with similar agency ratings are considered to be Investment Grade.

10) Liquid Securities. These securities can be sold and converted into cash at a price close to its true value in a short period of time.

11) Margin Offset. Margin Offset is the portion of charges plus any Revenue Sharing allowed under section A1.1)E) available to fund claims and amortization of the unamortized surrender charges allowance.

12) Multi-Point Linear Interpolation. This methodology is documented in mathematical literature and calculates factors based on multiple attributes categorized with discrete values where the attributes' actual values may be between the discrete values.

13) Model Office. A Model Office converts many contracts with similar features into one contract with specific features for modeling purposes.

14) Pre-Packaged Scenarios. The Pre-Packaged Scenarios are the year-by-year asset returns that may be used (but are not mandated) in projections related to the alternative methodology. These scenarios are available on an American Academy of Actuaries website.

15) Quota-Share Reinsurance. In this type of reinsurance treaty, the same proportion is ceded on all cessions. The reinsurer assumes a set percentage of risk for the same percentage of the premium, minus an allowance for the ceding company's expenses.

16) Resets. A Reset benefit results in a future minimum guaranteed benefit being set equal to the contract's account value at previous set date(s) after contract inception.

17) Risk Mitigation Strategy. A Risk Mitigation Strategy is a device to reduce the probability and/or impact of a risk below an acceptable threshold.

18) Risk Profile. Risk Profile in the Guideline relates to the prescribed asset class categorized by the volatility of returns associated with that class.

© 1999-2023 National Association of Insurance Commissioners

19) Risk Transfer Arrangements. A Risk Transfer Arrangement shifts risk exposures (e.g., the responsibility to pay at least a portion of future contingent claims) away from the original insurer.

20) Roll-Up. A Roll-Up benefit results in the guaranteed value associated with a minimum contractual guarantee increasing at a contractually defined interest rate.

21) Volatility. Volatility refers to the annualized standard deviation of asset returns.

C) Contract-by-Contract Application for Contracts that Contain No Guaranteed Living or Death Benefits. The Alternative Methodology reserve for each contract that contains no guaranteed living or death benefits shall be determined by applying Actuarial Guideline XXXIII. The application shall assume a return on separate account assets equal to the year of issue valuation interest rate less appropriate asset based charges. It shall also assume a return for any fixed separate account and general account options equal to the rates guaranteed under the contract.

The reserve for such contracts shall be no less than the Cash Surrender Value on the valuation date, as defined in Section III)B).

D) Contract-by-Contract Application for Contracts that Contain GMDBs only. For each contract, factors are used to determine a dollar amount, equal to $R \times (CA + FE) + GC$ (as described below), that is to be added to that contract's Cash Surrender Value as of the valuation date. The dollar amount to be added for any given contract may be negative, zero, or positive. The factors that are applied to each contract shall reflect the following attributes as of the valuation date:

1) The contractual features of the variable annuity product,

2) The actual issue age, period since issue, attained age, years-to-maturity, and gender applicable to the contract,

3) The account value and composition by type of underlying variable or fixed fund,

4) Any surrender charges,

5) The GMDB and the type of adjustment made to the GMDB for partial withdrawals (e.g., proportional or dollar-for-dollar adjustment), and

6) Expenses to be incurred and revenues to be received by the company as estimated on a Prudent Estimate basis as described in Section III)B)8) and complying with the requirements for Revenue Sharing as described in section A1.1)E).

E) Factor Components. Factors shall be applied to determine each of the following components.[21]

CA = Provision for amortization of the unamortized surrender charges calculated by the insurer based on each contract's surrender charge schedule, using prescribed assumptions, except that lapse rates shall be based on the insurer's Prudent Estimate, but with no provision for Federal Income Taxes or mortality;

---

[21] Material to assist in the calculation of the components is available on the American Academy of Actuaries' website, at *https://www.actuary.org/content/c3-phase-ii-rbc-and-reserves-project*.

© 1999-2023 National Association of Insurance Commissioners

FE = Provision for fixed dollar expenses less fixed dollar revenue calculated using prescribed assumptions, the contract's actual expense charges, the insurer's anticipated actual expenses and lapse rates, both estimated on a Prudent Estimate basis, and with no provision for Federal Income Taxes or mortality;

GC = Provision for the costs of providing the GMDB less net available spread-based charges determined by the formula $F \times GV - G \times AV \times R$, where GV and AV are as defined in section A4.3)A);

R = A scaling factor that is a linear function of the ratio of the margin offset to Total Account Charges (*W*) and takes the form $R(\beta_0, \beta_1) = \beta_0 + \beta_1 \times W$. The intercept and slope factors for this linear function vary according to:

a) Product type,
b) Pro-rata or dollar-for-dollar reductions in guaranteed value following partial withdrawals,
c) Fund class,
d) Attained age,
e) Contract duration,
f) Asset-based charges, and
g) 90% of the ratio of account value to guaranteed value, determined in the aggregate for all contracts sharing the same product characteristics.

Tables of factors for *F*, *G*, β_0, and β_1 values, reflecting a 65% confidence level and ignoring Federal Income Tax, are available from the National Association of Insurance Commissioners. In calculating $R(\beta_0, \beta_1)$ directly from the linear function provided above, the margin ratio *W* must be constrained to values greater than or equal to 0.2 and less than or equal to 0.6.

Interpolated values of F, *G* and *R* (calculated using the linear function described above) for all contracts having the same product characteristics and asset class shall be derived from the pre-calculated values using multi-point linear interpolation over the following four contract-level attributes:

1) Attained age,

2) Contract duration,

3) Ratio of account value to GMDB, and

4) The total of all asset based charges, including any fund management fees or allowances based on the underlying variable annuity funds received by the insurer.

The gross asset-based charges for a product shall equal the sum of all contractual asset-based charges plus fund management fees or allowances based on the underlying variable annuity funds received by the insurer determined by complying with the requirements for Prudent Estimate described in Section III)B)8) and Revenue Sharing described in section A1.1)E). Net asset-based charges equal gross asset-based charges less any company expenses assumed to be incurred expressed as a percentage of account value. All expenses that would be assumed if the Conditional Tail Expectation Amount were being computed as described in section A1.1)A) should be reflected either in the calculation of the net asset based charges or in the expenses reflected in the calculation of the amount *FE*.

No adjustment is made for Federal Income Taxes in any of the components listed above.

For purposes of determining the Conditional Tail Expectation Amount using the Alternative Methodology, any interpretation and application of the requirements of the Guideline shall follow the principles discussed in the Section I) Background.

A4.2) Calculation of *CA* and *FE*

A) General Description. Components *CA* and *FE* shall be calculated for each contract, thus reflecting the actual account value and GMDB, as of the valuation date, which is unique to each contract.

Components *CA* and *FE* are defined by deterministic "single-scenario" calculations that account for asset growth, interest and inflation at prescribed rates. Mortality is ignored for these two components. Lapse rates shall be determined on a Prudent Estimate basis as described in Section III)B)8). Lapse rates shall be adjusted by the formula shown below (the Dynamic Lapse Multiplier, λ), which bases the relationship of the GMDB (denoted as GV in the formula) to the account value (denoted as AV in the formula) on the valuation date. Thus, projected lapse rates are smaller when the GMDB is greater than the account value and larger when the GMDB is less than the account value.

$$\lambda = MIN\left[U, MAX\left[L, 1 - M \times \left(\frac{GV}{AV} - D\right)\right]\right],$$

where U=1, L=0.5, M=1.25, and D=1.1.

Present values shall be computed over the period from the valuation date to contract maturity at a discount rate of 5.75%.

Projected fund performance underlying the account values is as shown in the table below. Unlike the *GC* component, which requires the entire account value to be mapped, using the Fund Categorization Rules set forth in section A4.4, to a single "equivalent" asset class (as described in A4.4)C)), the *CA* and *FE* calculation separately projects each variable subaccount (as mapped to the 8 prescribed categories shown in section A4.4)) using the net asset returns shown in the following table. If surrender charges are based wholly on deposits or premiums as opposed to account value, use of this table may not be necessary.

Asset Class / Fund	Net Annualized Return
Fixed Account	Guaranteed Rate
Money Market	0%
Fixed Income (Bond)	0%
Balanced	–1%
Diversified Equity	–2%
Diversified International Equity	–3%
Intermediate Risk Equity	–5%
Aggressive or Exotic Equity	–8%

© 1999-2023 National Association of Insurance Commissioners

B) Component *CA*. Component *CA* is computed as the present value of the projected change in surrender charges plus the present value of an implied borrowing cost of 25 basis points at the beginning of each future period applied to the surrender charge at such time.

This component can be interpreted as the "amount needed to amortize the unamortized surrender charge allowance for the *persisting* policies plus the implied borrowing cost." By definition, the amortization for non-persisting lives in each time period is exactly offset by the collected surrender charge revenue (ignoring timing differences and any waiver upon death). The unamortized balance must be projected to the end of the surrender charge period using the net asset returns and Dynamic Lapse Multiplier, λ, both as described above and the year-by-year amortization discounted also as described above. For simplicity, mortality is ignored in the calculations. Surrender charges and free partial withdrawal provisions are as specified in the contract. Lapse and withdrawal rates are determined on a Prudent Estimate basis, and may vary according to the attributes of the business being valued, including, but not limited to, attained age, contract duration, etc.

C) Component *FE*. Component *FE* establishes a provision for fixed dollar expenses (e.g., allocated costs, including overhead expressed as "per contract" *and* those expenses defined on a "per contract" basis) less any fixed dollar revenue (e.g., annual administrative charges or contract fees) through the earlier of contract maturity or 30 years. *FE* is computed as the present value of the company's assumed fixed expenses projected at an assumed annual rate of inflation starting in the second projection year. This rate grades uniformly from the current inflation rate ("CIR") into an ultimate inflation rate of 3% per annum in the 8th year after the valuation date. The CIR is the greater of 3% and the inflation rate assumed for expenses in the company's most recent asset adequacy analysis for similar business.

A4.3) Calculation of the *GC* Component

A) *GC* Factors. *GC* is calculated as $F \times GV - G \times AV \times R$, where *GV* is the amount of GMDB and *AV* is the contract account value, both as of the valuation date. *F*, *G* and the slope and intercept for the linear function used to determine *R* (identified symbolically as β_0 and β_1) are pre-calculated factors available from the National Association of Insurance Commissioners and known herein as the "Pre-Calculated Factors." These factors shall be interpolated as described in subsection F), below, and modified as necessary as described in sections A4.3)G) and A4.3)H).

B) Five Steps. There are five major steps in determining the *GC* component for a given contract:

1) Classifying the asset exposure (as specified in subparagraph C), below);

2) Determining the risk attributes (as specified in subparagraphs D) and E), below);

3) Retrieving the appropriate nodal factors from the factor grid (as described in subparagraph F) below;

4) Interpolating the nodal factors, where applicable (optional) also as described in subparagraph F), below; and

5) Applying the factors to the contract values.

C) Classifying Asset Exposure. For purposes of calculating *GC* (unlike what is done for components *CA* and *FE*), the entire account value for each contract must be assigned to one of the eight prescribed fund classes shown in section A4.4), using the Fund Categorization rules in section A4.4).

D) Product Designs. Factors F, G and $R(\beta_1, \beta_2)$ are available within the Pre-Calculated Factors for the following GMDB product designs:

1) Return of Premium ("ROP"),

2) Premiums less withdrawals accumulated at 3% per annum, capped at 2.5 times premiums less withdrawals, with no further increase beyond age 80 ("ROLL3"),

3) Premiums less withdrawals accumulated at 5% per annum, capped at 2.5 times premiums less withdrawals, with no further increase beyond age 80 ("ROLL5"),

4) An annual ratchet design (maximum anniversary value), for which the guaranteed benefit never decreases and is increased to equal the previous contract anniversary account value, if larger, with no further increases beyond age 80 ("MAV"),

5) A design having a guaranteed benefit equal to the larger of the benefits in designs 3 and 4, above ("HIGH"),

6) An enhanced death benefit ("EDB") equal to 40% of the net earnings on the account (i.e., 40% of account value less total premiums paid plus withdrawals made) with this latter benefit capped at 40% of premiums less withdrawals ("EDB"),

E) Other Attributes. Factors F, G and $R(\beta_1, \beta_2)$ are available within the Pre-Calculated Factors for the following set of attributes:

1) Two Partial Withdrawal Rules – one for contracts having a pro-rata reduction in the GMDB and another for contracts having a dollar-for-dollar reduction,

2) The eight asset classes described in section A4.4)B),

3) Eight attained ages, with a 5-year age setback for females,

4) Five contract durations,

5) Seven values of GV/AV, and

6) Three levels of asset-based income.

F) Interpolation of F, G and $R(\beta_1, \beta_2)$.

1) Values of F, G and $R(\beta_1, \beta_2)$ apply to a contract having the product characteristics listed in section A4.5)A) and shall be determined by selecting values for the appropriate partial withdrawal rule and asset class and then using multi-point linear interpolation among published values for the last four attributes shown in section A4.3)E).

2) Interpolation over all four dimensions is not required, but if not performed over one or more dimensions, the factor used must result in a conservative (higher) value of GC. However, simple linear interpolation using the $AV \div GV$ ratio is mandatory. In this case, the company must choose nodes for the other three dimensions according to the following rules: next highest attained age, nearest duration, and nearest Annualized

Account Charge Differential, as listed in A4.5)C) (i.e., capped at +100 and floored at –100 bps).

3) For $R(\beta_1, \beta_2)$, the interpolation should be performed on the Scaling Factors R calculated using β_1, β_2, using the ratio of Margin Offset to Total Asset Charges (W), not on the factors β_1 and β_2 themselves.

4) An Excel® workbook, Excel® add-in and companion dynamic link library (.dll) program is available from the National Association of Insurance Commissioners that can be used to determine the correct values and perform the multi-point linear interpolation.

5) Alternatively, published documentation can be referenced on performing multi-point linear interpolation and the required sixteen values determined using a key that is documented in the table "*Components of Key Used for GC Factor Look-Up*" located in section A4.5)C).

G) Adjustments to *GC* for Product Variations & Risk Mitigation/Transfer. In some cases, it may be necessary to make adjustments to the published factors due to:

1) A variation in product form wherein the definition of the guaranteed benefit is materially different from those for which factors are available (see section A4.3)H)); and/or

2) A risk mitigation or other management strategy, other than a hedging strategy, that cannot be accommodated through a straightforward and direct adjustment to the published values.

Adjustments may not be made to *GC* for hedging strategies.

Any adjustments to the published factors must be fully documented and supported through stochastic analysis. Such analysis may require stochastic simulations, but would not ordinarily be based on full inforce projections. Instead, a representative "model office" should be sufficient. Use of these adjusted factors must be supported by a periodic review of the appropriateness of the assumptions and methods used to perform the adjustments, with changes made to the adjustments when deemed necessary by such review.

Note that minor variations in product design do not necessarily require additional effort. In some cases, it may be reasonable to use the factors/formulas for a different product form (e.g., for a roll-up GMDB near or beyond the maximum reset age or amount, the ROP GMDB factors/formulas shall be used, possibly adjusting the guaranteed value to reflect further resets, if any). In other cases, the reserves may be based on two different guarantee definitions and the results interpolated to obtain an appropriate value for the given contract/cell. Likewise, it may be possible to adjust the Alternative Methodology results for certain risk transfer arrangements without significant additional work (e.g., quota-share reinsurance without caps, floors or sliding scales would normally be reflected by a simple pro-rata adjustment to the "gross" *GC* results).

However, if the contract design is sufficiently different from those provided and/or the risk mitigation strategy is non-linear in its impact on the Conditional Tail Expectation Amount, and there is no practical or obvious way to obtain a good result from the prescribed factors/formulas, any adjustments or approximations must be supported using stochastic modeling. Notably this modeling need not be performed on the whole portfolio, but can be undertaken on an appropriate set of representative policies.

© 1999-2023 National Association of Insurance Commissioners

H) <u>Adjusting *F* and *G* for Product Design Variations</u>. This subsection describes the typical process for adjusting *F* and *G* factors due to a variation in product design. Note that *R* (as determined by the slope and intercept terms in the factor table) would not be adjusted.

1) Select a contract design among those described in section A4.3)D) that is similar to the product being valued. Execute cash flow projections using the documented assumptions (see table of *Liability Modeling Assumptions & Product Characteristics* in section A4.5)A) and table of *Asset Based Fund Charges* in section A4.5)B)) and the pre-packaged scenarios for a set of representative cells (combinations of attained age, contract duration, asset class, AV/GMDB ratio and asset-based charges). These cells should correspond to nodes in the table of pre-calculated factors. Rank (order) the sample distribution of results for the present value of net cost.[22] Determine those scenarios that comprise CTE (65).

2) Using the results from step 1, average the present value of cost for the CTE (65) scenarios and divide by the current guaranteed value. For the Jth cell, denote this value by F_J. Similarly, average the present value of margin offset revenue for the same subset of scenarios and divide by account value. For the Jth cell, denote this value by G_J.

3) Extract the corresponding pre-calculated factors. For each cell, calibrate to the published tables by defining a "model adjustment factor" (denoted by asterisk) separately for the "cost" and "margin offset" components:

$$F_J^* = \frac{f(\tilde{\theta})}{F_J} \text{ and } G_J^* = \frac{\hat{g}(\tilde{\theta})}{G_J}$$

4) Execute "product specific" cash flow projections using the documented assumptions and pre-packaged scenarios for the same set of representative cells. Here, the company should model the actual product design. Rank (order) the sample distribution of results for the present value of net cost. Determine those scenarios that comprise CTE (65).

5) Using the results from step 4, average the present value of cost for the CTE (65) scenarios and divide by the current guaranteed value. For the Jth cell, denote this value by $\overline{F}_J$. Similarly, average the present value of margin offset revenue for the same subset of scenarios and divide by account value. For the Jth cell, denote this value by $\overline{G}_J$.

6) To calculate the Conditional Tail Expectation Amount for the specific product in question, the company should implement the Alternative Methodology as documented, but use $\overline{F}_J \times F_J^*$ in place of *F* and $\overline{G}_J \times G_J^*$ instead of *G*. The same *R* factors as appropriate for the product evaluated in step 1 shall be used for this step (i.e., the product used to calibrate the cash flow model).

I) <u>Adjusting *GC* for Mortality Experience</u>. The factors that have been developed for use in determining *GC* assume male mortality at 100% of the 1994 Variable Annuity MGDB ALB Mortality Table. Companies electing to use the Alternative Methodology that have not conducted an evaluation of their mortality experience shall use these factors. Other companies should use the procedure described below to adjust for the actuary's Prudent Estimate of mortality. The development of Prudent Estimate mortality shall follow the requirements and guidance of

[22] Present value of net cost = PV [guaranteed benefit claims in excess of account value] – PV [margin offset]. The discounting includes cash flows in all future years (i.e., to the earlier of contract maturity and the end of the horizon).

© 1999-2023 National Association of Insurance Commissioners

Appendix 10. Once a company uses the modified method for a block of business, the option to use the unadjusted factors is no longer available for that part of its business. In applying the factors to actual inforce business, a 5-year age setback should be used for female annuitants.

1) Develop a set of mortality assumptions based on Prudent Estimate. In setting these assumptions, the actuary shall be guided by the definition of Prudent Estimate and the principles discussed in Appendices 9 and 10 of the Guideline.

2) Calculate two sets of net single premiums (NSP) at each attained age: one valued using 100% of the 1994 Variable Annuity MGDB ALB Mortality Table (with the aforementioned 5-year age setback for females) and the other using Prudent Estimate mortality. These calculations shall assume an interest rate of 3.75% and a lapse rate of 7% per year.

3) The *GC* factor is multiplied by the ratio, for the specific attained age being valued, of the NSP calculated using the Prudent Estimate mortality to the NSP calculated using the 1994 Variable Annuity MGDB ALB Mortality Table (with the aforementioned 5-year age setback for females).

A4.4) Fund Categorization

A) Criteria. The following criteria should be used to select the appropriate factors, parameters and formulas for the exposure represented by a specified guaranteed benefit. When available, the volatility of the long-term annualized total return for the fund(s) – or an appropriate benchmark – should conform to the limits presented. For this purpose, “long-term” is defined as twice the average projection period that would be applied to test the product in a stochastic model (generally, at least 30 years).

Where data for the fund or benchmark are too sparse or unreliable, the fund exposure should be moved to the next higher volatility class than otherwise indicated. In reviewing the asset classifications, care should be taken to reflect any additional volatility of returns added by the presence of currency risk, liquidity (bid-ask) effects, short selling and speculative positions.

B) Asset Classes. Variable subaccounts must be categorized into one of the following eight (8) asset classes. For purposes of calculating *CA* or *FE*, each contract will have one or more of the following asset classes represented, whereas for component *GC*, all subaccounts will be mapped into a single asset class.

1) Fixed Account. This class is credited interest at guaranteed rates for a specified term or according to a ‘portfolio rate’ or ‘benchmark’ index. This class offers a minimum positive guaranteed rate that is periodically adjusted according to company policy and market conditions.

2) Money Market/Short-Term. This class is invested in money market instruments with an average remaining term-to-maturity of less than 365 days.

3) Fixed Income. This class is invested primarily in investment grade fixed income securities. Up to 25% of the funds within this class may be invested in diversified equities or high-yield bonds. The expected volatility of the returns for this class will be lower than the Balanced fund class.

4) Balanced. This class is a combination of fixed income securities with a larger equity component. The fixed income component should exceed 25% of the portfolio. Additionally, any aggressive or 'specialized' equity component should not exceed one-third (33.3%) of the total equities held. Should the fund violate either of these constraints, it should be categorized as an equity fund. This class usually has a long-term volatility in the range of 8% – 13%.

5) Diversified Equity. This class is invested in a broad-based mix of U.S. and foreign equities. The foreign equity component (maximum 25% of total holdings) must be comprised of liquid securities in well-developed markets. Funds in this class would exhibit long-term volatility comparable to that of the S&P500. These funds should usually have a long-term volatility in the range of 13% – 18%.

6) Diversified International Equity. This class is similar to the Diversified Equity class, except that the majority of fund holdings are in foreign securities. This class should usually have a long-term volatility in the range of 14% – 19%.

7) Intermediate Risk Equity. This class has a mix of characteristics from both the Diversified and Aggressive Equity Classes. This class has a long-term volatility in the range of 19% – 25%.

8) Aggressive or Exotic Equity. This class comprises more volatile funds where risk can arise from: underdeveloped markets, uncertain markets, high volatility of returns, narrow focus (e.g., specific market sector), etc. This class (or market benchmark) either does not have sufficient history to allow for the calculation of a long-term expected volatility, or the volatility is very high. This class would be used whenever the long-term expected annualized volatility is indeterminable or exceeds 25%.

C) Selecting Appropriate Investment Classes. The selection of an appropriate investment type should be done at the level for which the guarantee applies. For guarantees applying on a deposit-by-deposit basis, the fund selection is straightforward. However, where the guarantee applies across deposits or for an entire contract, the approach can be more complicated. In such instances, the approach is to identify for each contract where the "grouped holdings" fit within the categories listed and to classify the associated assets on this basis.

A seriatim process is used to identify the "grouped" fund holdings, to assess the risk profile of the current fund holdings (possibly calculating the expected long-term volatility of the funds held with reference to the indicated market proxies), and to classify the entire 'asset exposure' into one of the specified choices. Here, 'asset exposure' refers to the underlying assets (separate and/or general account investment options) on which the guarantee will be determined. For example, if the guarantee applies separately for each deposit year within the contract, then the classification process would be applied separately for the exposure of each deposit year.

In summary, mapping the benefit exposure (i.e., the asset exposure that applies to the calculation of the guaranteed minimum death benefits) to one of the prescribed asset classes is a multi-step process:

1) Map each separate and/or general account investment option to one of the prescribed asset classes. For some funds, this mapping will be obvious, but for others it will involve a review of the fund's investment policy, performance benchmarks, composition and expected long-term volatility.

2) Combine the mapped exposure to determine the expected long-term "volatility of current fund holdings." This will require a calculation based on the expected long-term volatility for each fund and the correlations between the prescribed asset classes as given in the table "*Correlation Matrix for Prescribed Asset Classes*," in section A4.4)D).

3) Evaluate the asset composition and expected volatility (as calculated in step 2) of current holdings to determine the single asset class that best represents the exposure, with due consideration to the constraints and guidelines presented earlier in this section.

In step 1, the company should use the fund's actual experience (i.e., historical performance, inclusive of reinvestment) only as a guide in determining the expected long-term volatility. Due to limited data and changes in investment objectives, style and/or management (e.g., fund mergers, revised investment policy, different fund managers, etc.); the company may need to give more weight to the expected long-term volatility of the fund's benchmarks. In general, the company should exercise caution and not be overly optimistic in assuming that future returns will consistently be less volatile than the underlying markets.

In step 2, the company should calculate the "volatility of current fund holdings" (for the exposure being categorized) by the following formula:

$$\sigma = \sqrt{\sum_{i=1}^{n}\sum_{j=1}^{n} w_i w_j \rho_{ij} \sigma_i \sigma_j}$$

using the volatilities and correlations in the following table where $w_i = \frac{AV_i}{\sum_k AV_k}$ is the relative value of fund i expressed as a proportion of total contract value, ρ_{ij} is the correlation between asset classes i and j and σ_i is the volatility of asset class i. An example is provided after the table.

D) Correlation Matrix for Prescribed Asset Classes.

ANNUAL VOLATILITY		FIXED ACCOUNT	MONEY MARKET	FIXED INCOME	BALANCED	DIVERSE EQUITY	INTL EQUITY	INTERM EQUITY	AGGR EQUITY
1.0%	FIXED ACCOUNT	**1**	0.50	0.15	0	0	0	0	0
1.5%	MONEY MARKET	0.50	**1**	0.20	0	0	0	0	0
5.0%	FIXED INCOME	0.15	0.20	**1**	0.30	0.10	0.10	0.10	0.05
10.0%	BALANCED	0	0	0.30	**1**	0.95	0.60	0.75	0.60
15.5%	DIVERSE EQUITY	0	0	0.10	0.95	**1**	0.60	0.80	0.70
17.5%	INTL EQUITY	0	0	0.10	0.60	0.60	**1**	0.50	0.60
21.5%	INTERM EQUITY	0	0	0.10	0.75	0.80	0.50	**1**	0.70
26.0%	AGGR EQUITY	0	0	0.05	0.60	0.70	0.60	0.70	**1**

E) Fund Categorization Example. As an example, suppose three funds (Fixed Income, diversified U.S. Equity and Aggressive Equity) are offered to clients on a product with a contract level guarantee (i.e., across all funds held within the contract). The current fund holdings (in dollars) for five sample contracts are shown in the following table.

	1	**2**	**3**	**4**	**5**
MV Fund X (Fixed Income):	5,000	4,000	8,000	-	5,000
MV Fund Y (Diversified Equity):	9,000	7,000	2,000	6,000	-
MV Fund Z (Aggressive Equity):	1,000	4,000	-	4,000	5,000
Total Market Value:	15,000	15,000	10,000	10,000	10,000
Total Equity Market Value:	10,000	11,000	2,000	10,000	5,000
Fixed Income % (*A*):	33%	27%	80%	0%	50%
Fixed Income Test (*A*>75%):	No	No	Yes	No	No
Aggressive % of Equity (B):	10%	36%	n/a	40%	100%
Balanced Test (*A*>25% & *B*<33.3%):	Yes	No	n/a	No	No
Volatility of Current Fund Holdings:	10.9%	13.2%	5.3%	19.2%	13.4%
Fund Classification:	**Balanced**	**Diversified*[23]**	**Fixed Income**	**Intermediate**	**Diversified**

[23] Although the volatility suggests "Balanced Fund," the Balanced Fund criteria were not met. Therefore, this 'exposure' is moved "up" to Diversified Equity. For those funds classified as Diversified Equity, additional analysis would be required to assess whether they should be instead designated as "Diversified International Equity."

© 1999-2023 National Association of Insurance Commissioners

As an example, the "Volatility of Current Fund Holdings" for contract #1 is calculated as $\sqrt{A+B}$ where:

$$A = \left(\frac{5}{15}\times 0.05\right)^2 + \left(\frac{9}{15}\times 0.155\right)^2 + \left(\frac{1}{15}\times 0.26\right)^2$$

$$B = 2\cdot\left(\frac{5}{15}\cdot\frac{9}{15}\right)(0.1\times 0.05\times 0.155) + 2\cdot\left(\frac{5}{15}\cdot\frac{1}{15}\right)(0.05\times 0.05\times 0.26) + 2\cdot\left(\frac{9}{15}\cdot\frac{1}{15}\right)(0.7\times 0.155\times 0.26)$$

So the volatility for contract #1 = $\sqrt{0.0092+0.0026}$ = 0.109 or 10.9%.

A4.5) Tables

A) Liability Modeling Assumptions & Product Characteristics used for *GC* Factors.

Asset Based Charges (MER)	Vary by fund class. See section A4.5)B).
Base Margin Offset	100 basis points per annum.
GMDB Description	1. ROP = return of premium ROP. 2. ROLL3 = 3% roll-up, capped at 2.5 × premium, frozen at age 80. 3. ROLL5 = 5% roll-up, capped at 2.5 × premium, frozen at age 80. 4. MAV = annual ratchet (maximum anniversary value), frozen at age 80. 5. HIGH = Higher of 5% roll-up and annual ratchet. 6. EDB = 40% Enhanced Death Benefit (capped at 40% of deposit). Note that the Pre-Calculated Factors were originally calculated with a combined ROP benefit, but they have been adjusted to remove the effect of the ROP. Thus, the factors for this benefit 5 are solely for the Enhanced Death Benefit.
Adjustment to GMDB Upon Partial Withdrawal	Separate factors for "Pro-Rata by Market Value" and "Dollar-for-Dollar."
Surrender Charges	Ignored (i.e., zero). Included in the *CA* component.
Single Premium / Deposit	$100,000. No future deposits; no intra-contract fund rebalancing.
Base Contract Lapse Rate (Total Surrenders)	• Pro-rata by MV: 10% p.a. at all contact durations (before dynamics) • Dollar-for-dollar: 2% p.a. at all contract durations (no dynamics)
Partial Withdrawals	• Pro-rata by MV: None (i.e., zero) • Dollar-for-dollar: Flat 8% p.a. at all contract durations (as a % of AV). No dynamics or anti-selective behavior.
Mortality	100% of the 1994 Variable Annuity MGDB Mortality Table (MGDB 94 ALB). For reference, $1000\times q_x$ rates at ages 65 and 70 for 100% of MGDB 94 ALB Male are 18.191 and 29.363 respectively. Note that section A4.3)I) allows modification to this assumption.
Gender /Age Distribution	100% male. Methodology accommodates different attained ages. A 5-year age setback will be used for female annuitants.
Max. Annuitization Age	All policies terminate at age 95.
Fixed Expenses	Ignored (i.e., zero). Included in the *FE* component.

Annual Fee and Waiver	Ignored (i.e., zero). Included in the *FE* component.
Discount Rate	5.75% pre-tax.
Dynamic Lapse Multiplier (Applies only to policies where GMDB is adjusted "pro-rata by MV" upon withdrawal)	$\lambda = MIN\left[U, MAX\left[L, 1 - M \times \left(\frac{GV}{AV} - D\right)\right]\right]$ *U*=1, *L*=0.5, *M*=1.25, *D*=1.1 ▪ Applied to the 'Base Contract Lapse Rate' ▪ Does not apply to partial withdrawals.

B) Asset-Based Fund Charges (bps per annum).

Asset Class / Fund	**Account Value Charge**
Fixed Account	0
Money Market	110
Fixed Income (Bond)	200
Balanced	250
Diversified Equity	250
Diversified International Equity	250
Intermediate Risk Equity	265
Aggressive or Exotic Equity	275

C) Components of Key Used for *GC* Factor Look-Up.

(First Digit Always "1")

Contract Attribute	Key : Possible Values & Description	
Product Definition, P	0 : 0	Return-of-premium.
	1 : 1	Roll-up (3% per annum).
	2 : 2	Roll-up (5% per annum).
	3 : 3	Maximum Anniversary Value (MAV).
	4 : 4	High of MAV and 5% Roll-up.
	5 : 5	Enhanced Death Benefit (excludes the ROP GMDB, which would have to be added separately if the contract in question has an ROP benefit.)
GV Adjustment Upon Partial Withdrawal, A	0 : 0	Pro-rata by market value.
	1 : 1	Dollar-for-dollar.

APPENDIX 5 - Scenario Calibration Criteria

A5.1) General

This Appendix outlines the requirements for the stochastic models used to simulate fund performance.[24] Specifically, it sets certain standards that must be satisfied and offers guidance to the actuary in the development and validation of the scenario models. Background material and analysis are presented to support the recommendation. The Appendix focuses on the S&P 500 as a proxy for returns on a broadly diversified U.S. equity fund, but there is also advice on how the techniques and requirements would apply to other types of funds. General modeling considerations such as the number of scenarios and projection frequency are also discussed.

The calibration points given in this Appendix are applicable to gross returns (before the deduction of any fees or charges). To determine the net returns appropriate for the projections required by the Guideline, the actuary shall reflect applicable fees and contractholder charges in the development of projected account values. The projections shall also include the costs of managing the investments and converting the assets into cash when necessary.

As a general rule, funds with higher expected returns should have higher expected volatilities and in the absence of well-documented mitigating factors (e.g., a highly reliable and favorable correlation to other fund returns), should lead to higher reserve requirements.[25]

State or path dependent models are not prohibited, but must be justified by the historic data and meet the calibration criteria. To the degree that the model uses mean-reversion or path-dependent dynamics, this must be well supported by research and clearly documented in the Memorandum supporting the required actuarial certification.

The equity scenarios used to determine reserves must be available in an electronic format to facilitate any regulatory review.

A5.2) Gross Wealth Ratios

Gross Wealth Ratios derived from the stochastic return scenarios for use with a Separate Account variable fund category for diversified U.S. equities must satisfy calibration criteria consistent with that for the S&P 500 shown in the following table. Under these calibration criteria, Gross Wealth Ratios for quantiles less than 50 percent may not exceed the value from the table corresponding to the quantile, while at quantiles greater than 50 percent; Gross Wealth Ratios may not be less than the corresponding value for the quantile from the table. Gross Wealth Ratios must be tested for holding period 1, 5, 10 and 20 years throughout the projections, except as noted in section A5.3).

The "wealth factors" are defined as gross accumulated values (i.e., before the deduction of fees and charges) with complete reinvestment of income and maturities, starting with a unit investment. These can be less than 1, with "1" meaning a zero return over the holding period.

S&P 500 Total Return Gross Wealth Ratios at the Calibration Points

[24] For more details on the development of these requirements, including the development of the calibration points, see the American Academy of Actuaries recommendation on C-3 Phase II risk-based capital.

[25] While the model need not strictly adhere to 'mean-variance efficiency,' prudence dictates some form of consistent risk/return relationship between the proxy investment funds. In general, it would be inappropriate to assume consistently 'superior' expected returns (i.e., risk/return point above the frontier).

© 1999-2023 National Association of Insurance Commissioners

Calibration Point	One Year	Five Year	Ten Year	Twenty Year
2.5%	0.78	0.72	0.79	
5.0%	0.84	0.81	0.94	1.51
10.0%	0.90	0.94	1.16	2.10
90.0%	1.28	2.17	3.63	9.02
95.0%	1.35	2.45	4.36	11.70
97.5%	1.42	2.72	5.12	

The scenarios need not strictly satisfy all calibration points, but the actuary should be satisfied that any differences do not materially reduce the resulting reserves.[26] In particular, the actuary should be mindful of which tail most affects the business being valued. If reserves are less dependent on the right (left) tail for all products under consideration (e.g., a return of premium guarantee would primarily depend on the left tail, an enhanced death benefit equal to a percentage of the gain would be most sensitive to the right tail, etc.), it is not necessary to meet the right (left) calibration points.

For models that require starting values for certain state variables,[27] long-term ('average' or 'neutral') values should be used for calibration. The same values should normally be used to initialize the models for generating the actual projection scenarios unless an alternative assumption can be clearly justified.[28] It should be noted that a different set of initialization parameters might produce scenarios that do not satisfy all the calibration points shown in the above table. However, the S&P 500 scenarios used to determine reserves must meet the calibration criteria.

A5.3) Calibration Requirements Beyond Twenty Years

It is possible to parameterize some path and/or state dependent models to produce higher volatility (and/or lower expected returns) in the first 20 years in order to meet the calibration criteria, but with lower volatility (and/or higher expected returns) for other periods during the forecast horizon. While this property may occur for certain scenarios (e.g., the state variables would evolve over the course of the projection and thereby affect future returns), it would be inappropriate and unacceptable for a company to alter the model parameters and/or its characteristics for periods beyond year 20 in a fashion not contemplated at the start of the projection and primarily for the purpose(s) of reducing the volatility and/or severity of ultimate returns.[29]

A5.4) Other Funds

Calibration of other markets (funds) is left to the judgment of the actuary, but the scenarios so generated must be consistent with the calibration points in the table in section A5.2). This does not imply a strict functional relationship between the model parameters for various markets/funds, but it would generally be inappropriate to assume that a market or fund consistently "outperforms" (lower risk, higher expected return relative to the efficient frontier) over the long term.

[26] See the Preamble to the *Accounting Practices and Procedures Manual* for an explanation of materiality.

[27] For example, a stochastic log volatility ("SLV") model requires the starting volatility. Also, the regime-switching lognormal model requires an assumption about the starting regime.

[28] A clear justification exists when state variables are observable or "known" to a high degree of certainty and not merely estimated or inferred based on a "balance of probabilities."

[29] Such adjustments must be clearly documented and justified by the historic data.

© 1999-2023 National Association of Insurance Commissioners

The actuary shall document the actual 1-, 5-, 10- and 20-year wealth factors of the scenarios at the same frequencies as in the "S&P 500 Total Return Gross Wealth Ratios at the Calibration Points" table in section A5.2). The annualized mean and standard deviation of the wealth factors for the 1-, 5-, 10- and 20-year holding periods must also be provided. For equity funds, the actuary shall explain the reasonableness of any significant differences from the S&P500 calibration points.

When parameters are fit to historic data without consideration of the economic setting in which the historic data emerged, the market price of risk may not be consistent with a reasonable long-term model of market equilibrium. One possibility for establishing 'consistent' parameters (or scenarios) across all funds would be to assume that the market price of risk is constant (or nearly constant) and governed by some functional (e.g., linear) relationship. That is, higher expected returns can only be garnered by assuming greater risk.[30]

Specifically, two return distributions X and Y would satisfy the following relationship:

$$\text{Market Price of Risk} = \left(\frac{E[R_X] - r}{\sigma_X}\right) = \left(\frac{E[R_Y] - r}{\sigma_Y}\right)$$

where $E[R]$ and σ are respectively the (unconditional) expected returns and volatilities and r is the expected risk-free rate over a suitably long holding period commensurate with the projection horizon. One approach to establish consistent scenarios would set the model parameters to maintain a near-constant market price of risk.

A closely related method would assume some form of 'mean-variance' efficiency to establish consistent model parameters. Using the historic data, the mean-variance (alternatively, 'drift-volatility') frontier could be a constructed from a plot of (mean, variance) pairs from a collection of world market indices. The frontier could be assumed to follow some functional form,[31] with the coefficients determined by standard curve fitting or regression techniques. Recognizing the uncertainty in the data, a 'corridor' could be established for the frontier. Model parameters would then be adjusted to move the proxy market (fund) inside the corridor.

Clearly, there are many other techniques that could be used to establishing consistency between the scenarios. While appealing, the above approaches do have drawbacks[32] and the actuary should not be overly optimistic in constructing the model parameters or the scenarios.

Funds can be grouped and projected as a single fund if such grouping is not anticipated to materially reduce reserves. However, care should be taken to avoid exaggerating the benefits of diversification. The actuary must document the development of the investment return scenarios and be able to justify the mapping of the company's variable accounts to the proxy funds used in the modeling.

[30] As an example, the standard deviation of log returns is often used as a measure of risk.

[31] Quadratic polynomials and logarithmic functions tend to work well.

[32] For example, mean-variance measures ignore the asymmetric and fat-tailed profile of most equity market returns.

© 1999-2023 National Association of Insurance Commissioners

A5.5) Correlation of Fund Returns

In constructing the scenarios for the proxy funds, the company may require parameter estimates for a number of different market indices. When more than one index is projected, it is generally necessary to allow for correlations in the simulations. It is not necessary to assume that all markets are perfectly positively correlated, but an assumption of independence (zero correlation) between the equity markets would inappropriately exaggerate the benefits of diversification. An examination of the historic data suggests that correlations are not stationary and that they tend to increase during times of high volatility or negative returns. As such, the actuary should take care not to underestimate the correlations in those scenarios used for the reserve calculations.

If the projections include the simulation of interest rates (other than for discounting surplus strain) as well as equity returns, the processes may be independent provided that the actuary can demonstrate that this assumption (i.e., zero correlation) does not materially underestimate the resulting reserves.

A5.6) Number of Scenarios and Efficiency in Estimation

For straight Monte Carlo simulation (with equally probable "paths" of fund returns), the number of scenarios should typically equal or exceed 1000. The appropriate number will depend on how the scenarios will be used and the materiality of the results. The actuary should use a number of scenarios that will provide an acceptable level of precision.

Fewer than 1000 scenarios may be used provided that the actuary has determined through prior testing (perhaps on a subset of the portfolio) that the CTE values so obtained materially reproduce the results from running a larger scenario set.

Variance reduction and other sampling techniques are intended to improve the accuracy of an estimate more efficiently than simply increasing the number of simulations. Such methods can be used provided the actuary can demonstrate that they do not lead to a material understatement of results. Many of the techniques are specifically designed for estimating means, not tail measures, and could in fact reduce accuracy (and efficiency) relative to straight Monte Carlo simulation.[33]

The above requirements and warnings are not meant to preclude or discourage the use of valid and appropriate sampling methods, such as Quasi Random Monte Carlo (QRMC), importance sampling or other techniques designed to improve the efficiency of the simulations (relative to pseudo-random Monte Carlo methods). However, the actuary should maintain documentation that adequately describes any such techniques used in the projections. Specifically, the documentation should include the reasons why such methods can be expected not to result in systematic or material under-statement of the resulting reserves compared to using pseudo-random Monte Carlo numbers.

A5.7) Frequency of Projection and Time Horizon

Use of an annual cashflow frequency ("timestep") is generally acceptable for benefits/features that are not sensitive to projection frequency. The lack of sensitivity to projection frequency should be validated by testing wherein the actuary should determine that the use of a more frequent (i.e., shorter) time step does not materially increase reserves. A more frequent time increment should always be used when the product features are sensitive to projection period frequency.

[33] However, with careful implementation, many variance reduction techniques can work well for CTE estimators. For example, see Manistre, B.J. and Hancock, G. (2003), "Variance of the CTE Estimator," 2003 Stochastic Modeling Symposium, Toronto, ON, September 2003.

© 1999-2023 National Association of Insurance Commissioners

Care must be taken in simulating fee income and expenses when using an annual time step. For example, recognizing fee income at the end of each period after market movements, but prior to persistency decrements, would normally be an inappropriate assumption. It is also important that the frequency of the investment return model be linked appropriately to the projection horizon in the liability model. In particular, the horizon should be sufficiently long so as to capture the vast majority of costs (on a present value basis) from the scenarios.[34]

A5.8) Pre-Packaged Scenarios

The American Academy of Actuaries has provided 10,000 scenarios on its website[35] for the following nineteen asset classes.[36]

1) 3-month U.S. Treasury yields
2) 6-month U.S. Treasury yields
3) 1-year U.S. Treasury yields
4) 2-year U.S. Treasury yields
5) 3-year U.S. Treasury yields
6) 5-year U.S. Treasury yields
7) 7-year U.S. Treasury yields
8) 10-year U.S. Treasury yields
9) 20-year U.S. Treasury yields
10) 30-year U.S. Treasury yields
11) Money Market / Short-Term
12) U.S. Intermediate Term Government Bonds
13) U.S. Long Term Corporate Bonds
14) Diversified Fixed Income
15) Diversified Balanced Allocation
16) Diversified Large Capitalized U.S. Equity

---

[34] As a general guide, the forecast horizon should not be less than 20 years.

[35] The pre-packaged scenarios can be found at *https://www.soa.org/resources/tables-calcs-tools/research-scenario/* and are fully documented at *http://www.actuary.org/pdf/life/c3supp_march05.pdf*.

[36] Because the reserves calculated using projections involve cash flow projections, the pre-packaged scenarios were developed under the "real world" probability measure (as opposed to a "risk-neutral" basis). Therefore, the pre-packaged scenarios may not be appropriate for purposes of projecting the market value of future hedge instruments within a projection (to the extent such instruments are used in the projections). For this purpose, it may be more appropriate to use risk neutral scenarios to determine the market value of hedge instruments in the cash flow projections that are based on real world scenarios.

© 1999-2023 National Association of Insurance Commissioners

17) Diversified International Equity

18) Intermediate Risk Equity

19) Aggressive or Specialized Equity

The scenarios are available as gross monthly accumulation factors (or U.S. Treasury yields) over a 30-year horizon in comma-separated value format (*.*csv*). These scenarios have been appropriately correlated so that the Kth scenario for each asset class must be used together and considered one 'future investment return scenario.'[37] Hence, the scenarios can be combined (by blending the accumulation factors[38]) to create additional 'proxy' scenarios for the company's funds.

For example, suppose the actuary wanted to construct scenarios for a 'balanced fund' that targets a 60/40 allocation between bonds and U.S. equities. If we denote $[\ AF^{X}\ ]$ as the matrix of accumulation factors for asset class X, then the balanced scenarios would be defined by $[\ AF^{BAL}\ ] = 0.60 \times [\ AF^{BOND}\ ] + 0.40 \times [\ AF^{S\&P500}\ ]$. Care should be taken to avoid exaggerating the benefits of diversification. The actuary shall document the development of the investment return scenarios and be able to justify the mapping of the company's variable accounts to the proxy funds used in the modeling.

The U.S. Treasury yields are expressed as nominal semi-annual bond equivalent yields in decimal format. All other returns are expressed as periodic (not cumulative) market accumulation factors (i.e., monthly "gross wealth ratios"). Interest rates are assumed to change at the start of each month, hence the value in column T applies for month T-1. The market accumulation factor in column T represents the growth in month T-1.

If all or a portion of these scenarios are used, then the actuary shall verify that the scenario calibration criteria are met.

---

[37] It is inappropriate to misalign the ordering of scenarios (e.g., scenario J for "Diversified U.S. Equity" cannot be combined with scenario K for "Diversified International Equity," where $J \neq K$).

[38] It is important to blend the accumulation factors (not the returns) in order to achieve the desired asset mix.

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 6 - Allocation of the Aggregate Reserves to the Contract Level

Section IV states that the Aggregate Reserve shall be allocated to the contracts falling within the scope of the Guideline. When the Conditional Tail Expectation Amount is greater that the Standard Scenario Amount, this allocation requires that the excess be allocated to the contracts falling within the scope of the Guideline.

A6.1) Allocation when the Aggregate Reserve equals the Conditional Tail Expectation Amount

A) Single sub-grouping. When the Aggregate Reserve is equal to the Conditional Tail Expectation Amount and the Conditional Tail Expectation Amount is determined in aggregate for all contracts falling within the scope of the Guideline (i.e., a single grouping), as described in Section IV)D), the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount shall be allocated to each contract on the basis of the difference between the Standard Scenario Reserve and the Cash Surrender Value[39] on the valuation date for the contract. If the cash surrender value is not defined or not available, the Standard Scenario Amount will be the basis of allocation.

B) Multiple sub-groupings. When the Aggregate Reserve is equal to the Conditional Tail Expectation Amount and the Conditional Tail Expectation Amount is determined using more than one sub-grouping, as described in Section IV)D), the allocation of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount and shall reflect that sub-grouping of contracts used to determine the Conditional Tail Expectation Amount, as described in Section IV)D).

For example, when the Conditional Tail Expectation Amount is determined using sub-grouping, the excess of the aggregate (i.e., the total for all contracts within the scope of the Guideline) Conditional Tail Expectation Amount over the aggregate Standard Scenario Amount shall be allocated only to those contracts that are part of sub-groupings whose contributions to the Conditional Tail Expectation Amount exceed their contribution to the Standard Scenario Amount.

In the case of such sub-groupings, the excess of the aggregate Conditional Tail Expectation Amount over the aggregate Standard Scenario Amount shall be allocated to each sub-grouping in proportion to the difference between the Conditional Tail Expectation and the Standard Scenario Reserve for each sub-grouping for which that excess is positive.

Once the allocation to each sub-grouping is determined, the excess of the reserve allocated to such sub-grouping over the Standard Scenario Amount determined for that sub-grouping shall be allocated to each contract within that sub-grouping on the basis of the difference between the Standard Scenario Reserve and the Cash Surrender Value on the valuation date for the contracts. If the cash surrender value is not defined or not available, the Standard Scenario Amount will be the basis of allocation.

[39] Note that since the Standard Scenario Reserve for a contract is, by definition, greater than or equal to the Cash Surrender Value, it is understood that the difference between the Standard Scenario Reserve and the Cash Surrender Value for each contract will never be less than zero.

© 1999-2023 National Association of Insurance Commissioners

As an example, consider a company with the results of the following three sub-groupings:

Sub-grouping	A	B	C	Total
Conditional Tail Expectation Amount	28	40	52	120
Standard Scenario Amount	20	45	30	95
Aggregate Reserve				**120**
(1) – (2)	8	-5	22	25
Allocation	6.67	0	18.33	25

In this example, the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount, in aggregate, equals 25 (i.e., the "Total" column of row 1 less row 2, or 120 – 95). This excess of 25 would be allocated only to those contracts that are part of sub-groupings whose contributions to the Conditional Tail Expectation Amount exceed their contributions to the Standard Scenario Amount. In this example, that would be contracts in sub-groupings A and C (since in sub-grouping B, the contribution to the Standard Scenario Amount exceeds the contribution to the Conditional Tail Expectation Amount). Therefore, the excess of 25 would be allocated to the contracts in sub-groupings A and C in proportion to the difference between the Conditional Tail Expectation Amount and the Standard Scenario Reserve for those sub-groupings (i.e. row 4). In this example, the total difference between the Conditional Tail Expectation Amount and the Standard Scenario Reserve for the contracts in sub-groupings A and C equals 8 + 22, or 30. This would result in 8/30 of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount (or 6.67) to be allocated to the contracts in sub-groupings A and 22/30 of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount (or 18.33) to be allocated to the contracts in sub-groupings C as shown on line (5) above.

In this example, the allocation of the Aggregate Reserve to contracts within sub-grouping B would equal the Standard Scenario Reserve for those contracts (as described in section A6.2) below). For sub-groupings A and C, the difference between the allocation of the Aggregate Reserve to each of those sub-grouping and the Standard Scenario Amount determined for each of those sub-grouping would be allocated to each contract within each of those sub-groupings based on the difference between the Standard Scenario Reserve and the Cash Surrender Value for each of the contracts within the relevant sub-group. The result would be an allocated Aggregate Reserve for a given contract that would be equal to the Standard Scenario Reserve for that contract plus the amount of the difference between 1) and 2) below that is allocated to that contract, where:

1) Equals the allocation of the Aggregate Reserve to that contract's sub-grouping; and

2) Equals the Standard Scenario Amount determined for that contract's sub-grouping.

A6.2) Allocation when the Aggregate Reserve equals the Standard Scenario Amount

The Standard Scenario Amount, as required by Section IV)C), is calculated on a contract-by-contract basis, as described in Appendix 3. Therefore, when the Aggregate Reserve is equal to the Standard Scenario Amount, the reserve allocated to each contract shall be the reserve calculated for each contract under the Standard Scenario method.

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 7 – Modeling of Hedges

A7.1) Initial Considerations

The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline (excluding those that involve the offsetting of the risks associated with variable annuity guarantees with other products outside of the scope of the Guideline, such as equity-indexed annuities) shall be included in the calculation of the Conditional Tail Expectation Amount, determined in accordance with Section IV)D) and section A1.4) of the Guideline (i.e., Conditional Tail Expectation Amount using projections). If the company is following a Clearly Defined Hedging Strategy ("hedging strategy"), as defined in Section III, in accordance with an investment policy adopted by the Board of Directors, or a committee of Board members, the company is eligible to reduce the amount of the Conditional Tail Expectation Amount using projections otherwise calculated. The investment policy must clearly articulate the company's hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

For this purpose, the investment assets refer to all the assets including derivatives supporting covered products and guarantees. This is also referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which is also referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this Appendix. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this Appendix, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

The cost and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline shall be included in the stochastic cash flow model used to calculate the Conditional Tail Expectation Amount in accordance with Section IV)D) (the "model"). If the company is following a Clearly Defined Hedging Strategy, the model shall take into account the cost and benefits of hedge positions expected to be held by the company in the future based on the operation of the hedging strategy.

Before either a new or revised hedging strategy can be used to reduce the amount of the Conditional Tail Expectation Amount otherwise calculated, the hedging strategy should be in place (i.e., effectively implemented by the company) for at least three months. The company may meet the time requirement by having evaluated the effective implementation of the hedging strategy for at least three months without actually having executed the trades indicated by the hedging strategy (e.g., mock testing or by having effectively implemented the strategy with similar annuity products for at least three months).

These requirements do not supersede any statutes, laws, or regulations of any state or jurisdiction related to the use of derivative instruments for hedging purposes and should not be used in determining whether a company is permitted to use such instruments in any state or jurisdiction.

A7.2) Background

The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two methods as described below. Although a hedging strategy would normally be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the Conditional Tail Expectation Amount otherwise calculated.

The fundamental characteristic of the first method is that all hedging positions, both the currently held positions and those expected to be held in the future, are included in the stochastic cash flow model used to determine the Scenario Greatest Present Value, as discussed in Section IV)D), for each scenario.

The fundamental characteristic of the second method is that the effectiveness of the current hedging strategy (including currently held hedge positions) on future cash flows is evaluated, in part or in whole, outside of the stochastic cash flow model. In this case, the reduction to the Conditional Tail Expectation Amount otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions), on the Conditional Tail Expectation Amount needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation, and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the Conditional Tail Expectation Amount attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company's ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transforms some risks into others, introduces new risks or has other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the "Greeks" other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk.

A7.3) Calculation of CTE Amount (reported)

The company should begin by calculating "CTE Amount (best efforts)" – the results obtained when the Conditional Tail Expectation Amount (or "CTE Amount") is based on incorporating the hedging strategy (including currently held hedge positions) into the stochastic cash flow model, including all of the factors and assumptions needed to execute the hedging strategy (e.g., stochastic implied volatility).

Because most models will include at least some approximations or idealistic assumptions, CTE Amount (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the company shall recalculate the Conditional Tail Expectation Amount assuming the company has no dynamic hedging strategy (i.e., reflect only hedge positions held by the company on the valuation date. The result so obtained is called "CTE Amount (adjusted)." In some situations the determination of CTE Amount (adjusted) may include both direct and indirect techniques.

© 1999-2023 National Association of Insurance Commissioners

Finally, the reported value for the Conditional Tail Expectation Amount is given by:

CTE Amount (reported) = E x CTE Amount (best efforts) + (1 – E) × CTE Amount (adjusted)

The value for E (an "effectiveness factor") reflects the actuary's view as to the level of sophistication of the stochastic cash flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the "Greeks" being covered by the strategy) as well as the associated costs, risks, and benefits E will be no greater than 0.70. As the sophistication of the stochastic cash flow model increases, the value for E increases (i.e., the greater the ability of the CTE Amount (best efforts) model to capture all risks and uncertainties, the higher the value of E). If the model used to determine the "CTE Amount (best efforts)" effectively reflects all of the parameters used in the hedging strategy, the value of E may be up to 0.70. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, E must be in the lower end of the range. If hedge cash flows are not modeled directly, E will be no greater than 0.30. Simplistic hedge cash flow models will have a value of E in the low range between 0.00 and 0.70.

Additionally, the company shall demonstrate that, based on an analysis of at least the most recent 12 months, the model is able to replicate the hedging strategy in a way that justifies the value used for E. A company that does not have 12 months of experience to date shall set E to a value no greater than 0.30.

A7.4) Specific Considerations and Requirements

As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the Conditional Tail Expectation Amount, the actuary should review actual historical hedging effectiveness. The actuary shall evaluate the appropriateness of the assumptions on future trading, transaction costs, and other elements of the model, the strategy, the mix of business, and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either Anticipated Experience or adverse estimates of the parameters.

A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contractholder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contractholder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the Conditional Tail Expectation Amount, the actuary must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

© 1999-2023 National Association of Insurance Commissioners

Implementing a strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.

The combination of elements of the stochastic cash flow model, including the initial actual market asset prices, prices for trading at future dates, transaction costs, and other assumptions should be analyzed by the actuary as to whether the stochastic cash flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:

A) Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money; or

B) Hedging strategies that with a given amount of initial money never make less than accumulation at the one-period risk free rates in any scenario but make more than this in one or more scenarios.

If the stochastic cash flow model allows for such situations, the actuary should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. In addition, the actuary should disclose the situations and provide supporting documentation as to why the actuary believes the situations are not material for determining the Conditional Tail Expectation Amount. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the Conditional Tail Expectation Amount otherwise calculated.

In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. If there are substantial discrepancies, the actuary should disclose the substantial discrepancies and provide supporting documentation as to why the model-based prices are appropriate for determining the Conditional Tail Expectation Amount. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

A7.5) Certification and Documentation

The actuary must provide a certification that the values for E, CTE Amount (adjusted) and CTE Amount (best efforts) were calculated using the process discussed above and the assumptions used in the calculations were reasonable for the purpose of determining the Conditional Tail Expectation Amount. The actuary shall document the method(s) and assumptions (including data) used to determine CTE Amount (adjusted) and CTE Amount (best efforts) and maintain adequate documentation as to the methods, procedures and assumptions used to determine the value of E.

The actuary must provide a certification as to whether the Clearly Defined Hedging Strategy is fully incorporated into the stochastic cash flow model and any supplementary analysis of the impact of the hedging strategy on the Conditional Tail Expectation Amount. The actuary must document the extent to which elements of the hedging strategy (e.g., time between portfolio rebalancing) are not fully incorporated into the stochastic cash flow model and any supplementary analysis to determine the impact, if any. In addition, the actuary must provide a certification and maintain documentation to support the certification that the hedging strategy designated as the Clearly Defined Hedging Strategy meets the requirements of a Clearly Defined Hedging Strategy including that the implementation of the hedging strategy in the stochastic cash flow model and any supplementary analysis does not include knowledge of

© 1999-2023 National Association of Insurance Commissioners

events that occur after any action dictated by the hedging strategy (i.e. the model cannot use information about the future that would not be known in actual practice).

A financial officer of the company (e.g., Chief Financial Officer, Treasurer or Chief Investment Officer) or a person designated by them who has direct or indirect supervisory authority over the actual trading of assets and derivatives must certify that the hedging strategy meets the definition of a Clearly Defined Hedging Strategy and that the Clearly Defined Hedging Strategy is the hedging strategy being used by the company in its actual day to day risk mitigation efforts.

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 8 – Certification Requirements

A8.1) Management Certification

Management must provide signed and dated written representations as part of the valuation documentation that the valuation appropriately reflects management's intent and ability to carry out specific courses of actions on behalf of the entity where such is relevant to the valuation. This certification will be submitted no later than March 1. Upon written request by the company, the commissioner may grant an extension of the date for submission of the certification.

A8.2) Actuarial Certification

A) General Description. The certification shall be provided by a qualified actuary and consist of at least the following:

1) A paragraph identifying the actuary and his or her qualifications;

2) A scope paragraph identifying the reserves as of the valuation date for contracts included in the certification categorized by the approaches used to determine the reserves (e.g., Alternative Methodology, Projections, Standard Scenario);

3) A reliance paragraph describing those areas, if any, where the certifying actuary has relied on other experts;
   a) A reliance statement from each of those relied on should accompany the certification.
   b) The reliance statements should note the information being provided and a statement as to the accuracy, completeness or reasonableness, as applicable, of the information.

4) A paragraph certifying that the reserve was calculated in accordance with the principles and requirements of the Guideline;

5) A paragraph certifying that the assumptions used for these calculations are Prudent Estimate assumptions for the products, scenarios, and purpose being tested; and

6) A paragraph stating that the qualified actuary is not opining on the adequacy of the company's surplus or its future financial condition.

7) This certification will be submitted no later than March 1. Upon written request by the company, the commissioner may grant an extension of the date for submission of the certification.

A8.3) Supporting Memorandum

A) General Description. A supporting memorandum shall be created to document the methodology and assumptions used to determine the Aggregate Reserve. The information shall include the comparison of the Standard Scenario Amount to the Conditional Tail Expectation Amount required by Section IV)A) in the determination of the Aggregate Reserve.

B) Alternative Methodology using Published Factors.

1) If a seriatim approach was not used, disclose how contracts were grouped.

© 1999-2023 National Association of Insurance Commissioners

2) Disclosure of assumptions to include:
   a) Component CA
      (i) Mapping to prescribed asset categories
      (ii) Lapse and withdrawal rates
   b) Component FE
      (i) Determination of fixed dollar costs and revenues
      (ii) Lapse and withdrawal rates
      (iii) Inflation rates
   c) Component GC
      (i) Disclosure of contract features and how the company mapped the contract form to those forms covered by the Alternative Methodology factors
         - Product Definition - If not conservatively assigned to a published factor, company specific factors or stochastic modeling is required.
         - Partial Withdrawal Provision
         - Fund Class - Disclose the process used to determine the single asset class that best represents the exposure for a contract. If individual funds are mapped into prescribed categories, the process used to map the individual funds should be disclosed.
         - Attained Age
         - Contract Duration
         - Ratio of Account Value to Guaranteed Value
         - Annualized Account Charge Differential from Base Assumption
      (ii) Derivation of Equivalent Account Charges
      (iii) Derivation of margin offset
      (iv) Disclosure of interpolation procedures and confirmation of node determination

3) Disclosure, if applicable, of reinsurance that exists and how it was handled in applying published factors (For some reinsurance, creation of company-specific factors or stochastic modeling may be required.).
   a) Discuss how reserves before reinsurance were determined.

C) Alternative Factors based on Company-Specific Factors.

1) Disclosure of requirements consistent with Published Factors, as noted in subsection B) above.

2) Stochastic analysis supporting adjustments to published factors should be fully documented. This analysis needs to be submitted when initially used and be available upon request in subsequent years. Adjustments may include:
   a) Contract design;
   b) Risk mitigation strategy (excluding hedging); and
   c) Reinsurance.

D) Stochastic Modeling.

1) Assets
   a) Description including type and quality
   b) Investment & disinvestment assumptions

c) Describe assets used at the start of the projection
d) Source of asset data
e) Asset valuation basis
f) Documentation of assumptions
   (i) Default costs
   (ii) Prepayment functions
   (iii) Market value determination
   (iv) Yield on assets acquired
   (v) Mapping and grouping of funds to modeled asset classes
g) Hedging Strategy
   (i) Documentation of strategy
   (ii) Identification of current positions
   (iii) Description on how strategy was incorporated into modeling
      - Basis risk, gap risk, price risk, assumption risk
      - Document the methods and criterion used to estimate the a priori effectiveness of the hedging strategy
   (iv) Documentation required for specific consideration raised in section A7.4).
   (v) Documentation and certification required by section A7.5).

2) Liabilities
   a) Product descriptions
   b) Source of Liabilities
   c) Grouping of contracts
   d) Reserve method and modeling (e.g., Working Reserves were set to CSV)
   e) Investment Reserves
   f) Describe how reinsurance was handled in the models, including how reserves gross of reinsurance were modeled.
   g) Documentation of assumptions (i.e., list assumptions, discuss the sources and the rationale for using the assumptions).
      (i) Premiums and subsequent deposits
      (ii) Withdrawal, Lapse and Termination Rates
         - Partial Withdrawal (including treatment of dollar-for-dollar offsets on GMDBs and VAGLBs, and Required Minimum Distributions
         - Lapses / Surrenders
      (iii) Crediting Strategy
      (iv) Mortality
      (v) Annuitization rates
      (vi) Income Purchase rates
      (vii) GMIB and GMWB Utilization rates
      (viii) Commissions
      (ix) Expenses
      (x) Persistency Bonuses
      (xi) Investment / Fund Choice
      (xii) Revenue Sharing
      (xiii) Asset Allocation, Rebalancing and Transfer Assumptions
         - Dollar Cost Averaging
   h) The section showing the assumptions used for lapse and utilization assumptions for contracts with guaranteed living benefits in the development of the Conditional Tail Expectation Amount, as described in section A9.7).

3) Scenarios
   a) Description of scenario generation for interest rates and equity returns
      (i) Disclose the number "n" of scenarios used and the methods used to determine the sampling error of the CTE (70) statistic when using "n" scenarios.
      (ii) Time step of model (e.g., monthly, quarterly, annual)
      (iii) Correlation of fund returns
   b) Calibration
      (i) Gross Wealth Ratios for equity funds
         - Disclosure of adjustments to model parameters, if any.
         - Disclosure of 1-year, 5-year and 10-year wealth factors, as well as mean and standard deviation.
      (ii) Consistency of other funds to equity funds
      (iii) Correlation between all funds
      (iv) Estimate of market return volatility assumptions underlying the generated scenarios compared to actual observed volatility underlying market values.
   c) Extent of use of pre-packaged scenarios and support for mapping variable accounts to proxy funds

4) Description and results of sensitivity tests performed. At the request of the domiciliary commissioner, the company shall provide a sensitivity test showing an estimate of the impact of the market return volatility assumption when market volatility is materially higher than assumed in the generated scenarios.

5) Documentation of all material changes in the model or assumptions from that used previously and the estimated impact of such changes. This documentation, or a summary of this documentation, shall be included in an executive summary or some other prominent place in the memorandum.

6) A description of the methods used to validate the model and a summary of the results of the validation testing.

E) Standard Scenario.

1) For the amounts in 2), 3) and 4) below report the Basic Reserve in A3.3)B)2)a), the projection requirements in A3.3)B)2)b), the value of Aggregate reinsurance in A3.3)D)1), the value of hedges in A3.3)D)2), the total allocation of the value of hedges and Aggregate reinsurance in A3.3)B)2)c) and the Standard Scenario Reserve.

2) Report the Standard Scenario Amount as of the valuation date.

3) If applicable, report the Standard Scenario Amount on the inforce prior to the valuation date that was used to project the reserve requirements to the valuation date.

4) If applicable, report the Standard Scenario Amount on the model office used to represent the inforce.

5) Discuss modifications, if any, in the application of the standard scenario requirements to produce the amounts in 2), 3) and 4) above.

6) Document any assumptions, judgments or procedures not prescribed in the Standard Scenario Method or in the Guideline that are used to produce the Standard Scenario Amount.

7) If applicable, documentation of approval by the commissioner to use the Basic Reserve as the Standard Scenario Amount.

8) Document the company's calculation of DR.

9) Document the allocation of funds to Equity, Bond, Balanced and Fixed classes.

10) A statement by the actuary that none of the reinsurance treaties included in the Standard Scenario serve solely to reduce the calculated Standard Scenario Reserve without also reducing risk on scenarios similar to those used to determine the Conditional Tail Expectation Reserve. This should be accompanied by a description of any reinsurance treaties that have been excluded from the Standard Scenario along with an explanation of why the treaty was excluded.

F) The memorandum shall be made available for examination by the commissioner upon his or her request but shall be returned to the company after such examination and shall not be considered a record of the insurance department or subject to automatic filing with the commissioner.

© 1999-2023 National Association of Insurance Commissioners

APPENDIX 9 – Contractholder Behavior

A9.1) General

Contractholder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contractholder behavior is difficult to predict and behavior assumptions can significantly impact the results. In the absence of relevant and fully credible empirical data, the actuary should set behavior assumptions on the conservative end of the plausible spectrum (consistent with the definition of Prudent Estimate).

In setting behavior assumptions, the actuary should examine, but not be limited by, the following considerations:

1) Behavior can vary by product, market, distribution channel, fund performance, time/product duration, etc.

2) Options embedded in the product may impact behavior.

3) Options may be elective or non-elective in nature. Living benefits are often elective and death benefit options are generally non-elective.

4) Elective contractholder options may be more driven by economic conditions than non-elective options.

5) As the value of a product option increases, there is an increased likelihood that contractholders will behave in a manner that maximizes their financial interest (e.g., lower lapses, higher benefit utilization, etc.).

6) Behavior formulas may have both rational and irrational components (irrational behavior is defined as situations where some contractholders may not always act in their best financial interest). The rational component should be dynamic but the concept of rationality need not be interpreted in strict financial terms and might change over time in response to observed trends in contractholder behavior based on increased or decreased financial efficiency in exercising their contractual options.

7) Options that are ancillary to the primary product features may not be significant drivers of behavior. Whether an option is ancillary to the primary product features depends on many things such as:
    a) For what purpose was the product purchased?
    b) Is the option elective or non-elective?
    c) Is the value of the option well known?

8) External influences, including emergence of viatical / life settlement companies, may impact behavior.

A9.2) Aggregate vs. Individual Margins

As noted in Section III)B)8), Prudent Estimate assumptions are developed by applying a margin for uncertainty to the Anticipated Experience assumption. The issue of whether the level of the margin applied to the Anticipated Experience assumption is determined in aggregate or independently for each and every behavior assumption is discussed in Principle 3 in Section II) of this Guideline, which states:

> The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the Conditional Tail Expectation Amount at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the Conditional Tail Expectation Amount, the actuary should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Although this Principle discusses the concept of determining the level of margins in aggregate, it notes that the application of this concept shall be guided by evolving practice and expanding knowledge. From a practical standpoint, it may not always be possible to completely apply this concept to determine the level of margins in aggregate for all behavior assumptions.

Therefore, the actuary shall determine Prudent Estimate assumptions independently for each behavior (e.g., mortality lapses, and benefit utilization), using the requirements and guidance in this Appendix and throughout the guideline, unless the actuary can demonstrate that an appropriate method was used to determine the level of margin in aggregate for two or more behaviors.

A9.3) Sensitivity Testing

The impact of behavior can vary by product, time period, etc. Sensitivity testing of assumptions is required and shall be more complex than e.g., base lapse assumption minus 1% across all contracts. A more appropriate sensitivity test in this example might be to devise parameters in a dynamic lapse formula to reflect more out-of-the-money contracts lapsing and/or more holders of in-the-money contracts persisting and eventually utilizing the guarantee. The actuary should apply more caution in setting assumptions for behaviors where testing suggests that stochastic modeling results are sensitive to small changes in such assumptions. For such sensitive behaviors, the actuary shall use higher margins when the underlying experience is less than fully relevant and credible.

A9.4) Specific Considerations and Requirements

Within materiality considerations, the actuary should consider all relevant forms of contractholder behavior and persistency, including but not limited to the following:

1) Mortality (additional guidance and requirements regarding mortality is contained in Appendix 10)

2) Surrenders

3) Partial Withdrawals (Systematic and Elective)

4) Fund Transfers (Switching/Exchanges)

5) Resets/Ratchets of the Guaranteed Amounts (Automatic and Elective)

6) Future Deposits

It may be acceptable to ignore certain items that might otherwise be explicitly modeled in an ideal world, particularly if the inclusion of such items reduces the calculated provisions. For example:

1) The impact of fund transfers (intra-contract fund “switching”) might be ignored, unless required under the terms of the contract (e.g., automatic asset re-allocation/rebalancing, dollar cost averaging accounts, etc.)

2) Future deposits might be excluded from the model, unless required by the terms of the contracts under consideration and then only in such cases where future premiums can reasonably be anticipated (e.g., with respect to timing and amount).

However, the actuary should exercise caution in assuming that current behavior will be indefinitely maintained. For example, it might be appropriate to test the impact of a shifting asset mix and/or consider future deposits to the extent they can reasonably be anticipated and increase the calculated amounts.

Normally, the underlying model assumptions would differ according to the attributes of the contract being valued. This would typically mean that contractholder behavior and persistency may be expected to vary according to such characteristics as (this is not an exhaustive list):

1) Gender

2) Attained age

3) Issue age

4) Contract duration

5) Time to maturity

6) Tax status

7) Fund value

8) Investment option

9) Guaranteed benefit amounts

10) Surrender charges, transaction fees or other contract charges

11) Distribution channel

Unless there is clear evidence to the contrary, behavior assumptions should be no less conservative than past experience. Margins for contractholder behavior assumptions shall assume, without relevant and credible experience or clear evidence to the contrary, that contractholders’ efficiency will increase over time.

In determining contractholder behavior assumptions, the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that are similar to the business segment (i.e., other than direct experience), whether or not the segment is directly written by the company. If data from a similar business segment are used, the assumption shall be adjusted to reflect differences between the two segments. Margins shall reflect the data uncertainty associated with using data from a similar but not

identical business segment. The actuary shall document any significant similarities or differences between the two business segments, the data quality of the similar business segment and the adjustments and the margins applied.

Where relevant and fully credible empirical data do not exist for a given contractholder behavior assumption, the actuary shall set the contractholder behavior assumption to reflect the increased uncertainty such that the contractholder behavior assumption is shifted towards the conservative end of the plausible range of expected experience that serves to increase the Aggregate Reserve. If there are no relevant data, the actuary shall set the contractholder behavior assumption to reflect the increased uncertainty such that the contractholder behavior assumption is at the conservative end of the range. Such adjustments shall be consistent with the definition of Prudent Estimate, with the Principles described in Section I, and with the guidance and requirements in this Appendix.

Ideally, contractholder behavior would be modeled dynamically according to the simulated economic environment and/or other conditions. It is important to note, however, that contractholder behavior should neither assume that all contractholders act with 100% efficiency in a financially rational manner nor assume that contractholders will always act irrationally.

A9.5) Dynamic Assumptions

Consistent with the concept of Prudent Estimate assumptions described earlier, the liability model should incorporate margins for uncertainty for all risk factors which are not dynamic (i.e., the non-scenario tested assumptions) and are assumed not to vary according to the financial interest of the contractholder.

The actuary should exercise care in using static assumptions when it would be more natural and reasonable to use a dynamic model or other scenario-dependent formulation for behavior. With due regard to considerations of materiality and practicality, the use of dynamic models is encouraged, but not mandatory. Risk factors which are not scenario tested, but could reasonably be expected to vary according to a stochastic process, or future states of the world (especially in response to economic drivers) may require higher margins and/or signal a need for higher margins for certain other assumptions.

Risk factors that are modeled dynamically should encompass the plausible range of behavior consistent with the economic scenarios and other variables in the model, including the non-scenario tested assumptions. The actuary shall test the sensitivity of results to understand the materiality of making alternate assumptions and follow the guidance discussed above on setting assumptions for sensitive behaviors.

A9.6) Consistency with the CTE Level

All behaviors (i.e., dynamic, formulaic and non-scenario tested) should be consistent with the scenarios used in the CTE calculations (generally, the approximately top 1/3 of the loss distribution). To maintain such consistency, it is not necessary to iterate (i.e., successive runs of the model) in order to determine exactly which scenario results are included in the CTE measure. Rather, in light of the products being valued, the actuary should be mindful of the general characteristics of those scenarios likely to represent the tail of the loss distribution and consequently use Prudent Estimate assumptions for behavior that are reasonable and appropriate in such scenarios. For variable annuities, these “valuation” scenarios would typically display one or more of the following attributes:

1) Declining and/or volatile separate account asset values;

2) Market index volatility, price gaps and/or liquidity constraints;

© 1999-2023 National Association of Insurance Commissioners

3) Rapidly changing interest rates.

The behavior assumptions should be logical and consistent both individually and in aggregate, especially in the scenarios that govern the results. In other words, the actuary should not set behavior assumptions in isolation, but give due consideration to other elements of the model. The interdependence of assumptions (particularly those governing customer behaviors) makes this task difficult and by definition requires professional judgment, but it is important that the model risk factors and assumptions:

1) Remain logically and internally consistent across the scenarios tested;

2) Represent plausible outcomes; and

3) Lead to appropriate, but not excessive, asset requirements.

The actuary should remember that the continuum of “plausibility” should not be confined or constrained to the outcomes and events exhibited by historic experience.

Companies should attempt to track experience for all assumptions that materially affect their risk profiles by collecting and maintaining the data required to conduct credible and meaningful studies of contractholder behavior.

A9.7) Additional Considerations and Requirements for Assumptions Applicable to Guaranteed Living Benefits

Experience for contracts without guaranteed living benefits may be of limited use in setting a lapse assumption for contracts with in-the-money or at-the-money guaranteed living benefits. Such experience may only be used if it is appropriate (e.g., lapse experience on contracts without a living benefit may have relevance to the early durations of contracts with living benefits) and relevant to the business and is accompanied by documentation that clearly demonstrates the relevance of the experience, as discussed in the following paragraph.

The supporting memorandum required by Appendix 8 of this Guideline, shall include a separately identifiable section showing the assumptions used for lapse and utilization assumptions for contracts with guaranteed living benefits in the development of the Conditional Tail Expectation Amount. This section shall be considered part of the supporting memorandum and shall show the formulas used to set the assumptions and describe the key parameters affecting the level of the assumption (e.g., age, duration, in-the-moneyness, during and after the surrender charge period). The section shall include a summary that shows the lapse and utilization rates that result from various combinations of the key parameters. The section shall show any experience data used to develop the assumptions and describe the source, relevance and credibility of that data. If relevant and credible data were not available, the section should discuss how the assumption is consistent with the requirement that the assumption is to be on the conservative end of the plausible range of expected experience. The section shall also discuss the sensitivity tests performed to support the assumption. This separately identifiable section shall be made available on a standalone basis if requested by the Domiciliary Commissioner. If it is requested, the section shall have the same confidential status as the supporting memorandum and the actuarial memorandum supporting the actuarial opinion, as discussed in section A2.3)B).

Regarding lapse assumptions for contracts with guaranteed living benefits, the section shall include, at a minimum, the following:

1) Actual to expected lapses on two bases, where "expected" equals one of the following:
   a) Prudent estimate assumptions used in the development of the Conditional Tail Expectation Amount;
   b) The assumptions used in the Standard Scenario;

2) The lapse assumptions used in the development of Conditional Tail Expectation Amount and corresponding actual experience separated by:
   a) Logical blocks of business (based on company's assessment);
   b) Duration (at a minimum this should show during the surrender charge period vs. after the surrender charge period);
   c) In-the-moneyness (consistent with how dynamic assumptions are determined); and
   d) Age (to the extent age impacts the election of benefits lapse).

This data shall be separated by experience incurred in the following periods:
   a) In the past year;
   b) In the past three years; and
   c) All years.

APPENDIX 10 – Specific Guidance and Requirements for Setting Prudent Estimate Mortality Assumptions

A10.1) Overview

A) Intent. The guidance and requirements in this Appendix apply for setting Prudent Estimate mortality assumptions when determining the Conditional Tail Expectation Amount (whether using projections or the Alternative Methodology). The intent is for Prudent Estimate mortality assumptions to be based on facts, circumstances and appropriate actuarial practice (where more than one approach to appropriate actuarial practice exists, the actuary should select the practice that the actuary deems most appropriate under the circumstances) with only a limited role for unsupported actuarial judgment.

B) Description. Prudent Estimate mortality assumptions are determined by first developing expected mortality curves based on either available experience or published tables. Where necessary, margins are applied to the experience to reflect data uncertainty. The expected mortality curves are then adjusted based on the credibility of the experience used to determine the expected mortality curve. Section A10.2) addresses guidance and requirements for determining expected mortality curves and section A10.3) addresses guidance and requirements for adjusting the expected mortality curves to determine Prudent Estimate mortality.

Finally, the credibility-adjusted tables shall be adjusted for mortality improvement (where such adjustment is permitted or required) using the guidance and requirements in section A10.4).

C) Business Segments. For purposes of setting Prudent Estimate mortality assumptions, the products falling under the scope of the Guideline shall be grouped into business segments with different mortality assumptions. The grouping should generally follow the pricing, marketing, management and/or reinsurance programs of the company. Where less refined segments are used for setting the mortality assumption than is used in business management the documentation should address the impact, if material, of the less refined segmentation on the resulting reserves.

D) Margin for Data Uncertainty. The expected mortality curves that are determined in section A10.2) may need to include a margin for data uncertainty. The margin could be in the form of an increase or a decrease in mortality, depending on the business segment under consideration. The margin shall be applied in a direction (i.e., increase or decrease in mortality) that results in a higher reserve. A sensitivity test may be needed to determine the appropriate direction of the provision for uncertainty to mortality. The test could be a prior year mortality sensitivity analysis of the business segment or an examination of current representative cells of the segment.

For purposes of this Appendix, if mortality must be increased (decreased) to provide for uncertainty the business segment is referred to as a plus (minus) segment.

It may be necessary, because of a change in the mortality risk profile of the segment, to reclassify a business segment from a plus (minus) segment to a minus (plus) segment to the extent compliance with this subsection requires such a reclassification.

A10.2) Determination of Expected Mortality Curves

A) Experience Data. In determining expected mortality curves the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that is similar to the business segment (i.e., other than direct experience). See section B) below for

© 1999-2023 National Association of Insurance Commissioners

additional considerations. Finally, if there is no data, the company shall use the applicable table, as required in subsection C) below.

B) Data Other than Direct Experience. If expected mortality curves for a segment are being determined using data from a similar business segment (whether or not directly written by the company), the actuary shall document any similarities or differences between the two business segments (e.g., type of underwriting, marketing channel, average policy size, etc.). The actuary shall also document the data quality of the mortality experience of the similar business. Adjustments shall be applied to the data to reflect differences between the business segments and margins shall be applied to the adjusted expected mortality curves to reflect the data uncertainty associated with using data from a similar but not identical business segment. The actuary shall document the adjustments and the margins applied.

To the extent the mortality of a business segment is reinsured, any mortality charges that are consistent with the company's own pricing and applicable to a substantial portion of the mortality risk may also be a reasonable starting point for the determination of the company's expected mortality curves. The actuary shall document the application of such reinsurance charges and how they were used to set the company's expected mortality curves for the segment.

C) No Data Requirements. When little or no experience or information is available on a business segment, the company shall use expected mortality curves that would produce expected deaths no less than using 100% of the 1994 Variable Annuity MGDB mortality table for a plus segment and expected deaths no greater than 100% of the Annuity 2000 table for a minus segment. If mortality experience on the business segment is expected to be atypical (e.g., demographics of target markets are known to have higher (lower) mortality than typical), these "no data" mortality requirements may not be adequate.

D) Additional Considerations Involving Data. The following considerations shall apply to mortality data specific to the business segment for which assumptions are being determined (i.e., direct data discussed in subsection A) above or other than direct data discussed in subsection B) above).

1) Underreporting of deaths. Mortality data shall be examined for possible underreporting of deaths. Adjustments shall be made to the data if there is any evidence of underreporting. Alternatively, exposure by lives or amounts on contracts for which death benefits were in the money may be used to determine expected mortality curves. Underreporting on such exposures should be minimal; however, this reduced subset of data will have less credibility.

2) Experience by contract duration. Experience of a plus segment shall be examined to determine if mortality by contract duration increases materially due to selection at issue. In the absence of information, the actuary shall assume that expected mortality will increase by contract duration for an appropriate select period. As an alternative, if the actuary determines that mortality is impacted by selection, the actuary could apply margins to the expected mortality in such a way that the actual mortality modeled does not depend on contract duration.

3) Modification and Relevance of data. Even for a large company the quantity of life exposures and deaths are such that a significant amount of smoothing may be required to determine expected mortality curves from mortality experience. Expected mortality curves, when applied to the recent historic exposures (e.g., 3 to 7 years), should not result in an estimate of aggregate number of deaths less (greater) than the actual number deaths during the exposure period for plus (minus) segments. If this condition is not satisfied,

© 1999-2023 National Association of Insurance Commissioners

the actuary must document the rationale in support of using expected mortality that differs from recent mortality experience.

In determining expected mortality curves (and the credibility of the underlying data), older data may no longer be relevant. The "age" of the experience data used to determine expected mortality curves should be documented. There should be commentary in the documentation on the relevance of the data (e.g., any actual and expected changes in markets, products and economic conditions over the historic and projected experience).

4) Other considerations. In determining expected mortality curves, consideration should be given to factors that include, but are not limited to, trends in mortality experience, trends in exposure, volatility in year-to-year A/E mortality ratios, mortality by lives relative to mortality by amounts, changes in the mix of business and product features that could lead to mortality selection.

E) Documentation Requirements.

1) All Segments. The documentation should include any material considerations necessary to understand the development of mortality assumptions for the statutory valuation even if such considerations are not explicitly mentioned in this section. The documentation should be explicit when material judgments were required and such judgments had to be made without supporting historic experience.

The documentation shall:

a) Explain the rationale for the grouping of contracts into different segments for the determination of mortality assumptions and characterize the type and quantity of business that constitute each segment.
b) Describe how each segment was determined to be a plus or minus segment.
c) Summarize any mortality studies used to support mortality assumptions, quantify the exposures and corresponding deaths, describe the important characteristics of the exposures and comment on unusual data points or trends.
d) Document the age of the experience data used to determine expected mortality curves and comment on the relevance of the data.
e) Document the mathematics used to adjust mortality based on credibility and summarize the result of applying credibility to the mortality segments.
f) Discuss any assumptions made on mortality improvements, the support for such assumptions and how such assumptions adjusted the modeled mortality.
g) Describe how the expected mortality curves compare to recent historic experience and comment on any differences.
h) Discuss how the mortality assumptions are consistent with the goal of achieving the required CTE level over the joint distribution of all future outcomes, in keeping with Principle #3 and Appendix 9.

If the study was done on a similar business segment, identify the differences in the business segment on which the data were gathered and the business segment on which the data were used to determine mortality assumptions for the statutory valuation. Describe how these differences were reflected in the mortality used in modeling.

If mortality assumptions for the statutory valuation were based in part on reinsurance rates, document how the rates were used to set expected mortality (e.g., assumptions made on loadings in the rates and/or whether the assuming company provided their expected mortality and the rationale for their assumptions).

2) Plus Segments. For a plus segment, the documentation shall also discuss the examination of the mortality data for the underreporting of deaths and experience by duration, and describe any adjustments that were made as a result of the examination.

3) Minus Segments. For a minus segment the documentation shall also discuss how the mortality deviations on minus segments compare to those on any plus segments. To the extent the overall margin is reduced, the documentation should include support for this assumption.

A10.3) Adjustment for Credibility to Determine Prudent Estimate Mortality

A) Adjustment for Credibility. The expected mortality curves determined in section A10.2) shall be adjusted based on the credibility of the experience used to determine the curves in order to arrive at Prudent Estimate mortality. The adjustment for credibility shall result in blending the expected mortality curves with a mortality table consistent with a statutory valuation mortality table. For a plus segment, the table shall be consistent with 100% of the 1994 Variable Annuity MGDB table (or a more recent mortality table adopted by the NAIC to replace this table). For a minus segment, the table shall be consistent with 100% of the 2000 Annuity table (or a more recent mortality table adopted by the NAIC to replace that table). The approach used to adjust the curves shall suitably account for credibility.[40]

B) Adjustment of Statutory Valuation Mortality for Improvement. For purposes of the adjustment for credibility, the statutory valuation mortality table for a plus segment may be and the statutory valuation mortality table for a minus segment must be adjusted for mortality improvement. Such adjustment shall reflect applicable published industrywide experience from the effective date of the respective statutory valuation mortality table to the experience weighted average date underlying the data used to develop the expected mortality curves (discussed in section A10.2)).

C) Credibility Procedure. The credibility procedure used shall:

1) Produce results that are reasonable in the professional judgment of the actuary,

2) Not tend to bias the results in any material way,

3) Be practical to implement,

4) Give consideration to the need to balance responsiveness and stability,

5) Take into account not only the level of aggregate claims but the shape of the mortality curve, and

6) Contain criteria for full credibility and partial credibility that have a sound statistical basis and be appropriately applied.

Documentation of the credibility procedure used shall include a description of the procedure, the statistical basis for the specific elements of the credibility procedure, and any material changes from prior credibility procedures.

[40] For example, when credibility is zero, an appropriate approach should result in a mortality assumption consistent with 100% of the statutory valuation mortality table used in the blending.

© 1999-2023 National Association of Insurance Commissioners

D) Further Adjustment of the Credibility-adjusted Table for Mortality Improvement. The credibility-adjusted table used for plus segments may be and the credibility adjusted date used for minus segments must be adjusted for applicable published industrywide experience from the experience weighted average date underlying the company experience used in the credibility process to the valuation date.

Any adjustment for mortality improvement beyond the valuation date is discussed in section A10.4).

A10.4) Future Mortality Improvement

The mortality assumption resulting from the requirements of section A10.3) shall be adjusted for mortality improvements beyond the valuation date if such an adjustment would serve to increase the resulting Conditional Tail Expectation Amount. If such an adjustment would reduce the Conditional Tail Expectation Amount, such assumptions are permitted, but not required. In either case, the assumption must be based on current relevant data with a margin for uncertainty (increasing assumed rates of improvement if that results in a higher reserve, reducing them otherwise).

Actuarial Guideline XLIII

CARVM FOR VARIABLE ANNUITIES

Table of Contents

Section I Background
Section II Scope
Section III Reserve Requirements
Section IV Effective Date and Transition

Section I) Background

This Actuarial Guideline (Guideline) interprets the standards for the valuation of reserves for variable annuity and other contracts involving certain guaranteed benefits similar to those offered with variable annuities. The Guideline codifies the basic interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the assumptions and methodologies that will comply with the intent of the Standard Valuation Law. It also applies similar assumptions and methodologies to contracts that contain characteristics similar to those described in the scope, but that are not directly subject to CARVM.

In developing the Guideline, two regulatory sources provided guidance. First, the Standard Valuation Law defines CARVM as the greatest present value of future guaranteed benefits. Second, the NAIC Model Variable Annuity Regulation (VAR) states that the "reserve liability for variable annuities shall be established pursuant to the requirements of the Standard Valuation Law in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees."

During 2019 this Guideline was amended to follow the reserve requirements provided in VM-21 of the *Valuation Manual*. This was done for uniformity for all coverages within scope regardless of whether they were issued prior to or on and after the operative date of the *Valuation Manual*. This was also done to reflect the extensive analysis carried out by the NAIC, Oliver Wyman consulting for the NAIC, and industry participants for improvements to the variable annuity framework.

Section II) Scope

A) The Guideline applies to contracts, and product features on contracts, issued on or after January 1, 1981, and prior to the date that the *Valuation Manual* becomes effective in the applicable jurisdiction, whether directly written or assumed through reinsurance, falling into any of the following categories:

1) Variable deferred annuity contracts subject to the Commissioner's Annuity Reserve Valuation Method (CARVM), whether or not such contracts contain Guaranteed Minimum Death Benefits (GMDBs), or Variable Annuity Guaranteed Living Benefits (VAGLBs);

2) Variable immediate annuity contracts, whether or not such contracts contain GMDBs or VAGLBs;

3) Group annuity contracts that are not subject to CARVM, but contain guarantees similar in nature[1] to GMDBs, VAGLBs, or any combination thereof; and

[1] The term "similar in nature," as used in sections II)A)3) and II)A)4) is intended to capture both current products and benefits as well as product and benefit designs that may emerge in the future. Examples of the currently known designs are listed in footnote 2. Any product or benefit design that does not clearly fit the Scope should be evaluated on a case-by-case basis taking into consideration factors that include, but are not limited to, the nature of the guarantees, the definitions of GMDB and VAGLB in

© 1999-2023 National Association of Insurance Commissioners

4) All other products that contain guarantees similar in nature to GMDBs or VAGLBs, even if the insurer does not offer the mutual funds or variable funds to which these guarantees relate, where there is no other explicit reserve requirement.[2]

If such a benefit is offered as part of a contract that has an explicit reserve requirement and that benefit does not currently have an explicit reserve requirement:

a) The Guideline shall be applied to the benefit on a standalone basis (i.e., for purposes of the reserve calculation, the benefit shall be treated as a separate contract);

b) The reserve for the underlying contract is determined according to the explicit reserve requirement; and

c) The reserve held for the contract shall be the sum of a) and b).

B) The company may elect to apply these requirements to contracts and product features on contracts, whether directly written or assumed through reinsurance, falling into any of the categories defined in Section II.A. and issued prior to January 1, 1981.

C) The Guideline does not apply to contracts falling under the scope of the NAIC Model Modified Guaranteed Annuity Regulation (Model #255); however, it does apply to contracts listed above that include one or more subaccounts containing features similar in nature to those contained in Modified Guaranteed Annuities (e.g., market value adjustments).

D) Separate account annuity contracts that guarantee an index and do not offer GMDBs or VAGLBs are excluded from the scope of the Guideline.

Section III) Reserve Requirements

A) Reserves shall be determined by following the requirements in VM-21 from the version of the NAIC *Valuation Manual* applicable for that valuation date. For purposes of determining reserves, at the election of the company, the contracts subject to this Guideline may be aggregated with the contracts subject to VM-21 of the *Valuation Manual*. Alternatively, the company may elect to not aggregate the contracts subject to this Guideline with those subject to VM-21 of the *Valuation Manual*, and value these as a separate group of contracts.

B). The development of the reserves shall be documented following the requirements in VM-31 of the NAIC *Valuation Manual* applicable for that valuation date.

Section IV) Effective Date and Transition

A) This Actuarial Guideline applies for valuations on or after January 1, 2020. The phase-in provisions of VM-21 also apply for the contracts and product features subject to the Guideline.

VM-01 and whether the contractual amounts paid in the absence of the guarantee are based on the investment performance of a market-value fund or market-value index (whether or not part of the company's separate account).

[2] For example, a group life contract that wraps a GMDB around a mutual fund would generally fall under the scope of the Guideline since there is not an explicit reserve requirement for this type of group life contract. However, for an individual variable life contract with a GMDB and a benefit similar in nature to a VAGLB, the Guideline would generally apply only to the VAGLB-type benefit, since there is an explicit reserve requirement that applies to the variable life contract and the GMDB.

© 1999-2023 National Association of Insurance Commissioners

B) A company may elect to apply these requirements for the valuation on December 31, 2019, in lieu of the requirements of the prior version of this Guideline. If so elected, the reserves will be established by following the requirements of VM-21 from the 2020 NAIC *Valuation Manual* and the documentation requirements of VM-31 from the 2020 NAIC *Valuation Manual*.

Actuarial Guideline XLIV

GROUP TERM LIFE WAIVER OF PREMIUM DISABLED LIFE RESERVES

I. Background

Section 4.G. of the Standard Valuation Law establishes tables approved by the commissioner as the minimum standard for computing reserves for group life insurance and special benefits. The purpose of this Actuarial Guideline (Guideline) is to determine the minimum standard of valuation for group term life waiver of premium disabled life benefits and to recognize the ~~2005~~2023 Group Term Life Waiver (GTLW) Mortality and Recovery Valuation Tables. The Guideline also maintains recognition of the 2005 Group Term Life Waiver Mortality and Recovery Tables for purposes outlined in Section V of the Guideline.

Claims subject to Section V of the Guideline (applicable to individuals who become disabled on or after January 1, 2009, and on or before December 31, 2022) may be valued under Section VI (applicable to individuals who become disabled on or after January 1, 2023) at the election of the insurer provided these claims, for all future valuation dates, are valued under that section or any newer succeeding section at the insurer's election.

Group term life policies do not maintain contract reserves beyond the duration of the policy issued to the group policyholder. However, some policies guarantee an extended death benefit to an individual insured who is disabled according to the terms of the policy. Thus, to the extent such guarantees are made, a disabled life reserve must be maintained for each individual that is so disabled. However, prior to the creation of this guideline, there has been no formal guidance regarding the calculation of these disabled life reserves.

II. Scope

This guideline applies to group term life certificates on individuals who become disabled on or after January 1, 2009. Based on the provisions of Section 4.G. of the Standard Valuation Law, companies may apply this to group term life certificates on individuals who became disabled prior to January 1, 2009, provided they obtain permission from the commissioner.

III. Definitions

~~"2005 GTLW Mortality Tables" means the mortality rate tables shown in Attachments A and B.~~

~~"2005 GTLW Recovery Tables" means the recovery rate tables shown in Attachments C and D.~~"2005 GTLW Mortality Table", "2005 GTLW Recovery Table", "2023 GTLW Mortality Valuation Table", and "2023 GTLW Recovery Valuation Table" mean the tables found at https://content.naic.org/sites/default/files/actuary-acadamy-soari-glwp-table-rates.xlsx.

IV. The Group Waiver of Premium Reserve Calculation

A. The minimum standard of valuation for group term life waiver of premium disabled life benefits shall be the present value of the death benefit payable discounted for interest and recovery. Since there is not a contract reserve based upon an aggregate table, the discounted value of waived premiums is inadequate to support this liability.

B. The maximum interest rate to be used in determining the minimum valuation standard for any group term life waiver of premium disabled life benefit incurred on or after the effective date of this guideline shall be the maximum rate permitted by law in the valuation of life insurance of the same guaranteed duration issued on the same date as the claim incurral date of disability. For most

groups and companies this rate shall be the rate for life insurance with guaranteed duration greater than 20 years. The guaranteed duration used to determine the life insurance rate of interest is equal to the largest term in years between the point at which any individual in the group may become disabled and the point at which no death benefit is available. Thus, if a person could become disabled at age 20, and remain disabled, and receive a benefit upon death before age 65, the guaranteed duration would be 45 years.

C. The valuation tables were derived from employer-employee group life experience. Other forms of group term life insurance are also subject to the same requirements if they contain similar extended death benefit provisions.

~~I~~IV. ~~Text~~Group Term Life Certificates on Individuals Who Become Disabled on or After January 1, 2009, and on or Before December 31, 2022

Claims subject to this section of the Guideline may be valued under Section VI (applicable to disabilities incurred January 1, 2023 and later) at the election of the insurer provided these claims, for all future valuation dates, are valued under that section or any newer succeeding section at the insurer's election. The 2005 GTLW Mortality and Recovery Tables and the 2023 GTLW Mortality and Recovery Valuation Tables can be found here: https://content.naic.org/sites/default/files/actuary-acadamy-soari-glwp-table-rates.xlsx.

A. Group Waiver of Premium Reserve Calculation

~~1. The minimum standard of valuation for group term life waiver of premium disabled life benefits shall be the present value of the death benefit payable discounted for interest and recovery. Since there is not a contract reserve based upon an aggregate table, the discounted value of waived premiums is inadequate to support this liability.~~

~~2~~1. Except as provided in Section V.B., the 2005 GTLW Mortality and Recovery Tables shall be used for determining the minimum standard of valuation for any group term life waiver of premium disabled life benefit incurred ~~on or after the effective date of~~during the effective period of this section of this ~~g~~Guideline. ~~The valuation tables were derived from employer-employee group life experience. Other forms of group term life insurance are also subject to the same requirements if they contain similar extended death benefit provisions.~~ Section V.B. offers ways to modify the underlying rates of mortality or recovery if they differ from those associated with the underlying experience in the valuation table.

~~3. The maximum interest rate shall be the maximum rate permitted by law in the valuation of life insurance of the same guaranteed duration issued on the same date as the claim incurral date of disability. This maximum interest rate shall be used for determining the minimum standard of valuation for any group term life waiver of premium disabled life benefit incurred on or after the effective date of this guideline. The guaranteed duration used to determine the life insurance rate of interest is equal to the largest term in years between the point at which any individual in the group may become disabled and the point at which no death benefit is available. Thus, if a person could become disabled at age 20, and remain disabled, and receive a benefit upon death before age 65, the guaranteed duration would be 45 years. For most groups and companies this would mean the maximum interest rate shall be the rate for life insurance with duration greater than 20 years.~~

© 1999-2023 National Association of Insurance Commissioners

B. Use of Company Experience

1. The Appointed Actuary shall review company experience at least once every five years. The review of company experience can range from a detailed experience study to a high level analysis. The extent of the review must be sufficient to enable the Appointed Actuary to defend any conclusion reached. Company experience shall:

   i. Be segmented into policies with similar benefits, on individuals of each gender;

   ii. Be experience-specific to the company;

   iii. Include all relevant experience in the past three most recent years;

   iv. Exclude experience that is not in the past six most recent years;

   v. Otherwise be relevant, in accordance with the professional judgment of the Appointed Actuary; and

   vi. Not be deemed irrelevant by the commissioner.

2. The commissioner may require a company to use its experience based upon the most recent review referenced in Section V.B.1. to establish its specific valuation tables if:

   i. Actual mortality experience is reasonably expected to be greater than 90% of the 2005 GTLW Mortality Tables; or

   ii. Actual recovery experience is reasonably expected to be less than 125% of the 2005 GTLW Recovery Tables.

   Under these circumstances, the commissioner may require a company to use the process set out in Section V.B.4. and establish for the company a minimum value for Z.

3. A company may use its experience exclusively without reference to the standard tabular mortality expected experience or to the standard tabular recovery expected experience to create its specific valuation tables if:

   i. The Appointed Actuary can demonstrate and certify the following:

      a) The company-specific valuation tables are based on company experience with allowances for graduation and margins for adverse experience;

      b) The company-specific mortality valuation tables used for computing minimum reserves for group term life waiver of premium benefits are such that there is at least an 85% statistical confidence that the actual annual aggregate mortality will be less than the mortality in the company-specific-mortality valuation tables; and

c) The company-specific recovery valuation tables used for computing minimum reserves for group term life waiver of premium benefits are such that there is at least an 85% statistical confidence that the actual annual aggregate recoveries will be greater than the recoveries in the company-specific recovery valuation tables.

ii. The company has written permission from the domiciliary commissioner to use the company-specific valuation tables.

iii. Unless otherwise exempted or required, the specific valuation tables shall apply to the computation of minimum reserves for group term life waiver of premium disabled life benefits for claims incurred during or after the calendar year in which the study was performed.

iv. The company shall not use mortality and recovery tables with rates that produce reserves less than the reserves produced by using 75% of the 2005 GTLW Mortality Tables and 160% of the 2005 GTLW Recovery Tables for all durations of disability combined.

4. If not invoking Section V.B.3., a company may use a credibility-weighted combination of company mortality experience with the 2005 GTLW Mortality Tables and/or of company recovery experience with the 2005 GTLW Recovery Tables to create its specific valuation tables.

i. The blended tables for each gender and type of experience (mortality and recovery) shall be computed using the formula Blended Table = T x S, where:

a) Z shall be a credibility weighting factor, between 0 and 1, developed by the Appointed Actuary using credibility theory methods not unacceptable to the commissioner;

b) F shall be the ratio of the company's actual experience to the expected experience for the 2005 GTLW Mortality and Recovery Tables for each gender and type of experience (mortality and recovery);

c) M shall be 1.12 for mortality tables and 0.80 for recovery tables. The values provide a smooth transition between the 2005 tables and company experience when Z = 1;

d) S shall be the 2005 GTLW Mortality and Recovery Tables; and

e) T shall be computed using the following steps:

Step 1: Compute the raw value of T = [Z x (F x M) + (1 – Z)].

Step 2: Round T to the nearest 5%.

Step 3: If the absolute difference between the T produced in step 2 and the value of T utilized immediately prior to the

study is less than 10%, then set T equal to the value of T utilized immediately prior to the study.

Step 4: For all durations of disability, combined for each gender, set the value of T to the greater of 75% and the T resulting from step 3 for mortality and set the value of T to the lesser of 160% and the T resulting from step 3 for recovery.

ii. The company has written permission from the domiciliary commissioner to use the blended valuation tables.

iii. Unless otherwise exempted or required, the specific valuation tables shall apply to the computation of minimum reserves for group term life waiver of premium disabled life benefits for claims incurred during or after the calendar year in which the study was performed.

VI. Group Term Life Certificates on Individuals Who Become Disabled on or After January 1, 2023

A. When the insurer follows the instructions provided in this Guideline, the selected claim mortality rates and recovery rates automatically meet the minimum standard for computing reserves as established by Section 4.G. of the Standard Valuation Law.

B. Valuation Table Modifications for Company Experience

If not invoking the small company exception specified in Section VI.D., a company must use a credibility-weighted combination of its own claim mortality experience and claim recovery experience with the 2023 GTLW Mortality and Recovery Valuation Tables to create its specific valuation table.

i. For claim durations within the elimination period, mortality rates and recovery rates may be developed as below consistent with other Duration Groups or in any other manner deemed appropriate by the actuary. With respect to credibility, any value between 0 and 1 that the actuary deems appropriate for the block may be used.

ii. For claim durations beyond the elimination period, the valuation mortality rates and recovery rates shall be computed using the mortality rates from the 2023 GTLW Mortality Valuation Table (S_M) and recovery rates from the 2023 GTLW Recovery Valuation Table (S_R) multiplied by mortality experience adjustment factors (T_M) and recovery experience adjustment factors (T_R) that are calculated separately for three different duration groups for mortality and separately for three different duration groups for recovery.

Valuation Mortality Rate = $T_M \times S_M$

Valuation Recovery Rate = $T_R \times S_R$

The duration groups are defined as follows:

Group 1: duration > the satisfaction of the elimination period and duration <= 24 months
Group 2: duration > 24 months and duration <= 60 months

Group 3: duration > 60 months

a) S_M and S_R shall be the mortality rates and recovery rates respectively from the 2023 GTLW Mortality and Recovery Valuation Tables.

b) T_M shall be computed as $T_M = [Z_M \times F_M + (1 - Z_M)] \times (1 + M_M)$ and T_R shall be computed as $T_R = [Z_R \times F_R + (1 - Z_R)] \times (1 - M_R)$.

where

1) Z_M shall be a mortality credibility weighting factor, between 0 and 1, developed for each duration group according to the following specifications:

Group 1-3: $Z_M = Min\left(\sqrt{N_M / K_M}, 1\right)$ where N_M is the number of expected death counts determined by using claim mortality rates from the 2023 GTLW Mortality Valuation Table, and

2) K_M is a set of constants defined by duration group as follows for mortality:

Group 1: $K_M = 800$ Group 3: $K_M = 800$
Group 2: $K_M = 800$

3) Z_R shall be a recovery credibility weighting factor, between 0 and 1, developed for each duration group according to the following specifications:

Group 1-3: $Z_R = Min\left(\sqrt{N_R / K_R}, 1\right)$ where N_R is the number of expected recovery counts determined by using claim recovery rates from the 2023 GTLW Recovery Valuation Table, and

4) K_R is a set of constants defined by duration group as follows for recoveries:

Group 1: $K_R = 1{,}700$ Group 3: $K_R = 1{,}700$
Group 2: $K_R = 1{,}700$

5) F_M shall be the ratio of the company's actual death counts to the expected death counts in the 2023 GTLW Mortality Valuation Table for each duration group specified above and F_R shall be the ratio of the company's actual recovery counts to the expected recovery counts in the 2023 GTLW Recovery Valuation Table for each duration group specified above.

If the actuary has reserve adequacy or other significant analysis that demonstrates in the development and use of company-specific experience (see Section VI.C. below) that an alternative measurement is deemed appropriate, such as:

I. Use of some other weighting of claims (for example, death benefit amount) that is not only appropriate for measuring actual to expected (A to E), but also is expected to generally produce reserves not less than those produced by using a claim count measurement.

II. Use of an increased mortality credibility factor Z_M if F_M is greater than 1 and / or use of an increased recovery credibility factor Z_R if F_R is less than 1 to give unfavorable company experience more weight.

6) M_M and M_R are the company experience margins for mortality and recovery respectively, determined for each duration group, according to the following formulas:

$$M_M = Min\left(15\%, Max\left(5\%, 3\% + 1.65 * \sqrt{A_M / C_M}\right)\right)$$

$$M_R = Min\left(15\%, Max\left(5\%, 3\% + 1.65 * \sqrt{A_R / C_R}\right)\right)$$

where A_M is a set of constants defined by duration group as follows for mortality:

Group 1: $A_M = 1.0$ Group 3: $A_M = 1.0$
Group 2: $A_M = 1.0$

and A_R is a set of constants defined by duration group as follows for recoveries:

Group 1: $A_R = 2.0$ Group 3: $A_R = 2.0$
Group 2: $A_R = 2.0$

and C_M shall be the company's actual number of death counts by duration group.

and C_R shall be the company's actual number of recovery counts by duration group.

These are the minimum values for the definition of M_M and M_R prior to any reserve adequacy analysis. Adequacy tests and analysis of experience (for example, sharpness of fluctuations, trends over the period of the mortality rate study or recovery rate study, changing claims practices) may indicate that larger values of M_M or M_R may be more appropriate. If so, such values are deemed appropriate.

iii. The company shall not use mortality rates that are less than those produced by computing T_M as $T_M = 0.75$

C. Company-Specific Experience – Own Experience Measurement

In computing values F_M, F_R, T_M, and T_R to comply with section VI.B. above, the Appointed Actuary may consider the following:

© 1999-2023 National Association of Insurance Commissioners

i. Segment the company claim mortality experience and claim recovery experience into any major subgroups that may produce significantly different results (for example, market niches, claims operations, and unique benefit designs).

ii. Combine affiliated statutory entities and assumed reinsurance, where claim management is under a common structure, when considering company experience. It is also appropriate to evaluate experience separately when specific blocks of company business have distinct claim management practices or significantly different risk characteristics.

iii. Include all relevant experience the company is capable of providing for as many of the last five years as possible (not including the lag period described below). However, there are two situations where using other than a five-year period may be more appropriate. The first is when a company's experience in a longer period not only increases credibility but is still relevant and appropriate for the company's products and claim management practices. In this case, the period to be used is not to exceed ten years. The second is for a company that has had significant changes in product and/or claim management practices within the past five years that has diminished the relevance of the company's experience early in the five-year period. In this second situation, less than five years of experience may be used for any duration band for which there is compelling logic and when either the company's experience to be used is at least 90% credible, or the shorter experience period produces higher reserves than using five years.

iv. Recognize a suitable lag period to allow for a full resolution of claim status. For example, the lag period used in the 2019 Group Term Life Waiver Experience Study performed by the Society of Actuaries was 12 months. However, the Appointed Actuary may use a different lag period based on his or her company experience. For example, company experience indicates that all changes after the selected lag period are negligible.

v. Measure actual (A) to expected (E) deaths and A to E recoveries based on claim count (unless another weighting is deemed more appropriate, as mentioned in Section VI(B)(ii)(b)(5)), where the E is based on expected deaths and recoveries, respectively, from the 2023 GTLW Mortality Valuation Table and the 2023 GTLW Recovery Valuation Table. Claim count is also used in the measurement of credibility.

vi. Recognize where appropriate any flexibility built into the 2023 GTLW Mortality and Recovery Valuation Tables, such as not utilizing diagnosis-specific mortality rates and recovery rates when the information is deemed unreliable.

vii. Do not count as deaths or recoveries those claims that are closed due to settlement, or that have reached the end of the maximum benefit duration, or that are closed due to any other contractual limit.

viii. Use experience that is otherwise relevant in accordance with the professional judgment of the Appointed Actuary.

In the above paragraphs, the term "company" refers to a single company or a group of legally related companies subject to the same claim management.

D. Own Experience Measurement Exemption

Determine the number of claims that, according to the provisions of this Guideline, are subject to valuation using the 2023 GTLW Mortality and Recovery Valuation Tables. If, at the time of valuation, a company has fewer than 50 such open claims disabled within two years of the effective date of the valuation, and fewer than 200 such open claims disabled more than two years prior to the effective date of the valuation, the company is exempt from the requirement that the 2023 GTLW Mortality and Recovery Valuation Tables be modified by the company's own experience. Said company will use, based on the maximum values of M_M and M_R for any duration group according to Section VI(B)(ii)(b)(6) above, 115% of the 2023 GTLW Mortality Valuation Table for all duration groups to calculate claim mortality rates and 85% of the 2023 GTLW Recovery Valuation Table for all duration groups to calculate claim recovery rates in order to comply with the minimum valuation standard.

Editorial Note:
The following attachments to AG 44 as published in the *As of March 2022 Accounting Practices and Procedures Manual* have been removed from this Guideline and can now be found at *https://content.naic.org/sites/default/files/actuary-acadamy-soari-glwp-table-rates.xlsx*.

- Attachment B – 2005 GTLW Mortality Rates, Ultimate Period
- Attachment C – 2005 GTLW Recovery Rates, Select Period
- Attachment D – 2005 GTLW Recovery Rates, Ultimate Period

Actuarial Guideline XLV

THE APPLICATION OF THE STANDARD NONFORFEITURE LAW FOR LIFE INSURANCE TO CERTAIN POLICIES HAVING INTERMEDIATE CASH BENEFITS

Scope

This Guideline applies to individual life insurance policies, other than variable and non-variable adjustable life policies and current assumption whole life policies, that provide for an endowment benefit, materially less than the policy face amount, at a specified intermediate duration during a longer period of life insurance protection. The payment of such endowment benefit does not alter or eliminate any premiums or benefits scheduled for the period subsequent to the endowment date, nor does the policy automatically terminate upon payment of the endowment benefit. Policies that offer a return of premium endowment benefit may be considered a special case of the policies subject to this Guideline.

Background

In recent years a new category of life insurance products has emerged in the life insurance marketplace. These products offer a cash benefit at a specified time, typically many years prior to the coverage expiry date of the policy, conditioned on the insured being alive and the policy being in force at that time. The cash benefit has often taken the form of an intermediate period endowment that is either built into the policy or is provided through a rider or an endorsement. When the amount of the cash benefit is based upon the premiums paid into the policy, the benefit is often referred to as a return of premium benefit.

The straightforward application of Sections 3 and 5c of the Standard Nonforfeiture Law For Life Insurance (the Law), considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums, can result in negative or very low cash values at all durations for these products. This is caused by high premiums assumed applicable in the later durations. This application of the Law produces unacceptable results, as it fails to recognize that the cash benefit should be prefunded with the premiums that fall due prior to the time the benefit becomes available.

The intent of this Guideline is to provide guidance with respect to the required minimum cash values for some of the products described in the Scope section. However, other products within the scope designed to provide similar benefits, and having similar premium structures (for example products having a cash value at the end of an initial level premium period equal to the total premiums paid) would be expected to provide minimum cash values that are determined in a manner consistent with this Guideline. For products with multiple endowment benefits, the minimum cash values should be determined in accordance with the principles of this Guideline.

Text

A. The following methodology shall be used in the determination of minimum cash surrender values for policies subject to this Guideline in accordance with the requirements of the Law.

   1. The endowment period shall be that period of time measured from the issue date of the policy to the date when the endowment benefit becomes payable (the endowment date) under the terms of the policy.

   2. If the endowment benefit is added by rider to a policy, then for minimum cash value determination purposes the base policy and the endowment benefit are to be treated as integrated.

© 1999-2023 National Association of Insurance Commissioners

3. Premiums under the policy may be provided through a scale of guaranteed rates for the term of the policy or through a scale of current rates that are subject to a scale of guaranteed maximum premiums; if rates are subject to a scale of guaranteed maximum premiums, the minimum cash values shall be the greater of those produced under this Guideline using the guaranteed maximum rates and current rate scale applicable at issue of the policy.

4. Any cash surrender value available under the policy in the event of default in a premium payment due on any policy anniversary during the endowment period shall be an amount not less than the excess, if any, of the present value, on the anniversary, of the endowment benefit and any future incremental death benefits during the endowment period which would have been provided for by the policy if there had been no default, over the sum of:

   (i) The then present value of the adjusted premiums as defined below corresponding to premiums which would have fallen due on and after the anniversary during the endowment period; and

   (ii) The amount of any indebtedness to the company on the policy.

5. Incremental death benefits are death benefits during the endowment period in excess of the lowest death benefit provided under the policy during the endowment period.

6. The adjusted premiums for the policy shall be calculated on an annual basis and shall be such uniform percentage of the respective premiums specified in the policy for each policy year during the endowment period, excluding amounts payable as extra premiums to cover impairments or special hazards and also excluding any uniform annual contract charge or policy fee specified in the policy in a statement of the method to be used in calculating the cash surrender value and paid-up nonforfeiture benefits, that the present value, at the date of issue of the policy, of all adjusted premiums shall be equal to the sum of:

   (i) The present value of the endowment benefit and any incremental death benefits provided for by the policy during the endowment period;

   (ii) One percent (1%) of the average amount of insurance (total death benefit under the policy, including any incremental death benefits) at the beginning of each of the first ten policy years; and

   (iii) One hundred twenty-five percent (125%) of the nonforfeiture net level premium as defined below, provided however, that no nonforfeiture net level premium shall be considered to exceed 4% of the average amount of insurance (total death benefit under the policy, including any incremental death benefits) at the beginning of each of the first ten policy years.

7. The nonforfeiture net level premium for the policy shall be equal to the present value, at the date of issue of the policy, of the endowment benefit and any incremental death benefits provided for by the policy during the endowment period, divided by the present value, at the date of issue of the policy, of an annuity of one per annum payable on the date of issue of the policy and on each anniversary of such policy on which a premium falls due prior to the endowment date.

© 1999-2023 National Association of Insurance Commissioners

8. The mortality rates and interest rate used in the determination of the minimum cash values for the policy shall be those applicable under the Law considering during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums.

B. In no event can the cash surrender value under the policy at any duration be less than the greater of:

1. The minimum cash value calculated according to Section A of this Guideline; and

2. The minimum cash value at the same duration resulting from the application of the methods described in Sections 3 and 5c of the Law considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums. In performing this calculation, no annual premium at any duration after the endowment period shall exceed the difference between the death benefit and the cash value at that duration.

C. The cash surrender values for the policy must also satisfy the consistency of progression of cash values test contained in Section 8 of the Law, considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums.

D. For policies where the benefit is defined in more general terms as providing for a return of premiums paid or a portion of premiums paid, the procedures of Subsection 5c C of the Law and the requirements of Section A above shall be applied in the determination of a revised set of minimum cash values in the event the value of the endowment benefit of the policy changes due to a change made to the premium schedule provided at issue.

Applicability

This Guideline is effective for all policy forms filed on or after January 1, 2009, and affects all contracts issued on or after January 1, 2010.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XLVI

INTERPRETATION OF THE CALCULATION OF THE SEGMENT LENGTH WITH RESPECT TO THE LIFE INSURANCE POLICIES MODEL REGULATION UPON A CHANGE IN THE VALUATION MORTALITY RATES SUBSEQUENT TO ISSUE

I. Background

Some states have revised their regulation permitting the use of the 2001 CSO Preferred Class Structure Mortality Table so that at the company's option it might be used to value a policy on a plan which was previously approved for issue based on valuation using the 2001 CSO Mortality Table. A company making this election would be changing the valuation mortality rates. It is also the case that use of the 2001 CSO Preferred Class Structure Mortality Table is predicated upon the block of policies initially, and annually thereafter, satisfying certain requirements with respect to the present value of death benefits over certain future periods. If these requirements are not satisfied at some point in the future, the company must change to a table for which the requirements are satisfied. For example, this could mean changing from the super preferred nonsmoker table to the preferred nonsmoker table or maybe from the preferred smoker table to the smoker table. Although a non-elective change, this is also a change in the valuation mortality rates.

Section 4B of the Valuation of Life Insurance Policies Model Regulation defines the "Contract Segmentation Method" in which segments are to be calculated using the valuation mortality rates for deficiency reserves. Thus, potentially either of the two examples given above could trigger a recalculation of the valuation segments at the time the valuation mortality rates are changed. The purpose of this guideline is to prescribe which circumstances involving a change to the valuation mortality rates, require a recalculation of the segments and which do not.

The Valuation of Life Insurance Policies Model Regulation was adopted, in part, to stop the use of high net premiums late in the policy's life from unduly influencing the level of reserves early in the policy's life ("postfunding"). The contract segmentation method was the answer devised to control this. After the adoption of this regulation, companies incorporated the establishment of the segment lengths into the policy design process based on the valuation mortality expected to be used. Now it is seen that there are circumstances in which it may be necessary or desirable to change valuation mortality after issue. But if it triggers a segment recalculation then there could be unintended, undesirable results.

This guideline classifies the circumstances involved in changes to valuation mortality rates into two categories: those where deliberately designed postfunding is less likely so no segment recalculation is prescribed, and those where such postfunding is more possible so segment recalculation is required. In general, non-elective valuation mortality changes require no segment recalculation, while elective valuation mortality changes are divided into those on plans filed for approval before the adoption of this guideline and those filed after adoption. To preclude enhancing postfunding by changing valuation mortality after a plan is approved, recalculation of segments is required if the change is elected on plans filed after adoption of this guideline, but is not required for plans filed before.

II. Scope

This guideline is effective December 31, 2008.

© 1999-2023 National Association of Insurance Commissioners

III. Text

A. For policies subject to a non-elective change in valuation mortality rates:

For policies which were the subject of a non-elective change in valuation mortality rates because the requirements for continued use of the prior rates were no longer satisfied, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted so that the segments need not be recalculated.

B. For policies subject to a company election to substitute the 2001 Preferred Class Structure Table for the 2001 CSO Mortality Table:

1. For policies issued on a policy form filed for approval prior to January 1, 2009, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted so that the segments need not be recalculated.

2. For policies issued on a policy form filed for approval after January 1, 2009, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted to require that the segments be recalculated using the new valuation mortality rates.

Actuarial Guideline XLVII

THE APPLICATION OF COMPANY EXPERIENCE IN THE CALCULATION OF CLAIM RESERVES UNDER THE 2012 GROUP LONG-TERM DISABILITY VALUATION TABLE

I. Background

The 2012 Group Long-Term Disability (GLTD) Valuation Table, as included in the *Health Insurance Reserves Model Regulation* (#10), is the valuation standard to replace the Commissioner's Group Disability Table 1987 (CGDT87 Table) with a new one based on the GLTD 2008 Table. This table is referred to as the GLTD 2012 Valuation Table and can be found at the following location:

https://content.naic.org/sites/default/files/actuary-01-naic-2012-group-long-term-disability-valuation-table.xls

An actuarial guideline is more appropriate to handle the multiple segments of the 2012 GLTD Valuation Table, the computations of own experience and the application of credibility which are not normally found in model regulations.

II. Purpose

The purpose of this Actuarial Guideline is to provide an instruction for the use of the 2012 GLTD Valuation Table that is referenced in the *Health Insurance Reserves Model Regulation* (#10). This guideline pertains to Group Long-Term Disability claims consistent with the conditions defined in the model regulation, and governs the selection of claim termination rates for the purpose of calculating GLTD claim reserves. This guideline does not address reserve adequacy, which remains the concern of the insurer according to the terms expressed in the model regulation.

Although the various detailed formulas in this guideline do not directly address or define reserve adequacy, it is assumed that appropriate adequacy tests will be made periodically. Such adequacy testing is considered to be an additional tool for the actuary to make appropriate choices where leeway from any prescription made herein is allowed (A/E calculation, margin, etc.) so that the calculation of the reserve will generally be adequate and the actuary does not need to continually rely on other measures to achieve adequacy. In addition to the few times that leeway from prescription is mentioned below, nothing in this guideline should be assumed to prohibit the actuary from building a case and requesting permission from the state insurance commissioner for other appropriate variations. Many such situations, because they would apply to fully credible blocks of business and are intended for continual use, should be considered for approval by the commissioner for a period tied to the updates required by Section C.vi and not approved on an annual basis.

III. Text

A. When the insurer follows the instructions provided in this guideline, the selected claim termination rates automatically meet the minimum valuation standard defined in the model regulation.

B. Valuation Table Modifications

If not invoking the small company exception specified in Section D, a company must use a credibility-weighted combination of its own claim termination experience with the 2012 GLTD Valuation Table to create its specific valuation table.

i. For claims in Duration Group 1 (duration ≤ 3 months), termination rates may be developed as below consistent with other Duration Groups or in any other

© 1999-2023 National Association of Insurance Commissioners

manner deemed appropriate by the actuary. With respect to credibility, any value between 0 and 1.0 that the actuary deems appropriate for the block may be used.

ii. For claims beyond 3 months, the valuation termination rates shall be computed using the termination rates from the 2012 GLTD Valuation Table (S) multiplied by experience adjustment factors (T) that are calculated separately for four different duration groups.

Valuation Termination Rate = $T \times S$

The duration groups are defined as follows:

Group 2: duration > 3 months and duration ≤ 24 months
Group 3 duration > 24 months and duration ≤ 60 months
Group 4: duration > 60 months and duration ≤ 120 months
Group 5: duration > 120 months

a) S shall be the sum of recovery and death rates from the 2012 GLTD Valuation Table.

b) T shall be computed as $T = [Z \times F * (1 - M) + (1 - Z)]$.

1) Z shall be a credibility weighting factor, between 0 and 1, developed for each duration group according to the following specifications:
Groups 2–5: $Z = Min\left(\sqrt{N/K}, 1\right)$ N is the number of expected recovery and death counts from the 2012 GLTD Valuation Table.

2) K is a set of constants defined by duration group as follows:
Group 2: $K = 3{,}300$ Group 4: $K = 2{,}100$
Group 3: $K = 2{,}500$ Group 5: $K = 1{,}700$

3) F shall be the ratio of the company's actual total of recovery and death counts to the expected recovery and death counts for the 2012 GLTD Valuation Table for each duration group specified above.

If the actuary has reserve adequacy or other significant analysis that demonstrates in the development and use of Company Specific Experience (see Section C below) that an alternative measurement is deemed appropriate, such as:

I. Use of some other weighting of claims (gross benefit, net benefit, etc.) that is not only appropriate for measuring A/E, but also is expected to generally produce reserves not less than those produced by using a claim count measurement.

II. Use of an increased credibility factor Z if F is less than 1 to give the company experience more weight.

© 1999-2023 National Association of Insurance Commissioners

Then, a basis other than claim count may be used.

4) *M* is the company experience margin, determined for each duration group according to the following formula:

$$M = Min\left(15\%, Max\left(5\%, 3\% + 1.65 * \sqrt{A/C}\right)\right)$$

This is the minimum value for the definition of *M* prior to any reserve adequacy analysis. Adequacy tests and analysis of experience (sharpness of fluctuations, trends over the period of the termination rate study, changing claims practices, etc.) may indicate that a larger value of *M* may be more appropriate. If so, such a value is deemed appropriate.

5) *A* is a set of constants defined by duration group as follows:
Group 2: $A = 4.0$ Group 4: $A = 2.5$
Group 3: $A = 3.0$ Group 5: $A = 2.0$

6) *C* shall be the company's actual number of total recovery and death counts by duration group.

iii. The company shall not use termination rates that produce total reserves for claims disabled for more than two years that are less than the reserves produced for these claims by computing *T* as $\underline{T}$ = 1.30. If the Company Specific Experience, determined in Section C below, for Duration Group 3 includes at least 5,000 claim terminations, the value of *T* for that Duration Group shall not be limited to ≤ 1.30

C. Company Specific Experience—Own Experience Measurement

In computing values *F* and *S* to comply with Section B above, the appointed actuary shall:

i. Segment the company claim termination experience into any major subgroups that may produce significantly different results (e.g., market niches, claims operations, unique benefit designs, etc.).

ii. Combine affiliated statutory entities and assumed reinsurance, where claim management is under a common structure, when considering company experience. It is also appropriate to evaluate experience separately when specific blocks of company business have distinct claim management practices or significantly different risk characteristics.

iii. Include all relevant experience the company is capable of providing for as many of the last five years as possible (not including the lag period described below). However, there are two situations where using other than a five-year period may be more appropriate. The first is when a company's experience in a longer period not only increases credibility but is still relevant and appropriate for the company's products and claim management practices. The second is for a company that has had significant changes in product and/or claim management practices within the past five years that has diminished the relevance of the company's experience early in the five-year period. In this second situation, less than five years of experience may be used for any duration band for which there

is compelling logic and when either the company's experience to be used is at least 90% credible, or the shorter experience period produces higher reserves than using five years.

iv. Recognize a suitable lag period to allow for a full resolution of claim status. The lag period used in the 2008 GLTD Study was 12 months. However, the appointed actuary may use a different lag period based on his or her company experience. For example, company experience indicates that all changes after the selected lag period are negligible.

v. Measure actual (A) to expected (E) terminations based on claim count (unless another weighting is deemed more appropriate, as mentioned in Section B(ii)(b)4), where the E is based on monthly expected recoveries and deaths from the 2012 GLTD Valuation Table. Claim count is also used in the measurement of credibility.

vi. Update the minimum valuation basis in accordance with Section B above at least once every five years. In addition, the valuation basis also must be updated whenever the company's annual own experience study produces, in accordance with Section B, a value *T* that changes by more than 10% from the one used in the current valuation basis for any of the five duration groups.

vii. Recognize where appropriate any flexibility built into the 2012 GLTD Valuation Table, such as not utilizing diagnosis-specific termination rates when the information is deemed unreliable.

viii. Do not count as terminations those claims that are closed due to settlement (i.e., a lump sum replacing a series of potential future payments), or that have reached the end of the maximum benefit duration, or that are closed due to a contractual limit, such as a mental and nervous limit. For this purpose, a closure due to a change in definition of disability should be considered an actual termination and not a termination due to reaching the maximum benefit duration.

ix. Use experience that is otherwise relevant in accordance with the professional judgment of the appointed actuary.

x. Do not use experience that the commissioner has deemed inappropriate or likely to produce significantly inadequate reserves.

In the above paragraphs, the expression term "company" refers to a single company or a group of legally related companies subject to the same claim management.

D. Own Experience Measurement Exemption

If, at the time of valuation, a company has fewer than 50 open claims disabled within two years of the effective date of the valuation, and fewer than 200 open claims disabled more than two years prior to the effective date of the valuation, the carrier is exempt from the requirement that the 2012 GLTD Valuation Table be modified by the company's own experience. Open claims include only claims subject to valuation using the 2012 GLTD Valuation Table. Said company will use 100% of the 2012 Valuation Table for calculating claims termination rates in order to comply with the minimum valuation standard.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XLVIII
(*Applies to 2017 and Subsequent Year Valuations)*

ACTUARIAL OPINION AND MEMORANDUM REQUIREMENTS FOR THE REINSURANCE OF POLICIES REQUIRED TO BE VALUED UNDER SECTIONS 6 AND 7 OF THE NAIC VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION (MODEL #830)

Background

The NAIC Principle-Based Reserving Implementation (EX) Task Force ("PBRI Task Force") serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. The PBRI Task Force was also charged with further assessing, and making recommendations regarding, the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013 NAIC White Paper of the Captives and Special Purpose Vehicle Use (E) Subgroup of the Financial Condition (E) Committee. Some of these reinsurance arrangements have been referred to as "XXX/AXXX Captive arrangements," although not all such arrangements actually involve reinsurers organized as captives. In this connotation, XXX denotes the reserves prescribed by Section 6 of the NAIC *Valuation of Life Insurance Policies Model Regulation* (Model #830) while AXXX denotes the reserves prescribed by Section 7 of Model #830, and by *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38). On June 30, 2014, the PBRI Task Force adopted a framework as found in Exhibits 1 and 2 of the June 4, 2014 report from Rector & Associates, Inc. (the "June 2014 Rector Report"). Exhibit 2 of the report included a charge to the Life Actuarial (A) Task Force (LATF) to develop a level of reserves (the "Required Level of Primary Security") that must be supported by certain defined assets ("Primary Security"). The level of reserves is to be calculated by a method referred to as the "Actuarial Method." Another charge to LATF was to promulgate an actuarial guideline specifying that, in order to comply with the NAIC *Actuarial Opinion and Memorandum Regulation*, Model 822 ("AOMR") as it relates to XXX/AXXX reinsurance arrangements, the opining actuary must issue a qualified opinion as to the ceding insurer's reserves if the ceding insurer or any insurer in its holding company system has engaged in a XXX/AXXX reserve financing arrangement that does not adhere to the Actuarial Method and Primary Security forms adopted by the NAIC. The initial version of *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (AG 48) was developed in response to that charge, with an effective date of January 1, 2015.

Coordination between this Actuarial Guideline and the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)

Subsequently, on January 8, 2016, the NAIC adopted revisions to the *Credit for Reinsurance Model Law* (Model #785). Among other things, the revisions to Model #785 provide commissioners with the authority to enact, by regulation, additional requirements for ceding insurers to claim credit for reinsurance with respect to certain XXX/AXXX financing arrangements. On December 13, 2016, the NAIC adopted the *Term and Universal Life Insurance Reserve Financing Model Regulation* (Model #787) as the regulation permitted by Model #785. LATF subsequently received a charge to redraft AG 48 to make it as consistent as possible with the provisions of Model #787. The current version of this actuarial guideline is the result.

The following is an overview of the interrelationship between this actuarial guideline and Model #787, and the regulatory strategy that led to the adoption of each:

1. The initial version of this actuarial guideline immediately established national standards for the use of XXX/AXXX financing arrangements in an attempt to quickly set minimum standards based on the framework adopted by the PBRI Task Force on June 30, 2014. This initial version applied to such reinsurance arrangements entered into on or after 1/1/2015.

© 1999-2023 National Association of Insurance Commissioners

2. The revised statute (the NAIC *Credit for Reinsurance Model Law* (Model #785)) and a new regulation (the NAIC *Term and Universal Life Insurance Reserve Financing Model Regulation* (Model #787)) were then developed and adopted by the NAIC.

3. Except as noted in #4 below, this actuarial guideline will cease to be effective, on a state by state basis, as individual states enact Model #785 and adopt Model #787 to replace it.

4. Notwithstanding, it is anticipated that in a small number of states, Model #787 will need to be adopted on a "prospective" basis only (that is, it will only apply to ceded policies issued on or after the effective date thereof). In those cases, this actuarial guideline will remain as the authority for ceded policies subject to this actuarial guideline but to which Model #787, as adopted in a given state, does not apply. So although its role might diminish, this actuarial guideline will remain an essential part of the regulatory framework for a small number of states for many years to come.

5. To ensure uniformity of treatment between states, companies, and ceded policies (whether governed by this actuarial guideline or by Model #787) and to avoid confusion, this actuarial guideline is being updated, effective as of January 1, 2017, to make it as substantively identical to Model #787 as possible.

Authority, Avoidance, and Purpose

The requirements in this actuarial guideline derive authority from Section 3 of the AOMR, or, after the Operative Date of the *Valuation Manual*, from Section 1 of VM-30 of the *Valuation Manual*. Both Section 3 of the AOMR and Section 1 of VM-30 provide that the commissioner has the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items. As contained in the framework adopted by the PBRI Task Force on June 30, 2014, this actuarial guideline defines new terms, such as Primary Security and Required Level of Primary Security, specifies the Actuarial Method used to calculate the Required Level of Primary Security, and specifies other requirements that must be followed when reinsurance is involved in order for the appointed actuary to render an actuarial opinion that is not qualified.

No statute, regulation or guideline can anticipate every potential XXX/AXXX captive arrangement. Common sense and professional responsibility are needed to assure not only that the text of this actuarial guideline is strictly observed, but also that its purpose and intent are honored scrupulously. To that end, and to provide documentation to the appointed actuary as to the arrangements that are subject to review under this actuarial guideline, the appointed actuary may request from each ceding insurer, and may rely upon, the certification by the Chief Financial Officer or other responsible officer of each ceding insurer filed with the insurer's domiciliary regulator that the insurer has not engaged in any arrangement or series of arrangements involving XXX or AXXX reserves that are designed to exploit a perceived ambiguity in, or to violate the purpose and intent of, this actuarial guideline.

© 1999-2023 National Association of Insurance Commissioners

The purpose and intent of this actuarial guideline is to establish uniform, national standards governing XXX or AXXX reserve financing arrangements[1] in conformity with the PBRI Task Force framework and, in connection with such arrangements, to ensure that Primary Security, in an amount at least equal to the Required Level of Primary Security, is held by or on behalf of the ceding insurer. As described further in Section 4.B., the provisions of this actuarial guideline are not intended to apply to policies that were issued prior to 1/1/2015 if those policies were included in a captive reserve financing arrangement as of 12/31/2014. Further, the requirements of this actuarial guideline should be viewed as minimum standards and are not a substitute for the diligent analysis of reserve financing arrangements by regulators. A regulator should impose requirements in addition to those set out in this actuarial guideline if the facts and circumstances warrant such action.

Text

1. Authority

   Pursuant to Section 3 of the AOMR or, after the Operative Date of the *Valuation Manual*, to Section 1 of VM-30 of the *Valuation Manual*, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

2. Scope

   This actuarial guideline applies to reinsurance contracts that cede liabilities pertaining to Covered Policies as that term is defined in Section 4.

3. Exemptions

   This actuarial guideline does not apply to the situations described in Subsections A through F.

   A. Reinsurance of:

      (1) Policies that satisfy the criteria for exemption set forth in Section 6F or Section 6G of Model #830; and which are issued before the later of:

         (a) The effective date of Model #787 in the state of domicile of the ceding insurer, and

         (b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies' statutory reserves, but in no event later than January 1, 2020;

      (2) Portions of policies that satisfy the criteria for exemption set forth in Section 6E of Model #830 and which are issued before the later of:

[1] In general, reserve financing arrangements are those where the security/assets backing part or all of the reserves have one or more of the following characteristics: such security/assets (1) are issued by the ceding insurer or its affiliates; and/or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; and/or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any if its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance arrangement).

© 1999-2023 National Association of Insurance Commissioners

(a) The effective date of Model #787 in the state of domicile of the ceding insurer, and

(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies' statutory reserves, but in no event later than January 1, 2020;

(3) Any universal life policy that meets all of the following requirements:

(a) Secondary guarantee period, if any, is five (5) years or less;

(b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables and valuation interest rate applicable to the issue year of the policy; and

(c) The initial surrender charge is not less than one hundred percent (100%) of the first year annualized specified premium for the secondary guarantee period;

(4) Credit life insurance;

(5) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts; or

(6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year; or

B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Section 2D of Model #785; or

C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:

(1) Prepares statutory financial statements in compliance with the NAIC *Accounting Practices and Procedures Manual*, without any departures from NAIC statutory accounting practices and procedures pertaining to the admissibility or valuation of assets or liabilities that increase the assuming insurer's reported surplus and are material enough that they need to be disclosed in the financial statement of the assuming insurer pursuant to *Statement of Statutory Accounting Principles No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures* ("SSAP No. 1"); and

(2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in the NAIC *Risk-Based Capital (RBC) for Insurers Model Act* (Model #312) when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation; or

© 1999-2023 National Association of Insurance Commissioners

D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:

(1) Is not an affiliate, as that term is defined in Section 1A of the NAIC *Insurance Holding Company System Regulatory Model Act* (Model #440), of:

(a) The insurer ceding the business to the assuming insurer; or

(b) Any insurer that directly or indirectly ceded the business to that ceding insurer;

(2) Prepares statutory financial statements in compliance with the NAIC *Accounting Practices and Procedures Manual*;

(3) Is both:

(a) Licensed or accredited in at least 10 states (including its state of domicile), and

(b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and

(4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in Model #312 when its risk-based capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer's reported surplus; or

E. Reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of Model #785, pertaining to certain certified reinsurers or Section 5B(4)(b) of Model #785, pertaining to reinsurers meeting certain threshold size and licensing requirements; or

F. Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:

(1) The risks are clearly outside of the intent and purpose of this actuarial guideline (as described in the Authority, Avoidance and Purpose section above);

(2) The risks are included within the scope of this actuarial guideline only as a technicality; and

(3) The application of this actuarial guideline to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant to this Section 3F to exempt a reinsurance

© 1999-2023 National Association of Insurance Commissioners

treaty from this actuarial guideline, as well as the general basis therefor (including a summary description of the treaty).

Drafting Note: *The exemption set forth in Section 3F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this actuarial guideline purely as a technicality; and that regulatory relief in those instances may be appropriate. The example that was given at the time this exemption was developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business ceded. The exemption should not be used with respect to so-called "normal course" reinsurance transactions; rather, such transactions should either fit within one of the standard exemptions set forth in Sections 3A, B, C, D, or E or meet the substantive requirements of this actuarial guideline.*

4. Definitions

A. "Actuarial Method" means the methodology used to determine the Required Level of Primary Security, as described in Section 5.

B. "Covered Policies" means the following: Subject to the exemptions described in Section 3, Covered Policies are those policies, other than Grandfathered Policies, of the following policy types:

(1) Life insurance policies with guaranteed nonlevel gross premiums and/or guaranteed nonlevel benefits, except for flexible premium universal life insurance policies; or,

(2) Flexible premium universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period.

Note*: Although "Covered Policies" is defined to include all the policies described in Subsections B1 and B2 above, it is noted that whether a given "Covered Policy" is subject to this actuarial guideline or, instead, to Model #787 should be determined under Section 8 (Sunset).*

C. "Grandfathered Policies" means policies of the types described in Subsections B1 and B2 above that were:

(1) Issued prior to January 1, 2015; and

(2) Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not have met one of the exemptions set forth in Section 3 had that section then been in effect.

D. "Non-Covered Policies" means any policy that does not meet the definition of Covered Policies, including Grandfathered Policies.

E. "Required Level of Primary Security" means the dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies, but not more than the total reserve ceded.

© 1999-2023 National Association of Insurance Commissioners

F. "Primary Security" means the following forms of security:

(1) Cash meeting the requirements of Section 3A of Model #785;

(2) Securities listed by the Securities Valuation Office meeting the requirements of Section 3B of Model #785, but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit, and excluding any securities issued by the ceding insurer or any of its affiliates; and

(3) For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:

(a) Commercial loans in good standing of CM3 quality and higher;

(b) Policy Loans; and

(c) Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.

G. "Other Security" means any security acceptable to the commissioner other than security meeting the definition of Primary Security.

H. "*Valuation Manual*" means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.

I. "VM-20" means "Requirements for Principle-Based Reserves for Life Products," including all relevant definitions, from the *Valuation Manual*.

5. The Actuarial Method

A. Description of Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this actuarial guideline shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the *Valuation Manual* as then in effect, applied as follows:

(1) For Covered Policies described in Section 4B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the *Valuation Manual*, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 4B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the *Valuation Manual* imposes when aggregating these policy types for purposes of principle-based

© 1999-2023 National Association of Insurance Commissioners

reserve calculations. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

(2) For Covered Policies described in Section 4B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

(3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

(4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:

(a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;

(b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security may be reduced by the statutory reserve retained by the ceding insurer on those Covered Policies, where the retained reserve of those Covered Policies should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;

(c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be reduced by the amount resulting by applying the Actuarial Method including the reinsurance section of VM-20 to the portion of the Covered Policy risks ceded in the exempt arrangement, except that for Covered Policies issued prior to Jan 1, 2017, this adjustment is not to exceed [c_x/ (2 * number of reinsurance premiums per year)] where c_x is calculated using the same mortality table used in calculating the Net Premium Reserve; and

(d) For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty.

© 1999-2023 National Association of Insurance Commissioners

The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.

(5) In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

(6) If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this actuarial guideline, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this actuarial guideline.

(7) If a reinsurance treaty subject to this actuarial guideline cedes risk on both Covered and Non-Covered Policies:

(a) The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies; and

(b) Any Primary Security and/or Other Security used to meet any requirements pertaining to the Non-Covered Policies may not be used to satisfy any requirements related to the Required Level of Primary Security and/or Other Security for the Covered Policies.

B. Valuation Used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

(1) For assets, including any such assets held in trust, that would be admitted under the NAIC *Accounting Practices and Procedures Manual* if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer's general account and without taking into consideration the effect of any prescribed or permitted practices; and

(2) For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the NAIC's Life Actuarial (A) Task Force no later than the December 31 on or immediately preceding the valuation date for which the Required Level of Primary Security is being

© 1999-2023 National Association of Insurance Commissioners

calculated. The tables of asset spreads and asset default costs shall be incorporated into the Actuarial Method in the manner specified in VM-20.

6. Required Actuarial Analysis and Actuarial Opinion and Memorandum Requirements

A. Required Actuarial Analysis

Before the due date of each actuarial opinion, as to each reinsurance treaty in which Covered Policies have been ceded, the appointed actuary of each ceding insurer must perform an analysis on a treaty by treaty basis, of such Covered Policies to determine whether, as of the immediately preceding December 31 (the valuation date):

(1) Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of Section 3 of Model #785, on a funds withheld, trust, or modified coinsurance basis; and

(2) Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (1) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of Section 3 of Model #785; and

Note*: For the sake of clarity, funds consisting of Primary Security pursuant to Paragraphs (1) may exceed the Required Level of Primary Security, and Other Security is only required under Paragraph (2) to the extent that there is any portion of the statutory reserves as to which Primary Security is not so held. For example, if a ceding insurer's statutory reserves equal $1 Billion, its Required Level of Primary Security is $600 Million, and it holds $1 Billion in Primary Security pursuant to Paragraph (1), no Other Security is required under Paragraph (2).*

(3) Any trust used to satisfy the requirements of this Section 6 complies with all of the conditions and qualifications of Section 11 of the NAIC *Credit for Reinsurance Model Regulation* (Model #786), except that:

(a) Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 5B, be valued according to the valuation rules set forth in Section 5B, as applicable; and

(b) There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 6A(1); and

(c) The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 6A(1)) below 102% of the level required by Section 6A(1) at the time of the withdrawal or substitution.

B. Qualified Actuarial Opinion; Remediation

(1) The appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the *Valuation Manual*, as applicable, unless:

© 1999-2023 National Association of Insurance Commissioners

(a) The requirements of Section 6A(1) and 6(A)(2) were fully satisfied as of the valuation date as to such reinsurance treaty; or

(b) Any deficiency has been eliminated before the due date of the Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 6A(1) and 6A(2) to be fully satisfied as of the valuation date; or

(c) The ceding insurer has established a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 6A(1).

(2) In addition to the requirement set forth in Section 6B(1) above, the appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial option as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the *Valuation Manual*, as applicable, if the appointed actuary for any affiliated reinsurer of the ceding insurer issues a qualified actuarial opinion with respect to such affiliated reinsurer where (a) the affiliate reinsures Covered Policies of the ceding insurer and (b) the qualified actuarial opinion pertaining to the affiliated reinsurer results, in whole or in part, from the analysis required by this actuarial guideline.

Note*: The remediation option set forth in Section 6B(1)(c) mirrors that set forth in Model #787. Under this option, a ceding company may choose to avoid the consequence (a qualified opinion under this actuarial guideline) by establishing a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held. For example, suppose a ceding insurer has established statutory reserves of $1 Billion and has Primary Security of $550 Million and Other Security of $450 Million. Suppose further that the actuary determines that the insurer's Required Level of Primary Security is $600 Million. Under Section 6B(1)(c), the insurer may avoid a qualified opinion by establishing a liability equal to $450 Million (the difference between the statutory reserve of $1 Billion and the $550 Million amount of Primary Security actually held).*

C. Additional Requirements for the Actuarial Opinion and Memorandum for Companies that have Covered Policies Requiring the Analysis Pursuant to this actuarial guideline

(1) In the statement of actuarial opinion, the appointed actuary of the ceding insurer must state whether (i) he has performed an analysis, as to each reinsurance arrangement under which Covered Policies have been ceded, of the security supporting the Covered Policies and whether funds consisting of Primary Security in an amount at least equal to the Required Level of Primary Security are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis and (ii) funds consisting of Primary Security or Other Security in an amount equal to the statutory reserves are held by or on behalf of the ceding insurer as security under the reinsurance arrangement.

(2) In the actuarial memorandum as described by Section 7 of the AOMR or Section 3B of VM-30 of the *Valuation Manual*, as applicable, the appointed actuary of the ceding insurer must document the analysis and requirements applied by this

© 1999-2023 National Association of Insurance Commissioners

actuarial guideline as to each reinsurance arrangement under which Covered Policies are ceded.

(3) In the event that a reinsurance treaty contains both (1) Covered Policies subject to this actuarial guideline rather than to Model #787, and (2) Covered Policies subject to Model #787 rather than to this actuarial guideline, the treaty shall be tested as a whole for purposes of a ceding insurer's compliance with both (a) the requirements of Section 6A(1) and Section 6A(2) of this actuarial guideline and (b) the requirements of Section 7A(3) and Section 7A(4) of Model #787; provided further, that:

(a) If funds consisting of Primary Security are held in amounts less than the Required Level of Primary Security, such funds consisting of Primary Security shall be allocated first to fulfill the Required Level of Primary Security for the Covered Policies subject to this actuarial guideline, with any remainder allocated to those Covered Policies subject to Model #787; and

(b) If funds consisting of Other Security are held in amounts less than the requirements of Section 6A(2), such funds consisting of Other Security shall be allocated first to fulfill the Other Security requirements for the Covered Policies subject to this actuarial guideline, and any remainder shall be allocated to those Covered Policies subject to Model #787.

7. Effective Date

This actuarial guideline shall become effective as of January 1, 2017 with respect to all Covered Policies. This actuarial guideline supersedes and replaces all previous versions thereof with respect to actuarial opinions rendered as to valuation periods ending on or after January 1, 2017.

Note*: For the avoidance of doubt, actuarial opinions issued with respect to the year ended December 31, 2016, shall be governed by the version of AG 48 in effect on December 31, 2016, as included in the Accounting Practices and Procedures Manual.*

8. Sunset Provision

This actuarial guideline shall cease to apply as to Covered Policies that are both (a) issued by ceding insurers domiciled in a jurisdiction that has in effect, as of December 31st of the calendar year immediately preceding the year in which the actuarial opinion is to be filed, a regulation substantially similar to Model #787 adopted by the NAIC on December 13, 2016; and (b) subject to Model #787 as so adopted by the ceding insurer's jurisdiction of domicile. This Actuarial Guideline shall continue to apply, without interruption, to any and all Covered Policies not included in both (a) and (b) of the immediate preceding sentence.

Note*: It is anticipated that, for most states, this actuarial guideline will sunset pursuant to (a) and (b) of Section 8 and will continue only with respect to the limited number of states in which their version of Model #787 applies prospectively only, i.e., applies only to Covered Policies issued on or after the effective date of their version of Model #787. It is anticipated, however, that most states will be able to adopt a version of Model #787 that, like the Model itself, applies to all Covered Policies (subject to the applicable exemptions and grandfathering provisions) that are "in force" on or after the effective date, even if the policies were originally issued prior to that effective date. The goal of Section 8 is to ensure that* ***all*** *Covered Policies ceded in reinsurance transactions within the scope of this actuarial guideline continue to be subject to this actuarial guideline unless and until they become subject to Model #787.*

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline XLIX

THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST

Background

The *Life Insurance Illustrations Model Regulation* (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

(1) Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.

(2) Limits the policy loan leverage shown in an illustration.

(3) Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows:

i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this Actuarial Guideline, regardless of the date the policy was sold.

iii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

iv. This actuarial guideline shall not apply for any new business or in force life insurance illustration on policies sold on or after December 14, 2020.

v. Notwithstanding part iv of this section, an insurer may choose to utilize AG 49-A guidance for new illustrations on policies sold prior to the effective date of AG 49-A provided that, 1) the insurer utilizes AG 49-A guidance for all new product illustrations subject to AG 49, and 2) the insurer does not revert back to the AG 49 guidance.

© 1999-2023 National Association of Insurance Commissioners

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii) below:

i. The policy is subject to Model #582.

ii. Interest credits are linked to an external index or indices.

3. Definitions

A. **Alternate Scale**: A scale of non-guaranteed elements currently being illustrated such that:

i. The credited rate for each Index Account does not exceed the lesser of the maximum credited rate for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate for each Index Account shall not exceed the average of the maximum credited rate for the illustrated scale and the guaranteed credited rate for that account. However, the credited rate for each Index Account shall never be less than the guaranteed credited rate for that account.

ii. If the illustration includes a loan, the illustrated rate credited to the loan balance does not exceed the illustrated loan charge.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. **Benchmark Index Account**: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy's Index Accounts, subject to the requirements of paragraph 5 (D). However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in paragraph 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.

© 1999-2023 National Association of Insurance Commissioners

vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in paragraph 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values, including but not limited to experience refunds or bonuses**.**

viii. There are no limitations on the portion of account value allocated to the account.

C. **Fixed Account**: An account where the credited rate is not tied to an external index or indices.

D. **Index Account**: An account where the credited rate is tied to an external index or indices.

4. Illustrated Scale

The credited rate for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in paragraph 4 (A).

ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of a Benchmark Index Account, and shall use that cap in paragraph 4 (A).

B. For each applicable Benchmark Index Account, the arithmetic mean of the geometric average annual credited rates calculated in paragraph 4 (A) shall be the maximum credited rate(s) for the illustrated scale.

C. For other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. The determination shall reflect the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event shall the credited rate for the illustrated scale exceed the applicable rate calculated in paragraph 4 (B).

D. At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with paragraphs 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% of the annual

© 1999-2023 National Association of Insurance Commissioners

net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-based credits) allocated to support the policy.

B. If an insurer does not engage in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all benefits including illustrated bonuses.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in paragraphs 5 (A), 5 (B) and 5 (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

6. Policy Loans

If the illustration includes a loan, the illustrated rate credited to the loan balance shall not exceed the illustrated loan charge by more than 100 basis points.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in paragraph 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical interest rates using current index parameters for the most recent 20-year period.

Actuarial Guideline XLIX-A

THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD (On or After December 14, 2020)

Background

The *Life Insurance Illustrations Model Regulation* (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements that are linked to an index or indices should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for inforce illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

(1) Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.

(2) Limits the policy loan leverage shown in an illustration.

(3) Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies sold on or after December 14, 2020.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.

ii. The policy offers Indexed Credits.

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The Annual Rate of Indexed Credits for each Index Account does not exceed the lesser of the maximum Annual Rate of Indexed Credits for the illustrated scale less

100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the Annual Rate of Indexed Credits for each Index Account shall not exceed the average of the maximum Annual Rate of Indexed Credits for the illustrated scale and the guaranteed Annual Rate of Indexed Credits for that account. However, the Annual Rate of Indexed Credits for each Index Account shall never be less than the guaranteed Annual Rate of Indexed Credits for that account.

ii. If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedge assets for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate.

C. Annual Rate of Indexed Credits: The total annualized Indexed Credits expressed as a percentage of the account value used to determine the Indexed Credits.

D. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. The Hedge Budget used to determine the cap in 3 (D) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind cannot be used to increase the annual cap.

vii. There are no enhancements or similar features that provide additional Indexed Credits in excess of the interest provided by 3 (D) (i) through 3 (D) (v), including but not limited to experience refunds, multipliers, or bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4 (A) (ii) for purposes of complying with this guideline. A policy shall have no more than one Benchmark Index Account.

© 1999-2023 National Association of Insurance Commissioners

E. Fixed Account: An account where there are no Indexed Credits.

F. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.

G. Index Account: An account where some or all of the amounts credited are Indexed Credits.

H. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Amounts credited to the policy resulting from a floor greater than zero on an account with any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices are included.

I. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

J. Policy Loan Interest Rate: The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

K. Policy Loan Interest Credited Rate: The annualized interest rate credited that applies to the portion of the account value backing the Loan Balance:

i. For the portion of the account value in the Fixed Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate.

ii. For the portion of the account value in an Index Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account.

L. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. Illustrated Scale

The total Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for the Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25- year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers a Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the Benchmark Index Account in 4 (A).

ii. If the insurer does not offer a Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical,

© 1999-2023 National Association of Insurance Commissioners

supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For the Benchmark Index Account the Annual Rate of Indexed Credits shall not exceed the minimum of (i) and (ii):

i. The arithmetic mean of the geometric average annual credited rates calculated in 4 (A).

ii. 145% of the Annual Net Investment Earnings Rate.

C. For any other Index Account that is not the Benchmark Index Account in 3 (D), the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The Annual Rate of Indexed Credits reflecting the fundamental characteristics of the Index Account and the appropriate relationship to the expected risk and return of the Benchmark Index Account. The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

D. For the purposes of compliance with Section 6 (C) of Model #582, the Supplemental Hedge Budget is subtracted from the Annual Rate of Indexed Credits before comparing to the earned interest rate underlying the disciplined current scale.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for Indexed Credits in an account, the assumed earned interest rate underlying the disciplined current scale for that account, inclusive of all general account assets, both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed the lesser of (i) and (ii):

i. The Annual Net Investment Earnings Rate, plus 45% of the lesser of (1) and (2):

1. Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.

© 1999-2023 National Association of Insurance Commissioners

ii. The Annual Rate of Indexed Credits plus the Annual Net Investment Earnings Rate minus the Hedge Budget.

These rates should be adjusted for timing differences in the hedge cash flows to ensure that fixed interest is not earned on the Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

> Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

For a policy with multiple Index Accounts, a maximum rate in 5 (A) should be calculated for each account. All accounts, fixed and indexed, within a policy can be tested in aggregate.

B. If an insurer does not engage in a hedging program for Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the Annual Net Investment Earnings Rate.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy's account value.

6. Policy Loans

If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated

Policy Loan Interest Rate by more than 50 basis points. For example, if the illustrated Policy Loan Interest Rate is 4.00%, the Policy Loan Interest Credited Rate shall not exceed 4.50%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical Indexed Credits using current index parameters for the most recent 20-year period.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline L

2013 INDIVIDUAL DISABILITY INCOME VALUATION TABLE ACTUARIAL GUIDELINE

A. Background

The 2013 IDI Valuation Table, as included in the *Health Insurance Reserves Model Regulation* (#10), is the valuation standard to replace the 1985 Commissioner's Individual Disability Tables (85CIDA/85CIDC). The link below brings one to the 2013 IDI Valuation Table workbook and instructions:

https://content.naic.org/sites/default/files/actuary-01-2013-idi-valuation-table-workbook-and-instructions-version-1-3.zip

An actuarial guideline is more appropriate to handle the multiple segments of the 2013 IDI Valuation Table, the computations of own experience, the application of credibility, and successor updates to the table, which are not normally found in model regulations.

B. Purpose

The purpose of this actuarial guideline is to provide instructions for the use of the 2013 IDI Valuation Table that is referenced in the *Health Insurance Reserves Model Regulation* (#10). This guideline pertains to IDI claims consistent with the conditions defined in the model regulation and governs the selection of claim termination rates for the purpose of calculating IDI claim reserves. This guideline does not address reserve adequacy, which remains the concern of the insurer according to the terms expressed in the model regulation.

Although the various detailed formulas in this guideline do not address or define reserve adequacy directly, it is assumed that appropriate adequacy tests will be made periodically. Such adequacy testing is considered to be an additional tool for the actuary to make appropriate choices in cases in which leeway from any prescription made herein is allowed (A/E calculation, margin, etc.) so that the calculation of the reserve generally will be adequate and the actuary does not need to continually rely on other measures to achieve adequacy. In addition to the instances in which leeway from prescription is mentioned below, nothing in this guideline should be assumed to prohibit the actuary from building a case and requesting permission from the state insurance commissioner for other appropriate variations. Many such situations, because they would apply to fully credible blocks of business and are intended for continual use, should be considered for approval by the commissioner for a period tied to the updates required by section C.vi. of this guideline and not approved on an annual basis.

When the insurer follows the instructions provided in this guideline, the selected claim termination rates meet the minimum valuation standard defined in the model regulation.

C. Valuation Table Modifications

If not invoking the own experience measurement exemption exception specified in section E of this guideline, a company should use a credibility weighted combination of its own claim termination experience with the 2013 IDI Valuation Table to create its specific valuation table for the purpose of calculating disabled life reserve (DLR).

For claims in duration group 1 (months 1 to 12 following disability incurral) or greater, the valuation termination rates are computed using the termination rates from the 2013 IDI Valuation Table (S) multiplied by experience adjustment factors (T) that are calculated separately for four different duration groups.

Valuation Termination Rate = T x S

The duration groups are defined as follows:

Group 1: duration 1 to 12 months
Group 2: duration > 12 months and duration <= 24 months
Group 3 duration > 24 months and duration <= 60 months
Group 4: duration > 60 months and duration <= 120 months
Group 5: duration > 120 months

S is the claim termination rates from the 2013 IDI Valuation Table; and

T is computed as $T = [Z \text{ x } F * (1-M) + (1 - Z)]$.

Z is a credibility weighting factor, between 0 and 1, developed for each duration group according to the following specifications:

Group 1-5: $Z = Min\left(\sqrt{N/K}, 1\right)$ N is the number of expected claimant termination counts from the 2013 IDI Valuation Table.

K is a set of constants defined by duration group as follows:

Group 1 and 2: K = 3,300
Group 3: K = 2,500
Group 4: K = 2,100
Group 5: K = 1,700

F is the ratio of the company's actual total of termination counts to the expected termination counts for the 2013 IDI Valuation Table for each duration group specified above;

The A/E ratio (F) is to be determined based on monthly indemnity. If the actuary has reserve adequacy or other significant analysis that demonstrates that some other weighting of claims (claim or claimant counts, gross benefit, net benefit, etc.) is appropriate for measuring A/E, and also is expected to produce reserves not less than those produced by using a monthly indemnity measurement, such alternative measurement is deemed appropriate. If the actuary cannot produce A/E ratios based on monthly indemnity and only based on claim count or claimant count, an adjustment factor on 0.962 should be multiplied by the A/E ratios in each duration segment to convert them to an indemnity basis. The 0.962 factor is based on the observed relationship for indemnity- versus count-based claim termination experience in the IDI Valuation Table.

M is the company experience margin, determined for each duration group 2 or greater according to the following formula:

$$M = Min\left(15\%, Max\left(5\%, 3\% + 1.65 * \sqrt{A/C}\right)\right)$$

This is the minimum value for the definition of M prior to any reserve adequacy analysis. Adequacy tests and analysis of experience (sharpness of fluctuations, trends over the period of the termination rate study, changing claims practices, etc.) may indicate that a larger value of M may be more appropriate. If so, such a value is deemed appropriate. For duration group 1 (1 to 12 months), M is 5 percent, the same as the 2013 IDI Valuation Table margin for duration 1.

A is a set of constants defined by duration group as follows:

Group 1 and 2: *A* = 4.0
Group 3: *A* = 3.0
Group 4: *A* = 2.5
Group 5: *A* = 2.0

C is the company's actual number of total claimant termination counts by duration group. If an actuary cannot directly determine claimant termination counts, he or she may approximate it using the average number of claims per claimant for their block of claims.

The company should not use termination rates that produce total reserves for claims disabled for more than two years that are less than the reserves produced for these claims by computing T as T = 1.30.

D. Company-Specific Experience—Own Company Experience Measurement

In computing values F and S to comply with section B of this guideline, the appointed actuary should:

1. Segment the company claim termination experience into any major subgroup that may produce significantly different results (e.g., market niches, risk management practices, unique benefit designs, etc.);

2. Combine affiliated statutory entities and assumed reinsurance, in which claim management is under a common structure, when considering company experience. It also is appropriate to evaluate experience separately when specific blocks of company business have distinct risk management practices or significantly different risk characteristics;

3. Include all relevant experience the company is capable of providing for as many of the last five years (not including the lag period described below) as is appropriate;

4. Include a suitable lag period. Some claims may close retroactively, and others initially thought to be closed may reopen retroactively. Therefore, based on company experience, a suitable lag period is needed. The appointed actuary may use a lag period of up to 12 months if company experience shows it is appropriate. The five-year period mentioned above does not include the lag period;

5. Measure A/E based on monthly indemnity consistent with the development of the 2013 IDI Valuation Table. The A/E ratio is defined as the ratio of actual claim termination experience to the expected claim termination experience, according to the 2013 IDI Valuation Table with margin (by disability duration grouping). The A/E ratio is referred to as the variable F in section B, paragraph 4 of this guideline. For companies that can develop A/E studies only based on claim termination counts, an adjustment factor of 0.962 should be multiplied by their A/E ratio for each claim duration to convert it to an indemnity basis. The 0.962 factor was developed based on the relationship of the indemnity-based A/E to count-based A/E for the industry table;

6. In calculating expected claim terminations based on the 2013 IDI Valuation Table, companies should use all variables and modifiers with two exceptions:

    a. If a company has not maintained appropriate diagnosis codes on historical claim records, the company may set the diagnosis CTR modifier to 1.00.

© 1999-2023 National Association of Insurance Commissioners

b. If a company has not maintained appropriate occupation codes on historical claim records to identify occupations and assign them to the five occupation classes of the 2013 IDI Valuation Table consistent with definitions of these occupation classes, the company may assign claims to Occ Classes 1, 2, 3, and 4 based on the way the company has assigned claims to the 85CIDA occupation classes.

7. Assign credibility based on claimant termination counts, and not monthly indemnity terminated. Companies should use claimant termination counts and not claim termination counts in determining the number of terminations for their own company experience credibility. Each company will need to make appropriate adjustments based on its average number of claims per claimant if it is not able to determine claimant termination counts directly and can only directly measure claim termination counts. For example, on average, if a company has 1.5 open claims per claimant and if it had 100 claim terminations in a duration segment over its five-year study period, it would divide 100 by 1.5 and use 67 claimant terminations when determining credibility;

8. Update the minimum valuation basis in accordance with section B of this guideline at least once every five years. In addition, the valuation basis also should be updated whenever the company's annual own experience study produces, in accordance with section B, a value T that changes by more than 10 percent from the one used in the current valuation basis for any of the five duration groups. All claims valued using the 2013 IDI Valuation Table share the same company experience factors. When the company experience factors are updated, the new factors apply to all claims valued using the 2013 table, including claims incurred prior to the update of the experience factors;

9. Do not count as terminations those claims that are closed due to settlement (i.e., a lump sum replacing a series of potential future payments); that have reached the end of the maximum benefit duration; or that are closed due to a contractual limitation, such as a mental disorder limitation. For this purpose, a termination due to a change in definition of disability is not considered a termination due to reaching the maximum benefit duration. Terminations of residual or partial disability claims count as total disability terminations. Changes in the definition of disability do not count as a termination unless the claim actually terminates. If a claim closes when the definition of disability changes, that is counted as a claim termination;

10. Use experience that is otherwise relevant in accordance with the professional judgment of the appointed actuary;

11. Do not use experience that the commissioner has deemed inappropriate or likely to produce significantly inadequate reserves; and

12. In the above paragraphs, the term "company" refers to a single company or a group of legally related companies subject to the same claim management.

E. Own Experience Measurement Exemption

If, at the time of valuation, a company has fewer than 50 open claimants disabled within two years of the effective date of the valuation, and fewer than 200 open claimants disabled more than two years prior to the effective date of the valuation, the insurer is exempt from the requirement that the 2013 IDI Valuation Table be modified by the company's own experience. Said company should use 100 percent of the 2013 IDI Valuation Table for calculating claims termination rates in order to comply with the minimum valuation standard. This exemption is determined at the statutory company level and not at any segmented level that might be used in determining the own experience modifier.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline LI

THE APPLICATION OF ASSET ADEQUACY TESTING TO LONG-TERM CARE INSURANCE RESERVES

Background

The *Health Insurance Reserves Model Regulation (#010)* and the *NAIC Valuation Manual (VM-25)* contain requirements for the calculation of long-term care insurance (LTC) reserves. Regulators have observed a lack of uniform practice in the implementation of tests of reserve adequacy and reasonableness of LTC reserves. The reserve adequacy testing required by Model #10 and VM-25 does not provide regulators comfort as to the reserve adequacy of companies with material blocks of LTC business. As such, regulators must rely upon asset adequacy analysis required by the *NAIC Valuation Manual* (*VM-30*) to evaluate the solvency position of companies with sizable blocks of LTC business. This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for the asset adequacy testing applied to a company's LTC block of contracts. In particular, this Guideline:

(1) Specifies that the appropriate form of asset adequacy analysis may be in the form of a gross premium valuation or in a more robust form, such as cash-flow testing, with Actuarial Standards of Practice providing guidance in this area;

(2) Clarifies the type of adequacy testing methods that must be used for aggregation with other blocks of business to be allowed for asset adequacy analysis purposes;

(3) Requires a uniform approach to supporting acceptable assumptions regarding future LTC premium rate increases;

(4) Provides requirements for documentation of assumptions associated with all key LTC risks; and

(5) Provides requirements for documentation of standalone LTC asset adequacy testing results.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into the *NAIC Valuation Manual* (VM-30) at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements at the time the corresponding VM-30 requirements become effective.

Text

1. **Effective Date**

This Guideline shall be effective for reserves reported with the December 31, 2017, and subsequent annual statutory financial statements.

2. **Authority**

Pursuant to Section 1, paragraph 3, of *VM-30* of the *NAIC Valuation Manual*, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

3. **Scope**

This Guideline shall apply to a company with over 10,000 inforce lives covered by long-term care insurance contracts as of the valuation date. All long-term care insurance contracts, whether directly written or assumed through reinsurance are included. Accelerated death benefit products or other combination products where the substantial risk of the product is associated with life insurance or an annuity are not subject to this Guideline.

4. **Asset Adequacy Analysis of LTC Business**

A. As stated in Actuarial Standard of Practice (ASOP) No. 22, multiple asset adequacy analysis methods, including cash-flow testing and gross premium valuation, are available to actuaries for this analysis.

The method of analysis used for LTC shall conform with ASOP No. 22 in recognition of the typical significant asset and liability-related risks associated with LTC.

B. Asset adequacy analysis specific to all inforce LTC business, and without consideration of results for other block of business within the company, must be performed for valuations associated with the December 31, 2017, and subsequent annual statutory financial statements. The analysis shall comply with applicable Actuarial Standards of Practice, including standards regarding identification of key risks. Material assumptions associated with the LTC business shall be determined testing moderately adverse deviations in actuarial assumptions.

C. When determining whether additional reserves are necessary:

1. A reserve deficiency in the LTC block may be aggregated with sufficiencies in the company's other blocks of business for the purposes of developing an actuarial opinion, if cash-flow testing is used for both the LTC business and for all significant blocks of non-LTC business within a company. If a reserve deficiency in the LTC block is not offset with sufficiencies in the company's other blocks of business, then additional reserves shall be established as required by section 2.C.2. of *VM-30*.

2. If cash-flow testing is not used for testing of the LTC business, then a reserve deficiency revealed from another method, e.g., a gross premium valuation, utilized for purposes of asset adequacy analysis of the LTC block under this Guideline shall not be offset with sufficiencies in the company's other blocks of business. The additional reserves under this Guideline shall be established based only upon the adequacy of the reserves in the LTC block.

D. When determining the effect of investment returns or the time value of money:

1. In the case where cash-flow testing is used, the company must allocate investment income to the LTC block of business consistently with the way investment income generated by the General Account is managed. If, however, a segment of the General Account is used to manage the investment risk for LTC business, the investment income generated by assets from that segment should be appropriately represented within the asset adequacy analysis.

2. In the case where a gross premium valuation method is used or asset cash flows are not explicitly modeled, the discount rate used by the actuary must reflect consideration of the yield on current assets held to support the liability as well as future yields on assets purchased with future premium income and reinvestments or anticipated divesture of existing assets.

E. The analysis shall only anticipate premium rate increases based upon a rate increase plan that is documented, is supported by and has been approved by management, is highly likely to be undertaken, and contains rate increase requests and timelines by jurisdiction. The assumptions used in the analysis should reflect a reasonable estimate of regulatory approved amounts and implementation timelines.

5. **Documentation Required**

The documentation requirements below are to be incorporated as a separate section of the appointed actuary's Actuarial Memorandum required by the *VM-30* or in a special Actuarial Memorandum containing LTC-specific information and shall be submitted to the commissioner of the company's state of domicile. The separate section of the companywide Actuarial Memorandum or the special Actuarial Memorandum shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality provisions regarding the Actuarial Memorandum contained in *VM-30* are applicable to the separate section of the Actuarial Memorandum and to the special Memorandum.

A. Results of the asset adequacy analysis of the LTC business shall be reported and documented in the separate section of the Actuarial Memorandum or the special Memorandum, as appropriate.

B. Assumptions on mortality shall be documented to state the reference standard valuation table, if applicable, and explicitly cite adjustments, select factors, and mortality improvement factors, where applicable. If a reference standard valuation table is not used in setting the mortality assumption, then a table of rates and comparison of the applied rates to rates from an unmodified standard mortality table for sample issue ages shall be provided. A summary of experience or other actuarial support of assumptions used shall be documented.

C. Assumptions on voluntary lapse shall be documented in table format by duration band and by other factors such as gender, marital status, with versus without inflation rider, and length of benefit period impacting the lapse assumption, where applicable. A summary of experience or other support of assumptions shall be documented.

D. Assumptions on morbidity shall be documented and actuarial support of the assumption shall be provided. If an outside source is used as the basis for morbidity assumptions, then the rationale for the applicability of that source and any adjustments to the factors from that source shall be documented.

E. Assumptions on investment returns and interest rates shall be documented. If a simplified approach is applied, such as implicit reflection of projected investment returns through the use of discount rates in a gross premium valuation as contemplated in Section 4.D.2., then justification shall be provided.

F. Any rate increases already approved shall be documented by jurisdiction with approved implementation timelines. Assumptions on future rate increases shall be documented by policy form or policy grouping. Such documentation should adequately describe the way in which future rate increase assumptions are developed. Unless the appointed actuary has operational responsibility for carrying out the rate increase plan specified in Section 4.E.,

© 1999-2023 National Association of Insurance Commissioners

the Memorandum shall contain a signed and dated reliance statement from the person with operational responsibility for carrying out such actions that the rate increase plan(s) provided to the appointed actuary appropriately reflects management's plan.

G. Documentation of any other material assumptions shall be provided.

H. Documentation shall be provided for assumptions that have significantly changed from the prior year's analysis.

© 1999-2023 National Association of Insurance Commissioners

Actuarial Guideline LII

VARIABLE ANNUITY EARLY ADOPTION

Background

Beginning in 2015, the NAIC commissioned a study of the reserve and RBC framework for Variable Annuity products. The study concluded that the existing requirements resulted in non-economic volatility, providing incentive for companies to engage in the use of financial planning techniques that the NAIC deemed inappropriate. Considerable effort was spent to develop and test updates to the reserve and RBC framework to address these issues. That revised framework was adopted by the NAIC during 2018, and the changes to NAIC models, the NAIC *Valuation Manual*, and the NAIC *Life Risk-Based Capital Forecasting & Instructions* have been developed and adopted by the NAIC on August 2, 2019. By the provisions of the SVL (Model 820), the changes to the *Valuation Manual* will be effective on January 1, 2020, and will impact subsequent financial statements.

During the discussion of the framework by the Variable Annuities Issues (E) Working Group, the question was raised whether companies would have the option to 'early adopt'; that is, to apply the new framework for the reserve and RBC values used for the December 31, 2019, financial statements. Since the new framework has been determined to provide improved financial measurement of the company's liability and risk, there was agreement that optional application of the new framework for the December 31, 2019, financial statements would be appropriate.

Guideline

A company may elect to apply the VM-21 requirements from the 2020 NAIC *Valuation Manual* as the *Valuation Manual* requirements for the valuation on December 31, 2019. For such election, the phase-in provision of *Valuation Manual* VM-21 Section 2.B. may not be elected. Any company electing early adoption of VM-21 shall also:

1. Apply the provisions of *Actuarial Guideline XLIII—CARVM for Variable Annuities* as amended for 2020 to the December 31, 2019, valuation of contracts within the scope of that guideline;

2. Apply the Life RBC instructions for 2020 in the calculation of C-3 RBC in LR027 for 2019;

3. Follow the documentation and certification requirements of VM-31 from the 2020 *Valuation Manual* for the Variable Annuity Business. In the VA Summary, clearly indicate the use of the new requirements in the section on change in methods from prior year; and

4. Notify the commissioner of the state of domicile of such elections.

Actuarial Guideline LIII

APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER RESERVES

Background

The *NAIC Valuation Manual (VM-30)* contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy analysis. Regulators have observed a lack of uniform practice in the implementation of asset adequacy analysis. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy analysis performed by life insurers. In particular, this Guideline:

(1) Helps identify reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets.

(2) Clarifies elements to consider in establishing margins on asset-related assumptions.

(3) Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum.

(4) Requires sensitivity testing regarding complex assets supporting life insurer business.

(5) Identifies expectations in practice regarding the valuation of complex assets within asset adequacy analysis.

(6) Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the analysis requirements will be on assets categorized as high-yielding.

(7) Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Text

1. Effective Date

This Guideline shall be effective for asset adequacy analysis of the reserves reported in the December 31, 2022, Annual Statement and for the asset adequacy analysis of the reserves reported in all subsequent Annual Statements.

© 1999-2023 National Association of Insurance Commissioners

Guidance Note: It is anticipated that the requirements contained in this Guideline will be incorporated into VM-30 at a future date, effective for a future valuation year. Requirements in the Guideline will cease to apply to annual statutory financial statements when the corresponding or replacement VM-30 requirements become effective.

2. Scope

This Guideline shall apply to all life insurers with:

A. Over $5 billion of general account actuarial reserves (from Exhibits 5, 6, 7 and 8 of the annual statement) and non-unitized separate account assets, or

B. Over $100 million of general account actuarial reserves (from Exhibits 5, 6, 7 and 8 of the annual statement) and non-unitized separate account assets and over 5% of supporting assets (selected for asset adequacy analysis) in the category of Projected High Net Yield Assets, as defined in Section 3.F.

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

This Guideline applies to assets supporting liabilities tested in the asset adequacy analysis except it does not apply to unitized separate account assets or policy/contract loans.

3. Definitions

A. Equity-Like Instruments – Assets that include the following:

i. Any assets that, for purposes of risk-based capital C-1 reporting, are in the category of common stock, i.e., have a 30% or higher risk-based capital charge.

ii. Any assets that are captured on Schedule A or Schedule BA of the annual statement.

iii. Bond funds.

B. Fair Value – The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, consistent with methodology of fair value, as reported in the Annual Statement.

C. Net Market Spread – For each asset grouping, shall mean the spread over comparable Treasury bonds that equates the fair value as of the valuation date with modeled cash flows, less the default assumption used in asset adequacy analysis.

Market conventions and other approximations are acceptable for the purposes of this definition.

D. Investment Grade Net Spread Benchmark – The applicable spread found in Appendix I using the weighted average life (WAL) of the associated non-Equity-Like Instrument.

E. Guideline Excess Spread – The net spread derived by subtracting the Investment Grade Net Spread Benchmark from the Net Market Spread for non-Equity-Like Instruments. Investment expenses shall be excluded from this calculation.

© 1999-2023 National Association of Insurance Commissioners

F. Projected High Net Yield Assets – Currently held or reinvestment assets that are either:

i. An Equity-Like Instrument assumed to have higher value at projection year 10 or later than under an assumption of annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after. Aggregation shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model, or

ii. Assets other than Equity-Like Instruments where the assumed Guideline Excess Spread is higher than zero. In addition:

(a) Aggregation of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model.

(b) For applicable assets that do not have an explicit WAL or term to maturity, the appointed actuary shall disclose the method used to determine the appropriate WAL used for comparing to the Investment Grade Net Spread Benchmark.

(c) For purposes of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark, investment expenses shall be excluded.

iii. The following asset types can be excluded from the scope of requirements in sections 4.A.ii. through 5.:

(a) Cash or cash equivalents

(b) Treasuries and agency bonds

(c) Public non-convertible, fixed-rate corporate bonds with no or immaterial callability

4. **Asset Adequacy Considerations and Documentation Expectations**

A. Net Return and Risk Documentation

i. For all assets, either currently held or in assumed reinvestments, provide:

(a) Identification of the assumed gross asset yield and the key components (for example, default and investment expenses) deducted to arrive at the assumed net asset yield.

(b) Explanation of any future reinvestment strategy assumptions that materially differ from current practices.

ii. For Projected High Net Yield Assets, either currently held or in assumed reinvestments, provide:

© 1999-2023 National Association of Insurance Commissioners

(a) A detailed explanation describing the relationship between the expected gross returns from these assets and the risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period in moderately adverse conditions.

(b) Commentary on how assumptions on assets with risk factors leading to substantial volatility of returns, as identified through sensitivity testing or other means, contain an appropriate margin to reflect the uncertainty in the timing and amounts of asset cash flows.

(c) Identification of the extent to which Projected High Net Yield Assets are supporting major product categories, e.g., individual fixed annuities and pension risk transfers.

(d) Explanation of rationale for materially changing or not changing complex-asset-based assumptions from the prior year's analysis.

B. Model Rigor – Where significant risks associated with complex, Projected High Net Yield Assets are not adequately captured with traditional modeling techniques, more rigorous modeling of those risks should occur.

i. Where necessary to adequately reflect the risk:

(a) Multi-scenario testing of those risks specific to complex assets should be performed. For example, investments that may provide a higher expected return in part due to limited information, niche skill sets, or other factors may require unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.

(b) Asset cash flows should be appropriately projected to reflect anticipated liquidity under adverse conditions. If such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.

(c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy analysis results being less favorable.

(d) The full distribution of risk associated with complex assets should be considered.

ii. An appointed actuary may use simplifications, approximations, and modeling efficiency techniques if the appointed actuary can demonstrate that the use of such techniques does not make asset adequacy analysis results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.

© 1999-2023 National Association of Insurance Commissioners

Guidance Note: Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.

C. Fair Value Determination – In asset adequacy analysis, when an asset is projected to be available for sale, a fair value of that asset is established, based on the projected market conditions. Fair Value should only be determined internally (by the insurance or investment management company) when the market-based value of the asset or similar asset cannot be obtained or expected to be obtained in a projected scenario.

i. When the Fair Value of a material portion of supporting assets is determined internally, the actuarial memorandum shall contain a step-by-step description of the approach used to calculate the Fair Value of such assets.

ii. Provide the total Fair Value of assets that have values determined internally.

iii. When the Fair Value of a material portion of assets is determined internally, a sensitivity test should be performed (and the impact on asset adequacy analysis results presented) assuming a haircut to internally derived Fair Values that the appointed actuary deems reasonable given the commensurate level of anticipated uncertainty.

D. Non-Publicly Traded Assets – For non-publicly traded assets originated by the company, within the company's group, or within an entity closely tied to a company's group (inclusive of the company's investment manager), provide the following:

i. Documentation of practices to help ensure accurate valuation of those assets.

ii. The total Fair VGuideline Excess Spreadalue of such assets.

iii. To the extent the contractual agreement affects the investment income revenue streams included in the asset adequacy analysis, disclose in detail applicable contractual agreements and revenue sharing, e.g., performance fees, between the entity responsible for providing investment or other types of services and the insurer.

Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

E. Investments Expenses (Fees) – Assumed investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the expected expenses in light of the complexity of the assets.

F. Reinsurance Modeling – Related to reinsurance, relevant communications and disclosures, for instance commentary on collectability and counterparty risk, should be presented in the memorandum.

Guidance Note: Section 4.F. is consistent with the standard laid out in ASOP No. 11 – Reinsurance Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports.

© 1999-2023 National Association of Insurance Commissioners

G. Borrowing – Please identify if any borrowing is modeled besides to address very short-term liquidity needs. Also, verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.

5. **Sensitivity Tests and Attribution Analysis related to Assumptions on Projected High Net Yield Assets**

A. Sensitivity Testing

i. Perform and disclose, separately for (a) and (b), the asset adequacy analysis results from the following sensitivity tests:

(a) For reinvestment assets other than Equity-Like Instruments, assume the Net Market Spreads (before deduction of investment expenses) for Projected High Net Yield Assets do not exceed the Investment Grade Net Spread Benchmark and apply the test to a baseline of a level Treasury rate scenario.

For the purposes of limiting the Net Market Spreads at the Investment Grade Net Spread Benchmark, Projected High Net Yield Assets may be aggregated together but shall not include any assets that are not Projected High Net Yield Assets.

(b) For reinvestment assets that are Equity-Like Instruments, assume annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after.

ii. Strict technical compliance for each asset may not be practical for reasons such as model limitations. Professional judgment should be applied to produce sensitivity testing results that are consistent with the spirit of the test. A variety of alternative methods may be acceptable. Appropriate explanation and justification should be provided for the method that was employed.

iii. Sensitivity testing for the purpose of this Guideline does not reflect commentary on moderately adverse conditions, but the volatility and impact demonstrated from the testing should be contemplated in Section 4.A.ii.(b) considerations.

B. For Projected High Net Yield Assets for non-Equity-Like Instruments, either currently held or in assumed reinvestments, perform and disclose the following attribution analysis steps at the asset type level associated with the templates in Section 6:

i. State the assumed Guideline Excess Spread.

ii. Estimate the proportion of the Guideline Excess Spread attributable to the following factors:

(a) Credit risk

(b) Illiquidity risk

(c) Deviations of current spreads from long-term spreads defined in Appendix 1

(d) Volatility and other risks (identify and describe these risks in detail)

iii. Provide commentary on the results of Section 5.B.ii. Also, where judgment is applied, provide supporting rationale of how the expected return in excess of the Investment Grade Net Spread Benchmark is estimated.

Guidance Note: A best-efforts approach is expected for the year-end 2022 attribution analysis.

6. **Reporting, Review, and Templates**

Guidance Note: The NAIC Valuation Analysis (E) Working Group (VAWG) shall serve as a resource in the targeted review of asset adequacy analysis related to modeling of business supported with Projected High Net Yield Assets. VAWG shall provide periodic reports identifying outliers and concerns regarding the analysis to help inform regulators on the effectiveness of this Guideline in meeting the seven objectives stated in the Background section.

A. The documentation, sensitivity test results, and attribution analysis referenced above are to be incorporated as a separate, easily identifiable section of the actuarial memorandum required by VM-30 or as a standalone document, with a due date of April 1 following the applicable valuation date. The domiciliary commissioner may approve a later due date for companies seeking a hardship extension. The separate section or standalone document shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality and information provisions in state adoptions of NAIC Model 820 regarding the actuarial memorandum are applicable to the separate section or standalone document required by this Guideline.

B. The following sample templates adopted by the Life Actuarial (A) Task Force (LATF) are available on the LATF web page (https://content.naic.org/cmte_a_latf.htm) under the "Documents" tab:

i. Asset summary.

ii. Components of net asset yield for various asset classes, with separate tables to be provided for initial assets and reinvestment assets.

iii. Sensitivity test aspects for Projected High Net Yield Assets that are fixed-income.

iv. Sensitivity test results for Projected High Net Yield Assets.

v. Attribution analysis, with separate tables to be provided for initial assets and reinvestment assets for Projected High Net Yield Assets.

ACTUARIAL GUIDELINES – APPENDICES

Appendix C-1

Provides maximum reserve valuation and maximum life policy nonforfeiture interest rates for new issues, new purchases or changes in fund (as defined) under Section 4217, 4218, and 4221(k) of the New York Insurance Law as amended in 1982, 1983, 1985, 1986, 1987, 1988, 1990 and 1994. This information is provided for informational purposes and to aid compliance with the New York law.

Appendix C-2

Includes interpretations from the former Emerging Actuarial Issues (E) Working Group adopted by the Financial Condition (E) Committee. The Financial Analysis (E) Working Group and the Valuation Analysis (E) Working Group follow these interpretations when performing reviews of the reserving methodologies under *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38).

Appendix C-1

APPENDIX TO GUIDELINES

This information can be found on the New York State Department of Financial Services website:
https://www.dfs.ny.gov/apps_and_licensing/life_insurers/max_reserve_life

NEW YORK STATE DEPARTMENT OF FINANCIAL SERVICES
Maximum Reserve Valuation and Maximum Life Policy
Nonforfeiture Interest Rates

The maximum reserve valuation and nonforfeiture interest rates, prescribed by Sections 4217 and 4221(k) of the New York Insurance Law, are specified in "Table A through Table H Rates" noted below. Such rates vary from year to year based on Moody's corporate bond yield averages for 12 and 36 months ending on June 30, and weighting factors prescribed by Section 4217. The Moody's averages are provided for years 1981 to present in the attached Appendix.

Clarification on Fixed Annuity Reserves Interest Rates

We note that there has been some concern over the appropriate maximum valuation interest rate for flexible premium deferred annuities (FPDA). Section 4217(c)(4)(D)(iii) of the New York Insurance Law does not allow the use of the additional .05 weighting factor for annuities that guarantee interest rates on future considerations received more than twelve months beyond the valuation date. Accordingly, for flexible premium deferred annuities the weighting factors shown in Section 4217(c)(4)(D)(iii)(I) or 4217(c)(4)(D)(iii)(II) should be used. For convenience, maximum valuation interest rates for such FPDAs are shown in Table D (issue year basis) and Table G (change in fund basis). The rates shown in Table E and Table H are not appropriate for FPDAs.

Governor

ADRIENNE A. HARRIS
Acting Superintendent

September 20, 2022

TO: ALL AUTHORIZED LIFE INSURANCE COMPANIES, ACCREDITED LIFE REINSURERS, FRATERNAL BENEFIT SOCIETIES AND CHARITABLE ANNUITY SOCIETIES

SUBJECT: MAXIMUM RESERVE VALUATION AND MAXIMUM LIFE POLICY NONFORFEITURE INTEREST RATES

Attached hereto is an outline providing maximum reserve valuation and maximum life policy non-forfeiture interest rates for new issues, new purchases or changes in fund (as defined) for years 1982 through 2022 (and other years where shown), under Sections 4217, 4218 and 4221(k) of the New York Insurance Law, as amended in 1982, 1983, 1985, 1986, 1987, 1988, 1990, and 1994.

The maximum valuation and non-forfeiture interest rates, prescribed by Sections 4217 and 4221(k) of the New York Insurance Law for future years, will vary from year to year depending on Moody's corporate bond yield averages.

The maximum valuation interest rates for issues, purchases and changes-in-fund of years 1982 through 2022 (and other years where shown) are outlined below. The maximum valuation and non-forfeiture interest rates for Ordinary Life Insurance are shown in Category A of page 1, except for Single Premium Life Insurance, as defined in Section 4217(c)(4)(B)(vi), the maximum valuation interest rates for which are shown in Category B on pages 2-4.

Please refer to Sections 4217 and 4221 of NY Insurance Law, Regulation 147 and Regulation 151 for definitions and explanations of valuation interest rate, guarantee duration, plan type and product category. Regulation 151 has been effective since February 28, 2001, and is available on our web site.

This notice is to be used for informational purposes, as an aid in complying with the law.

Should any person have any question or comment in regard to this information, please contact Mr. Matthew Ryan of the Life Bureau at (518) 474-7929 or Matthew.Ryan@dfs.ny.gov.

APPENDIX

The maximum reserve valuation interest rates are based on reference interest rates, which are averages of corporate bond earnings published by Moody's Investors Service, Inc., and weighting factors prescribed by Section 4217, which defines running averages of the published monthly yield rates for 12-month and 36-month periods.

The following table shows the 12-month and 36-month yield averages for recent years:

TABLE 1

For Period Ending June 30 of Year	12-Month Running Average (1)	36-Month Running Average (2)	Lesser of Two Averages (3)
1981	13.71%	11.57%	11.57%
1982	15.70%	13.64%	13.64%
1983	13.39%	14.26%	13.39%

2021	2.96%	3.54%	2.96%
2022	3.52%	3.28%	3.28%

The maximum nonforfeiture interest rate for Life Insurance, under Section 4221(k), for a particular issue year, is equal to 125% of the maximum reserve valuation interest rate for the same issue year, rounded to the nearer 1/4%.

Should the computed maximum reserve valuation interest rate for Life Insurance (other than Single Premium Life Insurance covered in Category B on pages 2-4) for a particular issue year be different from the actual maximum reserve valuation interest rate for the next previous issue year by less than 1/2%, then the maximum reserve valuation interest rate for such particular issue year will be the same as that for such next previous issue year.

Appendix C-2

Interpretations of the Emerging Actuarial Issues (E) Working Group

Introduction

The former Emerging Actuarial Issues (E) Working Group (EAIWG) and the current Valuation Analysis (E) Working Group (VAWG) respond to questions of application, interpretation and clarification with respect to *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38). Following an abbreviated public comment and review period of no less than seven days, the Working Group will adopt by consensus formal interpretations on issues presented before it. These interpretations will then be reported to the Financial Condition (E) Committee, which, after adopting, will direct the Financial Analysis (E) Working Group to follow the interpretations in performing its reviews of the reserving methodologies under AG 38. These interpretations will not become effective until formally adopted by the Financial Condition (E) Committee. In no event shall a consensus opinion of the former EAIWG or current VAWG supersede or otherwise conflict with AG 38.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. The Guideline does not seem to preclude a company from using the Alternative Reserve Methodology for yearend 2012, thus avoiding the Primary Reserve Methodology calculations, even if in prior valuations their total reserve held was not at least as great as the total reserve determined in accordance with the November 1, 2011 Life Actuarial (A) Task Force (LATF) statement. In other words, at yearend 2012 a company can switch to any alternative reserve methodology as long as the total reserve held is at least as great as the total reserve determined in accordance with the November 1, 2011, LATF statement using the required lapses and mortality. Is that a correct interpretation?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Yes. The requirements as written provide for use of either 8D(a) or 8D(b) for the 12/31/12 valuation.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Reference

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. If a company uses the Alternative Reserve Methodology for yearend 2012, can they switch to the Primary Reserve Methodology for future valuations? What, if anything, should be reported in Exhibit 5A-Changes in Basis of Valuation for yearend 2012 or in future years as a result of these AG 38 revisions and any switch to the Primary Reserve Methodology or to the Alternative Reserve Methodology?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. A company, pursuant to the requirements of AG 38, 8D, may switch between the Primary Reserve Methodology and the Alternative Reserve Methodology.

3. For 12/31/12 or subsequent reserve valuations any change to or from the Primary or Alternative reserve methodologies should be reported in Exhibit 5A.

4. The company should check with their domestic state whether approval is required for any subsequent change to or from the Primary or Alternative reserve methodologies for reserves after 12/31/12.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. The Alternative Reserve Methodology calls for deficiency reserve mortality to be based on the VM-20 deterministic reserve mortality. Since XXX calls for segments to be based on deficiency reserve mortality this could affect segment lengths. However, at least the spirit of AG46, which came out when the 2001 CSO Preferred Risk tables came out, seems to allow for segments to continue to be based on the mortality table in use when the policy was issued. Does AG46 apply here and thus the original mortality basis for the segment lengths can continue to be used?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The original mortality basis for determining the segment length can continue to be used. 8D is not intended to be more restrictive in determination of segments.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. The Guideline states "The requirements of this Section 8D apply to a company on December 31, 2012, and on any subsequent valuation date if (1) on the applicable date, the in force face amount (direct plus assumed) of universal life insurance to which this Section 8D would otherwise apply exceeds 2% of the company's face amount of individual permanent life insurance in force…". Does the referenced individual permanent life insurance exclude term insurance?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Yes. Term is excluded.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. Subsection 8Da states that the Primary Reserve is determined by adding any excess of (2) over (1), where (1) is the reserve according to the methodology and assumptions used to calculate the reserves reported as of December 31, 2011. In the following three scenarios, what is the basis for the determination of (1)? Assume that scenarios 1 and 2 involve universal life with secondary guarantees (ULSG) policies issued between July 1, 2005 and December 31, 2006, with a higher set of cost of insurance (COI) charges being triggered if the shadow account value ever becomes 0 after issue:

    a. Issue 1) Reserves have always been calculated using the wrong methodology for determining the ratio in the fourth step of Section 8B. In applying Section 8D, would the reserves for 8Da1 be based on the correct methodology or on the methodology actually used by the company for year-end 2011?

    b. Issue 2) A policy has a negative account value but has not lapsed due to the secondary guarantee. The shadow account value eventually drops to 0 and then becomes negative, and the policyholder pays a premium during the grace period intended on keeping the policy in force. The company invokes the higher secondary guarantee charges to calculate the shadow account value, but the policyholder argues that the lower shadow account COI charges apply due to the premium being paid during the state required grace period; i.e. that during the grace period the policyholder has the opportunity to pay a premium based on the lower COI charges rather than based on the much higher set of COI charges. This is litigated, and a ruling is made that the higher COI rates cannot be charged unless the shadow account value has not been positive for a period of time greater than the grace period. Based on this ruling, the assumption in the AG38 calculation that the higher set of COI charges would be triggered at the end of the first policy year would not be valid. Would the reserves for 8Da1 continue to be based on the assumption that the higher COI charges would be triggered after the first policy year, or would they be modified to reflect the lower COI charges?

    c. Issue 3) Policies with multiple sets of COI charges have only been issued in 2012. What is the basis for the value of (1)?

© 1999-2023 National Association of Insurance Commissioners

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Issue 1) The reserves determined by the company under 8D(a)(1) are intended to be consistent with the methodology used by the company for the 12/31/2011 valuation. If a calculation error has been made in applying the 2011 methodology, this error should not be repeated in applying this methodology for the 2012 year-end valuation.

3. Issue 2) Where a valid court decision has interpreted the provisions of a policy, those interpretations should be reflected in future reserve calculations. In effect, the court ruled that the company made a mistake in applying certain policy provisions. Therefore, the 2012 reserve calculations should incorporate the correct view of the affected policies' provisions as determined by the court. As in 1) above, any error in the 2011 reserve calculations due to this company mistake should not be perpetuated in the 2012 reserve calculations.

4. Issue 3) In this case, the value of (1) would be based on the company's methodology for reserving these policies for 2012 quarterly reporting.

Issue / Question

1. If all of a company's universal life with secondary guarantees (ULSG) policies subject to Section 8D are the same identical policies that are subject to Section 8C, are they still required to perform the separate Section 8C stand-alone asset adequacy analysis or does the Section 8D Primary Reserve Methodology calculation suffice?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Such policies are still required to perform the separate Section 8C stand-alone asset adequacy analysis. Section 8D, second paragraph, clarifies that Section 8D is "in addition to any testing that may be required under Section 8C."

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. My question is on section 8E, regarding when a product would fall under method 1 or method 2. If you have a shadow account product that has either a single set of charges, or multiple sets of charges, and the product meets the crediting rate limitations defined in method 1, is there anything that could cause the product to be deemed to be subject to method 2? To put it another way, when I read section 8E, it seems that any shadow account product meeting the interest crediting limits would fall under method 1. This is because all shadow accounts have either a single set of charges or multiple sets of charges, so all shadow account products that meet the interest crediting limitation would fall under policy design 1 or policy design 3. Is this a correct interpretation, or if not, why?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. This interpretation is not completely correct. In drafting the revisions to AG 38, regulators were aware of the possibility that all existing and future product designs might not fit the three generic product designs noted in AG 38, independent of the crediting rate limitation. Method II was intended to provide a default reserve methodology for these other product designs, together with the more generic product designs containing interest crediting guarantees higher than the company-selected interest index plus 3 percent. The considerations in satisfying the actuarial opinion requirements contained in Section 8E should enable the opining actuary to determine the appropriate reserving methodology for a particular universal life with secondary guarantees (ULSG) product design.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. Section 8D(b), Alternate Methodology, requires the company to determine its deficiency reserve under Model 830 using mortality and lapse assumptions according to the same requirements for determining the deterministic reserve in the Valuation Manual. Does this require the company to determine its Triple-X segments (under the segmentation method) using the qx and lapse rates of the VM, or simply use these qx and lapse rates in calculating the deficiency reserve once the segments are determined using the company's current approach for determining such segments?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The original mortality basis for determining the segment length can continue to be used. 8D is not intended to be more restrictive in determination of segments.

Note: This response is similar to that for question Actuarial INT 03.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. Given all of the focus that the Guideline places on what premiums to use for these universal life with secondary guarantees (ULSG) reserve calculations, we are having unexpected difficulty finding published guidance on what premiums to assume in the deterministic reserve calculations for the Primary Reserve Methodology. Does such guidance exist and if so, where can we find it?

2. This question specifically asks for published guidance, but if none exists, perhaps the Working Group could provide such guidance or at least common practices/approaches they are aware of. Guidance is needed to create consistency amongst how companies are approaching this step of the calculation.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. For 8D(a)(2) reserve calculations, the company should use the expected premium to be paid by the policyholder, determined either policy-by-policy or by appropriate policy groupings. The Valuation Manual adopted by the A Committee on 8/17/12 provides requirements regarding premiums for the deterministic reserve calculation. Such requirements include those in Section 4(A), Section 7(B), and Sections 9(A) and 9(D).

Issue / Question

1. In the case of a Method I type product that is currently being sold and will continue to be sold unmodified after 12/31/12, the company would have to do a standalone asset adequacy analysis under Section 8C for issues 1/1/07 through 12/31/12 but they would not have to do a standalone asset adequacy analysis for issues after 12/31/12 even though it is the same product. Correct?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Yes. It is a correct interpretation that the stand-alone asset adequacy analysis in 8C does not include policies issued after 12/31/12.

Issue / Question

1. Is the greatest deficiency reserve test to be performed on a seriatim or product level basis? What if we see mixed results (For example, 70% pattern 1 and 30% pattern 2)

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The test should be performed on a seriatim basis, except to the extent it may be practical to group policies with identical attributes. It is possible that several combination premium patterns will be identified as having broad applicability. Regardless, each policy should assume a premium pattern that produces the greatest deficiency reserve as of the issue date consistent with good faith testing and review.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E(II)

Issue / Question

1. For the combination premium patterns, what does it mean "...to have access to better charges and credits...."? Can this be ignored it if the product only has one set of charges?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Better charges and credits can be understood as lower charges and/or higher credits that may be triggered based on the magnitude of the premium paid, the shadow account or other measures generally dependent on policyholder behavior. For example, a higher interest rate might apply to amounts above or below some defined premium dollar limit in particular policy years or based simply on the level of the shadow account. Higher or lower premium payments could lead directly to the most favorable interest rate (or weighted average interest rate) accessible within product design constraints. Better charges and credits would generally lead to lower minimum gross premiums and potentially greater deficiency reserves. For purposes of this question this requirement cannot be ignored, particularly if there are multiple sets of credits in addition to the assumed single set of charges.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D (a)(2a)

Issue / Question

1. Should the VM-20 deterministic reserve starting asset requirement related to the 2% collar be applied before or after the Primary Reserve Methodology caps on starting and reinvestment assets are applied?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Subsection a.2.a) (I) of Section 8D requires the determination of one of two portfolios of existing assets to support the initial reserve estimate for the block. Once this initial asset portfolio is determined, the deterministic gross premium reserve is determined using as the discount rates the net investment returns generated by the future projected cash flows calculated using the selected initial portfolio and future net reinvestment rates established according to subsection a.2.a) (II) of Section 8D.

3. If the resulting reserve falls within the +/- 2% collar (referenced in VM-20) relative to the initial reserve estimate (and corresponding level of initial assets), the calculated reserve is the final reserve. If the calculated reserve breaches the +/- 2% collar, the actuary must either provide a detailed rationale as to why the calculated reserve is appropriate or redo the reserve calculation assuming revised initial reserve and asset levels.

4. In performing the additional reserve calculation(s), use the same asset portfolio (adjusted upward or downward as below based on the results of the deterministic reserve calculation), either that of subsection a.2.a) (I) (i) or a.2.a) (I) (ii), as chosen for the initial reserve calculation.

5. If the initial or subsequently determined reserve is greater than the prior reserve estimate and the asset portfolio used in the deterministic reserve calculation is:

   a. as described in subsection a.2.a)(I)(i), then the prior asset portfolio shall be adjusted upward using assets as described in subsection a.2.a)(I)(i) to the extent such assets remain available in the company's portfolio after which such assets shall be adjusted upward as needed using assets as described in subsection a.2.a)(I)(ii). The recommended method for adjusting the prior asset portfolio upward is to do so in a pro rata fashion. Any other method proposed for adjusting the prior asset portfolio upward must be clearly documented in the Actuarial Memorandum and shall not involve changing the asset composition of the prior asset portfolio but shall constitute only additions to that portfolio.

© 1999-2023 National Association of Insurance Commissioners

b. as described in subsection a.2.a)(I)(ii), then the prior asset portfolio shall be adjusted upward as needed in a pro rata fashion using assets as described in subsection a.2.a)(I) (ii).

6. Regardless of which portfolio is chosen for the initial deterministic reserve calculation, if the initial or subsequently determined, reserve is less than the prior reserve estimate, then the prior asset portfolio shall be adjusted downward as needed in a pro rata fashion.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E/8D

Issue / Question

1. Consider the following: A universal life policy with a secondary guarantee requires that a shadow account be maintained at a positive level for the secondary guarantee to remain in effect. Once the shadow account value goes down to zero, the secondary guarantee terminates and cannot be reactivated. There is only one set of charges and credits that apply to the shadow account. In determining reserves for this policy under section 8E, would the assumption be made that the secondary guarantee terminates at the end of the first policy year since, if only the minimum premium is paid, the shadow account value would be zero at the end of the first policy year?

2. If the policy was written before 2012, would it be subject to section 8D?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. For issues in or after January 1, 2013, 8E would be applicable. But the policy, as described, would not fit into Method I because the minimum premium derived according to Method I would not satisfy the secondary guarantee requirements. Calculation of the reserve using Method I requires that the minimum premium keep the secondary guarantee in effect. Therefore, it must be reserved according to Method II.

4. For issues between July 1, 2005 and December 31, 2012 (inclusive), any regulatory response regarding applicability of Section 8D would require analysis of the policy form and dialog with the valuation actuary.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E

Issue / Question

1. Under 8E, Method I, Policy Design #1 applies for policies containing a secondary guarantee that uses a shadow account with a single set of charges and credits. For those policies, the minimum gross premium for any policy year is the premium that, when paid into a policy with a zero shadow account value at the beginning of the policy year, produces a zero shadow account value at the end of the policy year, using the guaranteed shadow account charges and credits specified under the secondary guarantee. Presumably, this will result in a yearly renewable term (YRT)-like pattern for the minimum premium.

2. The actuarial opinion required by 8E includes the statement "the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy." What is meant by "expected to apply"?

3. Since it is not likely that the policyholder will fund the policy using the YRT-like pattern that is the minimum premium, it does not seem as if "expected to apply" means "expected to be paid." It appears that "expected to apply" should be interpreted to mean that the YRT-type pattern will either fund the secondary guarantee or it is less than the minimum amount necessary to fund the guarantee.

Interpretation of Emerging Actuarial Issues (E) Working Group

4. The phrase "expected to apply" is intended to mean that the minimum premiums determined ($0-to-$0) are based on charges/credits generally consistent with those expected to apply to premium scales likely to be received from policyholders. For example, high premium loads at later durations would not be expected to apply for products with charges and credits that encourage a limited-pay or single-pay premium pattern. Other design features that should give the opining actuary pause, and could draw regulatory scrutiny, include negative charges and credits or unusual patterns of charges and credits. In addition, the actuary should not favorably opine on a product for Method I reserves with variables resulting in minimum gross premiums that would be inconsistent with the premiums a reasonable person would pay to limit advance funding. If the actuary is unable to opine favorably, the reserves should be calculated under Method II.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. A shadow account has a product design feature where the premium load is expressed as a fixed percentage of premium up to the target premium, and the target premium is reasonably consistent with level premium funding of the lifetime guarantee. In effect, there is a fixed dollar cap on the annual premium charge. The literal form of the charge is simply a specified percentage of premiums up the target premium and 0% thereafter. This will always mathematically produce the same result as the capped charge described above. Please clarify that a fixed dollar cap for the premium load, regardless of how the cap is expressed, does not make such a product incompatible with Policy Design # 1.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. A flat percentage of premium charge, subject to an annual maximum, would be compatible with Policy Design (PD) #1 provided the actuary is able to issue an unqualified actuarial opinion. The specified percentage rate subject to an annual maximum may be construed as a single rate even though an alternative expression of this charge could be viewed as involving a second rate equal to zero. However, it should be noted that the actuary might be unable to opine favorably in the case of designs with credit/charge structures that encourage limited-pay premium schedules.

3. The above interpretation does not extend to designs using a flat percentage load for premiums up to a break point and a different (non 0%) load for premiums above that. Such a design should be considered as PD#3, as would any design with tiered interest rate credits or other tiered credits/charges.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. Section 8D(a) references the deterministic reserve calculation in the VM20 valuation manual in the definition of the Primary Reserve Methodology. As part of the asset assumptions used in the deterministic reserve calculation, page 82 of the VM20 manual describes the derivation of the Illustrative Current Market Benchmark Spreads. We have reviewed the JP Morgan US Liquid Index data referenced, and the final published values appear to be derived from the underlying data for the index as opposed to referencing published table views. Does the Working Group agree that using an updated table would be preferred? Would the Working Group consider publishing an updated table as of 9/30 or providing additional details on how the table values (shown on page 89) were derived? The values for Table G (page 90) for the below investment grade bonds were taken directly from the source index so they are easy to replicate.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. For the 12/31/12 AG 38, 8D valuation it may be assumed that the 9/30/09 Tables H & I approximate both Tables F & G and Tables H & I as of 12/31/12. This assumption is based on benchmarking with current spread information from other sources as of 12/31/12. It is understood that strict technical compliance for each and every asset may not be possible due to modeling limitations. Professional judgment should be used to produce results that comply with the spirit of this standard, i.e., no lessening of conservatism. For example, if a company has access to current data sources and can reconstruct Tables F and G as of 12/31/12 then this would be an acceptable approach. In any event, appropriate explanation and justification should be provided for the methodology that was employed and the results that were obtained. The NAIC intends to provide updated tables for future year end AG 38, 8D, valuations.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. A product has a shadow account product design feature where, in addition to the fixed charges and credits associated with the policy, there is a shadow account premium charge in the event that the policyholder underfunds the policy. This premium charge is expressed as a fixed percentage of the premium shortfall when compared to a given level premium.

2. Please clarify whether a shadow account charge expressed as a fixed percentage of the premium shortfall is regarded as "multiple sets of charges" or as a "single set of charges" and thus whether such a product is compatible with Policy Design # 1 or Policy Design # 3.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This charge and treatment as Policy Design 1 does not appear consistent with the type of charge and treatment addressed by adopted INT 24 (formerly referred to as Pending Submission 6 prior to its adoption).

4. INT 24 deals with a single charge that all policyholders will incur which stops after a certain level of premiums have been paid. The charge described here is not incurred by all policyholders and provides the potential for a reserve premium being subject to the full impact of this charge whereas the premiums actually expected to be paid would not incur this charge.

5. More information is needed to fully assess the applicable Policy Design but based on the information provided Policy Design 3 appears appropriate.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E I) 3 Actuarial Opinion and Company Representation section

Issue / Question

1. A company currently issues a ULSG product that is clearly a Policy Design #3. Two hypothetical examples of the charge/credit structure are shown in Tables 1 and 2 below. Under either structure, the policy form:

- Is clearly Policy Design #3
- Does not run afoul of the "Index plus 3%" of 8E

2. The purpose of the bifurcated cost of insurance charge structure in Table 1 or bifurcated premium charge structure in Table 2 is to optimize management of policyholder premium paying pattern behavior. The exact insurance charge for any given policy under the Table 1 design is either COI 1 or COI 2, where the rate is determined by comparing the actual fund value to a pre-defined fund value. If the actual fund value is in excess of the pre-defined fund value, COI 1 is used, otherwise COI 2 is used. Similarly, the exact premium charge amount for any given policy under the Table 2 design is PremPct1 for amounts paid up to a target amount plus PremPct2 for amounts paid in excess of the target amount.

3. The company's approach to establishing statutory reserves has always been to determine AG XXXVIII Step 1 minimum premiums based on the lowest charges from Table 1 (or Table 2). The actuary concludes that everything in the reserving practices of the company with respect to this policy form is in compliance with the letter and spirit of AG XXXVIII, and except for the third statement in the Actuarial Opinion (of Section E), the actuary feels s/he could sign such an attestation. The third statement declares "the minimum gross premiums determined under Policy Design #3 are not inconsistent with the minimum premiums, charges and credits that are expected to apply".

4. What is the actuary expected to do in such a situation?

	TABLE 1						TABLE 2		
								Up to Target	In excess

Regulation XXX; *Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation*, Section 8D

Issue / Question

1. The company states that reserves equal to the deterministic reserve required in the valuation manual of the valuation law (model 820) are lower than produced under the above methodology, but states that it would hold reserves per the valuation manual if that produced greater reserves in aggregate for the block. If tested for each policy, the reserve required per the valuation manual would in some cases be higher than as calculated based on regulation XXX. Can the valuation manual floor be applied in aggregate rather than for each policy?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The deterministic reserve as required by Actuarial Guideline 38 8D(a) should be applied in the aggregate versus policy by policy.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 7 and Steps 1, 2, and 8 of Section 8E

Issue / Question

1. Does the language "This result may be negative." occurring twice in Step 3 of Section 8E of Actuarial Guideline 38 (AG 38) apply only to the Method II reserve approach in AG 38 or to both Method I and Method II reserve approaches? Step 3 of Section 8E of AG 38 provides for the determination of the amount of actual premium payments (or shadow account) greater than or less than the minimum gross premiums (or shadow account based on minimum premiums), as defined in Section 8E.

2. The issue regarding the referenced language relates to the interpretation of Step 3 as it applies particularly to (i) cumulative premium secondary guarantee designs with a "premium catch-up provision" or (ii) shadow account secondary guarantee designs where, if the shadow account is below the level necessary to maintain the secondary guarantee, there is a "catch-up provision" where the shadow account may be reinstated prior to the end of the secondary guarantee period.

3. In addition to Section 8E of AG 38, it appears that Section 7 of AG 38 applies in this situation. For Section 8E Method I reserve calculations, the language of Section 7 appears to deal with any deficiency indicated in Step 3 of Section 8E satisfactorily since that deficiency is measured relative to the guarantees (cumulative premium or shadow account). In this case, the value of the numerator in Step 3 of Section 8E would be zero and the floor basic and deficiency reserve would be set at the minimums defined in Section 7.

4. However, for Section 8E Method II reserve calculations, for purposes of applying Section 8E, the deficiency in Step 3 is measured relative to the premium defined in Step 1 which is the schedule of minimum gross premiums that create the greatest deficiency reserve rather than the schedule of minimum gross premiums based on the policy guarantees. This is inconsistent with the requirements and intent of Section 7 and therefore would allow for the ratio in Step 4 of Section 8E to be negative.

Interpretation of Emerging Actuarial Issues (E) Working Group

5. The recommended response is essentially correct. The phrase, "This result may be negative" applies only to Method II policies in Section 8E, Step 3. This phrase does not apply to the Step 3 amount for Method I policies given the requirements of AG 38, Section 7. Method I policies that would otherwise have a negative Step 3 amount were it not for Section 7 are those policies that are underfunded but provide for a catch up provision as addressed by Section 7. The Step 2 basic and deficiency reserves for such policies, used to calculate the "reserve floor" in Step 8 (c), must be adjusted as provided by Section 7 prior to calculating the "reserve floor" in Step 8 (c).

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.a.2(a)

Issue / Question

1. Section 8D directs companies to use "…the same requirements for determining the deterministic reserve in the version of the valuation manual specified…but with two modifications…" In determining future Treasury yield rates used in calculating the sale price of any asset existing on the valuation date, this language in Section 8D of AG38 can be interpreted in one of two ways:

   a. Assuming a level series of future Treasury yield curves for all future years of the model projection period. In this case, any gains or losses arising from the sale of existing assets during the projection period would be determined using a level Treasury yield curve scenario prospectively, and a spread applicable to the asset, as determined on the valuation date.

   b. Assuming the series of future Treasury yield curves is that described under Scenario 12 from the prescribed set of interest rate scenarios used in the stochastic exclusion test in VM-20. To these Treasury rates is added a spread to determine the yield rate to be used on the sale of an existing asset during the model projection period.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. It is recommended that the approach outlined in paragraph 1.a. be the interpretation of the relevant language of Actuarial Guideline 38 Section 8D.a.2(a).

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.A.2(a)(I)

Issue / Question

1. Section 8.D.A.2(a)(I) states, "net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue of those bonds" shall be calculated.

2. A possible interpretation of this language is that a company may be permitted to determine this hypothetical portfolio book yield for each year using their actual A-rated bonds purchased in that year, i.e. their own A-rated bonds. Is this approach acceptable?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. It was the intent of this provision that a company use a hypothetical portfolio composed of A-rated corporate bonds with yields commensurate with the A-rated corporate bond yields available in the year of issue. If the yields associated with the company's actual A-rated bonds purchased in the year of issue are commensurate with A-rated corporate bond yields available in the year of issue, then the company's approach is acceptable. If the yields associated with the company's bonds are significantly higher than A-rated corporate bond yields available in the year of issue, then the approach is unacceptable.

4. If such an approach was used, the appointed actuary should address this question in the memorandum. Reasonable approaches for comparison to a company's assets include using a published index of A-rated corporate bond yields such as Moody's at an appropriate point in the year of issue or an average over the course of the year. Another reasonable approach would be to use a Treasury yield curve at an appropriate point in the year of issue or an average over the course of the year plus an appropriate published spread of A-rated corporate bond yields over Treasuries. An appropriate point in time would be June 30 of that year if the business was sold uniformly throughout the year. If the comparison does not show the yields from company's assets to be commensurate with the published index or adjusted yield curve rate, then (a) the sample size of the company's own A-rated portfolio relative to the total portfolio backing the liabilities, and (b) the year to year consistency of asset allocation become major items to be addressed in the memorandum.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.a

Issue / Question

1. Section 8D.a. applies to a company's aggregate gross reserve before reinsurance. The reserve calculation requires a projection of future year-by-year cash flows, which includes such items as investment earnings and general insurance expenses. If a company has ceded 100% of the business to an authorized reinsurer by use of coinsurance, the assets and net liabilities are no longer on the ceding company's books. Additionally, the administration is also generally transferred to the reinsurer. In such circumstances, the projection of future cash flows is "hypothetical" in that one must assume a starting asset portfolio, future investment strategy, future general insurance expenses, and so on. Furthermore, the ceding company generally does not have the data or systems to determine the reserves and must rely on the assuming company.

2. Since the assuming company is required to calculate the reserves on both direct and assumed business, may the ceding company use the reserves as reported by the reinsurer in the reinsurer's annual statement?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. Under 100% coinsurance agreements with an authorized reinsurer, the ceding company is permitted to report reserves equal to those calculated by the reinsurer in the reinsurer's Exhibit 5/Schedule S.

4. Note that this interpretation was not being requested for coinsurance with funds withheld, modified coinsurance, or agreements where the reinsurer is unauthorized.

5. The Working Group recommends the above interpretation as guidance for yearend 2013, provided there is no conflict with the accounting requirements in the *Accounting Practices and Procedures Manual*. The issue/question will be submitted to the Life Actuarial (A) Task Force for broader consideration and possible amendment to the valuation manual.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Sections 8B and 8C

Issue / Question

1. Step 4 of Section 8E says "…determine the minimum amount of shadow account required to fully fund the guarantee." Should this determination take into account actual history, or is this a purely theoretical value?

2. Consider a hypothetical policy valued on its 5th anniversary. It has a shadow fund value of $12,000. Premiums of $2,500 were paid on each anniversary. If the policyholder paid an additional $63,000 (net of premium loads) on the valuation date, the guarantee would be fully funded. However, due to the product design, if the $12,000 shadow fund value resulted from a single premium of $10,000 at issue, the guarantee would be fully funded by payment of an additional $60,000 (net) at the valuation date. Is the "minimum amount" $75,000 or $72,000?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. Step 4 of Section 8E states that the determination is to be made as of "the valuation date for the policy being valued…", indicative of a seriatim calculation that considers the actual circumstances of the policy. If on the valuation date a specific set of charges and credits are applicable for future shadow account calculations, such charges and credits should be used in the determination regardless of any more favorable charges and credits that may have been available as of the issue date.

4. Given the information that the policyholder has no control over the future charges and credits to be applied in fully funding the guarantee, it is presumed that a single set of charges/credits (with no caps or floors) is operative as of the valuation date. While an unqualified response is not possible in the absence of a full understanding of the policy design, the minimum amount appears to be $75,000 rather than $72,000.

5. Also, per AG38, Section 8E, the actuary must ensure that the methodology is compatible with the intent that the funding ratio (Step 3 result divided by the Step 4 result) measures the level of prefunding.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. Actuarial INT 27 clarifies that AG38, Section 8D, addresses the gross reserve requirements and required documentation regarding reinsurance. In reviewing the AG 38, Section 8D Actuarial Memorandum and reinsurance information, it appears that guidance is needed to address situations where the YRT reinsurance agreement reserve credit taken may be significantly different than the reserve an assuming company has set up. Such a significant difference can be due to a larger credit being calculated under VM-20 assumptions versus that set up by an assuming company. Additionally, in some cases the higher gross reserve required under the AG 38, Section 8D modified deterministic reserve, was not reported in the statutory blank prior to the reinsurance credit being taken.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The reserve established pursuant to AG 38, Section 8D (AG38-8D), should be reported on a gross basis prior to any adjustment for reinsurance. In addition, the reserve credit for reinsurance on policies subject to AG38-8D should be calculated using current statutory requirements and mortality and interest applicable under the AG38-8D.a.1. calculation.

3. Since AG38-8D does not address credit for reinsurance and only addresses calculation of the gross reserve, any determination of such credit would be outside of AG38-8D and, therefore, based on current statutory requirements and accepted practices. For example, for the calculation of the ceding credit to be posted in the statutory statement, current accounting guidance (including SSAP No. 61R, paragraph 37) should be followed. And for asset adequacy analysis, both for general testing of aggregate reserves and for the standalone analysis required by AG38-8C, currently accepted actuarial practice should be followed. AG38-8D does not incorporate VM-20 directly into either of these.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D. a.2.a)(I), Section 7.D. of VM-20

Issue / Question

1. Subsection a.2. of Section 8D provides for two exceptions to the usual deterministic reserve requirements of VM-20 in calculating the gross premium reserve in Section 8D.a.2. One of these exceptions, in subsection a.2.a)(I), relates to net investment earnings on starting assets and limits those earnings to "…the lesser of (i) the actual portfolio net investment returns and (ii) the net investment returns based on a portfolio of A-rated corporate bonds…".

2. The language of Section 8D.a.2.a)(I) is not prescriptive as to the process for determining this net investment earnings comparison. One option is to compare actual portfolio yields to hypothetical portfolio yields as of a single point in time, most logically the valuation date. Another option is to develop both an actual and hypothetical portfolio as of the valuation date and project future asset cash flows and net investment returns prospectively and then use the lesser earning portfolio net investment return in each future year. Other prospective-type approaches to determining the Section 8D.a.2.a)(I) lesser net investment return portfolio are also possible. These lesser returns are then combined, in some fashion, with the net reinvestment return prescribed in Section 8D.a.2.a)(II) to develop the final path of discount rates used in the final Section 8D.a.2.c) reserve calculation.

3. In determining an appropriate interpretation of the language of Section 8D.a.2.a)(I) an important question to ask is: Is a prospective-type interpretation and approach illustrated above, or something similar, consistent with the determination of a single starting asset portfolio as described in Section 7.D. ofVM-20? The objective of the requirement in Section 8D.a.2.a)(I) is to impose a restriction on the determination of the starting asset portfolio required under VM-20 for the deterministic reserve calculation, not to anticipate the use of multiple portfolios prospectively. The use of future year-by-year net investment returns from multiple portfolios (actual and hypothetical) would appear to be inconsistent with the starting asset portfolio requirement of VM-20.

4. The issues at hand are twofold:

   a. Does a prospective future net investment return comparison interpretation of the language of Section 8D.a.2.a)(I) create an inconsistency with the language of Section 7.D. of VM-20 with respect to the requirements for utilizing a single starting asset portfolio in the deterministic reserve calculation?

   b. Given the multitude of possible approaches that might be used, does a prospective future net investment return comparison interpretation of the language of Section 8D.a.2.a)(I) lead

© 1999-2023 National Association of Insurance Commissioners

to the creation of a non-level playing field beyond the range of approaches available in interpreting Section 8D.a.2.a)(I) in a manner that is consistent with VM-20?

Interpretation of Emerging Actuarial Issues (E) Working Group

5. For 12/31/2014 and later Section 8D submissions, for purposes of determining the starting asset portfolio, the language of Section 8D.a.2.a)(I) is interpreted such that the actual/hypothetical starting asset portfolio net investment return comparison is made as of the valuation date and not prospectively. Examples of how the comparison may be made include (i) a comparison of the weighted average hypothetical portfolio versus actual portfolio net investment returns as of the valuation date or (ii) a historical issue-year-by-issue-year hypothetical versus actual portfolio net investment return comparison, perhaps resulting in a starting asset portfolio as of the valuation date that is a hybrid of the company's actual portfolio assets for certain issue years and a hypothetical asset portfolio for other issue years.

6. For purposes of this comparison for 12/31/16 and later, the actual portfolio net investment return is adjusted by the current amortization of IMR allocated to the portfolio. This adjustment is made only for the comparison of portfolio yields to determine the appropriate portfolio to use in the development of the deterministic reserve. The reserve amount is then determined following the procedure defined in VM-20.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.a.2.c) and Section 7.C.4. of VM-20

Issue / Question

1. Subsection a.2.c) of Section 8D provides for the calculation of gross premium Primary Reserve to be performed using the path of net investment returns determined in Section 8D.a.2.b) "…to discount the cash flows applicable to those policies.", i.e. those policies subject to Section 8D. The cash flows referenced in Section 8D.a.2.c) are to include, as per Section 4.A.3. of VM-20, death and cash surrender benefits. For the ULSG policy types subject to the requirements of Section 8D, if the interest rate credited to the policy account value is a non-guaranteed element (NGE), the value of the benefits be directly impacted by the net investment earnings of the assets used to back the reserves held in support of the risks assumed under the policies. In addition, lapse rates for these ULSG policy types also may vary depending on the net investment earnings of the assets used to back the reserves held in support of the risks assumed under the policies.

2. Section 7.C. of VM-20, covering NGE cash flows, requires, in subsection 4. that:

   a. "Projected levels of NGE in the cash flow model must be consistent with the experience assumptions used in each scenario. Policyholder behavior assumptions in the model must be consistent with the NGE assumed in the model."

   b. There is only a single (level) interest rate scenario applicable for the Section 8D.a.2. reserve gross premium reserve calculation so the issue centers on whether the NGE and policyholder behavior assumptions are "consistent" with the experience assumptions and NGE respectively.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This interpretation permits the delinking of the liability cash flows used in the Section 8D.a.2.c) gross premium reserve calculation from the net investment returns determined as in Section 8D.a.2.b) provided the actuary can provide justification that the impact of such delinkage on the Section 8D.a.2. reserve calculation is consistent with the requirements of Section 7.C.4 and Section 2G of VM-20.

4. The information required to support the delinked approach would need to present reasonable justification and reflect the consistency of the assumptions used with the particular company's anticipated experience and ULSG product structures. The information provided should be adequate to support the assertion that the requirements of Section 2.G. and Section 7.C.4. of VM-20 have been achieved.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D. a.2.a)(I)

Issue / Question

1. Section 8D directs companies to test: "The company's aggregate gross reserve before reinsurance for the business subject to this Section 8D to be reported in the December 31, 2012, and subsequent annual statutory financial statements of the company will be the aggregate reserve under 1 below, plus any excess of the aggregate reserve determined as defined in 2 below, over 1".

2. Furthermore Section 8D requires that for existing assets: "The projected net investment earnings from the starting assets shall be the lesser of (i) the actual portfolio net investment returns and (ii) net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds."

3. Is it required to test reinsurance assumed?

   a. Some companies only test at the direct writer level (using hypothetical portfolios) while other companies test the reinsurance assumed against actual assets.

4. Is it appropriate to use hypothetical portfolios for testing?

   a. Assuming a company where the reserves are 100% ceded (all but an insignificant amount was coinsurance) and no assets remain. May the company test on the basis of a hypothetical portfolio of A rated bonds described above? While this may be the only interpretation available, there is no connection between the assets and the liabilities or any company investment policy.

   b. When the existing asset yield is below that of the hypothetical portfolio, is it required to take a hair-cut on the yields of the existing assets or is it acceptable to use a hypothetical portfolio of just one bond per issue year instead?

Interpretation of Emerging Actuarial Issues (E) Working Group

5. Do the requirements of AG38-8D apply to applicable reinsurance assumed?

   a. Yes. It is required to apply the requirements of AG38-8D to include reinsurance assumed on risks that are within its scope. AG38-8D(a) includes the company's "aggregate gross reserve before reinsurance…". This is interpreted, for applicable business, to be the company's direct written business plus coinsurance reinsurance assumed and prior to any

© 1999-2023 National Association of Insurance Commissioners

reinsurance ceded. Only this interpretation is consistent with the scope of AG38-8D and the reporting of reserves in Exhibit 5 of the annual statement.

6. Is it appropriate to use hypothetical portfolios for testing?

   a. There are two types of hypothetical portfolios possible for this question.

      i. The first type of hypothetical portfolio is required by AG-38, 8D(a)(2)(a)(I)(ii). This citation provides for a derivation of a hypothetical "portfolio of A rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds."

      ii. There may be a second type of hypothetical portfolio to use in place of the actual portfolio pursuant to AG38, 8D(a)(2)(a)(I)(i) if that actual portfolio is incomplete or unavailable for a company that has ceded some or all of the risk through coinsurance. In this case the company may coordinate with and make use of the reserve calculations of the assuming reinsurer, as provided in VM-20 Section 8.A.1. However, the ceding company, in calculating the pre-reinsurance ceded reserve or gross reserve required by AG-38 Section 8D, must assure that such modeling and assumptions are appropriate as provided by the first paragraph of VM-20 Section 8.D.2 and as provided by VM-20 Section 8.D.2.b.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E

Issue / Question

1. A universal life policy contains a secondary guarantee based on the value of a shadow account. As long as the shadow account is positive, the policy is guaranteed not to lapse, even if the cash surrender value is not positive. The shadow account value accumulates with interest from one period to another, with deductions for COI charges. The interest credited to the shadow account is calculated as follows:

- 10% interest is credited to the shadow account up to a threshold amount.
- 0% interest is credited to the any excess of the shadow account over the threshold amount.
- The threshold amount is equal to the accumulation of the level premium that would keep the shadow account positive throughout the secondary guarantee period, assuming 10% interest is credited.

2. The shadow account is not larger than the threshold amount on the valuation date. For purposes of the fourth step in sections 8B and 8C of the Guideline, what interest rate should be used to determine the shadow account value that would fully fund the secondary guarantee?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This interpretation is qualified for issues within the scope of AG 38, Section 8E, only and applies to those section 8E products issued on and after 1/1/16. The intent of the ratio in AG 38 8E Step 4 is to measure the level of pre-funding and to specify its use to establish reserves in its application to the Net Single Premium. The objective is to provide for reserves equal to the appropriate portion of the Net Single Premium represented by pre-funding as of the valuation date. The ratio is a practical convention for this objective.

4. For shadow account secondary guarantee product designs with multiple charges/multiple credits where consistency of charges and credits in the numerator and denominator of the ratio is difficult to achieve, reasonable efforts must be made to establish a ratio which, on an aggregate basis, carries out the objective above.

5. Otherwise, reasonable efforts should be made to produce a conservative estimate of the present value of future benefits on a statutory basis which, in the aggregate, carries out the objective above. Such conservative estimate, when divided by the Net Single Premium calculated in AG 38 8E, Step 5, produces the ratio.

© 1999-2023 National Association of Insurance Commissioners

6. For any shadow account secondary guarantee product designs with multiple charges/multiple credits the denominator of the ratio shall be limited to be no larger than the Net Single Premium as calculated in AG 38 8E, Step 5.

Appendix D
GAAP Cross-Reference to SAP
as of December 2022

Introduction

As expressed in the Statement of Concepts, statutory accounting principles (SAP) utilize the framework established by Generally Accepted Accounting Principles (GAAP). Appendix D includes GAAP pronouncements that have been considered or are pending consideration in the development of SAP.

The NAIC Codification of Statutory Accounting Principles Working Group addressed all GAAP pronouncements included in Category A, Category B and Category C issued through 1996 during the initial drafting of the SSAPs, as well as the AICPA Accounting Interpretations included in Category D. This working group is now called the Statutory Accounting Principles (E) Working Group (SAPWG).

- Category A – FASB Statements and Interpretations, APB Opinions, and AICPA Accounting Research Bulletins
- Category B – FASB Technical Bulletins, Board-Directed FASB Staff Positions, AICPA Industry Audit and Accounting Guides, and AICPA Statements of Position
- Category C – Consensus positions of the FASB Emerging Issues Task Force (EITF) and AICPA Practice Bulletins
- Category D – AICPA Accounting Interpretations

Subsequent to the NAIC codification of statutory accounting principles, as documented in the Policy Statement on the Maintenance of Statutory Accounting Principles (included in Appendix F), the SAPWG continued to review new GAAP guidance for applicability to SAP. Beginning January 1, 1999, the Emerging Accounting Issues (E) Working Group (EAIWG) was formed and began addressing FASB EITF opinions issued subsequent to 1996. The positions of the EAIWG are documented in an interpretation (INT) as indicated by reference in the applicable column of the GAAP Cross-Reference to SAP chart. Appendix B includes the full text of EAIWG INTs issued before December 31, 2015. In October 2010, the SAPWG undertook a project to incorporate authoritative guidance related to specific topics in one location. This means that guidance within INTs has been incorporated into the applicable SSAPs, where possible. Appendix D now references the applicable SSAP, not the nullified INT. Therefore, completely superseded SSAPs and nullified INTs are removed from the Manual and retained in *Appendix H – Superseded SSAPs and Nullified Interpretations*, which is posted for public reference on the SAPWG web page at https://content.naic.org/cmte_e_app_sapwg.htm. Under this approach, only current guidance is included in the Manual, while preserving the historical reference of previous authoritative SSAPs and INTs for accounting purposes.

In addition to the GAAP Cross Reference to SSAP, Appendix D includes a Nonapplicable GAAP Pronouncements supplement which contains a listing of GAAP pronouncements that have been considered in the development of SAP and deemed not applicable.

In June 2009, the FASB issued *FASB Statement 168, FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles (FAS 168)*, effective for interim and annual periods ending after Sept. 15, 2009. FAS 168 (Topic 105 of the FASB Codification) identified the sources of accounting principles and the framework for selecting the principles used in the preparation of the financial statements of nongovernmental entities that are presented in conformity with generally accepted accounting principles (GAAP) in the United States. Pursuant to this standard:

© 1999-2023 National Association of Insurance Commissioners

- FASB Accounting Standards Codification was established as the source of authoritative accounting principles recognized by the FASB to be applied by nongovernmental entities. (SEC guidance included within the FASB Codification is provided for convenience and relates only to SEC entities.)

- Accounting Standards Updates issued after the effective date of FAS 168 are not considered authoritative in their own right. Such standards serve only to update the FASB Codification, provide background information, and provide the bases of conclusions on the changes to the FASB Codification.

- Effective September 15, 2009, all non-SEC accounting and reporting standards were superseded. Additionally, all nongrandfathered, non-SEC accounting literature not included in the Codification was deemed nonauthoritative. As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting.

As a result of FAS 168, Appendix D – GAAP Cross Reference to SAP has been revised to include reference of FASB Accounting Standards Updates, as well as the Accounting Standards Codification Reference (Topic and Subtopic) for pre-codification GAAP guidance. Pre-codification GAAP guidance that has been superseded as a result of exclusion from the GAAP Codification has been identified within Appendix D. Users of the NAIC *Accounting Practices and Procedures Manual* shall continue to refer to the FASB pre-codification standards, and the applicable references to such standards, to determine the GAAP guidance that has been adopted, adopted with modification or rejected for statutory accounting.

To assist users in tracing pre-codification GAAP standards to the FASB Codification, Appendix D – GAAP Cross-Reference to SAP includes the Topic and Subtopic for all pre-codification GAAP standards that have been included in the FASB Codification. This FASB Codification reference does not reflect GAAP guidance adopted for statutory accounting. Only the guidance detailed in specific SSAPs or INTs shall be utilized in determining the GAAP guidance adopted, adopted with modification or rejected for statutory accounting. Items noted with "Not Explicitly Included in Codification" are no longer included in the FASB Cross Reference tool.

Information Provided in Appendix D – GAAP Cross-Reference to SSAP:

- Status – This column includes the SAPWG status of review. A "pending" status indicates that the SAPWG has not completed deliberation of the GAAP pronouncement. Items noted as "Not Board-Directed or SEC Update" will not be reviewed by the SAPWG unless specifically requested for review.

- Disposition – This column represents the general conclusion of the SAPWG/EAIWG for the stated GAAP pronouncement. This information is included in Appendix D as a reference tool, however, the guidance in the specific SSAP or INT shall be the authoritative source in determining the GAAP guidance adopted, adopted with modification or rejected for statutory accounting.

- Statutory Reference – This column provides the statutory accounting source addressing the GAAP pronouncement.

- Accounting Standards Codification Topic and Subtopic – This column provides a reference guide to trace pre-codification GAAP standards to the new FASB Codification.

© 1999-2023 National Association of Insurance Commissioners

In addition to the "GAAP Cross Reference to SSAP," Appendix D includes the "FASB Codification to Pre-Codification GAAP" supplement. This supplement serves as a reference tool in tracing the FASB Codification to pre-codification GAAP standards that have been reviewed or are pending review as part of the current NAIC statutory accounting maintenance process. This supplement does not indicate which GAAP standards have been adopted, adopted with modification or rejected for statutory accounting. Pre-codification GAAP guidance not captured as part of the statutory accounting maintenance process, but that has been incorporated in the FASB Codification, has not been referenced within this supplement. Future consideration will occur on whether this pre-codification GAAP guidance will be reviewed for statutory accounting. Pre-codification GAAP included in the FASB codification, but not referenced within this supplement includes: FASB Derivative Implementation Group Issues; EITF Appendix D Topics; FASB Statement No. 138 Examples; FASB Staff Implementation Guides; AICPA Technical Inquiry Service and Audit and Accounting Guides. (The Audit and Accounting Guides (AAG) related to insurance have been reviewed for statutory accounting and are referenced in this supplement – HCO: Health Care Organizations, LHI: Life and Health Insurance and PLI: Property and Liability Insurance Companies. This supplement also does not include reference to the SEC standards incorporated within the FASB Codification: SEC Financial Reporting Releases; SEC Interpretive Releases; SEC Staff Accounting Bulletins; and SEC Regulation S-X.

Appendix D - GAAP Cross-Reference to SAP Table of Contents **Page**

FASB Codification:
Accounting Standards Updates........ D-1

Pre-FASB Codification:
Category A - FASB Statements and Interpretations, APB Opinions, and AICPA Accounting Research Bulletins........ D-17

Category B - FASB Technical Bulletins, FASB Staff Positions, AICPA Industry Audit and Accounting Guides, and AICPA Statements of Position........ D-48

Category C - Consensus positions of the FASB Emerging Issues Task Force and AICPA Practice Bulletins........ D-71

Category D - AICPA Accounting Interpretations........ D-117

Nonapplicable GAAP Pronouncements........ D-119

FASB Codification Cross Reference to GAAP Pronouncements........ D-131

[1] To assist users in tracing pre-codification GAAP standards to the FASB Codification, the FASB Codification Topic and Subtopic for all pre-codification GAAP standards has been included in this Appendix. This FASB Codification reference does not reflect GAAP guidance adopted for statutory accounting. The Accounting Practices and Procedures Manual (E) Subgroup was formed to assess changes necessary to reflect the new GAAP Codification within statutory accounting principles. Until this process is complete, or as otherwise noted in specific SSAPs or Interpretations, users of the *NAIC Accounting Practices and Procedures Manual* shall continue to refer to the FASB pre-codification standards, and the applicable references to such standards, to determine the GAAP guidance that has been adopted, adopted with modification, or rejected for statutory accounting.

[2] On December 5, 2009, the Statutory Accounting Principles (E) Working Group adopted revisions to the NAIC *Accounting Practices and Procedures Manual* to refer to the FASB Accounting Standards Codification as prescribed in *FAS 168, FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles* (FAS 168). With the issuance of FAS 168, and the establishment of the FASB Codification, the previous GAAP hierarchy established in *FAS 162, The Hierarchy of Generally Accepted Accounting Principles* (FAS 162) has been eliminated. As a result of FAS 168, the FASB Accounting Standards Codification is the source of authoritative accounting principles recognized by the FASB. (SEC guidance included within the codification is provided for convenience and relates only to SEC entities.) Pursuant to previous decisions by the Statutory Accounting Principles (E) Working Group, FASB Staff Positions (FSPs) issued after May 9, 2008, will be reviewed as part of the statutory accounting maintenance review process. FSPs issued prior to May 9, 2008, will be reviewed as part of the maintenance process if considered to be “Board-directed”. (Board-directed FSPs were issued to provide narrow and limited revisions to the FASB statements or FASB interpretations formerly provided in FASB Technical Bulletins.) FSPs that were not considered “Board-directed” were considered to provide application guidance similar to that found in FASB Staff Implementation Guides and Staff Announcements and were previously classified (pre-FAS 162) as NAIC Level 5 guidance. Due to this Level 5 classification, these FSPs were not reviewed as part of the statutory accounting maintenance review process.

[3] As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting. Therefore, this table will no longer be updated after SOP 09-1.

Appendix D
Nonapplicable GAAP Pronouncements for Statutory Accounting as of December 2022

In 2015, Issue Paper No. 99—Nonapplicable GAAP Pronouncements was removed from Appendix E and incorporated into this section of Appendix D.

For items presented to the Statutory Accounting Principles (E) Working Group, this table addresses Generally Accepted Accounting Principles (GAAP) pronouncements that are nonapplicable due to one of the following reasons:

a. The pronouncement does not relate to the insurance industry;

b. The pronouncement is not within the objectives of statutory accounting;

c. The pronouncement would not add a substantive amount of guidance to statutory accounting due to the narrow scope of the topic;

d. The pronouncement relates to transition of a previously issued GAAP pronouncement.

For items previously presented to the Emerging Accounting Issues (E) Working Group, this table includes references to EITFs that have been rejected for the following reasons:

a. Rejected as not applicable to statutory accounting;

b. Rejected without providing additional statutory guidance;

c. Rejected on the basis of issues rejected in a SSAP.

*NOTE: EITFs marked with an asterisk were rejected as not applicable to statutory accounting on the basis of issues rejected in a SSAP (paragraph c. above).

GAAP pronouncements[1] not considered applicable to NAIC statutory accounting principles are summarized as follows:

NONAPPLICABLE GAAP PRONOUNCEMENTS FOR STATUTORY ACCOUNTING

GAAP Pronouncement	Title
FASB Accounting Standards Updates (ASU)	
ASU 2009-02	Omnibus Update—Amendments to Various Topics for Technical Corrections

Appendix D
FASB Codification Cross-Reference to GAAP Pronouncements as of December 2022

Information provided within this Appendix D supplement has been obtained from the FASB Cross-Reference Tool. This supplement serves as a reference tool in tracing the FASB Codification to pre-codification GAAP standards and post-codification GAAP accounting standard updates (ASU) that have been reviewed, or are pending review, as part of the current NAIC statutory accounting maintenance process. This supplement does not indicate which GAAP standards have been adopted, adopted with modification or rejected for statutory accounting, as this information is contained in previous sections of this appendix. The following information is not included within this supplement:

- Pre-codification GAAP guidance that has not been captured as part of the statutory accounting maintenance process, but that has been incorporated into the FASB codification, which includes FASB Derivative Implementation Group Issues; EITF Appendix D Topics; FASB Statement No. 138 Examples; FASB Staff Implementation Guides; AICPA Technical Inquiry Service and Audit and Accounting Guides

- SEC standards incorporated within the FASB Codification SEC Financial Reporting Releases; SEC Interpretive Releases; SEC Staff Accounting Bulletins; and SEC Regulation S-X.

- GAAP codification topics (and/or subtopics) that have been deemed not applicable to statutory accounting (e.g. Topic 920 – Entertainment-Films)

- GAAP codification topics (and/or subtopics) that had no reference to previous GAAP guidance reflected in the FASB Cross-Reference Tool.

The Audit and Accounting Guides (AAG) related to insurance have been reviewed for statutory accounting and are referenced in this supplement – HCO: Health Care Organizations, LHI: Life and Health Insurance and PLI: Property and Liability Insurance Companies.

Appendix E
Statutory Issue Papers

Introduction

Issue papers are used as the first step in developing new or revised SSAPs, and each contains a recommended conclusion, discussion and relevant literature section. While issue papers do not constitute an authoritative level of statutory accounting guidance as defined by the statutory hierarchy, they are an important part of the *Accounting Practices and Procedures Manual* (Manual) because they reference the history and discussion of the related SSAP.

Issue papers are published in the Manual within Appendix E the first year after adoption of the related SSAP, but are then removed from the subsequent year's Manual and posted for public reference on the Statutory Accounting Principles (E) Working Group (SAPWG) web page at https://content.naic.org/cmte_e_app_sapwg.htm.

Statutory Issue Paper No. 166

Updates to the Definition of an Asset

STATUS
Finalized August 10, 2022

Original SSAP and Current Authoritative Guidance: SSAP No. 4

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper documents the SAP clarification revisions to *SSAP No. 4—Assets and Nonadmitted Assets.* The intent of the revisions is to align current statutory accounting guidance, specifically the definition of an "asset," with the term utilized by the Financial Accounting Standards Board (FASB).

SUMMARY CONCLUSION

2. The statutory accounting principle clarifications to SSAP No. 4 (illustrated in Exhibit A), reflect that for the purposes of statutory accounting, an asset shall be defined as: a present right of an entity to an economic benefit. An asset has two essential characteristics: (1) it is a present right, and (2) the right is to an economic benefit. The combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. For clarity, an "economic benefit" represents services or other items of economic value and generally result in net cash inflows to the entity. Pursuant to current guidance, assets are then evaluated, as outlined in paragraph 3 below, to determine whether they are admitted for statutory accounting purposes.

3. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet, and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

   a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or

   b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

DISCUSSION

6. In December 2021, FASB issued *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which introduced updated definitions of certain key elements used in financial reporting – most notably updating the fundamental definition of an asset. Through the FASB's adoption of Concept Statement No. 8, the original Concept Statement No. 6 has been superseded. As statutory accounting currently reflects FASB's historical definition, this issue paper is to review the prior concept definition (currently utilized by statutory accounting) and compare it to FASB's updated concept definition and assess whether the revised concept definition shall be reflected in statutory accounting.

7. FASB concept statements do not reflect authoritative U.S. GAAP guidance. Rather concept statements are intended to set forth objectives and fundamental concepts that will be the basis for development of financial accounting and reporting guidance. The term "asset" is not captured or defined in the FASB Accounting Standards Codification (which is the source of authoritative U.S. GAAP.) Furthermore, although the concept statement is intended to be used as a guide in establishing authoritative U.S. GAAP, the FASB is not restricted to the concepts when developing guidance, and the FASB may issue U.S. GAAP which may be inconsistent with the objectives and fundamental concepts set forth in Concept Statements. A change in a FASB Concept Statement does not 1) require a change in existing U.S. GAAP, 2) amend, modify or interpret the Accounting Standards Codification, or 3) justify either changing existing generally accepted accounting and reporting practices or interpreting the Accounting Standards Codification based on personal interpretations of the objectives and concepts in the concepts statement.

8. Under the prior FASB concept statement, which was reflected in SSAP No. 4, an asset was defined as a probable future economic benefit obtained or controlled by a particular entity as a result of past transactions or events. In addition, the historical definition possessed three essential characteristics in that (1) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (2) a particular enterprise can obtain the benefit and control others' access to it, and (3) the transaction or other event giving rise to the enterprise's right to or control of the benefit has already occurred.

9. Pursuant to the prior concept statement, and as incorporated in SSAP No. 4, *probable,* as referenced both in the definition and essential characters, was used in a usual general meaning, rather than in a specific accounting or technical sense and referred to which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

10. With the new FASB conceptual framework chapter, an asset is now defined as a present right of an entity to an economic benefit. In addition, the current definition only has two essential characteristics in that the asset is (1) a present right, and (2) the right is to an economic benefit. The combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. For clarity, an "economic benefit" represents services or other items of economic value to the asset holder and generally result in net cash inflows to the entity.

11. The updated asset definition from Concept Statement No. 8 no longer includes the term *probable* or the phrases *future economic benefit* and *as a result of past transactions or events.* The FASB concluded that the term *probable* has historically been misunderstood as implying that a future benefit must be probable to a certain threshold before the definition of an asset was met. Thus, if the probability of a future benefit was low, an asset could not be recognized. The FASB also struck the phrase *future economic benefit* as this phrase often was interpreted that the asset must represent a certain future economic benefit (such as

eventual cash inflows), however with this action, the FASB clarified that the asset represents the rights to the benefit, not the actual benefit itself – nor the probability of realization. Finally, FASB struck the phrase *as the result of past transactions or events.* It was concluded that if the asset represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

12. To meet the definition of an asset, the right must be a "present right," that is the right must exist at the financial statement date, not a right that is expected to occur in the future. The existence of a present right at the financial statement date means that the right and therefore the reasons why that asset was obtained, must have arisen from a past transaction or event. A right entitles its holder to have or obtain something, or act in a certain manner. Rights can be obtained in various ways and are often obtained through legal ownership. Legal ownership gives the owner access to the economic benefits, including the ability to possess, use, and enjoy the right. However, legally enforceable rights to economic benefits can also be obtained without legal ownership of the underlying property. This occurs in cases where the underlying benefit itself, as is the example in the right of use or rights to specified cashflows in contract provisions, are possessed by an entity other than the legal title holder. One important aspect of the change in definition is the removal of the term "control." The FASB clarified that while the term control has been removed, the notion of control has been maintained in the updated definition. In the prior definition, control was a required element and thus without control, an asset was not recognized. However, control often refers to the ability to direct, manage, or have power over something. The FASB stated that in many instances, constituents misunderstood the notion of control by 1) believing it represented a probable future economic benefit, or 2) failing to properly identify what was specifically controlled. An example provided was a trade receivable – the definition of control might be misapplied to mean the successful collection; however, the correct application should refer to the rights of collection – not the successful collection itself. Citing this as an example, the FASB concluded that while the notion of control was an important aspect, the explicit term did not sufficiently add to the definition – thus the term "control" was removed.

13. When reviewing the substance of the revisions, the FASB concluded that the updated definition resulted in a clearer and more precise definition and it did not fundamentally change the historical concept of an asset, nor should the revisions result in any material changes in instrument reclassification (e.g., items now being classified as an asset when previously they were not considered assets). For statutory accounting purposes, the updated definition should be viewed similarly, that is it does not change fundamental concepts, change current practices, or introduce a new, original or a modified accounting principle. The revisions to the definition of an asset clarify the definitional language and do not modify the original intent of SSAP No. 4 and thus the changes are deemed to be a statutory accounting principle clarification.

14. One concept articulated in SSAP No. 4, and one that is not proposed for revision, is the concept of nonadmitted assets. As revisions are not proposed to this concept, further discussion is not included in this issue paper.

Actions of the Statutory Accounting Principles (E) Working Group

15. During the 2022 Spring National Meeting, the Working Group exposed this issue paper for public comment.

16. During the 2022 Summer National Meeting, the Working Group adopted the exposed revisions to SSAP No. 4 and affirmed the SAP clarification classification of these revisions.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

17. Relevant excerpts of SSAP No. 4, paragraphs 2-5 regarding the definition of an asset and a nonadmitted asset (nonadmitted asset as it is referenced in definition of an asset paragraph) utilized by statutory accounting is:

> 2. For purposes of statutory accounting, an asset shall be defined as: probable[1] future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it[2], and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.
>
> 3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:
>
> a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
>
> b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.
>
> If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.
>
> 4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.
>
> 5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

---

[1] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states:

Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

[2] If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

© 1999-2023 National Association of Insurance Commissioners

Generally Accepted Accounting Principles

18. Relevant paragraphs from *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* have been included below:

> **Assets**
>
> E16. An asset is a present right of an entity to an economic benefit.
>
> **Characteristics of Assets**
>
> E17. An asset has the following two essential characteristics: a. It is a present right. b. The right is to an economic benefit.
>
> The combination of those two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled.
>
> E19. Essential to the definition of an asset is a right to an "economic benefit"—the capacity to provide services or benefits to the entities that use them. Generally, in a business entity, that economic benefit eventually results in potential net cash inflows to the entity. In a not-for-profit entity, that economic benefit is used to provide desired or needed goods or services to beneficiaries or other constituents, which may or may not directly result in net cash inflows to the entity. Some not-for-profit entities rely significantly on contributions or donations of cash to supplement selling prices or to replace cash or other assets used in providing goods and services. The relationship between the economic benefit of an entity's assets and net cash inflows to that entity can be indirect in both business entities and not-for-profit entities.
>
> E22. A right entitles its holder to have or obtain something or to act in a certain manner. Rights can be obtained in various ways. Often, rights are obtained by legal ownership, for example, owning a building. Legal ownership gives the owner access to economic benefits, including the ability to possess, use, and enjoy the right; to sell, donate, or exchange the right; or to exploit the right's value by, for example, pledging it as a security for borrowing.
>
> E23. Legally enforceable rights to economic benefits can be obtained without legal ownership of the underlying benefit itself as is the case, for example, when property is leased or intellectual property is licensed or when an entity has the rights to specified certain cash flows, as in the case of a contract providing rights only to interest flows from a specified debt instrument. Other legally enforceable rights that give rise to assets include the right to require other parties to make payments or render services and the right to use a patent or a trademark. Legally enforceable rights include, among other rights, contractual rights (for example, rights from options held).
>
> E31. Another essential characteristic of an asset is that the right of an entity must be to an economic benefit. An asset of an entity might be represented by rights to a particular property (such as the right to possess, use, and enjoy a parcel of land) or by rights to some or all the economic benefits derived from the property.

19. One of the most notable changes to the definitional change was the explicit removal of the term *control*, however the notion of control was retained. *Chapter 4, Elements of Financial Statements* included commentary regarding the FASB's rationale of the change.

> BC4.17. The definition of an asset in Concepts Statement 6 associated assets with a particular entity by inclusion of the term control. Control often refers to the ability to direct, manage, or have power over something to obtain or access benefits or to increase, maintain, or protect those benefits. Control goes beyond legal rights and includes the ability to obtain and control the benefit in other ways, including restricting, or otherwise prohibiting, the access of others to the economic benefit of the asset.

© 1999-2023 National Association of Insurance Commissioners

BC4.18. In applying the definition of an asset in Concepts Statement 6, however, many constituents misunderstood the notion of control. Some improperly viewed control of a probable future economic benefit in the same manner as described in business combinations or consolidation accounting. Additionally, in applying the term control, some failed to properly identify that which was controlled under the asset definition. For example, in the instance of trade receivables, the definition could be misunderstood to indicate that what is controlled is the successful collection of the receivable in the future. When applied appropriately, however, the definition in Concepts Statement 6 would conclude that the present right to collection is what is controlled. Similarly, if an entity has an option to acquire an asset, the present right of that entity is to the option itself, not the underlying asset that the option provides the right to acquire. Thus, control references the existing right that has the ability to generate economic benefits, or potential economic benefits, and to restrict others' access to those benefits.

BC4.19. While the Board concluded that the notion of control was an important aspect of the asset definition, it was not clear to the Board whether the explicit term control added anything significant to the definition of an asset. Those considerations are addressed by including the term present right in the definition in this chapter. If an entity has a present right to an economic benefit, that would seem to be sufficient to establish the fact that the asset is an asset of that entity. 37 Indeed, if an entity has exclusive rights, it presumably can deny or regulate access to that benefit by others, thereby implying control

BC4.22. The Board redeliberated the issue and decided that the term control should not be used in the definition of an asset for the following reasons:

a. It eliminates redundancy. If an entity has a present right, that would seem to be sufficient to establish the fact that the asset is an asset of that entity. In fact, the Board used the phrase of the entity in the definition of an asset to clarify that point. Indeed, if an entity has exclusive rights, it presumably can deny or regulate access to that benefit by others.

b. It eliminates misunderstanding of the term. The term control has two issues in the existing definition of an asset. First, many have a different definition of the term control. Second, many associate the term control with whether one has control of the economic benefit. The Board notes that what is controlled is the existing right that gives rise to economic benefits, or potential economic benefits, rather than the economic benefits themselves. The Board's reasoning for removing the term control is the same as removing other terms, such as future and probable, from the definition of an asset.

c. It avoids confusion with the IASB's Conceptual Framework use and meaning of the term. The IASB defines an asset as "a present economic resource controlled by the entity as a result of past events." In the basis for conclusions to the IASB's Conceptual Framework's discussion on control, footnote 19 references both IFRS 10, Consolidated Financial Statements, and IFRS 15, Revenue from Contracts with Customers. The Board is concerned about the references to IFRS 10 and IFRS 15 because those standards refer to control of an economic benefit, not control of the right. The Board notes that convergence with the IASB's asset definition on this point is not critical because it could perpetuate the misunderstanding discussed above.

20. Other changes regarding the definition of an asset included removal of the term *probable* and the phrases *future economic benefit* and *past transactions of events*. Rationale for these changes were documented in *Chapter 4, Elements of Financial Statements* commentary as follows:

BC4.11. The definitions of both an asset and a liability in Concepts Statement 6 include the term probable and the phrases future economic benefit and past transactions or events. The term probable in the definitions in Concepts Statement 6 has been misunderstood as implying that a future economic benefit or a future sacrifice of economic benefit must be probable to a certain threshold before the definition of an asset or a liability is met. In other words, if the probability of

future economic benefit is low, the asset definition is not met under that interpretation. A similar interpretation could be made for liabilities. The footnotes to the Concepts Statement 6 definition of assets and liabilities also were not helpful in clarifying the application of the term probable as used in the definitions of assets and liabilities. Accordingly, the Board decided to eliminate that term from the definitions of both assets and liabilities.

BC4.12. The term future in the definitions in Concepts Statement 6 focused on identifying a future flow of economic benefits to demonstrate that an asset exists or identifying a future transfer of economic benefits to demonstrate that a liability exists. The definitions in Concepts Statement 6 were often misunderstood as meaning that the asset (liability) is the ultimate future inflow (outflow). For example, in the instance of trade receivables, the definition in Concepts Statement 6 could be misunderstood to indicate that the asset is the successful collection of the receivable in the future. When applied appropriately, however, the definition would conclude that the asset is the present right to collection. Similar misunderstandings occurred in applying the liability definition. As a result, the Board concluded that a focus on the term present would appropriately shift the focus from identifying a future occurrence. Therefore, the Board decided to include the term present right to demonstrate that an asset exists and emphasize the term present obligation to demonstrate that a liability exists.

BC4.13. The definitions of assets and liabilities in Concepts Statement 6 both include the phrase past transactions or events. The Board concluded that if an entity has a present right or a present obligation, one can reasonably assume that it was obtained from some past transaction or event. Therefore, that phrase is considered redundant and has been eliminated from the definitions.

EXHIBIT A – SAP Clarification Revisions to *SSAP No. 4—Assets and Nonadmitted Assets*

Statement of Statutory Accounting Principles No. 4

Assets and Nonadmitted Assets

SCOPE OF STATEMENT

1. This statement establishes the definition of an "asset" for use in statutory accounting and establishes the criteria for consistent treatment of nonadmitted assets.

SUMMARY CONCLUSION

2. For purposes of statutory accounting, an asset shall be defined as: a present right of an entity to an economic benefitprobable[3] future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three two essential characteristics: (a) it is a present rightembodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, and (b) the right is to an economic benefit.[4] a particular entity can obtain the benefit and control others' access to it[5], and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted.[6] The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or

[3] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states:

Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

[4] *FASB Statement of Financial Accounting Concepts No. 8, Elements of Financial Statements*, states that the combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled.

[5] If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

[6] If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2, such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

© 1999-2023 National Association of Insurance Commissioners

b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Assets Pledged as Collateral or Otherwise Restricted

6. Assets that are pledged to others as collateral or otherwise restricted (not under the exclusive control of the insurer, subject to a put option contract, etc.) shall be identified in the investment schedules pursuant to the codes in the annual statement instructions, disclosed in accordance with *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures*, reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for assets pledged as collateral or otherwise restricted. Restricted assets should be reviewed to determine admitted or nonadmitted assets status in the statutory financial statements per the terms of their respective SSAPs. Asset restrictions may be a factor in determining the admissibility of an asset under a respective SSAP[7]. However, determining that a restricted asset is an admitted asset does not eliminate the statutory requirements to document and identify the asset as one that is pledged as collateral or otherwise restricted.

7. Assets pledged as collateral are one example of assets that are not under the exclusive control of the insurer, and are therefore restricted, even if the assets are admitted under statutory accounting guidelines (e.g., the asset is substitutable and/or other related SSAP conditions are met). As such, the asset shall be coded as pledged in the investment schedules pursuant to the annual statement instructions, disclosed in accordance with SSAP No. 1, reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for assets pledged as collateral or otherwise restricted.

Disclosure

8. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

[7] An example of such a situation is detailed in footnote 2 pertaining to assets restricted by the action of a related party. This is only a single example and each restricted asset would need to be reviewed to ensure it qualifies as an admitted asset.

NAIC Policy Statement on Maintenance of Statutory Accounting Principles

1. Statutory accounting principles (SAP) provide the basis for insurers to prepare financial statements to be filed with and utilized by state insurance departments for financial regulation purposes. Accuracy and completeness of such filings are critical to meaningful solvency monitoring. Accordingly, maintenance of SAP guidance for changes in the industry and changes in regulatory concerns is vital to preserving the usefulness of SAP financial statements.

2. The promulgation of new or revised SAP guidance by the NAIC ultimately requires action of the entire NAIC membership. Responsibility for proposing new or revised SAP guidance will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will charge the Statutory Accounting Principles (E) Working Group (Working Group) with the exclusive responsibility to develop and propose new statements of statutory accounting principles (SSAPs), to revise existing SSAPs, and to issue interpretations.

Composition of the Statutory Accounting Principles (E) Working Group

3. The chair of the Task Force shall determine membership of the Working Group subject to approval by the Financial Condition (E) Committee. The Working Group shall be limited in size to no more than 15 members and will include representation from the four zones of the NAIC. Membership shall be vested in the state (until such time as the membership may be changed) but continuity of individuals, to the extent possible, is extremely desirable.

Development of New SSAPs or New SAP Concepts[1] in an Existing SSAP

4. New SSAPs will be developed to address, but will not be limited to: 1) concepts not previously addressed by a SSAP and that do not fit within the scope of an existing SSAP; 2) concepts that fit within the scope of an existing SSAP, but the Working Group elects to supersede existing SSAPs and 3) existing concepts that warrant significant revisions. New SAP concepts to existing SSAPs will be developed to address, but will not be limited to: 1) concepts that fit within the accounting topic of an existing SSAP, but have not been addressed by the Working Group; 2) changes to the valuation and/or measurement of an existing SSAP; and 3) modifications to the overall application of existing SSAPs. The decision to undertake development of a new SSAP or a new SAP concept in an existing SSAP will rest with the Working Group. New SSAPs or a new SAP concept in an existing SSAP will have a specified effective date.

5. Research and drafting of a new SSAP or a new SAP concept in an existing SSAP will be performed by NAIC staff under the direction and supervision of the Working Group which may enlist the assistance of interested parties and/or consultants with requisite technical expertise as needed or desired. The first step in developing new SSAPs and new SAP concepts in existing SSAPs will commonly be the drafting of an issue paper, which will contain a summary of the issue, a summary conclusion, discussion, and a relevant literature section. Public comments will be solicited on an issue paper (at least one exposure period), and at least one public hearing will be held before the issue paper is converted to a SSAP. Upon approval by the Working Group, all proposed SSAPs will be exposed for public comment for a period commensurate with the length of the draft and the complexities of the issue(s). After a hearing of comments, adoption of new SSAPs or new SAP concepts in existing SSAPs (including any amendments from exposure) may be made by simple majority. If no comments are received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other non-contested positions after the opportunity is given during the hearing to separately discuss the

[1] Prior to December 11, 2021, the term used to describe a new SAP concept was "substantive" and the term used to describe a SAP clarification was "nonsubstantive." The new terms will be reflected in materials to describe revisions to statutory accounting principles on a prospective basis and historical documents will not be updated to reflect the revised terms.

proposal. All new SSAPs and new SAP concepts in existing SSAPs must be on the agenda for at least one public hearing before presentation to the Task Force for consideration. Adoption by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

6. The Working Group may, by a super majority vote (7 out of 10 members, 8 out of 11 or 12, 9 out of 13, 10 out of 14, and 11 out of 15) elect to: 1) combine the IP and SSAP process, resulting in concurrent exposure of the two documents; 2) expose and adopt revisions to a SSAP prior to the drafting/adoption of the related IP; and/or 3) forego completion of an IP and only proceed with a new SSAP or new SAP concept in an existing SSAP.

7. If accounting guidance, reserving standards, asset valuation standards, or any other standards or rules affecting accounting practices and procedures are first developed by other NAIC working groups, task forces, subcommittees, or committees, such proposed guidance, standards or rules shall be presented to the Working Group for consideration. In cases where such guidance has already been subjected to substantial due process (e.g., public comment periods and/or public hearings), the Working Group may elect to shorten comment periods and/or eliminate public hearings, and in such cases, will notify the Task Force of these actions.

Development of SAP Clarifications[1]

8. SAP clarifications will be developed to address, but will not be limited to: 1) clarification of the intent or application of existing SSAPs; 2) new disclosures and modification of existing disclosures; 3) revisions that do not change the intent of existing guidance; and 4) revisions to *Appendix A—Excerpts of NAIC Model Laws* to reflect amendments to NAIC adopted model laws and regulations. Research and drafting of SAP clarification revisions will be performed by NAIC staff under the direction and supervision of the Working Group. Public comment will be solicited on these revisions, and the item will be included on the agenda for at least one public hearing before the Working Group adopts revisions. SAP clarification revisions are considered effective immediately after adoption by the Working Group, unless the Working Group incorporates a specific effective date. If comments are not received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other "non-contested" positions after opportunity is given during the hearing to separately discuss the proposal. At its discretion, the Working Group may request that an issue paper be drafted for SAP clarification revisions in order to capture historical discussion and adopted revisions. Adoption of these revisions by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

Interpretations Which DO NOT Amend, Supersede or Conflict with Existing SSAPs

9. Interpretations may be developed to address issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an "interpretation" during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The voting requirement to adopt an interpretation of this type is a simple majority. The Working Group shall report the adopted interpretation to the Accounting Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-

© 1999-2023 National Association of Insurance Commissioners

thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Interpretations Which Amend, Supersede or Conflict with Existing SSAPs

11. In certain circumstances such as catastrophes and other time-sensitive issues requiring immediate, temporary statutory accounting guidance, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). (Examples of time-sensitive issues that have previously provided INT exceptions to SAP include the transition from LIBOR and special situations such as the federal TALF program.) Interpretations that conflict with existing SSAPs shall be temporary and restricted to circumstances arising from the need to issue guidance for circumstances requiring immediate guidance. In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

a. These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). In circumstances where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e., due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

b. These interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

a. **Interpretation of the new SSAP -** If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading "Interpreted by."

b. **Nullification** - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).

© 1999-2023 National Association of Insurance Commissioners

c. **Incorporation -** When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:

i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the "affects" section of the SSAP and is not referenced under the "interpreted by" section of the status page of the SSAP.

ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

NAIC Policy Statement on Comments to GAAP & IFRS Exposure Drafts

1. As expressed in the Statement of Concepts, statutory accounting principles (SAP) utilize the framework established by U.S. Generally Accepted Accounting Principles (GAAP). The NAIC's guidance on SAP (defined in the *Accounting Practices and Procedures Manual*) is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. GAAP pronouncements that do not differ from SAP may specifically be adopted by the NAIC to be included in statutory accounting. GAAP pronouncements do not become part of SAP until and unless adopted by the NAIC. Future SAP pronouncements will specifically identify any GAAP pronouncements that are to be included in SAP whether in whole, in part, or with modification as well as any GAAP pronouncements that are rejected. Future GAAP pronouncements, which SAP has not yet addressed, shall not be considered as providing authoritative statutory guidance.

2. As stated in the previous paragraph, the NAIC believes it is important to comment on GAAP exposure drafts that will affect SAP before such guidance is finalized. Exposing potentially contentious issues to the applicable GAAP bodies before completion will create a more efficient and effective maintenance process for the Statutory Accounting Principles (E) Working Group (Working Group). In addition, this allows the NAIC to be proactive to GAAP rather than reactive under the current system. The NAIC also believes that there may be instances in which it is important to comment on exposure drafts of the International Financial Reporting Standards (IFRS). This is particularly important on projects in which U.S. FASB and the International Accounting Standards Board (IASB) are attempting to converge, or to limit differences between U.S. GAAP and IFRS.

3. Comments on exposed GAAP pronouncements or IFRS exposure drafts will be developed at the discretion of the Working Group chair. After a comment letter has been agreed to by the Working Group, the chairs of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee must review and approve the comment letter before it is sent to the applicable standard board. Every reasonable attempt will be made to provide an adequate comment period to interested parties; however, FASB and IFRS deadlines may inhibit exposure in every instance. The chairs will consider factors such as comment deadline and level of controversy surrounding the issue. The chair of the parent task force or committee may override such a decision at any time.

4. Comment letters submitted to the FASB on GAAP exposure drafts may be considered when the Working Group is reviewing finalized GAAP pronouncements (as defined in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*). Nevertheless, these letters will not bind the Working Group to its tentative position during its deliberation to adopt, modify or reject the final GAAP guidance.

NAIC Policy Statement on
Statutory Accounting Principles Maintenance Agenda Process

1. The purpose of this policy statement is to document the Statutory Accounting Principles (E) Working Group (Working Group) maintenance agenda process.

2. As acknowledged in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*, the promulgation of statutory accounting principles (SAP) guidance will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will charge the Working Group with the responsibility to develop and propose new statements of statutory accounting principles (SSAPs), to propose revisions to existing SSAPs, and to issue interpretations in response to questions of application and clarification on existing SSAPs.

3. Information and issues can be presented to the Working Group in a variety of ways. Issues can be recommended or forwarded from 1) other NAIC committees, task forces or working groups; 2) interested parties; 3) interested regulators; and 4) NAIC staff. Also, if any guidance within the Generally Accepted Accounting Principles (GAAP) Hierarchy (see § V of the Preamble to the *Accounting Practices and Procedures Manual* (AP&P Manual)) is added or revised, those changes must be considered by the Working Group for potential revisions to SAP. In order for an issue to be placed on the **Pending Listing**, the recommending party must complete a Statutory Accounting Principles Maintenance Agenda Submission Form (Form A) and submit it to the Working Group support staff no later than 20 business days prior to the next scheduled Working Group meeting. NAIC staff will prepare a submission form for all GAAP pronouncements that have not been previously addressed by the Working Group. NAIC staff will update the **Pending Listing** before each national meeting and will notify the recommending party of such action. If the Working Group does not wish to address the issue (e.g., issue deemed not applicable to statutory accounting) or rejects the position presented, then the Working Group may move the item to the **Rejected Listing**. Should the Working Group choose to address an issue, it is moved to the **Active Listing** where it is prioritized and categorized as a new SAP concept, clarification of an existing SAP, ~~**Substantive, Nonsubstantive**~~ or an ~~I~~interpretation agenda item.

4. The **Active Listing** identifies agenda items that are in the process of development and includes the following:

   a. ~~**Substantive**~~**New SAP Concept**: These agenda items address the development of new SSAPs and/or the introduction of a new ~~substantially revised S~~SAP~~s~~ concept as defined in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*.

   b. ~~**Nonsubstantive**~~**Clarification of an Existing SAP**: These agenda items address the development of ~~nonsubstantive~~ revisions ~~to~~which clarify an existing SAP as defined in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles.*

   c. **Interpretations**: These agenda items address the development of interpretations to SAP as defined in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*. If SSAP revisions are subsequently deemed necessary, the Working Group shall re-categorize the agenda item as either ~~substantive or nonsubstantive~~a new SAP concept or clarification of an existing SAP, as applicable, and follow the appropriate process to consider and adopt revisions.

5. After review of the agenda item (including any interested party comments), at its discretion, the Working Group makes the ultimate determination of whether an agenda item is categorized (or re-categorized) as ~~substantive (either as a new SSAP or substantively revised SSAP), nonsubstantive~~a new SAP concept, clarification of an existing SAP, or an interpretation.

© 1999-2023 National Association of Insurance Commissioners

6. The **Rejected Listing** identifies items that were proposed to the Working Group and rejected without consideration. The **Disposition Listing** includes all agenda items considered by the Working Group and provides the conclusions and guidance given for all adopted revisions to SAP and for all agenda items disposed without modification to SAP.

7. It should be noted that this policy statement addresses the process and the flow of information. The timing is left to the discretion of the Working Group. For instance, once public discussion requirements have been met, as detailed in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*, the Working Group can take action on an item at its discretion. In determining whether it is appropriate to take specific actions (including adoption), the Working Group must consider when the last exposure period occurred, and the extent of any prior comments received and discussions held. Additionally, there is no timeframe in which items must be addressed. Items will remain on the Active Listing until formally disposed of by the Working Group.

8. NAIC staff will maintain the following on the Working Group Web page (*https://content.naic.org/cmte_e_app_sapwg.htm*): 1) A blank Form A (Attachment A to this policy statement); 2) The current Maintenance Agenda, and 3) Current ~~substantive, nonsubstantive~~statutory and/or interpretation revisions exposed for public comment. Attachment B to this policy statement will be attached to all exposures with proposed ~~substantive~~ revisions that result in a new SAP concept and serves as the request for written comment and notice of a public hearing.

Correction of Editorial Errors

9. Over time, during review and publication of the AP&P Manual, NAIC staff may identify inadvertent editorial errors and necessary revisions to the content of the Manual. These are editorial in nature and include grammatical errors, reference changes (i.e., paragraphs, SSAPs, and Model Laws and Regulations) and formatting issues. To aid in correcting these items and improve the overall usefulness of the AP&P Manual, the Working Group has implemented the following process:

a. At each meeting of the Working Group, if NAIC staff have identified (or have been informed by interested parties or regulators) any grammatical errors, reference changes and/or formatting issues, NAIC staff will present a public memorandum to the Working Group outlining the proposed amendments to the AP&P Manual. These corrections are not intended to clarify or revise existing guidance and as such, do not ordinarily warrant the use of a Form A or addition to the Maintenance Agenda.

b. After presentation to the Working Group, the memorandum will be exposed for a public comment period. If no objections are raised by the Working Group, interested regulators or interested parties, the revisions will be considered "noncontested" and presented to the Working Group for adoption. Upon adoption, the revisions will be incorporated into the AP&P Manual, with the revisions being posted on the "Updates to the AP&P Manual" secure Web page. Under this process, these revisions will be shown as tracked changes to the Manual unless otherwise noted in the memorandum.

c. If objections are raised by the Working Group, interested regulators or interested parties, the proposed revisions will either be rejected without further discussion or incorporated into a Form A to be presented to the Working Group and subsequently exposed for a public comment period. Under this process, the revisions will follow the Maintenance Agenda process as outlined in this policy statement.

Attachment B

EXPOSURE DRAFT NUMBER - TITLE

Notice of Public Hearing and Request for Written Comments

Hearing Date: ________________ **Location: ________________**
Deadline for Written Notice of Intent to speak: **Deadline for Receipt of Written Comments:**

Basis for hearings. The Statutory Accounting Principles (E) Working Group (Working Group) will hold a public hearing to obtain information from and views of interested individuals and organizations about the standards proposed in this Exposure Draft. The Working Group will conduct the hearing in accordance with the *National Association of Insurance Commissioners (NAIC) Policy Statement on Open Meetings*. An individual or organization desiring to speak must notify the NAIC in writing by __________. Speakers will be notified as to the date, location and other details of the hearings.

Oral presentation requirements. The intended speaker must submit a position paper, a detailed outline of a proposed presentation or comment letter addressing the standards proposed in this Exposure Draft by __________. Individuals or organizations whose submission is not received by this date will only be granted permission to present at the discretion of the Working Group chair. All submissions should be addressed to NAIC staff at the address listed below. Comments can also be submitted by electronic mail to ___________@naic.org.

Format of hearings. Speakers will be allotted up to 10 minutes for their presentations to be followed by a period for answering questions from the Working Group. Speakers should use their allotted time to provide information in addition to their already submitted written comments as those comments will have been read and analyzed by the Working Group. Those submissions will be included in the public record and will be available at the hearings for inspection.

Copies. Exposure drafts can be obtained on the Working Group's Web page at *https://content.naic.org/cmte_e_app_sapwg.htm*.

Written comments. Participation at a public hearing is not a prerequisite to submitting written comments on this Exposure Draft. Written comments are given the same consideration as public hearing testimony.

The Statutory Accounting Principles Statement of Concepts was adopted by the Accounting Practices & Procedures (EX4) Task Force on September 20, 1994, in order to provide a foundation for the evaluation of alternative accounting treatments. All issues considered by the Working Group will be evaluated in conjunction with the objectives of statutory reporting and the concepts set forth in the Statutory Accounting Principles Statement of Concepts.

The exposure period is not meant to only measure support for, or opposition to, a particular accounting treatment but rather to accumulate an analysis of the issues from other perspectives and persuasive comments supporting them. Therefore, form letters and objections without valid support for their conclusions are not helpful in the deliberations of the Working Group. Comments should register agreement or disagreement with a detailed explanation, a description of the impact of the proposed guidelines, and possible alternative recommendations for accomplishing the regulatory objective.

Any individual or organization may send written comments to ____________ by electronic mail in Microsoft Word format to _______@naic.org. After written comments have been reviewed by the Working Group, the letters will be posted publicly on the NAIC website.

NAIC Policy Statement on the Impact of Statements of Statutory Accounting Principles on NAIC Publications

1. The purpose of this policy statement is to document the process and procedure for identifying the impact of statements of statutory accounting principles (SSAPs) on NAIC publications.

2. New and revised SSAPs can affect various NAIC publications in different ways. New accounting practices or procedures may result in new disclosures and reporting requirements (affecting annual statement blanks and instructions), modified analysis techniques (affecting RBC formula or IRIS ratios), or new examination procedures (affecting the *Financial Condition Examiners Handbook*).

3. The Statutory Accounting Principles (E) Working Group (Working Group) shall evaluate the impact that newly adopted SSAPs will have on other NAIC publications. To that end, the Working Group shall submit a referral to any group in response to new or revised SSAPs expected to impact other NAIC groups or publications. (Instead of a referral, a blanks proposal may be sponsored by the Working Group and submitted to the Blanks (E) Working Group). These referrals and blanks proposals are only required to be approved by the chair of the Working Group prior to submission to the other groups but may be shared with and approved by all Working Group members.

© 1999-2023 National Association of Insurance Commissioners

NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Annual Statement Blank

1. The purpose of the codification of statutory accounting principles (SAP) project was to produce a comprehensive guide to SAP for use by insurance departments, insurers, and auditors. Statutory accounting principles, as they existed prior to codification did not always provide a consistent and comprehensive basis of accounting and reporting. Insurance companies were sometimes uncertain about what rules to follow, and regulators were sometimes unfamiliar with the accounting rules followed by insurers in other states. This was due in part to the fact that prior to codification, accounting guidance could be found in the NAIC *Accounting Practices and Procedures Manual*, annual statement instructions, the *Financial Condition Examiners Handbook*, and various states' laws and regulations. As a result, insurers' financial statements were not prepared on a comparable basis. Now that accounting requirements have been more rigidly stipulated by the NAIC, it is imperative that the accounting requirements and the reporting and disclosure requirements remain synchronized. This is an excellent opportunity to create a system of parallel requirements. This effort has already been recognized by the NAIC/AICPA (E) Working Group. In 1999, the NAIC/AICPA (E) Working Group modified the *Model Regulation Requiring Annual Audited Financial Reports* to require the following for audited financial statements:

> Notes to financial statements. These notes shall be those required by the appropriate NAIC annual statement instructions and the NAIC *Accounting Practices and Procedures Manual*. The notes shall include a reconciliation of differences, if any, between the audited statutory financial statements and the annual statement filed pursuant to Section [insert applicable section] of the [insert state] insurance law with a written description of the nature of these differences.

2. As stated in the model regulation, the NAIC/AICPA (E) Working Group has an expectation that the requirements of the annual statement instructions and the *Accounting Practices and Procedures Manual* will be identical in all pertinent parts that are subject to audit. There is no reason to create a different set of audit requirements in the annual statement instructions when a complete and comprehensive guide to statutory accounting exists. However, it must be noted that the statements of statutory accounting principles (SSAPs) are not intended to prescribe the specific format of the detailed financial statements.

3. The scope of this policy statement is defined as follows:

> Any change to the annual statement core financials (balance sheet, income statement, cash flow and notes to the financial statements) must be reviewed by the Statutory Accounting Principles (E) Working Group to determine whether it conflicts with the disclosure requirements of the SSAPs.

4. The scope is defined in broad terms because it is very difficult to specify what constitutes a conflict with the SSAPs. For example, the renumbering of the assets page does not conflict because there is not a SSAP that prescribes the order of asset presentation. Contrast this with a seemingly innocuous proposal to modify Schedule P - Part 1 that would create a disclosure conflict with the related SSAP.

5. In order to ascertain that the requirements of the annual statement instructions and blank are in harmony with the SSAPs (as they relate solely to the core financial statements), the following procedures shall be followed:

   a. The Blanks Agenda Item Submission Form will include an interrogatory that will indicate to the Blanks (E) Working Group whether the proposal:

© 1999-2023 National Association of Insurance Commissioners

i. Affects the core financial statements

ii. Conflicts with an existing SSAP

iii. Is not currently required by a SSAP

iv. Has been reviewed by the Statutory Accounting Principles (E) Working Group

b. NAIC staff supporting the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group are charged with verifying the accuracy of the interrogatory proposed in paragraph 5.a. After NAIC staff review the proposals, they will report their findings back to the applicable groups. If NAIC staff identify issues that need further exploration or consultation, the chairs of the two working groups or certain members from each group will hold a joint meeting.

c. The Blanks (E) Working Group will reject proposals that will delete/modify information contained within the core financial statements that are required by an existing SSAP.

d. The Blanks (E) Working Group will either reject proposals that would require additional audited disclosure or audited information within the core financial statements if that same item is not required by an existing SSAP; or move it outside the core financial statements. The sponsoring party will still have the option of placing this information outside the core financial statements (e.g., general interrogatories or interrogatories to schedules) until the disclosure is included in a SSAP. If the disclosure were added to a SSAP in the future, it could be moved to the Notes to the Financial Statements and subject to audit at that time.

e. The NAIC will maintain a SSAP to annual statement cross-reference. This cross-reference will contain two significant features. First, it will list all of the SSAP disclosures and reference them to where in the annual statement the disclosure requirement is met. Second, the cross-reference will identify the annual statement components that are required by a SSAP. The cross-reference can be used by the Blanks (E) Working Group and interested parties in completing the new Blanks Agenda Item Submission Form Interrogatory.

© 1999-2023 National Association of Insurance Commissioners

NAIC Policy Statement on Coordination with the Valuation Manual

1. Proposed changes to the *Valuation Manual* must be consistent with the existing referenced model laws, including the *Standard Valuation Law* (Model #820), and, to the extent determinable, with models in development. To the extent that proposed changes to the *Valuation Manual* could have an impact on accounting and reporting guidance and other requirements as referenced by the *Accounting Practices and Procedures Manual*, proposed changes must be reviewed by the Statutory Accounting Principles (E) Working Group for consistency with the *Accounting Practices and Procedures Manual,* including consistency of implementation dates. The Life Actuarial (A) Task Force or its staff support will prepare a summary recommendation that will include as appropriate an analysis of the impact of proposed changes.

2. If the Statutory Accounting Principles (E) Working Group reaches the conclusion that the proposed changes to the *Valuation Manual* are inconsistent with the authoritative guidance in the *Accounting Practices and Procedures Manual*, The Life Actuarial (A) Task Force will work with the Statutory Accounting Principles (E) Working Group to resolve such inconsistencies prior to implementation.

© 1999-2023 National Association of Insurance Commissioners

NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Purposes and Procedures Manual of the NAIC Investment Analysis Office

1. The purpose of this policy statement is to detail the coordination and collaboration between the Securities and Valuation Office (SVO) and the Statutory Accounting Principles (E) Working Group (Working Group) support staff, the relationship between the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) and *Accounting Practices and Procedures Manual* (AP&P Manual) and the expectations of the Valuation of Securities (E) Task Force (VOSTF) and the Working Group.

NAIC Designations Do Not Communicate Statutory Accounting or Reporting

2. The assessment of credit risk for an obligation or asset, as specified in the P&P Manual, is a separate and distinct process from the determination of statutory accounting or reporting under the AP&P Manual. The manner in which an NAIC designation is used within statutory accounting guidance is limited to that, if any, specified in a statement of statutory accounting principle (SSAP) and cannot be derived or implied by language in the P&P Manual. Obtaining an NAIC designation does not change an investment's applicable SSAP, annual or quarterly statement reporting schedule, or override other SSAP guidance required for the investment to be an admitted asset. There are limited instances in which a SSAP specifically identifies, within its scope, the inclusion of specific SVO-identified investments. The SVO review required for an investment to be included on a SVO listing is a separate evaluation process that focuses on the structure of the investment. This process is distinct from the SVO's assessment of an investment's credit risk, which results in a NAIC designation**.** As stated in the Statutory Hierarchy, Section V of the Preamble, the AP&P Manual is the highest level of authoritative guidance.

Sources and Application of Statutory Accounting Guidance

3. The authority to determine and interpret existing statutory accounting guidance in, or to develop new statutory accounting guidance for, the AP&P Manual, is a charge assigned by the Financial Condition (E) Committee through its Accounting Practices and Procedures (E) Task Force to the Statutory Accounting Principles (E) Working Group. The application of statutory accounting guidance to any specific obligation or asset to determine its status under the AP&P Manual is the obligation of the insurance company and its management. The state of domicile is the final authority with respect to statutory accounting and reporting guidance. Deviations from the authoritative guidance in the Statutory Accounting Hierarchy are reflected as a permitted or prescribed practice.

Impact on SVO Operations

4. Because SVO analytical determinations of credit quality do not convey opinions, conclusions or informational content relative to statutory accounting status, the SVO may assign an NAIC designation to any obligation or asset that is filed by an insurer, provided that its credit quality can be assessed consistently with the polices and methodologies specified in the P&P Manual.

Communication and Coordination Between SVO and SAPWG Staff

5. The following processes are intended to assist optimum communication and coordination between the SVO and SAPWG support staff functions.

   a. Maintain ongoing dialogue regarding investments, investment related SSAPs and relevant developments in the areas assigned to support staff of both groups.

© 1999-2023 National Association of Insurance Commissioners

b. Maintain an ongoing dialogue relative to obligations and assets filed with the SVO, including communications about new types of obligations or assets filed with the SVO and their likely treatment under existing investment related SSAPs.

c. Maintain an ongoing dialogue relative to new obligations or assets, in which no statutory accounting guidance exists, or uncertainty exists about how current statutory accounting guidance applies to features or characteristics of the obligation or asset.

d. The NAIC Investment Analysis Office (IAO) and Financial Regulatory Services (FRS) staff shall provide notice to, and consult with, each other when either staff determines that existing technical guidance or procedures administered by the staff are no longer adequate to secure the original regulatory objective for which it was designed. Upon receipt of such notice, both staff will formulate a statement of the issues and, if possible, recommendations, and thereafter coordinate discussion between the SAPWG and the VOSTF consistent with the NAIC procedures and policies that apply to the situation. Such proposed recommendations shall be discussed consistent with the NAIC open meetings policy and any revisions to the authoritative guidance will be exposed for comment for a period of time commensurate with the significance of the change, to provide a formal forum for interested parties and regulators to provide input and allow for adequate due process.

e. Situations in which NAIC staff (SVO or FRS) are contacted directly with questions on statutory accounting application, it shall be noted that opinions of NAIC staff are not authoritative and are based on the information provided and existing authoritative statutory accounting guidance. Information and issues can be submitted to the SAPWG for consideration, as detailed in the *NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process.*

Appendix G
Implementation Guide for the
Annual Financial Reporting Model Regulation

Introduction

The new requirements within the Annual Financial Reporting Model Regulation (Model) related to auditor independence, corporate governance and internal control over financial reporting became effective in 2010. The Implementation Guide (Guide) is being published to assist companies in planning and preparing for compliance with the new requirements.

The Guide is intended to supplement the Model, not to create additional requirements, by providing interpretive guidance and clarifying the meaning of terms used in the Model. Such guidance is important to ensure common understanding between insurers and regulators and to memorialize the intent of the changes. Because issues and questions will occur from time-to-time, by placing the Guide outside of the Model, maintenance can be achieved in a cost-effective way without reopening the Model especially when the issue under consideration is an interpretation of the requirements. The Guide should not be viewed as a requirement of complying with the *Accounting Practices and Procedures Manual*.

Maintaining the Guide

The responsibility of developing and maintaining the Guide resides with the NAIC/AICPA (E) Working Group with changes to the Guide following the NAIC regulatory due process. The Guide resides as an informational appendix to the NAIC *Accounting Practices and Procedures Manual* (AP&P Manual). The AP&P Manual was selected as the logical repository since the Guide provides instruction about compliance with the Model, which directly relates to financial reporting and statutory accounting.

The regulatory due process for modifying this Guide requires the NAIC/AICPA (E) Working Group to send adopted proposals to the Accounting Practices and Procedures (E) Task Force for adoption and inclusion in the AP&P Manual. If the Accounting Practices and Procedures (E) Task Force recommends substantive changes to the proposal received from the NAIC/AICPA (E) Working Group, the proposal should be returned to the NAIC/AICPA (E) Working Group for further deliberation.

© 1999-2023 National Association of Insurance Commissioners

Table of Contents

The Table of Contents for the Guide mirrors that of the Model. However, not all sections of the Model require interpretive guidance. Consequently, only those sections containing guidance are contained in the Guide. The presentation of the Guide is organized by the section title with the section number of the Model appearing after the title.

Title	Section	Page

Requirements for Audit Committees	14	11
Management's Report of Internal Control over Financial Reporting	17	13
Exemptions and Effective Dates	18	18
Appendix 1	17	22

Definitions (Section 3)

Certain terms and definitions contained in the Model need no further explanation. The Guide provides additional information for preparers and users for some definitions to facilitate their understanding.

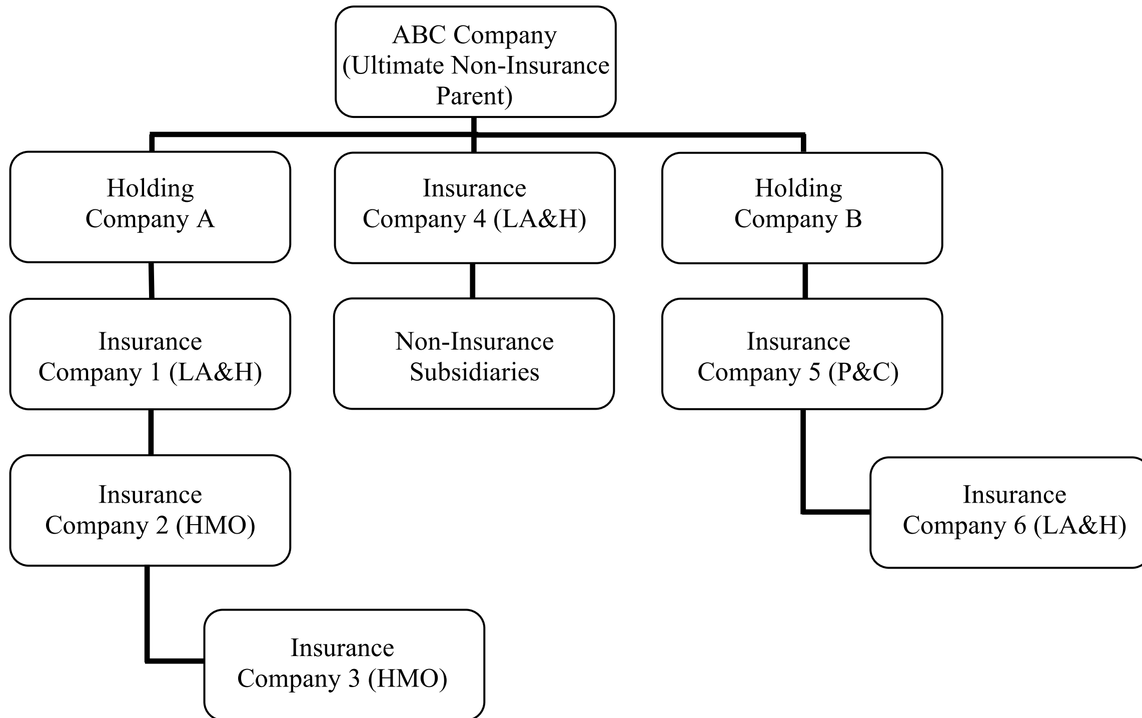
"**Audited financial report**" (D), differs from the term "financial statements" in that the Audited financial report (see Section 5 of the Model) includes the financial statements plus the report of the independent certified public accountant. "Financial statements," therefore, excludes the report of the independent certified public accountant.

"**Group of insurers**" (H), as intended for use in the Model is to recognize the variety of structures that may exist. Companies within a holding company structure, or other set of insurers identified by management, may often share common management, systems or processes. Consequently, when management asserts to the effectiveness of their internal controls, it is appropriate to make such an assertion for those companies based upon the organization management determines to be most relevant to meet the reporting requirements. Because holding company structures, and other groups of insurers, can be complex and organized to meet corporate objectives, that structure may not align with the organizations that are responsible for managing and preparing the financial statements of the insurer. The Model provides flexibility to insurers to identify a "Group of insurers" for purposes of evaluating the effectiveness of their internal control over financial reporting. In determining the appropriate scope and level of testing for systems that are shared by a group of insurers, management is not required to expand the scope or perform additional testing that would be redundant for each legal entity included within the group of insurers. To the extent that a specific internal control or system is unique to and has a material impact on the preparation of the audited statutory financial statements of a legal entity included in a group of insurers and the legal entity exceeds the premium thresholds contained in Section 17, that control or system is to be included in management's evaluation of internal controls.

© 1999-2023 National Association of Insurance Commissioners

A “Group of insurers” that has been granted approval to file audited statutory consolidated or combined financial statements of a group of insurers (as described in Section 8) may set the scope and level of testing for purposes of determining effectiveness of internal controls over financial reporting consistent with the basis on which the audited statutory financial statements for the Group are prepared (i.e., at the combined or consolidated level).

The following example is intended to illustrate various ways that a “Group of insurers” could be determined. The example is not intended to be limiting in any way. Rather, it is intended to show the flexibility to be in compliance with the Model. Insurers are encouraged to notify the Commissioner of its initial “Group of insurers” and any subsequent changes to such group.



1. “Group of insurers” could be established at the ultimate parent level, i.e., one report of the effectiveness of internal controls for all insurers in the group-insurance companies 1-6.
2. Two “Group of insurers” could be established at the holding company level, i.e., holding company A and B. In this case, a separate report would be required for holding company A, holding company B, and if it met the reporting threshold, insurance company 4 since it is not in either group.
3. Two “Group of insurers” could be established based upon the type of insurance company, i.e., LA&H companies 1, 4 and 6 could be one group and HMO companies 2 and 3 in the second group. In this case, a separate report would be required for the LA&H companies, the HMO companies and if it met the reporting threshold, insurance company 5 since it is not in either group.
4. Two “Group of insurers” could be established based upon the way the entities are managed. For example, companies, 1, 2, 3 and 5 have the same management while companies 4 and 5 have common management.
5. If management elects not to identify a “Group of insurers” for purposes of evaluating the effectiveness of internal control over financial reporting then each reporting entity meeting the reporting requirements of Section 17 would prepare such a report.

© 1999-2023 National Association of Insurance Commissioners

"**Internal control over financial reporting**" (I), as defined in the Model is intended to have the same meaning as understood in the public sector to comply with the requirements of the Sarbanes-Oxley Act of 2002. Because some terms might not be fully defined and to avoid misunderstanding, this Guide attempts to clarify such terms. For example, the word "reliability" used in the phrase "reliability of financial statements" has the same meaning as that contained in the generally accepted accounting principles (GAAP) framework, Statement of Financial Accounting Concepts Two. This Statement is referenced in the Preamble, Part III, paragraph 24 of the AP&P Manual.

General Requirements Related to Filing and Extensions for Filing of Annual Audited Financial Reports and Audit Committee Appointment (Section 4)

Section 4D stipulates that each insurer required to file an annual Audited financial report pursuant to the Model shall designate a group of individuals as constituting its Audit committee. Section 4D further states that the Audit committee of an entity that controls an insurer may be deemed to be the insurer's Audit committee for purposes of this regulation at the election of the controlling person. The definition of Audit committee in Section 3 of the Model references Section 14E for exercising this election. However, a disclaimer within Section 14 of the Model indicates that the section shall not apply to SOX Compliant Entities or wholly-owned subsidiaries of SOX Compliant Entities. Regardless of the disclaimer, in order to comply with the second sentence in Section 4D, the Audit committee of any entity that controls an insurer (a SOX Compliant entity or a non-SOX Compliant Entity) may be deemed to be the insurer's Audit committee at the election of the controlling person, and only if such election is completed in the manner outlined in Section 14E.

The responsibility of the Audit committee is defined in Section 14 of the Model. Section 14 states that each member of the Audit committee shall be a member of the Board of Directors and sets forth the requirements for the proportion of independent Audit committee members based on the insurer's direct written and assumed premiums. The definition of an independent Audit committee member is outlined in Section 14.

Qualifications of Independent Certified Public Accountant (Section 7)

Lead Audit Partner Rotation Requirement (Section 7D)

Purpose

The purpose of this section is to provide companies and their independent accountants with guidance to enable an orderly transition in meeting the revised lead audit partner rotation requirements as set forth in Section 7.

Background

Section 7 provides certain limitations on the number of years an audit partner may serve in the capacity of lead audit partner for an insurance company audit. Previously, the lead audit partner was permitted to serve for seven consecutive years in that capacity with a two-year break in service. Under the revised Model "…the lead …audit partner (having primary responsibility for the audit) may not act in that capacity for more than five (5) consecutive years. The person shall be disqualified from acting in that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years."

The new rotation requirements under Section 7 are effective beginning with audits of the 2010 financial statements. The rotation requirements of the Model and the interpretative guidance provided are applicable for statutory reporting and regulatory purposes. An insurer and its affiliates that are subject to the rotation requirements of the Securities and Exchange Commission (SEC) and Public Company Accounting Oversight Board (PCAOB) must also continue to comply with those rotation requirements.

Relief from the Lead Audit Partner Rotation Requirement (Section 7D)

The Model states:

> An insurer may make application to the Commissioner for relief from the above rotation requirement on the basis of unusual circumstances. This application should be made at least thirty (30) days before the end of the calendar year. The Commissioner may consider the following factors in determining if the relief should be granted:
>
> (a) Number of partners, expertise of the partners or the number of insurance clients in the currently registered firm;
>
> (b) Premium volume of the insurer; or
>
> (c) Number of jurisdictions in which the insurer transacts business.

The following examples illustrate circumstances that the Commissioner may consider in determining if relief from the lead partner rotation requirement shall be granted:

1. No other partners in the firm's local office have the qualifications to serve as lead audit partner and the use of a qualified partner resident in another location could result in increased audit risk and higher audit fees.
2. Limited number of partners in the firm that have the qualifications to serve as the lead audit partner.
3. Switching firms could result in increased audit risk due to the new engagement team's lack of familiarity with the insurer.
4. Limited availability of other firms in a particular location with the requisite expertise.
5. The regulator believes that complex issues at an insurer make a particular partner best suited to continue as lead audit partner.
6. Short-term relief due to the occurrence of an unforeseeable event that renders a partner unable to continue as the lead audit partner on the engagement.
7. Short-term relief due to unexpected delays in the state's licensing or admission process that prevent the "new" lead audit partner from assuming that role.

Also, the granting of transitional relief may be warranted when the non-insurance parent or ultimate parent of an insurance company is an SEC registrant and the current lead audit partner on the SEC registrant has completed his or her rotation as the lead audit partner on insurance subsidiaries prior to completing his or her five-year rotation as the lead partner on the audit of the GAAP financial statements of the SEC registrant. In this situation the relief would allow the lead audit partner to complete his or her rotation on the SEC registrant as long as he or she no longer acts in the capacity of lead audit partner for any insurance subsidiaries and/or any downstream affiliates of the insurance subsidiaries.

Frequently Asked Questions (Section 7D)

Following are a series of frequently asked questions to assist companies and their independent accountants in interpreting this guidance. Dates provided refer to the year of financial statements under audit.

In determining when the lead audit partner must rotate, consecutive time served in the capacity of lead audit partner prior to the effective date of these rules would be counted (i.e., the lead audit partner is not

© 1999-2023 National Association of Insurance Commissioners

afforded a "fresh start"). If the lead audit partner completed the two-year break in service required by the previous version of the Model prior to the effective date of these rules, the partner is eligible to resume service as a lead audit partner for a five-year period and need not wait additional years to accomplish a five-year break in service.

1. 2010 would be the fifth year that a partner would serve as lead audit partner of an insurance company. Would that partner be able to complete the 2010 year-end audit?

   Yes. The partner would be able to complete the 2010 year-end audit; however, the partner would be required to rotate off the engagement after the 2010 year-end audit.

2. 2010 would be the sixth or seventh year that a partner would serve as the lead audit partner. Would that partner be able to serve in that capacity for the 2010 audit?

   No. The partner would be required to rotate off for the 2010 year-end audit. In determining when the lead audit partner must rotate, consecutive time served in the capacity of lead audit partner since the most recent two-year break in service prior to the effective date of these rules would be counted.

3. If a partner serves as the concurring partner from 2007 – 2010, can that partner serve as the lead audit partner in 2011? If so, for how many years?

   Yes. The Model does not prohibit a partner that has served as the concurring partner from subsequently serving as the lead audit partner. The time served as concurring partner does not count towards the five-year limitation. In the situation above, the partner would be permitted to serve as lead audit partner from the 2011 year-end audit through the 2015 year-end audit.

4. Can a lead audit partner serve as the concurring review partner during the required five-year break in service?

   Yes. The Model specifies that a partner may not act in "that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years" where "that" refers to the role of lead audit partner. Therefore, the Model does not prohibit that partner from serving as concurring partner during that partner's five-year break in service.

5. During the five-year break in service, can a partner serve as lead audit partner on an insurance company affiliate of that company?

   No. The Model specifies a "person shall be disqualified from acting in that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years." The phrase "insurance subsidiaries or affiliates" is interpreted to mean any subsidiaries and affiliates (whether insurance or non-insurance).

6. If a lead audit partner serves for six years prior to the effective date of the revised Model (year-end audits from 2003 – 2008) then rotates off the engagement for two years (year-end audits 2009 – 2010), can that partner serve for five additional consecutive years (year-end audits from 2011 – 2015) as the lead audit partner?

   No. The requirement for a break in service of five consecutive years becomes effective for the 2010 year-end audits. If the partner has not completed the two-year break in service prior to the effective date of the new requirement, the partner becomes subject to the new requirement and must complete a five-year break in service. However, if the lead audit partner completes the two-year break in service by 2009 instead of 2010, that partner would be permitted to resume the lead audit partner role in 2010.

© 1999-2023 National Association of Insurance Commissioners

7. A partner that served seven years as lead audit partner has not worked on the engagement for two years. Assuming 2010 otherwise would be year three of the break in service, can that partner assume the lead audit partner role for the 2010 year-end audit?

   Yes. The requirement for the five-year break in service starts with engagement years beginning 2010. Prior to 2010, the rotation requirement is for a two-year break in service.

8. If a lead audit partner served in that capacity for years 2007 – 2009 and was not on the engagement (or that of any subsidiary or affiliate) for 2010, would that partner have to complete a five-year break in service before again serving as the lead audit partner?

   No. However, the partner could only serve as the lead audit partner for two more years since the partner has already served three years on this engagement.

9. Can a former lead audit partner currently in a break in service continue to serve the client in a role other than the lead audit partner, for example concurring partner or auxiliary partner, such as tax review partner or other assisting role?

   Yes. The Model auditor rotation rules apply only to the role of lead audit partner on the audit of the insurance company and its insurance subsidiaries or affiliates.

10. 2010 is the first year that a partner serves as the lead audit partner on an insurer. The partner serves as the lead audit partner on that insurer for year-end audits of 2010 – 2012; however, during 2013 – 2015 that partner does not serve as the lead audit partner on that insurer or any of its affiliates. If that partner again serves the insurer (or any of its insurance subsidiaries or affiliates) as the lead audit partner for 2016 year-end audit, when must that partner rotate off the engagement?

    The partner is permitted to serve as the lead audit partner for the 2016 and 2017 year-end audits and must begin a five-year break in service with the year-end 2018 audit. The break in service during 2013 – 2015 would be for less than the five-year period required by the Model. In order for the partner to be permitted to begin a new five-year service period as lead audit partner on the insurer or any of its insurance subsidiaries or affiliates, a full five-year break in service is required to be completed by that partner.

11. How is service as the lead audit partner on the audit of the GAAP-basis financial statements of a separate account evaluated under the Model?

    A separate account is not a legal entity, but an accounting entity with accounting records for variable contract assets, liabilities, income, and expenses segregated as a discrete operation within the insurance company. Therefore, the separate account is considered to be an insurance affiliate for purposes of applying the Model.

    If the insurer is a part of a mutual fund complex, the mutual funds are considered to be non-insurance affiliates even if held as investments in the insurer's separate accounts.

12. An insurer changes to a new independent accounting firm. At the same time, the lead audit partner for that insurer joins the new independent accounting firm. Would the lead audit partner's time at the previous accounting firm count toward the five-year rule at the new accounting firm?

    Yes. The rule specifically applies to the lead audit partner and not the independent accounting firm.

13. Some firms have individuals that are CPAs but not partners (i.e., nonequity participants such as directors or principals) that serve in the role of the lead audit partner. Can such a CPA serve in the role of the lead audit partner of an insurance company?

    Yes. The Model defines the lead audit partner as the individual having "primary responsibility for the audit." Whether this capacity is served by a partner or other CPA with the equivalent qualifications is at the discretion of the independent accounting firm. As such, the individual would be subject to the rotation requirements of the lead audit partner under Section 7.

Questions 14 through 23 are based on the following hypothetical fact pattern and assume there are no public registrants in the group.

Neither insurance subsidiary A nor insurance subsidiary B has any investment in non-insurance subsidiary C.

- Partner Smith served as the lead audit partner on non-insurance holding company H for six years through the 2010 year-end audit.
- Partner Jones served as the lead audit partner on insurance subsidiary A for four years through the 2010 year-end audit.
- Partner Little served as the lead audit partner on insurance subsidiary B for three years through the 2010 year-end audit.
- Partner Brown served as the lead audit partner on non-insurance subsidiary C for two years through the 2010 year-end audit.
- Partner Miller served as the lead audit partner on insurance subsidiary D for three years through the 2010 year-end audit.
- Partner King served as the lead audit partner on non-insurance subsidiary E for seven years through the 2010 year-end audit.

14. Can Partner Smith rotate from serving as the lead audit partner on non-insurance holding company H to serving as the lead audit partner on insurance subsidiary B for the 2011 year-end audit?

    Yes. The limitation under Section 7 initiates with service as the lead audit partner of an *insurer*. Assuming Partner Smith has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years.

15. Can Partner King rotate from serving as the lead audit partner on non-insurance subsidiary E to serving as the lead audit partner on insurance subsidiary B for the 2011 year-end audit?

    Yes. The limitation initiates with service as the lead audit partner of an *insurer*. Assuming Partner King has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years.

16. Can Partner Brown rotate from serving as the lead audit partner on non-insurance subsidiary C to serving as lead audit partner on insurance subsidiary B for the 2011 year-end audit?

    Yes. The limitation initiates with service as the lead audit partner of an *insurer*. Assuming Partner Brown has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years. Therefore, Brown could serve insurance subsidiary B for five years beginning with the 2011 year-end audit.

© 1999-2023 National Association of Insurance Commissioners

17. Can Partner Brown rotate from serving as the lead audit partner on non-insurance subsidiary C to serving as lead audit partner on Holding Company H for the 2011 year-end audit?

    Yes. C is a non-insurance subsidiary and H is a non-insurance holding company; therefore, assuming Partner Brown has not previously served as the lead audit partner on an insurer, the partner rotation requirements of Section 7 are not applicable relative to non-insurance subsidiary C and non-insurance holding company H.

18. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner for insurance subsidiary B for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate).

19. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on non-insurance subsidiary C for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

20. Can Partner King rotate from serving as the lead audit partner on non-insurance subsidiary E to serving as the lead audit partner on non-insurance subsidiary C for the 2011 year-end audit?

    Yes. E is a non-insurance subsidiary and C is a non-insurance subsidiary; therefore, assuming Partner King has not previously served as the lead audit partner on an insurer, the partner rotation requirements of Section 7 are not applicable relative to non-insurance subsidiary E and non-insurance subsidiary C.

21. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on non-insurance subsidiary E for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

22. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on insurance subsidiary D for the 2011 year-end audit?

    Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

23. Can Partner Little rotate from serving as the lead audit partner on insurance subsidiary B to serving as the lead audit partner on non-insurance subsidiary E for the 2011 year-end audit?

    Yes. However, Little can only serve for two years due to three years prior service as the lead audit partner on insurance subsidiary B (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

© 1999-2023 National Association of Insurance Commissioners

Prohibited Services (Section 7 G)

The Model does not allow the Commissioner to accept an Audited financial report prepared by an accountant who provides the insurer, contemporaneously with the audit, non-audit services as outlined within the Model. One of the prohibited services outlined in the Model consists of bookkeeping or other services related to the accounting records or financial statements of the insurer. The prohibition in this area should include, but is not limited to, services related to the preparation of the Annual Statement to be submitted by the insurer. However, the drafting of the Audited financial report would not be prohibited, provided that the accountant does not assume decision-making authority (e.g., approval of journal entries) in compiling the draft report.

Communication of Internal Control Related Matters Noted in an Audit (Section 11)

In addition to the annual Audited financial report, each insurer must furnish the Commissioner with a written communication as to any unremediated material weakness in its internal control over financial reporting noted during the audit. The communication is prepared by the accountant within 60 days after the filing of the annual Audited financial report and is filed by the insurer. Recognizing it may not always be practical, insurers are encouraged to file the communication concurrently with the filing of the annual Audited financial report for those years in which the insurer is aware that a financial condition examination has been scheduled. The insurer is required to provide a description of remedial actions taken or proposed to correct unremediated material weaknesses, if the actions are not described in the accountant's communication.

The Model requires that the Commissioner be notified when unremediated material weaknesses in internal control over financial reporting were noted during the audit. Previous versions of the Model required such communication when any significant deficiencies in internal control over financial reporting were noted during the audit, whether remediated or not. This distinction is important because of the level of severity of the internal control deficiency that is applicable to each term. The terms "material weakness" and "significant deficiency" have the same meaning respectively as used in PCAOB or American Institute of Certified Public Accountants (AICPA) auditing literature - PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements or AICPA AU Section 325, Communicating Internal Control Matters Identified in an Audit (see Section 17E of this Guide for the definitions of material weakness and significant deficiency that are included in the auditing literature). However, the insurer is expected to maintain information about significant deficiencies that were communicated by its auditors and such information should be available for review during the financial condition examination.

Effective for audits as of December 31, 2021, and thereafter, the information required in Section 12 of the MAR required to be communicated by the accountant should be supplemented by providing both the name of the current lead audit partner and the year at which he or she began serving in that capacity. For the purpose of maintaining confidentiality, this information will not be included in the annual letter of qualifications, but instead shall be included in the internal control communication required in Section 11 of the MAR by the accountant as a footer or under the firm signature as follows:

> The engagement partner, [name], has served in that capacity with respect to the Company since [year that current term started],

Consistent with the Drafting Note[1] to Section 11 of the MAR, the information provided on the engagement partner shall remain confidential.

[1] The insurer is expected to maintain information about significant deficiencies communicated by the independent certified public accountant. Such information should be made available to the examiner conducting a financial condition examination for review and kept in such a manner as to remain confidential.

© 1999-2023 National Association of Insurance Commissioners

The following is an example of the type of communication that an insurer should prepare to communicate the remedial actions taken or proposed to correct a material weakness in its internal control over financial reporting noted during an audit.

Communication of Internal Control Related Matter Noted in an Audit - Sample

Honorable Commissioner
State of Domicile Insurance Department
State of Domicile

Dear Honorable Commissioner:

During the audit completed for the year ended December 31, 20XX, for XYZ Holding Company Inc ("XYZ"), a material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the weakness noted above, XYZ's management has taken remedial actions to change its procedures for coding policies issued in the states affected so that all homeowners' policy data are included in the Actuarial Department review of estimate of insurance reserves. This change was effective on July 1, 20XX.

Should you have any questions regarding this matter, please do not hesitate to contact me at the number noted above.

Regards,

XYZ Holding Company, Inc.

Requirements for Audit Committees (Section 14)

A disclaimer within Section 14 of the Model indicates that the section shall not apply to SOX Compliant Entities or wholly-owned subsidiaries of SOX Compliant Entities. This disclaimer was placed within the Model to avoid conflicts between the independence requirements of the Model and those required of public companies under Section 301 of the Sarbanes Oxley Act of 2002. The expectation of regulators in developing this disclaimer was that the same independent Audit committee required of public companies under Section 301 would be deemed to be the insurer's Audit committee for purposes of this regulation (pursuant to Section 4D of the Model) or would participate in the oversight of the insurers within the group. Therefore, if material weaknesses, significant deficiencies and/or significant solvency concerns are identified at the legal entity level, the independent Audit committee should be involved in addressing these issues, regardless of their materiality at the consolidated, parent company level.

Independence of an Audit Committee Member (Section 14C)

A policyholder would be considered "independent" unless they receive direct compensation from the insurer for other unrelated services.

© 1999-2023 National Association of Insurance Commissioners

A person who is otherwise considered independent and also serves on the Board of Directors of a contracting entity (e.g., medical provider, vendors, banks, etc.) is considered independent.

An otherwise non-independent member of the Board of Directors is considered independent for Audit committee purposes if state law requires participation on the Board (e.g., Medical providers) as long as the member is not an officer or employee of the insurer or one of its affiliates.

Notification letter (Section 14E)

In accordance with Section 14E, upon the initial election by the insurer to designate the Audit committee of an entity that controls the insurer as its Audit committee, the insurer shall provide written notification to the Commissioner of the affected insurer. This notification shall identify the controlling entity and the basis for the election. This election remains in effect for perpetuity, until rescinded, at which time written notification would need to be provided to the Commissioner of the insurer. The notification letter should be timely filed with the Commissioner by the ultimate controlling person prior to the issuance of the statutory Audited financial report. However, each of the affected insurers (i.e. those that will have an Audit committee designated by its ultimate controlling person) that is subject to the provisions of Section 14 shall ensure that the notification letter is filed with the Commissioner. Absence such filing, each of the affected insurers would be individually responsible for complying with Section 14. For example, referring to the "Group of insurers" chart in Section 3, if the ABC Company is the ultimate controlling person and elects to have its Audit committee serve as the Audit committee for insurance company 5, then ABC Company would file the notification letter (insurance company 5 would have to ensure that the notification letter is filed or comply with Section 14 as a single entity). Once submitted, the election remains in effect until rescinded. The following example illustrates the reporting requirement.

> The XYZ insurance company (e.g., insurance company 5) is an indirect subsidiary of and controlled by ABC Company. ABC Company has an independent Audit committee comprised of directors of ABC Company. XYZ insurance Company has elected to designate the Audit committee of ABC Company as the Audit committee of XYZ insurance Company for purposes of complying with Audit committee requirements of the Annual Financial Reporting Model Regulation.

(Signed)____ (Date)______________
(XYZ Insurance Company Chief Executive Officer)
(Signed)____ (Date)______________
(ABC Company Chief Executive Officer)

Transitional Guidance (Section 14G)

Once a company exceeds the requisite thresholds for Audit committee requirements contained in Section 14 of the Model, it is required to comply with the Audit committee requirements by January 1 following one (1) complete calendar year. The following are examples of transitional period requirements.

A: Company surpasses $300 million threshold:

ABC Insurance Company has reached the $300 million requisite threshold in its December 31, 2011, audited statutory statement and therefore will be required to meet "majority (50% or more) member independence" Audit committee requirements by January 1, 2013, providing the company necessary time for recruitment and approvals.

© 1999-2023 National Association of Insurance Commissioners

B: Company surpasses $500 million threshold:

ABC Insurance Company has subsequently reached the $500 million requisite threshold in its December 31, 2014, audited statutory statement and therefore will be required to meet the “Supermajority (75% or more) member independence” Audit committee requirements by January 1, 2016.

C: Company drops below threshold amount:

If ABC Insurance Company has penetrated the requisite $500 million threshold and has been in compliance with the requirements but subsequently drops below the $500 million threshold, e.g., $450 million in its December 31, 2018, audited statutory statements, the company would be subject to the “majority (50% or more) member independence” requirement and could reduce the Audit committee independence in 2019. Companies, however, are encouraged to structure their Audit committees with at least a supermajority of independent Audit committee members.

Hardship Waiver (Section 14H)

An insurer may make application to the Commissioner for a waiver from the Section 14 requirements based upon hardship. Examples may include, but are not limited to, requests based on the business type of the entity, the availability of qualified board members, or the ownership (e.g., entities owned by non-profit health systems) or organizational structure of the entity. If the application for a waiver is approved, the insurer would file, with its annual statement filing, the approval for relief from Section 14 with the states that it is licensed in or doing business in and the NAIC. If the nondomestic state accepts electronic filing with the NAIC, the insurer would file the approval in an electronic format acceptable to the NAIC.

Management’s Report of Internal Control over Financial Reporting (Section 17)

Premium Threshold (Section 17A)

The term “direct written premium” is frequently associated with the property/casualty business. While the Model continues to use the term, it raises the question for other businesses, e.g., life and fraternal, what is the appropriate measure for assessing compliance? The following examples have been developed to illustrate the computation since the starting point is the audited financial statements of the reporting entity, and it is possible that the amount reported may not be consistent with written premium as reported in the regulatory reporting blank.

The annual direct written and assumed premium:

- will be derived from the annual Audited financial report of an individual insurer, as of December 31 immediately preceding;
- are generally reported in the Statement of Operations of the Audited Financial Report on an ‘earned’ and a ‘net of reinsurance ceded’ basis;
- will be computed by making the following adjustments:

P/C, Health and Title entities:

	$
Premiums earned (Statement of Income in Audited financial report)	A
Add/Deduct: Change in unearned premium	B
Add: Reinsurance ceded	C
Direct written and assumed premium *	D=A+B+C

*Note: Direct written and assumed premium would be reduced by any premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program

- A - Premiums earned per the Statement of Income will generally equal the Annual Statement, Page 4.
- B - Change in unearned premium is the difference between the current period amount and the prior year-end amount reported in the liabilities section of the balance sheet. The amount may also be derived from other company prepared exhibits.
- C - Reinsurance ceded may be derived from the notes to the Audited financial report, if disclosed, or other company prepared exhibits or schedules. If the Statement of Income or Statement of Operations separately presents reinsurance ceded, an adjustment is not required.
- D - Must be equal to, or greater than, $500 million in order to be subject to Section 17 reporting.

Life and Fraternal entities:

	$
Premiums earned (Statement of Operations in Audited financial report)	A
Add: Reinsurance ceded	B
Direct written and assumed premium	C=A+B

- A - Premiums earned per the Statement of Operations will generally equal the Annual Statement, Page 4.
- B - Reinsurance ceded may be derived from the notes to the Audited financial report, if disclosed, or other company prepared exhibits or schedules. If the Statement of Operations separately presents reinsurance ceded, an adjustment is not required.
- C - Must be equal to, or greater than, $500 million in order to be subject to Section 17 reporting.

Companies in an RBC Level Event or in Hazardous Financial Condition (Section 17B)

For purposes of this subsection, the phrase “RBC level event” refers to any of the regulatory action levels described in the Risk-Based Capital requirements or the trend test. For example, if the reporting entity’s total adjusted capital is equal to or less than 200% of the required risk-based capital, the result would trigger regulatory action.

Management’s Report of Internal Control over Financial Reporting (Sections 17C & 17D)

Management must annually provide their domiciliary insurance department with a report on internal controls over the statutory financial statement process. Recognizing it may not always be practical, insurers are encouraged to file the report concurrently with the filing of the annual Audited financial report for those years in which the insurer is aware that a financial condition examination has been scheduled. The elements to be included in the report are outlined in 17D.

As outlined in Section 17C, an addendum is required for all reports that rely on a Section 404 Report (Sarbanes-Oxley). The Model states that the Section 404 Report means management’s report on internal control over financial reporting as defined by the SEC and the related attestation report of the independent certified public accountant. However, in 2010, the Dodd-Frank Act exempted non-accelerated SEC filers (those reporting companies that do not meet the definition of either an “accelerated filer” or a “large accelerated filer” under Exchange Act Rule 12b-2.) from the requirement to obtain the related attestation report of the independent certified public accountant. As such, non-accelerated SEC filers may file a

© 1999-2023 National Association of Insurance Commissioners

Section 404 Report that does not include an attestation report of the independent certified public accountant, along with the appropriate addendum, to fulfill requirements in this area.

Alternately, insurers may utilize a report received as a result of work performed in accordance with Statement of Standards in Attestation Engagements (SSAE) No. 15 in a similar fashion to a Section 404 Report. As such, there are two main types of reports that can be provided:

- Reports from entities that have complied with all required elements of Section 404 of the Sarbanes-Oxley Act (or have received an SSAE No. 15 report) either as a requirement or on a voluntary basis.
- Reports from entities that have not complied with Section 404 of the Sarbanes-Oxley Act (or have not received an SSAE No. 15 report).

Appendix 1 of this guide provides examples of Management's Report of Internal Controls over Financial Reporting utilizing various facts and circumstances.

Section 17D(2): Management must make an assertion regarding the effectiveness of the insurer's Internal control over financial reporting to the best of its knowledge and belief after diligent inquiry. For purposes of filing the report, "diligent inquiry" means conducting a search and thorough review of relevant documents which are reasonably likely to contain significant information with regards to Internal control over financial reporting and making reasonable inquiries of current employees and agents whose duties include responsibility for Internal control over financial reporting.

Section 17D(5): The report must disclose any unremediated material weaknesses in Internal control over financial reporting that exist as of the balance sheet date. If the insurer or Group of insurers has identified an unremediated material weakness, management is not permitted to conclude that its Internal control over financial reporting is effective and it must include a description of the nature of any unremediated material weakness in the report. December 31 is used as the measurement date to whether a material control weakness is unremediated for purposes of reporting under this section of the Model.

Section 17D(6): Users of the report should be aware of the inherent limitations in Internal control over financial reporting. PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements provides the following description of such inherent limitations:

> Internal control over financial reporting has inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements will not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

Additionally, readers of the report should be aware that projecting management's assertion regarding the effectiveness of Internal control over financial reporting to future periods is subject to the risk that controls may become inadequate because of changes in conditions, or the degree of compliance with policies or procedures may deteriorate.

Section 17D(7): The report must include signatures of the chief executive officer and chief financial officer (or the equivalent position/title). If a report is being filed on behalf of a Group of insurers, management should identify the officeholders (i.e., the CEO and CFO of Company ABC) that have the

authority to sign the report on behalf of all of the legal entities being reported upon within the Group of insurers.

Basis for Management's Review and Assertions (Section 17E)

One of the primary reasons for the new Section 17 of the Model is to bring additional focus and attention to internal control over financial reporting. Financial reporting is the underpinning of many of the solvency oversight activities of insurance regulators. Section 17 of the Model identifies management's responsibilities for internal control over financial reporting and provides regulators additional assurances of the effectiveness of internal control practices in a cost-effective manner.

The basis for Management's Report of Internal Control over Financial Reporting shall be subject to insurance departments' financial condition examinations. Because of this and other solvency tools available to regulators, there is no requirement that the independent certified public accountant be engaged to perform an examination of the effectiveness of internal control over financial reporting. However, Section 9 requires the independent public accountant to consider (as that term is defined in AICPA Statement on Auditing Standards (SAS) No. 102, Defining Professional Requirements in Statements on Auditing Standards, or its replacement) the most recently available Management's Report of Internal Control over Financial Reporting in planning and performing the audit of the statutory financial statements. SAS No. 102, paragraph 4 states, "If a SAS provides that a procedure or action is one that the auditor "should consider," the consideration of the procedure or action is presumptively required, whereas carrying out the procedure or action is not." AU Section 319 of the Professional Standards of the AICPA, Consideration of Internal Control in a Financial Statement Audit, requires that the auditor obtain an understanding of internal control sufficient to plan and execute the audit. It is in this context that the auditor is required to "consider" management's report. There is no requirement that the auditor test or otherwise use management's report.

The Model does not mandate a specific framework for management's review and evaluation of internal controls. SEC registrants typically (but are not required to) use the COSO Internal Control-Integrated Framework in assessing the effectiveness of internal control over financial reporting. The COSO-sponsored "Enterprise Risk Management-Integrated Framework" and the PCAOB Guidance for Smaller Public Companies Reporting on Internal Control over Financial Reporting are other examples of relevant literature companies may want to consider in applying such a framework. Under the Model, however, management, when making its assessment and preparing its report, has discretion as to the nature of the internal control framework used. Insurers shall have flexibility as to the frequency and scope of testing activities and the documentation provided upon examination to support the assertions. Management should assess and select an appropriate framework or approach based upon its business risks and objectives.

Management's assertions about the effectiveness of internal controls enhance oversight and understanding of insurer solvency by allowing regulators to have greater confidence in the accuracy of financial reporting, which also provides a benefit to policyholders and creditors. An expected benefit of this enhancement, where internal controls are effective, is that financial examinations will become more efficient and risk-focused.

Management's Report of Internal Control over Financial Reporting may span more than one legal entity. Because internal controls are primarily about processes and these processes are often applied across multiple legal entities within an organization, (e.g., investment systems, premium and loss/benefit systems, and financial reporting processes), management may consider common processes and the associated controls when determining the Group of insurers for reporting purposes.

The Model provides flexibility in meeting the requirements of Section 17D and E. The controls included in the scope of management's report should only include those controls deemed significant or critical by management. The following examples represent aspects and components of internal control that insurers

© 1999-2023 National Association of Insurance Commissioners

may want to consider when making the assertions and determining relevant documentary evidence. These are not intended to serve as, and should not be considered, requirements:

- The internal control environment including oversight provided by the Audit committee of the Board of Directors. Insurers may want to consider how they can demonstrate "Tone at the Top." The insurer's compliance programs, code of conduct and the processes for reporting policy exceptions and overrides of controls may also be appropriate to consider.

- The risk assessment process utilized and identification of the areas of potential material internal control risk related to the financial statement. Risk areas that one might typically find for an insurance enterprise include:

    - Investments (including capital expenditures)
    - Policy and Claim Reserves
    - Benefit Payments
    - Premiums / Agent's Balances
    - Reinsurance
    - Related Party (Affiliate) Transactions
    - Operating Expenses/Taxes

- The control activities in place including procedures over financial reporting, which in management's judgment are appropriate under the circumstances. These might include the daily or monthly controls management relies upon in the normal course of its activities. They would also include any SAS 70 reports received from vendors upon which management relies. General information systems and technology controls might also be considered.

- The monitoring and testing processes used in the normal course of business to ascertain that the internal controls are in place and are working as intended. Insurers may want to consider describing the purpose, function or role of an internal audit department and/or describe other self-audit and analysis activities.

- The information and communication processes, including the frequency of reporting and monitoring activities and communication of internal control responsibilities.

Section 17D(5) of the Model indicates that if one or more unremediated material weaknesses in Internal control over financial reporting exists as of the balance sheet date, then management is not permitted to conclude that internal control over financial reporting is effective and it must include a description of the nature of any unremediated material weaknesses in the report. For purposes of this determination, material weakness has the same meaning as used in PCAOB or AICPA auditing literature – PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements or AICPA AU Section 325, Communicating Internal Control Related Matters Identified in an Audit. Such guidance provides the following definitions:

> Significant Deficiency – A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.
>
> Material Weakness – A material weakness is a deficiency, or combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis.

© 1999-2023 National Association of Insurance Commissioners

Insurers filing Management's Report of Internal Control over Financial Reporting as a Group of insurers may want to also consider identifying or documenting common systems and controls used by multiple companies within an insurance holding company system and how such information was used in the development of the Group of insurers for reporting purposes.

To allow insurers to comply with Section 17 in a cost-effective manner, management may base its assertions, in part, upon its review, monitoring and testing processes performed in the normal course of it activities. Management may also consider diligent inquiry of key process owners throughout the organization to provide additional assurance as to the operating effectiveness of its internal control over financial reporting. For purposes of filing the report, "diligent inquiry" means conducting a search and thorough review of relevant documents which are reasonably likely to contain significant information with regards to Internal control over financial reporting and making reasonable inquiries of current employees and agents whose duties include responsibility for Internal control over financial reporting.

Exemptions and Effective Dates (Section 18)

Hardship Waivers (Section 18A)

Notwithstanding any other provision of the Model, an insurer may make written application to the Commissioner for waiver from any or all provisions of the Model based upon financial or organizational hardship. For example, the Commissioner could under this section grant a waiver of the Section 14B audit committee independence requirements to a company exceeding the $500 million premium threshold, even though the Section 14H waiver would not apply. This exemption is granted at the discretion of the Commissioner, and may be granted at any time for a specified period or periods.

Specific Effective Dates (Section 18F)

An insurer will be required to file a Section 17 report if the insurer exceeds the premium threshold (as defined in Section 17A.)

1. Assume the insurer reports premiums as follows (note that the direct written and assumed premium in these examples would be reduced by any premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program) :

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3.

2. Assume the insurer reports premiums as follows:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	380.5	390.8	410.5	425.7
Add: Reinsurance ceded	100.5	110.7	115.7	115.8	120.1
Gross direct written and assumed premium	450.8	491.2	506.5	526.3	545.8

In the above example, the insurer has reached the requisite threshold in 201x+2 and therefore will file its first Section 17 report effective December 31, 201x+4.

© 1999-2023 National Association of Insurance Commissioners

3. Assume the insurer reports premiums as follows:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	380.5	410.5	425.7
Add: Reinsurance ceded	100.5	115.7	110.7	115.8	120.1
Gross direct written and assumed premium	450.8	506.5	491.2	526.3	545.8

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3. Because the insurer dropped below the threshold in 201x+2, the insurer is not required to file a Section 17 report and thus, the reporting period starts over. The insurer reaches the threshold in 201x+3 and therefore, required to file the Section 17 report effective December 31, 201x+5. The insurer may choose to begin voluntarily filing the Section 17 report beginning with 201x+3 especially if the insurer has done the work to prepare the report.

Business Combination

A business combination is defined as acquisition of insurance/reinsurance business through:

A. a stock acquisition,
B. inforce reinsurance assumption, or
C. a merger of insurers in a Group of insurers.

A. Stock Acquisitions

Assume Company A, which has premiums of $500m or more, buys Company B and retains Company B as a separate legal entity.

If Company B has premiums of less than $500m (as derived from Section 17A), no Section 17 report is required.

If Company B has premiums of $500m or more (as derived from Section 17A), a Section 17 report is required.

1. Assume Company B is acquired effective January 1, 201x and subsequently reports premiums as follows. Assume further that Company A and B elect to file separate Section 17 reports:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, Company B has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3.

2. Assume Company B is acquired June 30, 201x+2 by Company A and Company B has premiums as follows. Assume further that Company A elects to file a single Section 17 report with the Group of insurers consisting of Company A and B:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, Company B has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3. However due to the acquisition in 201x+2, the first combined Section 17 report, i.e., Group of insurers, would be effective December 31, 201x+4, two years subsequent to acquisition.

B. *Inforce Reinsurance Assumption*

For the purposes of determining premiums pursuant to Section 17A, assumed premiums from the assumption of an inforce reinsurance transaction will be excluded from the measurement of premiums, for two calendar years subsequent to acquisition.

Assume the insurer assumed an inforce transaction effective June 30, 201x+2 and reports premiums as follows:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	610.5	850.7	875.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	726.3	970.8	1,003.0
Less: Gross assumed premium resulting from a business combination	0	0	200.0	425.0	425.0
Gross direct written and assumed premium, subject to Section 17	450.8	506.5	526.3	545.8	578.0

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3, however only for business inforce in 201x+1 and still inforce in 201x+3. The business assumed at June 30, 201x+2 will be subject to a Section 17 report effective December 31, 201x+4, two calendar years after acquisition.

C. *Mergers of Insurers in a Group of Insurers*

If the merged insurer has premiums of less than $500m (as derived from Section 17A), a Section 17 report is not required.

If the merged insurer has premiums of $500m or more (as derived from Section 17A), a Section 17 report is required.

1. Assume that Insurer A and Insurer B have Gross direct written and assumed premiums as follows, and agree to merge effective January 1, 201x+1, with Insurer A as the surviving entity:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Gross direct written and assumed premium – Insurer A	450.3	460.8	510.5	n/a	n/a
Gross direct written and assumed premium – Insurer B	100.5	115.7	115.8	n/a	n/a
Less: Intercompany transactions – gross	-	65.3	62.2	n/a	n/a
Combined gross direct written and assumed premiums Insurer A	-	511.2	564.1	n/a	n/a

In the above example, the merged entity (insurer A) has reached the requisite threshold in 201x+1, and will file its first Section 17 report effective December 31, 201x+3.

2. Assume that Insurer A and Insurer B have Gross direct written and assumed premiums as follows, and agree to merge effective January 1, 201x+2, with Insurer A as the surviving entity:

$ millions	201x	201x+1	201x+2	201x+3	201x+4
Gross direct written and assumed premium – Insurer A	450.3	460.8	510.5	n/a	n/a
Gross direct written and assumed premium – Insurer B	100.5	115.7	115.8	n/a	n/a
Less: Intercompany transactions – gross	-	-	62.2	n/a	n/a
Combined gross direct written and assumed premiums Insurer A	-	-	564.1	n/a	n/a

In the above example, the merged entity (insurer A) has reached the requisite threshold in 201x+2, and will file its first Section 17 report effective December 31, 201x+4, two years subsequent to merger.

APPENDIX 1

Illustrative Examples of Management's Report of Internal Control over Financial Reporting

The following are examples of Management's Report of Internal Controls over Financial Reporting utilizing different facts and circumstances. These are only examples and individual company facts and circumstances will dictate the contents of their report. However, there are common elements that should be included in all reports as discussed in Sections 17C and 17D of the Model.

Example A: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that had all material control processes over statutory financial reporting addressed in its Section 404 report .... Page 23

Example B: An SEC registrant or a member of a holding company system who is a SEC registrant and is a non-accelerated filer that had all material control processes over statutory financial reporting addressed in its Section 404 report. For these non-accelerated filers, the Section 404 report does not require the report of independent registered public accounting firm on internal control over financial reporting........ Page 25

Example C: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that did not have all material control processes over statutory financial reporting addressed in its Section 404 report........ Page 27

Example D: An SEC registrant or a member of a holding company system who is a SEC registrant and is a non-accelerated filer that did not have all material control processes over statutory financial reporting addressed in its Section 404 report. For these non-accelerated filers, the Section 404 report does not require the report of independent registered public accounting firm on internal control over financial reporting .... Page 30

Example E: A non-SEC registrant or a member of a holding company system that voluntarily complied with Section 404 of the Sarbanes-Oxley Act and produced a report on internal controls which included an auditor's opinion........ Page 33

Example F: A company [or "group of insurers"] that is not subject to Section 404 and utilized their own framework to evaluate controls........ Page 35

Example G: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that had all material control processes addressed in their Section 404 report and had an unremediated material weakness........ Page 37

Example H: An SEC registrant or member of a holding company system whose parent is an SEC registrant that did not include all material processes over statutory financial reporting addressed in its Section 404 report and had an unremediated material weakness noted .... Page 39

Example I: An SEC registrant or member of a holding company system whose parent is an SEC registrant that had all material processes over statutory financial reporting addressed in its Section 404 report. However, they recently acquired another insurer that is not included in their assessment .... Page 42

EXAMPLE A: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL CONTROL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company Inc ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).* Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE B: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHO IS A SEC REGISTRANT AND IS A NON-ACCELERATED FILER THAT HAD ALL MATERIAL CONTROL PROCESSES OVER STATUTORY REPORTING ADDRESSED IN ITS SECTION 404 REPORT. FOR THIS NON-ACCELERATED FILER, THE SECTION 404 REPORT DOES NOT REQUIRE THE REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING.

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model] as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17 of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). This does not include a report of independent registered public accounting firm on internal control over financial reporting for XYZ, as it is not required for non-accelerated filers In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

ATTACHMENT A

XYZ Holding Company, Inc.
Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting contained in or incorporated by reference in the Company's Form 10-K/20-F. Accordingly, as required by [relevant state statute or Section 17C of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report. The following statutory financial reporting processes were reviewed separately from the internal controls reported by the Group of insurers in its Section 404 report:

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to *SSAP No. 101—Income Taxes*, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in SSAP No. 101 are not admitted.

© 1999-2023 National Association of Insurance Commissioners

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve ("AVR")

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.* No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve ("IMR")

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material process that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

EXAMPLE E: A NON-SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM THAT VOLUNTARILY COMPLIED WITH SECTION 404 OF THE SARBANES-OXLEY ACT AND PRODUCED A REPORT ON INTERNAL CONTROLS WHICH INCLUDED AN AUDITOR'S OPINION

Management's Report of Internal Control over Financial Reporting

As a non-SEC registrant, XYZ Holding Company, Inc. ("XYZ") is not required to prepare or file with the U.S. Securities and Exchange Commission a Sarbanes-Oxley Act Section 404 report on internal control over financial reporting. However, management has elected to prepare, and have audited by XYZ's independent certified public accountant, such a report for the fiscal year-ended December 31, 201X.

Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).* Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] the attached copy of XYZ's Section 404 Report for the fiscal year ended December 31, 201X, which includes Management's Report of Internal Control over Financial Reporting and report of independent registered public accounting firm on internal control over financial reporting for XYZ. In addition, an Addendum (Attachment A) is included to this report that identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE F: A COMPANY [OR "GROUP OF INSURERS"] THAT IS NOT SUBJECT TO SECTION 404 AND UTILIZED THEIR OWN FRAMEWORK TO EVALUATE CONTROLS

Management's Report of Internal Control over Financial Reporting

[As a non-SEC registrant, XYZ Holding Company, Inc. ("XYZ") is not required to prepare or file with the U.S. Securities and Exchange Commission a Sarbanes-Oxley Act Section 404 report on internal control over financial reporting. Each of the insurance companies listed on Attachment A is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment A.]

Management of ABC Insurance Company [or XYZ] is responsible for establishing and maintaining adequate internal control over statutory financial reporting. The Company has established an internal control system designed to provide reasonable assurance regarding the fair presentation of statutory financial reporting. The Company developed its own internal framework for evaluating the effectiveness of internal control over statutory financial reporting. The Company's framework includes the identification and evaluation of the company's internal control environment and areas of potential material internal control risk, documentation of existing internal controls, monitoring and testing of those key controls, documentation of remedial actions planned or taken, if any, and communication of the findings of the evaluation by the Company's senior management to the Audit committee of the Board of Directors.

Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Company's internal control over statutory financial reporting, which included identifying, reviewing, monitoring and testing significant internal controls over statutory financial reporting. Based on our assessment under the above described approach and through diligent inquiry, management has concluded that the Company's internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Company's internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE G: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL CONTROL PROCESSES ADDRESSED IN THEIR SECTION 404 REPORT AND HAD AN UNREMEDIATED MATERIAL WEAKNESS

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly-owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).*

A material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the company's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the weakness noted above, XYZ's management has taken remedial actions to change its procedures for coding policies issued in the states affected so that all homeowners policy data are included in the Actuarial Department review of estimate of insurance reserves. This change was effective on July 1, 20XX.

As a result of the unremediated material weakness described above, XYZ management has concluded that, as of December 31, 201X, XYZ's internal control over statutory financial reporting was not effective.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

EXAMPLE H: AN SEC REGISTRANT OR MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT DID NOT INCLUDE ALL MATERIAL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT AND HAD AN UNREMEDIATED MATERIAL WEAKNESS NOTED

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly-owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).*

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the company's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the assessment above, XYZ's management identified a material weakness as of December 31, 201X in the controls over the calculation of insurance reserves.

As a result of the unremediated material weakness described above, XYZ management has concluded that, as of December 31, 201X, XYZ's internal control over statutory financial reporting was not effective.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

ATTACHMENT A

XYZ Holding Company, Inc.
Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting contained in or incorporated by reference in the Company's Form 10-K/20-F. Accordingly, as required by [relevant state statute or Section 17C of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report. The following statutory financial reporting processes were reviewed separately from the internal controls reported by the Group of insurers in its Section 404 report:

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

© 1999-2023 National Association of Insurance Commissioners

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to *SSAP No. 101—Income Taxes*, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in SSAP No. 101 are not admitted.

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve ("AVR")

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.* No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve ("IMR")

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.* No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material processes that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

EXAMPLE I: AN SEC REGISTRANT OR MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT. HOWEVER, THEY RECENTLY ACQUIRED ANOTHER INSURER THAT IS NOT INCLUDED IN THEIR ASSESSMENT

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).* This assessment excluded an evaluation of internal controls over financial reporting for RST Insurance Company which was recently acquired. Based on our assessment under that framework, management concluded that the Group of insurers' internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers' internal control structure over the statutory financial statements for the year ended December 31, 201X.

Revisions to the
As of March 2023, Accounting Practices and Procedures Manual

On **March 22, 2023**, the Statutory Accounting Principles (E) Working Group adopted the following revisions to the *As of March 2023 Accounting Practices and Procedures Manual*. Documents associated with these revisions are linked to the reference items in bold text.

Ref #	SSAP/ Appendix	Title	Summary
Issue Paper No. 167	SSAP No. 86	*Issue Paper No. 167, Derivatives and Hedging* *New SAP Concept* Effective Immediately	Adoption of *Issue Paper No. 167—Derivatives and Hedging* to detail the historical actions of the authoritative guidance resulting in new SAP concepts within *SSAP No. 86—Derivatives*. As the statutory accounting guidance has already been adopted, the issue paper adoption is for historical documentation and does not change authoritative guidance.
2022-15	SSAP No. 25	SSAP No. 25 – Affiliate Reporting Clarification *SAP Clarification* Effective Immediately (March 22, 2023)	Revisions clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity, is an affiliated investment.
2022-16	SSAP No. 100R	*ASU 2022-03, Fair Value Measurement of Restricted Securities* *SAP Clarification* Effective Immediately (March 22, 2023)	Revisions adopt with modification the fair value measurement guidance from *ASU 2022-03, Fair Value Measurement of Restricted Securities* to incorporate updated guidance for restricted securities for statutory accounting. The disclosures from ASU 2022-03 were not adopted.
2022-17	SSAP No. 34	Interest Income Disclosure Update *SAP Clarification* Effective December 31, 2023	Revisions adopt additional disclosures in SSAP No. 34 to data capture the gross, nonadmitted and admitted amounts of interest income due and accrued, and to reflect the cumulative amount of paid-in-kind interest income included in the current principal balance.

Statutory Issue Paper No. 167

Derivatives and Hedging

STATUS
Finalized March 22, 2023

Original SSAP and Current Authoritative Guidance: SSAP No. 86

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. Statutory accounting guidance for derivatives is in *SSAP No. 86—Derivatives*. Although SSAP No. 86 indicates "adoption of the framework" of specific U.S. GAAP guidance, the accounting and reporting guidance for derivatives, particularly with regards to the four U.S. GAAP derivative cornerstones, is distinctly different between SSAP No. 86 and FAS 133/ASC 815. For example, under U.S. GAAP, assessment effectiveness under U.S. GAAP is largely an income statement management tool (to offset variations consistently through net income or other comprehensive income – OCI), but as SAP uses an amortized cost measurement method for a number of hedged items, the criteria for hedge effectiveness and the measurement approach for derivatives must be adjusted accordingly.

2. In August 2017, the FASB issued *ASU 2017-12, Derivatives and Hedging (Topic 815): Targeted Improvements to Accounting for Hedging Activities* to improve the financial reporting of hedging relationships to better portray the economic results of an entity's risk management activities in its financial statements. In addition, the amendments incorporated certain targeted improvements to simplify the application of the hedge accounting guidance in current U.S. GAAP. ASU 2017-12 included a new concept for a 'last of layer' approach to make portfolio fair value hedge accounting more accessible for specific assets. With the issuance of the last-of-layer guidance, a number of questions were received. After considering those questions, *ASU 2022-01 Fair Value Hedging – Portfolio Layer Method* was issued. This ASU expanded the original guidance and provided additional specifications and guidance.

3. The Statutory Accounting Principles (E) Working Group has considered several revisions to SSAP No. 86 in response to the review of ASU 2017-12 and ASU 2022-01. This issue paper has been drafted to detail the revisions incorporated into statutory accounting. These revisions, except for those initially adopted in 2018, are considered new SAP concepts.

DISCUSSION

Topic 1: Hedge Documentation and Initial Assessment Efficiencies (Agenda Item 2018-30)

4. The overall intent of ASU 2017-12 was to reduce cost and complexity of applying hedge accounting by simplifying the way assessments of hedge effectiveness may be performed. It was noted that the efficiencies gained from the revisions in the ASU for U.S. GAAP filers would be lost if corresponding provisions were not considered for statutory accounting. Pursuant to a July 9, 2018, interested parties' comment letter, three elements were requested to be considered by the Statutory Accounting Principles (E) Working Group in a nonsubstantive (SAP clarification) proposal. Interested parties noted that these elements will reduce the costs associated with hedge accounting, while neither changing the underlying accounting, nor creating any additional regulatory risks or concerns:

   a. Allow companies to perform subsequent assessments of hedge effectiveness qualitatively if certain conditions are met.

b. Allow companies more time to perform the quantitative hedge effectiveness assessment.

c. Clarify that companies may apply the "critical terms match" method for a group of forecaster transactions if the transactions occur and the derivatives mature within the same 31-day period or fiscal month, and the other requirements for applying the critical match method are satisfied.

5. On August 4, 2018, the Working Group exposed revisions to incorporate hedge documentation and assessment efficiencies from ASU 2017-12. This item was exposed with a shortened comment period to allow for potential revisions and re-exposure if needed, to permit adoption and application prior to year-end 2018. On November 15, 2018, the Working Group adopted the exposed revisions as final. The revisions were adopted with an effective date of January 1, 2019, with early adoption permitted for year-end 2018. U.S. GAAP filers could only early adopt if they had also early adopted ASU 2017-12.

6. Additionally, in ASU 2017-12, in response to comments requesting a more flexible approach to hedging interest rate risk, the FASB decided to amend the guidance for hedging interest rate risk of financial instruments for both fair value and cash flow hedges. With the revisions, the FASB decided to redefine the term interest rate risk and eliminate the benchmark interest rate concept for variable-rate financial instruments. With the changes, the FASB incorporated the SIFMA rate in the list of eligible rates for fixed income instruments and noted that the FASB will add to the list of eligible benchmark rates as necessary. The revisions adopted to SSAP No. 86 are detailed in Exhibit A.

7. With the inclusion of revisions, certain elements from the U.S.GAAP guidance were not duplicated within statutory accounting. The elements were considered part of the prior adoption of the "FAS 133 / technical guidance" originally reflected in SSAP No. 86:

a. Exceptions from the initial prospective quantitative assessment were not captured in the statutory guidance as they were not necessarily new under ASU 2017-12. The following overview details when an initial prospective quantitative assessment would not be required:

i. In a cash flow or fair value hedge, the entity applies the short-cut method.

ii. In a cash flow or fair value hedge, the entity determines that the critical terms of the hedging instrument and the hedged item match.

iii. In a cash flow hedge, the hedging instrument is an option and it meets specific criteria detailed in the U.S. GAAP guidance

iv. In a cash flow hedge, a private company that is not a financial institution applies the simplified hedge accounting approach.

v. In a cash flow hedge, the entity assesses hedge effectiveness under the change in variable cash flows method permitted under U.S. GAAP, with all noted conditions being met.

vi. In a cash flow hedge, the entity assesses hedge effectiveness under the hypothetical derivative method permitted under U.S. GAAP and all the critical terms of the hypothetical derivative and the hedging instrument are the same.

vii. In a net investment hedge, the entity assesses hedge effectiveness using a method based on changes in spot exchange rates, and the conditions noted under U.S. GAAP are met.

viii. In a net investment hedge, the entity assesses hedge effectiveness using a method based on changes in forward exchange rates and the noted condition under U.S. GAAP are met.

b. The short-cut method and critical terms match method are current method permitted under U.S. GAAP retained under ASU 2017-12. Under these methods, an entity may qualitatively assume, in very limited circumstances, that

8. Ultimately, the revisions incorporated in 2018, effective January 1, 2019, with early application permitted, from ASU 2017-12 were limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness: 1) provisions allowing more time to perform the initial qualitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of the critical terms and short-cut method for assessing hedge effectiveness. With the adoption of the limited provisions, it was identified that the remaining provisions of ASU 2017-12 would be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is completed, with a conclusion to adopt the U.S. GAAP guidance.

9. The revisions adopted in November 2018 included revisions to both SSAP No. 86 as well as Exhibit B – Assessment of Hedging Effectiveness. The subsequent revisions adopted in 2022 eliminated Exhibit B as well as incorporated new guidance through the SSAP. Ultimately, the final adopted guidance, as reflected in the AP&P Manual, is the authoritative guidance.

Topic 2: Hedge Effectiveness and Measurement Methods for Excluded Components (Ref #2021-20)

10. In December 2011, consideration began on revisions to facilitate effective hedge assessments consistently between statutory accounting and U.S. GAAP. The Working Group exposed a concept agenda item to solicit comments and directed NAIC staff to work with regulators and industry in developing revisions for consistent hedge effectiveness assessments and with the treatment of excluded components.

11. After working with industry, on April 4, 2022, the Working Group exposed two documents for public comment. The first document proposed revisions in the form of a new exhibit A to SSAP No. 86, which would replace both Exhibit A and Exhibit B. This new exhibit A would adopt with modification U.S. Guidance in determining hedge effectiveness. The second document proposed revised guidance to SSAP No. 86 to update the permitted excluded components to mirror U.S. GAAP but establish statutory-specific measurement methods for the excluded components.

12. The new Exhibit A intends to reflect the position that the assessment of hedge effectiveness for derivatives should be consistent between U.S. GAAP and SAP. In order words, transactions identified to be highly effective hedges under U.S. would be identified as highly effective hedged under statutory accounting. If a hedging instrument results with offsetting changes (or other permitted aspects) to a hedged item pursuant to the guidelines under U.S. GAAP to qualify as a highly effective hedge, the same assessment as a highly effective hedge should occur under SAP.

13. The Exhibit A would adopt, with modification U.S. GAAP guidance pertaining to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification (ASC) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12. Although the U.S. GAAP guidance for the assessment and determination of hedge effectiveness is proposed to be adopted, statutory modifications are captured to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in SSAP No. 86. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The adopt from U.S. GAAP only extends to

revisions incorporated through ASU 2017-12, as such, any subsequent U.S. GAAP edits would require statutory accounting consideration before they were considered adopted.

14. In addition to new Exhibit A to SSAP No. 86, the Working Group also exposed proposed revisions to SSAP No. 86, paragraphs 23, 40-41 and Exhibit C, to expand the list of permitted excluded components in assessing derivative effectiveness to match U.S. GAAP and to establish statutory specific measurement requirements for each type of excluded component.

15. The prior SSAP No. 86 guidance reflected the list of permitted excluded components originally adopted from U.S. GAAP. Since the original inclusion in SSAP No. 86, and within ASU 2017-12, U.S. GAAP had expanded the list, and it was noted that the statutory accounting treatment of excluded components related to foreign currency transactions were hindering the ability to engage in those transactions. It was also identified that current measurement guidance within the SSAP was conflicting between the guidance and specific hedge procedures detailed in Exhibit C. Through the discussions with industry, it was identified that different measurement or recognition provisions should be considered to properly reflect the type of excluded component with the financial statements, with specific guidance included in SSAP No. 86 accordingly:

a. If the excluded component pertains to the difference between a foreign currency spot price and the forward or future price (e.g., a forward spot rate), then this premium/discount shall be amortized into income over the life of the contract or hedged program. (This guidance addresses the excluded component in Exhibit A, paragraph 8.d.)

b. If the excluded component pertains to a foreign currency swap cross-currency basis spread, the impact of fair value changes shall be reflected as a component of the foreign currency swap's periodic interest accrual. (This guidance addresses the excluded component in Exhibit A, paragraph 8.e.)

c. For all other excluded components, the excluded component shall be measured and reported at fair value, with changes in fair value recognized as unrealized gains or losses. (This guidance shall be applied to excluded components detailed in Exhibit A, paragraphs 8.a. through 8.c.)

16. On August 10, 2022, after the exposure timeframe, in which interested party comments were received supporting the proposed revisions, the Working Group adopted the exposed revisions. This adoption resulted with both the new Exhibit A that adopts with modification U.S. GAAP guidance in determining hedge effectiveness and the revisions to SSAP No. 86 to incorporate measurement method guidance for excluded components. These revisions were adopted with a January 1, 2023, effective date, with early adoption permitted. With the action to adopt, the Working Group directed a blanks proposal to incorporate Schedule DB reporting fields and templates to capture the new disclosures for excluded components. These disclosure and investment schedule changes will be in effect for year-end 2023. Companies that early adopt the revisions are directly to complete the required disclosures in a narrative format for year-end 2022.

Topic 3: Portfolio Layer Method and Partial Term Hedging (Ref #2022-09)

17. In August 2022, considerations began to expand statutory accounting guidance to incorporate the portfolio layer method detailed in *ASU 2022-01, Fair Value Hedging – Portfolio Layer Method*. The guidance in ASU 2022-01 reflects an expansion of the last-of-layer method detailed in ASU 2017-12.

18. Under the last-of-layer approach captured in ASU 2017-12, for a closed portfolio of prepayable financial assets or one or more beneficial interests secured by a portfolio of prepayable financial instruments, entities were allowed to hedge a stated amount of the asset or assets in the closed portfolio that

is anticipated to be outstanding for the designated hedged period. If the requirements for the last-of-layer method were met, prepayment risk is not incorporated into the measurement of the hedged item. With the application of this guidance, a number of questions were received. After considering those questions, FASB issued *ASU 2022-01, Fair Value Hedging – Portfolio Layer Method,* which expanded the guidance and provided additional specifications for application. Ultimately, for a closed portfolio of financial assets or one of more beneficial interests secured by a portfolio of financial instruments, an entity may designate as the hedged item or items a hedged layer or layers if the following criteria is met:

a. As part of the initial hedge documentation, an analysis is completed and documented to support the entity's expectation that the hedged item or items (that is, the hedged layer or layers in aggregate) is anticipated to be outstanding for the designated hedge period. That analysis shall incorporate the entity's current expectations of prepayments, defaults, and other factors affecting the timing and amount of cash flows associated with the closed portfolio.

b. For purposes of its analysis, the entity assumes that as prepayments, defaults, and other factors affecting the timing and amount of cash flows occur, they first will be applied to the portion of the closed portfolio that is not hedged.

c. The entity applies the partial-term hedging guidance to the assets or beneficial interests used to support the entity's expectation. An asset that matures on a hedged layer's assumed maturity date meets this requirement.

19. Similar to concepts supporting the adoption of prior U.S. GAAP revisions, there is a general assessment that determination of effective hedges shall be consistent between statutory accounting and U.S. GAAP. As such, new SAP concepts revisions to reflect the portfolio layer method in establishing effective hedge dynamics was proposed to be consistent with U.S. GAAP. With the U.S. GAAP guidance limiting the application of this guidance to hedges of recognized financial assets, a consistent scope threshold was established for statutory accounting.

20. The review of the portfolio layer method identified that U.S. GAAP prevents basis adjustments directly to assets hedged in a portfolio and it was considered on whether statutory revisions would be necessary to address similar basis adjustment revisions under statutory accounting. However, after further assessments, it was identified that the fair value measurement method under U.S. GAAP, which results in ongoing basis adjustments from changes in fair value over the derivative term, would not be a prominent issue under statutory accounting, which predominantly uses an amortized cost approach for effective hedges. With the use of amortized cost, basis adjustments do not occur until hedge termination or at designation of the hedge, therefore this was identified as not a key statutory accounting impact.

21. In addition to considering guidance for the portfolio layer method, representatives from interested parties proposed to also capture concepts for partial term hedges from ASU 2017-12. (As detailed in the FASB criteria above in paragraph 18 for portfolio layer method hedges, application of a the partial-term hedging guidance is used to support the entity's expectation.) Prior review of partial term hedge concepts noted concern as how interim adjustments to hedged items, particularly for hedged liabilities, would be reflected in the financial statements. With the statutory accounting guidance to reflect derivative gains or losses as basis adjustments on the hedge item, if a hedge to a recognized liability resulted in a reduction to the presentation of the liability, this could misrepresent the financial statements as the liability itself had not been reduced. In considering these concerns and recognizing that a broader project would likely be needed to address these basis adjustments, representatives from industry recommended incorporated the U.S. GAAP guidance for partial term hedges, with a statutory modification to limit the application to hedges of recognized assets.

© 2023 National Association of Insurance Commissioners

22. Although the proposal to limit partial term hedges to recognized assets is a modification from the overarching concept to mirror hedge effectiveness assessments between U.S. GAAP and SAP, it was identified as an approach that would be consistent with the U.S. GAAP scope application for the portfolio layer method and would reflect how industry currently uses partial term hedge transactions. As such, although the modification created a U.S. GAAP and SAP difference, the modification satisfies the current need for statutory guidance and prevents significant concerns on how the guidance could impact the presentation of liabilities. With this discussion, it was identified that subsequent consideration of the limitation to recognized assets could occur, with potential expansion to hedges of recognized liabilities as part of a broader discussion on how derivative gains and losses are recognized as basis adjustments.

23. The proposed revisions exposed to incorporate the portfolio layer method and the partial-term hedging method are summarized as follows:

a. Revisions to SSAP No. 86, predominantly in paragraph 26.d., 26.f., and 26.g., to detail the ability to hedge recognized assets under the portfolio layer method and partial-term hedge. Also, revisions to paragraph 62 for a new disclosure for portfolio layer derivatives that no longer qualify for hedge accounting and the circumstances that led to the breach, as well as guidance in paragraphs 65.c. and 74.f. to detail relevant U.S. GAAP literature and the effective date.

b. Revisions to SSAP No. 86 – Exhibit, Exhibit A – Assessment of Hedge Effectiveness, to add a new section on the assessment of portfolio layer method for hedge effectiveness. (Note – This exhibit was the new exhibit adopted in agenda item 2021-20 which replaced the prior Exhibit A and Exhibit B within SSAP No. 86.)

c. Revisions to SSAP No. 86 – Exhibit C, paragraph 2.d., for which a portfolio layer method is discontinued to detail how the basis adjustment shall be allocated to the remaining individual assets in the closed portfolio. (Note – With the adoption of agenda item 2021-20, this Exhibit was renamed as Exhibit B.)

24. The proposed revisions reflect adoption of U.S. GAAP for the criteria for the portfolio layer method detailed in ASU 2022-01, criteria to only consider how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity date in ASC 815-20-25-6B, adding option in calculating the change in the hedged item's fair value attributed to changes in the benchmark interest rate based on the benchmark rate components of the contractual cash flows detailed in FASB ASC 815-25-35-13, and the partial-term hedging method detailed in FASB ASC 815-25-35-13B. The adoption of the partial term hedging method reflects statutory modifications that limits its use only when the hedged item is a recognized asset. This is different than U.S. GAAP, which permits the partial term method for hedged liabilities. The statutory limitation is established to prevent interim basis adjustments to hedged liabilities that could present a reduction of reported liabilities on the financial statements when the actual liability has not been reduced. Reconsideration of this statutory limitation may occur after a broader project to consider how derivative basis adjustments to hedged liabilities shall be reflected in the financial statements.

25. On December 13, 2022, the Working Group adopted the exposed revisions. This adoption resulted with the revisions identified in paragraph 23 above. These revisions were adopted with a January 1, 2023 effective date, with early adoption permitted. The revisions shall be applied prospectively to qualifying new hedges.

~~25.~~26. An updated version of this Issue Paper was exposed on December 12, 2022, and adopted on March 22, 2023. The purpose of this Issue Paper is to document the historical actions resulting in new SAP concepts within *SSAP No. 86—Derivatives*. As issue papers are not represented in the statutory hierarchy, the adoption of this Issue Paper does not change the effective date of the previously adopted authoritative literature.

Exhibit 1 – Revisions adopted to SSAP No. 86 on November 15, 2018 (Agenda Item 2018-30)

38. At inception of the hedge, documentation must include:

a. A formal documentation of the hedging relationship and the entity's risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument's effectiveness in offsetting the exposure to changes in the hedged item's fair value or variability in cash flows attributable to the hedged risk will be assessed, including whether an entity will perform subsequent effectiveness assessments on a qualitative basis (per paragraph 42) and how it intends to carry out that qualitative assessment. There must be a reasonable basis for how the entity plans to assess the hedging instrument's effectiveness;

b. An entity's defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative's change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 37 and Exhibit B;

c. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions; and

d. A description of the reporting entity's methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.

39. At inception, if an entity is required to perform an initial prospective assessment of hedge effectiveness on a quantitative basis (using information applicable as of the date of hedge inception[FN]), the assessment is considered to be performed concurrently at hedge inception if it completed by the earliest of the following: *(815-20-25-3)*

a. The first quarterly hedge effectiveness assessment date.

b. The date that financial statements that include the hedged transaction are available to be issued.

c. The date that the hedging instrument and hedged item no longer qualify for hedge accounting.

d. The date of expiration, sale, termination or exercise of the hedging instrument.

e. The date of dedesignation of the hedging relationship.

f. For a cash flow hedge of a forecasted transaction, the date that the forecasted transaction occurs.

New Footnote – Entities are required to perform an initial prospective assessment unless qualifying for an exception in accordance with ASU 2017-12, paragraph 815-20-25-3.

40. For all derivatives terminated, expired, or exercised during the year:

a. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions;

b. A description, for each instrument, of the nature of the transaction, including:

i. The date of the transaction;

ii. A complete and accurate description of the specific derivative, including description of the underlying securities, currencies, rates, indices, commodities, derivatives, or other financial market instruments;

iii. Number of contracts or notional amount;

iv. Date of maturity, expiry or settlement;

v. Strike price, rate or index (termination price for futures contracts);

vi. Counterparty, or exchange on which the transaction was traded; and

vii. Consideration paid or received, if any, on termination.

c. Description of the reporting entity's methodology to verify that derivatives were effective hedges; and

d. Identification of any derivatives that ceased to be effective as hedges.

41. For derivatives open at quarter-end:

a. A description of the methodology used to verify the continued effectiveness of hedges, and whether the entity is using qualitative assessments pursuant to paragraph 42[FN];

b. An identification of any derivatives that have ceased to be effective as hedges;

c. A description of the reporting entity's methodology to determine fair values of derivatives;

d. Copy of Master Agreements, if any, where indicated on Schedule DB Part D.

New Footnote: For purposes of this requirement, this statement adopts the guidance for effectiveness assessment after initial designation reflected in ASU 2017-12, including the concepts and restrictions for use of the short-cut method and the critical terms match method.

42. An entity may subsequently qualitatively assess hedge effectiveness, on a hedge-by-hedge basis, if both the conditions in paragraphs 42.a. and 42.b. were initially met. When an entity performs subsequent qualitative assessments of hedge effectiveness, it shall verify and document whenever financial statements or earnings are reported and at least every three months that the facts and circumstances related to the hedging relationship have not changed such that it can assert qualitatively that the hedging relationship was and continues to be highly effective. An entity may perform a quantitative assessment in any reporting period to validate whether qualitative assessments remain appropriate. When facts and circumstances change such that an entity no longer can assert qualitatively that the hedging relationship continue to be highly effective, then the entity shall begin performing quantitative assessments. (815-20-35-2A, 2C and 2D abbreviated)

a. An entity performs an initial quantitative test of hedge effectiveness on a prospective basis (that is, it is not assuming that the hedging relationship is perfectly effective at hedge inception) and the results of that quantitative test demonstrate highly effective offset.

b. At hedge inception, an entity can reasonably support an expectation of high effectiveness on a qualitative basis in subsequent periods.

RELEVANT LITERATURE

6059. This statement adopts the framework established by FAS 133, FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133 (FAS 137) and FASB Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133 (FAS 138), for fair value and cash flow hedges, including its technical guidance to the extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations. This statement adopts paragraphs 4 and 25 of FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5: Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No.45 and Clarification of the Effective Date of FASB Statement No. 161 (FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects FSP FIN 39-1, Amendments of FASB Interpretation No. 39, and ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach.

61 This statement adopts certain revisions to ASC 815-20 included in ASU 2017-12. This adoption is limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness and only includes: 1) provisions allowing more time to perform the initial quantitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of the critical terms and short-cut methods for assessing hedge effectiveness. The remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.

6260. This statement adopts with modification revisions to ASC 815 as reflected within ASU 2016-05, Effect of Derivative Contract Novations on Existing Hedge Accounting Relationships. This guidance is modified to require prospective application, as such it is only applicable to future counterparty changes in derivative instruments, and this guidance cannot be used to adjust derivative transactions previously terminated. This statement adopts revisions to ASC 815-20-25-15 as reflected within ASU 2010-08, Technical Corrections to Various Topics. This statement adopts revisions to ASC 815-10-50-4K as reflected within ASU 2010-11, Derivatives and Hedging (Topic 815), Scope Exception Related to Embedded Credit Derivatives, but rejects all other GAAP revisions from ASU 2010-11 and ASU 2014-16, Derivatives and Hedging, Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share is More Akin to Debt or to Equity and ASU 2016-06, Derivatives and Hedging, Contingent Put and Call Options in Debt Instruments. These GAAP revisions are rejected as embedded derivatives are not separated from the host contract and recognized as derivatives under SSAP No. 86. Revisions are also incorporated to SSAP No. 86 to require disclosures on embedded credit derivatives that expose the holder of a financial instrument to the possibility of being required to make future payments. This disclosure is a modification to the GAAP disclosures specific to statutory accounting as embedded credit derivatives are not separately recognized under statutory accounting. It should be noted that the conclusions reached in this statement are not intended to usurp the rules and regulations put forth by states in their respective investment laws. The contents of this statement are intended to provide accounting

guidance on the use of derivatives as allowed by an insurer's state of domicile. It is not intended to imply that insurers may use derivatives or cash instruments that the insurer's state of domicile does not allow under the state's insurance regulatory requirements, e.g., in replication transactions.

63~~61~~. This statement adopts revisions to ASC 815-20 as reflected within ASU 2013-10, Derivatives and Hedging, Inclusion of the Fed Funds Effective Swap Rate (or Overnight Index Swap Rate) as a benchmark interest rate for Hedge Accounting Purposes. These revisions define a benchmark interest rate, clarify what can be used in the U.S. for a benchmark interest rate, and eliminate the prior restriction on using different benchmark rates for similar hedges.

Effective Date and Transition

67~~65~~. This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used. Revisions adopted to paragraph 59 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.) Revisions adopted in paragraph 15 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.) Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness (detailed in paragraph 61) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018.

SSAP NO. 86 - EXHIBIT B – ASSESSMENT OF HEDGING EFFECTIVENESS

The following is based on paragraphs 62-70 of FAS 133 to offer additional guidance on assessing hedging effectiveness. The intent of such is to remain consistent with ~~FAS 133~~U.S. GAAP with respect to assessing hedge effectiveness, including guidance in ASU 2017-12 that outlines when an entity may perform subsequent assessments of hedge effectiveness qualitatively.

1. This statement requires that an entity define at the time it designates a hedging relationship the method it will use to assess the hedge's effectiveness in achieving offsetting changes in fair value or offsetting cash flows attributable to the risk being hedged. It also requires that an entity use that defined method consistently throughout the hedge period to assess at inception of the hedge and on an ongoing basis whether it expects the hedging relationship to be highly effective in achieving offset. If the entity identifies an improved method and wants to apply that method prospectively, it must discontinue the existing hedging relationship and designate the relationship anew using the improved method. Although this statement suggests a method for assessing whether a hedge is expected to be highly effective or measuring hedge ineffectiveness, the appropriateness of a given method of assessing hedge effectiveness can depend on the nature of the risk being hedged and the type of hedging instrument used. Ordinarily, however, an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified.

2. In defining how hedge effectiveness will be assessed, an entity must specify whether it will include in that assessment all of the gain or loss on a hedging instrument. As discussed in paragraph 33, this statement permits (but does not require) an entity to exclude all or a part of the hedging instrument's time value from the assessment of hedge effectiveness, as follows:

a. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the change in the time value of the contract would be excluded from the assessment of hedge effectiveness.

b. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract would be excluded from the assessment of hedge effectiveness.

c. If the effectiveness of a hedge with a forward or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price would be excluded from the assessment of hedge effectiveness.

In each circumstance above, changes in the excluded component would be included in unrealized gains or losses. As noted in paragraph 1 of this Exhibit, the effectiveness of similar hedges generally should be assessed similarly; that includes whether a component of the gain or loss on a derivative is excluded in assessing effectiveness. No other components of a gain or loss on the designated hedging instrument may be excluded from the assessment of hedge effectiveness.

3. In assessing the effectiveness of a cash flow hedge, an entity generally will need to consider the time value of money if significant in the circumstances. Considering the effect of the time value of money is especially important if the hedging instrument involves periodic cash settlements. An example of a situation in which an entity likely would reflect the time value of money is a tailing strategy with futures contracts. When using a tailing strategy, an entity adjusts the size or contract amount of futures contracts used in a hedge so that earnings (or expense) from reinvestment (or funding) of daily settlement gains (or losses) on the futures do not distort the results of the hedge. To assess offset of expected cash flows when a tailing strategy has been used, an entity could reflect the time value of money, perhaps by comparing the present value of the hedged forecasted cash flow with the results of the hedging instrument.

4. ~~Whether a hedging relationship qualifies as highly effective sometimes will be easy to assess.~~ If the critical terms of the hedging instrument and of the ~~entire~~ hedged item~~asset or liability~~ ~~(as opposed to selected cash flows)~~ or hedged forecasted transaction are the same, the entity could conclude that changes in fair value or cash flows attributable to the risk being hedged are expected to completely offset at inception and on an ongoing basis. For example, an entity may assume that a hedge of a forecasted purchase of a commodity with a forward contract will be ~~highly~~ perfectly effective if:

a. The forward contract is for purchase of the same quantity of the same commodity at the same time and location as the hedged forecasted purchase.

b. The fair value of the forward contract at inception is zero.

c. Either the change in the discount or premium on the forward contract is excluded from the assessment of effectiveness and included directly in unrealized gains and losses pursuant to paragraph 22.B. or the change in expected cash flows on the forecasted transaction is based on the forward price for the commodity.

5. In a cash flow hedge of a group of forecasted transactions, an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month. *(815-20-25-84A)*

~~5~~6. However, assessing hedge effectiveness can be more complex. For example, hedge effectiveness would be reduced by the following circumstances, among others:

a. A difference between the basis of the hedging instrument and the hedged item or hedged transaction (such as a Deutsche mark-based hedging instrument and Dutch guilder-based hedged item), to the extent that those bases do not move in tandem

b. Differences in critical terms of the hedging instrument and hedged item or hedged transaction, such as differences in notional amounts, maturities, quantity, location, or delivery dates.

Hedge effectiveness also would be reduced if part of the change in the fair value of a derivative is attributable to a change in the counterparty's creditworthiness.

~~6~~7. A hedge that meets the effectiveness test specified in paragraphs 19.b. and 20.b. (that is, both at inception and on an ongoing basis, the entity expects the hedge to be highly effective at achieving offsetting changes in fair values or cash flows) also must meet the other hedge accounting criteria to qualify for hedge accounting. If the hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test. If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting. The discussions of measuring hedge effectiveness in the examples in the remainder of this Exhibit assume that the hedge satisfied all of the criteria for hedge accounting at inception.

Exhibit 2 – Revisions adopted to SSAP No. 86 on August 10, 2021 (Agenda Item 2021-20)

Derivatives Used in Hedging Transactions

22. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting)[1].

23. Entities shall not bifurcate the effectiveness of derivatives. A derivative instrument is either classified as an effective hedge or an ineffective hedge. Entities must account for the derivative using fair value accounting if it is deemed to be ineffective or becomes ineffective. Derivative instruments classified as effective with excluded components in determining hedge effectiveness pursuant to Exhibit A, paragraph 8, shall account for the derivative and excluded components pursuant to the guidance in paragraph 40. Entities may redesignate a derivative in a hedging relationship even though the derivative was used in a previous hedging relationship that proved to be ineffective. A change in the counterparty to a derivative instrument that has been designated as the hedging instrument in an existing hedging relationship would not, in and of itself, be considered a termination of the derivative instrument. An entity shall prospectively discontinue hedge accounting for an existing hedge if any one of the following occurs:

a. Any criterion in paragraphs 26-38 is no longer met;

b. The derivative expires or is sold, terminated, or exercised (the effect is recorded as realized gains or losses or, for effective hedges of firm commitments or forecasted transactions, in a manner that is consistent with the hedged transaction – see paragraph 24);

c. The entity removes the designation of the hedge; or

d. The derivative is deemed to be impaired in accordance with paragraph 18. A permanent decline in a counterparty's credit quality/rating is one example of impairment required by paragraph 18, for derivatives used in hedging transactions.

Hedge Effectiveness

39. The measurement of hedge effectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 41.

40. The gain or loss on a derivative designated as a hedge and assessed to be effective is reported consistently with the hedged item. (Therefore, if the hedged item is reported at amortized cost, and the hedging instrument is consistent with that measurement method, fluctuations in fair value would not be recognized as unrealized gains or losses for either the hedging item or hedging instrument.) If an entity's defined risk management strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, on the hedging derivative from the assessment of hedge effectiveness

[1] Pursuant to paragraph 19, the gross reported value of a derivative and the determination of unrealized gains or losses shall exclude the impact of financing premiums. Premiums payable or receivable from the acquisition or writing of a derivative shall not be reflected in the gross reporting of derivatives or in determining the fair value change in a derivative.

(as discussed in Exhibit BA, paragraph 8), specific accounting treatment shall be followed for the that excluded component: of the gain or loss shall be recognized as an unrealized gain or loss. For example, if the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the changes in the option's time value would be recognized in unrealized gains or losses. Time value is equal to the fair value of the option less its intrinsic value.

a. If the excluded component pertains to the difference between a foreign currency spot price and the forward or future price (e.g., a forward spot rate), then this premium/discount shall be amortized into income over the life of the contract or hedged program. (This guidance addresses the excluded component in Exhibit A, paragraph 8.d.)

b. If the excluded component pertains to a foreign currency swap cross-currency basis spread, the impact of fair value changes shall be reflected as a component of the foreign currency swap's periodic interest accrual. (This guidance addresses the excluded component in Exhibit A, paragraph 8.e.)

c. For all other excluded components, the excluded component shall be measured and reported at fair value, with changes in fair value recognized as unrealized gains or losses. (This guidance shall be applied to excluded components detailed in Exhibit A, paragraphs 8.a.-8.c.

41. Hedging instruments with excluded components shall be identified in the financial statement investment schedule (Schedule DB) and shall be disclosed pursuant to paragraph 41.g.

Proposed New Disclosure Paragraph (This is proposed as a new paragraph 41.g. with reordering of subsequent paragraphs.)

g. For hedging instruments with excluded components for determining hedge effectiveness:

i. In the investment schedule, identify hedging instruments with excluded components, and report the current fair value of the excluded component, the fair value of the excluded component that is reflected in the reported BACV for the hedging instrument (this item would not be applicable for foreign-currency forwards and currency swaps where the forward points or cross-currency basis, respectively, are the excluded component), and the change in fair value reported as an unrealized gains/loss. (Note – These items will be proposed in electronic columns to Schedule DB.)

ii. In the notes to the financial statements, provide information on the aggregate excluded components by category: Time Value, Intrinsic Value, Forward Points and Cross Currency Basis Spread. The aggregate amounts reported should include the following (as applicable): current fair value, recognized unrealized gain/loss, the fair value reflected in BACV, and for the excluded forward points (e.g., forward spot rates), the aggregate amount owed at maturity, along with current year and remaining amortization. (Note – These items will be captured in a blanks proposal/template.)

Relevant Literature

64. This statement adopts the framework established by FAS 133, *FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133* (FAS 137) and *FASB Statement No. 138, Accounting* for *Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133* (FAS 138), for fair value and cash flow hedges, including its technical guidance to the

extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations. This statement adopts paragraphs 4 and 25 of *FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities* (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. (The adoption from FAS 149 on the assessment of hedge effectiveness is impacted by the adoption with modification of guidance from ASU 2017-12 as detailed in paragraph 65.b., with the guidance from ASU 2017-12 superseding the prior adoption to the extent applicable.) All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5*: Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No.45 and Clarification of the Effective Date of FASB Statement No. 161 (*FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects *FSP FIN 39-1, Amendments of FASB Interpretation No. 39*, and *ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach*.

65. This statement adopts, with modification, certain revisions to ASC 815-20 included in ASU 2017-12. Remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.

a. Revisions effective January 1, 2019, with early adoption permitted, ~~This adoption is~~are limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness and only includes: 1) provisions allowing more time to perform the initial quantitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of the critical terms and short-cut methods for assessing hedge effectiveness.

b. Revisions effective January 1, 2023, with early adoption permitted, are limited to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification (ASC) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12. This adoption reflects statutory modifications to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in the statement. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The adoption of the referenced ASC paragraphs only extends to revisions incorporated through ASU 2017-12; therefore, any subsequent U.S. GAAP edits would require statutory accounting consideration before considered adopted.
~~The remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.~~

Effective Date and Transition

74.~~73~~ This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used.

© 2023 National Association of Insurance Commissioners

a. Revisions adopted to paragraph 64 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.)

b. Revisions adopted in paragraph 16 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.)

c. Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness (detailed in paragraph 65) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018.

d. Revisions adopted April 2019 to explicitly include structured notes in scope of this statement are effective December 31, 2019. Revisions adopted July 2020 to define "derivative premium," require gross reporting of derivatives without the impact of financing premiums and require separate recognition of premiums payable and premiums receivable, are effective January 1, 2021.

e. Revisions adopted August 2022 that adopt with modification the criteria for initial and subsequent hedge effectiveness detailed in the FASB ASC paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12 and that incorporate statutory accounting revisions for the accounting and reporting of excluded components are effective January 1, 2023, with early adoption permitted. These revisions shall be applied prospectively for all new and existing hedges. Entities shall detail the adoption of this guidance as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors*

With the adoption of the new Exhibit A as detailed in the subsequent section, Exhibit C will be renamed Exhibit B. Due to the details of Exhibit A (including the FASB ASC paragraphs not duplicated in the SSAP), the following Exhibit B section is included before the new Exhibit A in this issue paper for ease of readability.

EXHIBIT ~~C~~ B – SPECIFIC HEDGE ACCOUNTING PROCEDURES FOR DERIVATIVES

Specific hedge accounting procedures for derivative instruments are outlined below.

1. Call and Put Options, Warrants, Caps, and Floors:

   a. Accounting at Date of Acquisition (purchase) or Issuance (written): The premium paid or received for purchasing or writing a call option, put option, warrant, cap or floor shall either be (i) recorded as an asset (purchase) or liability (written) on the Derivative line on the Assets (or) Liabilities pages or (ii) combined with the hedged item(s) individually or in the aggregate;

   b. Statement Value:

      i. Open derivatives hedging items recorded at amortized cost:

(a) Options, warrants, caps, and floors purchased or written shall be valued at amortized cost in a manner consistent with the hedged item. (Components of a hedging instrument excluded from the determination of hedge effectiveness shall be recognized at fair value, with changes in fair value recognized as unrealized gains/losses throughout the duration of the hedging instrument. These components are not captured within the guidance for effective hedges detailed within this section.);

(b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items, the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change). Specific treatment includes:

(1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;

(2) For hedges of forecasted transactions or firm commitments, the derivative may be recorded at cost until the hedged transaction occurs or it is determined that the hedge was not effective (see (d) in this section 1.b.i.);

(3) For other derivatives, the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program.

(c) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

(d) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (1) the hedged transaction occurs or (2) it is determined that the hedge was not effective (when the derivative is valued in accordance with (e) in this section);

(e) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or the designated portion of the derivative shall be valued at its current fair value with gains and losses recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

d. Gain/Loss on Termination of an option, warrant, cap or floor accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):

i. Exercise of an Option: The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;

ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain

or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination. For hedging instruments with excluded components in determining hedge effectiveness, the unrealized gain/loss from the change in fair value of the excluded component shall be realized upon the closing transaction. This gain/loss shall not be used to adjust the basis or proceeds of the hedged item.;

iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

iv. Upon the redesignation of a derivative from a currently effective hedging relationship:

(a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.

(b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.

(c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.

2. Swaps, Collars, and Forwards (see also discussion in Introduction above):

a. Accounting at Date of Opening Position:

i. Any premium paid or received at date of opening shall either be (a) recorded on the Derivative line on the Assets (or) Liabilities pages or (b) combined with the hedged item(s), individually or in the aggregate;

b. Statement Value:

i. Open derivatives hedging items recorded at amortized cost:

(a) Swaps, collars, and forwards shall be valued at amortized cost in a manner consistent with hedged item. (Components of a hedging instrument excluded from the determination of hedge effectiveness not addressed in 2.b.iii. shall be recognized at fair value, with changes in fair value of the excluded component recognized as unrealized gains/losses throughout the duration of the hedging instrument. These components are not captured within the guidance for effective hedges detailed within this section.);

(b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change.) Specific treatment includes:

(1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;

(2) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (a) the hedged transaction occurs or (b) it is determined that the hedge was not effective (see (5) in this section 2.b.i.);

(3) For other derivatives the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program;

(4) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

(5) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or a designated portion of the derivative shall be valued at its current fair value with gains and losses recorded in unrealized gains or unrealized losses to the extent that it ceased to be an effective hedge. Upon redesignation into an effective hedging relationship, the derivative's mark to fair value through unrealized gain or loss shall be reversed.

ii. Open derivatives hedging items recorded at fair value (where gains and losses on the hedged item are recognized as adjustments to unassigned funds (surplus):

(a) Swaps, collars, or forwards shall be valued at current fair value with changes in fair value recognized currently consistent with the hedged item; this will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);

(b) For hedges where the derivative is combined with the hedged item, the fair value of the derivative and hedge item shall be determined and reported separately, either individually or in the aggregate. The cost (book value) basis used to figure gain/loss on the derivative is zero.

iii. Open foreign currency swap and forward contracts hedging foreign currency exposure on items denominated in a foreign currency and translated into U.S. dollars where fair value accounting is not being used:

(a) ~~The foreign exchange premium (discount) on the currency contract shall be amortized into income over the life of the contract or hedge program.~~ The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened. For forward contracts, an excluded component representing a foreign exchange premium (discount) (forward points) on the currency contract shall be amortized into income over the life of the contract or hedge program. Amortization is not required if the contract was entered into within a year of maturity. For foreign currency swaps, an excluded component representing a cross-currency basis spread, is recognized into income through the foreign currency swap's periodic interest accruals.

~~Amortization is not required if the contract was entered into within a year of maturity;~~

(b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as done to translate the hedged item;

(c) The unrealized gain/loss for the period equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the prior period end spot rate;

(d) The statement value of the derivative equals the amortized cost plus:

1. For forward contracts, the amortized (premium) discount plus the cumulative unrealized gain/(loss) on the contract.

2. For foreign currency swaps, ~~T~~the cumulative unrealized gain/(loss) on the contract. The cross-currency basis spread is recorded through the Investment Income Due and Accrued or Other Liabilities, as a component of the foreign currency swap's periodic interest accrual.

The cumulative unrealized gain/loss equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened;

(e) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on derivatives hedging forecasted transactions or firm commitments shall be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;

(f) For hedges where the cost of the foreign currency contract is combined with the hedged item, the statement value on Schedule DB is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

(g) ~~If during the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge,~~ The derivative shall be recorded at fair value and ~~valuation at amortized cost shall cease. To the extent it ceased to be an effective hedge,~~ a cumulative unrealized gain/loss (surplus adjustment) ~~will~~ shall be recognized equal to the difference between the carrying value of the derivative on the balance sheet and the fair value of the derivative if either of the following occur:

1. During the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge.

2. The entity decides to terminate the derivative in advance of scheduled maturity.

~~notional amount or designated notional amount times the difference between the forward rate available for the remaining maturity of the~~

~~contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.~~

iv. Open derivatives hedging items recorded at fair value, where gains and losses on the hedged item are recognized currently in earnings: swaps, collars and forwards shall be valued at current fair value with changes in fair value recognized currently in earnings together with the gains and losses on the hedged item.

(a) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, recognition of changes in fair value through earnings ceases. The derivative shall continue to be valued at its current fair value, but thereafter gains or losses shall be recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

c. Cash Flows and Income:

i. Where the cost of the derivative is not combined with the hedged item:

(a) Amortization of premium paid or received on derivatives is an adjustment to net investment income or another appropriate caption within operating income consistent with the reporting of the hedged item;

(b) Periodic cash flows and accruals of income/expense are to be reported in a manner consistent with the hedged item, usually as net investment income or another appropriate caption within operating income.

ii. Where the cost of the derivative is combined with the hedged item, the cash flows and income of the derivative on Schedule DB is zero. All related amortization and cash flow accounting shall be reported with the hedged item instead of with the derivative.

d. Gain/Loss on Termination of a swap, collar or forward accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):

i. Exercise—The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;

ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination.~~;~~

iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

iv. Upon the redesignation of a derivative from a currently effective hedging relationship-

(a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall

continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.

(b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.

(c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.

The following new Exhibit A replaces both Exhibit A and Exhibit B within the existing SSAP No. 86. This is new guidance within SSAP No. 86, and the tracked changes shown in the section below reflect the modifications from U.S. GAAP. References to the FASB ASC are included in this issue paper for historical reference and will not be duplicated within the SSAP.

EXHIBIT A – DISCUSSION OF HEDGE EFFECTIVENESS

The guidance within this exhibit reflects the adoption, with modification, of *FASB Accounting Standards Codification (ASC) 815-20-25-72 through 815-20-35-20*, as revised through the issuance of *ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities* (ASU 2017-12) (issued on August 28, 2017). This adoption captures the U.S. GAAP guidance for the assessment and determination of hedge effectiveness, with modification to require the accounting and reporting of hedging instruments, including excluded components of hedging instruments to follow specific statutory accounting guidance in SSAP No. 86. The intent of this guidance is to clarify that the determination of whether a hedging instrument and derivative transaction qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement and reporting of effective hedge transactions shall follow statutory specific provisions. The adoption only extends to revisions incorporated to the FASB ASC through ASU 2017-12, therefore any subsequent U.S. GAAP edits to the ASC would require statutory accounting adoption before application. The guidance within this Exhibit reflects excerpts from the U.S. GAAP ASC, but do not reflect the full U.S. GAAP guidance referenced in the adopted language. The exclusion of cited guidance is to manage the extent of detail included within SSAP No. 86. Excerpts not duplicated within from the cited U.S. GAAP guidance are considered adopted unless subject to the specific accounting and reporting statutory exclusion. This Exhibit intends to supplement the guidance in SSAP No. 86 on hedge effectiveness. In any event in which this Exhibit could be interpreted as conflicting with the SSAP No. 86 guidance, the guidance in the body of SSAP No. 86 shall be followed.

Hedge Effectiveness Criteria Applicable to Both Fair Value Hedges and Cash Flow Hedges

1. This guidance addresses hedge effectiveness criteria applicable to both fair value hedges and cash flow hedges. *(815-20-25-74)*

2. To qualify for hedge accounting, the hedging relationship, both at inception of the hedge and on an ongoing basis, shall be expected to be highly effective in achieving either of the following: *(815-20-25-75)*

a. Offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated (if a fair value hedge)

b. Offsetting cash flows attributable to the hedged risk during the term of the hedge (if a cash flow hedge), unless the hedging instrument is used to modify the contractually specified interest receipts or payments associated with a recognized financial asset liability from one variable rate to another variable rate. ~~except as indicated in paragraph 815-20-25-50~~

3. If the hedging instrument (such as an at-the-money option contract) provides only one-sided offset of the hedged risk, either of the following conditions shall be met: *(815-20-25-76)*

a. The increases (or decreases) in the fair value of the hedging instrument are expected to be highly effective in offsetting the decreases (or increases) in the fair value of the hedged item (if a fair value hedge).

b. The cash inflows (outflows) from the hedging instrument are expected to be highly effective in offsetting the corresponding change in the cash outflows or inflows of the hedged transaction (if a cash flow hedge).

4. There would be a mismatch between the change in fair value or cash flows of the hedging instrument and the change in fair value or cash flows of the hedged item or hedged transaction in any of the following circumstances, among others: *(815-20-25-77)*

a. A difference between the basis of the hedging instrument and the hedged item or hedged transaction, to the extent that those bases do not move in tandem

b. Differences in critical terms of the hedging instrument and hedged item or hedged transaction, such as differences in any of the following:

i. Notional amounts

ii. Maturities

iii. Quantity

iv. Location (not applicable for hedging relationships in which the variability in cash flows attributable to changes in a contractually specified component is designated as the hedged risk)

v. Delivery Dates

5. An entity shall consider hedge effectiveness in two different ways—in prospective considerations and in retrospective evaluations: *(815-20-25-79)*

a. Prospective considerations. The entity's expectation that the relationship will be highly effective over future periods in achieving offsetting changes in fair value or cash flows, which is forward looking, must be assessed on a quantitative basis at hedge inception unless one of the exceptions detailed in ASU 2017-12, paragraph 815-20-25-3(b)(2)(iv)(01)[2] is met. Prospective assessments shall be subsequently performed whenever financial statements or earnings are reported and at least every three months. The entity shall elect at hedge inception ~~in accordance with paragraph 815-20-25-3(b)(2)(iv)(03)~~ whether to perform subsequent retrospective and prospective hedge effectiveness assessments on a quantitative or qualitative basis. ~~See paragraphs 815-20-35-2A through 35-2F for additional guidance on qualitative assessments of hedge effectiveness.~~ A quantitative assessment can be based on regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. The quantitative prospective assessment of hedge effectiveness shall consider all reasonably possible changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument and the hedged items for the period used to assess whether the

[2] Reference to this ASU 2017-12 guidance is consistent with the guidance in SSAP No. 86, paragraph 42, footnote 5.

requirement for expectation of highly effective offset is satisfied. The quantitative prospective assessment may not be limited only to the likely or expected changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument or the hedged items. Generally, the process of formulating an expectation regarding the effectiveness of a proposed hedging relationship involves a probability-weighted analysis of the possible changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument and the hedged items for the hedge period. Therefore, a probable future change in fair value will be more heavily weighted than a reasonably possible future change. ~~That calculation technique is consistent with the definition of the term **expected cash flow** in FASB Concepts Statement No. 7, *Using Cash Flow Information and Present Value in Accounting Measurements*.~~

b. Retrospective evaluations. An assessment of effectiveness may be performed on a quantitative or qualitative basis on the basis of the entity's election at hedge inception~~ in accordance with paragraph 815-20-25-3(b)(2)(iv)(03)~~. That assessment shall be performed whenever financial statements or earnings are reported, and at least every three months. ~~See paragraphs 815-20-35-2 through 35-4 for further guidance.~~ At inception of the hedge, an entity electing a dollar-offset approach to perform retrospective evaluations on a quantitative basis may choose either a period-by-period approach or a cumulative approach in designating how effectiveness of a fair value hedge or of a cash flow hedge will be assessed retrospectively under that approach, depending on the nature of the hedge initially documented~~ in accordance with paragraph 815-20-25-3~~. ~~For example, an entity may decide that the cumulative approach is generally preferred, yet may wish to use the period-by-period approach in certain circumstances. See paragraphs 815-20-35-5 through 35-6 for further guidance.~~

(ASC paragraph 815-20-25-79A not included in Exhibit A.)

6. All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship. An entity shall use the quantitative effectiveness assessment method defined at hedge inception consistently for the periods that the entity either elects or is required to assess hedge effectiveness on a quantitative basis. *(815-20-25-80)*

7. This ~~Subtopic~~ guidance does not specify a single method for assessing whether a hedge is expected to be highly effective. The method of assessing effectiveness shall be reasonable. The appropriateness of a given method of assessing hedge effectiveness depends on the nature of the risk being hedged and the type of hedging instrument used. Ordinarily, an entity shall assess effectiveness for similar hedges in a similar manner, including whether a component of the gain or loss on a derivative instrument is excluded in assessing effectiveness for similar hedges. Use of different methods for similar hedges shall be justified. The mechanics of isolating the change in time value of an option discussed beginning in paragraph 13 ~~815-20-25-98~~ also shall be applied consistently. *(815-20-25-81)*

8. In defining how hedge effectiveness will be assessed, an entity shall specify whether it will include in that assessment all of the gain or loss on a hedging instrument. An entity may exclude all or a part of the hedging instrument's time value from the assessment of hedge effectiveness, as follows: *(815-20-25-82)*

a. If the effectiveness of a hedge with an option is assessed based on changes in the option's intrinsic value, the change in the time value of the option would be excluded from the assessment of hedge effectiveness.

b. If the effectiveness of a hedge with an option is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract shall be excluded from the assessment of hedge effectiveness.

c. An entity may exclude any of the following components of the change in an option's time value from the assessment of hedge effectiveness:

i. The portion of the change in time value attributable to the passage of time (theta)

ii. The portion of the change in time value attributable to changes due to volatility (vega)

iii. The portion of the change in time value attributable to changes due to interest rates (rho).

d. If the effectiveness of a hedge with a forward contract or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price shall be excluded from the assessment of hedge effectiveness.

e. An entity may exclude the portion of the change in fair value of a currency swap attributable to a cross-currency basis spread.

9. No other components of a gain or loss on the designated hedging instrument shall be excluded from the assessment of hedge effectiveness nor shall an entity exclude any aspect of a change in an option's value from the assessment of hedge effectiveness that is not one of the permissible components of the change in an option's time value. For example, an entity shall not exclude from the assessment of hedge effectiveness the portion of the change in time value attributable to changes in other market variables (that is, other than rho and vega). *(815-20-25-83)*

Note – The following ASC Paragraphs 815-20-25-83A and 83B are not adopted within SSAP No. 86 as they address measurement and recognition. Measurement and recognition guidance shall follow the provisions detailed in SSAP No. 86.

For fair value and cash flow hedges, the initial value of the component excluded from the assessment of effectiveness shall be recognized in earnings using a systematic and rational method over the life of the hedging instrument. Any difference between the change in fair value of the excluded component and amounts recognized in earnings under that systematic and rational method shall be recognized in other comprehensive income. Example 31 beginning in paragraph 815-20-55-235 illustrates this approach for a cash flow hedge in which the hedging instrument is an option and the entire time value is excluded from the assessment of effectiveness. *(815-20-25-83A)*

For fair value and cash flow hedges, an entity alternatively may elect to record changes in the fair value of the excluded component currently in earnings. This election shall be applied consistently to similar hedges in accordance with paragraph 815-20-25-81 and shall be disclosed in accordance with paragraph 815-10-50-4EEEE. *(815-20-25-83B)*

10. If the critical terms of the hedging instrument and of the hedged item or hedged forecasted transaction are the same, the entity could conclude that changes in fair value or cash flows attributable to the risk being hedged are expected to completely offset at inception and on an ongoing basis. For example, an entity may assume that a hedge of a forecasted purchase of a commodity with a forward contract will be perfectly effective if all of the following criteria are met:

a. The forward contract is for purchase of the same quantity of the same commodity at the same time and location as the hedged forecasted purchase. Location differences do not need to be considered if an entity designates the variability in cash flows attributable to changes in a contractually specified component as the hedged risk and the requirements in paragraphs 815-20-25-22A through 25-22B of the FASB Codification are met. *(815-20-25-84)*

b. The fair value of the forward contract at inception is zero.

c. Either of the following criteria is met:

i. The change in the discount or premium on the forward contract is excluded from the assessment of effectiveness pursuant to paragraphs 7-9~~815-20-25-81 through 25-83~~.

ii. The change in expected cash flows on the forecasted transaction is based on the forward price for the commodity.

11. In a cash flow hedge of a group of forecasted transactions in accordance with paragraph 28.a. of the SSAP guidance~~815-20-25-15(a)(2)~~, an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph 10.a. ~~815-20-25-84(a)~~ if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month. *(815-20-25-84A)*

12. If all of the criteria in paragraphs 10-11 ~~815-20-25-84 through 25-84A~~ are met, an entity shall still perform and document an assessment of hedge effectiveness at the inception of the hedging relationship and~~, as discussed beginning in paragraph 815-20-35-9~~, on an ongoing basis throughout the hedge period. No quantitative effectiveness assessment is required at hedge inception if the criteria in paragraphs 10-11 ~~815-20-25-84 through 25-84A~~ are met ~~(see paragraph 815-20-25-3(b)(2)(iv)(01))~~. *(815-20-25-85)*

(ASC paragraphs 815-20-25-86 to 815-20-25-97 not included in Exhibit A.)

Computing Changes in an Option's Time Value

13. In computing the changes in an option's time value that would be excluded from the assessment of hedge effectiveness, an entity shall use a technique that appropriately isolates those aspects of the change in time value. Generally, to allocate the total change in an option's time value to its different aspects—the passage of time and the market variables—the change in time value attributable to the first aspect to be isolated is determined by holding all other aspects constant as of the beginning of the period. Each remaining aspect of the change in time value is then determined in turn in a specified order based on the ending values of the previously isolated aspects. *(815-20-25-98)*

14. Based on that general methodology, if only one aspect of the change in time value is excluded from the assessment of hedge effectiveness (for example, theta), that aspect shall be the first aspect for which the change in time value is computed and would be determined by holding all other parameters constant for the period used for assessing hedge effectiveness. However, if more than one aspect of the change in time value is excluded from the assessment of hedge effectiveness (for example, theta and vega), an entity shall determine the amount of that change in time value by isolating each of those two aspects in turn in a prespecified order (one first, the other second). The second aspect to be isolated would be based on the ending value of the first isolated aspect and the beginning values of the remaining aspects. The portion of the change in time value that is included in the assessment of effectiveness shall be determined

by deducting from the total change in time value the portion of the change in time value attributable to excluded components. (815-20-25-99)

(ASC paragraphs 815-20-25-100 and 815-20-25-101not included in Exhibit A.)

Assuming Perfect Hedge Effectiveness in a Hedge with an Interest Rate Swap

15. The conditions for the shortcut method do not determine which hedging relationships qualify for hedge accounting; rather, those conditions determine which hedging relationships qualify for a shortcut version of hedge accounting that assumes perfect hedge effectiveness. If all of the applicable conditions in the list in paragraph 17 ~~815-20-25-104~~ are met, an entity may assume perfect effectiveness in a hedging relationship of interest rate risk involving a recognized interest-bearing asset or liability (or a firm commitment arising on the trade [pricing] date to purchase or issue an interest-bearing asset or liability) and an interest rate swap (or a compound hedging instrument composed of an interest rate swap and a mirror-image call or put option as discussed in paragraph 17.e. ~~815-20-25-104[e])~~ provided that, in the case of a firm commitment, the trade date of the asset or liability differs from its settlement date due to generally established conventions in the marketplace in which the transaction is executed. The shortcut method's application shall be limited to hedging relationships that meet each and every applicable condition. That is, all the conditions applicable to fair value hedges shall be met to apply the shortcut method to a fair value hedge, and all the conditions applicable to cash flow hedges shall be met to apply the shortcut method to a cash flow hedge. A hedging relationship cannot qualify for application of the shortcut method based on an assumption of perfect effectiveness justified by applying other criteria. The verb *match* is used in the specified conditions in the list to mean *exactly the same* or *correspond exactly*. *(815-20-25-102)*

16. Implicit in the conditions for the shortcut method is the requirement that a basis exist for concluding on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair values or cash flows. In applying the shortcut method, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative that require the counterparty to make payments to the entity. *(815-20-25-103)*

17. All of the following conditions apply to both fair value hedges and cash flow hedges: *(815-20-25-104)*

a. The notional amount of the interest rate swap matches the principal amount of the interest-bearing asset or liability being hedged.

b. If the hedging instrument is solely an interest rate swap, the fair value of that interest rate swap at the inception of the hedging relationship must be zero, with one exception. The fair value of the swap may be other than zero at the inception of the hedging relationship only if the swap was entered into at the relationship's inception, the transaction price of the swap was zero in the entity's principal market (or most advantageous market), and the difference between transaction price and fair value is attributable solely to differing prices within the bid-ask spread between the entry transaction and a hypothetical exit transaction. The guidance in the preceding sentence is applicable only to transactions considered *at market* (that is, transaction price is zero exclusive of commissions and other transaction costs~~, as discussed in paragraph 820-10-35-9B)~~. If the hedging instrument is solely an interest rate swap that at the inception of the hedging relationship has a positive or negative fair value, but does not meet the one exception specified in this paragraph, the shortcut method shall not be used even if all the other conditions are met.

c. If the hedging instrument is a compound derivative composed of an interest rate swap and mirror-image call or put option as discussed in (e), the premium for the mirror-image call

or put option shall be paid or received in the same manner as the premium on the call or put option embedded in the hedged item based on the following:

i. If the implicit premium for the call or put option embedded in the hedged item is being paid principally over the life of the hedged item (through an adjustment of the interest rate), the fair value of the hedging instrument at the inception of the hedging relationship shall be zero (except as discussed previously in (b) regarding differing prices due to the existence of a bid-ask spread).

ii. If the implicit premium for the call or put option embedded in the hedged item was principally paid at inception-acquisition (through an original issue discount or premium), the fair value of the hedging instrument at the inception of the hedging relationship shall be equal to the fair value of the mirror-image call or put option.

d. The formula for computing net settlements under the interest rate swap is the same for each net settlement. That is, both of the following conditions are met:

i. The fixed rate is the same throughout the term.

ii. The variable rate is based on the same index and includes the same constant adjustment or no adjustment. The existence of a stub period and stub rate is not a violation of the criterion in (d) that would preclude application of the shortcut method if the stub rate is the variable rate that corresponds to the length of the stub period.

e. The interest-bearing asset or liability is not prepayable, that is, able to be settled by either party before its scheduled maturity, or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items occur on the date in which the last hedged cash flow is due and payable, ~~in accordance with paragraph 815-25-35-13B~~, with the following qualifications:

i. This criterion does not apply to an interest-bearing asset or liability that is prepayable solely due to an embedded call option (put option) if the hedging instrument is a compound derivative composed of an interest rate swap and a mirror-image call option (put option).

ii. The call option embedded in the interest rate swap is considered a mirror image of the call option embedded in the hedged item if all of the following conditions are met:

(a) The terms of the two call options match exactly, including all of the following:

(1) Maturities

(2) Strike price (that is, the actual amount for which the debt instrument could be called) and there is no termination payment equal to the deferred debt issuance costs that remain unamortized on the date the debt is called

(3) Related notional amounts

(4) Timing and frequency of payments

(5) Dates on which the instruments may be called.

(b) The entity is the writer of one call option and the holder (purchaser) of the other call option.

f. Any other terms in the interest-bearing financial instruments or interest rate swaps meet both of the following conditions:

i. The terms are typical of those instruments.

ii. The terms do not invalidate the assumption of perfect effectiveness.

18. All of the following incremental conditions apply to fair value hedges only: *(815-20-25-105)*

a. The expiration date of the interest rate swap matches the maturity date of the interest-bearing asset or liability or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items occur on the date in which the last hedged cash flow is due and payable~~in accordance with paragraph 815-25-35-13B~~.

b. There is no floor or cap on the variable interest rate of the interest rate swap.

c. The interval between repricings of the variable interest rate in the interest rate swap is frequent enough to justify an assumption that the variable payment or receipt is at a market rate (generally three to six months or less).

d. For fair value hedges of a proportion of the principal amount of the interest-bearing asset or liability, the notional amount of the interest rate swap designated as the hedging instrument ~~(see (a) in paragraph 815-20-25-104)~~ matches the portion of the asset or liability being hedged.

e. For fair value hedges of portfolios (or proportions thereof) of similar interest-bearing assets or liabilities, both of the following criteria are met:

i. The notional amount of the interest rate swap designated as the hedging instrument matches the aggregate notional amount of the hedged item (whether it is all or a proportion of the total portfolio).

ii. The remaining criteria for the shortcut method are met with respect to the interest rate swap and the individual assets or liabilities in the portfolio.

f. The index on which the variable leg of the interest rate swap is based matches the benchmark interest rate designated as the interest rate risk being hedged for that hedging relationship.

19. All of the following incremental conditions apply to cash flow hedges only: (815-20-25-106)

a. All interest receipts or payments on the variable-rate asset or liability during the term of the interest rate swap are designated as hedged.

b. No interest payments beyond the term of the interest rate swap are designated as hedged.

c. Either of the following conditions is met:

i. There is no floor or cap on the variable interest rate of the interest rate swap.

ii. The variable-rate asset or liability has a floor or cap and the interest rate swap has a floor or cap on the variable interest rate that is comparable to the floor or cap on the variable-rate asset or liability. For purposes of this paragraph, comparable does not necessarily mean equal. For example, if an interest rate swap's variable rate is based on LIBOR and an asset's variable rate is LIBOR plus 2 percent, a 10 percent cap on the interest rate swap would be comparable to a 12 percent cap on the asset.

d. The repricing dates of the variable-rate asset or liability and the hedging instrument must occur on the same dates and be calculated the same way (that is, both shall be either prospective or retrospective). If the repricing dates of the hedged item occur on the same dates as the repricing dates of the hedging instrument but the repricing calculation for the hedged item is prospective whereas the repricing calculation for the hedging instrument is retrospective, those repricing dates do not match.

e. For cash flow hedges of the interest payments on only a portion of the principal amount of the interest-bearing asset or liability, the notional amount of the interest rate swap designated as the hedging instrument (see paragraph 815-20-25-104(a)) matches the principal amount of the portion of the asset or liability on which the hedged interest payments are based.

f. For a cash flow hedge in which the hedged forecasted transaction is a group of individual transactions (as permitted by paragraph 28.a. of the SSAP guidance paragraph 815-20-25-15(a)), if both of the following criteria are met:

i. The notional amount of the interest rate swap designated as the hedging instrument (see paragraph (a)) matches the notional amount of the aggregate group of hedged transactions.

ii. The remaining criteria for the shortcut method are met with respect to the interest rate swap and the individual transactions that make up the group. For example, the interest rate repricing dates for the variable-rate assets or liabilities whose interest payments are included in the group of forecasted transactions shall match (that is, be exactly the same as) the reset dates for the interest rate swap.

g. The index on which the variable leg of the interest rate swap is based matches the contractually specified interest rate designated as the interest rate being hedged for that hedging relationship.

20. The shortcut method may be applied to a hedging relationship that involves the use of an interest rate swap-in-arrears provided all of the applicable conditions are met. (815-20-25-107)

21. Any discount or premium in the hedged debt's carrying amount (including any related deferred issuance costs) is irrelevant to and has no direct impact on the determination of whether an interest rate swap contains a mirror-image call option under paragraph 17.e.i.(e). Typically, the call price is greater than the par or face amount of the debt instrument. The carrying amount of the debt is economically unrelated

to the amount the issuer would be required to pay to exercise the call embedded in the debt. (815-20-25-108)

22. The fixed interest rate on a hedged item need not exactly match the fixed interest rate on an interest rate swap designated as a fair value hedge. Nor does the variable interest rate on an interest-bearing asset or liability need to be the same as the variable interest rate on an interest rate swap designated as a cash flow hedge. An interest rate swap's fair value comes from its net settlements. The fixed and variable interest rates on an interest rate swap can be changed without affecting the net settlement if both are changed by the same amount. That is, an interest rate swap with a payment based on LIBOR and a receipt based on a fixed rate of 5 percent has the same net settlements and fair value as an interest rate swap with a payment based on LIBOR plus 1 percent and a receipt based on a fixed rate of 6 percent. (815-20-25-109)

23. Comparable credit risk at inception is not a condition for assuming perfect effectiveness even though actually achieving perfect offset would require that the same discount rate be used to determine the fair value of the swap and of the hedged item or hedged transaction. To justify using the same discount rate, the credit risk related to both parties to the swap as well as to the debtor on the hedged interest-bearing asset (in a fair value hedge) or the variable-rate asset on which the interest payments are hedged (in a cash flow hedge) would have to be the same. However, because that complication is caused by the interaction of interest rate risk and credit risk, which are not easily separable, comparable creditworthiness is not considered a necessary condition for assuming perfect effectiveness in a hedge of interest rate risk. (815-20-25-111)

(ASC paragraphs 815-20-25-112 through 815-20-25-143 not included in Exhibit A.)

Hedge Effectiveness – After Designation

24. If a fair value hedge or cash flow hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test on either a quantitative basis (using either a dollar-offset test or a statistical method such as regression analysis) or a qualitative basis.~~ See paragraphs 815-20-35-2A through 35-2F for additional guidance on qualitative assessments of effectiveness~~. If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting. At least quarterly, the hedging entity shall determine whether the hedging relationship has been highly effective in having achieved offsetting changes in fair value or cash flows through the date of the periodic assessment.) (815-20-35-2)

Effectiveness Assessment on a Qualitative Basis

25. An entity may qualitatively assess hedge effectiveness if both of the following criteria are met: (815-20-35-2A)

a. An entity performs an initial quantitative test of hedge effectiveness on a prospective basis (that is, it is not assuming that the hedging relationship is perfectly effective at hedge inception~~ as described in paragraph 815-20-25-3(b)(2)(iv)(01)(A) through (H)~~), and the results of that quantitative test demonstrate highly effective offset.

b. At hedge inception, an entity can reasonably support an expectation of high effectiveness on a qualitative basis in subsequent periods.

26. An entity may elect to qualitatively assess hedge effectiveness in accordance with paragraph 25 ~~815-20-35-2A~~ on a hedge-by-hedge basis. If an entity makes this qualitative assessment election, only the

quantitative method specified in an entity's initial hedge documentation must comply with paragraph 7~~815-20-25-81~~. (815-20-35-2B)

27. When an entity performs qualitative assessments of hedge effectiveness, it shall verify and document whenever financial statements or earnings are reported and at least every three months that the facts and circumstances related to the hedging relationship have not changed such that it can assert qualitatively that the hedging relationship was and continues to be highly effective. While not all-inclusive, the following is a list of indicators that may, individually or in the aggregate, allow an entity to continue to assert qualitatively that the hedging relationship is highly effective: (815-20-35-2C)

a. An assessment of the factors that enabled the entity to reasonably support an expectation of high effectiveness on a qualitative basis has not changed such that the entity can continue to assert qualitatively that the hedging relationship was and continues to be highly effective. ~~This shall include an assessment of the guidance in paragraph 815-20-25-100 when applicable.~~

b. There have been no adverse developments regarding the risk of counterparty default.

28. If an entity elects to assess hedge effectiveness on a qualitative basis and then facts and circumstances change such that the entity no longer can assert qualitatively that the hedging relationship was and continues to be highly effective in achieving offsetting changes in fair values or cash flows, the entity shall assess effectiveness of that hedging relationship on a quantitative basis in subsequent periods. In addition, an entity may perform a quantitative assessment of hedge effectiveness in any reporting period to validate whether qualitative assessments of hedge effectiveness remain appropriate. In both cases, the entity shall apply the quantitative method that it identified in its initial hedge documentation~~ in accordance with paragraph (b)(2)(iv)(03)~~. (815-20-35-2D)

29. When an entity determines that facts and circumstances have changed and it no longer can assert qualitatively that the hedging relationship was and continues to be highly effective, the entity shall begin performing subsequent quantitative assessments of hedge effectiveness as of the period that the facts and circumstances changed. If there is no identifiable event that led to the change in the facts and circumstances of the hedging relationship, the entity may begin performing quantitative assessments of effectiveness in the current period. (815-20-35-2E)

30. After performing a quantitative assessment of hedge effectiveness for one or more reporting periods as discussed in paragraphs 28-29~~815-20-35-2D through 35-2E~~, an entity may revert to qualitative assessments of hedge effectiveness if it can reasonably support an expectation of high effectiveness on a qualitative basis for subsequent periods. ~~See paragraphs 815-20-55-79G through 55-79N for implementation guidance on factors to consider when determining whether qualitative assessments of effectiveness can be performed after hedge inception.~~ (815-20-35-2F)

Quantitative Hedge Effectiveness Assessments After Hedge Designation

31. Quantitative assessments can be based on regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. (815-20-35-2G)

32. If an entity elects at the inception of a hedging relationship to use the same regression analysis approach for both prospective considerations and retrospective evaluations of assessing effectiveness, then during the term of that hedging relationship both of the following conditions shall be met: (815-20-35-3)

a. Those regression analysis calculations shall generally incorporate the same number of data points.

b. That entity must periodically update its regression analysis (or other statistical analysis).

33. Electing to use a regression or other statistical analysis approach instead of a dollar-offset approach to perform retrospective evaluations of assessing hedge effectiveness may affect whether an entity can apply hedge accounting for the current assessment period. (815-20-35-4)

34. In periodically (that is, at least quarterly) assessing retrospectively the effectiveness of a fair value hedge (or a cash flow hedge) in having achieved offsetting changes in fair values (or cash flows) under a dollar-offset approach, an entity shall use either a period-by-period approach or a cumulative approach on individual fair value hedges (or cash flow hedges): (815-20-35-5)

a. Period-by-period approach. The period-by-period approach involves comparing the changes in the hedging instrument's fair values (or cash flows) that have occurred during the period being assessed to the changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged that have occurred during the same period. If an entity elects to base its comparison of changes in fair value (or cash flows) on a period-by-period approach, the period cannot exceed three months. Fair value (or cash flow) patterns of the hedging instrument or the hedged item (or hedged transaction) in periods before the period being assessed are not relevant.

b. Cumulative approach. The cumulative approach involves comparing the cumulative changes (to date from inception of the hedge) in the hedging instrument's fair values (or cash flows) to the cumulative changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged.

35. If an entity elects at inception of a hedging relationship to base its comparison of changes in fair value (or cash flows) on a cumulative approach, then that entity must abide by the results of that methodology as long as that hedging relationship remains designated. Electing to utilize a period-by-period approach instead of a cumulative approach (or vice versa) to perform retrospective evaluations of assessing hedge effectiveness under the dollar-offset method may affect whether an entity can apply hedge accounting for the current assessment period. (815-20-35-6)

Assessing Effectiveness Based on Whether the Critical Terms of the Hedging Instrument and the Hedged Items Match

36. If, at inception, the critical terms of the hedging instrument and the hedged forecasted transaction are the same (see paragraphs 10-11~~815-20-25-84 through 25-84A~~), the entity can conclude that changes in cash flows attributable to the risk being hedged are expected to be completely offset by the hedging derivative. Therefore, subsequent assessments can be performed by verifying and documenting whether the critical terms of the hedging instrument and the forecasted transaction have changed during the period in review. (815-20-35-9)

37. Because the assessment of hedge effectiveness in a cash flow hedge involves assessing the likelihood of the counterparty's compliance with the contractual terms of the derivative instrument designated as the hedging instrument, the entity must also assess whether there have been adverse developments regarding the risk of counterparty default, particularly if the entity planned to obtain its cash flows by liquidating the derivative instrument at its fair value. (815-20-35-10)

38. If there are no such changes in the critical terms or adverse developments regarding counterparty default, the entity may conclude that the hedging relationship is perfectly effective. In that case, the change

in fair value of the derivative instrument can be viewed as a proxy for the present value of the change in cash flows attributable to the risk being hedged. (815-20-35-11)

39. However, the entity must assess whether the hedging relationship is expected to continue to be highly effective using a quantitative assessment method (either a dollar-offset test or a statistical method such as regression analysis) if any of the following conditions exist: (815-20-35-12)

a. The critical terms of the hedging instrument or the hedged forecasted transaction have changed.

b. There have been adverse developments regarding the risk of counterparty default.

Possibility of Default by the Counterparty to Hedging Derivative

40. For an entity to conclude on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in cash flows, the entity shall not ignore whether it will collect the payments it would be owed under the contractual provisions of the derivative instrument. In complying with the requirements of paragraph 2.b.~~815-20-25-75(b)~~, the entity shall assess the possibility of whether the counterparty to the derivative instrument will default by failing to make any contractually required payments to the entity as scheduled in the derivative instrument. In making that assessment, the entity shall also consider the effect of any related collateralization or financial guarantees. The entity shall be aware of the counterparty's creditworthiness (and changes therein) in determining the fair value of the derivative instrument. Although a change in the counterparty's creditworthiness would not necessarily indicate that the counterparty would default on its obligations, such a change shall warrant further evaluation. (815-20-35-14)

41. If the likelihood that the counterparty will not default ceases to be probable, an entity would be unable to conclude that the hedging relationship in a cash flow hedge is expected to be highly effective in achieving offsetting cash flows. (815-20-35-15)

42. In contrast, a change in the creditworthiness of the derivative instrument's counterparty in a fair value hedge would have an immediate effect because that change in creditworthiness would affect the change in the derivative instrument's fair value, which would immediately affect both of the following: (815-20-35-16)

a. The assessment of whether the relationship qualifies for hedge accounting

b. The amount of mismatch between the change in the fair value of the hedging instrument and the hedged item attributable to the hedged risk recognized in earnings under fair value hedge accounting.

43. Paragraph 16~~815-20-25-103~~ states that, in applying the shortcut method, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative that require the counterparty to make payments to the entity. That paragraph explains that implicit in the criteria for the shortcut method is the requirement that a basis exist for concluding on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair values or cash flows. (815-20-35-18**)**

Change in Hedge Effectiveness Method When Hedge Effectiveness if Assessed on a Quantitative Basis

© 2023 National Association of Insurance Commissioners

44. If the entity identifies an improved method of assessing hedge effectiveness in accordance with the guidance in paragraph 6815-20-25-80 and wants to apply that method prospectively, it shall do both of the following: (815-20-35-19)

a. Discontinue the existing hedging relationship

b. Designate the relationship anew using the improved method.

45. The new method of assessing hedge effectiveness shall be applied prospectively and shall also be applied to similar hedges unless the use of a different method for similar hedges is justified. A change in the method of assessing hedge effectiveness by an entity shall not be considered a change in accounting principle as defined in Topic 250SSAP No. 3—Accounting Changes and Corrections of Errors. (815-20-35-20)

U.S. GAAP ASC Excerpts Excluded from Exhibit A

This information is included to illustrate the guidance within the adopted ASC references that are not captured in Exhibit A. The guidance within these paragraphs is considered part of the statutory adoption unless they include specific accounting and reporting guidance.

815-20-25-79A See paragraphs 815-20-25-139 through 25-142 about the timing of hedge effectiveness assessments required by paragraph 815-20-25-79 for a private company that is not a financial institution or a not-for-profit entity (except for a not-for-profit entity that has issued, or is a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market).

815-20-25-86 The remainder of this guidance on hedge effectiveness criteria applicable to both fair value hedges and cash flow hedges is organized as follows:

a. Hedge effectiveness when the hedging instrument is an option or combination of options

b. Hedge effectiveness when hedged exposure is more limited than hedging instrument

c. Hedge effectiveness during designated hedge period

d. Assuming perfect effectiveness in a hedge with an interest rate swap (the shortcut method).

Hedge Effectiveness When the Hedging Instrument Is an Option or Combination of Options

815-20-25-87 The hedge effectiveness criteria applicable to options and combinations of options are organized as follows:

a. Determining whether a combination of options is net written

b. Hedge effectiveness of written options

c. Hedge effectiveness of options in general.

Determining Whether a Combination of Options Is Net Written

815-20-25-88 This guidance addresses how an entity shall determine whether a combination of options is considered a net written option subject to the requirements of paragraph 815-20-25-94. A combination of options (for example, an interest rate collar) entered into contemporaneously shall be considered a written option if either at inception or over the life of the contracts a net premium is received in cash or as a favorable rate or other term. Furthermore, a derivative instrument that results from combining a written option and any other non-option derivative instrument shall be considered a written option. The determination of whether a combination of options is considered a net written option depends in part on whether strike prices and notional amounts of the options remain constant.

Strike Prices and Notional Amounts Remain Constant

815-20-25-89 For a combination of options in which the strike price and the notional amount in both the written option component and the purchased option component remain constant over the life of the respective component, that combination of options would be considered a net purchased option or a zero cost collar (that is, the combination shall not be considered a net written option subject to the requirements of paragraph 815-20-25-94) provided all of the following conditions are met:

a. No net premium is received.

b. The components of the combination of options are based on the same underlying.

c. The components of the combination of options have the same maturity date.

d. The notional amount of the written option component is not greater than the notional amount of the purchased option component.

815-20-25-90 If the combination of options does not meet all of those conditions, it shall be subject to the test in paragraph 815-20-25-94. For example, a combination of options having different underlying indexes, such as a collar containing a written floor based on three-month U.S. Treasury rates and a purchased cap based on three-month London Interbank Offered Rate (LIBOR), shall not be considered a net purchased option or a zero cost collar even though those rates may be highly correlated.

Strike Prices and Notional Amounts Do Not Remain Constant

815-20-25-91 If either the written option component or the purchased option component for a combination of options has either strike prices or notional amounts that do not remain constant over the life of the respective component, the assessment to determine whether that combination of options can be considered not to be a written option under paragraph 815-20-25-88 shall be evaluated with respect to each date that either the strike prices or the notional amounts change within the contractual term from inception to maturity.

815-20-25-92 Even though that assessment is made on the date that a combination of options is designated as a hedging instrument (to determine the applicability of paragraph 815-20-25-94), it shall consider the receipt of a net premium (in cash or as a favorable rate or other term) from that combination of options at each point in time that either the strike prices or the notional amounts change, such as either of the following circumstances:

a. If strike prices fluctuate over the life of a combination of options and no net premium is received at inception, a net premium will typically be received as a favorable term in one or more reporting periods within the contractual term from inception to maturity.

b. If notional amounts fluctuate over the life of a combination of options and no net premium is received at inception, a net premium or a favorable term will typically be received in one or more periods within the contractual term from inception to maturity.

815-20-25-93 In addition, a combination of options in which either the written option component or the purchased option component has either strike prices or notional amounts that do not remain constant over the life of the respective component shall satisfy all of the conditions in paragraph 815-20-25-89 to be considered not to be a written option (that is, to be considered to be a net purchased option or zero cost collar) under paragraph 815-20-25-88. For example, if the notional amount of the written option component is greater than the notional amount of the purchased option component at any date that the notional amount changes within the contractual term from inception to maturity, the combination of options shall be considered to be a written option under paragraph 815-20-25-88 and, thus, subject to the criteria in the following paragraph.

Hedge Effectiveness of Written Options

815-20-25-94 If a written option is designated as hedging a recognized asset or liability or an unrecognized firm commitment (if a fair value hedge) or the variability in cash flows for a recognized asset or liability or an unrecognized firm commitment (if a cash flow hedge), the combination of the hedged item and the written option provides either of the following:

a. At least as much potential for gains as a result of a favorable change in the fair value of the combined instruments (that is, the written option and the hedged item, such as an embedded purchased option) as exposure to losses from an unfavorable change in their combined fair value (if a fair value hedge)

b. At least as much potential for favorable cash flows as exposure to unfavorable cash flows (if a cash flow hedge).

815-20-25-95 The written-option test in the preceding paragraph shall be applied only at inception of the hedging relationship and is met if all possible percentage favorable changes in the underlying (from zero percent to 100 percent) would provide either of the following:

a. At least as much gain as the loss that would be incurred from an unfavorable change in the underlying of the same percentage (if a fair value hedge)

b. At least as much favorable cash flows as the unfavorable cash flows that would be incurred from an unfavorable change in the underlying of the same percentage (if a cash flow hedge).

815-20-25-96 The time value of a written option (or net written option) may be excluded from the written-option test if, in defining how hedge effectiveness will be assessed, the entity specifies that it will base that assessment on only changes in the option's intrinsic value. In that circumstance, the change in the time value of the options would be excluded from the assessment of hedge effectiveness in accordance with paragraph 815-20-25-82(a).

815-20-25-97 When applying the written-option test to determine whether there is symmetry of the gain and loss potential of the combined hedged position for all possible percentage changes in the underlying, an entity is permitted to measure the change in the intrinsic value of the written option (or net written option) combined with the change in fair value of the hedged item.

Hedge Effectiveness When Hedged Exposure Is More Limited Than Hedging Instrument

815-20-25-100 An entity may designate as the hedging instrument in a fair value hedge or cash flow hedge a derivative instrument that does not have a limited exposure comparable to the limited exposure of the hedged item to the risk being hedged. However, to make that designation, in accordance with paragraph 815-20-25-75, the entity shall establish that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period that the hedge is designated. See paragraph 815-20-25-79(a) for additional guidance on prospective considerations of hedge effectiveness in this circumstance.

Hedge Effectiveness during Designated Hedge Period

815-20-25-101 It is inappropriate under this Subtopic for an entity to designate a derivative instrument as the hedging instrument if the entity expects that the derivative instrument will not be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period that the hedge is designated, unless the entity has documented undertaking a dynamic hedging strategy in which it has committed itself to an ongoing repositioning strategy for its hedging relationship.

> > > > Application of Prepayable Criterion

815-20-25-112 An interest-bearing asset or liability shall be considered prepayable under the provisions of paragraph 815-20-25-104(e) if one party to the contract has the right to cause the payment of principal before the scheduled payment dates unless either of the following conditions is met:

a. The debtor has the right to cause settlement of the entire contract before its stated maturity at an amount that is always greater than the then fair value of the contract absent that right.

b. The creditor has the right to cause settlement of the entire contract before its stated maturity at an amount that is always less than the then fair value of the contract absent that right.

815-20-25-113 However, none of the following shall be considered a prepayment provision:

a. Any term, clause, or other provision in a debt instrument that gives the debtor or creditor the right to cause prepayment of the debt contingent upon the occurrence of a specific event related to the debtor's credit deterioration or other change in the debtor's credit risk, such as any of the following:

   1. The debtor's failure to make timely payment, thus making it delinquent

   2. The debtor's failure to meet specific covenant ratios

   3. The debtor's disposition of specific significant assets (such as a factory)

   4. A declaration of cross-default

   5. A restructuring by the debtor.

b. Any term, clause, or other provision in a debt instrument that gives the debtor or creditor the right to cause prepayment of the debt contingent upon the occurrence of a specific event that meets all of the following conditions:

   1. It is not probable at the time of debt issuance.

   2. t is unrelated to changes in benchmark interest rates, contractually specified interest rates, or any other market variable.

   3. It is related either to the debtor's or creditor's death or to regulatory actions, legislative actions, or other similar events that are beyond the control of the debtor or creditor.

c. Contingent acceleration clauses that permit the debtor to accelerate the maturity of an outstanding note only upon the occurrence of a specified event that meets all of the following conditions:

   1. It is not probable at the time of debt issuance.

   2. It is unrelated to changes in benchmark interest rates, contractually specified interest rates, or any other market variable.

   3. It is related to regulatory actions, legislative actions, or other similar events that are beyond the control of the debtor or creditor.

815-20-25-114 Furthermore, a right to cause a contract to be prepaid at its then fair value would not cause the interest-bearing asset or liability to be considered prepayable because that right would have a fair value of zero at all times and essentially would provide only liquidity to the holder.

© 2023 National Association of Insurance Commissioners

815-20-25-115 Application of this guidance to specific debt instruments is illustrated in paragraph 815-20-55-75.

Application of the Shortcut Method to a Portfolio of Hedged Items

815-20-25-116 Portfolio hedging cannot be used to circumvent the application of the shortcut method criteria beginning in paragraph 815-20-25-102 to a fair value hedge of an individual interest-bearing asset or liability. A portfolio of interest-bearing assets or interest-bearing liabilities cannot qualify for the shortcut method if it contains an interest-bearing asset or liability that individually cannot qualify for the shortcut method.

815-20-25-117 The fair value hedge requirements of paragraph 815-20-25-12(b)(1) ensure that the individual items in a portfolio share the same risk exposure and have fair value changes attributable to the hedged risk that are expected to respond in a generally proportionate manner to the overall fair value changes of the entire portfolio. That requirement restricts the types of portfolios that can qualify for portfolio hedging; however, it also permits the existence of a mismatch between the change in the fair value of the individual hedged items and the change in the fair value of the hedged portfolio attributable to the hedged risk in portfolios that do qualify. As a result, the assumption of perfect effectiveness required for the shortcut method generally is inappropriate for portfolio hedges of similar assets or liabilities that are not also nearly identical (except for their notional amounts). Application of the shortcut method to portfolios that meet the requirements of paragraph 815-20-25-12(b)(1) is appropriate only if the assets or liabilities in the portfolio meet the same stringent criteria in paragraphs 815-20-25-104(e), 815-20-25-104(g), and 815-20-25-105(a) as required for hedges of individual assets and liabilities.

Application of Whether the Shortcut Method Was Not or No Longer Is Appropriate

815-20-25-117A In the period in which an entity determines that use of the shortcut method was not or no longer is appropriate, the entity may use a quantitative method to assess hedge effectiveness and measure hedge results without dedesignating the hedging relationship if both of the following criteria are met:

a. The entity documented at hedge inception in accordance with paragraph 815-20-25-3(b)(2)(iv)(04) which quantitative method it would use to assess hedge effectiveness and measure hedge results if the shortcut method was not or no longer is appropriate during the life of the hedging relationship.

b. The hedging relationship was highly effective on a prospective and retrospective basis in achieving offsetting changes in fair value or cash flows attributable to the hedged risk for the periods in which the shortcut method criteria were not met.

815-20-25-117B If the criterion in paragraph 815-20-25-117A(a) is not met, the hedging relationship shall be considered invalid in the period in which the criteria for the shortcut method were not met and in all subsequent periods. If the criterion in paragraph 815-20-25-117A(a) is met, the hedging relationship shall be considered invalid in all periods in which the criterion in paragraph 815-20-25-117A(b) is not met.

815-20-25-117C If an entity cannot identify the date on which the shortcut criteria ceased to be met, the entity shall perform the quantitative assessment of effectiveness documented at hedge inception for all periods since hedge inception.

815-20-25-117D The terms of the hedged item and hedging instrument used to assess effectiveness, in accordance with paragraph 815-20-25-117A(b), shall be those existing as of the date that the shortcut criteria ceased to be met. For cash flow hedges, if the hypothetical derivative method is used as a proxy for the hedged item, the value of the hypothetical derivative shall be set to zero as of hedge inception.

Hedge Effectiveness Criterion Applicable to Fair Value Hedges Only—Effectiveness Horizon

815-20-25-118 In documenting its risk management strategy for a fair value hedge, an entity may specify an intent to consider the possible changes (that is, not limited to the likely or expected changes) in value of the hedging derivative instrument and the hedged item only over a shorter period than the derivative instrument's remaining life in formulating its expectation that the hedging relationship will be highly effective in achieving offsetting changes in fair value for the risk being hedged. The entity does not need to contemplate the offsetting effect for the entire term of the hedging instrument.

Consideration of Prepayment Risk Using the Last-of-Layer Method

815-20-25-118A In a fair value hedge of interest rate risk designated under the last-of-layer method in accordance with paragraph 815-20-25-12A, an entity may exclude prepayment risk when measuring the change in fair value of the hedged item attributable to interest rate risk.

Hedge Effectiveness Criteria Applicable to Cash Flow Hedges Only

815-20-25-119 The hedge effectiveness criteria applicable to cash flow hedges only are organized as follows:

a. Consideration of the time value of money

b. Consideration of counterparty credit risk

c. Additional considerations for options in cash flow hedges

d. Assuming perfect hedge effectiveness in a cash flow hedge of a variable-rate borrowing with a receive-variable, pay-fixed interest rate swap recorded under the simplified hedge accounting approach.

Consideration of the Time Value of Money

815-20-25-120 In assessing the effectiveness of a cash flow hedge, an entity generally shall consider the time value of money, especially if the hedging instrument involves periodic cash settlements.

815-20-25-121 An example of a situation in which an entity likely would reflect the time value of money is a tailing strategy with futures contracts. When using a tailing strategy, an entity adjusts the size or contract amount of futures contracts used in a hedge so that earnings (or expense) from reinvestment (or funding) of daily settlement gains (or losses) on the futures do not distort the results of the hedge. To assess offset of expected cash flows when a tailing strategy has been used, an entity could reflect the time value of money, perhaps by comparing the present value of the hedged forecasted cash flow with the results of the hedging instrument.

Consideration of Counterparty Credit Risk

815-20-25-122 For a cash flow hedge, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative instrument that require the counterparty to make payments to the entity. Paragraph 815-20-35-14 states that, for an entity to conclude on an ongoing basis that a cash flow hedging relationship is expected to be highly effective in achieving offsetting changes in cash flows, the entity shall not ignore whether it will collect the payments it would be owed under the contractual provisions of the derivative instrument. See paragraphs 815-20-35-14 through 35-18 for further guidance.

Additional Considerations for Options in Cash Flow Hedges

815-20-25-123 When an entity has documented that the effectiveness of a cash flow hedge will be assessed based on changes in the hedging option's intrinsic value pursuant to paragraph 815-20-25-82(a), that assessment (and the related cash flow hedge accounting) shall be performed for all changes in intrinsic value—that is, for all periods of time when the option has an intrinsic value, such as when the underlying is above the strike price of the call option.

815-20-25-124 When a purchased option is designated as a hedging instrument in a cash flow hedge, an entity shall not define only limited parameters for the risk exposure designated as being hedged that would include the time value component of that option. An entity cannot arbitrarily exclude some portion of an option's intrinsic value from the hedge effectiveness assessment simply through an articulation of the risk exposure definition. It is inappropriate to assert that only limited risk exposures are being hedged (for example, exposures related only to currency-exchange-rate changes above $1.65 per pound sterling as illustrated in Example 26 [see paragraph 815-20-55-205]).

815-20-25-125 If an option is designated as the hedging instrument in a cash flow hedge, an entity may assess hedge effectiveness based on a measure of the difference, as of the end of the period used for assessing hedge effectiveness, between the strike price and forward price of the underlying, undiscounted. Although assessment of cash flow hedge effectiveness with respect to an option designated as the hedging instrument in a cash flow hedge shall be performed by comparing the changes in present value of the expected future cash flows of the forecasted transaction to the change in fair value of the derivative instrument (aside from any excluded component under paragraph 815-20-25-82), that measure of changes in the expected future cash flows of the forecasted transaction based on forward rates, undiscounted, is not prohibited. With respect to an option designated as the hedging instrument in a cash flow hedge, assessing hedge effectiveness based on a similar measure with respect to the hedging instrument eliminates any difference that the effect of discounting may have on the hedging instrument and the hedged transaction. Pursuant to paragraph 815-20-25-3(b)(2)(iv), entities shall document the measure of intrinsic value that will be used in the assessment of hedge effectiveness. As discussed in paragraph 815-20-25-80, that measure must be used consistently for each period following designation of the hedging relationship.

Assessing Hedge Effectiveness Based on an Option's Terminal Value

815-20-25-126 The guidance in paragraph 815-20-25-129 addresses a cash flow hedge that meets all of the following conditions:

a. The hedging instrument is a purchased option or a combination of only options that comprise either a net purchased option or a zero-cost collar.

b. The exposure being hedged is the variability in expected future cash flows attributed to a particular rate or price beyond (or within) a specified level (or levels).

c. The assessment of effectiveness is documented as being based on total changes in the option's cash flows (that is, the assessment will include the hedging instrument's entire change in fair value, not just changes in intrinsic value).

815-20-25-127 This guidance has no effect on the accounting for fair value hedging relationships. In addition, in determining the accounting for seemingly similar cash flow hedging relationships, it would be inappropriate to analogize to this guidance.

815-20-25-128 For a hedging relationship that meets all of the conditions in paragraph 815-20-25-126, an entity may focus on the hedging instrument's terminal value (that is, its expected future pay-off amount at

its maturity date) in determining whether the hedging relationship is expected to be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge. An entity's focus on the hedging instrument's terminal value is not an impediment to the entity's subsequently deciding to dedesignate that cash flow hedge before the occurrence of the hedged transaction. If the hedging instrument is a purchased cap consisting of a series of purchased caplets that are each hedging an individual hedged transaction in a series of hedged transactions (such as caplets hedging a series of hedged interest payments at different monthly or quarterly dates), the entity may focus on the terminal value of each caplet (that is, the expected future pay-off amount at the maturity date of each caplet) in determining whether each of those hedging relationships is expected to be highly effective in achieving offsetting cash flows. The guidance in this paragraph applies to a purchased option regardless of whether at the inception of the cash flow hedging relationship it is at the money, in the money, or out of the money.

815-20-25-129 A hedging relationship that meets all of the conditions in paragraph 815-20-25-126 may be considered to be perfectly effective if all of the following conditions are met:

a. The critical terms of the hedging instrument (such as its notional amount, underlying, maturity date, and so forth) completely match the related terms of the hedged forecasted transaction (such as the notional amount, the variable that determines the variability in cash flows, the expected date of the hedged transaction, and so forth).

b. The strike price (or prices) of the hedging option (or combination of options) matches the specified level (or levels) beyond (or within) which the entity's exposure is being hedged.

c. The hedging instrument's inflows (outflows) at its maturity date completely offset the change in the hedged transaction's cash flows for the risk being hedged.

d. The hedging instrument can be exercised only on a single date—its contractual maturity date.

The condition in (d) is consistent with the entity's focus on the hedging instrument's terminal value. If the holder of the option chooses to pay for the ability to exercise the option at dates before the maturity date (for example, by acquiring an American-style option), the hedging relationship would not be perfectly effective.

815-20-25-129A In a hedge of a group of forecasted transactions in accordance with paragraph 815-20-25-15(a)(2), an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph 815-20-25-129(a) if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month.

Hedge Effectiveness of a Net-Purchased Combination of Options

815-20-25-130 The guidance in the following paragraph addresses a cash flow hedging relationship that meets both of the following conditions:

a. A combination of options (deemed to be a net purchased option) is designated as the hedging instrument.

b. The effectiveness of the hedge is assessed based only on changes in intrinsic value of the hedging instrument (the combination of options).

815-20-25-131 The assessment of effectiveness of a cash flow hedging relationship meeting the conditions in the preceding paragraph may be based only on changes in the underlying that cause a change in the

intrinsic value of the hedging instrument (the combination of options). Thus, the assessment can exclude ranges of changes in the underlying for which there is no change in the hedging instrument's intrinsic value.

Hedge Accounting Provisions Applicable to Certain Private Companies

Assuming Perfect Hedge Effectiveness in a Cash Flow Hedge of a Variable-Rate Borrowing with a Receive-Variable, Pay-Fixed Interest Rate Swap Recorded under the Simplified Hedge Accounting Approach

815-20-25-133 Paragraphs 815-10-35-1A through 35-1C, 815-10-50-3, 815-20-25-3A, 815-20-25-119, 815-20-25-134 through 25-138, 815-20-55-79A through 55-79B, 825-10-50-3, and 825-10-50-8 provide guidance for an entity electing the simplified hedge accounting approach. See paragraph 815-10-65-6 for transition guidance on applying the simplified hedge accounting approach.

815-20-25-134 The conditions for the simplified hedge accounting approach determine which cash flow hedging relationships qualify for a simplified version of hedge accounting. If all of the conditions in paragraphs 815-20-25-135 and 815-20-25-137 are met, an entity may assume perfect effectiveness in a cash flow hedging relationship involving a variable-rate borrowing and a receive-variable, pay-fixed interest rate swap.

815-20-25-135 Provided all of the conditions in paragraph 815-20-25-137 are met, the simplified hedge accounting approach may be applied by a **private company** except for a financial institution as described in paragraph 942-320-50-1. An entity may elect the simplified hedge accounting approach for any receive-variable, pay-fixed interest rate swap, provided that all of the conditions for applying the simplified hedge accounting approach specified in paragraph 815-20-25-137 are met. Implementation guidance on the conditions set forth in paragraph 815-20-25-137 is provided in paragraphs 815-20-55-79A through 55-79B.

815-20-25-136 In applying the simplified hedge accounting approach, the documentation required by paragraph 815-20-25-3 to qualify for hedge accounting must be completed by the date on which the first annual **financial statements are available to be issued** after hedge inception rather than concurrently at hedge inception.

815-20-25-137 An eligible entity under paragraph 815-20-25-135 must meet all of the following conditions to apply the simplified hedge accounting approach to a cash flow hedge of a variable-rate borrowing with a receive-variable, pay-fixed interest rate swap:

a. Both the variable rate on the swap and the borrowing are based on the same index and reset period (for example, both the swap and borrowing are based on one-month London Interbank Offered Rate [LIBOR] or both the swap and borrowing are based on three-month LIBOR).

b. The terms of the swap are typical (in other words, the swap is what is generally considered to be a "plain-vanilla" swap), and there is no floor or cap on the variable interest rate of the swap unless the borrowing has a comparable floor or cap.

c. The repricing and settlement dates for the swap and the borrowing match or differ by no more than a few days.

d. The swap's fair value at inception (that is, at the time the derivative was executed to hedge the interest rate risk of the borrowing) is at or near zero.

e. The notional amount of the swap matches the principal amount of the borrowing being hedged. In complying with this condition, the amount of the borrowing being hedged may be less than the total principal amount of the borrowing.

f. All interest payments occurring on the borrowing during the term of the swap (or the effective term of the swap underlying the forward starting swap) are designated as hedged whether in total or in proportion to the principal amount of the borrowing being hedged.

815-20-25-138 A cash flow hedge established through the use of a forward starting receive-variable, pay-fixed interest rate swap may be permitted in applying the simplified hedge accounting approach only if the occurrence of forecasted interest payments to be swapped is probable. When forecasted interest payments are no longer probable of occurring, a cash flow hedging relationship will no longer qualify for the simplified hedge accounting approach and the General Subsections of this Topic shall apply at the date of change and on a prospective basis.

Timing of Hedge Documentation for Certain Private Companies If Simplified Hedge Accounting Approach Is Not Applied

Concurrent Hedge Documentation

815-20-25-139 Concurrent with hedge inception, a **private company** that is not a financial institution as described in paragraph 942-320-50-1 shall document the following:

a. The hedging relationship in accordance with paragraph 815-20-25-3(b)(1)

b. The hedging instrument in accordance with paragraph 815-20-25-3(b)(2)(i)

c. The hedged item in accordance with paragraph 815-20-25-3(b)(2)(ii), including (if applicable) firm commitments or the analysis supporting a last-of-layer designation in paragraph 815-20-25-3(c), or forecasted transactions in paragraph 815-20-25-3(d)

d. The nature of the risk being hedged in accordance with paragraph 815-20-25-3(b)(2)(iii).

815-20-25-140 A private company that is not a financial institution is not required to perform or document the following items concurrent with hedge inception but rather is required to perform or document them within the time periods discussed in paragraph 815-20-25-142:

a. The method of assessing hedge effectiveness at inception and on an ongoing basis in accordance with paragraph 815-20-25-3(b)(2)(iv) and (vi)

b Initial hedge effectiveness assessments in accordance with paragraph 815-20-25-3(b)(2)(iv)(01) through (04).

815-20-25-141 Example 1A beginning in paragraph 815-20-55-80A illustrates hedge documentation when the critical terms of the hedging instrument and hedged forecasted transaction match. Although that Example illustrates the documentation of the method of assessing hedge effectiveness, private companies that are not financial institutions may complete hedge documentation requirements in accordance with paragraphs 815-20-25-139 through 25-140.

Hedge Effectiveness Assessments

815-20-25-142 For a private company that is not a financial institution, the performance and documentation of the items listed in paragraph 815-20-25-140, as well as required subsequent quarterly hedge effectiveness

assessments, may be completed before the date on which the next interim (if applicable) or annual financial statements are available to be issued. Even though the completion of the initial and ongoing assessments of effectiveness may be deferred to the date on which financial statements are available to be issued the assessments shall be completed using information applicable as of hedge inception and each subsequent quarterly assessment date when completing this documentation on a deferred basis. Therefore, the assessment should be performed to determine whether the hedge was highly effective at achieving offsetting changes in fair values or cash flows at inception and in each subsequent quarterly assessment period up to the reporting date.

Hedge Accounting Provisions Applicable to Certain Not-for-Profit Entities

815-20-25-143 Not-for-profit entities (except for not-for-profit entities that have issued, or are a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market) may apply the guidance on the timing of hedge documentation and hedge effectiveness assessments in paragraphs 815-20-25-139 through 25-142. Specifically, those entities shall document the items listed in paragraph 815-20-25-139 concurrent with hedge inception, but they may perform and document the items listed in paragraph 815-20-25-140 and perform the required subsequent quarterly hedge effectiveness assessments in accordance with paragraph 815-20-25-142 within the time periods discussed in paragraph 815-20-25-142.

Exhibit 3 – Revisions adopted to SSAP No. 86 on December 12, 2022 (Agenda Item 2022-09)

Fair Value Hedges (Note – Paragraphs 26.a. through 26.c. are not affected and are omitted for brevity.)

26. Fair value hedges qualify for hedge accounting if all of the following criteria are met:

d. The hedged item is specifically identified as either all, or a specific portion, or the partial term of a recognized asset, or all or a specific portion of or a recognized liability or of an unrecognized firm commitment. The hedged item is a single asset or liability (or a specific portion or partial term thereof) or is a portfolio of similar assets or a portfolio of similar liabilities (or a specific portion thereof) or a closed portfolio of assets (pursuant to paragraph 26.f. and Exhibit A, paragraph 46) where assumed layer or layers is anticipated to be outstanding (or a specific portion thereof)[3]. For a partial term hedge of one or more consecutive selected contractual cash flows where the hedged item begins when the first hedge cash flow begins to accrue and ends at the end of the designation hedge period, the assumed maturity of the hedged item occurs at the end of the designated hedge period; *(ASC 815-25-35-13B Partial Term Hedging.)*

e. If similar assets or similar liabilities are aggregated and hedged as a portfolio, the individual assets or individual liabilities must share the risk exposure for which they are designated as being hedged. The change in fair value attributable to the hedged risk for each individual item in a hedged portfolio must be expected to respond in a generally proportionate manner to the overall change in fair value of the aggregate portfolio attributable to the hedged risk; and

f. For a closed portfolio of financial assets or one or more beneficial interests secured by a portfolio of financial instruments, an entity may designate as the hedged item or items a hedged layer or layers (this designation is referred to throughout as the "portfolio layer method" (detailed in Exhibit A). *(ASC 815-20-25-12A Portfolio Layer Method)*

f.g. If the hedged item is a financial asset or liability, a recognized loan servicing right, or a nonfinancial firm commitment with financial components, the designated risk being hedged is:

i. The risk of changes in the overall fair value of the entire hedged item;

ii. The risk of changes in its fair value attributable to changes in benchmark interest rate;

iii. The risk of changes in its fair value attributable to changes in the related foreign currency exchange rates; or

iv. The risk of changes in its fair value attributable to both changes in the obligor's creditworthiness and changes in the spread over the benchmark interest rate with respect to the related financial asset's or liability's credit sector at inception of the hedge (referred to as credit risk).

[3] For clarity, partial-term hedges and portfolio hedges addressed in paragraph 26.f. are limited to the situations in which the hedged item(s) is a recognized asset or a closed portfolio of financial assets. These hedging accounting methods are not permitted to hedge liabilities.

If the risk designated as being hedged is not the risk in paragraph 26.f.i., two or more of the other risks (benchmark interest rate risk, foreign currency exchange risk, and credit risk) may simultaneously be designated as being hedged.

The benchmark interest rate being hedged in a hedge of interest rate risk must be specifically identified as part of the designation and documentation at the inception of the hedging relationship. In calculating the change in the hedged item's fair value attributable to changes in the benchmark interest rate, the estimated coupon cash flows used in calculating fair value shall ~~must~~ be based on either~~all of~~ the full contractual cash flows ~~of the entire hedged item~~ or the benchmark rate component of the contractual coupon cash flows of the hedged item determined at hedge inception. An entity may designate a fair value hedge of interest rate risk in which the hedged item is a prepayment instrument. The entity may consider only how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity (for example, an entity may consider only how change in the benchmark interest rate affect an obligor's decision to call a debt instrument when it has the right to do so.) The entity need not consider other factors that would affect this decision (for example, credit risk) when assessing hedge effectiveness. *(ASU 815-25-35-13 & 815-20-25-6B)*~~Excluding some of the hedged item's contractual cash flows (for example, the portion of the interest coupon in excess of the benchmark interest rate) from the calculation is not permitted.~~[4] An entity may not simply designate prepayment risk as the risk being hedged for a financial asset. However, it can designate the option component of a prepayable instrument as the hedged item in a fair value hedge of the entity's exposure to changes in the fair value of that "prepayment" option, perhaps thereby achieving the objective of its desire to hedge prepayment risk. The effect of an embedded derivative of the same risk class must be considered in designating a hedge of an individual risk. For example, the effect of an embedded prepayment option must be considered in designating a hedge of benchmark interest rate risk.

Disclosure Requirements

62. Reporting entities shall disclose the following for all derivative contracts used:

a. General disclosures:

vii. The net gain or loss recognized in unrealized gains or losses during the perioding period resulting from derivatives that no longer qualify for hedge accounting. For portfolio layer method hedges, disclose circumstances that led to the breach. *(ASC 815-10-50-5C.)*

Relevant Literature

64. This statement adopts the framework established by FAS 133, *FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133* (FAS 137) and *FASB Statement No. 138, Accounting* for *Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133* (FAS 138), for fair value and cash flow hedges, including its technical guidance to the extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues

~~[4] The first sentence of paragraph 26.d. that specifically permits the hedged item to be identified as either all or a specific portion of a recognized asset or liability or of an unrecognized firm commitment is not affected by the provisions in this subparagraph.~~

Task Force interpretations. This statement adopts paragraphs 4 and 25 of *FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities* (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. (The adoption from FAS 149 on the assessment of hedge effectiveness is impacted by the adoption with modification of guidance from ASU 2017-12 as detailed in paragraph 65.b., with the guidance from ASU 2017-12 superseding the prior adoption to the extent applicable.) All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5*: Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No.45 and Clarification of the Effective Date of FASB Statement No. 161 (*FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects *FSP FIN 39-1, Amendments of FASB Interpretation No. 39*, and *ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach*.

65. This statement adopts, with modification, certain revisions to ASC 815-20 included in ASU 2017-12. Remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.

a. Revisions effective January 1, 2019 with early adoption permitted, are limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness and only includes: 1) provisions allowing more time to perform the initial quantitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of the critical terms and short-cut methods for assessing hedge effectiveness.

b. Revisions effective January 1, 2023, with early adoption permitted, are limited to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification (ASC) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12. This adoption reflects statutory modifications to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in the statement. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The adoption of the referenced ASC paragraphs only extends to revisions incorporated through ASU 2017-12; therefore, any subsequent U.S. GAAP edits would require statutory accounting consideration before considered adopted**.**

c. Revisions effective January1, 2022, with early adoption permitted, are limited to the criteria for the portfolio layer method detailed in ASU 2022-01, criteria to only consider how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity date in 815-20-25-6B, adding option in calculating the change in the hedged item's fair value attributed to changes in the benchmark interest rate based on the benchmark rate components of the contractual cash flows detailed in FASB ASC 815-25-35-13, and the partial-term hedging method detailed in FASB ASC 815-25-35-13B. The adoption of the partial term hedging method reflects statutory modifications that limits its use only when the hedged item is a recognized asset. This is different than U.S. GAAP, which permits the partial term method for hedged liabilities. The statutory limitation is established to prevent interim basis adjustments to hedged liabilities that could present a reduction of reported liabilities on the financial statements when the actual liability has not been reduced. Reconsideration of this statutory limitation may occur after a broader project to consider how derivative basis adjustments to hedged liabilities shall be reflected in the financial statements.

Effective Date and Transition

74.~~73~~ This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used.

a. Revisions adopted to paragraph 64 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.)

b. Revisions adopted in paragraph 16 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.)

c. Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness (detailed in paragraph 65) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018.

d. Revisions adopted April 2019 to explicitly include structured notes in scope of this statement are effective December 31, 2019. Revisions adopted July 2020 to define "derivative premium," require gross reporting of derivatives without the impact of financing premiums and require separate recognition of premiums payable and premiums receivable, are effective January 1, 2021.

e. Revisions adopted August 2022 that adopt with modification the criteria for initial and subsequent hedge effectiveness detailed in the FASB ASC paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12 and that incorporate statutory accounting revisions for the accounting and reporting of excluded components are effective January 1, 2023, with early adoption permitted. These revisions shall be applied prospectively for all new and existing hedges. Entities shall detail the adoption of this guidance as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors.*

f. Revisions adopted December 12, 2022 that adopt U.S. GAAP guidance for the portfolio layer method, U.S. GAAP guidance to only consider how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity, U.S. GAAP guidance adding option in calculating the change in the hedged item's fair value attributed to changes in the benchmark interest rate based on the benchmark rate component of the contractual coupon cash flows, that and adopt with modification U.S. GAAP guidance for partial term hedging are effective January 1, 2023, with early adoption permitted. These revisions shall be applied prospectively to qualifying new hedges.

Edits to New Exhibit A – Discussion of Hedge Effectiveness

17. All of the following conditions apply to both fair value hedges and cash flow hedges: *(815-20-25-104)*

    e. The interest-bearing asset or liability is not prepayable, that is, able to be settled by either party before its scheduled maturity, or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items ~~occur on the date in which the last hedged cash flow is due and payable~~ ends at the end of the designated hedge period, in accordance with paragraph 815-25-35-13B, with the following qualifications:

        i. This criterion does not apply to an interest-bearing asset or liability that is prepayable solely due to an embedded call option (put option) if the hedging instrument is a compound derivative composed of an interest rate swap and a mirror-image call option (put option).

        ii. The call option embedded in the interest rate swap is considered a mirror image of the call option embedded in the hedged item if all of the following conditions are met:

18. All of the following incremental conditions apply to fair value hedges only: *(815-20-25-105 & 815-25-35-13B)*

    a. The expiration date of the interest rate swap matches the maturity date of the interest-bearing asset or liability or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items ends at the end of the designated hedge period ~~occur on the date in which the last hedged cash flow is due and payablein accordance with paragraph 815-25-35-13B~~.

Portfolio Layer Method (New paragraphs at the end of Exhibit A.)

46. For a closed portfolio of financial assets or one or more beneficial interests secured by a portfolio of financial instruments, an entity may designate as the hedged item or items a hedged layer or layers (this designation is referred to throughout as the "portfolio layer method.") *(ASU 815-20-25-12A)*

    a. As part of the initial hedge documentation, an analysis is completed and documented to support the entity's expectation that the hedged item or items (that is, the hedged layer or layers in aggregate) is anticipated to be outstanding for the designated hedge period. That analysis shall incorporate the entity's current expectations of prepayments, defaults, and other factors affecting the timing and amount of cash flows associated with the closed portfolio.

    b. For purposes of its analysis in paragraph 46.a., the entity assumes that as prepayments, defaults, and other factors affecting the timing and amount of cash flows occur, they first will be applied to the portion of the closed portfolio that is not hedged; and

    c. The entity applies the partial-term hedging guidance to the assets or beneficial interest used to support the entity's expectation in paragraph 46.a. An asset that matures on a hedged layer's assumed maturity date meets this requirement.

47. After a closed portfolio is established in accordance with paragraph 46, and entity may designate new hedging relationships associated with the closed portfolio without dedesignating any existing hedging

relationships associated with the closed portfolio if the criteria of paragraph 46 are met for those newly designated hedging relationships. *(ASU 815-20-25-12B)*

48. For the portfolio layer method if both of the following conditions exist, the quantitative test described for similar assets (shared risk exposure) may be performed qualitatively on a hedge-by-hedge basis and only at hedge inception:

a. The hedged item is a hedged layer in a portfolio layer hedge and designated in accordance with paragraph 26.f. of SSAP No. 86.

b. An entity measures the change in fair value of the hedged item based on the benchmark rate component of the contractual coupon cash flows.

Using the benchmark rate component of the contractual coupon cash flows when all assets have the same assumed maturity date and prepayment risk does not affect the measurement of the hedged item results in all hedged items having the same benchmark rate component coupon cash flows. *(ASU 815-20-55-14A)*

49. For one or more hedging relationships designated under the portfolio layer method, an entity shall discontinue (or partially discontinue) hedge accounting in the following circumstances: *(ASU 815-25-40-8)*

a. If the entity cannot support on a subsequent testing date that the hedged layer or layers are anticipated to be outstanding for the designated hedge (that is, a breach is anticipated), it shall discontinue (or partially discontinue) hedge accounting for one or more hedging relationships for the portion of the hedged item that is no longer anticipated to be outstanding for the designated hedge period.

b. If on a subsequent testing date the outstanding amount of the closed portfolio of financial assets or one or more beneficial interests is less than the hedged layer or layers (that is, a breach has occurred), the entity shall discontinue (or partially discontinue) hedge accounting for one or more hedging relationships for the portion of the hedged item that is no longer outstanding.

50. In the event of either an anticipated breach (as described in paragraph 49.a.) or a breach that has occurred (as described in paragraph 49.b.) for portfolio layer method, if multiple hedged layers are associated with a closed portfolio, an entity shall determine which hedge or hedges to discontinue (or partially discontinue) in accordance with an accounting policy election. That accounting policy election shall specify a systematic and rational approach to determining which hedge or hedges to discontinue (or partially discontinue). An entity shall establish its accounting policy no later than when it first anticipates a breach or when a breach has occurred (whichever comes first). After an entity establishes its accounting policy, it shall consistently apply its accounting policy to all portfolio layer method breaches (anticipated and occurred). *(ASU 815-25-40-8A)*

U.S. GAAP references not pulled into Exhibit will also be updated as follows:

Consideration of Prepayment Risk Using the ~~Last-of-Layer~~ Portfolio Layer Method

815-20-25-118A In a fair value hedge of interest rate risk designated under the portfolio layer ~~last-of-layer~~ method in accordance with paragraph 815-20-25-12A, an entity may exclude prepayment risk when measuring the change in fair value of the hedged item attributable to interest rate risk.

Edits to Exhibit ~~C~~ B – Specific Hedge Accounting Procedures for Derivatives

2. Swaps, Collars, and Forwards (see also discussion in Introduction above):

    d. Gain/Loss on Termination of a swap, collar or forward accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):

        i. Exercise—The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;

        ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. If a portfolio layer method hedging relationship is discontinued (or partially discontinued) in a voluntary dedesignation or in anticipation of a breach, the basis adjustment associated with the dedesignated amount as of the discontinuation date shall be allocated to the remaining individual assets in the closed portfolio that supported the dedesignated hedged layer using a systematic and rational method. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination. (ASU 815-25-40-9)

        iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.

        iv. Upon the redesignation of a derivative from a currently effective hedging relationship,

            (a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.

            (b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.

            (c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii.) above.

Issue: SSAP No. 25 – Affiliate Reporting Clarification

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
At its May 24, 2022, meeting, the Statutory Accounting Principles (E) Working Group adopted agenda item 2021-21: Related Party Reporting, which included revisions to clarify application of the existing affiliate definition as well as to incorporate new disclosure requirements for investments acquired through, or in, related parties, regardless of if they meet the affiliate definition. During the meeting discussion, it was suggested that there needs to be a clarification of when an investment is considered to be and affiliated investment and reported on the affiliated line in the investment schedules. When agenda item 2021-21 was adopted, it included a recommendation that NAIC staff look to further clarify when investments should be classified as affiliated in the reporting schedules. This agenda item intends to clarify that an investment held from an affiliate is considered an affiliated investment.

Existing Authoritative Literature:

The *Insurance Holding Company System Regulatory Act* (Model #440) establishes the laws for holding company structures. The Act also establishes the concept of an affiliate in Section 1A, and this definition is used for statutory accounting purposes.

> A. "Affiliate." An "affiliate" of, or person "affiliated" with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

SSAP No. 25—Affiliates and Other Related Parties establishes statutory accounting principles for affiliates and related parties. This definition is the language that is used to help define when an investment is affiliated or nonaffiliated for reporting in the various investment schedules.

> 5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

In March 2021, the Statutory Accounting Principles (E) Working Group adopted revisions to SSAP No. 25 pursuant to agenda item 2019-34: Related Parties, Disclaimers of Affiliation and Variable Interest Entities. Additionally, a new reporting Schedule Y, Part 3 was adopted by the Blanks (E) Working Group in proposal 2020-37BWG, with an initial effective date of Dec. 31, 2021, to capture information on all entities with ownership greater than 10%, the ultimate controlling parties of those owners and other entities that the ultimate controlling party controls.

On May 24, 2022, the Working Group adopted revisions to SSAP No. 25 and *SSAP No. 43R—Loan-Backed and Structured Securities*, to clarify application of the existing affiliate definition as well as to incorporate new disclosure requirements for investments acquired through, or in, related parties, regardless of if they meet the affiliate definition, and included a new disclosure that was adopted by the Blanks (E) Working Group in proposal 2021-22BWG, which adds a new electronic-only column for the investment schedules and the related instructions which describes the nature of any related party relationship that exists related to the investment.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to SSAP No. 25 to clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment. Staff also recommend that Working Group direct the Blanks (E) Working Group to modify the Annual Statement Instructions as illustrated below.

Proposed edits to SSAP No. 25:

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity. Any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.

Proposed Annual Statement Reporting Changes*: (These will be captured in a blanks proposal.)*

This will be included in the Investment Schedules General Instructions in several places covering several different types of investment, and this revision is proposed to be included in each place under the header "Parent, Subsidiaries and Affiliates."

Parent, Subsidiaries and Affiliates:

> Defined by *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*. Any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.

Staff Review Completed by: Jake Stultz—NAIC Staff, November 2022

Status:
On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 25 to clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions illustrated above to SSAP No. 25 which clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.

Issue: ***ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions***

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
In June 2022, the Financial Accounting Standards Board (FASB) issued *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions* to 1) clarify the guidance in Topic 820, Fair Value Measurement, when measuring the fair value of an equity security subject to contractual restrictions that prohibit the sale of an equity security, 2) amend a related illustrative example, and 3) add a new disclosure of the fair value of equity securities subject to contractual sale restrictions, nature and remaining duration of the restrictions, and circumstances that could cause a lapse in the restrictions, in accordance with Topic 820.

These amendments do not change the principles of fair value measurement. They provide clarity in situations involving equity securities that have restrictions related to the sale of the asset. This ASU provides updated guidance for two specific scenarios, one where the restriction is based on the entity holding the equity security and one where the restriction is a characteristic of the equity security.

- First, it clarifies situations where an equity security cannot be sold on the measurement date because of a contractual sale restriction where the entity is not allowed to sell an asset. An example of this would be lock-up periods, where the assets cannot be sold for a set period but can be readily priced based on a public security exchange.

- Second, it provides guidance for situations where the restriction is based on characteristics of the asset that limits if it can be sold in regular markets. An example would be an equity security issued through a private placement and not SEC registered and are legally restricted from being sold on a national securities exchange or an over-the-counter market. These assets would be available to be sold on an existing market (not on the public exchange) but would have a fair value based on the market price of the similar unrestricted equity security adjusted to reflect the effect of the restriction.

Guidance for restricted assets is in *SSAP No. 4—Assets and Nonadmitted Assets*, and additional guidance specific to securities in ASU 2022-03 are included in *SSAP No. 30R—Unaffiliated Common Stock*, *SSAP No. 32R—Preferred Stock*, and *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Under these SSAPs, restricted securities are generally considered to be admitted assets to the extent that they can be used to cover policyholder obligations.

Existing Authoritative Literature:
The primary guidance for fair value is in *SSAP No. 100R—Fair Value*. *SSAP No. 30R—Unaffiliated Common Stock* and *SSAP No. 32R—Preferred Stock*, include some guidance on restricted investments involving common and preferred stock, but neither goes into detail on the specific guidance discussed in ASU 2022-03. Additionally, *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures* and *SSAP No. 4—Assets and Nonadmitted Assets* include references to restricted assets, primarily related to disclosures.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None
Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:

None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 100R—Fair Value* to adopt *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions* with modification to be consistent with statutory language in the respective statutory accounting statements. Proposed revisions are illustrated below.

Proposed edits to SSAP No. 100R:

Equity Securities Subject to Contractual Sale Restrictions

15. An equity security that an entity cannot sell on the measurement date because of a contractual sale restriction shall be measured at fair value on the basis of the price in the principal (or most advantageous) market[FN]. A contractual sale restriction does not change the market in which that equity security would be sold. A discount applied to the price of an equity security because of a contractual sale restriction is not a characteristic of the equity security. A contractual sale restriction is a characteristic of the reporting entity holding the equity security rather than a characteristic of the asset and, therefore, is not considered in measuring the fair value of an equity security. A contractual sale restriction prohibiting the sale of an equity security is a characteristic of the reporting entity holding the equity security and shall not be separately recognized as its own unit of account.

16. The effect on a fair value measurement arising from a restriction on the sale or use of an asset by a reporting entity will differ depending on whether the restriction would be taken into account by market participants when pricing the asset. When the restriction is a characteristic of the asset, the restriction ~~is a characteristic of the asset and~~ should be considered in measuring the fair value of the asset. For example, an equity security issued through a private placement is not registered and is legally restricted from being sold on a national securities exchange or an over-the-counter market until the shares are registered or the conditions necessary for an exemption from registration have been satisfied. A market participant would sell the private placement equity securities in a different market than the market used for registered equity securities on the measurement date. Because that restriction would be a characteristic of the equity security, a market participant would consider the inability to resell the security on a national securities exchange or an over-the-counter market when pricing the equity security; therefore, the reporting entity that holds the Class A shares acquired through a private placement transaction would consider that restriction a characteristic of the asset, and the reporting entity should measure the fair value of the equity security on the basis of the market price of the similar unrestricted equity security adjusted to reflect the effect of the restriction[FN].

FN—Refer to *SSAP No. 4—Assets and Nonadmitted Assets* for admissibility guidance for restricted equity securities.

60. For equity securities that are subject to contractual sales, disclose the fair value of equity securities subject to contractual sale restrictions.

65. This standard adopts *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions*, with modification to be consistent with statutory language in the respective statutory accounting statements.

Staff Review Completed by: Jake Stultz– NAIC Staff, November 2022

Status:
On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 100R to adopt *ASU 2022-03,*

Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions with modification to be consistent with statutory language in the respective statutory accounting statements, as illustrated above. Note that this agenda item does not recommend incorporating the new proposed GAAP disclosures on sales restrictions, but identifies that items restricted as to sale would be captured as restricted assets per SSAP No. 1 and subject to admittance considerations under SSAP No. 4.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 100R to adopt ASU 2022-03 with modification to be consistent with statutory language in the respective statutory accounting statements. The adoption does not incorporate the new GAAP disclosures on sales restrictions, as items restricted as to sale would be captured as restricted assets per SSAP No. 1 and subject to admittance considerations under SSAP No. 4.

Issue: Interest Income Disclosure Update

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
This agenda item is the result of comments received from interested parties from the Principles-Based Bond Project. In the Oct. 7, 2022, comment letter, which provided comments on the Aug. 10 exposure by the Working Group, interested parties suggested some revisions to further enhance reporting of interest income on Schedule D-1-1 Bonds, and recommended that NAIC staff look further at if this should be added to any of the other reporting schedules where interest income is reported in accordance with *SSAP No. 34—Investment Income Due and Accrued*.

There were two distinct items noted in the interested parties' comments that are addressed by this agenda item. First, they suggested data capturing the gross, nonadmitted and admitted amounts for interest income due and accrued. Second, they suggested that a data element that is included in the bond proposal project be changed to reflect the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance.

With this agenda item, the Working Group will sponsor a proposal at the Blanks (E) Working Group to expand disclosures, with data capturing, to include gross, nonadmitted and admitted amounts for interest income due and accrued. The blanks proposal will also include cumulative amounts of paid-in-kind (PIK) interest included in the current principal balances.

Existing Authoritative Literature:
The guidance for disclosure of interest income is included in *SSAP No. 34—Investment Income Due and Accrued*.

Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

    a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;

    b. Disclose total amount excluded.

8. Refer to the Preamble for further discussion regarding disclosure requirements.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
As noted above, this agenda item comes from a suggestion from interested parties, which was included in their Oct. 7, 2022, comment letter.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

© 2023 National Association of Insurance Commissioners

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 34—Investment Income Due and Accrued* to add additional disclosures to data capture the gross, nonadmitted and admitted amounts for interest income due and to add disclosure of the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance. Adoption of this agenda item will also signify support for a corresponding Blanks (E) Working Group proposal to add these disclosures to Note 7 of the annual statement blanks.

Proposed edits to SSAP No. 34:

Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;

b. Disclose total amount excluded;.

c. Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued.

d. Disclose aggregate deferred interest and cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

8. Refer to the Preamble for further discussion regarding disclosure requirements.

Staff Review Completed by: Jake Stultz—NAIC Staff, November 2022

Status:
On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 34, to add additional disclosures, as illustrated above, and to data-capture the disclosures.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, with minor edits as illustrated below, to SSAP No. 34 to add additional disclosures to data capture the gross, nonadmitted and admitted amounts for interest income due and to add disclosure of the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance. These disclosures are effective for year-end 2023 reporting.

Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;

b. Disclose total amount excluded;

c. Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued;

d. Disclose aggregate deferred interest;

e. Disclose cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

Issue: ***ASU 2022-04, Disclosure of Supplier Finance Program Obligations***

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
In September 2022, the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update 2022-04, Liabilities—Supplier Finance Programs (Subtopic 405-50) Disclosure of Supplier Finance Program Obligations.* The Board issued ASU 2022-04 to enhance the transparency of supplier finance programs. ASU 2022-04 is effective for fiscal years beginning after December 15, 2022.

The amendments in ASU 2022-04 apply to all entities that use supplier finance programs in connection with the purchase of goods and services (described as buyer parties). Supplier finance programs, which also may be referred to as reverse factoring, payables finance, or structured payables arrangements, allow a buyer to offer its suppliers the option to access payment in advance of an invoice due date through a third-party finance provider or intermediary on the basis of invoices that the buyer has confirmed as valid.

Typically, a buyer in a program 1) enters into an agreement with a finance provider or an intermediary to establish the program, 2) purchases goods and services from suppliers with a promise to pay at a later date, and 3) notifies the finance provider or intermediary of the supplier invoices that it has confirmed as valid. Suppliers may then request early payment from the finance provider or intermediary for those confirmed invoices. Suppliers generally agree to accept an amount less than owed to receive payment from the intermediary timelier than the invoice due date. The full amount owed by the buyer is then paid to the intermediary, resulting in a spread income to the financing intermediary.

The ASU amendments require that a buyer in a supplier finance program disclose sufficient information about the program to allow a user of financial statements to understand the program's nature, activity during the period, changes from period to period, and potential magnitude. These disclosures were supported as buyers who utilize these programs are getting a form of financing, but the amounts owed to the financial intermediaries have been reported differently, with some entities reporting as trade payables and others reporting as debt. As such, users of the financial statements do not have clear information on the use of these financing structures. ASU 2202-04 requires the buyer to make the following annual disclosures of qualitative and quantitative information about its supplier finance programs:

1. The key terms of the program, including a description of the payment terms (including payment timing and basis for its determination) and assets pledged as security or other forms of guarantees provided for the committed payment to the finance provider or intermediary

2. For the obligations that the buyer has confirmed as valid to the finance provider or intermediary:

   a. The amount outstanding that remains unpaid by the buyer as of the end of the annual period (the outstanding confirmed amount)

   b. A description of where those obligations are presented in the balance sheet

   c. A rollforward of those obligations during the annual period, including the amount of obligations confirmed and the amount of obligations subsequently paid.

© 2023 National Association of Insurance Commissioners

> In each interim reporting period, the buyer should disclose the amount of obligations outstanding that the buyer has confirmed as valid to the finance provider or intermediary as of the end of the interim period.

SSAP No. 105R—Working Capital Finance Investments addresses programs similar to some of the ones described in ASU 2022-04, however it addresses such programs from the perspective of evaluating investments in such programs for admissibility for the **investor** in such programs. That is, the insurers tend to act as a finance provider or an investor in the supplier chain finance program, not the "buyer." Insurers are not typically "buyers" in such programs as they are described in ASU 2022-04. The guidance in SSAP No. 105R would describe the "buyer" in the ASU 2022-04 as an obligor of the working capital finance program. Therefore, since the disclosures in ASU 2022-04 are for buyers/obligors of supplier finance programs, not for providers of liquidity – the investors, the disclosures do not seem relevant to require of the investors in such programs for statutory accounting.

Note that if an insurer were to sell its premium receivables, existing guidance in S*SAP No. 42—Sale of Premium Receivables* and *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishment of Liabilities* provide guidance which distinguishes sales from financing transactions. Therefore, the new GAAP disclosures in ASU 2022-04 are not recommended for incorporation into statutory accounting.

Existing Authoritative Literature:
SSAP No. 105R—Working Capital Finance Investments

> 1. This statement establishes statutory accounting principles for working capital finance investments held by reporting entities. This statement amends *SSAP No. 20—Nonadmitted Assets* (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this statement.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
The Working Group most recently updated SSAP No. 105R with substantive revisions which were effective June 30, 2020. Revisions to SSAP No. 105R were from agenda item 2019-25: Working Capital Finance Notes which also resulted in *Issue Paper No. 163—Working Capital Finance Investment Updates*. In agenda item 2019-25 the Working Group reviewed ten industry requests and incorporated 7 out of 10 revisions to SSAP No. 105R.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to SSAP No. 105R to reject ASU 2022-04 as illustrated below. As insurance reporting entities are not the buyers (obligors) of supplier chain finance programs, the disclosures in ASU 2022-04 are not relevant. Reporting entities that invest in working capital finance programs are the providers of capital (investors) not the buyers (obligors) of such programs. Revisions to SSAP No. 105R:

> 33. *ASU 2022-04, Disclosure of Supplier Finance Program Obligations* is rejected.

Actuarial Guideline XLIX-A

THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD (On or After December 14, 2020)

Background

The *Life Insurance Illustrations Model Regulation* (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

~~In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements that are linked to an index or indices should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for inforce illustrations on policies sold before the effective date of this guideline.~~

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

(1) Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.

(2) Limits the policy loan leverage shown in an illustration.

(3) Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies sold on or after December 14, 2020.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.

ii. The policy offers Indexed Credits.

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The Annual Rate of Indexed Credits for each Index Account does not exceed the lesser of the maximum Annual Rate of Indexed Credits for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the Annual Rate of Indexed Credits for each Index Account shall not exceed the average of the maximum Annual Rate of Indexed Credits for the illustrated scale and the guaranteed Annual Rate of Indexed Credits for that account. However, the Annual Rate of Indexed Credits for each Index Account shall never be less than the guaranteed Annual Rate of Indexed Credits for that account.

ii. If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedge assets for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate.

C. Annual Rate of Indexed Credits: The total annualized Indexed Credits expressed as a percentage of the account value used to determine the Indexed Credits.

D. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. The Hedge Budget used to determine the cap in 3 (D) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind cannot be used to increase the annual cap.

vii. There are no enhancements or similar features that provide additional Indexed Credits in excess of the interest provided by 3 (D) (i) through 3 (D) (v), including but not limited to experience refunds, multipliers, or bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4 (A) (ii) for purposes of complying with this guideline. A policy shall have no more than one Benchmark Index Account.

E. Fixed Account: An account where there are no Indexed Credits.

F. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.

G. Index Account: An account where some or all of the amounts credited are Indexed Credits.

H. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Amounts credited to the policy resulting from a floor greater than zero on an account with any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices are included.

I. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

J. Policy Loan Interest Rate: The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

K. Policy Loan Interest Credited Rate: The annualized interest rate credited that applies to the portion of the account value backing the Loan Balance:

i. For the portion of the account value in the Fixed Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate.

ii. For the portion of the account value in an Index Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account.

L. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. Illustrated Scale

The total Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for the Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25- year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers a Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the Benchmark Index Account in 4 (A).

ii. If the insurer does not offer a Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition

of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For the Benchmark Index Account the Annual Rate of Indexed Credits shall not exceed the minimum of (i) and (ii):

i. The arithmetic mean of the geometric average annual credited rates calculated in 4 (A).

ii. 145% of the Annual Net Investment Earnings Rate.

C. For any other Index Account that is not the Benchmark Index Account in 3 (D), the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii) for policies sold prior to May 1, 2023, and shall not exceed the minimum of (i), (ii), and (iii) for policies sold on or after May 1, 2023:

i. The Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The Annual Rate of Indexed Credits reflecting the fundamental characteristics of the Index Account and the appropriate relationship to the expected risk and return of the Benchmark Index Account. The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

iii. The lesser of (1) and (2) multiplied by the Annual Rate of Index Credits for the Benchmark Index Account, calculated in 4 (B), divided by (2); plus, the Supplemental Hedge Budget for the Index Account:

1. The Hedge Budget of the Index Account

2. Hedge Budget of the Benchmark Index Account.

D. For the purposes of compliance with Section 6 (C) of Model #582, the Supplemental Hedge Budget is subtracted from the Annual Rate of Indexed Credits before comparing to the earned interest rate underlying the disciplined current scale.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for Indexed Credits in an account, the assumed earned interest rate underlying the disciplined current scale for that account, inclusive of all general account assets, both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed the lesser of (i) and (ii):

i. The Annual Net Investment Earnings Rate, plus 45% of the lesser of (1) and (2):

1. Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.

ii. The Annual Rate of Indexed Credits plus the Annual Net Investment Earnings Rate minus the Hedge Budget.

These rates should be adjusted for timing differences in the hedge cash flows to ensure that fixed interest is not earned on the Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

For a policy with multiple Index Accounts, a maximum rate in 5 (A) should be calculated for each account. All accounts, fixed and indexed, within a policy can be tested in aggregate.

B. If an insurer does not engage in a hedging program for Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the Annual Net Investment Earnings Rate.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy's account value.

6. Policy Loans

If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate by more than 50 basis points. For example, if the illustrated Policy Loan Interest Rate is 4.00%, the Policy Loan Interest Credited Rate shall not exceed 4.50%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical Indexed Credits using current index parameters for the most recent 20-year period.

Actuarial Guideline LIV

Nonforfeiture Requirements for Index-Linked Variable Annuity Products

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements, that include a risk of negative index returns subject to limitations on the loss, such as a floor or a buffer. These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, *Standard Nonforfeiture Law for Individual Deferred Annuities;* however, NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, *Variable Annuity Model Regulation*, defines variable annuities as “contracts that provide for annuity benefits that vary according to the investment experience of a separate account.” Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA accounts are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth principles and requirements for determining values, including death benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a variable annuity and thereby exempt from Model 805. An ILVA that does not comply with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify the definition of a variable annuity under Model 250 or other Model Regulations.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity and includes index-linked crediting features that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

© 2023 National Association of Insurance Commissioners

Principles

This guideline is based on the following principles:

1. Interim Values defined in the contract provide equity between the contract holder and the insurance company.
2. Interim Values are consistent with the value of the Hypothetical Portfolio over the Index Strategy Term.

Definitions

"Derivative Asset Proxy" means a package of hypothetical derivative assets established at the beginning of an Index Strategy Term that is designed to replicate credits provided by an Index Strategy at the end of an Index Strategy Term.

"Fixed Income Asset Proxy" is a hypothetical fixed income asset.

"Hypothetical Portfolio" means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

"Index" means a benchmark designed to track the performance of a defined portfolio of securities.

"Index Strategy" means a method used to determine index credits with specified index or indices and cap, buffer, participation rate, spread, margin or other index crediting elements.

"Index Strategy Base" means the notional amount used to determine index credits that does not change throughout the Index Strategy Term except for withdrawals, transfers, deposits, loans, and any explicit charges.

"Index Strategy Term" means the period of time from the term start date to the term end date over which an index changes and the index credit is determined.

"Interim Value" means the Strategy Value at any time other than the start date and end date of an Index Strategy Term.

"Strategy Value" means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

"Trading Cost" means the additional cost of liquidating the derivative assets in the Derivative Asset Proxy or actual derivative assets supporting the Index Strategy that is not accounted for in the Derivative Asset Proxy calculation.

Text

The Index Strategy Base must equal the Strategy Value at the Index Strategy Term start date.

The Fixed Income Asset Proxy is assumed to be a hypothetical fixed income asset with a yield that results in

i. At the beginning of the Index Strategy Term, the book value of the Fixed Income Asset Proxy equal to the Index Strategy Base less the Derivative Asset Proxy value; and
ii. At the end of the Index Strategy Term, the book value of the Fixed Income Asset Proxy, assuming no change in yield, projected to equal the Index Strategy Base.

Drafting Note: The guideline defines the conditions under which an index-linked variable annuity is exempt from Model 805 on the basis that it is a variable annuity. A variable annuity provides daily values (analogous to Interim Values in this guideline) based on the market value of separate account assets. In order to more closely align an ILVA to a variable annuity Interim Values should be consistent with the market value of hypothetical assets supporting the ILVA (i.e. Hypothetical Portfolio). The market value of the assets may be determined by a fair value methodology or by applying an MVA to the book value. A state may want to consider whether including or

excluding an MVA is appropriate. In making a determination regarding whether including or excluding an MVA is appropriate and, if applicable, what an acceptable MVA formula is, the state should consider whether the Interim Values provide reasonable equity between the contract holder and the insurance company.

The value of the package of derivative assets is determinable daily. Assumptions used to determine the market value of the Derivative Asset Proxy including implied volatilities, risk-free rates, and dividend yields must be consistent with the observable market prices of derivative assets, whenever possible.

Interim Values must be materially consistent with the value of the Hypothetical Portfolio over the Index Strategy Term less a provision for the cost attributable to reasonably expected or actual Trading Costs at the time the Interim Value is calculated.

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent over the Index Strategy Term with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term under a reasonable number of realistic economic scenarios that include index changes that test crediting constraints and recognize initial option pricing market conditions.

The company must provide an actuarial memorandum with each ILVA product filing that includes the following:

1. Actuarial certifications must be included with each ILVA product filing and must include the following:
    a. Interim Values defined in the contract provide equity between the contract holder and the insurance company;
    b. The assumptions used to determine the market value of the Derivative Asset Proxy including implied volatilities, risk-free rates, dividend yields, and other parameters required to value the derivatives are consistent with the observable market prices of derivative assets over the Index Strategy Term, whenever possible. Valuation techniques include the standard Black-Scholes method, Monte-Carlo Simulation techniques, and other market consistent option valuation techniques for more complex options;
    c. The contractually defined Interim Values are materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term over the Index Strategy Term less a provision for the Trading Costs at the time the Interim Value is calculated; and
    d. Any Trading Costs represent reasonably expected or actual costs at the time the Interim Value is calculated.

2. If the Interim Values are determined using a methodology other than the Hypothetical Portfolio methodology described in this guideline, the actuary shall describe the testing performed to verify that the values are materially consistent with the Hypothetical Portfolio methodology. The actuary should define any parameters or assumptions used in determining material consistency and provide a summary of the results of the testing.

3. Descriptions of
    a. The value of the Fixed Income Asset Proxy;
    b. The market value adjustment formula, if any;
    c. The market value of the Derivative Asset Proxy including any Trading Costs; and
    d. All formulas, methodologies and assumptions used to calculate these values for each Index Strategy and Index Strategy Term as well as the sources for all assumptions.

    ILVA nonforfeiture benefits for Index Strategies subject to this guideline must comply with Section 7 of Model 250 not including Section 7.B with net investment return consistent with the requirements for determining Interim Values in this guideline.

Effective Date

The Guideline applies to all contracts (including associated riders, endorsements, or amendments) issued on or after July 1, 2024.

Revisions to the
As of March 2023 Accounting Practices and Procedures Manual

On **May 16, 2023**, the Statutory Accounting Principles (E) Working Group adopted the following revisions to the *As of March 2023 Accounting Practices and Procedures Manual*. Documents associated with these revisions are linked to the reference items in bold text.

Ref #	SSAP/ Appendix	Title	Summary
INT 22-02	SSAP No. 9 SSAP No. 101	INT 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax *SAP Clarification* Effective Immediately (May 16, 2023)	Adoption of *INT 22-02* extends this interpretation for the second quarter 2023 statutory financial statements. For application to the second quarter 2023 financial statements, reporting entities shall follow the guidance in this interpretation paragraphs 17 a-c.
2023-11EP	SSAP No. 86 Various	Editorial and Maintenance Update *Editorial Revisions* Effective Immediately (May 16, 2023)	Revisions change SSAP No. 86 references of “Intrinsic Value” to reflect “Volatility Value”. In addition, “percent” is changed to “%” and all citations to *the Purposes and Procedures Manual of the NAIC Investment Analysis Office* are streamlined so they do not reflect a specific location in the Manual or a webpage.

Interpretation of the
Statutory Accounting Principles (E) Working Group

INT 22-02: Third Quarter 2022 through ~~First~~ Second Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax

INT 22-02 Dates Discussed

October 6, 2022; October 24, 2022, November 16, 2022; December 13, 2022; April 12, 2023; May 16, 2023

INT 22-02 References

Current:
SSAP No. 9—Subsequent Events
SSAP No. 101—Income Taxes

INT 22-02 Issue

Key Provisions of the Inflation Reduction Act

1. The Inflation Reduction Act (Act) was enacted on August 16, 2022, and included a new corporate alternative minimum tax (CAMT). The Act and the CAMT go into effect for tax years beginning after 2022. Reporting entities shall refer to the Act and the resulting regulations and other tax guidance to determine application, but a non-authoritative high-level summary based on information at the time of initial INT discussion regarding the CAMT is as follows:

   a. The CAMT is 15% of the corporation's "adjusted financial statement income" for the tax year, reduced by corporate alternative minimum foreign tax credit.

   b. The CAMT will only apply to "applicable corporations" (determined on an affiliated group basis) with average adjusted financial statement income in excess of $1 billion for the three prior tax years. This threshold is reduced to $100 million in the case of certain foreign-parented corporations. When a corporation becomes subject to the CAMT, it remains an applicable corporation for purposes of the CAMT, even if its average adjusted financial statement income is less than $1 billion, unless an exception applies.

   c. A corporation's adjusted financial statement income is the amount of net income or loss the corporation reports on its applicable financial statement. The income is adjusted for various purposes including certain adjustments in the case of consolidated returns or for foreign income.

   d. The Act includes references to the tax codes which provides a hierarchy for determining the "applicable financial statement." At a high level, the first choice is U.S. generally accepted accounting principles (GAAP) financial statements; the second choice is international financial reporting standards (IFRS) financial statements. If GAAP and IFRS financial statements are not available, the financial statements filed by the taxpayer with any other regulatory or government body is acceptable. If the taxpayer is part of an affiliated group of corporations filing a consolidated return, the adjustable financial statement income for the group considers the group's applicable financial statement.

   e. To determine its U.S. federal income tax liability, an applicable corporation will need to compute taxes under both systems—the regular tax system and the CAMT system. The CAMT is payable to the extent the tentative CAMT exceeds the regular corporate income

© 2023 National Association of Insurance Commissioners

tax. Any CAMT paid is available indefinitely as a credit carryover that could reduce future regular tax in future years if the regular tax liability is in excess of CAMT tax liability.

f. The Act directs the Treasury to issue regulations and other guidance relate to implementing the CAMT, so several issues are pending detailed clarifications including clarifying the definition of an applicable corporation, and providing guidance on the starting point for, and adjustments to, adjusted financial statement income, as well as the handling of separate company tax returns when required under current tax law that are unique to the insurance industry.

Interpretation Issues

2. This interpretation is focused on addressing third quarter 2022 transition accounting and reporting aspects of the new CAMT. While most insurers will not be subject to the CAMT, for those that know that they are subject, and those that could be subject to the CAMT, there are a variety of reporting uncertainties, particularly regarding reporting for third quarter 2022.

3. The CAMT is effective for the tax years on or after 2023.

4. Both statutory accounting principles and U.S. GAAP require the effects of tax changes on deferred taxes, including the valuation allowance (future realizability of existing DTAs) in the period in which the legislation is enacted (third quarter 2022). *SSAP No. 101—Income Taxes,* paragraph 7.e. requires the statutory valuation allowance adjustment as a direct reduction in the gross DTA if, based on the weight of available evidence, it is more likely than not that some or all of the gross DTAs will not be realized. Gross DTA less the statutory valuation allowance results in adjusted gross DTAs. The statutory valuation allowance adjustment is not reported as a separate line in the statutory financial statements (it is an off-balance sheet item that reduces the gross DTAs). The statutory valuation allowance is disclosed.

5. The statutory accounting calculation for admissible DTAs is determined using adjusted gross DTAs (gross DTAs reduced by the valuation allowance). For statutory accounting, admittance of adjusted gross DTAs in SSAP No. 101 depends on a three-component calculation, for which the second step limits admittance of adjusted gross DTAs to those that are expected to be realized in a timeframe that does not exceed three years. The actual number of years permitted depends on specifics for each reporting entity (type and other information about the reporting entity), but the maximum timeframe is three years. The last step admits DTAs which can be offset by DTLs.

6. Guidance in *SSAP No. 9—Subsequent Events* requires consideration of Type I and Type II[1] subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued. For subsequent events identified after the statutory financial statements are filed (example, March 1), but before the audited financial statements are issued (example, June 1), reporting entities are generally required by their domestic state to amend their filed statutory financial statements to ensure that the statutory financial statements and the audited financial statements are consistent. Under this guidance, as additional information is made available on the impact of the Act, or information becomes available to update estimates and assessments, under existing statutory accounting guidance in SSAP No. 9, reporting entities would need to identify updated estimates as a Type I subsequent event in the audited financial statements.

[1] A Type I subsequent event relates to an event or transaction that provides additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. Under SSAP No. 9, entities shall recognize in the financial statements the effects of all material Type I subsequent events. A Type II subsequent event pertains to events or transactions that provide evidence to conditions that did not exist at the balance sheet date but arose after that date. Type II events are disclosed in the financial statements.

Issue 1 – Consideration of the Act for Third Quarter 2022 Financial Statements

7. During the period of enactment (third quarter 2022) reporting entities filing statutory financial statements would normally have to consider the applicability of the CAMT and if applicable, determine the impact on the statutory valuation allowance as well as assess DTAs for admissibility (e.g., realization timeframe). These elements will be collectively referred to as "calculations impacted by the Act" or "calculations impacted by the CAMT."

8. This interpretation will address the issue for what reporting entities are required to report or disclose regarding the calculations impacted by the CAMT for September 30, 2022, financial statements.

Issue 2 – Consideration of Subsequent Events for Third Quarter 2022 Financial Statements

9. SSAP No. 9 requires consideration of subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued.

10. For reporting entities that materially revise or establish calculations impacted by the CAMT subsequent to September 30, 2022 (including the statutory valuation allowance, the timing of determination of net admitted DTAs, and the determination of the applicability of the CAMT), this interpretation will address the extent a Type I or Type II subsequent event assessment is required for third quarter 2022 financial reporting.

INT 22-02 Discussion

11. The Statutory Accounting Principles (E) Working Group consensuses to the noted issues are included below.

Response: Issue 1 – Consideration of the Act for Third Quarter 2022 Financial Statements

12. Reporting entities that are aware they will be subject to the CAMT would normally reflect the effects of the Act on the calculations impacted by the CAMT if reasonably estimable for third quarter 2022. Because of the timing of the adoption of the Act and the considerable number of unknown variables for September 30, 2022, reporting, the Working Group has determined that a reasonable estimate is not determinable for third quarter 2022 interim financial statements for the calculations impacted by the CAMT.

13. Because reasonable estimates of calculations impacted by the CAMT are not determinable, reporting entities shall not recognize impacts related to CAMT for third quarter 2022 financial statements, but shall make the following disclosures regarding the CAMT and the Act:

a. The Act was enacted during the reporting period on August 16, 2022.

b. A statement regarding whether the reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined if it expects to be liable for CAMT in 2023. For example:

i. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it does not expect to be liable for CAMT in 2023.

ii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has not determined as of the reporting date if it will be liable

for CAMT in 2023. The third quarter 2022 financial statements do not include an estimated impact of the CAMT because a reasonable estimate cannot be made.

iii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it expects to be liable for CAMT in 2023. The third quarter 2022 financial statements do not include an estimated impact of the CAMT, because a reasonable estimate cannot be made.

Response: Issue 2 – Consideration of Subsequent Events for Third Quarter 2022 Financial Statements

14. For third quarter 2022 reporting, CAMT updated estimates or other calculations affected by the Act determined subsequent to third quarter statutory financial statement or filing date shall not be recognized as Type I subsequent events. Meaning, amended financial statements are not required to reflect updated estimates subsequent to the third quarter filing date and prior to the filing the third quarter financial statements. With the disclosure required under Issue 1, additional subsequent event disclosure (such as what would be required for Type II event) is not required.

15. Reporting entities shall be working in good faith to complete the accounting for the changes adopted under the Act.

INT 22-02 Status

16. The consensuses in this interpretation were adopted on October 24, 2022, to provide reporting guidance regarding the calculations impacted by the CAMT and provide limited-scope, limited-time exceptions to the valuation allowance and DTA calculations in response to legislation under SSAP No. 101 as well as Type I subsequent event requirements in SSAP No. 9 for September 30, 2022, statutory reporting. As detailed, the exceptions to SSAP No. 101 and SSAP No. 9 are effective for third quarter 2022.

17. On December 13, 2022, the Working Group adopted a consensus to extend this interpretation for December 31, 2022, and first quarter 2023 statutory financial statements. For application as of year-end 2022 and first quarter 2023:

a. Consistent with paragraphs 12 and 13, the Working Group has concluded that a reasonable estimate is not determinable for December 31, 2022, and March 31, 2023, therefore impacts related to the CAMT in the year-end 2022 and March 31, 2023, financial statements are not required.

~~b. The reporting entity shall include disclosures in paragraph 13 in the year-end 2022 and March 31, 2023, financial statements. In addition, the reporting entity shall disclose the following:~~

~~i. If, based on information regarding the projected adjusted financial statement income for 2023, the entity or the controlled group of corporations of which the reporting entity is a member has determined if it is an "applicable corporation" to determine if CAMT exceeds the regular federal income tax payable. That is, disclose if the reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined if average "adjusted financial statement income" is above the thresholds for 2023 tax year that they expect to be required to perform the CAMT calculations. This disclosure is about being applicable corporation, not if the entity is required to pay.~~

~~c.~~b. Consistent with paragraph 14, CAMT updated estimates or other calculations affected by the Act determined subsequent to filing the December 31, 2022, and March 31, 2023, financial statements shall not be recognized as Type I subsequent events.

~~d.~~c. For year-end 2022 financial statements, the subsequent event exception is expanded to encompass events that occur prior to the issuance of statutory financial statements as well as events that occur before the date the audited financial statements are issued, or available to be issued. This provision intends to prevent reporting entities from having to amend statutory financial statements from material Type I subsequent events as a result of updated information / estimates received after the reporting date of year-end 2022 statutory financial statements pertaining to the accounting for the enactment of the Act.

18. On May 16, 2023, the Working Group adopted a consensus to extend this interpretation for the second quarter 2023 statutory financial statements. For application to the second quarter 2023 financial statements, reporting entities shall follow the guidance in this interpretation paragraphs 17.a. through 17.c.

~~18.~~19. With the extension, this interpretation will be automatically nullified on ~~June 15, 2023~~August 16, 2023.

~~19.~~20. No. further discussion is planned.

NAIC Accounting Practices and Procedures Manual
Editorial and Maintenance Update
May 16, 2023

Maintenance updates provide revisions to the *Accounting Practices and Procedures Manual*, such as editorial corrections, reference changes and formatting.

SSAP/Appendix	Description/Revision
SSAP No. 86	Paragraph 43.g.ii.: Revise "Intrinsic Value" to reflect "Volatility Value"
P&P Manual References	All citations to the *Purposes and Procedures Manual of the NAIC Investment* Analysis *Office* (P&P Manual) are proposed to be reviewed and streamlined so they do not reflect a specific location in the P&P Manual or web page. These references will be eliminated to prevent inappropriate citations.
Percent References	Instances in which 'percent' is spelled out in combination with a number will be eliminated with retention of the % sign. This is a consistency change as the usage is currently inconsistent within the AP&P Manual.

Recommendation:
NAIC staff recommend that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorize as a SAP Clarification, and expose editorial revisions as illustrated within.

SSAP No. 86R—Derivatives
Revise the reference to "Intrinsic Value" to reflect "Volatility Value." This change was proposed by industry to clarify the disclosure category for the excluded component to the Blanks (E) Working Group and a corresponding revision is needed in SSAP No. 86R.

43.a. For hedging instruments with excluded components for determining hedge effectiveness:

i. In the investment schedule, identify hedging instruments with excluded components and report the current fair value of the excluded component, the fair value of the excluded component that is reflected in the reported BACV for the hedging instrument (this item would not be applicable for foreign-currency forwards and currency swaps where the forward points or cross-currency basis, respectively, are the excluded component), and the change in fair value reported as an unrealized gain/loss.

ii. In the notes to the financial statements, provide information on the aggregate excluded components by category: Time Value, ~~Intrinsic~~ Volatility Value, Forward Points and Cross Currency Basis Spread. The aggregate amounts reported should include the following (as applicable): current fair value, recognized unrealized gain/loss, the fair value reflected in BACV, and for the excluded forward points (e.g., forward spot rates), the aggregate amount owed at maturity, along with current year and remaining amortization.

Purposes and Procedure Manual References
The following SSAPs will be revised to update references to the P&P Manual.

SSAP No. 25—Affiliates and Other Related Parties

21.h. The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.* ~~the *Purposes and Procedure Manual of the NAIC Investment Analysis Office*, "Procedures for Valuing Common Stocks and Stock Warrants."~~

SSAP No. 26R—Bonds

4.a. Exchange traded funds (ETFs), which qualify for bond treatment, as identified in ~~Part Three of~~ the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and published on the SVO web page ~~at *https://content.naic.org/industry/securitiesvaluation- office*~~. (SVO-identified ETFs are reported on Schedule D – Part 1.)

SSAP No. 30R—Unaffiliated Common Stock

4.c. Shares of SEC registered Investment Companies3 captured under the Investment Company Act of 1940 (open-end investment companies (mutual funds), closed-end funds and unit investment trusts), regardless of the types or mix of securities owned by the fund (e.g., bonds or stocks), including shares of funds referenced in the “NAIC Fixed Income-Like SEC Registered Funds List” as identified in ~~Part Three of~~ the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and published on the SVO web page.~~;~~

4.d. Exchange Traded Funds, except for those identified for bond or preferred stock treatment, as identified in ~~Part Three of~~ the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and published on the SVO web page ~~at *https://content.naic.org/industry/securities-valuation-office*~~;

SSAP No. 32R—Preferred Stock

4.a. Exchange Traded Funds, which qualify for preferred stock treatment, as identified in ~~Part Three of~~ the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and published on the SVO web page ~~at *https://content.naic.org/industry/securities-valuationoffice*~~. SVO-identified preferred stock ETFs shall follow the accounting provisions for perpetual preferred stock.

SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

64. By August 31 or one month after the audit report date of each year, the NAIC shall initiate a review of all SCA investments for which new Sub 2 form filings have been received as well as an annual update review of Sub 2 SCA investments already logged in the VISION database. The NAIC review shall encompass a review of the most recent annual statutory reporting by the parent insurance company's Schedule Y (to ascertain the identity of the members of the holding company system and to ensure that information for all SCA companies has been submitted), a review of the parent's financial statement blank to review the last reported value for the SCA investments and a review of the VISION database to determine whether SCA debt and SCA preferred securities have been assigned NAIC designations. As part of its analysis, the NAIC shall review the portion of the bond investments carried by the parent or a subsidiary insurer with a **Z** notation. If the NAIC determines that the portion of the **Z** bonds shown on the documentation is significant, the NAIC shall not process the Sub 2 filing until the insurance company reports the bonds to permit removal of the **Z** notation. Beginning with year-end 2019, two new suffixes will apply: **YE** and **IF**. YE means that the security is a properly filed annual update that the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol YE is assigned by the SVO pursuant to the carryover administrative procedure described in ~~Part One, Section 3 f) (iii) of~~ the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. When the SVO assigns the symbol YE it also assigns the NAIC designation in effect for the previous reporting year. IF means that the security is an initial filing that has been properly filed with the SVO but which the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol IF is assigned by the SVO and communicates that the insurer should self-designate the security for year-end and identify it with the symbol IF. IF, therefore, also communicates to the regulator that the NAIC designation reported by the insurance company was not derived by or obtained from the SVO, but has been determined analytically by a reporting insurance company.

© 2023 National Association of Insurance Commissioners

Percent References
The following SSAPs will be revised to update the percent reference.

SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets:

13. As directed by *SSAP No. 101—Income Taxes*, tax loss contingencies (including related interest and penalties) for current and all prior years, shall be computed in accordance with this SSAP, with the following modifications:

    a. The term "probable" as used in this standard shall be replaced by the term "more likely than not (a likelihood of more than 50% percent)" for federal and foreign income tax loss contingencies only.

    b. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.

    c. If the estimated tax loss contingency is greater than 50% percent of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% percent of the original tax benefit recognized.

As noted in SSAP No. 101, state taxes (including premium, income and franchise taxes) shall also be computed in accordance with this SSAP. These items (as detailed in SSAP No. 101) are not impacted by the modifications detailed in paragraphs 13.a.-13.c.

SSAP No. 16R—Electronic Data Processing Equipment and Software

4. The aggregate amount of admitted EDP equipment and operating system software (net of accumulated depreciation) shall be limited to 3% three percent of the reporting entity's capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any EDP equipment and operating system software, net deferred tax assets and net positive goodwill.(INT 01-18)

SSAP No. 43R—Loan-Backed and Structured Securities

FN 10: Changes in the interest rate of a "plain-vanilla," variable-rate beneficial interest (a plain-vanilla, variable-rate beneficial interest does not include those variable-rate beneficial interests with interest rate reset formulas that involve either leverage or an inverse floater) generally should not result in the recognition of an other-than-temporary impairment. For plain-vanilla, variable-rate beneficial interests, the yield is changed to reflect the revised interest rate based on the contractual interest rate reset formula. For example, if a beneficial interest pays interest quarterly at a rate equal to LIBOR plus 2% percent, the yield of that beneficial interest is changed prospectively to reflect changes in LIBOR. However, changes in the fair value of a plain-vanilla, variable-rate beneficial interest due to credit events should be considered when evaluating whether there has been an other-than-temporary impairment.

SSAP No. 57—Title Insurance

19.g. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate carrying value of an investment in a title plant or plants shall not exceed the lesser of 20% of admitted assets or forty percent (40%) of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

SSAP No. 60—Financial Guarantee Insurance

10. The contingency reserve shall be the greater of 50%~~fifty percent~~ of premiums written for each category or the amount provided by applying the following percentages to the principal guaranteed in each calendar year. The premiums written shall be net of reinsurance if the reinsurer has established a contingency reserve.

a.	Municipal obligation bonds	0.55%~~ percent~~
b.	Special revenue bonds	0.85%~~ percent~~
c.	Investment grade Industrial Development Bonds (IDBs) secured by collateral or having a term of seven years or less, and utility first mortgage obligations	1.00%~~ percent~~
d.	Other investment grade IDBs	1.50%~~ percent~~
e.	Other IDBs	2.50%~~ percent~~
f.	Investment grade obligations, secured by collateral or having a term of seven years or less	1.00%~~ percent~~
g.	Other investment grade obligations not secured	1.50%~~ percent~~
h.	Non-investment grade consumer debt obligations	2.00%~~ percent~~
i.	Non-investment grade asset backed securities	2.00%~~ percent~~
j.	All other non-investment grade obligations	2.50%~~ percent~~

SSAP No. 62R—Property and Casualty Reinsurance

116.a. The written premium ceded to the reinsurer by the reporting entity or its affiliates represents ~~fifty percent (~~50%~~)~~ or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or

116.b. ~~Twenty-five percent (~~25%~~)~~ or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in separate reinsurance contract.

Exhibit C – Assumptions

Premium = $1,000 (assumes no commissions or allowances)
Coverage Period = 1 year
Initial expected recoveries = $225 per year (at end of year) for five years
Initial Implicit rate = 4%~~ percent~~*

*present value of $225 per year for five years at 4%~~ percent~~ = $1,000

At the end of Year 2, the timing of anticipated recoveries under the reinsurance contract changes. A reevaluation of the implicit interest rate produces a rate of 3.63%~~ percent~~ and an asset of $640 at the end of the year.

SSAP No. 65—Property and Casualty Contracts

37. If the reporting entity does not hold specific collateral for the policy, amounts accrued for reimbursement of the deductible shall be billed in accordance with the provisions of the policy or the contractual agreement and shall be aged according to the contractual due date. In the absence of a contractual due date, billing date shall be utilized for the aging requirement. Deductible recoverables that are greater than ninety days old shall be nonadmitted. However, if the reporting

entity holds specific collateral for the high deductible policy, 10%~~ten percent~~ of deductible recoverable in excess of collateral specifically held and identifiable on a per policy basis, shall be reported as a nonadmitted asset in lieu of applying the aging requirement; however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall also be nonadmitted. The collateral requirements of this paragraph may be satisfied when an insured provides one collateral instrument to secure amounts owed under multiple policies, provided that the reporting entity has the contractual right to apply the collateral to the high deductible policy. Collateral obtained at a group level that is not supported by an existing pooling agreement requires a written allocation agreement among all collateral beneficiaries. The terms of such agreement must be fair and equitable. Documentation supporting any allocation of collateral among reporting entities must be maintained to allow proper calculation of the nonadmitted amounts and prohibit double counting of collateral.

SSAP No. 78—Multiple Peril Crop Insurance

3. Catastrophic insurance is designed to provide farmers with protection against extreme crop losses for a small processing fee. Buy-up insurance provides protection against more typical and smaller crop losses in exchange for a policyholder-paid premium. The government subsidizes the total premium for catastrophic insurance and a portion of the premium for buy-up insurance. Farmers who purchase buy-up crop insurance must choose both the coverage level (the proportion of the crop to be insured) and the unit price (such as, per bushel) at which any loss is calculated. With respect to the coverage level of production, farmers can choose to insure as much as 85%~~ percent~~ of normal production or as little as 50%~~ percent~~ of normal production at different price levels. With respect to the unit price, farmers choose whether to value their insured production at FCICs full estimated market price or at a percentage of the full price.

5. Companies participate in the MPCI program with FCIC through the Standard Reinsurance Agreement (SRA) per the terms of which the insurance companies share in the underwriting results of each policy. The SRA reinsurance terms provide a company the flexibility to limit its exposure on a state-by-state basis. MPCI premium is not expense loaded, therefore FCIC pays the insurance companies, on behalf of the policyholder, a percent of premium for administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims.

15. FCIC pays the insurance companies a percent of premium for administrative expenses associated with selling and servicing crop insurance policies, including the expenses associated with adjusting claims. The expense payment associated with the catastrophic coverage shall be recorded as a reduction of loss expenses whereas the expense payment for the buy-up coverage shall be recorded as a reduction of other underwriting expenses. The company shall disclose the total amounts received for each type of coverage.

SSAP No. 86—Derivatives

26.c. The term highly effective describes a cash flow hedging relationship where the change in fair value of the derivative hedging instrument is within 80 to 125%~~ percent~~ of the opposite change in the fair value of the hedged item attributable to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibit A;

27.c. The term highly effective describes a cash flow hedging relationship where the change in cash flows or present value of cash flows of the derivative hedging instrument is within 80 to 125% ~~percent~~ of the opposite change in the cash flows or present value of the cash flows of the hedged item attributable to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique. Further guidance on determining effectiveness can be found within Exhibit A.

Exhibit A, 19.c.ii. The variable-rate asset or liability has a floor or cap and the interest rate swap has a floor or cap on the variable interest rate that is comparable to the floor or cap on the variable-

rate asset or liability. For purposes of this paragraph, comparable does not necessarily mean equal. For example, if an interest rate swap's variable rate is based on LIBOR and an asset's variable rate is LIBOR plus 2% ~~percent~~, a 10% ~~percent~~ cap on the interest rate swap would be comparable to a 12% ~~percent~~ cap on the asset.

Exhibit A, 22 The fixed interest rate on a hedged item need not exactly match the fixed interest rate on an interest rate swap designated as a fair value hedge. Nor does the variable interest rate on an interest-bearing asset or liability need to be the same as the variable interest rate on an interest rate swap designated as a cash flow hedge. An interest rate swap's fair value comes from its net settlements. The fixed and variable interest rates on an interest rate swap can be changed without affecting the net settlement if both are changed by the same amount. That is, an interest rate swap with a payment based on LIBOR and a receipt based on a fixed rate of 5% ~~percent~~ has the same net settlements and fair value as an interest rate swap with a payment based on LIBOR plus 1% ~~percent~~ and a receipt based on a fixed rate of 6% ~~percent~~.

SSAP No. 92—Postretirement Benefits Other Than Pensions

49. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net periodic postretirement benefit cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10% ~~percent~~ of the greater of the accumulated postretirement benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active plan participants. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of the average remaining service period.

75. An employer shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. An employer may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture. This disclosure shall identify whether the contributions represent more than 5% ~~percent~~ of total contributions to the plan as indicated in the plan's most recently available annual report.

108.b.i ~~Ten~~10% ~~percent~~ of the calculated surplus impact as of the transition date; and

SSAP No. 93—Low-Income Housing Tax Credit Property Investments

Exhibit A Assumptions

1. All cash flows (except initial investment) occur at the end of each year.

2. Depreciation expense is computed, for book and tax purposes, using the straight-line method with a 27.5 year life (the same method is used for simplicity).

3. The investor made a $100,000 investment for a 5% ~~percent~~ limited partnership interest in the project at the beginning of the first year of eligibility for the tax credit.

4. The partnership finances the project cost of $4,000,000 with 50% ~~percent~~ equity and 50% ~~percent~~ debt.

5. The annual tax credit allocation (equal to 4% ~~percent~~ of the project's original cost) will be received for a period of 10 years.

6. The investor's tax rate is 40% ~~percent~~.

Chart Footnotes:

(1) End-of-year investment for a 5% ~~percent~~ limited liability interest in the project net of amortization in Column (2).

(3) 4%~~Four percent~~ tax credit on $200,000 tax basis of the underlying assets.

SSAP No. 100R—Fair Value

52.g. If a group of investments would otherwise meet the criteria in paragraph 45 but the individual investments to be sold have not been identified (for example, if a reporting entity decides to sell 20% ~~percent~~ of its investments in private equity funds but the individual investments to be sold have not been identified), so the investments continue to qualify for the practical expedient in paragraph 39, the reporting entity shall disclose its plans to sell and any remaining actions required to complete the sale(s).

SSAP No. 101—Income Taxes

2. For purposes of accounting for federal and foreign income taxes, reporting entities shall adopt *FASB Statement No. 109, Accounting for Income Taxes* (FAS 109) with modifications for state income taxes(INT 18-03), the realization criteria for deferred tax assets, and the recording of the impact of changes in deferred tax balances. One objective of accounting for income taxes is to recognize the estimated amount of taxes payable or refundable for the current year as a tax liability or asset. A second objective is to recognize deferred tax liabilities and assets for the future tax consequences of events that have been recognized in a reporting entity's statutory financial statements or tax returns. However, the second objective is realistically constrained because (a) the tax payment or refund that results from a particular tax return is a joint result of all the items included in that return, (b) taxes that will be paid or refunded in future years are the joint result of events of the current or prior years and events of future years, and (c) information available about the future is limited. As a result, financial statements will recognize current and deferred income tax assets and liabilities in accordance with the provisions of this statement based upon estimates and approximations. For purposes of this statement, only adjusted gross deferred tax assets that are more likely than not (a likelihood of more than 50% ~~percent~~) to be realized shall be considered in determining admitted adjusted gross deferred tax assets.

3.a.i The term "probable" as used in SSAP No. 5R shall be replaced by the term "more likely than not (a likelihood of more than 50% ~~percent~~)" for federal and foreign income tax loss contingencies only.

7.e. Gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50% ~~percent~~) that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment, determined in a manner consistent with paragraphs 20-25 of FAS 109, shall reduce the gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets).

1.3 SSAP No. 101 – Gross DTAs are reduced by a statutory valuation allowance adjustment that is determined on a separate company, reporting entity basis. Pursuant to paragraphs 2 and 7.e. of SSAP No. 101, gross DTAs are adjusted to an amount that is more likely than not to be realized (a likelihood of more than 50% ~~percent~~). Only adjusted gross DTAs shall be considered in determining admitted adjusted gross DTAs. See Question 2 for further discussion of the statutory valuation allowance adjustment. See Question 4 for a further discussion of the admissibility test. See Question 12 for further discussion of presentation and disclosure of the statutory valuation allowance adjustment.

1.11 SSAP No. 101 – FIN 48 is rejected for statutory accounting pursuant to paragraph 31 of SSAP No. 101. SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets provides guidance in determining the amount of federal and foreign income tax loss contingencies with the following modifications. The term "probable" as used in SSAP No. 5R is replaced by the term "more likely than not (a likelihood of more than 50% ~~percent~~)". In determining the amount of a federal or foreign income tax loss contingency, it shall be assumed that the reporting entity will be examined by the

tax authority that has full knowledge of all relevant information. If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized. See Question 9 for further discussion of income tax loss contingencies.

2.1 A – An enterprise shall record a gross deferred tax liability or asset for all temporary differences and operating loss, capital loss and tax credit carryforwards. Temporary differences include unrealized gains and losses and nonadmitted assets but do not include AVR, IMR, Schedule F penalties and, in the case of a mortgage guaranty insurer, amounts attributable to its statutory contingency reserve to the extent that "tax and loss" bonds have been purchased. In general, temporary differences produce taxable income or result in tax deductions when the related asset is recovered or the related liability is settled. A deferred tax asset or liability represents the increase or decrease in taxes payable or refundable in future years as a result of temporary differences and carryforwards at the end of the current year. Additionally, gross DTAs are reduced by a statutory valuation allowance adjustment if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50% ~~percent~~) that some portion or all of the gross DTAs will not be realized. The statutory valuation allowance adjustment, determined in a manner consistent with paragraphs 20-25 of FAS 109, shall reduce gross DTAs to the amount that is more likely than not to be realized (the adjusted gross deferred tax assets). This answer only addresses the recognition of adjusted gross DTAs and gross DTLs and does not address the admissibility of such amounts. See Question 4 for a discussion of the admissibility criteria of SSAP No. 101.

5.12 The temporary difference related to property and casualty unearned premiums is typically ~~twenty percent (~~20%~~)~~ of the outstanding statutory unearned premium reserve. If a company issues only one-year policies, it is reasonable to assume that the entire temporary difference will reverse in one year. If a company writes multi-year contracts, management will be required to estimate the percentage of the unearned premium that will be earned within each year of the applicable reversal period and apply these percentages to the outstanding temporary difference.

5.14 For those temporary differences that do not have a defined reversal period, such as unrealized losses on common stock or deferred compensation liabilities, management will need to determine when the temporary difference is "expected" to reverse. For instance, assume a company has an unrealized loss of $200 in its equity portfolio and that, on average, the portfolio turns over ~~twenty percent~~ (20%~~)~~ per year. It would be appropriate for the company to conclude that $40 of the temporary difference will reverse in each year in the applicable reversal period. When determining when the temporary difference would be "expected" to reverse, management should normally consider events that are likely to occur using information, facts and circumstances in existence as of the reporting date. The estimates used in this circumstance should not be extended to other tests of impairment. For instance, when the entity assumed a 20% turnover in its equity portfolio, it is not involuntarily required to record an impairment in accordance with paragraph 10 of SSAP No. 30R—Unaffiliated Common Stock.

10.3 As an example, assume Company X files its 20X1 federal income tax return and reports $1,000,000 of taxable income comprised of $800,000 of ordinary income and $200,000 of capital gain income. Since the company is subject to taxation at a 21% ~~percent~~ tax rate on all its income, it incurred federal income tax expense of $210,000. In preparing its 20X1 statutory income tax provision, the company estimated that its liability for 20X1 federal income tax would be $147,000 based on $600,000 of ordinary income and $100,000 realized capital gains.

10.8 For example, assume the reporting entity has DTAs of $1,000 relating to temporary differences other than unrealized losses, and a $100 DTL relating to unrealized gains as of the beginning of the year. Since the entity is subject to tax at 21% ~~percent~~ and all of its DTAs are expected to reverse within one year, the entity recorded a $900 net admitted DTA as of the beginning of the year.

12.20 The Company has not recognized a deferred tax liability of approximately $30,000 of foreign withholding taxes for the undistributed earnings of its 100% ~~percent~~ owned foreign subsidiaries that arose in 20X2 and prior years because the Company does not expect those unremitted earnings to reverse and become taxable to the Company in the foreseeable future. A deferred tax liability will be recognized when the Company expects that it will recover those undistributed earnings in a

taxable manner, such as through receipt of dividends or sale of the investments. As of December 31, 20X2, the undistributed earnings of these subsidiaries were approximately $200,000.

SSAP No. 102—Pensions

22. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net pension cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10%~~ percent~~ of the greater of the projected benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active employees expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of average remaining service.

79. A reporting entity shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. A reporting entity may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture. This disclosure shall identify whether the contributions represent more than 5%~~ percent~~ of total contributions to the plan as indicated in the plan’s most recently available annual report.

93.b.i. ~~Ten~~10%~~ percent~~ of the calculated surplus impact as of the transition date;

SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

22. An exchange of debt instruments with substantially different terms is also considered a debt extinguishment and shall be accounted for in accordance with paragraph 21. A debtor’s exchange of debt instruments (in a nontroubled debt situation) is accomplished with debt instruments that are substantially different if the present value of the cash flows under the terms of the new debt instrument is at least 10%~~ percent~~ different from the present value of the remaining cash flows under the terms of the original instrument. If the difference between the present value of the cash flows under the terms of the new debt instrument and the present value of the remaining cash flows under the terms of the original debt instrument is less than 10%~~ percent~~, a creditor should evaluate whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification.

91. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102%~~ percent~~ of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 100%~~ percent~~ of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral by the end of the next business day, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102%~~ percent~~ of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100%~~ percent~~ at the reporting date, the difference between the actual collateral and 100%~~ percent~~ will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

92. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105%~~ percent~~ of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 102% ~~percent~~ of the fair value of the loaned securities, the reporting entity must obtain additional collateral by the end of the next business day, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105%~~ percent~~ of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100%~~ percent~~ at the reporting date, the difference between the actual collateral and 100%~~ percent~~ will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

113. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95% ~~percent~~ of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at any time the fair value of the collateral received from the counterparty is less than 95% ~~percent~~ of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral by the end of the next business day the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95% ~~percent~~ of the fair value of the transferred securities. If the collateral is less than 95% ~~percent~~ at the reporting date, the difference between the actual collateral and 95% ~~percent~~ will be nonadmitted.

Reverse Repurchase Transaction

b. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102% ~~percent~~ of the purchase price paid by the reporting entity for the securities. If at any time the fair value of the collateral is less than 100% ~~percent~~ of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102% ~~percent~~ of the purchase price.

130. Exchanges of debt instruments or debt instrument modifications are considered extinguishments if the exchange or modification results with substantially different terms or is considered more than minor. If the cash flows under the terms of the new debt instrument are at least 10% ~~percent~~ different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of, or modification to, debt instruments is consider substantially different and/or more than minor.

Illustration 3 Company C originates $1,000 of loans that yield 10% ~~percent~~ interest income for their estimated lives of 9 years. Company C transfers the entire loans to an entity and the transfer is accounted for as a sale. Company C receives as proceeds $1,000 cash, a beneficial interest to receive 1% ~~percent~~ on the contractual interest on the loans (an interest-only strip receivable), and an additional 1% ~~percent~~ of the contractual interest as compensation for servicing the loans. The fair values of the servicing asset and the interest-only strip receivable are $40 and $60, respectively.

Illustration 4 – Facts

Transferor's carrying amount and fair value of security loaned	$1,000
Cash "collateral"	1,020
Transferor's return from investing cash collateral at a 5% ~~percent~~ annual rate	5
Transferor's rebate to the securities borrower at a 4% ~~percent~~ annual rate	4

SSAP No. 104R—Share-Based Payments

117.a.ii. Any purchase discount from the market price does not exceed the per-share amount of share issuance costs that would have been incurred to raise a significant amount of capital by a public offering. A purchase discount of 5% ~~percent~~ or less from the market price shall be considered to comply with this condition without further justification. A purchase discount greater than 5% ~~percent~~ that cannot be justified under this condition results in compensation cost for the entire amount of the discount. Note that an entity that justifies a purchase discount in excess of 5% ~~percent~~ shall reassess at least annually, and no later than the first share purchase offer during the fiscal year, whether it can continue to justify that discount pursuant to this paragraph.

122. Changes in total employee withholdings during a purchase period that occur solely as a result of salary increases, commissions, or bonus payments are not plan modifications if they do not

represent changes to the terms of the award that was offered by the employer and initially agreed to by the employee at the grant (or measurement) date. Under those circumstances, the only incremental compensation cost is that which results from the additional shares that may be purchased with the additional amounts withheld (using the fair value calculated at the grant date). For example, an employee may elect to participate in the plan on the grant date by requesting that 5% ~~percent~~ of the employee's annual salary be withheld for future purchases of stock. If the employee receives an increase in salary during the term of the award, the base salary on which the 5% ~~percent~~ withholding amount is applied will increase, thus increasing the total amount withheld for future share purchases. That increase in withholdings as a result of the salary increase is not considered a plan modification and thus only increases the total compensation cost associated with the award by the grant date fair value associated with the incremental number of shares that may be purchased with the additional withholdings during the period. The incremental number of shares that may be purchased is calculated by dividing the incremental amount withheld by the exercise price as of the grant date (for example, 85% ~~percent~~ of the grant date stock price).

SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees

11. The term "highly effective" describes a fair value hedging relationship where the change in fair value of the derivative instrument is within 80 to 125% ~~percent~~ of the opposite change in fair value of the hedged item attributed to the hedged risk. It shall also apply when an R-squared of .80 or higher is achieved when using a regression analysis technique.

Status:

On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed editorial revisions as illustrated within the agenda item.

On May 16, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed editorial revisions, as illustrated above, to the *Accounting Practices and Procedures Manual*.

Revisions to the
As of March 2023, Accounting Practices and Procedures Manual

On **August 13, 2023**, the Statutory Accounting Principles (E) Working Group adopted the following revisions to the *As of March 2023 Accounting Practices and Procedures Manual*. Documents associated with these revisions are linked to the reference items in bold text.

Ref #	SSAP/ Appendix	Title	Summary
2019-21	**SSAP No. 26R** **SSAP No. 43R** **Various SSAPs**	Bond Definition *New SAP Concept* Effective January 1, 2025	Adoption revises *SSAP No. 26R—Bonds* and *SSAP No. 43R—Loan-Backed and Structured Securities* for the principles-based bond definition, the accounting for bonds (issuer credit obligations and asset-backed securities), as well as revisions to various SSAPs that have been updated to reflect the revised definition and/or SSAP references.
2022-01	SSAP No. 5R **IP No. 168**	Conceptual Framework *SAP Clarification* Effective Immediately (August 13, 2023)	Adoption revises the definition of a liability under statutory accounting to be more consistent with recent FASB revisions.
2022-19	**INT 23-01**	Negative IMR *New SAP Concept* Effective Immediately (August 13, 2023)	Adoption provides an optional, limited-time guidance, which allows the admittance of net negative (disallowed) interest maintenance reserve (IMR) up to 10% of adjusted capital and surplus. *INT 23-01: Net Negative (Disallowed) Interest Maintenance Reserve* will be automatically nullified on January 1, 2026.
2023-02	SSAP No. 43R	CLO Financial Modeling *SAP Clarification* Effective December 31, 2023	Adopted revisions incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities.
2023-05	**INT 20-01**	*ASUs 2020-04, 2021-01 & 2022-06 - Reference Rate Reform* *SAP Clarification* Effective Immediately (August 13, 2023)	Adoption provides a temporary (optional) expedient and exception interpretative guidance to revise the expiration date of the guidance in *INT 20-01: ASUs 2020-04 & 2021-01 – Reference Rate Reform* to December 31, 2024.

SCOPE OF STATEMENT

1. The principles-based definition of a bond within this statement shall be utilized to identify whether security structures should be reported as bonds. Investments that qualify within the principles-based definition as an issuer credit obligation shall follow the accounting guidance within this statement. Investments that qualify within the principles-based definition as an asset-backed security (ABS) shall follow the accounting guidance in *SSAP No. 43R—Asset-Backed Securities*.

2. In addition to security investments that qualify under the principles-based definition as issuer credit obligations, certain specific instruments are also captured in scope of this statement:

   a. Certificates of deposit that have a fixed schedule of payments and a maturity date in excess of one year from the date of acquisition;

   b. Bank loans that are obligations of operating entities issued directly by a reporting entity or acquired through a participation, syndication or assignment[1];

   c. Debt instruments in a certified capital company (CAPCO) (INT 06-02)

   d. Exchange Traded Funds (ETFs) that qualify for bond treatment as identified in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and included in the 'SVO-Identified Bond ETF List' published on the SVO's webpage. (These instruments are referred to as SVO-Identified Bond ETFs.)

   e. Mortgage loans in scope of *SSAP No. 37—Mortgage* Loans that qualify under an SVO structural assessment and are identified as SVO-Identified Credit Tenant Loans.

3. Securities that qualify as issuer credit obligations with a maturity date of one year or less from date of acquisition that qualify as cash equivalents or short-term investments shall follow the accounting requirements of this statement. These investments are also captured in *SSAP No. 2R—Cash, Cash*

---

[1] **Bank Loan** – Fixed-income instruments, representing indebtedness of a borrower, made by a financial institution. Bank loans can be issued directly by a reporting entity or acquired through an assignment, participation or syndication:

- **Assignment** – A bank loan assignment is defined as a fixed-income instrument in which there is the sale and transfer of the rights and obligations of a lender (as assignor) under an existing loan agreement to a new lender (and as assignee) pursuant to an Assignment and Acceptance Agreement (or similar agreement) which effects a novation under contract law, so the new lender becomes the direct creditor of and is in contractual privity with the borrower having the sole right to enforce rights under the loan agreement.

- **Participation –** A bank loan participation is defined as a fixed-income investment in which a single lender makes a large loan to a borrower and subsequently transfers (sells) undivided interests in the loan to other entities. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the originating lender continues to service the loan. The participating entity may or may not have the right to sell or transfer its participation during the term of the loan, depending on the terms of the participation agreement. Loan Participations can be made on a parri-passu basis (where each participant shares equally) or a senior subordinated basis (senior lenders get paid first and the subordinated participant gets paid if there are sufficient funds left to make a payment).

- **Syndication –** A bank loan syndication is defined as a fixed-income investment in which several lenders share in lending to a single borrower. Each lender loans a specific amount to the borrower and has the right to repayment from the borrower. Separate debt instruments exist between the debtor and the individual creditors participating in the syndication. Each lender in a syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender that then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is simply functioning as a servicer and shall not recognize the aggregate loan as an asset. A loan syndication arrangement may result in multiple loans to the same borrower by different lenders. Each of those loans is considered a separate instrument.

Equivalents, Drafts and Short-Term Investments and shall follow the reporting and disclosure requirements of that statement.

4. This statement excludes:

a. Mortgage loans and other real estate lending activities made in the ordinary course of business. These investments are addressed in *SSAP No. 37—Mortgage Loans* and *SSAP No. 39—Reverse Mortgages*.

b. Investments that qualify within the principles-based definition as an ABS. These investments shall follow the guidance in *SSAP No. 43R—Asset-Backed Securities*

c. Securities that provide varying principal or interest based on underlying equity appreciation or depreciation, an equity-based derivative, real estate or other non-debt variable, as described in paragraph 6.d.

d. Securities that do not qualify as bonds pursuant to the principles-based bond definition, including first loss positions that lack contractual payments or substantive credit enhancement. These investments shall follow the appropriate guidance in *SSAP No. 21R—Other Admitted Assets*.

e. Replication (synthetic asset) transactions addressed in *SSAP No. 86—Derivatives*. The admissibility, classification and measurement of a replication (synthetic asset) transactions are not preemptively determined by the principles-based bond definition and should be evaluated in accordance with the guidance on replication (synthetic asset) transactions within SSAP No. 86.

f. Investments that are captured specifically within other SSAPs. For example, reporting entity acquired structured settlements are captured in scope of *SSAP No. 21R—Other Admitted Assets*, held surplus notes are captured in scope of *SSAP No. 41R—Surplus Notes* and working capital finance investments are captured in scope of *SSAP No. 105—Working Capital Finance Investments*. Investments captured in scope of other SSAPs are subject to the measurement and admittance provisions of those SSAPs. Furthermore, investments that have specific reporting lines on dedicated schedules (such as with both surplus notes and WCFI) shall be reported on their dedicated lines.

SUMMARY CONCLUSION

Principles-Based Bond Definition

5. A bond shall be defined as any security[2] representing a creditor relationship, whereby there is a fixed schedule for one or more future payments, and which qualifies as either an issuer credit obligation or an asset-backed security as described in this statement.

[2] This statement adopts the GAAP definition of a security as it is used in FASB Accounting Standards Codification Topics 320 and 860. Evaluation of an investment under this definition should consider the substance of the instrument rather than solely its legal form.

Security: A share, participation, or other interest in property or in an entity of the issuer or an obligation of the issuer that has all of the following characteristics:

a. It is either represented by an instrument issued in bearer or registered form or, if not represented by an instrument, is registered in books maintained to record transfers by or on behalf of the issuer.
b. It is of a type commonly dealt in on securities exchanges or markets or, when represented by an instrument, is commonly recognized in any area in which it is issued or dealt in as a medium for investment.
c. It is either one of a class or series or by its terms is divisible into a class or series of shares, participations, interests or obligations.

6. Determining whether a security represents a creditor relationship should consider its substance, rather than solely the legal form of the instrument. The analysis of whether a security represents a creditor relationship should consider all other investments the reporting entity owns in the investee as well as any other contractual arrangements. A security that in substance possesses equity-like characteristics or represents an ownership interest in the issuer does not represent a creditor relationship. While not intended to be all-inclusive, paragraphs 6.a.-6.d. discuss specific elements that may introduce equity-like characteristics:

a. Determining whether a debt instrument represents a creditor relationship in substance when the source of cash flows for repayment is derived from underlying equity interests inherently requires significant judgment and analysis. Unlike a debt instrument collateralized by assets with contractual cash flows, debt instruments collateralized by equity interests are dependent on cash flow distributions that are not contractually required to be made and are not controlled by the issuer of the debt. As a result, there is a rebuttable presumption that a debt instrument collateralized by equity interests does not represent a creditor relationship in substance. Notwithstanding this rebuttable presumption, it is possible for such a debt instrument to represent a creditor relationship if the characteristics of the underlying equity interests lend themselves to the production of predictable cash flows and the underlying equity risks have been sufficiently redistributed through the capital structure of the issuer. Factors to consider in making this determination include but are not limited to:

   i. Number and diversification of the underlying equity interests
   ii. Characteristics of the underlying equity interests (vintage, asset-types, etc.)
   iii. Liquidity facilities
   iv. Overcollateralization
   v. Waiting period for distributions/paydowns to begin
   vi. Capitalization of interest
   vii. Covenants (e.g., loan-to-value trigger provisions)
   viii. Reliance on ongoing sponsor commitments

b. While reliance of the debt instrument on sale of underlying equity interests or refinancing at maturity does not preclude the rebuttable presumption from being overcome, it does require that the other characteristics mitigate the inherent reliance on equity valuation risk to support the transformation of underlying equity risk to bond risk. As reliance on sale or refinancing increases, the more compelling the other factors needed to overcome the rebuttable presumption become.

c. Analysis of whether the rebuttable presumption for underlying equity interests is overcome shall be conducted and documented by a reporting entity at the time such an investment is acquired. The level of documentation and analysis required will vary based on the characteristics of the individual debt instrument, as well as the level of third-party and/or non-insurance company market validation to which the issuance has been subjected. For example, a debt instrument collateralized by fewer, less diversified equity interests would require more extensive and persuasive documented analysis than one collateralized by a larger diversified portfolio of equity interests. Likewise, a debt instrument that has been successfully marketed to unrelated and/or non-insurance company investors, may provide enhanced market validation of the structure compared to one held only by related party and/or insurance company investors where capital relief may be the primary motivation for the securitization.

d. In order for a debt instrument to represent a creditor relationship in accordance with

Paragraph 6, it must have pre-determined principal and interest payments (whether fixed interest or variable interest) with contractual amounts that do not vary based on the appreciation or depreciation (i.e., performance) of any underlying collateral value or other non-debt variable. For example, an issued security that has varying principal and interest payments based on the appreciation of referenced equity, real estate or other non-debt variable is precluded from bond treatment. This exclusion is not intended to restrict variables that are commonly related to debt instruments such as, but not limited to, plain-vanilla[3] inflation or benchmark interest rate adjustments (such as with U.S. TIPs or SOFR-linked coupons, respectively), scheduled interest rate step-ups, or credit-quality related interest rate adjustments. This exclusion is also not intended to encompass nominal interest rate adjustments[4]. For clarification purposes, all returns from a debt instrument in excess of principal are required to be considered as interest. Therefore, investments with "stated" interest and then "additional returns" to which the holder of the debt instrument is entitled are collectively considered as interest and shall be assessed together in determining whether the investment has variable principal or interest due to underlying referenced non-debt variables. Examples of securities excluded from the bond definition under this guidance:

i. Structured Notes, which are securities that otherwise meet the definition of a bond, but for which the contractual amount of the instrument to be paid at maturity (or the original investment) is at risk for other than the failure of the borrower to pay the principal amount due, are excluded from the bond definition. These investments, although in the form of a debt instrument, incorporate the risk of an underlying variable in the terms of the agreement, and the issuer obligation to return the full principal is contingent on the performance of the underlying variable. These investments are addressed in *SSAP No. 86—Derivatives*. Mortgage-referenced securities issued by a government sponsored enterprise are explicit inclusions in scope of SSAP No. 43. Foreign-denominated bonds subject to variation as a result of foreign currency fluctuations are not structured notes.

ii. Principal-protected securities, as defined in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* are excluded from the bond definition as they have a performance component whose payments originate from, or are determined by, non-fixed income securities. These investments shall follow the guidance for non-bond securities in *SSAP No. 21—Other Admitted Assets.*

[3] Inflation or benchmark interest rate adjustment mechanisms are considered plain-vanilla if based on widely recognized measures of inflation or interest rate benchmarks and excludes those that involve either leverage (such as a multiplier) or an inverse adjustment relationship.

[4] Nominal interest rate adjustments are those that are too small to be taken into consideration when assessing the investment's substance as a bond. Nominal adjustments are not typically influential factors in an investors' evaluation of investment return and are often included to incentivize certain behavior of the issuer. An example would include sustainability-linked bonds where failure to achieve performance metrics could cause interest rate adjustments. In general, interest rate adjustments that adjust the total return from interest by more than 10% (e.g., >0.4% for a 4% yielding bond), would not be considered nominal. Further, any such adjustments that cause an investment to meet the definition of a structured note would not be considered nominal.

7. An issuer credit obligation is a bond, for which the general creditworthiness of an operating entity or entities through direct or indirect recourse, is the primary[5] source of repayment. Operating entity or entities includes holding companies with operating entity subsidiaries where the holding company has the ability to access the operating subsidiaries' cash flows through its ownership rights. An operating entity may be any sort of business entity, not-for-profit organization, governmental unit, or other provider of goods or services, but not a natural person or "ABS Issuer" (as defined in paragraph 8). Examples of issuer credit obligations include, but are not limited to:

a. U.S. Treasury securities, including U.S. Treasury Inflation-Indexed Securities;(INT 01-25)

b. U.S. government agency securities;

c. Municipal securities issued by the municipality or supported by cash flows generated by a municipally-owned asset or entity that provides goods or services (e.g., airport, toll roads, etc.);

d. Corporate bonds issued by operating entities, including Yankee bonds and zero-coupon bonds;

e. Corporate bonds, issued by holding companies that own operating entities;

f. Project finance bonds issued by operating entities;

g. Investments in the form of securities for which repayment is fully supported by an underlying contractual obligation of a single operating entity (e.g., Credit Tenant Loans (CTLs), Equipment trust certificates (ETCs), other lease backed securities, Funding Agreement Backed Notes (FABNs), etc.). For purposes of applying this principal concept, repayment is fully-supported by the underlying operating entity obligation if it provides cash flows for the repayment of all interest and at least 95% of the principal of the security.

h. Bonds issued by real estate investment trusts (REITs) or similar property trusts;

i. Bonds issued by business development corporations, closed-end funds, or similar operating entities, in each case registered under the 1940 Act.

j. Convertible bonds issued by operating entities, including mandatory convertible bonds as defined in paragraph 20.b.

[5] "Primary" refers to the first in order of repayment source, not to a majority of the sources of repayment. For example, an issuer obligation may have secondary recourse to collateral upon default of the operating entity but would otherwise be expected to be fully repaid with cash flows of the operating entity. This differs from an asset-backed security for which the primary source of repayment is from cash flows of the collateral.

8. An asset-backed security[6] is a bond issued by an entity (an "ABS Issuer") created for the primary purpose of raising debt capital backed by financial assets[7] or cash generating non-financial assets owned by the ABS Issuer, for which the primary source of repayment is derived from the cash flows associated with the underlying defined collateral rather than the cash flows of an operating entity[8]. In most instances, the ABS Issuer is not expected to continue functioning beyond the final maturity of the debt initially raised by the ABS Issuer. Also, many ABS Issuers are in the form of a trust or special purpose vehicle ("SPV"), although the presence or lack of a trust or SPV is not a definitive criterion for determining that a security meets the definition of an asset-backed security. The provisions in paragraphs 9-10 detail the two defining characteristics that must be present for a security to meet the definition of an asset-backed security.

9. The assets owned by the ABS Issuer are either financial assets or cash-generating non-financial assets. Cash-generating non-financial assets are defined as assets that are expected to generate a meaningful level of cash flows toward repayment of the bond through use, licensing, leasing, servicing or management fees, or other similar cash flow generation. For the avoidance of doubt, there must be a meaningful level of cash flows to service the debt, other than through the sale or refinancing of the underlying assets held by the ABS Issuer. Reliance on cash flows from the sale or refinancing of cash generating non-financial assets does not preclude a security from being classified as an asset-backed security so long as the conditions in this paragraph are met.

a. *Meaningful Level of Cash Flows*: Determining what constitutes a "meaningful" level of cash flows generated to service the debt from sources other than the sale or refinancing of the underlying collateral pursuant to paragraph 9 is specific to each transaction, determined at origination, and shall consider the following factors:

   i. The price volatility in the principal market for the underlying collateral;
   ii. The liquidity in the principal market for the underlying collateral;
   iii. The diversification characteristics of the underlying collateral (i.e., types of collateral, geographic location(s), source(s) of cash flows within the structure, etc.);
   iv. The overcollateralization of the underlying collateral relative to the debt obligation; and
   v. The variability of cash flows, from sources other than sale or refinancing, expected to be generated from the underlying collateral.

---

[6] The underlying collateral supporting an asset-backed security shall meet the definition of an asset by the ABS Issuer. Certain forms of collateral, such as rights to future cash flows, may not be recognized as assets by the selling entity but may be recognized as assets when sold to an ABS Issuer. These assets are permitted as the collateral supporting an asset-backed security, although they may not represent an asset that can be liquidated to provide payment toward the issued debt obligations (i.e., if the future cash flows do not materialize). The limited ability to liquidate the underlying collateral supporting an asset-backed security does not impact the structural determination of whether an issued security meets the definition of an asset-backed security but may impact the recoverability of the investment, as well as the consideration of whether there is sufficient credit enhancement.

[7] *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* defines a financial asset as cash, evidence of an ownership interest in an entity, or a contract that conveys to one entity a right (a) to receive cash or another financial instrument from a second entity or (b) to exchange other financial instruments on potentially favorable terms with the second entity. As a point of clarity, for the purposes of this standard, financial assets do not include assets for which the realization of the benefits conveyed by the above rights depends on the completion of a performance obligation (e.g., leases, mortgage servicing rights, royalty rights, etc.). These assets represent non-financial assets, or a means through which non-financial assets produce cash flows, until the performance obligation has been satisfied.

[8] Dedicated cash flows from an operating entity can form the underlying defined collateral in an asset-backed security. This dynamic, perhaps noted in a whole-business securitization, still reflects an asset-backed security and is not an issuer credit obligation.

The factors for price variability and the variability of cash flows are directly related to the "meaningful" requirement. That is, as price volatility or variability of cash flows increase, the required percentage of cash flows generated to service the debt from sources other than the sale or refinancing of the underlying collateral must also increase. The factors for liquidity, diversification and overcollateralization are inversely related to the "meaningful" concept. That is, as liquidity, diversification or overcollateralization increase, the required percentage of cash flows generated to service the debt from sources other than the sale or refinancing of the underlying collateral may decrease.

b. As a practical expedient to determining whether a cash generating non-financial asset is expected to produce meaningful cash flows, a reporting entity may consider an asset for which less than 50% of the original principal relies on sale or refinancing to meet the meaningful criteria. In applying this practical expedient, only contractual cash flows of the non-financial assets may be considered. This practical expedient should not be construed to mean that assets cannot meet the meaningful criteria if they rely on sale or refinancing to service greater than 50% of the original principal or if they rely on cash flows that are not contracted at origination. Rather, such instances would require a complete analysis of the considerations described within the meaningful level of cash flows definition in paragraph 9.

10. The holder of a debt instrument issued by an ABS Issuer is in a different economic position than if the holder owned the ABS Issuer's assets directly. The holder of the debt instrument is in a different economic position if such debt instrument benefits from substantive credit enhancement through guarantees (or other similar forms of recourse), subordination and/or overcollateralization.

a. *Substantive Credit Enhancement*: The intent of the criteria requiring the holder to be in a different economic position is to distinguish qualifying bonds from instruments with equity-like characteristics or where the substance of the transaction is more closely aligned with that of the underlying collateral. To qualify as an ABS under this standard, there is a requirement that there are substantive credit enhancements within the structure that absorb losses before the debt instrument being evaluated would be expected to absorb losses. This is inherent in the context of an issuer credit obligation in scope of SSAP No. 26R as the owners of the equity in the operating entity are the first to absorb any variability in performance of the operating entity. The same concept applies to asset-backed securities. If substantive credit enhancement did not exist, the substance of the debt instrument being evaluated would be more closely aligned with that of the underlying collateral than that of a bond. Credit enhancement that is merely nominal or lacks economic substance does not put a holder in a different economic position. The substantive credit enhancement required to be in a different economic position is specific to each transaction; determined at origination; and refers to the level of credit enhancement a market participant (i.e., knowledgeable investor transacting at arm's length) would conclude is substantive.

b. The first loss position may be issued as part of a securitization in the form of a debt or equity interest, or it may be retained by the sponsor and not issued as part of the securitization. If the first loss position (or a more senior position(s), if the first loss position(s) lacks contractual payments along with a substantive credit enhancement) is issued as part of the securitization, and does not have contractual principal and interest payments along with substantive credit enhancement and is held by a reporting entity, the investment(s) does not qualify for reporting as a bond and shall be reported on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value consistent with the treatment for residuals. (These items are further addressed in *SSAP No. 21R—Other Admitted Assets*.)

11. Whether an issuer of debt represents an operating entity or ABS Issuer is unambiguous in most instances, but certain instances may be less clear. For example, an entity may operate a single asset such as a toll road or power generation facility (e.g., project finance) which serves to collateralize a debt issuance, and the cash flows produced by the operation of the assets are pledged to service the debt. In many such instances, the entity is structured as a bankruptcy-remote entity that is separate from the municipality or project sponsor. Such entities have characteristics of operating entities as the operation of the asset constitutes a stand-alone business. They also have many common characteristics of ABS Issuers as they are formed for the purpose of raising debt capital backed by the cash flows from collateral held by a bankruptcy-remote entity. When viewed more holistically, these issuing entities are typically being used to facilitate the financing of an operating component of a project sponsor or municipality. The use of a bankruptcy-remote entity facilitates the efficient raising of debt to finance the operating project, but the primary purpose is to finance an operating project. Therefore, structures in which the issuing entity represents a stand-alone business producing its own operating revenues and expenses, where the primary purpose is to finance an operating project, shall be considered operating entities despite certain characteristics they may share with ABS Issuers.

12. The definition of a creditor relationship, per paragraph 6, does not include equity/fund investments (such as mutual funds or exchanged-traded funds), or securities that possess equity-like characteristics or that represent an ownership interest in the issuer. However, as identified in paragraph 2, exchange traded funds (ETFs), which qualify for bond treatment, as identified in Part Three of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and included in the 'SVO-Identified Bond ETF List' published on the SVO's webpage are provided special statutory accounting treatment and are included within the scope of this statement. These investments shall follow the guidance within this statement, as if they were issuer credit obligations, unless different treatment is specifically identified in paragraphs 32-38.

13. Investments within the scope of this statement issued by a related party, or acquired through a related party transaction, are also subject to the provisions, admittance assessments and disclosure requirements of *SSAP No. 25—Affiliates and Other Related Parties.*

14. Investments within the scope of this statement meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement and SSAP No. 25.

Accounting and Reporting Guidance for Investments that Qualify as Issuer Credit Obligations[9]

Acquisitions, Disposals and Changes in Unrealized Gains and Losses

15. A bond acquisition or disposal shall be recorded on the trade date (not the settlement date) except for the acquisition of private placement bonds which shall be recorded on the funding date. At acquisition, bonds shall be reported at their cost, including brokerage and other related fees. The reported cost of a bond received as a property dividend or capital contribution shall be the initial recognized value. SSAP No. 25 shall be used to determine whether a transfer is economic or noneconomic for initial recognition.

16. For reporting entities required to maintain an interest maintenance reserve (IMR), the accounting for realized capital gains and losses on sales of bonds shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7.

---

[9] For all references to "bond" investments beginning in paragraph 15, this term intends to refer to investments that are permitted accounting and reporting treatment within scope of this standard.

17. For reporting entities not required to maintain an IMR, realized gains and losses on sales of bonds shall be reported as net realized capital gains or losses in the statement of income. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

Amortized Cost

18. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond.[10] (INT 07-01) Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion), except "make-whole" call provisions, shall be amortized to the call or maturity value/date which produces the lowest asset value (yield-to-worst). Although the concept for yield-to-worst shall be followed for all callable bonds, make-whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision.

Application of Yield-to-Worst

19. For callable bonds[11], the first call date after the lockout period (or the date of acquisition if no lockout period exists) shall be used as the "effective date of maturity." Depending on the characteristics of the callable bonds, the yield-to-worst concept in paragraph 18 shall be applied as follows:

a. For callable bonds with a lockout period, premium in excess of the next call price[12] (subsequent to acquisition[13] and lockout period) shall be amortized proportionally over the length of the lockout period. After each lockout period (if more than one), remaining premium shall be amortized to the call or maturity value/date which produces the lowest asset value.

b. For callable bonds without a lockout period, the book adjusted carrying value (at the time of acquisition) of the callable bonds shall equal the lesser of the next call price (subsequent to acquisition) or cost. Remaining premium shall then be amortized to the call or maturity value/date which produces the lowest asset value.

c. For callable bonds that do not have a stated call price, all premiums over par shall be immediately expensed. For callable bonds with a call price at par in advance of the maturity date, all premiums shall be amortized to the call date.

---

[10] For perpetual bonds with an effective call option, any applicable premium shall be amortized utilizing the yield-to-worst method.

[11] Callable bonds within the scope of paragraph 19 excludes bonds with make-whole call provisions unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision. Exhibit C includes illustrations for the amortization of callable bonds.

[12] Reference to the "next call price" indicates that the reporting entity shall continuously review the call dates/prices to ensure that the amortization (and resulting BACV) follows the yield-to-worst concept throughout the time the reporting entity holds the bond.

[13] The reporting entity shall only consider call dates/prices that occur after the reporting entity acquires the bond. If all of the call dates had expired prior to the reporting entity acquiring the bond, the reporting entity would consider the bond continuously callable without a lockout period.

Balance Sheet Amount

20. Bonds shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the NAIC *Valuations of Securities* product prepared by the NAIC Securities Valuation Office (SVO).

a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value. For perpetual bonds which do not possess or no longer possess an effective call option, the bond shall be reported at fair value regardless of NAIC designation.

b. Mandatory convertible bonds: Mandatory convertible bonds are subject to special reporting instructions and are not assigned NAIC designations or unit prices by the SVO. The balance sheet amount for mandatory convertible bonds shall be reported at the lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics. (For example, if converted to common stock, the security will be in scope of *SSAP No. 30R—Unaffiliated Common Stock*, if converted to preferred stock, the security will be in scope of *SSAP No. 32R—Preferred Stocks*.)

21. The premium paid on a zero coupon convertible bond that produces a negative yield as a result of the value of a warrant exceeding the bond discount shall be written off immediately so that a negative yield is not produced. The full amount of the premium should be recorded as amortization within investment income on the date of purchase.

Impairment

22. An other-than-temporary[INT 06-07] impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition.[14] A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bond's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with SSAP No. 7. The other-than-temporary impairment loss shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

[14] If a bond has been modified from original acquisition, the guidance in *SSAP No. 36—Troubled Debt Restructuring* and paragraph 22 of *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* shall be followed, as applicable. After modification of original terms, future assessments to determine other-than-temporary impairment shall be based on the modified contractual terms of the debt instrument.

© 2023 National Association of Insurance Commissioners

23. In periods subsequent to the recognition of an other-than-temporary impairment loss for a bond, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the bond on the measurement date shall become the new cost basis of the bond and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized over the remaining life of the security in the prospective manner based on the amount and timing of future estimated cash flows. The security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than temporary shall be recorded as realized losses.

Income

24. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of bonds, and the addition of discount accrual. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts which have been determined to be uncollectible. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

25. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

26. The amount of prepayment penalty and/or acceleration fee to be reported as investment income or loss shall be calculated as follows:

a. For called or tendered bonds in which the total proceeds (consideration) received exceeds par:

i. The amount of investment income reported is equal to the consideration received less the par value of the investment; and

ii. Any difference between the book adjusted carrying value (BACV) and the par value at the time of disposal shall be reported as realized capital gains and losses, subject to the authoritative literature in SSAP No. 7.

b. For called or tendered bonds in which the consideration received is less than par[15]:

i. To the extent an entity has in place a process to identify an explicit prepayment penalty or acceleration fee, these should be reported as investment income. (An entity shall consistently apply their process. Once a process is in place, an entity is required to maintain a process to identify prepayment penalties for called bonds in which consideration received is less than par.)

ii. After determining any explicit prepayment penalty or acceleration fee, the reporting entity shall calculate the resulting realized gain as the difference between

[15] This guidance applies to situations in which consideration received is less than par but greater than the book adjusted carrying value (BACV). Pursuant to the yield-to-worst concept, bonds shall be amortized to the call or maturity date that produces the lowest asset value. In the event a bond has not been amortized to the lowest value prior to the call, or in cases of an accepted tender bond offer (BACV is greater than the consideration received), the entire difference between consideration received and the BACV shall be reported to investment income.

the remaining consideration and the BACV, which shall be reported as realized capital gain, subject to the authoritative literature in SSAP No. 7.

Origination Fees

27. Origination fees represent fees charged to the borrower in connection with the process of originating or restructuring a transaction such as the private placement of bonds. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points) shall be amortized into income over the term of the bond consistent with paragraph 18 of this statement. Other origination fees shall be recorded as income upon receipt.

Origination, Acquisition and Commitment Costs

28. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the bond, consistent with paragraph 15 of this statement. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase or commitment to purchase bonds shall be charged to expense when incurred.

Commitment Fees

29. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future, generally, is refundable only if the bond is issued. If the bond is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

30. A fee paid to the reporting entity to obtain a commitment to be able to borrow funds at a specified rate and with specified terms quoted in the commitment agreement, generally, is not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 18 of this statement over the life of the bond as an adjustment to the investment income on the bond. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Exchanges and Conversions

31. If a bond is exchanged or converted into other securities (including conversions of mandatory convertible securities addressed in paragraph 20.b.), the fair value of the bond surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the bond surrendered, then it shall become the cost basis for the new securities.

SVO-Identified Bond Exchange –Traded Funds

32. SVO-identified bond exchange-traded fund (ETF) investments, as discussed in paragraph 2.d., are captured within the scope of this statement for accounting and reporting[16] purposes only. The inclusion of these investments within this statement is not intended to contradict state law regarding the classification

[16] With the inclusion of these SVO-identified investments as bonds, specific guidelines are detailed in the annual statement instructions for reporting purposes.

of these investments and does not intend to provide exceptions to state investment limitations involving types of financial instruments (e.g., equity/fund interests), or with regards to concentration risk (e.g., issuer).

33. SVO-identified bond ETF investments shall be initially reported at cost, including brokerage and other related fees. Subsequently, SVO-identified bond ETF investments shall be reported at fair value,[17] with changes in fair value recorded as unrealized gains or losses) unless the reporting entity has elected use[18] of a documented systematic approach to amortize or accrete the investment in a manner that represents the expected cash flows from the underlying bond holdings. This special measurement approach is referred to as the "systematic value" measurement method and shall only be used for the SVO-identified bond ETF investments within the scope of this statement.

34. Use of the systematic value for SVO-identified bond ETF investments is limited as follows:

a. Systematic value is only permitted to be designated as the measurement method for AVR filers acquiring qualifying investments that have an NAIC designation of 1 to 5, and for non-AVR filers acquiring qualifying investments with an NAIC designation of 1 or 2. SVO-identified investments that have an NAIC designation of 6 for AVR filers or 3-6 for non AVR filers shall be measured at fair value.

b. Designated use of a systematic value is an irrevocable election per qualifying investment (by CUSIP) at the time investment is originally acquired[19]. Investments owned prior to being identified by the SVO as a qualifying SSAP No. 26R investment are permitted to be subsequently designated to the systematic value measurement method. This designation shall be applied as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors*, which requires the reporting entity to recognize a cumulative effect to adjust capital and surplus as if the systematic value measurement method had been applied retroactively for all prior periods in which the investment was held. The election to use systematic value for investments shall be made before the year-end reporting of the investment in the year in which the SVO first identifies the investment as a qualifying SSAP No. 26R investment.

c. Once designated for a particular investment, the systematic value measurement method must be retained as long as the qualifying investment is held by the reporting entity and the investment remains within the scope of this statement with an allowable NAIC designation per paragraph 34.a. Upon a full sale/disposal of an SVO-identified investment (elimination of the entire CUSIP investment), after 90 days the reporting entity can reacquire the SVO-identified investment and designate a different measurement method. If the reporting entity was to reacquire the same investment within 90 days after it was sold/disposed, the reporting entity must utilize the measurement method previously designated for the investment. Subsequent/additional purchases of the same SVO-identified investment (same CUSIP) already held by a reporting entity must follow the election previously made by the reporting entity. If an investment no longer qualifies for a systematic value

---

[17] For these investments, net asset value (NAV) is allowed as a practical expedient to fair value.

[18] The election to use systematic value is not a permitted or prescribed practice as it is an accounting provision allowed within this SSAP. Similarly, this election does not override state statutes, and if a state does not permit reporting entities the election to use systematic value as the measurement method, this is also not considered a permitted or prescribed practice. SVO-identified investments reported at fair value (NAV) or systematic value, if in accordance with the provisions of this standard, are considered in line with SSAP No. 26R and do not require permitted or prescribed disclosures under *SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures*.

[19] This guidance requires investments purchased in lots to follow the measurement method established at the time the investment was first acquired.

measurement because the NAIC designation has declined, then the security must be subsequently reported at the lower of "systematic value" or fair value. If the security has been removed from the SVO-identified listings, and is no longer in scope of this statement, then the security shall be measured and reported in accordance with the applicable SSAP.

d. Determination of the designated systematic value must follow the established[20] approach, which is consistently applied for all SVO-identified bond ETF investments designated for a systematic value. In all situations, an approach that continuously reflects "original" or "historical cost" is not an acceptable measurement method. The designated approach shall result with systematic amortization or accretion of the equity/fund investment in a manner that represents the expected cash flows from the underlying bond holdings.

35. Income distributions received from SVO-identified bond ETF investments (cash or shares) shall be reported as interest income in the period in which it is earned. For those SVO-identified bond ETF investments where the systematic value method is applied, interest income shall be recognized based on the book yield applied to the carrying value each period, similar to bonds.

36. For reporting entities required to hold an IMR and AVR reserve, realized and unrealized gains and losses for the SVO-identified bond ETF investments shall be consistent with bonds within the scope of this standard. With this guidance, recognition of gains/losses (and corresponding AVR/IMR impacts) will be based on the ETF, and not activity that occurs within the ETF (e.g., such as changes in the underlying bonds held within the ETF). Also consistent with the guidance for bonds, recognized losses from other-than-temporary impairments shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

37. SVO-identified bond ETF investments reported at systematic value shall recognize other-than-temporary impairments in accordance with the following guidance:

a. A decision to sell an SVO-identified bond ETF investment that has a fair value less than systematic value results in an other-than-temporary impairment that shall be recognized.

b. In situations in which an SVO-identified bond ETF investment has a fair value that is less than systematic value, the reporting entity must assess for other-than-temporary impairment. For these investments, a key determinant, along with other impairment indicators in *INT 06-07: Definition of Phrase "Other Than Temporary*," shall be whether the net present value of the projected cash flows for the underlying bonds in the SVO-identified investment have materially[21] declined from the prior reporting period (most recent issued financial statements) or from the date of acquisition. In calculating the net present value of the projected cash flows for each reporting period, entities shall discount cash flows using a constant purchase yield, which is the initial book yield at acquisition. Consistent with INT 06-07, a predefined threshold to determine whether the decline in projected cash flows (e.g., percentage change) shall result in an other than temporary impairment has not been set, as exclusive reliance on such thresholds removes the ability of management to apply its judgement.

c. Upon identification of an SVO-identified investment as OTTI, the reporting entity shall recognize a realized loss equal to the difference between systematic value and the current

[20] Exhibit B details the established systematic value approach.

[21] The net present value of cash flows will decline in a declining interest rate environment. Reporting entities shall use judgment when assessing whether the decline in cash flows is related to a decline in interest rates or the result of a non-interest related decline, and determine whether the decline represents an OTTI pursuant to INT 06-07.

fair value. (Although the determination of OTTI is likely based on projected cash flows, the realized loss recognized for the OTTI is based on the difference between systematic value and fair value.) The fair value of the SVO-identified investment on the date of the OTTI shall become the new cost basis of the investment.

d. Subsequent to recognition of an OTTI, the SVO-identified bond ETF investment is required to be reported at the lower of the then-current period systematic value or fair value. As the underlying bonds can be replaced within an ETF, it is possible for a subsequent period systematic value and fair value to recover above the fair value that existed at the time an OTTI was recognized. As such, the requirement for subsequent reporting at the lower of systematic value or fair value is intended to be a current period assessment. For example, in reporting periods after an OTTI, the systematic value for an SVO-identified investment may exceed the fair value at the time of the OTTI, but in no event shall the reported systematic value exceed the then-current period fair value. If current calculated systematic value is lower than the current fair value, systematic value is required.

38. Impairment guidance for SVO-identified bond ETF investments reported at fair value is consistent with impairment guidance for investments captured under SSAP No. 30R. Pursuant to this guidance, realized losses are required to be recognized when a decline in fair value is considered to be other-than-temporary. Subsequent fluctuations in fair value shall be recorded as unrealized gains or losses. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses. A decision to sell an impaired security results with an other-than-temporary impairment that shall be recognized.

Disclosures

39. The financial statements shall include the following disclosures:

a. Fair value in accordance with *SSAP No. 100R—Fair Value*;

b. Concentrations of credit risk in accordance with *SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures*;

c. The basis at which the bonds, mandatory convertible securities, and SVO-identified bond ETF investments identified in paragraph 2.d., are stated;

d. Amortization method for bonds and mandatory convertible securities, and if elected by the reporting entity, the approach for determining the systematic value for SVO-identified securities per paragraph 33. If utilizing systematic value measurement method approach for SVO-identified investments, the reporting entity must include the following information:

i. Whether the reporting entity consistently utilizes the same measurement method for all SVO-identified investments[22] (e.g., fair value or systematic value). If different measurement methods are used[23], information on why the reporting entity

[22] As identified in paragraph 34.d., a consistent approach must be followed for all investments designated to use the systematic value method. As such, this disclosure is limited to situations in which a reporting entity uses both fair value and systematic value for reported SVO-identified investments.

[23] The guidance in this statement allows different measurement methods by qualifying investment (CUSIP), but it is anticipated that companies will generally utilize a consistent approach for all qualifying investments.

© 2023 National Association of Insurance Commissioners

has elected to use fair value for some SVO-identified investments and systematic value for others.

ii. Whether SVO-identified investments are being reported at a different measurement method from what was used in an earlier current-year interim and/or in a prior annual statement. (For example, if reported at systematic value prior to the sale, and then reacquired and reported at fair value.) This disclosure is required in all interim reporting periods and in the year-end financial statements for the year in which an SVO-identified investment has been reacquired and reported using a different measurement method from what was previously used for the investment. (This disclosure is required regardless of the length of time between the sale/reacquisition of the investments, but is only required in the year in which the investment is reacquired.)

iii. Identification of securities still held that no longer qualify for the systematic value method. This should separately identify those securities that are still within the scope of SSAP No. 26R and those that are being reported under a different SSAP.

e. For each balance sheet presented, the book/adjusted carrying values, fair values, excess of book/carrying value over fair value or fair value over book/adjusted carrying values for each pertinent bond or assets in scope of this statement.

f. For the most recent balance sheet, the book/adjusted carrying values and the fair values of bonds and assets in scope of this statement, reported in statutory Annual Statement Schedule D – Part 1A due:

i. In one year or less (including items without a maturity date which are payable on demand and in good standing);

ii. After one year through five years;

iii. After five years through ten years;

iv. After ten years (including items without a maturity date which are either not payable on demand or not in good standing).

g. For each period for which results of operations are presented, the proceeds from sales of bonds and assets in scope of this Statement and gross realized gains and gross realized losses on such sales.

h. For each balance sheet presented, all items in scope of this Statement in an unrealized loss position for which other-than-temporary declines in value have not been recognized:

i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

ii. The aggregate related fair value of bonds with unrealized losses.

i. The disclosures in paragraphs 39.h.i. and 39.h.ii. should be segregated by items that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 100R.

j. As of the most recent balance sheet date presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

k. When it is not practicable to estimate fair value in accordance with SSAP No. 100R, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

l. For securities sold, redeemed or otherwise disposed as a result of a call or tender offer feature (including make-whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.

40. Refer to the Preamble for further discussion regarding disclosure requirements. The disclosures in paragraphs 39.b., 39.e., 39.f., 39.g., 39.h., 39.i., 39.j. and 39.k. shall be included in the annual audited statutory financial reports only.

Effective Date and Transition

43. Revisions to SSAP No. 26R, adopted August 2023, to incorporate the principle-based bond concepts are effective January 1, 2025. These revisions incorporate principle concepts on what should be reported as a long-term bond. Securities that qualify as issuer credit obligations within the principle concepts are captured within scope of SSAP No. 26R. Securities that qualify as asset-backed securities within the principle concepts are captured within scope of SSAP No. 43R. Securities that do not qualify as

© 2023 National Association of Insurance Commissioners

issuer credit obligations or ABS, unless specifically permitted in scope of these statements, are not permitted to be reported as a bond.

44. At the time of transition, reporting entities shall make their best efforts to assess investments to determine whether they qualify within the bond definition for reporting on Schedule D-1. The bond definition requires assessments at the time of acquisition (as of the origination date), and it is recognized that reporting entities may not have the means to complete historical assessments for securities held at the time of transition. For these instances, if information is not readily available for reporting entities to assess a security as of the date at origination, reporting entities may utilize current or acquisition information in concluding that a security qualifies for reporting as a bond as either an issuer obligation or asset-backed security.

45. Investments that were reported as a bond on Schedule D-1: Long-Term Bonds as of December 31, 2024, that do not qualify under the principle-based bond concepts shall be reported as a disposal from that schedule, with a reacquisition on the appropriate reporting schedule as of January 1, 2025. These investments shall be accounted for in accordance with the resulting SSAP that addresses the specific investment structure. For securities that are reported at the lower of amortized cost or fair value under the new applicable guidance, this could result with an unrealized loss in the measurement of the investment at the time of the reclassification. Although the adoption of this guidance is considered a change in accounting principle under SSAP No. 3, the following transition guidance shall be applied on January 1, 2025, to ensure consistency in reporting and to allow investment schedules to roll appropriately:

a. Securities reclassified from Schedule D-1 as they no longer qualify under the bond definition shall be reported as a disposal from Schedule D-1 at amortized cost. Although no proceeds are received, amortized cost at the time of disposal shall be reported as consideration on Schedule D-4.

   i. For securities held at amortized cost at the time of disposal, book adjusted carrying value and amortized cost shall agree, preventing gain or loss recognition at the time of reclassification.

   ii. For securities held at fair value under the lower of amortized cost or fair value measurement method, previously reported unrealized losses shall be reversed on Jan. 1, 2025, prior to disposal, resulting with a reported value that mirrors amortized cost at the time of disposal. This action prevents realized loss recognition at time of reclassification.

b. Securities reclassified from Schedule D-1 shall be recognized on the subsequent schedule (e.g., Schedule BA) with an actual cost that agrees to the disposal value (amortized cost). Immediately subsequent to recognition on the resulting schedule, the securities shall be reported in accordance with the measurement method prescribed by the applicable SSAP:

   i. For securities previously reported at fair value on Schedule D-1 (under a lower of amortized cost or fair value measurement method), the reporting entity will recognize an unrealized loss to match the previously reported book adjusted carrying value. Subsequently, the security will continue to reflect a lower of amortized cost or fair value measurement method.

   ii. For securities previously reported at amortized cost on Schedule D-1, if the subsequent statement requires a lower of amortized cost or fair value measurement

method, then the reporting entity shall recognize an unrealized loss to the extent fair value is less than amortized cost.

iii. After application of paragraph 45.b.i. and 45.b.ii. all securities shall reflect either the same reported value as of December 31, 2024 (amortized cost or fair value) or a lower reported value (if the security is subject to the lower of amortized cost or fair value measurement method). There should be no instances that result with a security having a greater reported value than what was presented on December 31, 2024. Subsequent to transition, securities reported at fair value may incur unrealized gains or losses due to fair value fluctuations, but should never have unrealized gains that result with a book adjusted carrying value that exceeds amortized cost.

46. With this transition guidance, changes in measurement for securities reclassified under the bond definition will be reported as a change in unrealized capital gains (losses) in the first quarter 2025 financial statements (unless sold in the interim with a realized gain or loss) and not as a change in accounting principle. To enable regulators the ability to identify the impact of securities reclassified under the bond definition, the following disclosure for the 2025 first quarter financial statement is required:

a. Aggregate book adjusted carrying value for all securities reclassified off Schedule D-1.

b. Aggregate book adjusted carrying value after transition for all securities reclassified off Schedule D-1 that resulted with a change in measurement basis. (This shall be a subset of paragraph 46.a. and captures the securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.)

c. Aggregate surplus impact for securities reclassified off Schedule D-1. This shall include the difference between book adjusted carrying value as of December 31, 2024, and book adjusted carrying value after transition for those securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.

47. For clarification purposes, the transition guidance shall be applied prospectively beginning with the first year of adoption (Jan. 1, 2025). For disclosures that provide comparative information, reporting entities shall not restate the prior year's information in the 2025 disclosure.

Historical Adoption and Revisions to Original SSAP No. 26R

48. For historical reference, the original adoption, and subsequent revisions to SSAP No. 26R prior to the adoption of the principles-based bond definition are detailed below:

a. SSAP No. 26R was originally effective for years beginning January 1, 2001.

b. Guidance for the accounting of securities subsequent to other than temporary impairments was originally effective for reporting periods beginning on January 1, 2009, with early adoption permitted. This guidance was incorporated from *SSAP No. 99—Accounting for Securities Subsequent to an Other-Than-Temporary Impairment* in 2010. The original impairment guidance included in this standard, and the substantive revisions reflected in SSAP No. 99 are retained for historical purposes in Issue Paper No. 131.

© 2023 National Association of Insurance Commissioners

c. Guidance pertaining to the accounting for zero-coupon convertible bonds was originally effective December 8, 2002, and was subsequently incorporated into this statement from *INT 02-05: Accounting for Zero Coupon Convertible Bonds*.

d. Guidance adopted in December 2013 clarifying the 'yield-to-worst' concept for bonds with make-whole call provisions was initially effective January 1, 2014, unless the company had previously been following the guidance. (Companies that have previously been following the original intent, as clarified in the revisions, were not impacted by these changes.)

e. The guidance on the calculation of investment income for prepayment penalties and/or acceleration fees was effective January 1, 2017, on a prospective basis and was required for interim and annual reporting periods thereafter, with early application permitted.

f. In April 2017, revisions were incorporated in accordance with the investment classification project. These revisions are detailed in Issue Paper No. 156 and were effective December 31, 2017. These revisions clarified the scope of the bond definition as well as incorporated new guidance for SVO-Identified Bond ETFs identified in scope of this statement. Retained transition / application guidance is captured as follows:

    i. For situations in which there is an interval of time between when a company purchases an investment and when the investment is designated as an SVO-identified investment eligible for systematic value, the book yield should be calculated by equating the book/adjusted carrying value at that time to the portfolio's aggregate cash flows (ACF). For these situations, the ETF shall be reported as a disposed security on the prior reporting schedule and reported as an acquisition.

    ii. In accordance with the systematic value methodology, at the next reporting period date, the reporting entity shall amortize or accrete the carrying value by the difference between the effective interest using the initial book yield, and the distributions received, and shall recalculate the new effective book yield using the new carrying value and ACF as of the last day of the reporting period.

    iii. As the necessary historical ACF data is not available for calculating the initial book yield at acquisition for the net present value constant purchase yield (NPV-CPY) method for impairment recognition, reporting entities shall use recently published yield-to-maturity (YTM) as their constant purchase yield to be applied for NPV-CPY impairment recognition.

    iv. If the investment no longer qualifies as an SVO-Identified Bond ETF in scope of statement, this change shall be reflected prospectively from the effective date. Investments previously captured in this statement, that will move within the scope of another SSAP and reporting schedule shall be shown as dispositions on and shown as an acquisition on the schedule for which it will be subsequently reported.

g. The guidance to explicitly exclude securities for which the contract amount of the instrument to be paid at maturity (or the original investment) is at risk for other than failure of the borrower to pay the contractual amount due, were effective December 31, 2019.

h. Revisions to clarify existing guidance that all prepayment penalties and acceleration fees for when a bond is liquidated prior to its scheduled maturity date, including those from tendered bonds, shall follow the guidance in SSAP No. 26R was effective January 1, 2021.

Reporting entities that have historically applied this guidance shall not change historical practices, but the effective date of January 1, 2021, with early application permitted, was allowed for reporting entities to make systems changes to capture tendered bonds in scope of this guidance.

EXHIBIT A - EXAMPLES OF ANALYSIS FOR ASSET-BACKED SECURITIES

1. As detailed in paragraphs 9-10, the holder of an asset-backed securities is 1) required to be in a different economic position than if the holder owned the ABS Issuer's assets directly, and 2) if the assets owned by the ABS Issuer are cash generating non-financial assets, then the assets are expected to generate a meaningful level of cash flows towards repayment of the bond through use, licensing, leasing servicing or management fees, or other similar cash flow generation. (This guidance requires a meaningful level of cash flows to service the debt other than through the sale or refinancing of the assets.) This appendix details example analysis for these meaningful cash flow and substantive credit enhancements.

2. **Example 1:** A reporting entity invests in debt instruments issued from a SPV sponsored by the Government National Mortgage Association (GNMA), the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (Freddie Mac) (collectively, "Agency or Agencies"). These debt instruments pass through principal and interest payments received from underlying mortgage loans held by the SPV to the debtholders proportionally, with principal and interest guaranteed by the Agencies. While there is prepayment and extension risk associated with the repayment of the underlying mortgage loans, the credit risk associated with the mortgage loans is assumed by the Agencies.

3. **Example 1 Rationale:** Although the reporting entity participates on a proportional basis in the cash flows from the underlying mortgage loans held by the SPV, the reporting entity is in a different economic position than if it owned the underlying mortgage loans directly because the credit risk has been redistributed and assumed by the Agencies. This is a substantive credit enhancement because a market participant (i.e., a knowledgeable investor transacting at arm's length) would conclude the Agency guarantee is expected to absorb all losses before the debt instrument being evaluated. Therefore, the holder of the debt instrument is in a substantively different economic position than if the holder owned the ABS Issuer's unguaranteed assets directly, in accordance with the requirements in paragraph 10. When guarantees do not cover 100% of principal and interest as the Agency guarantees do in this example, it is still appropriate to determine if the guarantee is substantive in accordance with the requirements in paragraph 10, to determine if the holder is in a substantively different economic position that if the holder held the ABS Issuer's assets directly.

4. **Example 2:** A reporting entity invested in a debt instrument issued by a SPV. Payments under the instrument are secured by a note, a legal assignment from the borrower of a lease for real property and an assignment of the lease payments from an operating entity tenant. Additional security is provided by a mortgage on the leased property (the "underlying collateral"). The leased property is owned by the borrower under the note -- the SPV does not have any ownership interest in the underlying collateral, though it has legal recourse to it through the mortgage. The tenant makes contractually-fixed payments over the life of the lease to the borrower, who has assigned both the lease and the lease payments to the SPV as security for the debt. While the debt is outstanding, the lease, the lease payments, and the mortgage all serve as security for the debtholders. Should a default occur, the debtholders can foreclose on and liquidate the real property as well as submit an unsecured lease claim in the lessee's bankruptcy for all or a portion of the defaulted lease payments. The loan-to-value (as a percentage of property value) at origination is 100%.

5. The existing lease payments are sufficient to cover all interest payments and all scheduled debt amortization payments over the life of the debt instrument. However, at debt maturity, there is a balloon payment due, totaling 50% of the original outstanding debt principal amount. The corresponding lease has no balloon payment due at lease maturity, so the SPV will either need to refinance the debt or sell the underlying collateral to service the final debt balloon payment. The property has a high probability of appreciating in value over the term, however ignoring any potential for appreciation, the 50% loan-to-value at maturity is the expected figure at the end of the debt term based solely on scheduled amortization payments. The real property is expected to be subject to some market value volatility and periods of lower

liquidity at certain points in time but has a predictable value range and ready market over a longer period of time, such that the property could be liquidated over a reasonable period of time, if necessary.

6. **Example 2 Rationale:** The reporting entity determined that the debtholder was in a fundamentally different position than if the real estate was owned directly. The lease is a cash generating non-financial asset which is expected to generate a meaningful level of cash flows for the repayment of the bonds which covers all interest payments and 50% of the principal payments. The level of reliance on the collateral value for sale or refinancing is just over the cutoff for using the practical expedient (<50%), so a full analysis is required. In reaching its determination, the reporting entity considered the predictable nature of the cash flows, which are contractually fixed for the life of the debt instrument, as well as the ability of the underlying collateral value to provide for the balloon payment through sale or refinancing in light of its characteristics. While the real property may have some market value volatility and periods of lower liquidity at points in time, the cash flows produced by the lease were concluded to reduce the loan balance to a level (50% loan-to-value) that would be able to be recovered by sale or refinancing at the maturity of the loan.

7. The reporting entity also determined that the structure provides substantive credit enhancement in the form of overcollateralization to conclude that investors are in a different economic position than holding the real property directly, in accordance with the requirements in paragraph 10. In reaching this conclusion, the reporting entity noted that although the debt instrument starts with a 100% loan-to-value (not including the value of the contractually required lease payments), contractual fixed payments from the lease provide additional security such that the reporting entity is in a different economic position than owning the property directly. Lease cash flows are sufficient to cover the payment of all interest and 50% of the outstanding principal over the term of the lease. In the context of the predictable nature of the cash flows and collateral value range over time, the reporting entity concluded that a market participant (i.e., knowledgeable investor transacting at arm's length) would consider this level of overcollateralization to put the investor in a substantively different economic position than owning the underlying property directly.

8. For the purposes of determining whether there is substantive overcollateralization, it is appropriate to consider any expected economic depreciation, if it is reasonably expected, but it is not appropriate to consider any expected economic appreciation. Note that a debt instrument with a loan-to- value that is expected to decrease over time is not necessarily deemed to have substantive overcollateralization.

9. **Example 3:** A reporting entity invested in a debt instrument with the same characteristics as described in Example 2, except that the existing lease at the time of origination has a contractual term that is shorter than that of the debt instrument. It is expected with a high degree of probability that the lease will be renewed, and a substantial leasing market exists to replace the lessee should they not renew. However, in the unlikely circumstance that the property cannot be re-leased, there would not be enough cash flows to service the scheduled principal and interest payments, and the property would have to be liquidated to pay off the debt upon default.

10. **Example 3 Rationale:** All details of Example 3, including the expected collateral cash flows, are consistent with those in Example 2, except that the cash flows in Example 2 are contractually fixed for the duration of the debt while the cash flows in Example 3 are subject to re-leasing risk. Notwithstanding the involvement of re-leasing risk, the reporting entity concluded that the ability to re-lease the property was highly predictable and supported the conclusion that the underlying collateral was expected to produce meaningful cash flows to service the debt.

11. This distinction is to highlight that the expected cash flows of a cash-generating non-financial asset may or may not be contractually fixed for the term of the bond. Certain securitized cash flow streams may not by their nature lend themselves to long-term contracts (e.g., single-family home rentals), but may nevertheless lend themselves to the production of predictable cash flows. While the non-contractual nature of the cash flows is an important consideration in determining whether a non-financial asset is expected to

produce meaningful cash flows to service the debt, it does not, in and of itself, preclude a reporting entity from concluding that the assets are expected to produce meaningful cash flows.

12. **Example 4:** A reporting entity invested in a debt instrument issued by a SPV that owns equipment which is leased to an equipment operator. The equipment operator makes lease payments to the SPV, which are passed through to service the SPV's debt obligation. While the debt is outstanding, the equipment and lease are held in trust and pledged as collateral for the debtholders. Should a default occur, the debtholders can foreclose on and liquidate the equipment as well as submit an unsecured lease claim in the lessee's bankruptcy for any defaulted lease payments. The loan-to-value at origination is 70%.

13. The existing lease payments are sufficient to cover all interest payments and all scheduled debt amortization payments over the life of the debt instrument. However, at maturity, there is a balloon payment due, totaling 80% of the original outstanding principal amount. The corresponding lease has no balloon payment due at lease maturity, so the SPV will either need to refinance the debt or sell the underlying equipment to service the final debt balloon payment. The loan-to-value at maturity is expected to increase to 95% considering the scheduled principal amortization payments net of the expected economic depreciation in the equipment value over the term of the debt. The equipment is expected to be subject to some market value volatility and periods of lower liquidity at certain points in time, but has a predictable value range and ready market over a longer period of time, such that the equipment could be liquidated over a reasonable period of time, if necessary.

14. **Example 4 Rationale:** The equipment is a cash generating non-financial asset which is not expected to generate a meaningful level of cash flows for the repayment of the bonds via the existing lease that covers all interest payments and 20% of principal payments. In reaching this determination, the reporting entity considered that, while the cash flows being produced are predictable, the ability to recover the principal of the debt investment is almost entirely reliant on the equipment retaining sufficient value to sell or refinance to satisfy the debt.

15. The reporting entity also determined that the structure lacks substantive credit enhancement to conclude that investors are in a different economic position than holding the equipment directly, in accordance with the requirements in paragraph 10. In reaching this conclusion, the reporting entity noted that the debt starts with a 70% loan-to-value, but the overcollateralization is expected to deteriorate over the term of the debt as the equipment economically depreciates more quickly than the debt amortizes. This results in a high loan-to-value (i.e., 95%) at maturity, relative to the market value volatility of the underlying collateral. Despite the predictable nature of the cash flows, the reporting entity concluded that the debt instrument lacked a substantive level of overcollateralization to conclude that the investor is in a different economic position than owning the underlying equipment directly. It was determined that the level of overcollateralization, as determined by a market participant (i.e., a knowledgeable investor transacting at arm's length), is nominal. Therefore, the reporting entity concluded that it was in a substantively similar position as if it owned the equipment directly.

16. For the purposes of determining whether there is substantive overcollateralization, it is appropriate to consider any expected economic depreciation, if it is reasonably expected, but it is not appropriate to factor in any expected economic appreciation. Note that a debt instrument with a loan-to- value that is expected to increase over time is not necessarily deemed to have nominal overcollateralization.

EXHIBIT B – SYSTEMATIC VALUE CALCULATION

The established systematic value method is considered an "aggregated cash flow" (ACF) method in which the cash flow streams from the individual bond holdings are aggregated into a single cash flow stream. These cash flows are scaled such that, when equated with the market price at which the ETF was purchased or sold, an internal rate of return is calculated, representing the investor's initial book yield for the ETF. Although the initial book yield is utilized to determine the current period effective yield, and the resulting adjustments to the ETF's reported (systematic) value, the book yield is recalculated at least quarterly in order to adjust the investor's book yield to reflect current cash flow projections of the current bond holdings within the ETF.

The following calculation shall be followed by reporting entities electing systematic value:

1. Download **cash flows** file from ETF provider website.

Item	Value	Formula / Source
NAV:	$115.07	(Official end-of-day NAV found on ETF provider website)
Maturity:	12/8/2027	= SUMPRODUCT (CASHFLOW_DATE column, PRINCIPAL column)/SUM (PRINCIPAL column)
When Paid:	Monthly	
Par Value:	2,500	# shares purchased
Monthly Effective Interest:	$0.40	= (Recalculated Effective Book Yield from prior month x Prior Month Ending Book Value /12)
Distribution:	$0.34	Found on provider website
Net Amortization/Accretion:	$0.06	= (Monthly Effective Interest) – (Distribution)
Prior Month Ending Book Value:	$115.35	
NPV Constant Yield Method:	$117.10	= XNPV (Initial Book Yield, CASHFLOW column, CASHFLOW_DATE column) / 1000000
Initial Book Yield:	4.15%	
Book (Systematic) Value:	$115.41	= (Prior Period Ending Book Value) + (Net "amortization/ accretion")
Expense Ratio:	0.1500%	
Recalculated Effective Book Yield:	4.1639%	=XIRR(CASHFLOW column, CASHFLOW_DATE column, 0.05)

All formulas on the left are at a per share level (excepting "Par Value" which represents the number of shares purchased for this lot).

The resulting values calculated on the left are aggregated to reflect the total number of shares held on the previous tabs reflecting how one might populate the reporting schedule with these values.

Additionally, the cash flows in the data file are based on 1 million shares. This was done in order to make the cash flows easier to observe and work with (i.e., at a single share level, cash flows would be at fractional dollar levels). Therefore, in order to calculate the yield, investors must multiply the price of the ETF by 1 million shares and then use that value as a cash outflow against the positive cash inflows from the bond portfolio in order to calculate the IRR.

CUSIP	ASOF_DATE	CALL_TYPE	CASHFLOW_DATE	INTEREST	PRINCIPAL	CASHFLOW
2. Insert a row in between the column headings and the cash flow data.		3. Filter for "Call Type" is WORST. (Click "Data" at the top of Excel sheet, then click "Filter" and click the new dropdown box in the "Call Type" cell and select only "WORST.")	4. Enter the date of the cash flow data file underneath cash flow date. **8/31/20X1**			5. Under the column "CASHFLOW" enter the following formula in Excel: =(-Ending Book Value)*1000000 **(115,414,059.56)**
"Ticker"	8/31/20X1	WORST	9/8/20X1	136,538.564	81,472.372	218,010.937
"Ticker"	8/31/20X1	WORST	9/9/20X1	5,990.106	0	5,990.106
"Ticker"	8/31/20X1	WORST	9/10/20X1	9,706.324	0	9,706.324

EXHIBIT C – AMORTIZATION TREATMENT FOR CALLABLE BONDS

Example 1: Call Price Less Than BACV Throughout the Life of the Bond

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)
01/01/2009 – Call Date/Call Price 107
12/15/2010 – Reporting Entity Acquires Bond. Cost = 106
01/01/2012 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 104
01/01/2014 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 103
01/01/2016 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 102

General Note for Examples: The reporting entity purchased the bond at a premium (cost was greater than par). The 1/1/2009 call date and price is ignored as it occurred prior to the reporting entity acquiring the bond. The bolded numbers represent the lowest asset value at each reporting period. The bond is amortized to the lowest asset value, which in this scenario is amortizing to the call dates and prices. (The standard amortization to the maturity date is shown as it should be compared to the amortization to the call date/price to verify that the BACV at any given reporting date reflects the lowest asset value.)

Date	Action	Cost	Call Price	BACV (Under Call Date/Price)	Amortization to the Lowest Value	BACV Under Standard Amortization
12/15/2010	Acquired	106		106		106
12/31/2011	Lockout Period			**104**	2	105.25
01/01/2012	Call Date		104	**104**		
12/31/2012	Year-End Reporting			**103.5**	0.5	104.50
12/31/2013	Year-End Reporting			**103**	0.5	103.75
01/01/2014	Call Date		103	**103**		
12/31/2014	Year-End Reporting			**102.5**	0.5	103
12/31/2015	Year-End Reporting			**102**	0.5	102.25
01/01/2016	Call Date Exercised		102	**102**		

Standard Amortization
This table shows the amortization with a purchase date of 12/15/2010 at $106 through the maturity date of 12/31/2018.

12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization	.75	.75	.75	.75	.75	.75	.75	.75
BACV	105.25	104.50	103.75	103	102.25	101.50	100.75	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	102	100	102	(2)

* Per paragraph 26, the entity would recognize a $(2) loss (BACV less par), and investment income of $2 (consideration less par).

Example 2: Call Price Could be Greater Than BACV

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)
01/01/2009 – Call Date/Call Price 107
12/15/2010 – Reporting Entity Acquires Bond. Cost = 104
01/01/2012 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 106
01/01/2014 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 103
01/01/2016 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 102

The bolded numbers represent the lowest asset value:

Date	**Action**	**Cost**	**Call Price**	**BACV (Under Call Date / Price)**	**Amortization To the Lowest Asset Value**	**BACV Under Standard Amortization**
12/15/2010	Acquired	104		104		104
12/31/2011	Lockout Period		106	104	0.5	**103.50**
01/01/2012	Call Date		106	104		**103.50**
12/31/2012	Year-End Reporting			103.5	0.5	**103**
12/31/2013	Year-End Reporting			103	0.5	**102.50**
01/01/2014	Call Date		103	103		**102.50**
12/31/2014	Year-End Reporting			102.5	0.5	**102**
12/31/2015	Year-End Reporting			102	0.5	**101.50**
01/01/2016	Call Date Exercised		102	102		**101.50**

Standard Amortization
This table shows the amortization with a purchase date of 12/15/2010 at $104 through the maturity date of 12/31/2018.

12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization	0.50	0.50	0.50	0.50	0.50	0.50	0.50	0.50
BACV	103.50	103	102.50	102	101.50	101	100.50	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	102	100	101.50	(1.50)

* Per paragraph 26, the entity would recognize a $(1.50) loss (BACV less par), and investment income of $2 (consideration less par).

Example 3: Call Price Could be Greater Than BACV

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)
01/01/2009 – Call Date/Call Price 107
12/15/2010 – Reporting Entity Acquires Bond. Cost = 104
01/01/2012 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 106
01/01/2014 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 102
01/01/2016 – Scheduled Call Date Subsequent to Reporting Entity Acquisition. Call Price 101

Note – This illustration shows that the evaluation of whether standard amortization (to the maturity date) or the call date price may change over the time. The bolded numbers represent the lowest asset value:

Date	Action	Cost	Call Price	BACV (Under Call Date / Price)	Amortization To the Lowest Asset Value	BACV Under Standard Amortization
12/15/2010	Acquired	104		104		
12/31/2011	Lockout Period		106	104	0.5	**103.50**
01/01/2012	Call Date		106	104		**103.50**
12/31/2012	Year-End Reporting			103	0.5	**103**
12/31/2013	Year-End Reporting			**102**	1	102.50
01/01/2014	Call Date		102	**102**		102.50
12/31/2014	Year-End Reporting			**101.5**	0.5	102
12/31/2015	Year-End Reporting			**101**	0.5	101.50
01/01/2016	Call Date Exercised		101	**101**		101.50

Standard Amortization
This table shows the amortization with a purchase date of 12/15/2010 at $104 through the maturity date of 12/31/2018.

12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization	0.50	0.50	0.50	0.50	0.50	0.50	0.50	0.50
BACV	103.50	103	102.50	102	101.50	101	100.50	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	101	100	101	(1)

* Per paragraph 26, the entity would recognize a $(1) loss (BACV less par), and investment income of $1 (consideration less par).

Example 4: Continuously Callable Bond – Callable at Par After Initial Lockout Period

12/31/2008 – Issuance of Bond. Par = 100/10-Year Bond (Matures 12/31/2018)
01/01/2009 – Call Date / Call Price 107 – Continuously Callable Thereafter at Par
12/15/2010 – Reporting Entity Acquires Bond. Cost = 104

The bolded numbers represent the lowest asset value:

Date	Action	Cost	Call Price	BACV (Under Call Date/Price)	Amortization To the Lowest Asset Value	BACV Under Standard Amortization
12/15/2010	Acquired	104		100	4	
12/31/2010	Year-End Reporting		100	**100**	There is no subsequent amortization as the premium was fully expensed at acquisition.	104
12/31/2011	Year-End Reporting		100	**100**		103.50
12/31/2012	Year-End Reporting		100	**100**		103
12/31/2013	Year-End Reporting		100	**100**		102.50
12/31/2014	Year-End Reporting		100	**100**		102
12/31/2015	Year-End Reporting		100	**100**		101.50
01/01/2016	Year-End Reporting		100	**100**		101.50

Standard Amortization
This table shows the amortization with a purchase date of 12/15/2010 at $104 through the maturity date of 12/31/2018.

12/15/2010	12/31/2011	12/31/2012	12/31/2013	12/31/2014	12/31/2015	12/31/2016	12/31/2017	12/31/2018
Amortization	0.50	0.50	0.50	0.50	0.50	0.50	0.50	0.50
BACV	103.50	103	102.50	102	101.50	101	100.50	100

	Consideration	Par Value	BACV at Disposal Date	Realized Gain/Loss*
01/01/2016 Call Exercised	100	100	100	0

* Since the call price is par and could occur immediately after acquisition, the premium is immediately expensed. When the bond is called, there is no gain or loss as the consideration received equals the BACV.

Example 5: Determination of Prepayment Penalty When Call Price is Less Than Par

Call Price Less than Par					
Entity 1				**Entity 2**	
Par	100			Par	100
BACV	24			BACV	25
Consideration	26			Consideration	26
Explicit fee	1			Explicit fee	1
Remaining consideration	25			Remaining consideration	25
Gain	2			Gain	0
Income*	0			Income**	1

*Entity 1 does not have in place a process to identify an explicit prepayment penalty or acceleration fee.

**Entity 2 has in place a process to identify an explicit prepayment penalty or acceleration fee.

EXHIBIT A – QUESTION AND ANSWER IMPLEMENTATION GUIDE **18**

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for each security investment that qualifies as an asset-backed security (ABS) under the principles-based bond definition detailed in *SSAP No. 26R—Bonds*. Each security shall be individually assessed under the bond definition to determine applicability as an asset-backed security and reported separately regardless of whether the security was issued in combination or as a unit with other investments. Items captured in scope of this statement are collectively referred to as asset-backed securities.

2. In addition to security investments that qualify under the principles-based definition as an asset-backed security, certain specific investments are also captured in scope of this statement:

a. Mortgage Referenced Securities that do not meet the definition of an asset-backed security. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise[1] or by a special purpose trust in a transaction sponsored by a government sponsored enterprise in the form of a "credit risk transfer." In these situations, the issued security is tied to a referenced pool of mortgages and the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions within this standard apply to mortgage-referenced securities.

b. Freddie-Mac When Issued K-Deal (WI Trust) Certificates fully guaranteed by Freddie Mac are included in scope of this statement from original acquisition, and not initially reported as a derivative forward contract. (INT 22-01)

3. Securities captured in scope of this statement are not permitted to be reported as cash equivalents or short-term investments in scope of *SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments* even if acquired within one year or less from the maturity date. Investments captured in scope of SSAP No. 2R are intended to reflect situations in which limited risk remains, either from changes in credit quality or interest rates, due to the short-duration until maturity. As ultimate cash flows from asset-backed securities may have other risks beyond default risk or interest rate risk (such as performance factors, balloon payments, collateral quality) reporting as a cash equivalent or short-term investment is not permitted to prevent inappropriate assumptions of the investment's remaining potential risk.

4. This statement excludes:

a. Securities captured in scope of *SSAP No. 26R—Bonds*.

b. Mortgage loans in scope of *SSAP No. 37—Mortgage Loans* that qualify under an SVO structural assessment as SVO-Identified Credit Tenant Loans. These investments are excluded as these are captured as issuer credit obligations under SSAP No. 26R.

c. Securities that do not qualify as Asset-Backed Securities per the bond definition in *SSAP No. 26R—Bonds*. This exclusion includes residual or interests, as well as first loss positions, that do not have contractual payments or substantive credit enhancement. Debt securities that do not qualify and residual interests shall follow guidance in *SSAP No. 21R—Other Admitted Assets*.

SUMMARY CONCLUSION

Principles-Based Bond Definition - Asset-Backed Security

5. Investments within the scope of this statement issued by a related party or acquired through a related party transaction or arrangement are also subject to the provisions, admittance assessments and disclosure requirements *of SSAP No. 25—Affiliates and Other Related Parties.* In determining whether a security is a related party investment, consideration should be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security. Asset-

[1] Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that either directly issue qualifying mortgage-referenced securities or sponsor transactions in which a special purpose trust issues qualifying mortgage-reference securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of mortgage credit risk.

© 2023 National Association of Insurance Commissioners

backed securities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement and SSAP No. 25.

a. Although an asset-backed security may be acquired from a non-related issuer, if the assets held in trust predominantly[2] reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment. In such situations where the underlying collateral assets are issued by related parties that do not qualify as affiliates, these securities shall be identified as related party investments in the investment schedules.

b. An asset-backed security may involve a relationship with a related party but not be considered an affiliated investment. This may be because the relationship does not result in direct or indirect control of the issuer or because there is an approved disclaimer of control or affiliation. Regardless of whether investments involving a related party relationship are captured in the affiliated investment reporting lines, these securities shall be identified as related party investments in the investment schedules. Examples of related party relationships would include involvement of a related party in sponsoring or originating the asset-backed security or any type of underlying servicing arrangement. For the avoidance of doubt, investments from any arrangement that results in direct or indirect control, including control through a servicer or other controlling arrangement, shall be reported as affiliated in accordance with *SSAP No. 25—Affiliates and Other Related Parties*.

Initial Reporting Value and Recognition of Origination and Commitment Fees & Costs

6. Items in scope of this statement shall initially be reported at cost, including brokerage and related fees, unless otherwise detailed in paragraph 8. Acquisitions and dispositions shall be recorded on the trade date, not the settlement date, except for the acquisition of private placement asset-backed securities which shall be recorded on the funding date. For securities where all information is not known as of the trade date (e.g., actual payment factors and specific pools), a reporting entity shall make its best estimate based on known facts.

7. For assets that qualify in scope of this statement that result from a securitization or transfer of assets by the reporting entity captured in SSAP No. 103R, the guidance in that SSAP determines the initial reporting value:

a. For asset-backed securities resulting from transfers of participating interests that qualify as a sale, the participating interests in financial assets that continue to be held by the reporting entity transferor shall be measured and reported at the date of transfer by allocating the previous carrying amount between the participating interests transferred and sold, and the participating interests that are not transferred and continue to be held by the reporting entity, based on their relative fair values.

---

[2] In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in *SSAP No. 25—Affiliates and Other Related Parties*, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

b. For asset-backed securities resulting from transfers of an entire financial asset or group of entire financial assets that qualify as a sale, assets obtained, including beneficial interests, shall be initially recognized at fair value.

c. For asset-backed securities resulting from the transfer of assets that do not qualify as sales, the reporting entity transferor shall continue to report the transferred financial assets with no change in measurement.

8. Costs related to origination when paid in the form of brokerage and other related fees shall be capitalized as part of the cost of the asset-backed security. All other costs, including internal costs or costs paid to an affiliated entity related to origination, purchase, or commitment to purchase asset-backed securities, shall be charged to expense when incurred.

9. Origination fees represent fees charged to the borrower (paid to the reporting entity) in connection with the process of originating or restructuring a transaction. The fees include, but are not limited to, points, management, arrangement, placement, application, underwriting, and other fees pursuant to such a transaction. Origination fees shall not be recorded until received in cash. Origination fees intended to compensate the reporting entity for interest rate risks (e.g., points), shall be amortized into income over the term of the asset-backed security consistent with paragraph 12 of this statement. Other origination fees shall be recorded as income upon receipt.

10. Commitment fees are fees paid to the reporting entity that obligate the reporting entity to make available funds for future borrowing under a specified condition:

a. A fee paid to the reporting entity to obtain a commitment to make funds available at some time in the future is generally refundable only if the asset-backed security is issued. If the security is not issued, then the fees shall be recorded as investment income by the reporting entity when the commitment expires.

b. A fee paid to the reporting entity to obtain a commitment to borrow funds at a specified rate and with specified terms quoted in the commitment agreement is generally not refundable unless the commitment is refused by the reporting entity. This type of fee shall be deferred, and amortization shall depend on whether or not the commitment is exercised. If the commitment is exercised, then the fee shall be amortized in accordance with paragraph 12 of this statement over the life of the asset-backed security as an adjustment to the investment income on the security. If the commitment expires unexercised, the commitment fee shall be recognized in income on the commitment expiration date.

Subsequent Carrying Value Method, Amortization, Accruals and Prepayment Penalties

11. After initial recognition, the carrying value shall be determined in accordance with the reported NAIC designation. The determination of NAIC designations shall be in accordance with the requirements detailed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual)[3]:

a. For reporting entities that maintain an Asset Valuation Reserve (AVR), asset-backed securities, excluding residual tranches or interests, shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

[3] Paragraphs 39-40 provide guidance on the NAIC financial modeling approach applicable to certain securities in determining NAIC designations.

b. For reporting entities that do not maintain an AVR, asset-backed securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively), excluding residual tranches or interests, shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

c. For residual tranches or interests[4], all reporting entities shall report the item on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value. Changes in the reported value from the prior period shall be recorded as unrealized gains or losses. For reporting entities that maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. These items are captured in *SSAP No. 21R—Other Admitted Assets* and subject to admittance restrictions detailed in that statement.

12. Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method and shall be recorded as an adjustment to investment income.[INT 07-01] The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the asset-backed securities is expected to occur, not the stated maturity period. (P9)

13. Interest shall be accrued using the effective-yield method using the redemption prices and redemption dates used for amortizing premiums and discounts. Interest income consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium amortization and interest paid on acquisition of asset-backed securities, and the addition of discount accrual. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

14. An asset-backed security may provide for a prepayment penalty or acceleration fee in the event the investment is liquidated prior to its scheduled termination date. These fees shall be reported as investment income when received.

15. The amount of prepayment penalty and/or acceleration fees to be reported as investment income shall be calculated as follows:

a. The amount of investment income reported is equal to the total proceeds (consideration) received less the par value of the investment; and

b. Any difference between the book adjusted carrying value (BACV) and the par value at the time of disposal shall be reported as realized capital gains and losses subject to the authoritative literature in SSAP No. 7.

---

[4] Reference to "residual tranches or interests" intends to capture securitization tranches and beneficial interests as well as other structures that reflect loss layers without any contractual payments, whether principal or interest, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment's duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

Assessment of Cash Flows and Impact of Prepayments

16. Prepayments can be a significant variable element in the cash flows received from asset-backed securities because they may affect the yield and determine the expected maturity against which the yield is evaluated. For example, with a mortgage-backed security, falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created when rising interest rates slow repayment and can significantly lengthen the duration of the security. In addition to interest rate risk, other factors can influence the cash flows generated from an asset-backed securities. These factors include, but are not limited to, defaults of the underlying payors as well as performance requirements that must occur before cash flows can be generated from the underlying assets (such as with leases or royalty rights). If the underlying assets are delinquent or otherwise not generating expected cash flows, such items should be reflected in the cash flow analysis through diminishing security cash flows. Updated cash flow assessments shall continue to occur even if the underlying assets have not been liquidated and regardless of whether an other-than-temporary loss has been recognized.

17. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on all asset-backed securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying assets shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all asset-backed securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

18. Asset-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions. Reporting entities may utilize the prospective adjustment method for all asset-backed securities, or they may elect to utilize the retrospective adjustment methodology to specific asset-backed securities that are reported with NAIC designations that are of high credit quality[5] at the time of acquisition by the reporting entity. That is, the reporting entity shall determine if it will apply the retrospective or prospective method at the time of acquisition depending on the NAIC designation at that time and can only apply retrospective (as a policy election) to securities that of high credit. Subsequently, if an investment is downgraded below high credit quality, the reporting entity may continue to apply the retrospective method unless the security is other-then-temporarily impaired.

19. The prospective approach recognizes, through the recalculation of the effective yield to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the amortized cost of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.

20. The retrospective methodology changes both the yield and the amortized cost so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated effective yield will equate the present value of the actual and anticipated cash flows with the original cost

[5] Under U.S. GAAP, application of the retrospective method for beneficial interests in securitized financial assets, which would generally encompass most asset backed securities defined within SSAP 43R, is limited to "high quality" investments. This has been interpreted to be investments with AA or better ratings.

of the investment. The current amortized cost basis for the asset-backed security is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

Accretable Yield and Changes to Effective Yield for Application of Prospective Method

21. At initial acquisition of an asset-backed security, the reporting entity shall determine the accretable yield. The accretable yield is the excess of cash flows expected to be collected over the reporting entity's initial investment in the asset-backed security. The accretable yield shall be recognized as interest income on an effective-yield basis over the life of the asset-backed security[6]. The nonaccretable difference is the contractually required payments in excess of the cash flows expected to be collected. The nonaccretable difference shall not be recognized as an adjustment to yield, a loss accrual or a valuation allowance for credit risk. For transactions initially captured in SSAP No. 103R resulting from a reporting entity's transfer of assets, all cash flows estimated at the transaction date are defined as the holder's estimate of the amount and timing of estimated future principal and interest cash flows used in determining the purchase price or the holder's fair value for purposes of determining a gain or loss under SSAP No. 103R.

22. After the transaction date, cash flows expected to be collected are defined as the holder's estimate of the amount and timing of the estimated principal and interest cash flows based on the holder's best estimate of current considerations and reasonable and supportable forecasts. Expected cash flows are re-evaluated each quarter to determine if there has been a favorable (or an adverse) change in cash flows versus the previous estimate.

23. If upon evaluation there is a favorable (or an adverse) change in cash flows expected to be collected from the cash flows previously projected, the reporting entity shall recalculate the amount of accretable yield for the asset-backed security on the date of evaluation as the excess of cash flows expected to be collected over the assert-backed security's current amortized cost. The amortized cost is equal to the initial investment minus cash received to date, minus write-offs of the amortized cost basis (e.g., recognized other than temporary impairments) plus the yield accreted to date. If the security is in an impaired state (meaning, fair value is less than amortized cost, regardless if an unrealized loss has been recognized because the security is reported at amortized cost) and there is an adverse change in cash flows expected to be collected, an other-than-temporary impairment shall be considered to have occurred as described in paragraph 30 and requires recognition of a realized loss pursuant to paragraph 35. However, an adverse change in cash flows due solely to changes in the interest rate of a "plain-vanilla", variable-rate asset-backed security generally shall not result in the recognition of an other-than-temporary impairment (a plain-vanilla, variable-rate asset-backed investment does not include those variable-rate investments with interest rate reset formulas that involve either leverage or an inverse floater).

24. A favorable (or an adverse) change in cash flows expected to be collected is considered in the context of both timing and amount of the cash flows expected to be collected. Based on cash flows expected to be collected, interest income may be recognized on an asset-backed security even if the net investment in the asset-backed security is accreted to an amount greater than the amount at which the asset-backed security could be settled if prepaid immediately in its entirety. The adjustment shall be accounted for prospectively as a change in estimate in conformity with SSAP No. 3, with the amount of periodic accretion adjusted over the remaining life of the asset-backed security.

25. Determining whether there has been a favorable (or an adverse) change in cash flows expected to be collected from the cash flows previously projected (taking into consideration both the timing and amount

[6] An asset-backed security may be acquired at a discount because of a change in credit quality or rate or both. When a security is acquired at a discount that relates, at least in part, to the security's credit quality, the effective interest rate is the discount rate that equates the present value of the investor's estimate of the security's future cash flows with the purchase price of the security.

of the cash flows expected to be collected) involves comparing the present value of the remaining cash flows expected to be collected at the initial transaction date (or at the last date previously revised) against the present value of the cash flows expected to be collected at the current financial reporting date. Both the current and previous sets of cash flows shall be discounted at a rate equal to the current yield used to accrete the asset-backed security.

Recognition of Realized and Unrealized Gains and Losses and Impairment Guidance

26. Asset-backed securities required to be reported at the lower of amortized cost or fair value shall report changes from the prior reporting period as unrealized gains or losses unless an other-than-temporary impairment has occurred. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be reported through the AVR. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus). (P29)

27. Assessment of an other-than-temporary impairment is required for all asset-backed securities when fair value is less than the amortized cost basis. The amortized cost basis includes adjustments made to the cost of an investment for accretion, amortization, collection of cash, and previous other-than-temporary impairments recognized as a realized loss. Reporting a security at the lower of amortized cost or fair value is not a substitute for other-than-temporary impairment recognition. For securities reported at fair value where an other-than-temporary impairment has been determined, the loss recognized reflects the realization of unrealized losses previously recorded from fluctuations in fair value. (The extent to which unrealized losses are realized depends on whether the other-than-temporary impairment is considered a full impairment or a bifurcated impairment pursuant to paragraphs 34 and 35.) After the recognition of an other-than-temporary impairment, securities reported at the lower of amortized cost or fair value shall continue to report unrealized gains and losses from fluctuations in fair value.

28. If an entity intends to sell the asset-backed security (that is, it has decided to sell the security), an other-than-temporary impairment shall be considered to have occurred.

29. If an entity does not intend to sell the asset-backed security, the entity shall assess whether it has the intent and ability[7] to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred.

30. If the entity does not expect to recover the entire amortized cost basis of the security, the entity would be unable to assert that it will recover its amortized cost basis even if it does not intend to sell the security and the entity has the intent and ability to hold. (This includes situations in which an entity has an adverse change in cash flows expected to be collected for a security that is an impaired position (meaning, fair value is less than amortized cost, regardless of if an unrealized loss has been recognized.) In such situations, an other-than temporary impairment shall be considered to have occurred. (For mortgage-referenced securities, an OTTI is considered to have occurred when there has been a delinquency or other credit event in the referenced pool of mortgages such that the entity does not expect to recover the entire amortized cost basis of the security.) In assessing whether the entire amortized cost basis of the security will be recovered, an entity shall compare the present value of cash flows expected to be collected from the security with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will not be recovered, and an other-than-temporary impairment shall be considered to have occurred. A decrease in

[7] This assessment shall be considered a high standard due to the accounting measurement method established for the securities within the scope of this statement (amortized cost).

the present value of cashflows expected to be collected on an asset-backed security that results from an increase or decrease in expected prepayments on the underlying assets shall be considered in the estimate of the present value of cashflows expected to be collected.

31. In determining whether an other than-temporary impairment has occurred, an entity shall calculate the present value of cash flows expected to be collected based on an estimate of the expected future cash flows of the impaired asset-backed security, discounted at the security's effective interest rate. For securities in which there was no nonaccretable yield and for which there has been no changes to estimated cash flows since acquisition, the effective interest rate is the rate of return implicit in the security (that is, the contractual interest rate adjusted for any net deferred fees or costs, premium, or discount existing at the origination or acquisition of the security).[8] For all other securities, the effective interest rate is the rate implicit immediately prior to the recognition of the other-than-temporary impairment. (Meaning, the effective interest rate as adjusted to reflect the last revised assessment of expected cash flows.)

32. It is inappropriate to automatically conclude that a security is not other-than-temporarily impaired because all of the scheduled payments to date have been received. However, it also is inappropriate to automatically conclude that every decline in fair value represents an other-than-temporary impairment. Further analysis and judgment are required to assess whether a decline in fair value indicates that it is probable that the holder will not collect all of the contractual or estimated cash flows from the security. In addition, the length of time and extent to which the fair value has been less than cost can indicate a decline is other than temporary. The longer and/or the more severe the decline in fair value, the more persuasive the evidence that is needed to overcome the premise that it is probable that the holder will not collect all of the contractual or estimated cash flows from the issuer of the security.

33. In making its other-than-temporary impairment assessment, the holder shall consider all available information relevant to the collectibility of the security, including information about past events, current conditions, and reasonable and supportable forecasts, when developing the estimate of future cash flows. Such information generally shall include the remaining payment terms of the security, prepayment speeds, the financial condition of the issuer(s), expected defaults, and the value of any underlying collateral. To achieve that objective, the holder shall consider, for example, industry analyst reports and forecasts, sector credit ratings, and other market data that are relevant to the collectibility of the security. The holder also shall consider how other credit enhancements affect the expected performance of the security, including consideration of the current financial condition of the guarantor of a security (if the guarantee is not a separate contract) and/or whether any subordinated interests are capable of absorbing estimated losses on the loans underlying the security. The remaining payment terms of the security could be significantly different from the payment terms in prior periods (such as for some securities backed by "nontraditional loans"[9]). Thus, the holder shall consider whether a security backed by currently performing loans will continue to perform when required payments increase in the future (including "balloon" payments). The holder also shall consider how the value of any collateral would affect the expected performance of the

---

[8] An asset-backed security may be acquired at a discount because of a change in credit quality or rate or both. When a security is acquired at a discount that relates, at least in part, to the security's credit quality, the effective interest rate is the discount rate that equates the present value of the investor's estimate of the security's future cash flows with the purchase price of the security.

[9] A nontraditional loan may have features such as (a) terms that permit principal payment deferral or payments smaller than interest accruals (negative amortization), (b) a high loan-to-value ratio, (c) multiple loans on the same collateral that when combined result in a high loan-to value ratio, (d) option adjustable-rate mortgages (option ARMs) or similar products that may expose the borrower to future increases in repayments in excess of increases that result solely from increases in the market interest rate (for example, once negative amortization results in the loan reaching a maximum principal accrual limit), (e) an initial interest rate that is below the market interest rate for the initial period of the loan term and that may increase significantly when that period ends, and (f) interest-only loans that should be considered in developing an estimate of future cash flows.

security. If the fair value of the collateral has declined, the holder needs to assess the effect of that decline on the ability of the holder to collect the balloon payment.

34. When an other-than-temporary impairment has occurred because the entity intends to sell the security or has assessed that that they do not have the intent and ability to retain the investments in the security for a period of time sufficient to recover the amortized cost basis, the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment's amortized cost basis and its fair value at the balance sheet date (full impairment). For asset-backed securities held at lower of amortized cost or fair value, upon recognition of an other-than-temporary impairment, all unrealized losses would be considered realized and the current fair value becomes the new cost basis.)

35. When an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment's amortized cost basis and the present value of cash flows expected to be collected, discounted at the security's effective interest rate in accordance with paragraph 31 (bifurcated impairment). For asset-backed securities held at lower of cost or fair value, unrealized losses would be realized for the non-interest related decline. Hence, unrealized losses could continue to be reflected for these securities based on the difference between the current fair value and the present value of cash flows expected to be collected. (After recognizing an OTTI in these situations, the present value of cash flows expected to be collected becomes the new cost basis of the security.)

36. For reporting entities required to maintain an AVR or IMR, all unrealized gains and losses shall be reported through the AVR. For realized gains and losses, an analysis is required on whether the realized loss reflects an interest or non-interest related decline[10]. The analysis required is the same regardless of whether a realized loss results from an impairment write-down or whether there was a gain or loss upon sale. Guidance on specific scenarios resulting in realized gains and losses are as follows:

a. Unrealized Gains and Losses – Record all unrealized gains and losses through AVR. At the time an unrealized gain or loss is realized, allocation between AVR or IMR will depend on the analysis and bifurcation between interest or non-interest related declines Unrealized gains or losses that are realized shall be reversed from AVR before the recognition of the realized gain or loss within AVR and IMR.

b. Other-Than-Temporary Impairment – Non-interest related other-than-temporary impairment losses shall be recorded through the AVR and interest-related OTTI losses shall be recorded through the IMR. If the reporting entity wrote the security down to fair value due to the intent to sell or because the entity does not have the intent and ability to retain the investment for a period of time sufficient to recover the amortized cost basis, the entity shall bifurcate the realized loss between non-interest related (AVR) and interest related (IMR). The analysis for bifurcating impairment losses between AVR and IMR shall be completed as of the date when the other-than-temporary impairment is determined. Entities that recognized an OTTI based on the difference between amortized cost and the present value of expected cash flows shall recognize the full realized loss through AVR.

---

[10] Pursuant to INT 06-07, the term interest-related includes a declining value due to both increases in the risk free interest rate and general credit spread widening. Credit spreads can widen or contract for a variety of reasons, including supply/demand imbalances in the marketplace or the perceived higher/lower risk of an entire sector. If the declining value is caused, in whole or in part, due to credit spreads widening, but not due to fundamental credit problems of the issuer, the change in credit spreads is deemed to be interest-related.

© 2023 National Association of Insurance Commissioners

c. Security Sold at a Loss Without Prior OTTI – An entity shall bifurcate the loss into AVR and IMR portions depending on interest and non-interest related declines in accordance with the analysis performed as of the date of sale.

d. Security Sold at a Loss With Prior OTTI – An entity shall bifurcate the current realized loss into AVR and IMR portions depending on interest and non-interest related declines in accordance with the analysis performed as of the date of sale. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

e. Security Sold at a Gain With Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale. The bifurcation between AVR and IMR that occurs as of the date of sale may be different from the AVR and IMR allocation that occurred at the time of previous other-than-temporary impairments. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

f. Security Sold at a Gain Without Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale.

37. This statement does not permit reversals of recognized other-than-temporary impairments based on subsequent recoveries of fair value. If there are subsequent changes to the cash flows expected to be collected, the prospective adjustment method shall be used to adjust the effective yield in future periods to reflect those changes.

38. In periods subsequent to the recognition of an other than temporary impairment loss for an asset-backed security, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment at an amortized cost basis equal to the previous amortized cost basis less the other-than-temporary impairment recognized as a realized loss. The difference between the new amortized cost basis and the cash flows expected to be collected shall be accreted as interest income. A reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the asset-backed security.

Designation Guidance

39. For Residential Mortgage-Backed Securities (RMBS), Commercial Mortgage-Backed Securities (CMBS) and Collateralized Loan Obligations (CLOs) securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled RMBS/CMBS legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers' carrying value. For a modeled RMBS/CMBS non-legacy security, meaning one which closed after December 31, 2012, or modeled CLO, the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those RMBS/CMBS legacy securities that are financially modeled, the insurer must use NAIC

CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer's book/adjusted carrying value. The three-step process for modeled RMBS/CMBS legacy securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of an asset-backed security is compared to the modeled breakpoint values assigned to each NAIC designation and NAIC designation category for each CUSIP to establish the **initial** NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 11 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 39.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the NAIC designation and NAIC designation category for each CUSIP or is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 39.a.ii.).

b. All Other Asset-Backed Securities: For securities not subject to paragraph 39.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 11.

40. For securities that will be financially modeled under paragraph 39, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 39, regardless of the quarterly methodology used. (P28)

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 39.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 39.a.) for these securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 40.a. or 40.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 39.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 39.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate).

Giantization/Megatization of FHLMC or FNMA Mortgage-Backed Securities

41. Giantization/megatization of mortgage-backed securities is defined as existing pools of FHLMC or FNMA mortgage-backed securities (MBS) with like coupon and prefix which are repooled together by the issuing agency creating a new larger security. The new Fannie Mae "Mega" or Freddie Mac "Giant" is a guaranteed MBS pass-through representing an undivided interest in the underlying pools of loans.

42. Repooled FHLMC and FNMA securities meet the definition of substantially the same as defined in *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. The transaction shall not be considered a sale/purchase and no gain or loss shall be recognized. To properly document the repooling, the transaction shall be reported through Schedule D of the annual statement as a disposition and an acquisition.

43. Transaction fees charged by the issuing agencies shall be capitalized and amortized over the life of the repooled security.

Disclosures

44. In addition to the disclosures required for invested assets in general, the following disclosures regarding asset-backed securities shall be made in the financial statements. Regardless of the allowances within paragraph 63 of the Preamble, the disclosures in paragraph 44.f., 44.g. and 44.h. of this statement are required in separate, distinct notes to the financial statements:

a. Fair values in accordance with *SSAP No. 100R—Fair Value*.

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the asset-backed securities are stated;

d. The adjustment methodology used for each type of security (prospective or retrospective);

e. Descriptions of sources used to determine prepayment assumptions.

f. All securities within the scope of this statement with a recognized other-than-temporary impairment, disclosed in the aggregate, classified on the basis for the other-than-temporary impairment: (1) intent to sell, (2) inability or lack of intent to retain the investment in the security for a period of time sufficient to recover the amortized cost basis, or (3) present

value of cash flows expected to be collected is less than the amortized cost basis of the security.

g. For each security with an other-than-temporary impairment, recognized in the current reporting period by the reporting entity, as the present value of cash flows expected to be collected is less than the amortized cost basis of the securities:

i. The amortized cost basis, prior to any current-period other-than-temporary impairment.

ii. The other-than-temporary impairment recognized in earnings as a realized loss.

iii. The fair value of the security.

iv. The amortized cost basis after the current-period other-than-temporary impairment.

h. All impaired securities (fair value is less than cost or amortized cost) for which an other-than-temporary impairment has not been recognized in earnings as a realized loss (including securities with a recognized other-than-temporary impairment for non-interest related declines when a non-recognized interest related impairment remains):

i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

ii. The aggregate related fair value of securities with unrealized losses.

i. The disclosures in (i) and (ii) above should be segregated by those securities that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 100R.

j. Additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

k. When it is not practicable to estimate fair value, the investor should disclose the following additional information, if applicable:

i. The aggregate carrying value of the investments not evaluated for impairment, and

ii. The circumstances that may have a significant adverse effect on the fair value.

l. For securities sold, redeemed or otherwise disposed as a result of a callable feature (including make whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.

m. The items in the scope of this statement are also subject to the annual audited disclosures in *SSAP No. 26R—Bonds*, paragraphs. 39.e., 39.f. and 39.g.

45. Refer to the Preamble for further discussion regarding disclosure requirements. All disclosures within this statement, except disclosures included in paragraphs 44.b., 44.k. and 44.m., shall be included

within the interim and annual statutory financial statements. Disclosure requirements in paragraphs 44.b., 44.k. and 44.m. are required in the annual audited statutory financial statements only.

Relevant Literature

46. This statement reflects specific statutory accounting guidance for assets that qualify as asset-backed securities under the statutory accounting principles-based bond definition. The classification of investments as ‘bonds’ for statutory accounting and reporting purposes differs from the U.S. GAAP determination of a “debt instrument” and this statement reflects statutory specific measurement and impairment guidance for investments captured in scope. This statement does incorporate limited U.S. GAAP concepts, particularly with the determination of accretable yield and consideration of changes in expected cash flows using the retrospective or prospective method. However, due to the statutory accounting specifications on scope, measurement method and impairment, no U.S. GAAP standards are considered adopted within this statement. Concepts that converge with U.S. GAAP are limited to the extent they are detailed in this statement.

Effective Date and Transition

47. This statement adopted August 13, 2023, is effective for years beginning January 1, 2025. The revisions to this statement, and *SSAP No. 26R—Bonds*, incorporate principal concepts on what should be reported as a long-term bond. Securities that qualify as issuer credit obligations within the principal concepts are captured within scope of SSAP No. 26R. Securities that qualify as asset-backed securities within the principal concepts are captured within scope of SSAP No. 43R. Securities that do not qualify as issuer credit obligations or ABS, unless specifically permitted in scope of these statements, are not permitted to be reported as a bond.

48. At the time of transition, reporting entities shall make their best efforts to assess investments to determine whether they qualify within the bond definition for reporting as issuer credit obligations on Schedule D-1-1 or asset-backed securities on Schedule D-1-2. The bond definition requires assessments at the time of acquisition (as of the origination date), and it is recognized that reporting entities may not have the means to complete historical assessments for securities held at the time of transition. For these instances, if information is not readily available for reporting entities to assess a security as of the date at origination, reporting entities may utilize current or acquisition information in concluding that a security qualifies for reporting as a bond as either an issuer obligation or asset-backed security.

49. Investments that were reported as a bond on Schedule D-1: Long-Term Bonds as of December 31, 2024, that do not qualify under the principle-based bond concepts shall be reported as a disposal from that schedule, with a reacquisition on the appropriate reporting schedule as of January 1, 2025. These investments shall be accounted for in accordance with the resulting SSAP that addresses the specific investment structure. For securities that are reported at the lower of amortized cost or fair value under the new applicable guidance, this could result with an unrealized loss in the measurement of the investment at the time of the reclassification. Although the adoption of this guidance is considered a change in accounting principle under SSAP No. 3, the following transition guidance shall be applied on January 1, 2025, to ensure consistency in reporting and to allow investment schedules to roll appropriately:

a. Securities reclassified from Schedule D-1 as they no longer qualify under the bond definition shall be reported as a disposal from Schedule D-1 at amortized cost. Although no proceeds are received, amortized cost at the time of disposal shall be reported as consideration on Schedule D-4.

i. For securities held at amortized cost at the time of disposal, book adjusted carrying value and amortized cost shall agree, preventing gain or loss recognition at the time of reclassification.

ii. For securities held at fair value under the lower of amortized cost or fair value measurement method, previously reported unrealized losses shall be reversed on Jan. 1, 2025, prior to disposal, resulting with a reported value that mirrors amortized cost at the time of disposal. This action prevents realized loss recognition at time of reclassification.

b. Securities reclassified from Schedule D-1 shall be recognized on the subsequent schedule (e.g., Schedule BA) with an actual cost that agrees to the disposal value (amortized cost). Immediately subsequent to recognition on the resulting schedule, the securities shall be reported in accordance with the measurement method prescribed by the applicable SSAP:

i. For securities previously reported at fair value on Schedule D-1 (under a lower of amortized cost or fair value measurement method), the reporting entity will recognize an unrealized loss to match the previously reported book adjusted carrying value. Subsequently, the security will continue to reflect a lower of amortized cost or fair value measurement method.

ii. For securities previously reported at amortized cost on Schedule D-1, if the subsequent statement requires a lower of amortized cost or fair value measurement method, then the reporting entity shall recognize an unrealized loss to the extent fair value is less than amortized cost.

iii. After application of paragraph 49.b.i. and 49.b.ii. all securities shall reflect either the same reported value as of December 31, 2024 (amortized cost or fair value) or a lower reported value (if the security is subject to the lower of amortized cost or fair value measurement method). There should be no instances that result with a security having a greater reported value than what was presented on December 31, 2024. Subsequent to transition, securities reported at fair value may incur unrealized gains or losses due to fair value fluctuations, but should never have unrealized gains that result with a book adjusted carrying value that exceeds amortized cost.

50. With this transition guidance, changes in measurement for securities reclassified under the bond definition will be reported as a change in unrealized capital gains (losses) in the first quarter 2025 financial statements (unless sold in the interim with a realized gain or loss) and not as a change in accounting principle. To enable regulators the ability to identify the impact of securities reclassified under the bond definition, the following disclosure for the 2025 first quarter financial statement is required:

a. Aggregate book adjusted carrying value for all securities reclassified off Schedule D-1.

b. Aggregate book adjusted carrying value after transition for all securities reclassified off Schedule D-1 that resulted with a change in measurement basis. (This shall be a subset of paragraph 50.a. and captures the securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.)

c. Aggregate surplus impact for securities reclassified off Schedule D-1. This shall include the difference between book adjusted carrying value as of December 31, 2024, and book adjusted carrying value after transition for those securities that moved from an amortized cost to a fair value measurement method under the lower of amortized cost or fair value approach.

51. Asset-backed securities that were previously reported as short-term (Schedule DA) or as a cash equivalent (Schedule E2) shall be reclassified to be reported on Schedule D-1-2 on Jan. 1, 2025. Similar to the process detailed in paragraph 49, the securities shall be removed from DA and E2 at amortized cost, with reversal of any unrealized loss prior to the reclassification. The amortized cost shall be reported as "consideration received on disposals' on Schedule DA – Verification Between Years or Schedule E-2 – Verification Between Years, as applicable based on the prior reporting location. The security shall be recognized as an ABS acquired on Schedule D-3 at amortized cost. Immediately after initial recognition, if the security was required to be held at fair value, under the lower of amortized cost or fair value measurement method, the reporting entity shall recognize an unrealized loss.

52. For clarification purposes, the transition guidance shall be applied prospectively beginning with the first year of adoption (Jan. 1, 2025). For disclosures that provide comparative information, reporting entities shall not restate the prior year's information in the 2025 disclosure.

EXHIBIT A – QUESTION AND ANSWER IMPLEMENTATION GUIDE

This exhibit addresses common questions regarding the valuation and impairment guidance detailed in SSAP No. 43R.

Index to Questions

No.	Question
1	Are reporting entities permitted to establish an accounting policy to write down a SSAP No. 43R other-than-temporarily impaired security, for which a “non-interest” related decline exists, to fair-value regardless of whether the reporting entity intends to sell, or has the intent and ability to hold?
2	Can a reporting entity avoid completing a cash-flow assessment or testing for a specific other-than-temporarily impaired security when the entity believes there is a clear cash-flow shortage (i.e., non-interest related impairment) and elect to recognize a full impairment for the SSAP No. 43R security (no impairment bifurcation), with fair value becoming the new amortized cost basis, and recognition of the full other-than-temporary impairment as a realized loss?
3	Can reporting entities change their “intend to sell” or “unable to hold” assertions and recover previously recognized other-than-temporary impairments?
4	How do the regulators intend the phrase “intent and ability to hold” as used within SSAP No. 43R to be interpreted?
5	How do contractual prepayments affect the determination of credit losses?
6	Are the disclosure requirements within paragraphs 44.f. and 44.g. of SSAP No. 43R required to be completed for the current reporting quarter only, or as a year-to-date cumulative disclosure?
7	If an impairment loss is recognized based on the "present value of projected cash flows" in one period is the entity required to get new cash flows every reporting period subsequent or just in the periods where there has been a significant change in the actual cash flows from projected cash flows?
Questions 8-10 are specific to securities subject to the financial modeling process. (This process is limited to qualifying RMBS/CMBS securities reviewed by the NAIC Structured Securities Group.) The guidance in questions 8-10 shall not be inferred to other securities in scope of SSAP No. 43R.	
8	Do ABS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?
9	The NAIC Designation process for ABS may incorporate loss expectations that differ from the reporting entity’s expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

© 2023 National Association of Insurance Commissioners

No.	Question
10	For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

Questions 8-10 are specific to securities subject to the financial modeling process. (This process is limited to qualifying RMBS/CMBS securities reviewed by the NAIC Structured Securities Group.) The guidance in questions 8-10 shall not be inferred to other securities in scope of SSAP No. 43R.

1. Question - Are reporting entities permitted to establish an accounting policy to write down a SSAP No. 43R other-than-temporarily impaired security, for which a "non-interest" related decline exists, to fair-value regardless of whether the reporting entity intends to sell, or has the intent and ability to hold?

1.1 Pursuant to the guidance in SSAP No. 43R, optionality is not permitted. As such, an accounting policy that differs from SSAP No. 43R would be considered a departure from statutory accounting principles as prescribed by the NAIC *Accounting Practices and Procedures Manual.*

2. Question – Can a reporting entity avoid completing a cash-flow assessment or testing for a specific other-than-temporarily impaired security when the entity believes there is a clear cash-flow shortage (i.e., non-interest related impairment) and elect to recognize a full impairment for the SSAP No. 43R security (no impairment bifurcation), with fair value becoming the new amortized cost basis, and recognition of the full other-than-temporary impairment as a realized loss?

2.1 Under the basis of SSAP No. 43R, an entity is not permitted to elect a write-down to fair value in lieu of assessing cash flows and bifurcating "interest" and "non-interest" impairment components. As noted in paragraph 30, if the entity does not have the intent to sell, and has the intent and ability to hold, but does not expect to recover the entire amortized cost basis of the security, the entity shall compare the present value of cash flows expected to be collected with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will not be recovered (a non-interest decline exists) and an other-than-temporary impairment shall be considered to have occurred. Pursuant to paragraph 35, when an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment's amortized cost basis and the present value of cash flows expected to be collected, discounted at the asset-backed security's effective interest rate.

2.2 If the entity does not want to assess cash flows of an impaired security (fair value is less than amortized cost), the entity can designate the security as one the entity intends to sell, or one that the entity does not have the intent and ability to hold, providing it is reflective of the true intent and assessment of the ability of the entity. Once an impaired security has this designation, pursuant to paragraphs 28 or 29, an other-than-temporary impairment shall be considered to have occurred. As detailed in paragraph 34, the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment's amortized cost basis and its fair value at the balance sheet date.

© 2023 National Association of Insurance Commissioners

2.3 As addressed in question 3 of this Question and Answer Guide, reporting entities are not permitted to change assertions regarding their intent to sell or their lack of intent and ability to hold. Once the security has been identified as one the entity intends to sell, or as a security that the entity does not have the intent and ability to hold, that assertion shall not change as long as the entity continues to hold the security.

3. Question - Can reporting entities change their "intend to sell" or "unable to hold" assertions and recover previously recognized other-than-temporary impairments?

3.1 No, a reporting entity is not permitted to change assertions and reverse previously recognized SSAP No. 43R other-than-temporary impairments. Although an entity may elect to hold a security due to a favorable change in the security's fair value, once the security has been identified as one the entity intends to sell, or as a security that the entity does not have the intent and ability to hold for purposes of initially recognizing an other-than-temporary impairment, that assertion shall not change as long as the entity continues to hold the security.

3.2 Reporting entities that have recognized an other-than-temporary impairment on a SSAP No. 43R security in a manner corresponding with an assertion on the intent to sell or the lack of the intent and ability to hold, for which a subsequent other-than-temporary impairment has been identified, shall recognize a realized loss for the difference between the current amortized cost (reflecting the previously recognized SSAP No. 43R other-than-temporary impairment) and the fair value at the balance sheet date of the subsequent impairment. Thus, bifurcation of impairment between interest and non-interest related declines is not permitted for securities in which an other-than-temporary impairment was previously recognized on the basis that the reporting entity had the intent to sell, or lacked the intent and ability to hold, regardless if the entity has subsequently decided to hold the security.

3.3 Reporting entities shall reclassify a security as one for which there is an intent to sell, or for which there is not an intent or ability to hold, regardless if a bifurcated other-than-temporary impairment had previously been recognized, as soon as the entity realizes that they can no longer support a previous assertion to hold the security. In making such reclassifications, if the security is impaired, the difference between the amortized cost (reflecting the initial non-interest other-than-temporary impairment recognized) and fair value at the balance sheet date of the reclassification shall be recognized as a realized loss, with fair value reflecting the new amortized cost basis. Once such a reclassification occurs, and the security is classified as one for which there is an intent to sell, or for which there is not an intent and ability to hold, the security must continue to carry that assertion until it is no longer held by the reporting entity.

4. Question – How do the regulators intend the phrase "intent and ability to hold" as used within SSAP No. 43R to be interpreted?

4.1 SSAP No. 43R paragraph 29 states in part "…the entity shall assess whether it has the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred."

4.2 The intent of this language within SSAP No. 43R is focused on ensuring that, as of the balance sheet date, after considering the entity's own cash or working capital requirements

and contractual or regulatory obligations and all known facts and circumstances related to the impaired security, the entity does not have the intention of selling the impaired security and has the current intent and ability to hold the security to recovery. Due to impairment bifurcation provisions provided within SSAP No. 43R, and the amortized cost measurement method generally permitted for asset-backed securities, the assessment of "intent and ability" is intended to be a high standard. Despite the intent of paragraph 29, it is identified that information not known to the entity may become known in subsequent periods and/or facts and circumstances related to an individual holding or group of holdings may change thereby influencing the entity's subsequent determination of intent and ability with respect to a security or securities.

4.3 If a reporting entity asserts that it has the intent and ability to hold a security, or group of securities, until recovery of the amortized cost, but sells or otherwise disposes the security or securities prior to such recovery, the reporting entity shall be prepared to justify this departure from their original assertion to examiners and auditors. SSAP No. 43R purposely does not identify specific circumstances in which a change in assertion would be justifiable, but requires judgment from management, examiners and auditors on whether future assertions warrant closer review.

4.4 Delaying recognition of other-than-temporary impairments is a cause of serious concern by the regulators, and entities that habitually delay such recognition through false assertions on the "intent and ability to hold" may face increased scrutiny and regulatory action by their domiciliary state. It is imperative that a reporting entity recognize the full other-than-temporary impairment as soon as the entity realizes that they will no longer be able to hold the security until recovery of the amortized cost basis. Greater scrutiny shall be placed on securities sold or otherwise disposed shortly after a financial statement reporting date if such securities had been excluded from the full other-than-temporary impairment recognition on the basis of the reporting entity's intent and ability to hold.

4.5 As noted in paragraph 3.3 of this question and answer guide, once a security is classified as one for which there is an intent to sell, or for which there is not an intent and ability to hold, the security must continue to carry that assertion until the security is no longer held by the reporting entity.

5. **Question** – How do contractual prepayments affect the determination of credit losses?

5.1 Paragraph 30 of SSAP No. 43R states that "A decrease in cash flows expected to be collected on asset-backed security that results from an increase in prepayments on the underlying assets shall be considered in the estimate of present value of cash flows expected to be collected." Paragraph 18 states that "Asset-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions. Reporting entities may utilize the prospective adjustment method for all asset-backed securities that are reported with NAIC designations that are of high credit at the of acquisition by the reporting entity."

6. **Question** – Are the disclosure requirements within paragraphs 44.f. and 44.g. of SSAP No. 43R required to be completed for the current reporting quarter only, or as a year-to-date cumulative disclosure?

6.1 The disclosures should reflect the year-to-date other-than-temporary impairments. The "fair value" reported within the disclosure is intended to reflect the fair value at the date of the other-than-temporary impairment and shall not be updated due to the fluctuations identified at subsequent reporting dates. If a security has more than one other-than-

© 2023 National Association of Insurance Commissioners

temporary impairment identified during a fiscal reporting year, the security shall be included on the disclosure listing separately for each identified other-than-temporary impairment. Notation shall be included in the disclosure identifying the other-than-temporary impairments that were recognized for each respective reporting period.

7. **Question** – If an impairment loss is recognized based on the "present value of projected cash flows" in one period is the entity required to get new cash flows every reporting period subsequent or just in the periods where there has been a significant change in the actual cash flows from projected cash flows?

7.1 The guidance in paragraph 38 of SSAP No. 43R indicates that a reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the asset-backed security. This guidance is explicit that the reporting entity shall continue to estimate the present value of cash flows expected to be collected over the life of the loan-backed or structured security.

7.2 As provided in paragraph 2.2 of this Q&A, if the entity does not want to assess cash flows of an impaired security (fair value is less than amortized cost), the entity can designate the security as one the entity intends to sell, or one that the entity does not have the intent and ability to hold, providing it is reflective of the true intent and assessment of the ability of the entity. Reporting entities subject to the requirements of AVR and IMR should allocate the impairment loss between AVR and IMR accordingly.

8. **Question** – Do ABS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?

8.1 Under the financial modeling process (applicable to qualifying RMBS/CMBS reviewed by the NAIC Structured Securities Group), the amortized cost of the security impacts the "final" NAIC designation used for reporting and RBC purposes. As such, securities subject to the financial modeling process acquired in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. For reporting purposes, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. (For example, all acquisitions of the identical CUSIP resulting with an NAIC 1 designation may be aggregated, and all acquisitions of the identical CUSIP resulting with an NAIC 3 designation may be aggregated.)

9. **Question** – The NAIC Designation process for ABS subject to the financial modeling process may incorporate loss expectations that differ from the reporting entity's expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

9.1 In accordance with *INT 06-07: Definition of Phrase "Other Than Temporary*," reporting entities are expected to "consider all available evidence" at their disposal, including the information that can be derived from the NAIC designation.

10. Question - For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

10.1 The financial modeling process for qualifying RMBS/CMBS securities is required for applicable securities held in either the general or separate account.

SSAP Reference Revisions

---

1. ***SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments***

SSAP No. 26R: Updated reference in paragraph 18. No revisions needed to paragraph 7 or 15.

SSSAP No. 43R: Adjusted title references in paragraphs 7 and 15.

---

2. ***SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve***

SSAP No. 43R: Adjusted reference in paragraph 3.

---

3. ***SSAP No. 15—Debt and Holding Company Obligations***

SSAP No. 26R: No revisions needed to paragraph 13.

---

4. ***SSAP No. 21—Other Admitted Assets***

SSAP No. 26R: Updated footnote 1 and clarified guidance for GICs in paragraphs 14-17.

SSAP No. 43R: Adjusted reference in paragraph 6 to asset-backed securities that qualify.

---

5. ***SSAP No. 36—Troubled Debt Restructuring***

SSAP No. 26R: No revisions needed to paragraph 29.

---

6. ***SSAP No. 43R—Asset-Backed Securities***

SSAP No. 26R: Updated disclosure reference that link to SSAP No. 26R, paragraph 51.m.

---

7. ***SSAP No. 86—Derivatives***

SSAP No. 26R and SSAP No. 43R: Updated the guidance for structured notes in paragraph 5.g. and replication (synthetic assets) in Footnote 5.

---

8. ***SSAP No. 95—Nonmonetary Transactions***

SSAP No. 26R: No revisions needed to paragraph 6.

SSAP No. 43R: Adjusted the citation to SSAP No. 43R in paragraph 6.

---

9. ***SSAP No. 100R—Fair Value***

SSAP No. 26R: No revisions needed to Footnote 3.

---

10. ***SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities***

SSAP No. 43R: Revisions remove the direct pointer of beneficial interests as in scope of SSAP No. 43R and incorporate guidance for reporting under the applicable SSAP in paragraphs 2, 11 and 18.

© 2023 National Association of Insurance Commissioners

11. ***INT 01-25: Accounting for U.S. Treasury Inflation-Indexed Securities***

SSAP No. 26: No revisions needed.

12. ***06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)***

SSAP No. 26: Updated paragraph reference in paragraph 5.a.

13. ***06-07: Definition of Phrase "Other Than Temporary"***

SSAP No. 26: No revisions needed.

SSAP No. 43R: Updated reference in list of applicable SSAPs.

14. ***INT 07-01: Application of the Scientific (Constant Yield) Method in Situations of Reverse Amortization***

SSAP No. 26R: Removed quoted guidance.

SSAP No. 43R: Updated reference in list of applicable SSAPs and removed quoted guidance.

15. ***INT 19-02: Freddie Mac Single Security Initiative***

SSAP No. 26R: No revisions needed.

SSAP No. 43R: Updated reference in list of applicable SSAPs and in paragraph 1.

16. ***INT 22-01: Freddie Mac When Issued K-Deal (WI Trust) Certificates***

SSAP No. 43R: Updated reference in list of applicable SSAPs and in paragraph 1.

Summary of SAP Guidance Revisions

17. ***SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments***

Revisions preclude asset-backed securities that are in scope of SSAP No. 43R from being reported as cash equivalents or short-term investments. The revisions also identify items captured on Schedule BA as non-bond securities. (These revisions also add reference to working capital finance investments, but that is not new guidance, but was not explicitly stated in SSAP No. 2R.)

© 2023 National Association of Insurance Commissioners

Summary of SAP Reference Revisions:

SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments

7. Regardless of maturity date, related party or affiliated investments that would be in scope of *SSAP No. 26R—Bonds, SSAP No. 43R—~~Loan-Backed and Structured~~Asset-Backed Securities,* or that would be reported as "Other Invested Assets" shall be reported as long-term investments if any of the following conditions apply,[1] unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial 90-day timeframe.

b. The investment was previously reported as a cash equivalent investment and the initial maturity timeframe has passed. If an investment is reported as a cash equivalent and it is unexpectedly renewed/rolled, the reporting entity is not permitted to continue to report the held security as a cash equivalent, regardless of the updated maturity date, and shall report the security as a long-term investment. An investment is only permitted to be reported as a cash equivalent for one quarter reporting period. Meaning, if an investment was reported as a cash equivalent in the first quarter, it is not permitted to be reported as a cash equivalent in the second quarter.

c. The reporting entity reacquired the investment (or a substantially similar investment) within one year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as short-term investments, regardless of the maturity date of the reacquired investment.)

Footnote 1: Cash equivalents subject to the provisions of paragraph 7 are not permitted to be subsequently reported as short-term investments, even if the updated/reacquired maturity date is within one year. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition, regardless of the initial maturity date.

15. Regardless of maturity date, related party or affiliated investments in scope of *SSAP No. 26R—Bonds, SSAP No. 43R—~~Loan-Backed and Structured~~Asset-Backed Securities,* or that would be reported as "Other Invested Assets" shall be reported as long-term investments if any of the following conditions apply,[2, 3] unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial "less than one year" timeframe.

b. The investment was previously reported as a short-term investment and the initial maturity timeframe has passed. If an investment is reported as a short-term investment and it is unexpectedly renewed/rolled, the reporting entity is not permitted to continue to report the held security as a short-term investment (or as a cash equivalent) regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a short-term investment for one annual reporting period. Meaning, if an investment was reported as a short-term investment as of December 31, 2018, it is not permitted to be reported as short-term investment as of December 31, 2019.

c. The reporting entity reacquired the investment (or a substantially similar investment) within one year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as cash equivalent investments regardless of the maturity date of the reacquired investment.)

Footnote 2: Reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant *to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities.*

Footnote 3: Short-term investments subject to the provisions of paragraph 15 are not permitted to be subsequently reported as cash equivalents, even if the updated/reacquired maturity date is within 90 days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition, regardless of the initial maturity date.

Disclosures

18. The following disclosures shall be made for short-term investments in the financial statements:

a. Fair values in accordance with *SSAP No. 100R—Fair Value*;

b. Concentrations of credit risk in accordance with *SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures*;

c. Basis at which the short-term investments are stated.

d. The items in the scope of this statement are also subject to the annual audited disclosures in *SSAP No. 26R—Bonds*, paragraph 39.f~~30.f~~.

e. Identification of cash equivalents (excluding money market mutual funds as detailed in paragraph 8) and short-term investments (or substantially similar investments), which remain on the same reporting schedule for more than one consecutive reporting period. This disclosure is satisfied by use of a designated code in the investment schedules of the statutory financial statements.

SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve

3. The IMR and AVR shall be calculated and reported as determined per guidance in the SSAP for the specific type of investment (e.g., SSAP No. 43R for ~~loan-backed and structured~~asset-backed securities), or if not specifically stated in the respective SSAP, in accordance with the NAIC *Annual Statement Instructions* for Life and Accident and Health Insurance Companies.

SSAP No. 15—Debt and Holding Company Obligations - (No Changes)

13. Convertible debt securities and convertible preferred stock with beneficial conversion features are to be valued according to the appropriate statutory accounting statement; *SSAP No. 26R—Bonds* or *SSAP No. 32R—Preferred Stock.*

SSAP No. 21R—Other Admitted Assets

Collateral Loans

4. Collateral loans are unconditional obligations[1] for the payment of money secured by the pledge of an investment[2] and meet the definition of assets as defined in SSAP No. 4, and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:

Footnote 1: For purposes of determining a collateral loan in scope of this statement, a collateral loan does not include investments captured in scope of other statements. For example, *SSAP No. 26R—Bonds* includes securities that qualify as issuer creditor obligations and *SSAP No. 43—Asset-Backed Securities* includes securities that qualify as asset-backed securities under the bond definition. ~~(as defined in that statement) representing a creditor relationship whereby there is a fixed schedule for one or more future payments.~~ Investments captured in SSAP No. 26R or SSAP No. 43R that are also secured with collateral shall continue to be captured within scope of ~~SSAP No. 26R~~those statements.

Footnote 2: Investment defined as those assets listed in Section 3 of *Appendix A-001—Investments of Reporting Entities*.

6. A reporting entity that acquires (directly or indirectly) structured settlement payment rights[3] through a factoring company, excluding securitizations that qualify as asset-backed securities ~~captured~~ in scope of SSAP No. 43R, shall report the acquisition as follows:

a. Period-certain (non-life contingent) structured settlement income streams shall be reported as other long-term invested assets[4], and are admitted assets if the rights to the future payments from a structured settlement have been legally acquired in accordance with all state and federal requirements. If the structured settlement has not met all legal requirements, including the court-approved transfer from the original recipient, then the reporting entity shall recognize the appropriate excise tax obligation and the structured settlement shall be nonadmitted.

b. Life-contingent structured settlement income streams shall be reported as other long-term invested assets on Schedule BA and shall be nonadmitted. (Nonadmittance is required regardless if the right to future payments has been legally transferred.)

Footnote 3: This guidance is specific to acquired structured settlement income streams (legal right to receive future payments from a structured settlement) and does not capture accounting and reporting guidance for the acquisition of any insurance product (e.g., life settlement, annuities, etc.).

Footnote 4: Reporting entities that hold qualifying structured settlement payment rights shall report the security on Schedule BA either as an "any other class of asset" or as a "fixed or variable interest rate investment with underlying characteristics of other fixed income instruments" if the structured settlement payment right qualifies for reporting within that reporting line (e.g., NAIC designation).

Guaranteed Investment Contracts

14. Guaranteed Investment Contracts (GICs) purchased for investment purposes meet the definition of assets as defined in SSAP No. 4~~,~~ and are admitted assets to the extent they conform to the requirements of this statement. This includes an investment in a GIC payment stream which can be created when an intermediary purchases individual GICs, pools them, and sells the rights to the payment stream.

15. GICs acquired in a security structure that qualify under the bond definition as an issuer obligation or asset-backed security shall follow the accounting guidance within SSAP No. 26R or SSAP No. 43R as applicable.

© 2023 National Association of Insurance Commissioners

~~15.~~16. Purchases of GIC investments that do not meet the definition of a security, but for which all contractual rights and ownership of the GIC result in an investment similar to a corporate bond, shall be reported at amortized cost and ~~accounted for in accordance with the guidance in *SSAP No. 26R—Bonds*~~ included on Schedule BA: Other Long-Term Invested Assets. If, in accordance with SSAP No. 5R, it is probable that the carrying value of a GIC is not fully recoverable the investment shall be considered impaired. Accordingly, the cost basis of the investment shall be written down to the undiscounted estimated cash flows and the amount of the write down shall be accounted for as a realized loss. The new cost basis shall not be changed for subsequent recoveries in fair value.

~~16. An investment in a GIC payment stream is created when an intermediary purchases individual GICs, pools them, and sells the rights to the payment stream. These investments shall be reported as other long-term invested assets and shall be carried at amortized cost.~~

~~17. If, in accordance with SSAP No. 5R, it is probable that the carrying value of a GIC is not fully recoverable the investment shall be considered impaired. Accordingly, the cost basis of the investment shall be written down to the undiscounted estimated cash flows and the amount of the write down shall be accounted for as a capital loss. The new cost basis shall not be changed for subsequent recoveries in fair value.~~

SSAP No. 36—Troubled Debt Restructuring (No Changes)

29. Although *FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases* (FAS 91) was rejected in *SSAP No. 26R—Bonds*, this statement is consistent with paragraph 14 of *FAS No. 91*.

SSAP No. 43R—Asset-Backed Securities

Disclosures

51. In addition to the disclosures required for invested assets in general, the following disclosures regarding loan-backed and structured securities shall be made in the financial statements. Regardless of the allowances within paragraph 63 of the Preamble, the disclosures in paragraph 51.f., 51.g. and 51.h. of this statement are required in separate, distinct notes to the financial statements:

m. The items in the scope of this statement are also subject to the annual audited disclosures in *SSAP No. 26R—Bonds*, paragraphs 39.e.,~~30.e.~~, 39.f.,~~30.f.~~ and 39.g.~~30.g~~.

SSAP No. 86—Derivatives

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures, structured notes with risk of principal/original investment loss based on the terms of the agreement (in addition to default risk), and any other agreements or instruments substantially similar thereto or any series or combination thereof.

g. "Structured Notes" ~~in scope of this statement are instruments defined in *SSAP No. 26R—Bonds* (often in the form of debt instruments),~~ in scope of this statement are instruments in which the amount of principal repayment or return of original investment is contingent on an underlying variable/interest[5]~~.~~where the terms of the agreement make it possible that the reporting entity could lose all or a portion of its original investment amount (for other than failure of the issuer to pay the contractual amounts due). ~~Structured notes that are "m~~Mortgage-referenced securities~~"~~ issued by a government sponsored enterprise in the

form of credit-risk transfers where an issue security is tied to a referenced pool are mortgages are captured in *SSAP No. 43R—Loan-Backed and Structured Securities*.

Footnote 5 - ~~The "structured notes" captured within scope of this statement is specific to instruments in which the terms of the agreement make it possible that the reporting entity could lose all or a portion of its original investment amount (for other than failure of the issuer to pay the contractual amounts due).~~ These instruments incorporate both the credit risk of the issuer, as well as the risk of an underlying variable/interest (such as the performance of an equity index or the performance of an unrelated security). Securities that are labeled "principal-protected notes" are captured within scope of this statement if the "principal protection" involves only a portion of the principal and/or if the principal protection requires the reporting entity to meet qualifying conditions in order to be safeguarded from the risk of loss from the underlying linked variable. Securities that may have changing positive interest rates in response to a linked underlying variable or the passage of time, or that have the potential for increased principal repayments in response to a linked variable (such as U.S. Treasury Inflation-Indexed Securities) that do not incorporate risk of original investment/principal loss (outside of default risk) are not captured as structured notes in scope of this statement. A replication (synthetic asset) transaction addressed within this standard may reproduce the investment characteristics of an otherwise permissible investment that would not meet the principles-based bond definition (e.g., is distinct from a "structured note" as defined here); the admissibility, classification and measurement of a replication (synthetic asset) transaction are not preemptively determined by the principles-based bond definition, and should be evaluated in accordance with the guidance on replication (synthetic asset) transactions within this standard.

SSAP No. 95—Nonmonetary Transactions

6. Fair value of assets received or transferred in a nonreciprocal transfer shall be measured based on statutory accounting principles for the type of asset transferred. Accordingly, the value shall be determined in accordance with *SSAP No. 26R—Bonds*, *SSAP No. 30R—Unaffiliated Common Stock*, *SSAP No. 32R—Preferred Stock*, SSAP No. 37—*Mortgage Loans*, *SSAP No. 39—Reverse Mortgages*, *SSAP No. 40R—Real Estate Investments*, *SSAP No. 43R—~~Loan-Backed and Structured~~Asset-Backed* Securities, *SSAP No. 90—Impairment or Disposal of Real Estate Investments* or other applicable statements. The guidance provided in SSAP No. 25 shall be followed in accounting for nonreciprocal transactions with affiliates and other related parties as defined in that statement.

SSAP No. 100—Fair Value (No Changes)

48. For each class of assets and liabilities measured and reported[3] at fair value or NAV in the statement of financial position after initial recognition. The reporting entity shall determine appropriate classes of assets and liabilities in accordance with the annual statement instructions.

Footnote 3: The term "reported" is intended to reflect the measurement basis for which the asset or liability is classified within its underlying SSAP. For example, a bond with an NAIC designation of 2 is considered an amortized cost measurement and is not included within this disclosure even if the amortized cost and fair value measurement are the same. An example of when such a situation may occur includes a bond that is written down as other-then-temporarily impaired as of the date of financial position. The amortized cost of the bond after the recognition of the other-than-temporary impairment may agree to fair value, but under SSAP No. 26R this security is considered to still be reported at amortized cost.

SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

2. This statement focuses on the issues of accounting for transfers and servicing of financial assets and extinguishments of liabilities. This statement establishes statutory accounting principles for transfers and servicing of financial assets, including asset securitizations and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements, repurchase financing and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. Securitizations of nonfinancial assets are outside the scope of this statement. Transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments*. Additionally, retained beneficial interests

© 2023 National Association of Insurance Commissioners

from the sale of ~~loan-backed or structured~~ asset-backed securities are to be accounted for in accordance with the statutory accounting statement that is applicable to the investment retained~~with~~ . ~~SSAP No. 43R—Loan-Backed and Structured Securities, Revised.~~ If the retained security does not qualify for reporting as a bond under the bond definition detailed in SSAP No. 26R, it shall be reported as a debt security that does not qualify as a bond in scope of *SSAP No. 21R—Other Admitted Assets*.

11. Upon completion of a transfer of an entire financial asset or a group of entire financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 8), the transferor (seller) shall:

a. Derecognize the transferred financial assets;

b. Recognize and initially measure at fair value servicing assets, servicing liabilities, and any other assets obtained (including a transferor's beneficial interest in the transferred financial assets) and liabilities incurred[1] in the sale (paragraphs 60 and 62-66).

c. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be determined per the guidance in the SSAP for the specific type of investment ~~(e.g., SSAP No. 43R for loan-backed and structured securities)~~, or if not specifically stated in the related SSAP, in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value.

Footnote 1: Some assets that might be obtained and liabilities that might be incurred include cash, put or call options that are held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations) and swaps (for example, provisions that convert interest rates from fixed to variable).

Financial Assets Subject to Prepayment

18. Financial assets, except for instruments that are within the scope of *SSAP No. 86—Derivatives*, that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment shall be assessed in accordance with the bond definition captured in *SSAP No. 26R—Bonds* to determine appropriate accounting and reporting. Securities that do not qualify for bond reporting shall be captured as debt securities that do not qualify as bonds in scope of *SSAP No. 21R—Other Admitted Assets*. ~~subsequently measured in accordance with the statutory accounting statement that is applicable to the financial asset. subsequently measured like investments in debt securities and loan-backed and structured securities in accordance with SSAP No. 43R. Examples of such financial assets include, but are not limited to, interest-only strips, other beneficial interests, loans, or other receivables.~~

INT 01-25: Accounting for U.S. Treasury Inflation-Indexed Securities

- No Change – Applies to SSAP No. 26R.

INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)

5. For Issue 1, the Working Group came to a consensus that reporting entities should account and report for investments in CAPCO's consistent with the agreement structure within the guidance provided below:

h. Investment in a debt instrument of a CAPCO shall be reported as a bond in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 26R, paragraph 20~~11~~.

i. Investment in an equity interest of a CAPCO shall be reported as common stock and reported at fair value as stated in SSAP No. 30R, paragraph 8.

j. Investment in preferred stock interest of a CAPCO shall be reported as preferred stock in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 32R, paragraphs 19-22.

k. Investment in a Joint Venture, Partnership and Limited Liability Company (LLC) shall be reported in accordance with SSAP No. 48, paragraphs 5-6. The reported value of the investment shall be decreased in proportion to the premium tax credits utilized.

l. The tax credits shall be recognized as a reduction of the tax liabilities as they are utilized. Tax credits received are not to be included in investment income.

INT 06-07: Definition of Phrase "Other Than Temporary"

- Update interpreted SSAP list to reference to *SSAP No. 43R—Asset-Backed Securities*

INT 07-01: Application of the Scientific (Constant) Yield Method in Situations of Reverse Amortizations

1. SSAP No. 26R and SSAP No. 43R both reference the use of the scientific or constant yield method of amortization of a premium or a discount. ~~*SSAP No. 26R—Bonds* provides the following (bolding added for emphasis):~~

~~**Amortized Cost**~~

~~9. **Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond.** Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).~~

~~*SSAP No. 43R—Loan-Backed and Structured Securities* provides the following (bolding added for emphasis):~~

~~**Amortization**~~

~~8. **Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method** and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.~~

~~**Collection of All Contractual Cashflows is Probable**~~

~~12. The following guidance applies to loan-backed and structured securities for which it is probable that the investor will be able to collect all contractually required payments receivable. (Paragraphs 17-19 provide guidance for securities in which collection of all contractual cash flows is not probable and paragraphs 20-24 provide guidance for beneficial interests.) Prepayments are a significant variable element in the cash flow of loan-backed securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security. Differences in cash flows can also result from other changes in the cash flows from the underlying assets. If assets are delinquent or otherwise not generating cash flow, which should be reflected in the cash flow analysis through diminishing security cash flows, even if assets have not been liquidated and gain/losses have not been booked.~~

~~13. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on loan-backed securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.~~

~~14. Loan-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities. However, if at any time during the holding period, the reporting entity determines it is no longer probable that they will collect all contractual cashflows, the reporting entity shall apply the accounting requirements in paragraphs 17-19.~~

~~15. The prospective approach recognizes, through the recalculation of the **effective yield** to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.~~

~~16. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated **effective yield** will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.~~

© 2023 National Association of Insurance Commissioners

2. This interpretationThe following identifies three situations where, using a constant yield methodology for determining amortization or accretion, changes in amortized value move in the opposite direction of what is expected. That is, if a security is purchased at a premium, the constant yield methodology will, in certain cases, cause the amortized value to move to a discount during the life of the security. Conversely, if the security were purchased at a discount, the constant yield methodology will, in certain cases, cause the amortized value to move to a premium during the life of the security.

INT 19-02: Freddie Mac Single Security Initiative

- Update interpreted SSAP list to reference to *SSAP No. 43R—Asset-Backed Securities*

1. This interpretation has been issued to provide a limited-scope exception to the exchange and conversion guidance in *SSAP No. 26R—Bonds* as well as prescribe guidance in *SSAP No. 43R—Asset-Backed Loan-Backed and Structured Securities* (SSAP No. 43R) for instruments converted in accordance with the Freddie Mac Single Security Initiative. Under this initiative, reporting entities will be permitted to exchange "45-day securities" for "55-day securities" without any material change to the securities, or to the loans that back the securities. (With the exchange, there would be a 10-day delay in payment cycle.)

INT 22-01: Freddie Mac When Issued K-Deal (WI Trust) Certificates

- Update interpreted SSAP list to reference to *SSAP No. 43R—Asset-Backed Securities*

1. This interpretation is to address questions on the accounting and reporting for Freddie Mac "When-Issued K-Deal (WI Trust) Certificates" (WI Program). Ultimately, the question is whether the structure should be initially captured in scope of *SSAP No. 43R—Loan-Backed and StructuredAsset-Backed Securities* or as a forward contract in scope of *SSAP No. 86—Derivatives*.

Summary of SAP Guidance Revisions:

SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments

Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities[1] of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 8, and cash pooling, as detailed in paragraph 9. Regardless of maturity date, the following investments are not permitted to be reported as cash equivalents and shall be reported on the investment schedule that corresponds to the SSAP for which the investment is applicable:

a. Asset-backed securities captured in scope of SSAP No. 43R.

b. All debt securities that do not qualify as bonds which are in scope of SSAP No. 21R.

~~a.~~c. ~~, d~~Derivative instruments in scope of SSAP No. 86 or SSAP No. 108~~shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB~~.

d. Working capital finance investments in scope of SSAP No. 105R.

~~b.~~e. ~~-~~Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

Short-Term Investments

14. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under reverse repurchase agreements) of one year or less at the time of acquisition. Short-term investments can include, but are not limited to bonds, commercial paper, reverse repurchase agreements, and collateral and mortgage loans which meet the noted criteria. Short-term investments shall not include investments specifically classified as cash equivalents as defined in this statement, certificates of deposit, or derivatives. Regardless of maturity date, , the following investments are not permitted to be reported as cash equivalents and shall be reported on the investment schedule that corresponds to the SSAP for which the investment is applicable:

a. Asset-backed securities captured in scope of SSAP No. 43R.

b. All debt securities that do not qualify as bonds which are in scope of SSAP No. 21R.

c. ~~d~~Derivative instruments in scope of SSAP No. 86 or SSAP No. 108~~shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB~~.

d. Working capital finance investments in scope of SSAP No. 105R.

[1] Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: Conceptual Framework – Updates

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: In December 2021, the Financial Accounting Standards Board (FASB) issued two new chapters of its conceptual framework. The conceptual framework is a body of interrelated objectives and fundamentals that provides the FASB with a foundation for setting standards and concepts to consider when it resolves questions or develops/modifies accounting and reporting guidance.

It is important to note that the Statements of Financial Accounting Concepts are not authoritative and do not establish new or change existing U.S. GAAP. Per the FASB chair, these concepts are "a tool for the Board to use in setting standards that improve the understandability of information entities provide to existing and potential investors, lenders, donors, and other resource providers."

This agenda item reviews and summarizes each of the two newly issued concept chapters and reviews their potential impact on statutory accounting. Again, while the conceptual framework statements are not authoritative, they are the guiding principles for standard setting and these new updates have superseded chapters currently referenced in the *Accounting Practices and Procedures Manual* (AP&P Manual). In addition, and most notably, in the case of one of these chapters, FASB changed certain key fundamental definitions, specifically the definition of an asset and a liability, which have historically been mirrored by statutory accounting.

Update 1:
FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* introduced updated definitions of certain key elements used in financial reporting – the definition of an asset and liability. The chapter states that assets and liabilities have conceptual and definitional primacy because assets and liabilities (and changes in those elements) are foundational to all the other items reported in the financial statements. To correctly identify and represent an asset or liability is the beginning basis for all financial reporting and due to their importance, updates to both financial statement elements have been adopted. A summary of each, comparing the historical and current definitions, is provided below:

Changes regarding **the definition of an ASSET:**

- **Historical definition:** a probable future economic benefit obtained or controlled by a particular entity as a result of past transactions or events.

- **Historical Characteristics: Three essential characteristics:**
  1. it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows,
  2. a particular enterprise can obtain the benefit and control others' access to it, and
  3. the transaction or other event giving rise to the enterprise's right to or control of the benefit has already occurred.

- **New Definition:** a present right of an entity to an economic benefit.

- **Current Characteristics: Two essential characteristics:**

  1. it is a present right, and
  2. the right is to an economic benefit.

The combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. For clarity, an "economic benefit" represents services or other items of economic value and generally result in net cash inflows to the entity.

Commentary regarding definitional changes:
The current definition of an asset no longer includes the term *probable* or the phrases *future economic benefit* and *past transactions or events.* The FASB concluded that the term *probable* has historically been misunderstood as implying that a future benefit must be probable to a certain threshold before the definition of an asset was met. Thus, if the probability of a future benefit was low, an asset could not be recognized. FASB also struck the phrase *future economic benefit* as this phrase often was interpreted that the asset must represent a certain future economic benefit (such as eventual cash inflows), however with this update, FASB clarified that the asset represents the rights to the benefit, not the actual benefit itself – nor the probability of realization.

Finally, FASB struck the phrase as the result of *past transactions or events.* It was concluded that if the asset represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

Changes regarding **the definition of a LIABILITY:**

- **Historical definition:** are [certain or] probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

- **Historical Characteristics: Three essential characteristics**:

  1. it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand,
  2. the duty or responsibility obligates a particular enterprise, leaving it little or no discretion to avoid the future sacrifice, and
  3. the transaction or other event obligating the enterprise has already happened.

- **New Definition:** a present obligation of an entity to transfer an economic benefit.

- **Current Characteristics: Two essential characteristics**:

  1. it is a present obligation, and
  2. the obligation requires an entity to transfer or otherwise provide economic benefit to others. (For the purposes of this characteristic, *transfer* is typically used to describe obligations to pay cash or convey assets, while the term *provide* is used to describe obligations to provide services or stand by to do so).

Commentary regarding definitional changes:
The current definition of a liability no longer includes the term *probable* or the phrase *in the future as a result of past transactions or events.* The FASB concluded that the term *probable* has historically been understood as implying that a future obligation must meet a probability to a certain threshold before the definition of a liability was met. Thus, if the probability of a future transfer of an asset (or the requirement to provide a service) was low, a liability would likely not be recognized. In removing the term *probable* (and replacing it with "present

obligation"), FASB concluded that in almost all situations, the presence of an obligation will be apparent. It stated that most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. Chapter 4 also discusses the prevalence of certain business risks and how to assess if they result in the recognition of a liability. It concluded that while certain businesses pose risk of future events occurring that will cause them to transfer an economic benefit (an asset), the risk itself does not represent a present obligation because exposure to a potential negative consequence does not constitute a present obligation.

However, FASB also stated situations lacking clear legal or contractual evidence of a present obligation may pose particular challenges that may make it difficult to discern whether a present obligation exists. In these settings, the FASB stated that constructive obligations or other noncontractual obligations are created by circumstance rather than by explicit agreement. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the FASB concluded that the specific facts and circumstances at the standards level (or in the case of statutory accounting, at the SAP level) must be utilized to determine whether the entity has created a constructive obligation and must recognize a liability.

FASB also struck the phrase as the result of *past transactions or events.* It was concluded that if the liability represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

Update 2:
FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* identifies factors that the FASB will consider when deciding **how** items should be displayed on the financial statements. Chapter 7 describes the information to be included in the financial statements and how appropriate presentation can contribute to the objective of financial reporting – to communicate financial information about an entity that is useful to existing and potential investors, lenders, and other creditors in making decisions about providing resources (goods and services) to the entity. These decisions typically involve buying or selling of goods/services or holding equity and debt instruments as well as providing or settling loans or other forms of credit. This chapter articulates that the financial statements meet a "general purpose" and should not be considered to meet all purposes for possible users – and thus a common set of conceptual standards is appropriate.

Chapter 7 also describes the importance of financial statement notes, or supplementary information so that financial statement users are provided with a more complete picture of an entity's accounting policy or any particular unique circumstance or event. In terms of general reporting, the conceptual statement relays that a distinction between nonhomogeneous items should be depicted in the financial statements with different reporting line items and subtotals and that the information should be provided based on recognition and measurement standards. In essence, reporting should be sufficiently aggregated, but not aggregated to a level in which the information is too consolidated for general use and understanding. Once reported, then any significant accounting policy or circumstance would further be defined with accompanying notes.

The chapter broadly states that to meet the objectives of financial reporting, line items should be distinct based on the information being provided – as the information should distinguish between various types of transactions/events and should assist users in their estimates in the amounts and timing of future cash flows or the entity's ability to provide other economic value. The financial statements should depict the results of different types of transactions, including changes in events or other circumstances that may vary the frequency or predictability of performance based on many items, including changes in economic conditions.

In summary, while Chapter 7 does supersede sections of *Statement of Financial Accounting Concept 5*, it did not result in fundamental changes to the principal concepts of financial reporting. The chapter articulates the need for complete financial reporting, describes the interconnectedness of a 'complete set of financial statements' and relays the importance of these documents as the information in the financial statements is the primary (and typically the sole) source for analyzing current and potential future performance of an organization and its ability to meet its long-term financial objectives. At a high level, the chapter discusses what information should broadly be categorized

as revenues, expenses, gains, and losses and to the extent equity is impacted by operations as well as changes in owners' equity through investments or distributions.

In terms of the impact to statutory accounting, the updated concepts in this chapter are not expected to modify current guidance, other than to update references to superseded accounting concepts.

Existing Authoritative Literature:

NAIC Staff Note – the Preamble contains reference to certain concept statements in footnotes 2 and 4 and have been bolded below for ease of identification. It is important to note that while these footnotes currently reference superseded conceptual statements, the conceptual statements noted do not represent adopted guidance - they are noted as reference for overarching guiding principles regarding financial reporting.

Preamble

IV. Statutory Accounting Principles Statement of Concepts

25. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners (NAIC) in the continued development and maintenance of statutory accounting principles ("SAP" or "statutory basis") and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.

26. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

27. SAP utilizes the framework established by GAAP. **FN2** This document integrates that framework with objectives exclusive to statutory accounting. The NAIC's guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC must specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

28. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

29. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

FN 2 - The GAAP framework applicable to insurance accounting is set forth in *Statements of Financial Accounting Concepts One, Two, Five, and Six*. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.

V. Statutory Hierarchy

42. The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1

SSAPs, including U.S. GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification (FASB Codification or GAAP guidance)

Level 2

Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC (INTs adopted before 2016)

Interpretations of existing SSAPs as adopted by the Statutory Accounting Principles (E) Working Group (INTs adopted in 2016 or beyond)

Level 3

NAIC Annual Statement Instructions

Purposes and Procedures Manual of the NAIC Investment Analysis Office

Level 4

Statutory Accounting Principles Preamble and Statement of Concepts ***FN4***

Level 5

Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA guidance not included in FASB Codification, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles

43. If the accounting treatment of a transaction or event is not specified by the SSAPs, preparers, regulators and auditors of statutory financial statements should consider whether the accounting treatment is specified by another source of established statutory accounting principles. If an established statutory accounting principle from one or more sources in Level 2 or 3 is relevant to the circumstances, the preparer, regulator or auditor should apply such principle. If there is a conflict between statutory accounting principles from one or more sources in Level 2 or 3, the preparer, regulator or auditor should follow the treatment specified by the source in the higher level—that is, follow Level 2 treatment over Level 3. Revisions to guidance in accordance with additions or revisions to the NAIC statutory hierarchy should be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

44. Because of developments such as new legislation or the evolution of a new type of business transaction, there sometimes are no established statutory accounting principles for reporting a specific transaction or event. In those instances, it might be possible to report the event or transaction on the basis of its substance by selecting a statutory accounting principle that appears appropriate when applied in a manner similar to the application of an established statutory principle to an analogous transaction or event. In the absence of a SSAP or another source of established statutory accounting principles, the preparer, regulator or auditor of statutory financial statements may consider other accounting literature, depending on its relevance in the circumstances. Other accounting literature includes the Statutory Accounting Principles Statement of Concepts and GAAP reference material and accounting literature identified in Level 5. The appropriateness of other accounting literature depends on its relevance to the particular circumstances, the specificity of the guidance, and the general recognition of the issuer or author as an authority. For example, the Statutory Accounting Principles Statement of Concepts would be more authoritative than any other sources of accounting literature. Similarly, FASB Concepts Statements would normally be more influential than other sources of nonauthoritative GAAP pronouncements.

FN 4 - The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements One, Two, Five and Six to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

SSAP No. 4—Assets and Nonadmitted Assets

NAIC Staff Note – this SAP contains the definition of the financial statement element of an **Asset**. Relevant items have been bolded below for ease of identification.

2. For purposes of statutory accounting, **an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred**. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or

b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

FN1 - ***FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.**

FN2 - If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

SSAP No. 5—Liabilities, Contingencies and Impairments of Assets

NAIC Staff Note – this SAP contains the definition of the financial statement element of a **Liability**. Relevant items have been bolded below for ease of identification.

> **2. A liability is defined as certain or probable FN1 future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).**
>
> 3. **A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable FN1 future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened.** This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.
>
> 4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.
>
> **FN1 - *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.**

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): While slightly different, the updated FASB asset & liability definitions closely align with IFRS definitions. While IFRS retains the phrase "as a result of past events," it also explicitly retains the term "control," which is now implicit with the FASB updates. The elimination of the explicit term "control" was a deliberate action of the FASB as they noted that the notion of control has been historically misunderstood (control is to the right that gives rise to the economic benefit rather than to the economic benefits themselves). For reference *IFRS Chapter 4 – The Elements of Financial Statements,* defines an ***asset*** as a present economic resource controlled by the entity as a result of past events; with the economic resource representing a right that has the potential to produce economic benefits. Additionally, the chapter defines a ***liability*** as a present obligation of an entity to transfer an economic resource as a result of past events.

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to the Preamble, *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets,* as illustrated below and in the issue papers, to incorporate updates from *Chapter 4, Elements of Financial Statements* and *Chapter 7, Presentation* of the FASB's Conceptual Framework for Financial Reporting.

Proposed edits to the Preamble: proposed modifications reflect updates for superseded FASB Financial Accounting Concepts.

IV. Statutory Accounting Principles Statement of Concepts

25. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners (NAIC) in the continued development and maintenance of statutory accounting principles ("SAP" or "statutory basis") and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.

26. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

27. SAP utilizes the framework established by GAAP. **FN2** This document integrates that framework with objectives exclusive to statutory accounting. The NAIC's guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC must specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

28. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

29. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

FN 2 - The GAAP framework applicable to insurance accounting is set forth in *Statements of Financial Accounting Concepts ~~One, Two,~~ Five~~,~~ and ~~Six~~Eight*. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.

V. Statutory Hierarchy

42. The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1

SSAPs, including U.S. GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification (FASB Codification or GAAP guidance)

Level 2

Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC (INTs adopted before 2016)

Interpretations of existing SSAPs as adopted by the Statutory Accounting Principles (E) Working Group (INTs adopted in 2016 or beyond)

Level 3

NAIC Annual Statement Instructions

Purposes and Procedures Manual of the NAIC Investment Analysis Office

Level 4

*Statutory Accounting Principles Preamble and Statement of Concepts **FN4***

Level 5

Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA guidance not included in FASB Codification, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles

FN 4 - The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements ~~One, Two,~~ Five and ~~Six~~Eight to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

Proposed edits *SSAP No. 4—Assets and Nonadmitted Assets*: proposed modifications reflect an updated definition of the term **Asset** – to match the newly issued definition in FASB Statement of Financial Accounting Concepts No. 8

2. For purposes of statutory accounting, an asset shall be defined as: a present right of an entity to an economic benefit. ~~probable **FN1** future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.~~ An asset has two~~three~~ essential characteristics: (a) it is a present right~~embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows~~, and (b) the right is to an economic benefit. ~~a particular entity can obtain the benefit and control others' access to it~~ **FN1** **FN2**~~, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.~~ These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or

b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

FN1 - *FASB Statement of Financial Accounting Concepts No. 86, Elements of Financial Statements*, states that the combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. : Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

FN2 - If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

Relevant Literature

9. This statement incorporates the definition of an asset from adopts *FASB Statement of Financial Accounting Concepts No. 86, Chapter 4, Elements of Financial Statements,* paragraphs E16-E1825-33.

SSAP No. 5—Liabilities, Contingencies and Impairments of Assets: proposed modifications reflect an updated definition of the term **Liability** – to match the newly issued definition in FASB Statement of Financial Accounting Concepts No. 8

2. A liability is defined as a present obligation of an entity to transfer an economic benefit. certain or probable FN1 future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three two essential characteristics: (a) it is a present obligation embodies a present duty or responsibility to one or more other entities that entails settlement by probable FN1 future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, and (b) the obligation requires an entity to transfer or otherwise provide economic benefit to othersduty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and

reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

~~FN1 - *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.~~

Relevant Literature

39. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5~~ and paragraphs 35 and 36 of *FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements*~~. *FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification *ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14. This statement incorporates the definition of a liability from *FASB Statement of Financial Accounting Concepts No. 8, Chapter 4, Elements of Financial Statements,* paragraphs E37 and E38.

Issue Paper No. 166—Updates to the Definition of an Asset

Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to the Preamble, *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets,* as illustrated in the agenda item and in the draft issue papers, to incorporate updates from *Chapter 4, Elements of Financial Statements* and *Chapter 7, Presentation* of the FASB's Conceptual Framework for Financial Reporting.

Staff Review Completed by: Jim Pinegar– NAIC Staff, January – 2022; Robin Marcotte, NAIC Staff, December – 2022

Status:
On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to the Preamble, *SSAP No. 4—Assets and*

Nonadmitted Assets and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* to incorporate 1) updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* which identifies factors to consider when deciding how items should be displayed on the financial statements, and 2) Concepts Statement No. 8*, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements,* which updates the definitions of an asset and a liability. The Working Group also exposed two draft issue papers for historical documentation of these SAP clarifications.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to the Preamble and *SSAP No. 4—Assets and Nonadmitted Assets.* The revisions incorporate updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation,* which identifies factors to consider when deciding how items should be displayed on the financial statements, and Concepts Statement No. 8*, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements,* which updates the definition of an asset. In addition, the Working Group adopted *Issue Paper No. 166—Updates to the Definition of an Asset*, which documents the revisions to SSAP No. 4.

Additionally, on August 10, 2022, the Working Group re-exposed the proposed revisions and draft issue paper related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.* This exposure intends to provide additional time for industry to review the changes in accordance with statutory accounting statements. These revisions are also shown above under the SSAP No. 5R heading.

On December 13, 2022, the Working Group re-exposed the proposed revisions and draft *Issue Paper No. 16X—Updates to the Definition of a Liability* related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.* This exposure intends to provide additional time for industry to review the changes in accordance with statutory accounting statements. NAIC staff were directed to collaborate with interested parties on proposed clarifying language.

On March 22, 2023, the Working Group exposed additional revisions to *Issue Paper No. 16X—Updates to the Definition of a Liability* related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*. The revisions to: 1) add an additional footnote to the definition of a liability in SSAP No. 5R which defers to more topic specific contradictory guidance 2) revise the relevant literature section of SSAP No. 5R to note the modification and 3) note the additional exposure action in the Issue Paper paragrpah18.

These clarifications were because of the authoritative treatment that statutory accounting provides to the definition of an asset and a liability in SSAP No. 4 and SSAP No. 5R. For GAAP, the FASB Conceptual statements definitions are not authoritative, but rather are concepts to consider when developing and applying guidance. The FASB basis for conclusions noted that some existing authoritative FASB literature regarding liabilities is inconsistent with the updates to Concepts Statement No. 8. Therefore, a modification regarding topic specific liabilities guidance was incorporated to address variations from the definition of a liability. Examples of existing SAP variations from the definition of a liability include but are not limited to:

a. *SSAP No. 7—Asset Valuation Reserves and Interest Maintenance Reserves* – AVR and IMR establish liabilities for regulatory objectives.

b. *SSAP No. 62R—Property and Casualty Reinsurance* – contains the provision for reinsurance liability guidance which results in a liability that is a regulatory valuation allowance for overdue and slow paying reinsurance and also enforces Credit for Reinsurance (Model No. 785) collateral requirements.

c. *SSAP No. 92—Post Retirement Benefits Other than Pensions*, provides liability recognition, which adopts several GAA P standards with modifications.

The additional exposed revisions to SSAP No. 168 and SSAP No. 5R are reflected in the Issue Paper and also shown below.

- **Exposed revisions – Topic Specific Footnote -** This language is proposed for incorporation as a footnote to the liability definition in SSAP No. 5R and its related and *Issue Paper No. 16X—Updates to the Definition of a Liability*.

  New Footnote to paragraph 3 of SSAP No. 5R:
  The guidance in this Statement regarding the definition of a liability is applicable unless another authoritative statement of statutory accounting principles (SSAP) provides more topic specific contradictory guidance. In such cases the topic specific guidance shall apply.

- Exposed revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* and *Issue Paper No. 16X—Updates to the Definition of a Liability* (New language shaded):

  Relevant Literature

  39. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5 ~~and paragraphs 35 and 36 of *FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements*~~. *FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification *ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14. This statement incorporates the definition of a liability from *FASB Statement of Financial Accounting Concepts No. 8, Chapter 4, Elements of Financial Statements*, paragraphs E37 and E38 with modification reflected in this Statement regarding topic specific guidance.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated in *Issue Paper No. 168—Updates to the Definition of a Liability*, to the Preamble and SSAP No. 5R which revises the definition of a liability under statutory accounting.

Statutory Issue Paper No. 168

Updates to the Definition of a Liability

STATUS
Finalized August 13, 2023

Original and Current Authoritative Guidance: SSAP No. 5R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper documents the SAP clarification revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.* The intent of the revisions is to align current statutory accounting guidance, specifically the definition of a "liability," with the term utilized by the Financial Accounting Standards Board (FASB).

SUMMARY CONCLUSION

2. The statutory accounting principle clarifications to SSAP No. 5R (illustrated in Exhibit A), reflect that for the purposes of statutory accounting, a liability shall be defined as: a present obligation of an entity to transfer an economic benefit. A liability has two essential characteristics: (1) it is a present obligation, and (2) the obligation requires an entity to transfer or otherwise provide economic benefit to others. For the purposes of these characteristics, *transfer* is typically used to describe obligations to pay cash or convey assets, while the term *provide* is used to describe obligations to provide services or stand by to do so. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

3. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies. (The definition and recognition requirements of loss contingencies under SSAP No. 5R are not proposed to be revised and will continue as statutory accounting guidance.)

DISCUSSION

4. In December 2021, FASB issued *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which introduced updated definitions of certain key elements used in financial reporting – most notably updating the fundamental definition of a liability. Through the FASB's adoption of Concept Statement No. 8, the original Concept Statement No. 6 has been superseded. As statutory accounting currently reflects FASB's historical definition, this issue paper is to review the prior concept definition (currently utilized by statutory accounting) and compare it to FASB's updated concept definition and assess whether the revised concept definition shall be reflected in statutory accounting.

5. FASB concept statements do not reflect authoritative U.S. GAAP guidance. Rather concept statements are intended to set forth objectives and fundamental concepts that will be the basis for development of financial accounting and reporting guidance. The term "liability" is not captured or defined in the FASB Accounting Standards Codification (which is the source of authoritative U.S. GAAP.) Furthermore, although the concept statement is intended to be used as a guide in establishing authoritative

U.S. GAAP, the FASB is not restricted to the concepts when developing guidance, and the FASB may issue U.S. GAAP which may be inconsistent with the objectives and fundamental concepts set forth in Concept Statements. A change in a FASB Concept Statement does not 1) require a change in existing U.S. GAAP, 2) amend, modify or interpret the Accounting Standards Codification, or 3) justify either changing existing generally accepted accounting and reporting practices or interpreting the Accounting Standards Codification based on personal interpretations of the objectives and concepts in the concepts statement.

6. Under the prior FASB concept statement, which was reflected in SSAP No. 5R, a liability was defined as a probable future sacrifice of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of past transactions or events. In addition, the historical definition possessed three essential characteristics in that (1) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (2) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (3) the transaction or other event obligating the entity has already happened.

7. Pursuant to the prior concept statement, and as incorporated in SSAP No. 5R, *probable,* as referenced both in the definition and essential characters, was used in a usual general meaning, rather than in a specific accounting or technical sense and referred to which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

8. With the new FASB conceptual framework chapter, a liability is now defined as a present obligation of an entity to transfer an economic benefit. In addition, the current definition has two essential characteristics in that the liability is (1) a present obligation, and (2) the obligation requires an entity to transfer or otherwise provide economic benefits to others.

9. The updated liability definition from Concept Statement No. 8 no longer includes the term *probable* or the phrase *in the future* and *as a result of past transactions or events.* The FASB concluded that the term *probable* has historically been misunderstood as implying that a future obligation must meet a probability to a certain threshold before the definition of a liability was met. Thus, if the probability of a future transfer of an asset (or the requirement to provide a service) was low, a liability would likely not be recognized. In removing the term *probable* (and replacing it with "present obligation"), FASB concluded that in almost all situations, the presence of an obligation will be apparent. It stated that most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. Chapter 4 also discusses the prevalence of certain business risks and how to assess if they result in the recognition of a liability. The FASB concluded that while certain businesses have a risk that a future event will cause them to transfer an economic benefit (an asset), the risk itself does not represent a present obligation because exposure to a potential negative consequence does not constitute a present obligation.

10. However, the FASB also stated that situations lacking clear legal or contractual evidence of a present obligation may pose particular challenges that may make it difficult to discern whether a present obligation exists. In these settings, the FASB stated that constructive obligations or other noncontractual obligations are created by circumstance rather than by explicit agreement. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the FASB concluded that the specific facts and circumstances at the standards level (or in the case of statutory accounting, at the SSAP level) must be utilized to determine whether the entity has created a constructive obligation and must recognize a liability.

11. The FASB also struck the phrase *as the result of past transactions or events*. With this action, the FASB clarified that if the liability represents a *present obligation*, by default, the obligation must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

12. When reviewing the substance of the revisions, the FASB concluded that the updated definition resulted in a clearer and more precise definition. Furthermore, while it did not fundamentally change the historical concept of a liability, the revised definition potentially expands the population of liabilities to include certain obligations to issue or potentially issue an entity's own shares rather than settle an obligation exclusively with assets. In essence, clarifying that instruments with characteristics of both liabilities and equity may in fact be classified as liabilities in certain situations.

13. In general, the FASB did not anticipate that the liability definition revisions would result in any material changes in instrument reclassification (e.g., items now being classified as a liability when previously they were not considered liabilities). Again, FASB Concept Statements are not authoritative and thus the guidance in any specific standard will still be utilized for instrument measurement and classification. For statutory accounting purposes, the updated definition should be viewed similarly, that is it does not change fundamental concepts, change current practices, or introduce a new, original or a modified accounting principle. The revisions to the definition of a liability clarify the definitional language and do not modify the original intent of SSAP No. 5R and thus the changes are deemed to be a statutory accounting principle clarification.

14. The remaining concepts and guidance articulated in SSAP No. 5R (e.g., contingencies, impairments, guarantees, etc.) were not proposed for revision and thus are not further discussed in this issue paper.

Actions of the Statutory Accounting Principles (E) Working Group

15. During the 2022 Spring National Meeting, the Working Group exposed this issue paper for public comment.

16. During the 2022 Summer National Meeting, the Working Group re-exposed this issue paper for public comment.

17. At the 2022 Fall National Meeting, the Working Group re-exposed this issue paper related to the definition change of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.* This exposure intends to provide additional time for industry to review the changes in accordance with statutory accounting statements. NAIC staff were directed to collaborate with interested parties on proposed clarifying language.

18. At the 2023 Spring National Meeting, the Working Group exposed this issue paper with revisions to: 1) add an additional footnote to the definition of a liability in SSAP No. 5R which defers to more topic specific contradictory guidance and 2) revise the relevant literature section of SSAP No. 5R to note the modification. These clarifications were because of the authoritative treatment that statutory accounting provides to the definition of an asset and a liability in SSAP No. 4 and SSAP No. 5R. For U.S. GAAP, the FASB Conceptual statements definitions are not authoritative, but rather are concepts to consider when developing and applying guidance. The FASB basis for conclusions noted that some existing authoritative FASB literature regarding liabilities is inconsistent with the updates to Concepts Statement No. 8. Therefore, a modification regarding topic specific liabilities guidance was incorporated to address variations from the definition of a liability. Examples of existing SAP variations from the definition of a liability include but are not limited to:

a. *SSAP No. 7—Asset Valuation Reserves and Interest Maintenance Reserves* – AVR and IMR establish liabilities for regulatory objectives.

b. *SSAP No. 62R—Property and Casualty Reinsurance* – contains the provision for reinsurance liability guidance which results in a liability that is a regulatory valuation allowance for overdue and slow paying reinsurance and also enforces credit for reinsurance (*Credit for Reinsurance Model Law* (#785)) collateral requirements.

c. *SSAP No. 92—Post Retirement Benefits Other than Pensions*, provides liability recognition, which adopts several U.S. GAAP standards with modifications.

19. At the 2023 Summer National Meeting, the Working Group adopted the exposed revisions to SSAP No. 5R as documented in this issue paper and adopted this issue paper.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

20. Relevant excerpts of SSAP No. 5R, paragraphs 2-3 regarding the definition of a liability accounting are as follows:

> 2. A liability is defined as certain or probable[1] future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).
>
> 3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable[1] future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

Generally Accepted Accounting Principles

21. Relevant paragraphs from *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* have been included below:

> **Liabilities**
>
> E37. A liability is a present obligation of an entity to transfer an economic benefit
>
> **Characteristics of Liabilities**
>
> E38. A liability has the following two essential characteristics: a. It is a present obligation. b. The obligation requires an entity to transfer or otherwise provide economic benefits to others.[2]
>
> E39. Liabilities commonly have features that help identify them. For example, many liabilities require the obligated entity to pay cash to one or more identified other entities. Liabilities may not require an entity to pay cash but may require the entity to convey other assets, provide services, or transfer other economic benefits or to be ready to do so. Liabilities are based on a foundation of legal rights and duties.
>
> E40. Entities routinely incur liabilities in exchange transactions to acquire the funds, goods, and services they need to operate. For example, borrowing cash (acquiring funds) obligates an entity

[1] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

[2] This chapter continues the practice of describing liabilities as an obligation either to transfer or to provide economic benefits. For example, the term transfer has typically been used to describe obligations to pay cash or convey assets, and the term provide has typically been used to describe obligations to perform services or stand ready to do so.

to repay the amount borrowed, acquiring assets on credit obligates an entity to pay for the assets, and selling products with a warranty or guarantee obligates an entity to either pay cash or repair or replace any products that prove defective. Often, obligations incurred in exchange transactions are contractual based on written or oral agreements to pay cash or to provide goods or services to specified or determinable entities on demand at specified or determinable dates or on the occurrence of specified events.

Present obligation

E41. A liability requires that an entity be obligated to perform or act in a certain manner. In most cases it is apparent that liabilities are legally enforceable. Legally enforceable obligations include those arising from binding contracts, agreements, rules, statutes, or other requirements that would be upheld by a judicial system or government. Judicial systems vary in type and form, and the term judicial systems includes any such system that would enforce laws, statutes, and regulations. In the context most relevant to financial reporting, an obligation is any condition that binds an entity to some performance or action. In a financial reporting context, something is binding on an entity if it requires performance. Performance is what the entity is required to do to satisfy the obligation.

E42. Many obligations that qualify as liabilities stem from contracts and other agreements that are enforceable by courts or from governmental actions that have the force of law. Agreements, contracts, or statutory requirements often will specify or imply how an obligation was incurred and when and how the obligation is to be settled. For example, borrowing and lease agreements specify the amount of charges and the dates when the payments are due. The absence of a specified maturity date or event to require settlement may cast doubt that an obligation exists.

E43. Liabilities necessarily involve other parties, society, or law. The identity of the other party or recipient need not be known to the obligated entity before the time of settlement. An obligation of an entity to itself cannot be a liability. For example, in the absence of external requirements an entity is not obligated to repair the roof of its building or maintain its plant and equipment. Although those actions may be wise business moves, the entity may forgo or defer such activities because there is no present obligation to perform the activity.

E44. Certain obligations require nonreciprocal transfers from an entity to one or more other entities. Such obligations include taxes imposed by governments, donations pledged to charitable entities, and cash dividends declared but not yet paid.

E45. To have a liability, an entity must have a present obligation, that is, the obligation exists at the financial statement date. The settlement date of the liability may occur in the future, but the obligation must be present at the financial statement date. Transactions or other events or circumstances expected to occur in the future do not in and of themselves give rise to obligations today.

E46. An intention to purchase an item, for example, an asset, does not in and of itself create a liability. However, a contractual obligation that requires an entity to pay more than the fair value of the asset at the transaction date may create a liability before the asset is received, reflecting what the entity might have to pay to undo the unfavorable contract.

E47. Business risks result from the conduct of an entity's business activities. A business risk is not a present obligation, though at some point in the future an event may occur that creates a present obligation. Some businesses have the potential of carrying out activities and creating present obligations as a result of those activities. However, no present obligation exists even if it is virtually certain that an obligating event will occur, though at present no such event has occurred. The essence of distinguishing business risks from liabilities is determining the point in time when an entity has a present obligation.

E48. Some business risks result from an entity's transactions, for example, selling goods in overseas markets might expose an entity to the risk of future cash flow fluctuations because of changes in foreign exchange rates. Other business risks result from an entity's operating environment, for example, operating in a highly specialized industry might expose an entity to the

risk that it will be unable to attract sufficient skilled staff to sustain its operating activities. Those risks are not liabilities.

E49. To be presently obligated, an entity must be bound, either legally or in some other way, to perform or act in a certain way. Most liabilities are legally enforceable, including those arising from contracts, agreements, rules, and statutes. An entity also can become obligated by other means that would be expected to be upheld by a judicial process. However, the existence of a present obligation may be less clear in those circumstances.

E50. Some liabilities rest on constructive obligations, including some that arise in exchange transactions. A constructive obligation is created, inferred, or construed from the facts in a particular situation rather than contracted by agreement with another entity or imposed by government. An entity may become constructively obligated through customary business practice. In the normal course of business, an entity conducting certain activities may not create a clear contractual obligation but may nonetheless cause the entity to become presently obligated. For example, policies and practices for sales returns and those for warranties in the absence of a contract may create a present obligation because the pattern of behavior may create an enforceable claim for performance that would be upheld in the ultimate conclusion of a judiciary process.

E51. An entity's past behavior also may give rise to a present obligation. Repeated engagement in a certain behavior may obligate the entity to perform or act in a certain way on the basis of that pattern of behavior. For example, the entity may create a constructive obligation to employees for vacation pay or year-end bonuses by paying them every year even though it is not contractually bound to do so and has not announced a policy to do so.

22. The most notable changes regarding the definition of a liability included removal of the term *probable* and the phrase *as a result of past transactions or events.* Rationale for these changes were documented in *Chapter 4, Elements of Financial Statements* commentary as follows:

BC4.11. The definitions of both an asset and a liability in Concepts Statement 6 include the term probable and the phrases future economic benefit and past transactions or events. The term probable in the definitions in Concepts Statement 6 has been misunderstood as implying that a future economic benefit or a future sacrifice of economic benefit must be probable to a certain threshold before the definition of an asset or a liability is met. In other words, if the probability of future economic benefit is low, the asset definition is not met under that interpretation. A similar interpretation could be made for liabilities. The footnotes to the Concepts Statement 6 definition of assets and liabilities also were not helpful in clarifying the application of the term probable as used in the definitions of assets and liabilities. Accordingly, the Board decided to eliminate that term from the definitions of both assets and liabilities.

BC4.12. The term future in the definitions in Concepts Statement 6 focused on identifying a future flow of economic benefits to demonstrate that an asset exists or identifying a future transfer of economic benefits to demonstrate that a liability exists. The definitions in Concepts Statement 6 were often misunderstood as meaning that the asset (liability) is the ultimate future inflow (outflow). For example, in the instance of trade receivables, the definition in Concepts Statement 6 could be misunderstood to indicate that the asset is the successful collection of the receivable in the future. When applied appropriately, however, the definition would conclude that the asset is the present right to collection. Similar misunderstandings occurred in applying the liability definition. As a result, the Board concluded that a focus on the term present would appropriately shift the focus from identifying a future occurrence. Therefore, the Board decided to include the term present right to demonstrate that an asset exists and emphasize the term present obligation to demonstrate that a liability exists.

BC4.13. The definitions of assets and liabilities in Concepts Statement 6 both include the phrase past transactions or events. The Board concluded that if an entity has a present right or a present obligation, one can reasonably assume that it was obtained from some past transaction or event. Therefore, that phrase is considered redundant and has been eliminated from the definitions.

23. The other significant change to the definition of a liability included changing *future sacrifices* to a *present obligation*. Rationale for these changes were documented in *Chapter 4, Elements of Financial Statements* commentary as follows:

> BC4.25. The term present obligation is included in the definition of a liability, both in this chapter and in Concepts Statement 6. Because the application of the liability definition under Concepts Statement 6 did not give sufficient emphasis to the term present obligation, the definition in this chapter more appropriately emphasizes that term. Assessing whether a present obligation exists is the primary criterion in the definition of a liability in this chapter. The primacy of the term present obligation is made more evident through the removal of many of the problematic terms in the definition of a liability in Concepts Statement 6, as discussed in paragraphs BC4.11–BC4.13.
>
> BC4.26. Almost always, the existence of a present obligation will be apparent. Most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. However, situations lacking clear legal or contractual evidence of a present obligation pose particular challenges that may make it difficult to discern whether a present obligation exists.
>
> BC4.27. Determining when a present obligation exists has caused confusion with the existence of business risks. Business risks result from the nature of the business and where, when, and how an entity conducts its business. While certain businesses pose risks of future events occurring that will cause a transfer of economic benefits, the Board decided that the risks themselves are not present obligations because exposure to a potential negative consequence does not constitute a present obligation. Rather than viewing all business risks as liabilities, the Board decided that an entity has a present obligation only after an event occurs that demonstrates that the inherent business risk has created a present obligation. Thus, distinguishing when a business risk makes an entity presently obligated requires analysis of the facts and circumstances at the standards level.
>
> BC4.28. Determining the existence of a present obligation is particularly challenging in evaluating constructive obligations. Interpreting constructive obligations too narrowly will tend to exclude significant actual obligations of an entity, while interpreting them too broadly will effectively nullify the definition by including items that lack an essential characteristic of liabilities.
>
> BC4.29. Given that constructive obligations and other noncontractual obligations are created by circumstance rather than explicit agreement, it can be unclear whether a present obligation exists. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the Board decided that specific facts and circumstances at the standards level must be assessed to determine whether an entity has created a constructive obligation.

EXHIBIT A – SAP Clarification Revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* the other paragraphs of SSAP No. 5R are unchanged.

Statement of Statutory Accounting Principles No. 5 - Revised

Liabilities, Contingencies and Impairments of Assets

SCOPE OF STATEMENT

1. This statement defines and establishes statutory accounting principles for liabilities, contingencies and impairments of assets.

SUMMARY CONCLUSION

Liabilities

2. A liability is defined as a present obligation of an entity to transfer an economic benefit.~~certain or probable FN1 future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).~~

3. A liability[1] has ~~three~~ two essential characteristics: (a) it is a present obligation ~~embodies a present duty or responsibility to one or more other entities that entails settlement by probable FN1 future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand~~, and (b) the obligation required an entity to transfer or otherwise provide economic benefit to others~~duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened~~. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

~~FN1 - *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.~~

Relevant Literature

39. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5 ~~and~~

[1] The guidance in this statement regarding the definition of a liability is applicable unless another authoritative statement of statutory accounting principles (SSAP) provides more topic specific contradictory guidance. In such cases the topic specific guidance shall apply.

~~paragraphs 35 and 36 of *FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements*~~. *FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification *ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14. This statement incorporates the definition of a liability from *FASB Statement of Financial Accounting Concepts No. 8, Chapter 4, Elements of Financial Statements,* paragraphs E37 and E38 with modification reflected in this Statement regarding topic specific guidance.

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: Negative IMR

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☐	☒	☐
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: This agenda item has been developed to discuss the interest maintenance reserve (IMR) within statutory accounting, specifically the current guidance for the nonadmittance of disallowed negative IMR. Although the statutory accounting guidance has been in place for several years, the rising interest rate environment has created an increased likelihood for reporting entities to move to a negative IMR position. This agenda item intends to provide information on the background of IMR, current accounting guidance, recent discussions of the Life Actuarial (A) Task Force and some broad financial results from year-end 2021 and interim 2022 financial statements. The intent is to provide this information to facilitate Working Group discussion.

The following provides a high-level overview of the use of the terms positive IMR and negative IMR for entities filing the Life, Accident & Health / Fraternal annual statement blank:

- A positive IMR means that the net realized interest related gains which are amortized in the IMR calculation are greater than net realized interest related losses which are being amortized in the IMR calculation. A positive IMR is reported as a statutory liability and amortized to income over time.

- A negative IMR means that net realized interest related losses which are amortized in the IMR calculation are greater than net realized interested related gains which are amortized in the IMR calculation. A disallowed negative IMR is reported as a nonadmitted asset and amortized to income as a loss over time.

As IMR occurs in the general and separate account, there are specific guidelines in determining whether the IMR reflects a net disallowed negative or position in the annual statement instructions. These are on page 5.

A letter from the American Council of Life Insurers (ACLI) dated Oct. 31, 2022, raised concerns with existing statutory accounting requirements on the nonadmittance of disallowed negative IMR noting negative ramifications for insurers. Key summarized positions from this ACLI letter include:

- In general, rising interest rates are favorable to the financial health of the insurance industry and policyholders. However, with negative IMR, there is an inappropriate perception of decreased financial strength through lower surplus and risk-based capital.

- Negative IMR could impact the rating agency view of the industry or incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. In either scenario, negative IMR encourages short-term non-economic activity that is not in the best long-term interest of a reporting entity's financial health or its policyholders.

<u>Background of IMR</u>

The IMR was first effective in statutory accounting in 1992 and requires that a realized fixed income gains or losses attributable to changes in interest rates (excluding gains/losses that are credit related), be amortized into income over the remaining term to maturity of the fixed-income investments (and related hedging programs) sold rather than being reflected in income immediately.

Minutes, including adopted materials – in the Blue Book (Life Statement), from the 2002 4th Quarter NAIC Proceedings discussing IMR are provided below. Please note the last section that includes "Future Directions" which identifies recognition of negative IMR as a major area of effort.

Description and other components of IMR from the Blue Book, captured in the 2002 4th Quarter NAIC Proceedings, provides the following definition and other details: ***(Only key excepts include*****d.)**

The Interest Maintenance Reserve (IMR): captures for all types of fixed income investments, all of the realized capital gains and losses which result from changes in the overall level of interest rates as they occur. Once captured, these capital gains or losses are amortized into income over the remaining life (period to maturity) of the investments sold. Realized gains and losses on derivative investments, which alter the interest rate characteristics of assets/liabilities, also are allocated to the IMR and are to be amortized into income over the life of the associated assets/liabilities. Note: certain significant unusual transactions may require immediate recognition of any realized capital gains or losses, as described in a later section. This reserve is not subject to any maximum.

VII. IMR MINIMUMS/MAXIMUMS: A. Minimums: **The IMR can be negative for any line of business as long as the aggregate IMR for the Company is not less than zero. Any otherwise negative IMR value is carried over to subsequent years**. B. Maximums: There is no maximum of the IMR

VIII. BACKGROUND/PERSPECTIVE: To insure solvency of a company, its assets should be invested so that the company has a very high probability of paying its contractual liabilities when they become due. In order to assess whether a company is able to fulfill its obligations, it must present its liabilities and assets on a financially integrated basis. Since the accounting practices prescribed for the life insurance annual statement are an important element in this discipline, it is imperative that the accounting practices be consistent for assets and liabilities. If they are inconsistent, then the annual statement will not reveal whether assets exceed liabilities; more importantly, neither regulators nor management can determine the risk of insolvency for the company.

The Valuation Actuary's Opinion includes a statement that the assets backing the liabilities make adequate provision for the company's liabilities. That is, the Actuary must look beyond the statutory valuation formulas and satisfy himself that the cash flows generated by the assets will probably be sufficient to discharge the liabilities. Prior to the AVR and IMR, there were many circumstances under which the statutory formula valuation methods gave rise to inappropriate results. Some examples were:

- Changes in values due to interest rate swings were recognized inconsistently on the asset and liability sides of the balance sheet. Liabilities are valued using interest rates fixed at issue while some assets may be valued using current interest rates through trading activity.
- When the assets are poorly matched to the liabilities, a significant adverse swing in the interest rates will reduce financial strength and could lead to insolvency even though the balance sheet value of the assets exceeds the balance sheet value of the liabilities. Using long term assets to back demand liabilities is dangerous if there is a significant upswing in interest rates. In addition, individual insurance premiums are received and invested for many years after the issue date on which the reserve interest rate is determined, creating a potential for inadequate yields that is not reflected in standard accounting procedures.
- The potential for future asset losses was not well reflected in the balance sheet or earnings statement.

It is desirable that the valuation of the assets and liabilities be made as consistent as possible to 1) minimize the instances where, in order to render a clean opinion, the actuary must establish extra reserves due to interest rate gains or potential for defaults and 2) increase the likelihood that assets supporting liabilities are sufficient even in the absence of an Actuarial Opinion. The development of an AVR and IMR will correct many of these deficiencies in consistency.

XII. AVR AND IMR BUILT ON AND COMPLEMENT EXISTING VALUATION PRACTICES: The existing framework of asset and liability valuation practices, as augmented by the NAIC Model Standard Valuation Law, played a key role in designing the AVR and IMR, including:

A. Reserve valuation standards should contain a provision for future losses. Although it is well understood that in cash flow testing provision must be made for future asset losses, it may not be as well understood that historically the minimum valuation standards implicitly contained such a provision.

B. Interest assumptions in reserve valuation generally recognize the potential for mismatch. Dynamic valuation rates are lower for ordinary life than for guaranteed investment contracts, for example, because the mismatch is almost inevitable on the former. In addition, it is required in other regulations, and in the NAIC Model Standard Valuation Law, that cash flow testing should be used and may result in the adoption of lower than the dynamic valuation rates if mismatch exists. Hence, with the one exception noted in section (c), there is no need for the IMR reserves to make provision for the risk of mismatch.

C. Asset valuations for fixed interest securities usually reflect the outlook at the time of purchase of an asset. In particular, bond amortization tends to reflect the yields available at time of purchase and the expected cash flow. Liabilities are established at the same time, and the interest rate assumptions on them are those appropriate to the outlook at that time. **But if securities are traded, a new amortization schedule is established that may be based on an entirely different yield environment, which may not be consistent with the liabilities that have been established. Using the IMR to absorb trading gains is desirable and appropriate to eliminate this subsequently created mismatch.**

D. Equities present special valuation problems. Common stocks are valued at market rather than amortized value; hence they require different treatment. Real estate and similar investments, although usually valued at depreciated value, require special consideration because of the great likelihood of major changes in yield and yield expectation after purchase.

XXII. RESERVE MAXIMUM AND MINIMUM LEVELS: No maximum is placed on the Interest Maintenance Reserve. The aggregate minimum value for the IMR for the Company is zero. The IMR may be negative for any Line of Business as long as the aggregate for all lines equals zero. Provision is made in the accounting rules that if an aggregate negative IMR is developed in the absence of the zero minimum, that negative value is carried over to subsequent years.

The basic rationale for the IMR would conclude that neither a maximum nor a minimum is appropriate. If the liability values are based on the assumption that the assets were purchased at about the same time as the liabilities were established, then there should be no bounds to the reserve which corrects for departures from that assumption; if a company has to set up a large reserve because of trading gains, it is in no worse position than if it had held the original assets. As for negative values of the IMR, the same rationale applies. However, the concept of a negative reserve in the aggregate has not been adopted.

XXVIII. EXCESSIVE WITHDRAWALS:

A. Background: Major book-value withdrawals or increases in policy loans can occur at a time of elevated interest rates. If these withdrawals or increases are far in excess of the withdrawals provided for in the company's reserving and cash flow testing, and **if asset sales at this point are, in effect, forced sales to fund liabilities that are no longer on the books, the allocation of a negative amount to the IMR is not correct.**

   A company may also experience a "run on the bank" due to adverse publicity. This could occur even during a period of low interest rates, and the sale of assets to meet a run would conceivably produce gains. It is appropriate to register the gains immediately.

   If the withdrawals were scheduled payments under a GIC, then there is a presumption that any gains or losses that might occur at the time of withdrawal should be added to the IMR since the gains or losses would be spurious if the company has followed a policy of matching its assets to its liabilities.

Note that many of the situations where an upsurge in withdrawal activity generates real losses arise when a company has a severe mismatch between its assets and its liabilities. Such losses can be present even in the absence of any realized gains or losses. The primary protection as to the adequacy of reserves in these circumstances is the requirement for an actuary's opinion.

B. IMR Exclusions: All realized interest-related gains or losses which arise from the sale of investments required to meet "Excess Withdrawal Activity" as defined below will be excluded from the IMR and will be reflected in net income.

STANDARDS FOR ACTUARIAL RESERVES WITH AN IMR AND AN AVR

LXX. IMR RESERVE STANDARD The Interest Maintenance Reserve is a true actuarial reserve, and actuaries should use the assets supporting the Interest Maintenance Reserve when opining that the assets supporting the company's reserves make adequate provision for the company's obligations. **In the case of a negative IMR, the actuarial opinion should include an explicit statement that the impact of the negative IMR on reserve adequacy has been considered and that the reserves after deduction of the negative IMR still make adequate provision for the liabilities.**

LXXI. GENERAL EXPLANATION The IMR is designed to work with minimum statutory reserves based on formulas contained in laws or regulations. Where, for example, the valuation rate is based on the interest rate conditions prevailing in the year of deposit, the assets supporting the liabilities will be consistent with the liability assumptions. Disposal of the assets during a period of declining interest rates will produce interest-related gains, but these gains will be needed to support the liabilities that are still valued at the interest rate levels prevailing at time of deposit. Thus, it is appropriate in the case of positive IMR to treat the IMR as an additional reserve requirement above and beyond formula minimums.

In cash-flow-testing actuaries take future cash flows into account from existing assets. In an example such as described above, existing assets may well have been purchased at rates below those prevailing at the time reserves were established. The positive IMR that has been built up has captured the gains and not allowed them to be available for distribution. The IMR is recognized as part of the reserves available to meet future obligation cash flows.

Thus from either point of view a positive IMR is treated as a true actuarial reserve. The same arguments should apply equally well in the case of a negative IMR, but some concern has been expressed that in this case the net reserves are in effect lower than statutory formulas minimums, and therefore special considerations are required.

FUTURE DIRECTIONS

In late 2002, the interested persons (as its name had become) considered refinements of the AVR/IMR for the next several years, from that vantage point, some of the major areas of effort appear to be as follows:

1. **There should be recognition of negative values of the IMR. The group had long recognized that the philosophical basis for the IMR supports negative values of the reserve as well as positive. There is a need to have investment return match the liabilities associated with the investment; and a need to remove the incentive for a company to make investment decisions based on the short term balance sheet effect; and these needs exist also on the negative side of the IMR.**

   No doubt there are concerns that a negative reserve of this type could somehow lead to an unsound condition, so there has been appended to this report a discussion entitled "Why Are Negative Values For the IMR Necessary?" It also seems as though there should be additional safeguards in the case of a negative IMR. Rather than put arbitrary limits on the amount of the negative reserve, however, consideration is being given to an actuary's statement that an asset adequacy analysis has been carried out that demonstrates the soundness of the reserves.

   (Staff Note: The NAIC library does not have a record of the report noted in the above paragraph.)

Current Accounting Guidance

The statutory accounting guidance for IMR (and the Asset Valuation Reserve – AVR) is within *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, but the guidance within that SSAP is very limited. It provides a general description, identifies that IMR/AVR shall be calculated and reported per the guidance in the applicable SSAP, and if not explicit in the SSAP, in accordance with the Annual Statement Instructions. The SSAPs most often simply direct allocation to (or between) IMR and AVR, with the bulk of the guidance within the Annual Statement Instructions.

The guidance in the Annual Statement instructions provides information on the net IMR balance, which takes into consideration both the positive and negative balances in the general and separate accounts. As detailed, disallowed negative IMR is reported so that it is a direct reduction to surplus on the Summary of Operations, page 4, line 41 change in nonadmitted assets:

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned "Interest Maintenance Reserve" on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the "Change in Disallowed Interest Maintenance Reserve" in the write-in line, in the Surplus Account on Page 4 of the Separate Accounts Statement.

The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Account IMR Balance	Net IMR Balance
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

a. If both balances are positive, then report each as a liability in its respective statement.

b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.

c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.

d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.

e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.

f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

The Statutory Accounting Statement of Concepts in the Preamble to the AP&P provides the following on Recognition:

Recognition

35. The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise's ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.

36. The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

37. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

Life Actuarial (A) Task Force 2022 Guidance

The Life Actuarial (A) Task Force considered comments from the ACLI that the inclusion of a negative IMR balance in asset adequacy testing, the disallowance of a negative IMR could result in double counting of losses (i.e., through the disallowance on the balance sheet and the potential AAT-related reserve deficiency). The Task Force identified that VM-20 Section 7.D.7.b notes that "…the company shall use a reasonable approach to allocate any portion of the total company balance that is disallowable under statutory accounting procedures (i.e., when the total company balance is an asset rather than a liability)." Question 22 of the AAA's Asset Adequacy Practice Note (Attachment 2) states that "… a negative IMR is not an admitted asset in the annual statement. So, some actuaries do not reflect a negative value of IMR in the liabilities used for asset adequacy analysis." However, Question 22 also notes a 2012 survey data that showed varying practices across companies, including some companies that allocated negative IMR**.**

On Nov. 17, 2022, in order to assist state regulators in achieving uniform outcomes for year-end 2022, the Task Force exposed guidance until November 30, 2022:

Recommendation In order to assist state regulators in achieving uniform outcomes for year-end 2022, we have the following recommendation: the allocation of IMR in VM-20, VM-21, and VM-30 should be principle-based, "appropriate", and "reasonable". Companies are not required to allocate any non-admitted

portion of IMR (or PIMR, as applicable) for purposes of VM-20, VM-21, and VM-30, as being consistent with the asset handling for the nonadmitted portion of IMR would be part of a principle-based, reasonable and appropriate allocation. However, if a company was granted a permitted practice to admit negative IMR as an asset, the company should allocate the formerly non-admitted portion of negative IMR, as again a principle-based, reasonable and appropriate IMR allocation would be consistent with the handling of the IMR asset. This recommended guidance is for year-end 2022, to address the current uncertainty and concerns with the "double-counting" of losses. This recommended guidance will help ensure consistency between states and between life insurers in this volatile rate environment. Refinement of this guidance may be considered beyond year-end 2022.

The Oct. 31, 2022 ACLI Letter also identified the following references to IMR in the valuation manual and Risk-Based Capital Calculations:

Regulation	Use	IMR references
Actuarial Opinion and Memorandum Regulation (VM-30)	Asset adequacy analysis for annual reserve opinion	An appropriate allocation of assets in the amount of the IMR, whether positive or negative, shall be used in any asset adequacy analysis.
Life principle-based reserves (VM-20)	Calculation of deterministic reserve	Calculate the deterministic reserve equal to the actuarial present value of benefits, expenses, and related amounts less the actuarial present value of premiums and related amounts, less the positive or negative pre-tax IMR balance at the valuation date allocated to the group of one or more policies being modeled
Life principle-based reserves (VM-20)	Calculation of stochastic reserve	Add the CTE amount (D) plus any additional amount (E) less the positive or negative pre-tax IMR balance allocated to the group of one or more policies being modeled
Variable annuities principle-based reserves (VM-21)	Reserving for variable annuities	The IMR shall be handled consistently with the treatment in the company's cash-flow testing, and the amounts should be adjusted to a pre-tax basis.
C3 Phase 1 (Interest rate risk capital)	RBC for fixed annuities and single premium life	IMR assets should be used for C3 modeling.

Assessment of 2020-2022 IMR Balances:

Note – The following amounts reflect the general account IMR Reserve balance. (This is the amount shown as a liability and shows the decrease in the positive IMR reported since 2020.) This detail does not show the disallowed negative IMR reported as an asset and nonadmitted. Also, information on the separate account IMR, which is a factor in determining in disallowed negative IMR, will not be known until the year-end financial statements are filed (March 1. 2023).

	GA 2022 – Q3	GA 2022 – Q2	GA 2022 – Q1	GA YE – 2021	GA YE – 2020
Aggregate IMR	27,601,001,445	31,859,274,989	37,697,176,149	40,598,068,038	35,229,578,726
Change from Prior	(4,258,273,544)	(5,837,901,160)	(2,900,891,889)	5,368,489,312	
% Change	(13.4%)	(21.5%)	(7.1%)	15.2%	

Review of GA IMR Reserve Decrease:

- From the first quarter (Q1) to second quarter (Q2), 25 companies had decreases in the IMR reserve balance over $50M totaling $4,717,657,986, representing 80% of the overall change. 13 of these companies had decreases of IMR over $100M, totaling $3,959,569,339, representing 68% of the change. Four of these companies had decreases of IMR over $400M. One of these companies reported a zero IMR liability and reported a disallowed IMR on the asset page of approx. $570M.

- From the first quarter (Q1) to second quarter (Q2), 49 companies increased their prior reported positive IMR by $61,390,564. From the second quarter (Q2) to third quarter (Q3), 56 companies increase their prior reported positive IMR by $60,316,403

- From the second quarter (Q2) to third quarter (Q3), 16 companies had decreases in the IMR reserve balance over $50M totaling $3,161,570,362, representing 74% of the change. 8 of these companies had decreases of IMR over $100M, totaling $2,580,832,015, representing 60% of the change. All of these companies were still in a net positive IMR position.

- For the 30 companies that reflected the largest decline in reported IMR between the first to second quarter and then the second to third quarter, the following key details are noted.

    - From the first (Q1) to second quarter (Q2), the top 30 companies reflected a decrease in $4,923,166,733, which is 84% of the total decrease.

    - From the second (Q2) to third quarter (Q3), the top 30 companies reflected a decrease in $3,642,088,165, which is 85.5% of the total decrease.

    - 19 companies were noted as being in the population for both periods. 29 of the 30 companies reported a net positive IMR in the third quarter. One company reported a zero IMR in Q3.

- For the 15 companies that had the largest declines between the first quarter (Q1) to second quarter (Q2), eight of those companies also had the largest declines from second quarter (Q2) to third quarter (Q3).

- A limited number of companies are reporting a negative IMR on the liabilities side. Seven companies reported a net negative IMR balance in the third quarter (Q3) for a total of 11,031,998. One company made up $10.5M of the aggregate balance and this company initially went negative in the second quarter (Q2). Six companies reported a net negative IMR balance for Q2 for a total of $9,815,594. (The other companies with negative IMR were immaterial amounts.) *(Under the guidance in the A/S instructions, these companies should stop at zero and report the negative as disallowed nonadmitted asset.)*

Review of Disallowed IMR:
Although the assessment of the liability balance shows the decrease in positive IMR, it no longer tracks the decline for companies that go negative, as the reserve balance on the liability page should stop at zero. (This info may be identifiable from the IMR schedule, but not within the quarterly financials from a review of the IMR reported on the liability page.) As such, NAIC staff completed a review of the data to identify the companies that moved to a zero balance (from a prior positive balance) at year-end 2021 or in the 2022 quarters:

Companies that moved from a positive IMR (liability) to a zero balance:

- Initially went to zero in 2022 – Q3: 20 companies
- Initially went to zero in 2022 – Q2: 20 companies
- Initially went to zero in 2022 – Q1: 11 companies
- Initially went to zero YE 2021 – 20 companies (This is a comparison to YE 2020.)

For these 71 companies, NAIC staff has completed a manual review to the 2022 third quarter financial statements to determine if a disallowed IMR was reported as an aggregate write-in on the asset page. For these companies, 60 were identified with a disallowed IMR for a total of $1 Billion as of the third quarter 2022.

Existing Authoritative Literature:

SSAP Authoritative Guidance:

- *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*
- Life Annual Statement Instructions

(Guidance included as part of discussion.)

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Nov. 17, 2022, Discussion by Life Actuarial (A) Task Force as discussed above.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): NA

Recommendation:
NAIC staff recommend that the Working Group include this item on their maintenance agenda as a New SAP Concept for discussion to assess the current guidance for disallowed negative IMR. NAIC staff recommend that at the Working Group's conclusion, documentation of the discussion, and resulting decisions, be captured for historical purposes in an Issue Paper.

Staff Review Completed by: Julie Gann - NAIC Staff, November 2022

Status:
On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a New SAP Concept and exposed the agenda item with a request for comments by industry on potential guardrails and details on unique considerations. The Working Group directed NAIC staff to coordinate with the Life Actuarial (A) Task Force and request regulator-only sessions with industry to receive specific company information.

© 2023 National Association of Insurance Commissioners

On March 22, 2023, the Statutory Accounting Principles (E) Working Group directed NAIC staff regarding the consideration of negative interest maintenance reserve (IMR) with an intent to work on both a 2023 solution and a long-term solution as follows:

a. Draft a referral to the Life Actuarial (A) Task Force on further consideration of the asset adequacy implications of negative IMR. Items to include: 1) developing a template for reporting within asset adequacy testing (AAT); 2) considering the actual amount of negative IMR that is admitted to be used in the AAT; 3) better consideration of cash flows within AAT (and documentation), as well as any liquidity stress test (LST) considerations; 4) ensuring that excessive withdrawal considerations are consistent with actual data (sales of bonds because of excess withdrawals should not use the IMR process); and 5) ensuring that any guardrails for assumptions in the AAT are reasonable and consistent with other aspects.

b. Draft a referral to the Capital Adequacy (E) Task Force for the consideration of eliminating any admitted net negative IMR from total adjusted capital (TAC) and the consideration of sensitivity testing with and without negative IMR.

c. Develop guidance for future Working Group consideration that would allow the admission of negative IMR up to 5% of surplus using the type of limitation calculation similar to that used for goodwill admittance. The guidance should also provide for a downward adjustment if RBC ratio is less than 300.

d. Review and provide updates on any annual statement instructions for excess withdraws, related bond gains/losses and non-effective hedge gains/losses to clarify that those related gains/losses are through asset valuation reserve (AVR), not IMR.

e. Develop accounting and reporting guidance to require the use of a special surplus (account or line) for net negative IMR.

f. Develop governance related documentation to ensure sales of bonds are reinvested in other bonds.

g. Develop a footnote disclosure for quarterly and annual reporting.

On April 10, 2023, the Working Group exposed a limited-time, optional INT to allow admittance of net negative (disallowed) IMR in the general account up to 5% of adjusted capital and surplus. The exposed INT proposed restrictions on what is permitted to be captured in the net negative IMR balance eligible for admittance as well as reporting and disclosure requirements.

On June 28, 2023, the Working Group discussed comments received on the exposed INT and directed NAIC staff to incorporate several revisions to the INT. The revised INT reflects the following:

- Requirement for RBC over 300% after adjustment to remove admitted positive goodwill, EDP equipment and operating system software, DTAs and admitted IMR.
- Allowance to admit up to 10% of adjusted capital and surplus – first in the GA, and then if all disallowed IMR in the GA is admitted and the percentage limit is not reached, then to the SA account proportionately between insulated and non-insulated accounts. *(The adjustments are the same that occur for the RBC adjustment and reduce capital and surplus before applying the 10% percentage limit.)*
- There is no exclusion for derivatives losses included in negative IMR if the company can demonstrate historical practice in which realized gains from derivatives were also reversed to IMR (as liabilities) and amortized.
- Inclusion of a new reporting entity attestation.

- Effective date through Dec. 31, 2025, with a note that it could be nullified earlier or extended based on WG actions to establish specific guidance on net negative (disallowed) IMR.
- Application guidance for admitting / recognizing IMR in both the general and separate accounts.

On July 5, 2023, the Working Group exposed via evote the revised INT for a shortened comment period ending July 21, 2023.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed INT 23-01 which provides optional, limited-time guidance, which allows the admittance of net negative (disallowed) interest maintenance reserve (IMR) up to 10% of adjusted capital and surplus. INT 23-01 is effective through December 31, 2025.

INT 23-01 References

Current:
SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve
Annual Statement Instructions

INT 23-01 Issue

1. The statutory accounting guidance for interest maintenance reserve (IMR) and the asset valuation reserve (AVR) is within *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, but the guidance within SSAP No. 7 is very limited. It provides a general description, identifies that IMR/AVR shall be calculated and reported per the guidance in the applicable SSAP, and if not explicit in the SSAP, in accordance with the annual statement instructions. The SSAPs most often simply direct allocation to (or between) IMR and AVR, with the bulk of the guidance residing within the annual statement instructions.

2. As detailed in SSAP No. 7, paragraph 2, the guidance for IMR and AVR applies to life and accident and health insurance companies and focuses on IMR and AVR liability recognition and distinguishing between IMR and AVR:

> 2. Life and accident and health insurance companies shall recognize liabilities for an AVR and an IMR. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR defers recognition of the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the liability released.

3. The IMR guidance in the annual statement instructions provides information on the net balance. A positive IMR represents net interest rate realized gains and is reported as a liability on a dedicated reporting line. A negative disallowed IMR represents net interest rate realized losses and is reported as a miscellaneous other-than-invested write-in asset in the general account and nonadmitted.

4. IMR balances between the general account and separate accounts are separate and distinct. Meaning, a net negative IMR in the general account only represents activity that occurred in the general account that was allocated to IMR. However, the net positive or negative balance of the general account influences how the net positive or negative balances are reported in separate account statements (and vice versa). (A net negative IMR balance in the general account may not be disallowed if there is a covering net positive IMR in the separate account. Negative IMR that is not disallowed is reported as a contra-liability.) The instructions for reporting the net negative and positive balances are detailed in the annual statement instructions:

Line 6 – Reserve as of December 31, Current Year

Record any positive or allowable negative balance in the liability line captioned "Interest Maintenance Reserve" on Page 3, Line 9.4 of the General Account Statement and Line 3 of the Separate Accounts Statement. A negative IMR balance may be recorded as a negative liability in either the General Account or the Separate Accounts Statement of a company only to the extent that it is covered or offset by a positive IMR liability in the other statement.

If there is any disallowed negative IMR balance in the General Account Statement, include the change in the disallowed portion in Page 4, Line 41 so that the change will be appropriately charged or credited to the Capital and Surplus Account on Page 4. If there is any disallowed negative IMR balance in the Separate Accounts Statement, determine the change in the disallowed portion (prior year less current year disallowed portions), and make a direct charge or credit to the surplus account for the "Change in Disallowed Interest Maintenance Reserve" in the write-in line, in the Surplus Account on Page 4 of the Separate Accounts Statement. The following information is presented to assist in determining the proper accounting:

General Account IMR Balance	Separate Account IMR Balance	Net IMR Balance
Positive	Positive	Positive (See rule a)
Negative	Negative	Negative (See rule b)
Positive	Negative	Positive (See rule c)
Positive	Negative	Negative (See rule d)
Negative	Positive	Positive (See rule e)
Negative	Positive	Negative (See rule f)

Rules:

a. If both balances are positive, then report each as a liability in its respective statement.

b. If both balances are negative, then no portion of the negative balances is allowable as a negative liability in either statement. Report a zero for the IMR liability in each statement and follow the above instructions for handling disallowed negative IMR balances in each statement.

c. If the general account balance is positive, the separate accounts balance is negative and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the Separate Accounts Statement.

d. If the general account balance is positive, the separate account balance is negative, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the Separate Accounts Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the Separate Accounts Statement.

e. If the general account balance is negative, the separate account balance is positive, and the combined net balance is positive, then all of the negative IMR balance is allowable as a negative liability in the General Account Statement.

f. If the general account balance is negative, the separate account balance is positive, and the combined net balance is negative, then the negative amount not covered by the positive amount is not allowable. Report only the allowable portion as a negative liability in the General Account Statement and follow the above instructions for handling the disallowed portion of negative IMR balances in the General Account Statement.

5. In October 2022, the ACLI requested the Statutory Accounting Principles (E) Working Group to reassess the guidance for net negative (disallowed) IMR, with a request to consider admittance of those

amounts. The ACLI noted that the nonadmittance of disallowed negative IMR can have adverse negative ramifications for insurers with two key themes:

a. In general, rising interest rates are favorable to the financial health of the insurance industry and policyholders. However, with negative IMR, there is an inappropriate perception of decreased financial strength through lower surplus and risk-based capital.

b. Negative IMR could impact the rating agency view of the industry or incentivize companies to avoid prudent investment transactions that are necessary to avoid mismatches between assets and liabilities. In either scenario, negative IMR encourages short-term non-economic activity that is not in the best long-term interest of a reporting entity's financial health or its policyholders.

6. In considering the request, the Working Group concluded that, for year-end 2022, there would be no change to statutory accounting guidance and deviations from statutory accounting principles would need to be approved via a permitted or prescribed practice. The Working Group then held company-specific educational sessions in January 2023 to receive detailed information regarding negative IMR and received a subsequent comment letter from the ACLI.

7. During the 2023 Spring National Meeting, the Working Group further discussed the topic of negative IMR and directed NAIC staff to proceed with drafting guidance for a 2023 solution and to begin work towards a long-term solution.

INT 23-01 Discussion

8. This interpretation prescribes limited-time, optional, statutory accounting guidance, as an exception to the existing guidance detailed in SSAP No. 7 and the annual statement instructions that requires nonadmittance of net negative (disallowed) IMR as a short-term solution. Specifically, this interpretation impacts the annual statement instruction rules regarding disallowed negative IMR detailed in rules 'b,' 'd' and 'f' shown in paragraph 4.

9. Reporting entities are permitted to admit net negative (disallowed) IMR with the following restrictions:

a. Reporting entities that qualify pursuant to paragraph 9.b., are permitted to admit net negative (disallowed) IMR up to 10% of the reporting entity's adjusted general account[1] capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner. The capital and surplus shall be adjusted to exclude any net positive goodwill, EDP equipment and operating system software, net deferred tax assets and admitted[2] net negative (disallowed) IMR.

b. Reporting entities applying this interpretation are required to have a risk-based capital (RBC) greater than 300% authorized control level (ACL) after an adjustment to total adjusted capital (TAC) that reflects a reduction to remove any net positive goodwill, EDP equipment and operating system software, net deferred tax assets and admitted net negative (disallowed) IMR. Compliance with this adjusted RBC calculation shall be affirmed for all

[1] The general account capital and surplus includes surplus reflected in the separate account; therefore, an aggregation of general account and separate account surplus is not necessary.

[2] As the separate account does not have "admitted" assets, broad reference to "admitted net negative (disallowed) IMR" throughout this interpretation includes what is admitted in the general account and what is recognized as an asset in the separate accounts.

quarterly and annual financial statements for which net negative (disallowed) IMR is reported as an admitted asset in the general account or recognized as an asset in the separate accounts. Reporting entities shall provide documentation to illustrate compliance with this requirement upon state regulator request. Reporting entities with an adjusted RBC calculation of 300% ACL or lower are not permitted to admit net negative (disallowed) IMR in the general account or recognize IMR assets in the separate accounts.

c. The net negative (disallowed) IMR permitted for admittance shall not include losses from derivatives that were reported at fair value prior to derivative termination[3] unless the reporting entity has historically followed the same process for interest-rate hedging derivatives that were terminated in a gain position. In other words, there is a requirement for documented, historical evidence illustrating that unrealized gains from derivatives reported at fair value were reversed to IMR (as a liability) and amortized as part of IMR. Reporting entities that do not have evidence of this past application are required to remove realized losses from derivatives held at fair value from the net negative (disallowed) IMR balance to determine the amount permitted to be admitted. Reporting entities that begin a new process for the use of hedging derivatives, perhaps with a theoretical process to treat derivative losses and derivative gains similarly, but do not have evidence illustrating the historical treatment of derivative gains through IMR are not permitted to include derivative losses in the net negative (disallowed) IMR permitted to be admitted. This evidence is required separately for the general account, insulated separate account and non-insulated separate account if losses from derivatives previously reported at fair value are currently being allocated to IMR in those accounts.

10. Reporting entities that admit net negative (disallowed) IMR shall follow the following process:

a. All net negative (disallowed) IMR in the general account shall first be admitted until the capital and surplus percentage limit, as detailed in paragraph 9.a., is reached.

b. If all general account net negative (disallowed) IMR has been fully admitted, and the reporting entity is still below the paragraph 9.a. capital and surplus limit, then the reporting entity can report net negative (disallowed) IMR as an asset in the separate accounts. Reporting entities that have both insulated and non-insulated separate accounts shall recognize IMR assets proportionately between the insulated and non-insulated statements until the aggregated amount recognized as an admitted asset in the general account and as an asset in the insulated and non-insulated statements reaches the percentage limit of capital and surplus detailed in paragraph 9.a.

11. Reporting entities that admit net negative (disallowed) IMR in the general account shall report the admittance in the balance sheet as follows:

a. Reporting entities shall report the net negative (disallowed) IMR as an aggregate write-in to miscellaneous other-than-invested assets (line 25) (named as “Admitted Disallowed IMR”) on the asset page. The net negative (disallowed) IMR shall be admitted to the extent permitted per paragraph 9.a., with the remaining net negative (disallowed) IMR balance nonadmitted.

b. Reporting entities shall allocate an amount equal to the general account admitted net negative (disallowed) IMR from unassigned funds to an aggregate write-in for special surplus funds (line 34) (named as “Admitted Disallowed IMR”). Although dividends are

[3] Reference to derivative termination throughout this interpretation includes all actions that close out a derivative, including, but not limited to, termination, expiration, settlement, or sale.

contingent on state specific statutes and laws, the intent of this reporting is to provide transparency and preclude the ability for admitted negative IMR to be reported as funds available to dividend.

12. Reporting entities that record net negative (disallowed) IMR as an asset in the separate account shall report the recognition in the balance sheet as follows:

a. Reporting entities shall report the permitted net negative (disallowed) IMR as an aggregate write-in to miscellaneous other-than-invested assets (line 15) (named as "Recognized Disallowed IMR") on the asset page.

b. Reporting entities shall allocate an amount from surplus equal to the asset recognized as disallowed IMR as an aggregate write-in for special surplus funds (line 19) (named as "Recognized Disallowed IMR) on the liabilities and surplus page.

13. Reporting entities admitting net negative (disallowed) IMR are required to complete the following disclosures in the annual and quarterly financial statements for IMR:

a. Reporting entities that have allocated gains/losses to IMR from derivatives that were reported at fair value prior to the termination of the derivative shall disclose the unamortized balances in IMR from these allocations separately between gains and losses.

b. Reporting entities shall complete a note disclosure that details the following:

i. Net negative (disallowed) IMR in aggregate and allocated between the general account, insulated separate account and non-insulated account,

ii. Amounts of negative IMR admitted in the general account and reported as an asset in the separate account insulated and non-insulated blank,

iii. The calculated adjusted capital and surplus per paragraph 9.a., and

iv. Percentage of adjusted capital and surplus for which the admitted net negative (disallowed) IMR represents (including what is admitted in the general account and what is recognized as an asset in the separate account).

c. Reporting entities shall include a note disclosure that attests to the following statements:

i. Fixed income investments generating IMR losses comply with the reporting entity's documented investment or liability management policies,

ii. IMR losses for fixed income related derivatives are all in accordance with prudent and documented risk management procedures, in accordance with a reporting entity's derivative use plans and reflect symmetry with historical treatment in which unrealized derivative gains were reversed to IMR and amortized in lieu of being recognized as realized gains upon derivative termination.

iii. Any deviation to 13.c.i was either because of a temporary and transitory timing issue or related to a specific event, such as a reinsurance transaction, that mechanically made the cause of IMR losses not reflective of reinvestment activities.

iv. Asset sales that were generating admitted negative IMR were not compelled by liquidity pressures (e.g., to fund significant cash outflows including, but not limited to excess withdrawals and collateral calls).

INT 23-01 Status

14. The consensuses in this interpretation were adopted on August 13, 2023, to provide limited-time exception guidance to SSAP No. 7 and the annual statement instruction for the reporting of net negative (disallowed) IMR. The provisions within this interpretation are permitted as a short-term solution until December 31, 2025, and will be automatically nullified on January 1, 2026.

15. The effective date of this interpretation may be adjusted (nullified earlier or with an extended effective date timeframe) in response to Statutory Accounting Principles (E) Working Group actions to establish statutory accounting guidance specific to net negative (disallowed) IMR.

16. No further discussion is planned.

© 2023 National Association of Insurance Commissioners

Application Guidance for Admitting / Recognizing Net Negative (Disallowed) IMR

General Account:

1. Net negative IMR in the general account that exceeds net positive IMR in the separate accounts is considered "disallowed" general account IMR. (Determination of the disallowed IMR in the general account shall be compared against the aggregate IMR balance in all separate accounts.)

2. Net negative disallowed IMR in the general account shall be reported as an aggregate write-in for other-than-invested assets as "Admitted Disallowed IMR" on line 25 of the asset page and nonadmitted. The change in nonadmittance shall be reported on line 41 in the summary of operations.

3. To the extent the reporting entity is permitted to admit net negative disallowed IMR pursuant to the provisions in this interpretation, the reporting entity shall admit the disallowed IMR reported on line 25 of the asset page to the extent permitted, with the change in nonadmittance reflected on line 41 in the summary of operations.

4. Reporting entities shall report an amount equal to the general account admitted net negative (disallowed) IMR as an aggregate write-in for special surplus funds (line 34 of the Liabilities, Surplus an Other Funds page) named as "Admitted Disallowed IMR."

5. Reporting entities shall include note disclosures in the quarterly and annual financial statements as required in paragraph 13 of the interpretation.

Separate Account:

6. Net negative IMR in the separate account (aggregated IMR in both insulated and non-insulated separate accounts) that exceeds net positive IMR in the general account is considered "disallowed" separate account IMR. If the aggregate separate account IMR is positive, with a negative IMR in the insulated separate account and positive IMR in non-insulated separate account (or vice versa), then the negative IMR in the insulated separate account is not permitted to be reported as an asset. In those situations, the separate account has an aggregate positive IMR balance.

7. Net negative (disallowed) IMR in the separate account permitted to be recognized as an asset, as the admittance in the general account did not utilize the full percentage of adjusted capital and surplus permitted within this interpretation, shall be proportionately divided between insulated and non-insulated separate accounts if both separate accounts are in a negative position. If the separate account IMR is an aggregate net negative, but only one separate account blank is in a negative position, then only the separate account blank with a net negative position can recognize disallowed IMR as an asset.

8. If negative IMR in the separate account has previously been recognized as a direct charge to surplus, the reporting entity shall recognize an asset as an aggregate write-in for other-than-invested assets as "Recognized Disallowed IMR" on line 15 of the separate account asset page, with an offsetting credit to surplus. This credit to surplus shall reverse the charge previously recognized. This process shall continue in subsequent quarters if additional separate account IMR is permitted as an asset to the extent IMR was previously taken as a direct charge to surplus. Once prior surplus impacts have been fully eliminated, then the entity shall follow the guidance for new net negative (disallowed) IMR as detailed in the following paragraph. If subsequent quarters result with a decline in the permitted IMR asset in the separate account, then the asset shall be credited with an offsetting charge to surplus.

© 2023 National Association of Insurance Commissioners

9. If the reporting entity enters a net negative (disallowed) IMR position (meaning, there has not been a prior charge to surplus for net negative (disallowed) IMR), then the entity shall recognize the asset as an aggregate write-in for other-than-invested assets as “Disallowed IMR” on line 15 of the separate account balance sheet, with an offsetting credit to IMR (line 3 of the liability page) until the IMR liability equals zero. This process shall continue in subsequent quarters if additional net negative IMR is generated from operations and is permitted as an asset under the provisions of this interpretation. If subsequent quarters result with a decline in the permitted IMR asset in the separate account, then the asset shall be credited with an offsetting charge to surplus.

10. Reporting entities shall report an amount equal to the asset recognized reflecting net negative (disallowed) IMR as an aggregate write-in for special surplus funds (line 19) (named as “Recognized Disallowed IMR.” This shall be included in each separate account statement (insulated and non-insulated) if net negative disallowed IMR is recognized as an asset in that statement.

11. Reporting entities shall include note disclosures in the quarterly and annual financial statements as required in paragraph 13 of the interpretation.

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: SSAP No. 43R – CLO Financial Modeling

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: This agenda item proposes revisions to *SSAP No. 43R—Loan-Backed and Structured Securities* to incorporate edits to reflect changes adopted by the Valuation of Securities (E) Task Force on Feb. 21, 2023, to include collateralized loan obligations (CLOs) in the SVO financial modeling process.

This agenda item has been drafted to ensure the financial modeling guidance summarized in *SSAP No. 43R—Loan-Backed and Structured Securities* reflects the practices as directed by the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual). (Note, while the *Accounting Practices and Procedures Manual* is higher than the P&P manual in the statutory hierarchy, the primary source of authoritative guidance for financial modeling is the P&P manual. Only a general description of the modeling process is included in SSAP No. 43R). The methodology to model CLOs is still being developed, but guidance that permits the SVO to model CLOs has been adopted and should be followed once CLOs begin to be financially modeled.

Existing Authoritative Literature:

SSAP No. 43R—Loan-Backed and Structured Securities

Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers' carrying value. For a modeled non-legacy security, meaning one which closed after December 31, 2012, the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those legacy securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer's book/adjusted carrying value. The three-step process for modeled legacy securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to each NAIC designation and NAIC designation category for each CUSIP to establish the **initial** NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then

determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the NAIC designation and NAIC designation category for each CUSIP or is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.

Specific Interim Reporting Guidance Financially Modeled Securities

28. For securities that will be financially modeled under paragraph 27, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

SSAP No. 43R - EXHIBIT A – Question and Answer Implementation Guide
Index to Questions

<table>
<tr><td colspan="2">Questions 8-10 are specific to securities subject to the financial modeling process. (This process is limited to qualifying RMBS/CMBS securities reviewed by the NAIC Structured Securities Group.) The guidance in questions 8-10 shall not be inferred to other securities in scope of SSAP No. 43R.</td></tr>
<tr><td>8</td><td>Do LBSS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?</td></tr>
<tr><td>9</td><td>The NAIC Designation process for LBSS may incorporate loss expectations that differ from the reporting entity’s expectations related to OTTI conclusions. Should the reporting entities be required</td></tr>
</table>

	to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?
10	For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

8. ***Question*** – Do LBSS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?

8.1 Under the financial modeling process (applicable to qualifying RMBS/CMBS reviewed by the NAIC Structured Securities Group), the amortized cost of the security impacts the "final" NAIC designation used for reporting and RBC purposes. As such, securities subject to the financial modeling process acquired in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. For reporting purposes, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. (For example, all acquisitions of the identical CUSIP resulting with an NAIC 1 designation may be aggregated, and all acquisitions of the identical CUSIP resulting with an NAIC 3 designation may be aggregated.)

9. ***Question*** – The NAIC Designation process for LBSS subject to the financial modeling process may incorporate loss expectations that differ from the reporting entity's expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

9.1 In accordance with *INT 06-07: Definition of Phrase "Other Than Temporary*," reporting entities are expected to "consider all available evidence" at their disposal, including the information that can be derived from the NAIC designation.

10. ***Question*** - For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

10.1 The financial modeling process for qualifying RMBS/CMBS securities is required for applicable securities held in either the general or separate account.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

The following edits have previously been reflected in the financial modeling guidance:

- Agenda Item 2018-19: To be consistent with the prior SVO P&P Manual revisions, eliminated the multi-step designation guidance for modified filing exempt (MFE) securities. The elimination of MFE was effective March 31, 2019, with early application permitted for year-end 2018. With the elimination of MFE, for securities that are filing exempt, the NAIC designation reported will correspond to the Credit Rating Provider (CRP) rating without adjustment based on carrying value.

- Agenda Item 2018-03: Clarified that securities acquired in lots shall not be reported with weighted average designations. With the adopted guidance, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. With the

elimination of MFE, the instances of different designations by lot are not expected to be prevalent, but could still occur with the financial modeling process for residential mortgage backed securities (RMBS) and commercial mortgage backed securities (CMBS).

- Agenda Item 2020-21: Edits incorporated adopted guidance to the P&P manual detailing the use and mapping of NAIC designations to NAIC designation categories. Reporting entities were to then utilize the new NAIC designation categories for accounting and reporting purposes.

- Agenda Item 2021-23: Adopted changes to summarize the financial modeling guidance in SSAP No. 43R This guidance continues to refer users to the detailed financial modeling guidance in the P&P Manual.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): Not Applicable

Staff Recommendation: **NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 43R—Loan-backed and Structured Securities* to incorporate changes to add CLOs to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities. These revisions reflect the guidance adopted for the P&P Manual in February 2023.**

Proposed Revisions to *SSAP No. 43R—Loan-Backed and Structured Securities*

Designation Guidance

27. For Residential Mortgage-Backed Securities (RMBS), Commercial Mortgage-Backed Securities (CMBS) and Collateralized Loan Obligations (CLOs), ~~RMBS/CMBS~~ securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

    a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled RMBS/CMBS legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers' carrying value. For a modeled RMBS/CMBS non-legacy security, meaning one which closed after December 31, 2012, or modeled CLO the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those RMBS/CMBS legacy securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer's book/adjusted carrying value. The three-step process for modeled RMBS/CMBS legacy securities is as follows:

        i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to each NAIC designation and NAIC designation category for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the NAIC designation and NAIC designation category for each CUSIP or is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.

Specific Interim Reporting Guidance Financially Modeled Securities

28. For securities that will be financially modeled under paragraph 27, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate) until the current year financial modeling information becomes available and then follow the procedures for financially modeled securities (paragraph 27.a., as appropriate).

Staff Review Completed by: Julie Gann, NAIC Staff – February 2023

Status:
On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 43R to incorporate changes to add CLOs to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 43R which incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities.

Form A

Issue: ***ASU 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848***

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
The Financial Accounting Standards Board (FASB) issued *ASU 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848* to extend the sunset date of the reference rate reform guidance that was included in *ASU 2020-04, Reference Rate Reform (Topic 848) Facilitation of the Effects of Reference Rate Reform on Financial Reporting* and *ASU 2021-01, Reference Rate Reform (Topic 848), Scope*.

As background, reference rate reform refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it would no longer require banks to continue rate submissions after 2021 – thus, likely sunsetting both the use and publication of LIBOR. An important item to note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform. For simplicity, LIBOR will be the sole IBOR referenced throughout this agenda item.

With a significant number of financial contracts referencing LIBOR, its discontinuance will require organizations to reevaluate and modify any contract which does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a dedesignation of the transaction.

To address ASU 2020-04 the Working Group *issued INT 20-01: Reference Rate Reform*, and this interpretation was then revised to incorporate guidance from ASU 2021-01. This agenda item intends to again revise INT 20-01 to include the revised sunset date of December 31, 2024.

Existing Authoritative Literature:
The Working Group adopted INT 20-01 to address ASU 2020-04, and further revised that interpretation to address ASU 2021-01. The modifications in ASU 2020-04 address hedge accounting and the allowance for a reporting entity to change the reference rate and other critical terms related to reference rate reform without having to dedesignate the hedging relationship. Alternative benchmark interest rates were previously addressed in agenda item 2018-46 – Benchmark Interest Rate.

ASU 2021-01 increased the scope of the optional, expedient accounting guidance for derivative instruments in ASU 2020-04 which would primarily affect *SSAP No. 86—Derivatives*. While detailed in the original agenda item (Ref #2020-12), additional SSAPs impacted by ASU 2020-04 were *SSAP No. 15—Debt and Holding Company Obligations* and *SSAP No. 22R—Leases.*

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

The Working Group has taken several actions related to reference rate reform; each are summarized below.

1. Agenda item 2018-46 – Benchmark Interest Rate, incorporated revisions to SSAP No. 86, adding the Securities Industry and Financial Markets (SIFMA) Municipal Swap Rate and the Secured Overnight Financing Rate (SOFR) Overnight Index Swap (OIS) Rate as acceptable benchmark interest rates for hedge accounting. Prior to this change, only LIBOR and the Fed Funds Effective Swap Rate (also referred to as the Overnight Index Swap Rate) were considered acceptable benchmark interest rates.

2. Agenda item 2020-12 reviews ASU 2020-04, the foundation of which this agenda item and related ASU (2021-01) are based. Agenda item 2020-12 resulted in the Working Group adopting INT 20-01.

3. *INT 20-01: ASU 2020-04 - Reference Rate Reform*, adopted by the Working Group in April 2020, broadly adopted ASU 2020-04 for statutory accounting stating that for statutory accounting:

   - For all contracts within scope of ASU 2020-04, modifications due to reference rate reform are afforded an optional expedient to be accounted for as a continuation of the existing contract.
   - Debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as *SSAP No. 15—Debt and Holding Company Obligations* states such liabilities should only be derecognized if extinguished.
   - Lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under *SSAP No. 22R—Leases.*
   - For derivative transactions within scope of ASU 2020-04, a change to the critical terms of the hedging relationship (due to reference rate reform), shall be afforded similar treatment in that the hedging relationship can continue the original hedge accounting rather than dedesignate the hedging relationship.

4. *INT 20-09: Basis Swaps as a Result of the LIBOR Transition*, adopted by the Working Group in July 2020, provided statutory accounting and reporting guidance for basis swaps issued by CCPs. This INT designated that basis swaps, issued by CCPs, in response to reference rate reform (i.e., the discounting transition), shall be classified as a derivative used for hedging. This categorization allowed for the basis swap derivatives to be admitted under SSAP No. 86. Additionally, the INT directed that basis swap derivatives shall not be reported as “effective” unless the instrument qualifies, with the required documentation, as highly effective under SSAP No. 86.

5. Agenda item 2021-09 further revised INT 20-01 and increased the scope of the optional, expedient accounting guidance for derivative instruments in ASU 2020-04.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as SAP clarification and expose temporary (optional) expedient and exception interpretative guidance, to revise the expiration date of the guidance in *INT 20-01: ASU 2020-04 & 2021-01 - Reference Rate Reform* to be December 31, 2024.

The proposed modifications to INT 20-01 temporarily override SSAP No. 15, SSAP No. 22R and SSAP No. 86 guidance, therefore the policy statement in Appendix F requires 2/3rd (two-thirds) of the Working Group members to be present and voting and a supermajority of the Working Group members present to vote in support of the interpretation before it can be finalized.

Staff Review Completed by: Jake Stultz—February 2023

Status:
On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed temporary (optional) expedient and exception interpretative guidance, to revise the expiration date of the guidance in *INT 20-01: 2020-04, 2021-01 & 2022-06 - Reference Rate Reform* to be December 31, 2024, as reflected in INT 20-01.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as reflected in *INT 20-01: ASUs 2020-04, 2021-01 & 2022-06 - Reference Rate Reform* which revises expiration date of the interpretation to December 31, 2024.

https://naiconline.sharepoint.com/teams/FRSStatutoryAccounting/National Meetings/A. National Meeting Materials/2023/8-13-23 Summer National Meeting/Adoptions/23-05a - ASU 2022-06 - LIBOR.docx

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-01: *ASUs 2020-04, ~~&~~ 2021-01 & 2022-06 – Reference Rate Reform*

INT 20-01 Dates Discussed

March 26, 2020; April 15, 2020; March 15, 2021, May 20, 2021, March 22, 2023, August 13, 2023

INT 20-01 References

Current:
SSAP No. 15—Debt and Holding Company Obligations
SSAP No. 22R—Leases
SSAP No. 86—Derivatives

This INT applies to all SSAPs with contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

INT 20-01 Issue

1. This interpretation has been issued to provide statutory accounting and reporting guidance for the adoption with modification of *ASU 2020-04, Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting*, ~~and~~ *ASU 2021-01, Reference Rate Reform (Topic 848)*, and *ASU 2022-06, Reference Rate Reform (Topic 848)* for applicable statutory accounting principles. The Financial Accounting Standards Board (FASB) issued ~~both~~ ASU 2020-04, ~~and~~ ASU 2021-01 and ASU 2022-06 to provide optional, transitional and expedient guidance as a result of reference rate reform.

2. "Reference rate reform" typically refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it will no longer require banks to continue LIBOR submissions after 2021 – likely sunsetting both the use and publication of LIBOR. An important note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform.

3. With a significant number of financial contracts solely referencing IBORs, their discontinuance will require organizations to reevaluate and modify any contract that does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a dedesignation of the transaction.

4. The overall guidance in ASU 2020-04 is that a qualifying modification (as a result of reference rate reform) should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination. FASB concluded that as reference rate changes are a market-wide initiative, one that is required primarily due to the discontinuance of LIBOR, it is outside the control of an entity and is the sole reason compelling an entity to make modifications to contracts or hedging strategies. As such, FASB determined that the traditional financial reporting requirements of discontinuing such contracts and treating the modified contract as an entirely new contract or hedging relationship would 1) not provide decision-useful information to financial statement users and 2) require a reporting entity to incur significant costs in the financial

statement preparation and potentially reflect an adverse financial statement impact, one of which may not accurately reflect the intent or economics of a modification to a contract or hedging transaction.

5. Guidance in ASU 2020-04 allows a method to ensure that the financial reporting results would continue to reflect the intended continuation of contracts and hedging relationships during the period of the market-wide transition to alternative reference rates – thus, generally not requiring remeasurement or dedesignation if certain criteria are met.

6. Guidance in ASU 2021-01 expanded the scope of ASU 2020-04 by permitting the optional, transitional, expedient guidance to also include derivative contracts that undergo a similar transition but do not specifically reference a rate that is expected to be discontinued. While these contract modifications do not reference LIBOR (or another reference rate expected to be discontinued), the changes are the direct result of reference rate reform and were deemed to be eligible for similar exception treatment. ASU 2021-01 allows for modifications in interest rates indexes used for margining, discounting or contract price alignment, as a result of reference rate reform initiatives (commonly referred to as a "discounting transition") to be accounted for as a continuation of the existing contract and hedge accounting. On August 13, 2023, the Working Group added the guidance in ASU 2022-06 which only acts to defer the sunset date of Topic 848 from December 31, 2022, to December 31, 2024, after which entities will no longer be permitted to apply the relief from the prior ASUs.

7. The optional, expedient and exceptions guidance provided by the amendments in ASU 2020-04, ~~and~~ ASU 2021-01 and ASU 2022-04 are applicable for all entities. However, they are only effective as of March 12, 2020 through December 31, 2024~~2022~~. This is because the amendments are intended to provide relief related to the accounting requirements in generally accepted accounting principles (GAAP) due to the effects of the market-wide transition away from IBORs. The relief provided by the amendments is temporary in its application in alignment with the expected market transition period. However, the FASB will monitor the market-wide IBOR transition to determine whether future developments warrant any changes, including changes to the end date of the application of the amendments in this ASU. If such an update occurs, the Working Group may also consider similar action. It is not expected that the Working Group will take action prior to or in the absence of a FASB amendment.

8. The accounting issues are:

a. Issue 1: Should a reporting entity interpret the guidance in ASU 2020-04 as broadly accepted for statutory accounting?

b. Issue 2: Should the optional, expedient and exception guidance in ASU 2020-04 apply to debt and other service agreements addressed in SSAP No. 15?

c. Issue 3: Should the optional, expedient and exception guidance in ASU 2020-04 apply to lease transactions addressed in SSAP No. 22R?

d. Issue 4: Should the optional, expedient and exception guidance in ASU 2020-04 apply to derivative transactions addressed in SSAP No. 86?

e. Issue 5: Should the optional, expedient and exception guidance in ASU 2021-01 apply to derivative transactions addressed in SSAP No. 86?

INT 20-01 Discussion

9. For Issue 1, the Working Group came to the consensus that ASU 2020-04 shall be adopted, to include the same scope of applicable contracts or transactions for statutory accounting with the only modification related to a concept not utilized by statutory accounting, as noted below. The Working Group agreed the amendments provide appropriate temporary guidance that alleviate the following concerns due to reference rate reform:

a. Simplifies accounting analyses under current GAAP and statutory accounting principles (SAP) for contract modifications.

i. All contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

b. Allows hedging relationships to continue without dedesignation upon a change in certain critical terms.

c. Allows a change in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship.

d. Suspends the assessment of certain qualifying conditions for fair value hedging relationships for which the shortcut method for assuming perfect hedge effectiveness is applied.

e. Simplifies or temporarily suspends the assessment of hedge effectiveness for cash flow hedging relationships.

f. The only SAP modification to this ASU is related to the option to sell debt currently classified held-to-maturity. This concept is not employed by statutory accounting and thus is not applicable.

10. For Issue 2, the Working Group came to the consensus that debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as SSAP No. 15 states such liabilities should only be derecognized if extinguished. A reference rate modification should not generally require de-recognition and re-recognition under statutory accounting. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to the consensus that should an eligible contract be affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

11. For Issue 3, the Working Group came to the consensus that lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under statutory accounting. SSAP No. 22R, paragraph 17 states only modifications in which grant the lessee additional rights shall be accounted for as a new lease. These changes are outside the scope allowed for optional expedience in ASU 2020-04. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to a consensus that if an eligible lease affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

12. For Issue 4, the Working Group came to the consensus that ASU 2020-04 shall be applied to derivative transactions as the following considerations provided in the ASU are appropriate for statutory accounting:

a. For any hedging relationship, upon a change to the critical terms of the hedging relationship, allow a reporting entity to continue hedge accounting rather than dedesignate the hedging relationship.

b. For any hedging relationship, upon a change to the terms of the designated hedging instrument, allow an entity to change its systematic and rational method used to recognize the excluded component into earnings and adjust the fair value of the excluded component through earnings.

c. For fair value hedges, allow a reporting entity to change the designated hedged benchmark interest rate and continue fair value hedge accounting.

d. For cash flow hedges, adjust the guidance for assessment of hedge effectiveness to allow an entity to continue to apply cash flow hedge accounting.

13. For Issue 5, the Working Group came to a consensus on May 20, 2021, that ASU 2021-01 shall be applied to derivative transactions for statutory accounting. Accordingly, derivative instruments that are modified to change the reference rate used for margining, discounting, or contract price alignment that is a result of reference rate reform (regardless of whether the reference rate that is expected to be discontinued) are eligible for the exception

guidance afforded in ASU 2020-04 in that such a modification is not considered a change in the critical terms that would require dedesignation of the hedging relationship. In addition, for all derivatives (those qualifying for hedge accounting, those that do not qualify for hedge accounting and replication (synthetic asset) transactions (RSAT)), a reporting entity may account for and report modifications (that are within the scope of INT 20-01) as a continuation of the existing contract even when the legal form of the modification is a termination of the original contract and its replacement with a new reference rate reform contract. This includes in-scope modifications of centrally cleared swap contracts whether they are automatically transitioned at a cessation date or voluntarily executed prior to cessation.

14. Additionally, for GAAP purposes, if an entity has not adopted the amendments in *ASU 2017-12, Derivatives and Hedging*, it is precluded from being able to utilize certain expedients for hedge accounting. For statutory accounting purposes, only the hedge documentation requirements were adopted from ASU 2017-12, while the remainder of the items are pending statutory accounting review. The Working Group concluded that all allowed expedient methods are permitted as elections for all reporting entities under statutory accounting. However, if a reporting entity is a U.S. GAAP filer, the reporting entity may only make elections under ASU 2017-12 if such elections were also made for their U.S. GAAP financials.

INT 20-01 Status

15. ~~No further~~Further discussion is planned.

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: Additional Updates on ASU 2021-10, Government Assistance

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, revisions to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items* in agenda item 2022-04: ASU 2021-10, Government Assistance. The revisions incorporate certain disclosures, adopted with modification from ASU 2021-10, to supplement existing disclosures regarding unusual or infrequent items.

This agenda item is to provide additional clarifications to SSAP No. 24, regarding follow-up questions, that NAIC staff received regarding the adoption of the disclosures about government assistance in ASU 2021-10. The primary questions were regarding whether the adoption with modification of the ASU disclosures intended to allow insurers to use the grant and contribution model. If the intent was not to allow for the use of the grant and contribution model, then the question becomes in what situation would these disclosures be required Because NAIC staff understanding is that the grant and contribution model is not intended to be permitted for statutory accounting, additional modifications to clarify this point have been proposed which reject ASU 2021-10 but still incorporate government assistance disclosures.

In November 2021, the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update* (ASU) *2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance* to increase financial statement transparency regarding certain types of government assistance by increasing the disclosure of such information in the notes to the financial statements.

The new disclosure aims to increase transparency by enhancing the identification of 1) the types of assistance received, 2) an entity's accounting for said assistance, and 3) the effects of the assistance in an entity's financial statements. The disclosures will contain information about the nature of the transactions, which includes a general description of the transaction and identification of the form (cash or other) in which the assistance was received. In terms of the effects on the financial statement, disclosure will include identification of the specific line items in both the balance sheet and income statement and a description of the extent to which they have been impacted by any government assistance. In addition, an entity will be required to disclose information about any significant terms of the transaction with a government entity, with items including durations of such agreements and any provisions for potential recapture.

ASU 2021-10 defines "government assistance," in a comprehensive manner to capture most types of assistance from governmental entities and includes examples of tax credits, cash grants, or grants of other assets. ASU 2021-10 does not apply to not-for-profit entities or benefit plans, and only applies to government assistance transactions analogizing either a grant or contribution model.

With the specificity of these additional disclosures only applying in certain circumstances (only applicable in cases where the government assistance is not accounted for in accordance with other accounting standards – i.e., revenue in the normal course of business or debt), NAIC staff believe the occurrence of such items requiring disclosure per ASU 2021-10 will likely be relatively infrequent.

© 2023 National Association of Insurance Commissioners

NAIC Staff Note – as mentioned above, NAIC staff believe that as these additional disclosures are not applicable for transactions that are in scope of other accounting standards, and only apply when the transaction is accounted for by analogy using the grant or contribution model, the prevalence of such items will be infrequent. As such, the most appropriate location for these items is reflected in SSAP No. 24.

Existing Authoritative Literature:
The following revisions were adopted to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items* in agenda item 2022-04

Disclosures [Unusual/Infrequent Items]

16. The nature, including a general description of the transactions, and financial effects of each unusual or infrequent event or transaction shall be disclosed in the notes to the financial statements. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. If the unusual or infrequent item is as the result of government assistance (as defined in ASU 2021-10, *Government Assistance, Disclosures by Business Entities about Government Assistance)* disclosure shall additionally include the form in which the assistance has been received (for example, cash or other assets), and information regarding significant terms and conditions of the transaction, with items including, to the extent applicable, the duration or period of the agreement, and commitments made by the reporting entity, provisions for recapture, or other contingencies.

Relevant Literature

24. This statement adopts *ASU 2021-10, Government Assistance: Disclosure by Business Entities about Government Assistance,* with modification to require disclosure by all entity types.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
Agenda item 2022-04: ASU 2021-10, Government Assistance was adopted on August 10, 2022.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None.

Convergence with International Financial Reporting Standards (IFRS): None.

Staff Review Completed by: Robin Marcotte – NAIC Staff

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to SSAP No. 24 as illustrated below. These revisions will clarify the rejection of ASU 2021-10, Government Assistance and the incorporation of disclosures regarding government assistance.

17. The nature, including a general description of the transactions, and financial effects of each unusual or infrequent event or transaction shall be disclosed in the notes to the financial statements. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. If the unusual or infrequent item is as the result of government assistance, ~~(as defined in ASU 2021-10, *Government Assistance, Disclosures by Business Entities about Government Assistance)*~~ disclosure shall additionally include the form in which the assistance has been received (for example, cash or other assets), and information regarding significant terms and conditions of the transaction, with items including, to the extent applicable, the duration or period of the agreement, and commitments made by the reporting entity, provisions for recapture, or other contingencies.

Relevant Literature

24. This statement ~~adopts~~ rejects *ASU 2021-10, Government Assistance: Disclosure by Business Entities about Government Assistance*. However, it does incorporate general disclosures about government assistance for all reporting entity types. ~~, with modification to require disclosure by all entity types~~.

Status:
On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 24 to specify rejection of *ASU 2021-10, Government Assistance* but that the statutory guidance does incorporate general disclosures regarding government assistance for all entity types.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 24 which specifies the rejection of ASU 2021-10 but incorporates general disclosures regarding government assistance for all entity types.

Issue: ASU 2019-08, Codification Improvements to Topic 718 and Topic 606

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: In November 2019, FASB issued *ASU 2019-08 Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer,* which includes amendments to Topics 718 and 606. The changes to Topic 718 include share-based payment transactions for acquiring goods and services from nonemployees and in doing so superseded guidance in Subtopic 505-50, Equity—Equity-Based Payments to Non-Employees. The changes to Topic 606 expand the scope of the codification to include share-based payment awards granted to a customer in conjunction with selling goods or services.

The amendments in ASU 2019-08 require that an entity measure and classify share-based payment awards granted to a customer by applying the guidance in Topic 718. The amount recorded as a reduction of the transaction price is required to be measured on the basis of the grant-date fair value of the share-based payment award in accordance with Topic 718. The grant date is the date at which a grantor (supplier) and a grantee (customer) reach a mutual understanding of the key terms and conditions of a share-based payment award. The classification and subsequent measurement of the award are subject to the guidance in Topic 718 unless the share-based payment award is subsequently modified and the grantee is no longer a customer.

For statutory accounting assessments, prior U.S. GAAP guidance related to share-based payments has been predominantly adopted with modification in *SSAP No. 104R—Share-Based Payments*. Statutory accounting modifications to the U.S. GAAP guidance have mostly pertained to statutory terms and concepts. (For example, statutory reporting lines, nonadmittance of prepaid assets, etc.)

Existing Authoritative Literature:
Stock Compensation is covered by *SSAP No. 104R—Share-Based Payments* and *SSAP No. 95—Nonmonetary Transactions*.

The ASUs related to ASC Topic 606 have been rejected in *SSAP No. 47—Uninsured Plans.*

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
Agenda item 2018-35 adopted with modification *ASU 2018-07, Improvements to Nonemployee Share-Based Payment Accounting* and incorporated the U.S. GAAP amendments from that project into SAP.

Agenda items 2016-19 and 2017-37 address the main ASUs related to *ASC Topic 606* and there have been several other agenda items for minor updates to revenue recognition guidance, all of which have been rejected in SSAP No. 47.

Per the comment letter received on June 9, 2023, interested parties had no comments on Agenda item 2023-07.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None.

Convergence with International Financial Reporting Standards (IFRS):
None.

Staff Recommendation:
Staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to adopt with modification *ASU 2019-08 Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer* for statutory accounting. These revisions would add language to include share-based consideration payable to customers under SSAP No. 104R guidance in the same manner as U.S. GAAP. With the revisions proposed to SSAP No. 104R, revisions are also proposed to *SSAP No. 95—Nonmonetary Transactions* to update previously adopted U.S. GAAP guidance. In addition, proposed revisions to *SSAP No. 47—Uninsured Plans*, reject Topic 606 guidance in ASU 2019-08. The proposed revisions to SSAP No. 95, SSAP No. 104R, and *SSAP No. 47—Uninsured Plans*, are illustrated in the Form A.

Proposed Revisions to SSAP No. 95—Nonmonetary Transactions

Accounting for a Convertible Instrument Granted or Issued to a Nonemployee for Goods or Services or Services and Cash (in combination or individually), or ~~a Combination of Goods or Services and Cash~~as Consideration Payable to a Customer

17. The guidance in paragraph 18 addresses a convertible instrument that is issued or granted to a nonemployee in exchange for goods or services or a combination of goods or services and cash or consideration payable to a customer. The convertible instrument contains a nondetachable conversion option that permits the holder to convert the instrument into the issuer's stock.

19. To determine the fair value of a convertible instrument granted as part of a share-based payment transaction to a nonemployee in exchange for goods or services or as consideration payable to a customer that is equity in form or, if debt in form, that can be converted into equity instruments of the issuer, the entity shall first apply SSAP No. 104R.

Proposed Revisions to SSAP No. 104R—Share-Based Payments

SUMMARY OF ISSUE

2. The objective of accounting for transactions under share-based payment arrangements is to recognize in the financial statements the goods or services received in exchange for equity instruments granted or liabilities incurred and the related cost to the entity as those goods or services are received. This statement uses the terms "compensation" and "payment" in their broadest senses to refer to the consideration paid for goods, ~~or~~ services, or the consideration paid to a customer.

Scope and Scope Exceptions

4. This statement applies to all share-based payment transactions in which a grantor acquires goods or services to be used or consumed in the grantor's own operations or provides consideration payable to a customer by issuing (or offering to issue) its shares, share options, or other equity instruments or by incurring liabilities to an employee or nonemployee that meet either of the following conditions:

a. The amounts are based, at least in part, on the price of the entity's shares or other equity instruments.

b. The awards require or may require settlement by issuing the entity's equity shares or other equity instruments.

5. Share-based payments awarded to a grantee by a related party or other holder of an economic interest in the entity as compensation for goods or services provided to the reporting entity are share-based payment transactions to be accounted for under this statement unless the transfer is clearly for a purpose other than compensation for goods or services to the reporting entity. The substance of such a transaction is that the economic interest holder makes a capital contribution to the reporting entity, and that entity makes a share-based payment to the grantee in exchange for services rendered or goods received. An example of a situation in which such a transfer is not compensation is a transfer to settle an obligation of the economic interest holder to the grantee that is unrelated to goods or services to be used or consumed in a grantor's own operations.

6. The guidance in this statement does not apply to:

a. Equity instruments held by an employee stock ownership plan. Such equity instruments shall follow the guidance in SSAP No. 12—Employee Stock Ownership Plans.

b. Transactions involving equity instruments granted to a lender or investor that provides financing to the issuer.

c. Transactions involving equity instruments granted in conjunction with selling goods or services to customers as part of a contract (for example, sales incentives). If consideration payable to a customer is payment for a distinct good or service from the customer, then the entity shall account for the purchase of the good or service in the same way it accounts for other purchases from suppliers. Therefore, share-based payment awards granted to a customer for a distinct good or service to be used or consumed in the grantor's own operations are accounted for under this statement.

Recognition

11. This guidance does not address the period(s) or the manner (that is, capitalize versus expense) in which an entity granting the share-based payment award (the purchaser or grantor) to a nonemployee shall recognize the cost of the share-based payment award that will be issued, other than to require that a nonadmitted prepaid asset or expense be recognized (or previous recognition reversed) in the same period(s) and in the same manner as if the grantor had paid cash for the goods or services instead of paying with or using the share-based payment award.

Initial Measurement

35. An entity shall account for the compensation cost from share-based payment transactions in accordance with the fair-value-based method set forth in this statement. That is, the cost of goods obtained or services received in exchange for awards of share-based compensation generally shall be measured based on the grant-date fair value of the equity instruments issued or on the fair value of the liabilities incurred. The cost of goods obtained or services received by an entity as consideration for equity instruments issued or liabilities incurred in share-based compensation transactions with employees shall be measured based on the fair value of the equity instruments issued or the liabilities settled. The portion of the fair value of an instrument attributed to goods obtained or services received is net of any amount that a grantee pays (or becomes obligated to pay) for that instrument when it is granted. For example, if a grantee pays $5 at the grant date for an option with a grant-date fair value of $50, the amount attributed to goods or services provided by the grantee is $45.

Measurement Objective – Fair Value at Grant Date

38. The measurement objective for equity instruments awarded to grantees is to estimate the fair value at the grant date of the equity instruments that the entity is obligated to issue when grantees have delivered the good or rendered the service and satisfied any other conditions necessary to earn the right to benefit

© 2023 National Association of Insurance Commissioners

from the instruments (for example, to exercise share options). That estimate is based on the share price and other pertinent factors, such as expected volatility, at the grant date.

a. Measurement Objective and Measurement Date for Awards Classified as Liabilities: At the grant date, the measurement objective for liabilities incurred under share-based compensation arrangements is the same as the measurement objective for equity instruments awarded to grantees as described in paragraph 38. However, the measurement date for liability instruments is the date of settlement.

b. Intrinsic Value Option for Awards Classified as Liabilities: A reporting entity shall make a policy decision of whether to measure all of its liabilities incurred under share-based payment arrangements (for employee and nonemployee awards) issued in exchange for goods or services at fair value or ~~to measure all such liabilities~~ at intrinsic value. However, the reporting entity shall initially and subsequently measure awards determined to be consideration payable to a customer at fair value.

52. A reporting entity may not be able to reasonably estimate the fair value of its equity share options, nonemployee awards and similar instruments because it is not practicable for the reporting entity to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options, nonemployee awards and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (~~the calculated~~ permitted value). A reporting entity's use of ~~calculated~~ permitted value shall be consistent between employee share-based payment transactions and nonemployee share-based payment transactions. Throughout the remainder of this statement, provisions that apply to accounting for share options, nonemployee awards and similar instruments at fair value also apply to calculated value.

Staff Note: Paragraph 98 references "permitted value in accordance with paragraph 52", but terminology was not consistent between paragraphs. NAIC staff changed "calculated value" to "permitted value" to allow for easier cross-referencing.

54. A reporting entity that elects to apply the practical expedient in paragraph 53 shall apply the practical expedient to a share option or similar award that has all of the following characteristics:

a. The share option or similar award is granted at the money.

b. The grantee has only a limited time to exercise the award (typically 30-90 days) if the grantee no longer provides goods ~~or~~, terminates service after vesting, or ceases to be a customer.~~.~~

c. The grantee can only exercise the award. The grantee cannot sell or hedge the award.

d. The award does not include a market condition.

Subsequent Measurement

68. The total amount of compensation cost recognized for share-based payment awards to nonemployees shall be based on the number of instruments for which a good has been delivered or a service has been rendered. To determine the amount of compensation cost to be recognized in each period, an entity shall make an entity-wide accounting policy election for all nonemployee share-based payment awards, including share-based payment awards granted to customers, to do either of the following:

a. Estimate the number of forfeitures expected to occur. The entity shall base initial accruals of compensation cost on the estimated number of nonemployee share-based payment awards for which a good is expected to be delivered or service is expected to be rendered.

The entity shall revise that estimate if subsequent information indicates that the actual number of instruments is likely to differ from previous estimates. The cumulative effect on current and prior periods of a change in the estimates shall be recognized in compensation cost in the period of the change.

b. Recognize the effect of forfeitures in compensation cost when they occur. Previously recognized compensation cost for a nonemployee share-based payment award shall be reversed in the period that the award is forfeited.

80. A freestanding financial instrument issued to a grantee ~~in exchange for goods or services received (or to be received)~~ that is subject to initial recognition and measurement guidance within this statement shall continue to be subject to the recognition and measurement provisions of this statement throughout the life of the instrument, unless its terms are modified after a ~~nonemployee~~ grantee vests in the award and is no longer providing goods or services, a grantee vests in the award and is no longer a customer, or a grantee is no longer an employee. Only for purposes of this paragraph, a modification does not include a change to the terms of an award if that change is made solely to reflect an equity restructuring provided that both of the following conditions are met:

a. There is no increase in fair value of the award (or the ratio of intrinsic value to the exercise price of the award is preserved, that is, the holder is made whole) or the antidilution provision is not added to the terms of the award in contemplation of an equity restructuring.

b. All holders of the same class of equity instruments (for example, stock options) are treated in the same manner.

81. Other modifications of that instrument that take place after a ~~nonemployee~~ grantee vests in the award and is no longer providing goods or services, is no longer a customer, or ~~a grantee~~ is no longer an employee shall be subject to the modification guidance in paragraph 83. Following modification, recognition and measurement of the instrument shall be determined through reference to other applicable statutory accounting principles.

Subsequent Measurement - Awards Classified as Liabilities

97. Changes in the fair value (or intrinsic value for a reporting entity that elects that method) of a liability incurred under a share-based payment arrangement issued in exchange for goods or services that occur during the employee's requisite service period or the nonemployee's vesting period shall be recognized as compensation cost over that period. The percentage of the fair value (or intrinsic value) that is accrued as compensation cost at the end of each period shall equal the percentage of the requisite service that has been rendered for an employee award or the percentage that would have been recognized had the grantor paid cash for the goods or services instead of paying with a nonemployee award at that date. Changes in the fair value (or intrinsic value) of a liability issued in exchange for goods or services that occur after the end of the employee's requisite service period or the nonemployee's vesting period are compensation costs of the period in which the changes occur. Any difference between the amount for which a liability award issued in exchange for goods or services is settled and its fair value at the settlement date as estimated in accordance with the provisions of this statement is an adjustment of compensation cost in the period of settlement.

98. Reporting entities shall measure a liability award under a share-based payment arrangement based on the award's fair value (or permitted value in accordance with paragraph 52) remeasured at each reporting date until the date of settlement. Compensation costs for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered for an employee award or the percentage that would have been recognized had the grantor paid cash for the goods and services instead of paying with a nonemployee award at the reporting date) in the

© 2023 National Association of Insurance Commissioners

fair value of the instrument for each reporting period. A reporting entity shall subsequently measure awards determined to be consideration payable to a customer at fair value.

Effective Date and Transition

132. Since the initial adoption of SSAP No. 104, subsequent revisions were effective as follows:

b. *ASU 2019-08, Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer.*

Issue: ASU 2019-07, Codification Updates to SEC Sections

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
FASB issued *ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates*, which primarily effects the codifications of Financial Services—Depository and Lending (Topic 942), Financial Services—Insurance (Topic 944), and Financial Services—Investment Companies (Topic 946). The update amends and supersedes certain SEC sections in Topic 942, 944, and 946 to align codification guidance with SEC Releases No. 33-10532, 33-10231, and 33-10442. These SEC Releases amend a wide range of disclosure requirements which were determined to be redundant, duplicative, overlapping, outdated, or superseded by other relevant literature. Additionally, the SEC Releases include several miscellaneous updates and corrections intended to clarify SEC guidance.

Existing Authoritative Literature:
Historically, SEC guidance from ASUs have been rejected as not applicable for statutory accounting in Appendix D. Regardless, all ASUs are reviewed for statutory accounting purposes to determine if the guidance should be considered for statutory accounting.

Debt is covered in *SSAP No. 15—Debt and Holding Company Obligations*, surplus is covered in *SSAP No. 72—Surplus and Quasi-Reorganizations*, and consolidation guidance is discussed in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Per the comment letter received on June 9, 2023, interested parties had no comments on Agenda item 2023-08.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None.

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject *ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates* as not applicable to statutory accounting. This item is proposed to be rejected as not applicable as ASU 2019-07 is specific to amendment of SEC paragraphs, which are not applicable for statutory accounting purposes.

Issue: *ASU 2022-05, Transition for Sold Contracts*

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: This agenda item has been drafted to consider *ASU 2022-05, Transition for Sold Contracts* (ASU) for statutory accounting. The FASB issued the ASU in December 2022 to amend specific sections of *ASU 2018-12, Targeted Improvements for Long-Durations Contracts* (LDTI). The amendments made by the ASU are intended to reduce implementation costs and complexity associated with the adoption of LDTI for contracts that have been derecognized in accordance with the ASU before the LDTI effective date. The revisions captured in the ASU are summarized as follows:

The amendments in the ASU amend the LDTI transition guidance to allow an insurance entity to make an accounting policy election on a transaction-by-transaction basis. An insurance entity may elect to exclude contracts that meet certain criteria from applying the amendments in the LDTI. To qualify for the accounting policy election, as of the LDTI effective date both of the following conditions must be met:

a. The insurance contracts must have been derecognized because of a sale or disposal of individual or a group of contracts or legal entities.

b. The entity has no significant continuing involvement with the derecognized contracts.

ASU 2018-12, as amended by 2022-05, is effective for public entities for fiscal years beginning after December 15, 2022, and interim periods within those fiscal years. For nonpublic entities, the LDTI is effective for fiscal years beginning after December 15, 2024, and interim periods within fiscal years beginning after December 15, 2025. The LDTI includes different transition provisions as follows:

- For the liability for future policyholder benefits and deferred acquisition costs, insurance entities should apply the amendments to contracts in force as of the beginning of the earliest period presented on the basis of their existing carrying amounts, adjusted for the removal of any related amounts in accumulated other comprehensive income. Insurance entities are permitted to apply the amendments retrospectively (with a cumulative catch-up adjustment to the opening balance of retained earnings), using actual historical experience information as of contract inception. (Estimates of historical experience may not be substituted for actual historical experience.) If electing retrospective application, it must be applied entity-wide for the same contract issue year, and all subsequent contract issue years. (Meaning, it must be used to all products and contracts issued in the first year in which retrospective application will be applied, and all subsequent products and contracts issued in later years.)

- For market risk benefits, insurance entities should apply the amendments retrospectively as of the beginning of the earliest year presented. An insurance entity may use hindsight in instances in which assumptions in a prior period are unobservable or otherwise unavailable and cannot be independently substantiated. The difference between fair value and the carrying value at the transition date, excluding the effect of changes in the instrument-specific credit risk, requires an adjustment to the opening balance of retained earnings.

© 2023 National Association of Insurance Commissioners

Existing Authoritative Literature:

The key changes reflected in ASU 2018-12 revised U.S. GAAP guidance previously rejected for statutory accounting. (In a couple instances, the prior U.S. GAAP guidance was not reviewed for SAP - as the guidance was not Board Directed or was still pending SAP review.)

References from Appendix D – Cross-Reference to SAP:

U.S. GAAP	SAP Accounting Provisions
FAS 60, Accounting and Reporting by Insurance Entities	Rejected in SSAP No. 40R, SSAP No. 50, SSAP No. 51R, SSAP No. 52, SSAP No. 53, SSAP No. 54R, SSAP No. 57, SSAP No. 59, and SSAP No. 71
FAS 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments	Rejected in SSAP No. 50, SSAP No. 51R, SSAP No. 52 and SSAP No. 71
FSP FAS 97-1, Situations in Which Paragraphs 17(b) and 20 of FAS 97 Permit or Require Accrual of an Unearned Revenue Liability	Not Board Directed

SOP 03-1, Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts	Rejected in SSAP No. 56
SOP 05-1, Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchange of Insurance Contracts	Rejected in SSAP No. 71
SOP 00-3, Accounting by Insurance Enterprises for Demutualizations and Formations of Mutual Insurance Holding Companies and for Certain Long-Duration Participating Contracts	Pending SAP
AICPA Practice Bulletin 8, Application of FAS 97 to Insurance Enterprises	Rejected in SSAP No. 51R and SSAP No. 52R
ASU 2018-12, Financial Services—Insurance (Topic 944): Targeted Improvements to the Accounting for Long-Duration Contracts	Rejected in Preamble, SSAP No. 50, SSAP No. 51R, SSAP No. 52, SSAP No. 54R, SSAP No. 55, SSAP No. 56, SSAP No. 71, and SSAP No. 86

Other U.S. GAAP revised as a result of the ASU include:

- *FAS 133, Accounting for Derivative Instruments and Hedging Activities* (and related DIGs) – The framework of FAS 133 was adopted with modification in *SSAP No. 86—Derivatives*. The revisions from ASU 2018-12 indicate that contracts with market risk benefits do not need to be bifurcated as embedded derivatives, as the guidance in ASU 2018-12 requires market risk benefits to be measured at fair value. The ASU revisions also delete or revise related implementation guidance for assessing whether embedded derivatives shall be bifurcated under U.S. GAAP. **This guidance will not impact the FAS 133 guidance adopted with modification, as SSAP No. 86 specifies that embedded derivatives shall not be separated from the derivative instrument.**

- *FAS 130, Other Comprehensive Income* – FAS 130 was rejected as not applicable under statutory accounting. The revisions from ASU 2018-12 modify FAS 130 to specify the additional components (e.g., changes in discount rate assumptions) that are recognized through OCI. These modifications will not impact the prior statutory accounting decision to reject FAS 130 for statutory accounting.

The following relevant SAP guidance is noted:

- ***SSAP No. 51—Life Contracts*****:** This SSAP establishes statutory accounting principles for income recognition and policy reserves for life contracts. This SSAP identifies that policy reserves shall be established as required in *Appendix A-820, Minimum Life and Annuity Reserves* and *Appendix A-822, Asset Adequacy Analysis Requirements* or the *Valuation Manual.*

- ***SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses:*** This SSAP establishes statutory accounting principles for recording liabilities for unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts. (It also addresses unpaid losses and LAE for property and casualty contracts.) Pursuant to the guidance in paragraph 12, for each line of business, and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses and loss/claim adjustment expenses. This guidance identifies that management shall follow the concept of conservatism when determining estimates, but there is not a specific requirement to include a provision for adverse deviation in claims. With the revisions reflected in ASU 2018-12, the U.S. GAAP guidance has been revised to specify that the assumptions used in determining a liability for future policy benefits shall not include a provision for the risk of adverse deviation. Prior to these revisions, the guidance in ASC 944-40-30-7 specifically stated that the assumptions shall include a provision for the risk of adverse deviation. *(Note, as detailed in the proposed statutory accounting modifications, reference to the old U.S. GAAP guidance for adverse deviation is included in the Preamble and is proposed to be deleted.)*

- ***SSAP No. 71—Policy Acquisition Costs and Commissions*****:** This SSAP establishes statutory accounting principles for policy acquisition costs and commissions. Pursuant to SSAP No. 71, all policy acquisition costs and commissions shall be expensed when incurred. Although the ASU is streamlining the amortization of capitalized deferred acquisition costs, this revision will not impact statutory accounting. *(Note, as detailed in the proposed statutory accounting modifications, reference to the old U.S. GAAP guidance is included in the Preamble and is proposed to be modified to reflect the new guidance.)*

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
Per the comment letter received on June 9, 2023, interested parties support the conclusion reached on Agenda item 2023-07.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS):
In 2008, the FASB undertook an insurance contracts project jointly with the International Accounting Standards Board (IASB). In 2013, after considering comments from the exposure of a 2010 Discussion Draft and a 2013 Proposed Update, the FASB decided to separate from the IASB project, and instead focus on targeted improvements to existing U.S. GAAP concepts. The decision to focus on targeted improvements to existing U.S. GAAP guidance, with the continued limitation of the guidance to insurance companies, was strongly supported by commenters in lieu of introducing a completely new accounting model that would apply to all entities that issued "insurance contracts."

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose proposed revisions to reject *ASU 2022-05, Transition for Sold Contracts* as not applicable for statutory accounting in *SSAP No. 50–Classifications of Insurance or Managed Care Contracts; SSAP No. 51R—Life Contracts; SSAP No. 52—Deposit-Type Contracts; SSAP No. 56—Separate Accounts; SSAP No. 71—Policy Acquisition Costs and Commissions* and *SSAP No. 86—Derivatives*. The guidance in ASU 2022-05 provides updated transition guidance for ASU 2018-12, which had previously been rejected for statutory accounting. The proposed revisions are illustrated below:

SSAP No. 50–Classifications of Insurance or Managed Care Contracts

46. This statement rejects the U.S. GAAP classifications (i.e., short-duration and long-duration) found in *ASU 2022-05 Transition for Sold Contracts, ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts, FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, and *FASB Statement No. 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long Duration Participating Contracts*.

SSAP No. 51R—Life Contracts

56. This statement rejects *ASU 2022-05 Transition for Sold Contracts, ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts, FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises, FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments, FASB Statement 120, Accounting and Reporting by Mutual Life Insurance Enterprises and by Insurance Enterprises for Certain Long-Duration Participating Contracts,* AICPA *Practice Bulletin No. 8, Application of FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses From the Sale of Investments, to Insurance Enterprises,* the AICPA *Audit and Accounting Guide—Audits of Stock Life Insurance Companies,* AICPA *Statement of Position 95-1, Accounting for Certain Activities of Mutual Life Insurance Enterprises* relating to accounting and reporting for policy reserves for short and long duration contracts, and *FASB Interpretation No. 40, Applicability of Generally Accepted Accounting Principles to Mutual Life Insurance and Other Enterprises, an interpretation of FASB Statements No. 12, 60, 97, and 113.*

SSAP No. 52—Deposit-Type Contracts

25. This statement rejects *ASU 2022-05 Transition for Sold Contracts, ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts*, *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*, *FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, *FASB Statement 120, Accounting and Reporting by Mutual Life Insurance* Enterprises *and by Insurance Enterprises for Certain Long-Duration Participating Contracts*, AICPA *Practice Bulletin No. 8, Application of FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses From the Sale of Investments, to Insurance Enterprises,* the AICPA *Audit and Accounting Guide—Audits of Stock Life Insurance Companies*, AICPA *Statement of Position 95-1, Accounting for Certain Activities of Mutual Life Insurance Enterprises* relating to accounting and reporting for policy reserves for short and long duration contracts, and *FASB Interpretation No. 40, Applicability of Generally Accepted Accounting Principles to Mutual Life Insurance and Other Enterprises, an interpretation of FASB Statements No. 12, 60, 97, and 113*.

SSAP No. 56—Separate Accounts

41. This statement rejects *ASU 2022-05 Transition for Sold Contracts, ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts*, AICPA *Statement of Position 03-1,*

© 2023 National Association of Insurance Commissioners

Accounting and Reporting by Insurance Enterprises *for Certain Nontraditional Long-Duration Contracts and for Separate Accounts* (SOP 03-1). The disclosure elements included within this SSAP are derived from the criteria for separate account reporting under SOP 03-1; however, this SSAP does not restrict separate account reporting pursuant to the criteria established in SOP 03-1.

SSAP No. 71—Policy Acquisition Costs and Commissions

6. This statement rejects *ASU 2022-05 Transition for Sold Contracts, ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts*, *ASU 2010-26, Accounting for Costs Associated with Acquiring or Renewing Insurance Contracts, FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises, FASB Statement No. 97, Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments*, and *Statement of Position 05-1, Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts.*

SSAP No. 86—Derivatives

73. This statement rejects *ASU 2022-05 Transition for Sold Contracts, 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity's Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity's Own Equity*, *ASU 2020-01, Investments—Equity Securities (Topic 321), Investments—Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815), Clarifying the Interactions between Topic 321, Topic 323 and Topic 815, ASU 2018-03, Recognition and Measurement of Financial Assets and Financial* Liabilities, and *ASU 2016-03, Intangibles—Goodwill and Other, Business Combinations, Consolidation, Derivatives and Hedging*.

Staff Review Completed by:
William Oden, NAIC Staff – December 2022

Status:
On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification to reject *ASU 2022-05, Transition for Sold Contracts* in *SSAP No. 50–Classifications of Insurance or Managed Care Contracts; SSAP No. 51R—Life Contracts; SSAP No. 52—Deposit-Type Contracts; SSAP No. 56—Separate Accounts; SSAP No. 71—Policy Acquisition Costs and Commissions* and *SSAP No. 86—Derivatives*, which is consistent with prior agenda items related to this topic.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to reject ASU 2022-05 in SSAP Nos. 50, 51R, 52, 56, 71, and 86.

Issue: PIK Interest Disclosure Clarification

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: This agenda item has been developed to further clarify, and incorporate a practical expedient, to the paid-in-kind (PIK) interest aggregate disclosure adopted in *SSAP No. 34—Investment Income Due and Accrued* for year-2023. In response to questions received on how paydowns / disposals would impact PIK interest included in the cumulative balance, it was noted that clarifying guidance would assist with consistent application. Furthermore, without clarification it was identified that companies and investment software vendors may interpret the need to detail the retrospective PIK allocations and paydowns / disposals as evidence for the resulting amount.

To eliminate the potential inconsistent application on how paydowns / disposals impact PIK interest included in cumulative principal / par balance, as well as to streamline the calculation, this agenda item proposes the following clarifications:

- Any decreasing amounts to principal balances (paydowns / disposals / sales, etc.,) shall first be applied to any PIK interest included in the principal balance. For example, if original par was $100, PIK interest received overtime was $50 and paydowns received were $30, the resulting PIK included in the cumulative balance would be $20 - ($50 less $30). No reduction to the original principal would occur until the PIK interest had been fully eliminated from the balance. If in this scenario paydowns of $70 had occurred, the company would report zero in the disclosure for cumulative PIK interest, as the amount received would have fully eliminated the $50 in PIK interest.

- The determination of PIK interest in cumulative balance can be calculated through a practical expedient calculation of original par / principal value to current par / principal value, not to go less than zero. This calculation will determine the resulting balance from PIK interest over time as well as paydowns / disposals, etc. The intent of this calculation is to prevent companies and investment software vendors from creating a schedule that details PIK interest and paydowns received retroactively since the origination of the investment. The practical expedient calculation from the original to current par / principal value shall result with the same resulting PIK interest amount included in the cumulative balance without the retroactive scheduling required.

The adopted disclosure in SSAP No. 34 is not intended to change, but the proposed clarification and practical expedient guidance is intended to be captured in the annual statement instructions. This agenda item is being exposed at the SAPWG, as the source of the adopted disclosure, and will be used to subsequently provide a memo to blanks for year-end 2023 application and to revise the formal instructions for 2024.

Existing Authoritative Literature:

- **SSAP No. 34—Investment Income Due and Accrued**

Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;

b. Disclose total amount excluded;

c. Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued;

d. Disclose aggregate deferred interest;

e. Disclose cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

- **A/S Instructions – Life, Accident and Health / Fraternal Companies**

7. Investment Income Instruction:

Disclose the following for investment income due and accrued in the financial statements:

A. The bases, by category of investment income, for excluding (nonadmitting) any investment income due and accrued,

B. The total amount excluded.

C. The gross, nonadmitted and admitted amounts for interest income due and accrued. (1) Gross amount for interest income due and accrued. (2) Nonadmitted amount for interest income due and accrued. (3) Admitted amount for interest income due and accrued.

D. The aggregate deferred interest.

E. The cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Agenda item 2022-17: Interest Income Disclosure update was adopted March 22, 2023. This disclosure data-captured existing and incorporated new disclosures, to SSAP No. 34, which included the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance. The revisions were adopted for year-end 2023 and are shown in the authoritative literature section above.

- Blanks Proposal 2023-11BWG intends to adopt instructions and illustrations for the revised disclosures in May 2023.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): NA

Recommendation:
NAIC staff recommend that the Working Group include this item on their maintenance agenda as a SAP clarification and expose this agenda item to clarify and incorporate a practical expedient, to the paid-in-kind (PIK) interest aggregate disclosure for SSAP No. 34 and annual statement instruction purposes. For annual statement purposes, this instruction will be an editorial change only and can be provided by the SAPWG in a memo posted on the Blanks Working (E) Group page if adopted after the deadline to incorporate into the annual statement instructions for 2023. Comments on this exposure are requested by June 30, 2023, to allow for adoption consideration at the 2023 Summer National Meeting.

Proposed Revisions to SSAP No. 34

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;

b. Disclose total amount excluded;

c. Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued;

d. Disclose aggregate deferred interest;

e. Disclose cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance. / par value[FN].

New Footnote: In disclosing the cumulative amount of PIK interest, identify the specific amounts of PIK interest by lot and aggregate the amounts by CUSIP/PPN that have a net increase to the original par value. The net increase includes PIK interest added to the par value less disposals (i.e., repayments; sales) that are first applied to any PIK interest outstanding. As a practical expedient, an insurer may calculate the cumulative amount of PIK interest on a bond by subtracting the original principal / par value from the current principal / par value, but not less than $0.

Proposed instruction for inclusion in the Annual Statement Instructions (or 2023 memo to Blanks):

7. Investment Income Instruction:

Disclose the following for investment income due and accrued in the financial statements:

A. The bases, by category of investment income, for excluding (nonadmitting) any investment income due and accrued,

B. The total amount excluded.

C. The gross, nonadmitted and admitted amounts for interest income due and accrued. (1) Gross amount for interest income due and accrued. (2) Nonadmitted amount for interest income due and accrued. (3) Admitted amount for interest income due and accrued.

D. The aggregate deferred interest.

E. The cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

For the PIK interest included in the current principal balance, include the amount of reported interest in which the terms permit “paid in kind” (PIK) instead of cash. The amount reported shall reflect the cumulative amount of PIK interest included in the current principal balance / par value. In disclosing the cumulative amount of PIK interest, identify the specific amounts of PIK interest by lot and aggregate the amounts by CUSIP/PPN that have a net increase to the original par value. The net increase includes PIK interest added to the par value less disposals (i.e., repayments; sales) that are first applied to any PIK interest outstanding. As a practical expedient, an insurer may calculate the cumulative amount of PIK interest on a bond by subtracting the original principal / par value from the current principal / par value, but not less than $0.

Staff Review Completed by: Julie Gann - NAIC Staff, May 2023

Status:
On May 16, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 34 and the Annual Statement Instructions to clarify and incorporate a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure. These SSAP No. 34 revisions, when adopted, will also result in editorial changes to the annual statement instructions.

August 13, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 34 and directed that the proposed updates to the Annual Statement Instructions be forwarded to the Blanks (E) Working Group. These revisions provide a practical expedient to the paid-in-kind (PIK) interest aggregate disclosure.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 23-02: Third Quarter 2023 Inflation Reduction Act – Corporate Alternative Minimum Tax

INT 23-02 Dates Discussed
August 13, 2023; September 21, 2023

INT 23-02 References

Current:
SSAP No. 9— Subsequent Events
SSAP No. 101—Income Taxes

INT 23-02 Issue

Key Provisions of the Inflation Reduction Act

1. The Inflation Reduction Act (Act) was enacted on August 16, 2022, and included a new corporate alternative minimum tax (CAMT). The CAMT is effective for tax years beginning after 2022. Reporting entities shall refer to the Act and the resulting regulations and other tax guidance to determine application, but a high-level summary of the CAMT is below.

   a. The tentative CAMT is 15% of the corporation's "adjusted financial statement income" for the tax year, reduced by the corporate alternative minimum foreign tax credit.

   b. The CAMT differs from the previous traditional alternative minimum tax (AMT) that applied under pre-2018 tax law in that it starts at a financial statement measure (book income) – not an Internal Revenue Code taxable income calculation. Adjusted financial statement income does not include other comprehensive income including unrealized gains and losses on available for sale securities. The determination of whether the CAMT applies is made on a tax-controlled group basis (scope determination), the tentative CAMT is based on the group's adjusted financial statement income (not adjusted regular taxable income), and any tax due (liability determination) is based on a comparison of consolidated tentative CAMT to consolidated regular tax.

   c. The CAMT applies only to corporations (determined on a tax-controlled group basis as defined for federal income tax purposes, this could include standalone unaffiliated entities which meet the specified income thresholds) with average annual adjusted financial statement income in excess of $1 billion for three prior taxable years. The threshold is reduced to $100 million in the case of certain foreign-owned corporations. A corporation that meets the applicable threshold is an "applicable corporation." Applicable corporations generally remain applicable corporations for subsequent taxable years unless certain limited exceptions apply. Applicable corporation status means that CAMT must be tentatively determined and compared to regular tax liability.

   d. A corporation's adjusted financial statement income is the amount of net income or loss the corporation reports on its applicable financial statement. The income is adjusted for various purposes including certain adjustments in the case of consolidated returns or for foreign income.

© 2023 National Association of Insurance Commissioners

e. The Act includes references to the tax code which provides a hierarchy for determining the "applicable financial statement." At a high level, the first choice is U.S. generally accepted accounting principles (GAAP) financial statements; the second choice is international financial reporting standards (IFRS) financial statements. If GAAP and IFRS financial statements are not available, the financial statements filed by the taxpayer with any other regulatory or government body are acceptable. If the taxpayer is part of a tax-controlled group of corporations, the group's applicable financial statement is the applicable financial statement for each member of the group.

f. To determine its U.S. federal income tax liability, an applicable corporation will need to compute taxes under both systems—the regular tax system and the CAMT system. The CAMT is payable to the extent the tentative CAMT exceeds the sum of the regular corporate income tax plus base erosion and anti-abuse tax (BEAT) liability.

g. Any CAMT paid is available indefinitely as a credit carryover that would reduce future regular tax in future years when the regular tax liability is in excess of CAMT tax liability. That is, the CAMT tax credit can be used to reduce the regular tax but not below CAMT liability.

h. A foreign tax credit (FTC) may reduce the tentative minimum CAMT. Note that unused FTCs may be carried forward for 5 years. General business credits can generally offset up to 75% of the sum of regular and minimum tax.

2. The Working Group previously issued *INT 22-02: Third Quarter 2022 through Second Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax* which addressed third quarter 2022 through second quarter 2023. INT 22-02 noted that a reasonable estimate of the CAMT was not possible for those reporting periods and required disclosures.

3. This interpretation is focused on addressing accounting and reporting aspects of the CAMT for third quarter 2023 reporting (reporting period July 1 through September 30, 2023). While most insurers will not be applicable corporations, this interpretation provides temporary third quarter 2023 statutory accounting guidance for all reporting entities that are or expect to be applicable entities with respect to the CAMT. A separate interpretation is being developed for year-end 2023 and periods thereafter.

4. Although it is likely that most insurers that are applicable corporations will be members of a tax-controlled group of corporations and included in a consolidated federal income tax return with other members of the group, this interpretation applies to all applicable reporting entities. For reporting entities subject to the CAMT, this includes an unaffiliated corporation[1] that files a separate tax return, a member of a tax-controlled group not included in the common parent company's consolidated tax return that files a separate company tax return or a separate consolidated tax return with other members of the group, or as a member of the common parent's consolidated return group.

Interpretation Issues

5. *SSAP No. 101—Income Taxes,* paragraph 7.e. requires the statutory valuation allowance adjustment as a direct reduction in the gross DTA if, based on the weight of available evidence, it is more likely than not that some or all of the gross DTAs will not be realized. Gross DTA less the statutory valuation allowance results in adjusted gross DTAs. The statutory valuation allowance adjustment is not reported as a separate line in the statutory financial statements (it is an off-balance sheet item that reduces the gross DTAs). The statutory valuation allowance is disclosed.

[1] As used herein, an "unaffiliated" corporation is one that is not a member of a tax-controlled group.

6. The statutory accounting calculation for admissible DTAs is determined using adjusted gross DTAs (gross DTAs reduced by the valuation allowance). For statutory accounting, admittance of adjusted gross DTAs in SSAP No. 101 depends on a three-component calculation, for which the second step limits admittance of adjusted gross DTAs to those that are expected to be realized in a timeframe that does not exceed three years. The actual number of years permitted depends on specifics for each reporting entity (type and other information about the reporting entity), but the maximum timeframe is three years. The last step admits DTAs which can be offset by DTLs.

7. Guidance in *SSAP No. 9—Subsequent Events* requires consideration of Type I and Type II[2] subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued. For subsequent events identified after the statutory financial statements reporting date (example September 30) but before the statements are filed (example, November 15), reporting entities are generally required by their domestic state to reflect estimates in their filed statutory financial statements. Under this guidance, as additional information is made available on the impact of the Act, or information becomes available to update estimates and assessments, under existing statutory accounting guidance in SSAP No. 9, reporting entities would need to identify updated estimates as a Type I subsequent event in the audited financial statements.

Issue 1 – Consideration of the Act for Third Quarter 2023 Financial Statements

8. Under statutory accounting guidance, reporting entities filing statutory financial statements would have to consider the applicability of the CAMT and if applicable, attempt to determine the impact on the statutory valuation allowance as well as assess DTAs for admissibility (e.g., realization timeframe). These elements will be collectively referred to as "calculations impacted by the Act" or "calculations impacted by the CAMT." Exceptions to these calculations impacted by the CAMT have previously been provided under INT 22-02 through second quarter 2023.

9. This interpretation will address the issue for what reporting entities are required to report or disclose regarding the calculations impacted by the CAMT for third quarter 2023 (July 1 through September 30, 2023, financial statements.)

Issue 2 – Consideration of Subsequent Events for Third Quarter 2023 Financial Statements

10. SSAP No. 9 requires consideration of subsequent events through the date of the statutory financial statements and the date of issuance of the audited financial statements, or the date in which audited financial statements are available to be issued. An exception to this requirement has previously been provided under INT 22-02 through second quarter 2023.

11. For reporting entities that materially revise or establish calculations impacted by the CAMT during the third quarter 2023 or immediately subsequent to the third quarter (including the statutory valuation allowance, the timing of determination of net admitted DTAs, and the determination of the applicability of the CAMT and any related liabilities), this interpretation will address the extent a Type I or Type II subsequent event assessment is required for third quarter 2023 financial reporting.

INT 23-02 Discussion

[2] A Type I subsequent event relates to an event or transaction that provides additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. Under SSAP No. 9, entities shall recognize in the financial statements the effects of all material Type I subsequent events. A Type II subsequent event pertains to events or transactions that provide evidence to conditions that did not exist at the balance sheet date but arose after that date. Type II events are disclosed in the financial statements.

12. The Statutory Accounting Principles (E) Working Group tentative consensuses to the noted issues are included below.

Response: Issue 1 – Consideration of the Act for Third Quarter 2023 Financial Statements

13. Reporting entities that are aware they will be subject to the CAMT would normally have to reflect the effects of the Act on the calculations impacted by the CAMT if reasonably estimable for the third quarter 2023. The Act was adopted in August 2022; however, entities may continue to have a considerable number of unknown variables for September 30, 2023, reporting. As such, the Working Group has determined that a reasonable estimate might not be determinable for third quarter 2023 interim financial statements for the calculations impacted by the CAMT for some entities.

14. If a reporting entity is an applicable corporation and has determined a reasonable estimate, it shall be disclosed. If a reporting entity is an applicable corporation and cannot determine a reasonable estimate, the reporting entity shall disclose that they expect to be an applicable corporation but have not determined a reasonable estimate.

15. Because reasonable estimates of calculations impacted by the CAMT might not be determinable, reporting entities shall only disclose impacts related to CAMT for third quarter 2023 financial statements for which reasonable estimates are possible. If the reporting entity is an applicable corporation, they shall make the following disclosures regarding the CAMT and the Act:

a. A statement regarding whether the reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined if it expects to be liable for CAMT in 2023. For example:

   i. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it does not expect to be liable for CAMT in 2023.

   ii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has not determined as of the reporting date if it will be liable for CAMT in 2023. The third quarter 2023 financial statements do not include an estimated impact of the CAMT because a reasonable estimate cannot be made.

   iii. The reporting entity (or the controlled group of corporations of which the reporting entity is a member) has determined that it expects to be liable for CAMT in 2023. The third quarter 2023 financial statements shall disclose the estimated impact of the CAMT.

Response: Issue 2 – Consideration of Subsequent Events for Third Quarter 2023 Financial Statements

16. For third quarter 2023 reporting, CAMT updated estimates or other calculations affected by the Act determined subsequent to third quarter statutory financial statement or filing date shall not be recognized as Type I subsequent events. Meaning, third quarter financial statements are not required to reflect updated estimates subsequent to the third quarter reporting date and prior to the filing of the third quarter financial statements. With the disclosure required under Issue 1, additional subsequent event disclosure (such as what would be required for Type II event) is not required.

17. Reporting entities shall be working in good faith to complete the accounting for the changes adopted under the Act.

INT 23-02 Status

18. The tentative consensuses in this interpretation were adopted on September 21, 2023 to provide reporting guidance regarding the calculations impacted by the CAMT and provide limited-scope, limited-time exceptions to the valuation allowance and DTA calculations in response to legislation under SSAP No. 101 as well as Type I subsequent event requirements in SSAP No. 9 for September 30, 2023, statutory reporting. As detailed, the exceptions to SSAP No. 101 and SSAP No. 9 are effective for the third quarter 2023.

19. This interpretation will be automatically nullified on November 16, 2023, and as additional guidance for year end 2023 reporting is being separately developed.

20. No further discussion is planned.

Issue: Corporate Alternative Minimum Tax Guidance

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
The Inflation Reduction Act (Act) was enacted on August 16, 2022, and included a new corporate alternative minimum tax (CAMT). In December 2022, the Working Group adopted temporary guidance to address the CAMT in *INT 22-02: Third Quarter 2022 through First Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax*.

This agenda item is to begin the project of providing guidance regarding the CAMT for periods after the first quarter 2023. Interested parties of the SAPWG have submitted initial informal recommendations to assist with preparing the guidance.

The Act and the CAMT go into effect for tax years beginning after 2022. A high-level summary regarding the CAMT is as follows:

a. The CAMT is 15% of the corporation's "adjusted financial statement income" for the tax year, reduced by corporate alternative minimum foreign tax credit. The CAMT differs from the previous traditional alternative minimum tax (AMT) in that it starts at a financial statement measure (book income) – not an Internal Revenue Code tax calculation.

b. The CAMT will only apply to corporations (determined on an affiliated group basis) with an average adjusted financial statement income in excess of $1 billion for the three prior tax years. This threshold is reduced to $100 million in the case of certain foreign-parented corporations. When a corporation becomes subject to the CAMT, it remains subject to the calculation of the CAMT, even if its average adjusted financial statement income is less than $1 billion, unless an exception applies.

c. A corporation's adjusted financial statement income is the amount of net income or loss the corporation reports on its applicable financial statement. The income is adjusted for various purposes including certain adjustments in the case of consolidated returns or for foreign income tax.

d. The Act includes references to the tax codes which provides a hierarchy for determining the "applicable financial statement." At a high level, the first choice is U.S. generally accepted accounting principles (GAAP) financial statements; the second choice is international financial reporting standards (IFRS) financial statements. If GAAP and IFRS financial statements are not available, the financial statements filed by the taxpayer with any other regulatory or government body is acceptable. If the taxpayer is part of an affiliated group of corporations filing a consolidated return the adjustable financial statement income for the group considers the group's applicable financial statement.

e. To determine its U.S. federal income tax liability, a corporation will need to compute taxes under both systems — the regular tax system and the CAMT system. The CAMT is payable to the extent the tentative CAMT exceeds the regular corporate income tax. The tentative corporate alternative minimum tax will be the excess of the tentative corporate alternative minimum tax over regular income tax + base erosion and

© 2023 National Association of Insurance Commissioners

anti-abuse tax (BEAT) liability. A foreign tax credit (FTC) will reduce the tentative minimum CAMT. Note that unused FTCs can be carried forward 5 years.

f. General business credits can generally offset up to 75% of regular and minimum tax.

g. Any CAMT paid is available indefinitely as a tax credit carryover that could reduce future regular tax if the regular tax liability plus the base erosion and anti-abuse tax (BEAT) exceeds the tentative minimum tax is in excess of CAMT tax liability. That is, the CAMT tax credit (CAMT DTA) can be used to reduce the regular tax but not below CAMT liability.

h. The Act directs the Treasury to issue regulations and other guidance relate to implementing the CAMT. As of February 2023, several issues are pending detailed clarifications from the Treasury.

The CAMT presents several accounting challenges including:

1. Financial Projections - There will be challenges estimating future applicable financial statement income for a group of companies outside of the reporting entity. In addition, there are challenges related to projecting partnership/alternative investment income for applicable financial statement income projections.

2. Payment of the CAMT creates a deferred tax asset which can be carried forward indefinitely. Determining the future period when the CAMT credit can be used will require projections of future regular tax and CAMT, which may also require information external to the reporting entity.

3. Tax sharing agreements and allocation of the CAMT liability which is determined on a consolidated basis.

4. The CAMT DTA (tax credit) can be used to reduce the general tax liability but not below the CAMT. Therefore, the Working Group will need to review treatment under the statutory valuation allowance and also the interaction of the realizability of the CAMT DTA on other DTAs. That is, use of the CAMT DTA, may reduce the realizability of other DTAs. Related topics are as follows:

    a. Is an estimate of future CAMT required for the determination of DTA realization under the "with and without" calculation? CAMT DTAs would reduce realization under the with and without approach,

    b. Under GAAP, for the analysis of realizably of non-AMT credit deferred tax assets, the company may elect to consider or disregard its AMT status as long as it is consistent. If the company elects to consider AMT, must book the valuation allowance in the period of enactment (period that includes August of 2022). If material, the company has to disclose the accounting policy election.

    c. Admissibility of CAMT DTAs under SSAP No. 101, particularly for the paragraph 11b admissibility calculation, presents challenges.

Existing Authoritative Literature:
SSAP No. 101—Income Taxes provides the federal income tax guidance for statutory accounting.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): In December 2022, the Working Group adopted *INT 22-02: Third Quarter 2022 through First Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax*.

In addition, *INT 22-03: Inflation Reduction Act - Corporate Alternative Minimum Tax* was exposed for comment in October 2022, but not finalized.

In 2019 the Working Group revised the *SSAP No. 101—Income Taxes-Implementation Q&A* to update examples and guidance in response to the federal Tax Cuts and Jobs Act which repealed of the Alternative Minimum Tax in agenda item 2019-09: SSAP No. 101 – Q&A Updates – TCJA.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): None.

Staff Review Completed by: Robin Marcotte– NAIC Staff, February 2023

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification and direct NAIC staff, to continue to work with industry on developing guidance for the reporting of the CAMT for future Working Group discussion.

The CAMT presents several accounting challenges, Working Group input will be needed on several decisions points including: treatment of tax sharing agreements, consideration regarding the CAMT DTA in the statutory valuation allowance, and the treatment of CMATs DTAs, in the overall DTA admissibility calculation. Staff will also need Working Group input on whether to maintain an RBC threshold for the SSAP No. 101, paragraph 11b admissibility test and the overall extent of admissibility of the CAMT DTAs.

Status:
On March 22, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and directed staff to work with industry on developing guidance for CAMT for interim discussion.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group exposed *INT 23-03: Inflation Reduction Act - Corporate Alternative Minimum Tax* for comment with a proposed effective date of year-end 2023. After discussion, the Working Group also directed that the exposed INT 23-03T, including guidance which provides for the admissibility of CAMT credits under SSAP No. 101, paragraph 11c. should be consistent with the treatment of other DTAs under this step (see exposure paragraph 34).

On September 21, 2023, the Statutory Accounting Principles (E) Working Group adopted *INT 23-03: Inflation Reduction Act - Corporate Alternative Minimum Tax*, which incorporated the majority of the revisions proposed by interested parties. However, these revisions did not change the overall principles exposed. This interpretation applies for reporting periods on or after December 31, 2023

INT 23-03 Issue

Key Provisions of the Inflation Reduction Act

1. The Inflation Reduction Act (Act) was enacted on August 16, 2022, and included a new corporate alternative minimum tax (CAMT). The CAMT is effective for tax years beginning after 2022. Reporting entities shall refer to the Act and the resulting regulations and other tax guidance to determine application, but a high-level summary of the CAMT is below.

   a. The tentative CAMT is 15% of the corporation's "adjusted financial statement income" for the tax year, reduced by corporate alternative minimum foreign tax credit.

   b. The CAMT differs from the previous traditional alternative minimum tax that applied under pre-2018 tax law in that it starts at a financial statement measure (book income) – not an Internal Revenue Code taxable income calculation. Adjusted financial statement income does not include other comprehensive income including unrealized gains and losses on available for sale securities. The determination of whether the CAMT applies is made on a tax-controlled group basis (scope determination), the tentative CAMT is based on the group's adjusted financial statement income (not adjusted regular taxable income), and any tax due (liability determination) is based on a comparison of consolidated tentative CAMT to consolidated regular tax (non-CAMT).

   c. The CAMT applies only to corporations (determined on a tax-controlled group basis as defined for federal income tax purposes, this could include standalone unaffiliated entities which meet the specified income thresholds – see paragraph 3) with average annual adjusted financial statement income in excess of $1 billion for three prior taxable years. The threshold is reduced to $100 million in the case of certain foreign-owned corporations. A corporation that meets the applicable threshold is an "applicable corporation." Applicable corporations generally remain applicable corporations for subsequent taxable years unless certain limited exceptions apply. Applicable corporation status means that CAMT must be tentatively determined and compared to regular (non-CAMT) tax liability.

   d. A corporation's adjusted financial statement income is the amount of net income or loss the corporation reports on its applicable financial statement. The income is adjusted for various purposes including certain adjustments in the case of consolidated returns or for foreign income.

e. The Act includes references to the tax code which provides a hierarchy for determining the applicable financial statement. At a high level, the first choice is U.S. generally accepted accounting principles (GAAP) financial statements; the second choice is international financial reporting standards (IFRS) financial statements. If GAAP and IFRS financial statements are not available, the financial statements filed by the taxpayer with any other regulatory or government body are acceptable. If the taxpayer is part of a tax-controlled group of corporations, the group's applicable financial statement is the applicable financial statement for each member of the group.

f. To determine its U.S. federal income tax liability, an applicable corporation will need to compute taxes under both systems – the regular tax system and the CAMT system. The CAMT is payable to the extent the tentative CAMT exceeds the sum of the regular corporate income tax plus base erosion and anti-abuse tax (BEAT) liability.

g. Any CAMT paid is available indefinitely as a credit carryover that would reduce future regular tax in future years when the regular tax liability is in excess of the tentative CAMT liability. That is, the CAMT credit can be used to reduce the regular tax but not below tentative CAMT liability.

h. A foreign tax credit (FTC) may reduce the tentative minimum CAMT. Note that unused FTCs may be carried forward for 5 years. General business credits can generally offset up to 75% of the sum of regular and minimum tax.

2. This interpretation is focused on addressing accounting and reporting aspects of the CAMT. As most reporting entities will not be above the applicable corporation threshold and will not be subject to the CAMT calculation, this guidance has been developed as an interpretation. While most insurers will not be applicable corporations, this interpretation provides comprehensive statutory accounting guidance for all reporting entities with respect to the CAMT. This interpretation incorporates a principles-based approach for purposes of statutory accounting for the CAMT.

3. Although it is likely that most insurers that are applicable corporations will be members of a tax-controlled group of corporations and included in a consolidated federal income tax return with other members of the group, this interpretation applies to all reporting entities subject to the CAMT, whether an unaffiliated corporation[1] that files a separate tax return, a member of a tax-controlled group not included in the common parent company's consolidated tax return that files a separate company tax return or a separate consolidated tax return with other members of the group, or as a member of the common parent's consolidated return group.

4. For reporting entities that are included in a consolidated tax return, the fundamental statutory tax accounting issue for the CAMT is how to reflect in the reporting entity's separate company financial statements a portion of what is essentially an add-on tax for a consolidated tax return group that is based on the group's financial statement income and group tax rate. Even if a member of a tax-controlled group of corporations files its own separate federal income tax return, the tax law does not provide for a separate company scope determination, but rather looks to the tax-controlled group for applicable corporation status and determination of the applicable financial statement.

INT 23-03 Discussion

5. The discussion along with the Statutory Accounting Principles (E) Working Group tentative consensuses are included below.

[1] As used herein, an "unaffiliated" corporation is one that is not a member of a tax-controlled group.

Categories of Reporting Entities

6. In an annual determination of applicable corporation status, all reporting entities are separated into one of the following categories:

a. Nonapplicable reporting entities

b. Applicable reporting entities

c. Applicable reporting entities with tax allocation agreement (also called tax sharing agreements) exclusions.

Nonapplicable Reporting Entities

7. Nonapplicable reporting entities are reporting entities that do not reasonably expect to be an applicable corporation either as a member of a tax-controlled group of corporations[2] or individually as an unaffiliated corporation, for the taxable year that includes the current reporting period. Nonapplicable reporting entities are not required to calculate or recognize a payable for CAMT. If a reporting entity is not subject to pay CAMT, then they will have no CAMT credit carryforward. For nonapplicable reporting entities, further assessment of the CAMT is not required for current or deferred tax computations, and the remaining accounting components of the interpretation do not apply. Applicable disclosures are required.

8. A reporting entity that was an applicable corporation for the preceding taxable year shall reasonably expect to be an applicable corporation for the current taxable year, unless one of the tax law exceptions to continued applicable corporation status applies.

Applicable Reporting Entities

9. Applicable reporting entities are reporting entities that reasonably expect to be applicable corporations for the taxable year that includes the current reporting period, either individually as an unaffiliated corporation or as a member of a tax-controlled group of corporations[3]. Applicable reporting entities are required to consider CAMT in current and deferred tax computations in the manner set forth in this interpretation.

10. Because CAMT is not payable by an applicable corporation unless it is in excess of regular tax liability, the CAMT calculations for applicable reporting entities within this interpretation may or may not result in different current and deferred income taxes than if the CAMT was not taken into account. (Applicable reporting entities with tax allocation agreement exclusions that meet the requirements of paragraph 11 of this interpretation shall follow the guidance in paragraph 12 of this interpretation.)

Applicable Reporting Entities with Tax Allocation Agreement Exclusions

11. Applicable reporting entities with tax allocation agreement exclusions are reporting entities that qualify as an applicable corporation as a member of a tax-controlled group of corporations pursuant to

[2] A reporting entity that is a member of a tax-controlled group that does not reasonably expect to be applicable corporation on a group basis is not required to make a separate company determination as the CAMT is determined on a group basis.

[3] Determination of applicable reporting entity within a tax-controlled group is subject to the tax law. A reporting entity within a tax-controlled group is captured with the group's applicable corporation status regardless of if they were excluded from the consolidated tax return and filed their own separate return. For example, if the reporting entity is a life insurance company and i) the group has not made a "life-nonlife" consolidated return election, or ii) the reporting entity has been recently acquired and is excluded from the life-nonlife consolidated return for a period of 5 years.

paragraphs 9 and 10 of this interpretation, and is a party to a tax allocation agreement that is in effect for the reporting period that has all of the following terms:

a. The reporting entity is excluded from charges for any portion of the group's CAMT, and

b. The reporting entity is not allocated any portion of the group's CAMT credit carryover.

12. Reporting entities with tax allocation agreement exclusions which qualify under paragraph 11 of this interpretation, are not required to calculate, or recognize CAMT in their current or deferred tax computations. Even with the tax allocation agreement exclusions, the general current tax liability guidance pursuant to *SSAP No. 101—Income Taxes*, paragraph 3 continues to apply. This guidance requires the reporting entity to recognize the amount the reporting entity has paid or is payable, which includes any additional amount the reporting entity expects to pay on behalf of its co-obligors.

Accounting for Applicable Reporting Entities

Impact of Tax Allocation Agreements

13. This interpretation is based on the principle that the statutory accounting for the CAMT for reporting entities included in a consolidated tax return should be matched to the CAMT charges reasonably estimated to be paid by the reporting entity and the corresponding CAMT credits reasonably estimated to be received by the reporting entity. For such reporting entities, this interpretation applies the provisions of the intercompany tax allocation agreement[4] (also referred to as a tax sharing agreement) that governs allocation of consolidated taxes to individual members of the group.

14. SSAP No. 101, paragraph 16 provides that in the case of a reporting entity that files a consolidated income tax return with one or more affiliates, income tax transactions between the affiliated parties shall be recognized if such transactions are economic transactions as defined in *SSAP No. 25—Affiliates and Other Related Parties*; are pursuant to a written tax allocation agreement; and income taxes incurred are accounted for in a manner consistent with the principles of FAS 109 the predecessor of what is now ASC 740, as modified by SSAP No. 101.

15. For a reporting entity that is included in a consolidated tax return and is subject to a qualifying tax allocation agreement which is consistent with paragraphs 16 and 17 of SSAP No. 101, the amount of CAMT payable (expense) or CAMT credit carryforward is recognized in accordance with the tax allocation agreement.

Recognition of CAMT Payable

16. Reporting entities that are applicable corporations, excluding those having qualifying tax allocation agreement exclusions per paragraph 11 of this interpretation, are required to take CAMT payable into account in the calculation of current income tax expense pursuant to SSAP No. 101. Reporting entities shall accrue the CAMT owed, reflecting the amount owed as a separate return filer or in accordance with the amount allocated through the consolidated tax return group's tax sharing agreement pursuant to paragraph 15 of this INT.

---

[4] SSAP No. 101, paragraphs 16 and 17 provide requirements for tax allocation agreement recognition. Tax allocation agreements are also subject to internal revenue service requirements and are subject to domiciliary regulator review under the Insurance Holding Company System Regulatory Act (Model #440), which also requires that the terms of intercompany agreements be fair and reasonable. In assessing fair and reasonable, state insurance regulators are encouraged to assess the terms of the TSA for allocations to the insurance reporting entity for both CAMT payables and CAMT credit carryforwards.

17. Consistent with SSAP No. 101, paragraph 8, changes in deferred tax assets (DTAs) and deferred tax liabilities (DTLs), including changes attributable to changes in tax rates and changes in tax status, if any, shall be recognized as a separate component of gains and losses in unassigned funds (surplus) as "change in net deferred income tax," excluding any change reflected in unrealized capital gains.

18. Paragraph 8.3 of SSAP No. 101 Exhibit A – Implementation Questions and Answers (Q&A) is not applicable to reporting entities subject to CAMT through a tax-controlled group structure. This exclusion is provided due to the consolidated nature of the CAMT calculation. Any theoretical separate entity calculation of the CAMT liability may be unrelated to the actual consolidated tax return computations and to the tax allocation agreement allocation of liability.

Recognition of CAMT Credit Deferred Tax Asset

19. Reporting entities shall recognize a corresponding DTA which represents the non-expiring tax credit carryforward equal and offsetting to the current CAMT accrued. The CAMT credit can be used to reduce regular tax in future years when the regular tax liability is in excess of the tentative CAMT liability as permitted under the tax law. The CAMT credit carryforward is a type of deferred tax asset.

Impact of CAMT to the Statutory Valuation Allowance

20. *SSAP No. 101—Income Taxes*, paragraph 7.e. requires the statutory valuation allowance adjustment as a direct reduction in the gross DTA if, based on the weight of available evidence, it is more likely than not that some or all of the gross DTAs will not be realized. Gross DTA less the statutory valuation allowance results in adjusted gross DTAs. The statutory valuation allowance adjustment is not reported as a separate line in the statutory financial statements (it is an off-balance sheet item that reduces the gross DTAs). The statutory valuation allowance is disclosed.

21. The determination of a statutory valuation allowance[5] for CAMT credit deferred tax assets depends on whether the reporting entity is part of a consolidated tax return group or a separate tax return filer:

a. Consolidated Tax Return Group: A reporting entity that is an applicable entity and a member of consolidated tax return group shall utilize the statutory valuation assessment for the CAMT credit deferred tax assets completed at the consolidated tax return group level. A reporting entity is not required to adjust the group statutory valuation allowance for CAMT credit deferred tax assets. Rather, the group determined statutory valuation allowance and the resulting credit deferred tax asset deemed to be more likely than not to be realized, is permitted to be allocated (consistent with tax allocation agreement) to the reporting entity and reflected as an CAMT credit adjusted gross DTA. The reporting entity shall continue to have a separate statutory valuation allowance calculation for non-CAMT deferred tax assets as required under SSAP No. 101. The combination of the CAMT credit adjusted gross deferred tax asset (as received from the group) and the adjusted gross deferred tax assets from non-CAMT deferred tax assets shall equal the total adjusted gross deferred tax assets reviewed for admittance within the scope of this interpretation.

b. Separate Tax Return Filer: A reporting entity that is an applicable entity and files a separate tax return, is required to complete a statutory valuation allowance for all deferred tax assets, including CAMT credit deferred tax assets, in determining their total adjusted gross DTAs. (The CAMT credit deferred tax assets can be assessed separately from non-

[5] Although reporting entities may conclude that the non-expiring CAMT DTA more likely than not will ultimately be realized, reporting entities will not be able to utilize the tax credit until the reporting entity if a separate tax return filer, or the tax consolidated group of corporations if the reporting entity is a member of such group , are no longer CAMT payors and have sufficient tax liability that permits the group the ability to use the CAMT credits.

CAMT deferred tax assets in determining whether the deferred tax asset is more likely than not to be realized.) The total adjusted gross deferred tax assets are then reviewed for admittance within the scope of this interpretation.

22. A reporting entity is allowed an accounting policy election to either consider or disregard CAMT when evaluating the need for a valuation allowance for its non CAMT deferred tax assets.[6] The accounting policy election applies for valuation allowance purposes only – that is, in the determination of adjusted gross deferred tax assets other than the CAMT credit deferred tax assets. This accounting policy election cannot be used to avoid a valuation allowance analysis for CAMT credit DTAs. The accounting policy election must be disclosed in the notes to the financial statements and applied consistently in subsequent reporting periods.

Admissibility

Admittance - Implications of Group Tax Assessment (Related Parties)

23. For reporting entities that are applicable corporations as they are a member of a tax-controlled group of corporations, the reporting entity may be subject to the CAMT, or be hindered from utilizing the CAMT credit, through the actions of their consolidated tax return group related parties. (As noted in footnote 5, although a reporting entity may have earned an non-expiring tax credit through payment of CAMT, the reporting entity is not eligible to utilize that tax credit until the consolidated tax return group has sufficient tax liability that allows the members of the group to utilize their tax credit. This means that on a group basis they are no longer CAMT payors.) *SSAP No. 4—Assets and Nonadmitted Assets* requires assets that are restricted by the action of a related party to be nonadmitted assets.

> SSAP No. 4, Footnote 2: If assets of an insurance entity are pledged **or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2, such assets shall not be recognized as an admitted asset on the balance sheet.** Additional guidance for assets pledged as collateral is included in INT 01-31.

24. A key focus of this interpretation is the admittance of the CAMT deferred tax assets (credits). However, it is recognized that under the existing statutory accounting guidance in SSAP No. 4 a reporting entity recognizing CAMT credit deferred tax assets would not be permitted to admit those deferred tax assets if as part of a consolidated tax return group the ability to receive those CAMT credits is explicitly linked to the actions of other entities within the group. If the group on a collective basis does not incur enough tax to allow utilization of the tax credits, then the reporting entity cannot use the tax credits, regardless of the income or tax paid by the reporting entity. This aspect is not impacted by the tax sharing agreement. Although the tax sharing agreement may specify how the CAMT credits will be allocated among the group, such tax credits allocated to the reporting entity can only be realized when the group qualifies for the credit.

25. For the CAMT credit adjusted gross deferred tax assets allocated to the reporting entity to be eligible to be admitted, this interpretation provides an exception to the guidance in SSAP No. 4, footnote 2, recognizing that the impact to ultimately utilize the allocated tax credits is dependent on the actions of the other parties within the group.

Admittance – Adjusted Gross DTAs

---

[6] SSAP No. 101, FAS 109 and ASC 740 do not specifically address whether future years' CAMT should be anticipated in a valuation allowance assessment for non-CAMT DTAs. Accordingly, an accounting policy election is allowed for GAAP purposes as to whether to consider or disregard CAMT when evaluating the need for a valuation allowance for non-CAMT DTAs.

26. The guidance in SSAP No. 101 allows admittance of adjusted gross DTAs (gross DTAs reduced by the statutory valuation allowance) pursuant to a three-component calculation, for which the second step limits admittance of adjusted gross DTAs to those that are expected to be realized in a timeframe that does not exceed three years. The actual number of years to realization permitted depends on specifics for each reporting entity (type and other information about the reporting entity), but the maximum timeframe is three years. The last step (SSAP No. 101, paragraph 11.c.) admits DTAs which can be offset by DTLs.

27. Due to the following aspects regarding the CAMT credits, specific admittance guidance for the CAMT credit DTAs has been established:

a. The CAMT credit is a tax credit DTA that does not expire. As long as the reporting entity is a CAMT payor or is part of a tax-consolidated group that is a CAMT payor, the reporting entity cannot utilize the tax credit.

b. The ability to utilize the CAMT credit is contingent on the actions and tax paying behaviors of the consolidated tax return group. Although the reporting entity may be paying sufficient tax above the CAMT threshold, if other parties within the group do not act in a similar manner, putting the group below the CAMT threshold, then the CAMT credit cannot be utilized by the reporting entity.

28. With these noted limitations in utilization of the earned tax credits, reporting entities are only permitted to admit CAMT credits if the reporting entity tax projections (if a separate tax return filer) or projections of the tax-consolidated group (if a member of such group) indicate that the CAMT credit will be realizable within the stated timeframes using the applicable SSAP No. 101, paragraph 11 realization table thresholds[7]. This means that the tax projections will have sufficient tax liability that permits utilization of the CAMT credits. For example, a reporting entity with greater than 300% ExDTA ACL RBC can only admit CAMT credits that are expected to be realized (consistent with the tax allocation agreement) in three years. Reporting entities that have ExDTA ACL RBC between 200-300% can only admit CAMT credits that are expected to be realized in one year. If a reporting entity cannot project (either on its own if a separate return filer or at the group if a consolidated tax return group member) sufficient tax liability that allows them to utilize the CAMT credit within the applicable realizable timeframes for admittance, then the portion of CAMT credits that cannot be utilized are required to be nonadmitted under SSAP No. 101, paragraph 11.b.

29. CAMT credits included in the SSAP No. 101, paragraphs 11 and 11.b. calculation as they are expected to be realized within the applicable 1 or 3 year permitted timeframes shall then be combined with non-CAMT adjusted gross deferred tax assets and admitted to the extent that the total DTAs admitted under paragraph 11.b. do not exceed the capital and surplus percentage limit for the company type. All references to SSAP No. 101, paragraph 11.b. include the modifications in this Interpretation.

30. Reporting entities shall use the Realization Threshold Limitations Tables in SSAP No. 101, paragraph 11.b. as applicable to the entity for determination of the admissibility of the CAMT credits. The percentage limitations of capital and surplus of and the projected realization periods continue to apply to admitted adjusted gross DTAs, including the adjusted gross DTA for any CAMT credit DTA.

31. A reporting entity which meets or exceeds the top line of the applicable of the Realization Threshold Limitation Table (Ex. 3 years and 15%) is **not required** to take the CAMT into account in calculating the

[7] The examples in this paragraph reference Ex-DTA ACL RBC, however, SSAP No. 101, paragraph 11.b. also includes realization threshold tables which apply to non-RBC filers.

"with and without[8]" tax liability for purposes of determining the amount expected to be realized under SSAP No. 101, paragraph 11.b. for non-CAMT DTAs. Specifically, the reporting entity's "with and without" regular tax liability is not reduced by CAMT, if any, reasonably expected to be incurred during the SSAP No. 101, paragraph 11.b. applicable period. In the case of a reporting entity included in a consolidated federal income tax return, the amount expected to be incurred refers to the portion of the consolidated CAMT, if any, reasonably expected to be allocable to the reporting entity pursuant to the group's tax allocation agreement. However, any admitted CAMT credits in this step must be realizable within the applicable time period specified in the applicable Realization Threshold Limitation Table (Ex, top line - 3 years), determined consistent with the tax allocation agreement. The post-valuation allowance adjusted gross DTA for any CAMT credit DTA is admitted following the guidance in SSAP No. 101, paragraph 11.b.i. as modified by this Interpretation. The 15% limitation of capital and surplus which is provided in SSAP No. 101, paragraph 11.b.ii. continues to apply to admitted adjusted gross DTAs, including the adjusted gross DTA for any CAMT credit DTA.

32. A reporting entity which meets the second line of the applicable Realization Threshold Limitation Table (Ex. 1 year and 10%), the amount expected to be realized under SSAP No. 101, paragraph 11.b.i. within the applicable period determined under paragraph 11.b. **is based** on the reporting entity's "with and without" regular tax liability reduced by CAMT, if any, reasonably expected to be incurred during the paragraph 11.b. applicable period. In the case of a reporting entity included in a consolidated federal income tax return, the amount expected to be realized is reduced by the portion of the consolidated CAMT, if any, reasonably expected to be allocable to the reporting entity pursuant to the group's tax allocation agreement. CAMT credit utilization during the applicable period is recognized based on the same principles, – that is, as an admitted DTA. The purpose of these computations is to account for CAMT in deferred taxes in the same manner as CAMT would be reflected in current taxes.

33. A reporting entity which meets or is below the third line of the applicable Realization Threshold Limitation Table (Ex. 0 years and 0%), is not permitted to admit either CAMT credit DTAs or non-CAMT DTAs under SSAP No. 101, paragraph 11.b.

34. The adjusted gross DTA for any CAMT credit carryforward which does not qualify for admission under SSAP No. 101, paragraph 11.b. is permitted to be recognized as an offset against DTLs in accordance with SSAP No. 101, paragraph 11.c. The reporting entity shall admit the remaining amount of adjusted gross DTAs, after application of paragraphs 11.a. and 11.b. that can be offset against existing gross DTLs. The reporting entity shall consider the character (i.e., ordinary versus capital) of the DTAs and DTLs such that offsetting would be permitted in the tax return under existing enacted federal income tax laws and regulations.

Admittance - Projections

35. Projections of CAMT liability, if any, (and CAMT credit utilization) during the applicable period involve forward-looking data, groupings, of assets and liabilities, estimates and other adjustments for both the reporting entity and the group of which it is a member. The manner in which this is done shall be conducted in a reasonable and consistent manner. A reporting entity shall retain internal documentation to support these computations and the methodologies so employed. Modifications to the estimation methodology are permitted should events or circumstances change from a previous period – such as a change in materiality or administrative costs associated with the computations, or system changes that affect the level of detail available. Entities that make such modifications should be prepared to rationalize the

[8] "With and without" is further described in SSAP No. 101.

changes. Disclosure of material modifications, and the general reason for such, should be made in the notes to the financial statements.[9]

Admittance - Tax Planning Strategies

36. SSAP No. 101 provides that tax-planning strategies are required to be considered in the valuation allowance analysis and may be considered in determining the admission of DTAs under SSAP No. 101, paragraph 11. For reporting entities that are part of a consolidated tax return group, tax planning strategies impacting the CAMT are determined at a group level, as long as the tax planning strategies at the group level do not conflict with tax planning strategies at the reporting level and vice versa. For reporting entities that are separate tax return filers, a reporting entity must consider tax-planning strategies in making the valuation allowance analysis required under this interpretation.

Transition Guidance

37. Even though the CAMT was enacted in 2022 and generally became effective January 1, 2023, the requirements for statutory tax accounting for the CAMT have effectively been deferred by INT 22-02. This paragraph provides the applicable transition rules for year-end 2023 statutory accounting for requests for a timely-filed tax allocation agreement amendment or a new tax allocation agreement for the 2023 taxable year.

a. Because the CAMT was newly enacted effective for 2023, tax allocation agreements in effect for periods prior to the 2023 taxable year include no explicit provisions relating to the CAMT. Thus, applicable reporting entities (with and without tax allocation agreement exclusions) may need to amend tax allocation agreements to deal with the CAMT effective for the entire 2023 taxable year. A reporting entity would file a request for amendment to a tax allocation agreement or a new tax allocation agreement on Form D – Prior Notice of a Transaction as required under the *Insurance Holding Company System Regulatory Act* (Model #440) and the related regulation, (Model #450) with its applicable domiciliary regulator(s) and commercial domiciliary regulator(s).

b. Time is of the essence in both requesting and approving tax allocation agreement amendments or a new tax allocation agreement relating to the CAMT for the 2023 taxable year to be applicable to the 2023 reporting period. Accordingly, if, a reporting entity files the applicable Form D request(s) for tax allocation agreement amendment or a new tax allocation agreement prior to the end of 2023 to address the CAMT for 2023 and subsequent taxable years, and the domiciliary regulator has confirmed in writing that they have no objections to using the new tax allocation agreement amendment or new tax allocation agreement, while under review. The reporting entity shall be allowed to account for the tax allocation agreement as applicable for the entire 2023 reporting period.

c. If the final approved tax allocation agreement differs in its treatment of the CAMT allocation from the tax allocation agreement originally requested on the Form D, the difference shall be recorded as follows:

    i. If Form D approval occurs subsequent to the balance sheet date, but before the issuance of the statutory financial statements and before the date the audited financial statements are issued, or available to be issued, such approval shall be considered a Type I subsequent event within the meaning of *SSAP No. 9—Subsequent Events.*

[9] See paragraph 2.9 of the *SSAP No. 101 Q&A* for similar requirements in the context of grouping of assets and liabilities for measurement.

© 2023 National Association of Insurance Commissioners

ii. If the Form D approval occurs after the period which defines a subsequent event in SSAP No. 9, the difference created by such approval shall be recognized and disclosed in the period in which the approval is given.

d. The transition guidance in paragraph 37 does not apply to a reporting entity that does not file a Form D request for a CAMT-related tax allocation agreement amendment or a new tax allocation agreement prior to the end of 2023.

38. Consistent with *SSAP No. 3—Accounting Changes and Corrections of Errors,* paragraph 4, initial application of this interpretation shall not be considered a change in accounting principle, but instead application of a new principle for the first time.

Disclosures

39. The reporting entity shall disclose whether it is a nonapplicable reporting entity; an applicable reporting entity with tax allocation agreement exclusions or an applicable reporting entity.

40. Additionally, the following disclosures shall be made in the notes to the financial statements of applicable reporting entities (which do not have tax allocation agreement exclusions in accordance with paragraph 11 of this interpretation):

a. If the reporting entity has made an accounting policy election to either consider or disregard CAMT when evaluating the need for a valuation allowance for its non-CAMT DTAs described in paragraph 22 of this interpretation.

b. Any disclosure of material modifications to the methodology used to project CAMT as required by paragraph 35 of this interpretation.

41. Relevant disclosures required by SSAP No. 101 also apply including but not limited to, the following:

a. The disclosure of the statutory valuation allowance as required by SSAP No. 101, paragraph 21.

b. The disclosure of tax planning strategies is required by SSAP No. 101. In the disclosure required by SSAP No. 101, paragraph 28.b., a statement as to whether the reporting entity may be charged with a portion of CAMT incurred by the consolidated group (or credited with a portion of the consolidated group's CAMT credit utilization).

c. Inclusion of CAMT credit DTAs, if any, in the disclosure required by SSAP No. 101, paragraph 26.a. regarding the origination dates and expiration of tax credit carry forwards.

d. The impact of CAMT -planning strategies, if any, in the disclosure required by SSAP No. 101, paragraph 22.f.

INT 23-03 Status

42. The consensuses in this interpretation are effective beginning with year-end 2023 financial statements and periods thereafter.

43. No further discussion is planned.

Examples

Basic Facts Used in All Examples

44. The reporting entity is a member of a tax-affiliated group of corporations that files consolidated federal income tax returns which reasonably expects to be an applicable corporation for 20X3.

a. Reporting entity also has $200x of non-CAMT adjusted gross DTAs (i.e., has already reduced by any required valuation allowance of $40x). Of this $200x of which $150x reverses over the 3-year applicable period 20X4-20X6 and is expected to be realized.

b. At the end of 20X3, reporting entity has a $50x CAMT credit DTA (pursuant to the consolidated group's tax allocation agreement, reporting entity was allocated a portion of the group's expected 20X3 current CAMT expense, which reporting entity included in its 20X3 current tax expense).

c. The consolidated group of which the reporting entity is a member establishes a $20x valuation allowance against its $50x CAMT credit DTA, resulting in a CAMT adjusted gross DTA of $30x that is more likely than not to be realized.

d. The reporting entity makes an accounting policy election to disregard CAMT when evaluating the need for a valuation allowance for its non-CAMT DTAs.

e. Reporting entity’s capital and surplus for purposes of calculating the limitation under SSAP No. 101, paragraph 11.b. ii. is $2,000. Therefore, the 15% of surplus limitation is $300 (based on the top line of the applicable SSAP No. 101 paragraph 11.b. realization threshold limitation table), the 10% limitation is $200 (based on the second line of the applicable SSAP No. 101 paragraph 11.b. realization threshold limitation table).

f. For the purposes of these examples any DTA admittance under SSAP No. 101, paragraphs 11.a. and 11.c. is ignored.

Example 1 – Applicable reporting entity meets or exceeds the top line of the relevant SSAP No. 101, paragraph 11.b. Realization Threshold Limitation table (Ex. 3 years, 15%).

45. The basic facts above apply with the following additional information:

a. For 20x3, the reporting entity exceeds the first line of the applicable realization threshold limitation in SSAP No. 101, paragraph 11.b. for use of a 3-year applicable period and the limitation of capital and surplus is 15%. Pursuant to paragraph 31 of this interpretation, the reporting entity would not have to take the CAMT into account in calculating the "with and without" tax liability for purposes of determining the amount expected to be realized under SSAP No. 101, paragraph 11.b.i.

b. The consolidated tax return group has assessed and determined that the CAMT credit DTA amounts after the valuation allowance of $30x is expected to be utilized in 20x4and 20x5but $15x of CAMT would be incurred in 20x6.

46. The reporting entity admits the $30x adjusted gross DTA for its portion of the allocated CAMT credit DTA expected to be utilized within three years and admits the $150x non-CAMT adjusted gross DTA after valuation allowance than can be utilized within three years. Therefore, the admitted non-CAMT DTA and admitted CAMT credit DTA would total $180x ($150 +$30 =$180).

47. Although the consolidated group is expecting to incur CAMT during the 3-year period, the reporting entity does not reduce its non-CAMT admitted DTAs by the $15x the CAMT expected to be allocated under the tax allocation agreement to the reporting entity during the three years (pursuant to paragraph 31 of this Interpretation). Note that if the consolidated tax return group had assessed and determined that only a portion of the CAMT credit DTA after the valuation allowance was expected to be utilized in 20x4 20x5 and 20x6 then the reporting would only admit its allocation (per its tax allocation agreement) of the amount of CAMT credit DTA that will be utilized by the consolidated group during the 3 years.

48. The $180 is less than the $300 15% of surplus limitation in paragraph 11.b.ii., so it is not a limiting factor. (However, if reporting entity's 15% of surplus limitation under paragraph 11.b.ii. was $175x, the reporting entity's admitted adjusted gross DTA would be further reduced to $175).

	DTA	Valuation Allowance	Not Recoverable Within 3 Years	DTA Admitted Standalone	Impact of Consol. DTA	Admitted DTA under 11bi	15% surplus limitation under 11bii	Nonadmitted DTAs
DTAs	240	-40	-50	150		150		50
CAMT credit DTA	50	-20	0		30	30	-	-
totals	**290**	**-60**	**-50**	**150**	**30**	**180**	**300**	**50**

Example 2. Applicable entity, that meets level 2 on the relevant SSAP No. 101, paragraph 11.b. Realization Threshold Limitation table (Ex.-1 year 10%).

49. The basic facts above apply with the following additional information:

a. For 20x3, the reporting entity meets the second line of the applicable realization threshold limitation in SSAP No. 101, paragraph 11.b. for use of a 1-year applicable period and the limitation of capital and surplus is 10%. Pursuant to paragraph 32 of this interpretation, the reporting entity would have to also apply the with and without calculation of the determination of the impact of the CAMT on the realization of DTAs.

b. The consolidated group of which the reporting entity is a member expects to incur CAMT in 20x4, of which $10 is expected to be allocated under the tax allocation agreement to reporting entity. The reporting entity reduces its $150x of non-CAMT admitted adjusted gross DTAs by its $10x share of the consolidated CAMT expected to be incurred in 20x4.

50. The reporting entities admitted DTA would be $140x. The result is an adjusted gross non-CAMT DTA of $150x, minus the $10 impact of the consolidated CAMT (with and without) equals 140 admitted DTA.

51. The resulting $140x of DTA admitted under paragraph 11.b.i., which is less than the $200x paragraph is less than the $200 10% of surplus limitation in paragraph 11.b.ii., so it is not a limiting factor.

	DTA	Valuation Allowance	Not Recoverable Within 1 Year	DTA Admitted Standalone	Impact of Consol. DTA and VA	Admitted DTA under 11bi	10% surplus limitatio n under 11bii	Nonadmitted DTAs
DTAs	240	-40	-50	150	-10	140		60
CAMT credit DTA	50	-20	-30				-	30
totals	**290**	**-60**	**-80**	**150**	**-10**	**140**	**200**	**90**

Example 3 Applicable entity with qualifying tax allocation agreement exclusions

52. The basic facts situation applies.

a. Similar to Example 1, the reporting entity meets the exceeds the first line of the applicable realization threshold limitation in SSAP No. 101, paragraph 11.b. for use of a 3-year applicable period and the limitation of capital and surplus is 15%.

b. The reporting entity is excluded pursuant to the tax allocation agreement from any allocation of CAMT or CAMT credit utilization in a qualifying tax allocation agreement as described in paragraph 11 of this interpretation.

53. Accordingly, the reporting entity for 20x3, would be excluded from the CAMT calculations, and the reporting entity's admitted adjusted gross DTA would be $150x. which is the amount after the valuation allowance of $40 and the $50 reduction for the amount not recoverable within 3 years.

54. The $150 is less than the $300 15% of surplus limitation in paragraph 11.b.ii., so it is not a limiting factor.

	DTA	Valuation Allowance	Not Recoverable Within 3 Years	DTA Admitted Standalone	Impact of Consol. DTA and VA	Admitted DTA under 11bi	15% surplus limitation under 11bii	Nonadmitted DTAs
DTAs	240	-40	-50	150		150		50
CAMT credit DTA	0						-	-
totals	**240**	**-40**	**-50**	**150**		**150**	**300**	**50**

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: Residuals in SSAP No. 48 Investments

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:

This agenda item proposes revisions to clarify the scope and reporting for investment structures that represent residual interests or a residual security tranche (collectively referred to as residuals) within statutory accounting principles. Previously, revisions have been incorporated in *SSAP No. 43R—Loan-Backed and Structured Securities* to address the reporting of residual interests within securitization structures. With these revisions, residual interests, as defined within SSAP No. 43R, were required to be reported on Schedule BA on designated reporting lines beginning year-end 2022. After reviewing the 2022 reporting results, it was identified that the information for residuals may be underrepresented as a result of the various legal forms that residual investments can take. For example, a reporting entity could hold investments that have the substance of residual interests in the form of limited partnerships, joint ventures, or other equity fund investments. To ensure collective and consistent reporting of all residual interests, this agenda item proposes guidance to clarify the reporting of in-substance residuals regardless of the structure of the investment vehicle.

The discussion of residual interests often compares those securities to equity interests. These two investment structures are not synonymous, and it should not be perceived that all equity interests reflect residuals. A residual interest or a residual security tranche exists in investment structures that are backed by a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. These collateral assets generate cash flows that provide interest and principal payments to debt holders, and once those contractual requirements are met, the resulting excess funds generated by (or with the sale of) the collateral assets are provided to the holder of the residual interest. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent cash flows will be generated and distributed. The residual interest holder absorbs these losses (as it reduces what they could receive as a residual holder) while the holders of the debt securities continue to receive interest and principal, so long as there are enough collateral cash flows to cover them. The residual holder may ultimately receive nothing, a reduced amount from original projection, or large returns, based on how the underlying collateral assets perform.

The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive 'residual' cash flows after all debt holders receive contractual interest and principal payments. The list below provides common characteristics in residuals, but with varying (and often changing structures), this list should not be used as rules governing whether a security reflects a residual interest. Determining whether a security reflects a residual interest or tranche for reporting purposes shall be based on the substance of the investment held rather than its legal form.

Common Characteristics of Residual Interests/Residual Security Tranches:

- Residuals often do not have contractual principal or interest.
- Residuals may have stated principal or interest, but with terms that result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

- Residuals do not have credit ratings or NAIC assigned designations. Rather, they provide the subordination to support the credit quality of the typically rated debt tranches.
- Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after other tranche holders receive contractual principal and interest payments.
- Frequently, there are contractual triggers that divert cash flows from the residual tranche to the debt tranches if the structure becomes stressed.

Existing Authoritative Literature:

SSAP No. 43R—Loan-Backed and Structured Securities defines residuals specific to securitizations or beneficial interests and requires these securities to be reported on dedicated Schedule BA reporting lines. (This guidance was effective for year-end 2022 and detailed in agenda item 2022-15.)

26. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual), and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

    a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities, excluding residual tranches or interests, shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

    b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively), excluding residual tranches or interests, shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

    c. For residual tranches or interests[FN] captured in scope of this statement, all reporting entities shall report the item on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value. Changes in the reported value from the prior period shall be recorded as unrealized gains or losses. For reporting entities that maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.

    Footnote: Reference to “residual tranches or interests” intends to capture securitization tranches and beneficial interests as well as other structures captured in scope of this statement that reflect loss layers without any contractual payments, whether principal or interest, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

Annual Statement Instructions also detail specific reporting lines for residuals with instructions for reporting in Schedule BA:

Residual Tranches or Interests with Underlying Assets Having Characteristics of:

Residual Tranches or Interests with Underlying Assets Having Characteristics of:

Investment in Residual Tranches or Interests should be assigned to the subcategory with the highest underlying asset concentration. There shouldn't be any bifurcation of the underlying assets among the subcategories.

Include: Residual tranches or interests captures securitization tranches and beneficial interests as well as other structures captured in scope of *SSAP No. 43R – Loan-Backed and Structured Securities*, that reflect loss layers without any contractual payments, whether interest or principal, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. See SSAP No. 43R for accounting guidance.

Fixed Income Instruments

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule D – Part 1 – Long-Term Bonds*

Common Stocks

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule D – Part 2 – Section 2 – Common Stocks*

Preferred Stocks

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule D – Part 2 – Section 1 – Preferred Stocks*

Real Estate

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule A – Real Estate Owned*

Mortgage Loans

Include: Investments with underlying collateral which, if held individually, would be reported on *Schedule B – Mortgage Loans*

Other

Include: Items that do not qualify for inclusion in the above subcategories.

© 2023 National Association of Insurance Commissioners

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Under the principles-based bond project, revisions have been proposed to incorporate guidance for residuals in *SSAP No. 21R—Other Admitted Assets*. With the Spring 2023 National Meeting exposure, information was requested from industry on how amortized cost for residuals was determined as well as how other-then-temporary assessments were completed.

- The Investment Risk and Evaluation (IRE) Risk Based-Capital (E) Working Group is considering a structural change and a potential factor change for residuals reported on Schedule BA. The year-end 2022 data was reviewed and was noted to underrepresent the full scope of residual tranche securities held by insurance reporting entities as the current guidance in SSAP No. 43R is specific to securitizations or beneficial interests.

- A March 31, 2023, Valuation of Securities (E) Task Force referral to the Statutory Accounting Principles (E) Working Group identified other structures that could contains residual tranche securities that may not be captured within the year-end 2022 Schedule BA dedicated residual reporting lines.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): NA

Recommendation:
NAIC staff recommend that the Working Group move this item to the active listing, as a SAP clarification, and expose revisions to clarify that investments structures captured in scope of *SSAP No. 48—Joint Ventures, Partnerships, and Limited Liability Companies*, that represent residual interests or that predominantly hold residual interests, shall be reported on the dedicated residual reporting line on Schedule BA. As these investments are already reported on Schedule BA, this revision results in a reporting classification change within the same schedule. These investments are still considered to be in scope of SSAP No. 48 and they are only permitted to be admitted if they qualify as admitted assets pursuant to requirements of SSAP No. 48. (Under SSAP No. 48, investments in scope must be supported by an audit to qualify for admittance.)

Proposed revisions to *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*:

New header and paragraphs 18-20. All other paragraphs will be renumbered accordingly.

Residual Interests and Reporting

18. Investments in scope of this statement are reported on *Schedule BA: Other Long-Term Assets*. Schedule BA includes dedicated reporting categories for joint ventures, partnerships, and limited liability company investments as well as for residual interests, both with reporting lines in accordance with underlying asset characteristics. Investments within scope of this standard shall be divided within these reporting categories, with investments that reflect residual interests, or that predominantly hold residual interests, captured in the residual interest reporting category.

19. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures that are backed by a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. These collateral assets generate cash flows that provide interest and principal payments to debt holders, and once those contractual requirements are met, the resulting funds generated by (or with the sale of) the collateral assets are provided to the holder of the residual security / residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual security holder absorbs these losses first (as it reduces what they could receive as a residual holder) while the holders of

the debt securities continue to receive interest and principal so long as there are enough collateral cash flows to cover them. The residual holder may ultimately receive nothing, a reduced amount from original projection, or large returns, based on how the underlying collateral assets perform.

20. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive 'residual' cash flows after all debt holders receive contractual interest and principal payments. Determining whether a security reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence of absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may have stated principal or interest, but with terms that result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they provide the subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after other tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual tranche to the debt tranches if the structure becomes stressed.

Corresponding revisions are also proposed to SSAP No. 43R—Loan-Backed and Structured Securities:

Revisions are proposed to pull the residual guidance into a new section, after paragraph 26, rather than a footnote. Remaining paragraphs will be renumbered accordingly.

Reporting Guidance for All Loan-Backed and Structured Securities

26. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), and the designation assigned in the NAIC Valuations of Securities product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities, excluding residual tranches or interests, shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively), excluding residual tranches or interests, shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

c. For residual tranches or interests[†] captured in scope of this statement, all reporting entities shall report the item on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value. Changes in the reported value from the prior period shall be recorded as unrealized gains or losses. For reporting entities that maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.

Residual Tranches or Interests

27. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures (including securitizations, beneficial interests and other structures captured in scope of this statement) that are backed by a discrete pool of collateral assets. These collateral assets generate cash flows that provide interest and principal payments to debt holders, and once those contractual requirements are met, the resulting funds generated by (or with the sale of) the collateral assets are provided to the holder of the residual security / residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual security holder absorbs these losses first (as it reduces what they could receive as a residual holder) while the holders of the debt securities continue to receive interest and principal so long as there are enough collateral cash flows to cover them. The residual holder may ultimately receive nothing, a reduced amount from original projection, or large returns, based on how the underlying collateral assets perform.

28. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive 'residual' cash flows after all debt holders receive contractual interest and principal payments. Determining whether a security reflects a residual interest or tranche for reporting purposes shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence of absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may have stated principal or interest, but with terms that result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they provide the subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after other tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual tranche to the debt tranches if the structure becomes stressed.

Proposed revisions to Annual Statement Instructions:

Residual Tranches or Interests with Underlying Assets Having Characteristics of:

Investment in Residual Tranches or Interests should be assigned to the subcategory with the highest underlying asset concentration. There shouldn't be any bifurcation of the underlying assets among the subcategories.

Include: Residual tranches or interests ~~captures~~ from securitization tranches and beneficial interests as well as other structures captured in scope of *SSAP No. 43R – Loan-Backed and Structured Securities*. ~~, that reflect loss layers without any contractual payments, whether interest or principal, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. See SSAP No. 43R for accounting guidance.~~

Investments in joint ventures, partnerships and limited liability companies captured in scope of *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* that represent residual interests, or that predominantly hold residual interests.

This category shall also include residual interests or residual security tranches within investment structures that are not captured in scope of SSAP No. 43R or SSAP No. 48 but that reflect, in substance, residual interests or residual security tranches.

The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive 'residual' cash flows after all debt holders receive contractual interest and principal payments. Determining whether a security reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence of absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may have stated principal or interest, but with terms that result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they provide the subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after other tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual tranche to the debt tranches if the structure becomes stressed.

Staff Note: With adoption of guidance to define a residual, corresponding revisions will also be proposed to the SSAPs proposed to be updated under the principles-based bond definition (e.g., *SSAP No. 43R—Asset-Backed Securities* and *SSAP No. 21R—Other Admitted Assets*.)

Staff Review Completed by: Julie Gann - NAIC Staff, April 2023

Status:
On May 16, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 48 which clarify that investments structures captured in scope of SSAP No. 48 that represent residual interests or that predominantly hold residual interests, shall be reported on the dedicated residual reporting line on Schedule BA. Corresponding edits to ensure consistent language in SSAP No. 43R and revisions to the Schedule BA Annual Statement Instructions were also exposed.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group exposed revisions as shown below in the updated July 2023 recommendation with a shortened comment deadline ending September 12, 2023. The updated recommendation was based on interim discussions and coordination with industry representatives.

Updated Recommendation - July 12, 2023
NAIC staff has been working directly with regulators and industry on the proposed revisions to ensure consistent reporting classification for residuals. As a result of this coordination, updated revisions are proposed. Changes from the prior proposal are shaded:

SSAP No. 48 - New header and paragraphs 18-20. All other paragraphs will be renumbered accordingly.

Residual Interests and Reporting

18. Investments in scope of this statement are reported on *Schedule BA: Other Long-Term Assets*. Schedule BA includes dedicated reporting categories for joint ventures, partnerships, and limited liability company investments as well as for residual interests, both with reporting lines in accordance with underlying asset characteristics. Investments within scope of this standard shall be divided within these reporting categories, with investments that reflect residual interests, or that predominantly hold residual interests, captured in the residual interest reporting category.

19. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures that issue one or more classes of debt securities created for the primary purpose of raising debt capital backed by collateral assets. The primary source of debt repayment is derived through rights to the cash flows of ~~are backed by~~ a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. The~~se~~ collateral assets generate cash flows that provide interest and principal payments to debt holders through a contractually prescribed distribution methodology (e.g., waterfall dictating the order and application of all collateral cash flows). ~~, and~~ Once those contractual requirements are met, the ~~resulting funds~~ remaining cash flows generated by (or with the sale of) the collateral assets are provided to the holder of the residual security/residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual holders in the structure continue to receive payments from the collateral so long as there are cash flows in excess of the debt obligations. ~~security holder absorbs these losses first (as it reduces what they could receive as a residual holder) while the holders of the debt securities continue to receive interest and principal so long as there are enough collateral cash flows in excess of the debt obligations to cover them. The residual holder may ultimately receive nothing, a reduced amount from~~

~~original projection, or large returns, based on how the underlying collateral assets perform.~~ The payments to the residual holder may vary significantly, both in timing and amount, based on the underlying collateral performance.

20. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive ~~'residual'~~ the remaining cash flows after all debt holders receive contractual interest and principal payments. Determining whether an investment in a structure ~~a security~~ reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence or absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may be structured with terms that appear to be ~~have~~ stated principal or interest but that lack substance, and ~~with terms that~~ result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they are first loss positions that provide ~~the~~ subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after ~~other~~ debt tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual ~~tranche~~ holders to the debt tranches if the structure becomes stressed.

Corresponding revisions are then proposed to SSAP No. 43R and the Schedule BA Annual Statement Instructions:

SSAP No 43R:

Residual Tranches or Interests

27. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures that issue one or more classes of debt securities created for the primary purpose of raising debt capital backed by collateral assets. The primary source of debt repayment is derived through rights to the cash flows of ~~are backed by~~ a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. The~~se~~ collateral assets generate cash flows that provide interest and principal payments to debt holders through a contractually prescribed distribution methodology (e.g., waterfall dictating the order and application of all collateral cash flows).~~and~~ Once those contractual requirements are met, the ~~resulting funds~~ remaining cash flows generated by (or with the sale of) the collateral assets are provided to the holder of the residual security/residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual holders in the structure continue to receive payments from the collateral so long as there are cash flows in excess of the debt obligations. ~~security holder absorbs these losses first (as it reduces what they could receive as a residual holder) while the holders of the debt securities continue to receive interest and principal so long as there are enough collateral cash flows in excess of the debt obligations to cover them. The residual holder may ultimately receive nothing, a reduced amount from original projection, or large returns, based on how the underlying collateral assets perform.~~ The payments to the residual holder may vary significantly, both in timing and amount, based on the underlying collateral performance.

28. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive ~~'residual'~~ the remaining cash flows after all debt holders receive contractual interest and principal payments. Determining whether an investment in a structure ~~a security~~ reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence or absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may be structured with terms that appear to be ~~have~~ stated principal or interest but that lack substance, and ~~with terms that~~ result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they are first loss positions that provide ~~the~~ subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after ~~other~~ debt tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual ~~tranche~~ holders to the debt tranches if the structure becomes stressed.

Schedule BA Annual Statement Instructions:

Residual Tranches or Interests with Underlying Assets Having Characteristics of:

Investment in Residual Tranches or Interests, as defined within *SSAP No. 43R—Loan-Backed and Structured Securities or SSAP No. 48—Joint Ventures, Partnerships and Limited Liabilities Companies* should be assigned to the subcategory with the highest underlying asset concentration. There shouldn't be any bifurcation of the underlying assets among the subcategories.

Include: Residual tranches or interests ~~captures~~ from securitization tranches and beneficial interests as well as other structures captured in scope of *SSAP No. 43R – Loan-Backed and Structured Securities*. ~~, that reflect loss layers without any contractual payments, whether interest or principal, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. See SSAP No. 43R for accounting guidance.~~

Investments in joint ventures, partnerships and limited liability companies captured in scope of *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* that represent residual interests, or that predominantly hold residual interests.

This category shall also include residual interests or residual security tranches within investment structures that are not captured in scope of SSAP No. 43R or SSAP No. 48 but that reflect, in substance, residual interests or residual security tranches.

~~The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive 'residual' the remaining cash flows after all debt holders receive contractual interest and principal~~

~~payments. Determining whether an investment in a structure a security reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests / residual security tranches include the items noted below, but the presence of absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.~~

a. Residuals often do not have contractual principal or interest.

b. Residuals may be structured with terms that appear to be ~~have~~ stated principal or interest but that lack substance, and ~~with terms that~~ result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they are first loss positions that provide ~~the~~ subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after ~~other~~ debt tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual ~~tranche~~ holders to the debt tranches if the structure becomes stressed.

On September 21, 2023, the Statutory Accounting Principles (E) Working Group adopted the revisions as exposed on August 13, 2023, to *SSAP No. 43R—Loan-Backed and Structured Securities* and *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*, and adopted revisions to the Annual Statement Instructions modified from the exposure to reflect industry comments. As clarification revisions for the reporting of residual interests, so that all residuals are captured on the dedicated Schedule BA reporting lines, the revisions are effective for year-end December 31, 2023. The revisions to the Annual Statement Instructions will be forwarded to the Blanks (E) Working Group in the year-end memo and for a future blanks proposal. The adopted statutory accounting revisions and annual statement instructions are shown below:

SSAP No. 48 - New header and paragraphs 18-20. All other paragraphs will be renumbered accordingly.

Residual Interests and Reporting

18. Investments in scope of this statement are reported on *Schedule BA: Other Long-Term Assets*. Schedule BA includes dedicated reporting categories for joint ventures, partnerships, and limited liability company investments as well as for residual interests, both with reporting lines in accordance with underlying asset characteristics. Investments within scope of this standard shall be divided within these reporting categories, with investments that reflect residual interests, or that predominantly hold residual interests captured in the residual interest reporting category.

19. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures that issue one or more classes of debt securities created for the primary purpose of raising debt capital backed by collateral assets. The primary source of debt repayment is derived through rights to the cash flows of a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. The collateral assets generate cash flows that provide interest and principal payments to debt holders through a contractually prescribed distribution methodology (e.g., waterfall dictating the order and application of all collateral cash flows). Once those contractual requirements are

met, the remaining cash flows generated by (or with the sale of) the collateral assets are provided to the holder of the residual security/residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual holders in the structure continue to receive payments from the collateral so long as there are cash flows in excess of the debt obligations. The payments to the residual holder may vary significantly, both in timing and amount, based on the underlying collateral performance.

20. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive the remaining cash flows after all debt holders receive contractual interest and principal payments. Determining whether an investment in a structure reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence or absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may be structured with terms that appear to be stated principal or interest but that lack substance and result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they are first loss positions that provide subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after debt tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual holders to the debt tranches if the structure becomes stressed.

SSAP No 43R: New Header and paragraphs 27-28. All other paragraphs will be renumbered accordingly.

Residual Tranches or Interests

27. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures that issue one or more classes of debt securities created for the primary purpose of raising debt capital backed by collateral assets. The primary source of debt repayment is derived through rights to the cash flows of a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. The collateral assets generate cash flows that provide interest and principal payments to debt holders through a contractually prescribed distribution methodology (e.g., waterfall dictating the order and application of all collateral cash flows). Once those contractual requirements are met, the remaining cash flows generated by (or with the sale of) the collateral assets are provided to the holder of the residual security/residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual holders in the structure continue to receive payments from the collateral so long as there are cash flows in excess of the debt obligations. The payments to the residual holder may vary significantly, both in timing and amount, based on the underlying collateral performance.

28. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive the remaining cash flows after all debt holders receive contractual interest and principal payments. Determining whether an investment in a structure reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics

of residual interests/residual security tranches include the items noted below, but the presence or absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may be structured with terms that appear to be stated principal or interest but that lack substance, and result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they are first loss positions that provide subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after debt tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual holders to the debt tranches if the structure becomes stressed.

Schedule BA Annual Statement Instructions:

Residual Tranches or Interests with Underlying Assets Having Characteristics of:

Investment in Residual Tranches or Interests should be assigned to the subcategory with the highest underlying asset concentration. There shouldn't be any bifurcation of the underlying assets among the subcategories.

Include: Residual tranches or interests captures from securitization tranches and beneficial interests as well as other structures captured in scope of *SSAP No. 43R – Loan-Backed and Structured Securities*. , that reflect loss layers without any contractual payments, whether interest or principal, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. See SSAP No. 43R for accounting guidance.

Investments in joint ventures, partnerships and limited liability companies captured in scope of *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* that represent residual interests, or that predominantly hold residual interests.

This category shall also include residual interests or residual security tranches within investment structures that are not captured in scope of SSAP No. 43R or SSAP No. 48 but that reflect, in substance, residual interests or residual security tranches.

Revisions to the
As of March 2023, Accounting Practices and Procedures Manual

On **October 23, 2023**, the Statutory Accounting Principles (E) Working Group adopted the following revisions to the *As of March 2023 Accounting Practices and Procedures Manual*. Documents associated with these revisions are linked to the reference items in bold text.

Ref #	SSAP/ Appendix	Title	Summary
2022-11	SSAP No. 20 SSAP No. 21R	Collateral for Loans *SAP Clarification* Effective immediately October 23, 2023	Adoption includes consistency revisions to SSAP No. 20. Revisions to SSAP No. 21R provide more detail on qualifying collateral, require information to support fair value of collateral to be available on request, and provide audit transition guidance for equity collateral from entities in the scope of SSAP *No. 48—Joint Ventures, Partnerships and Limited Liability Companies* and *SSAP No. 97—Investments to Subsidiary, Controlled and Affiliated Entities.*
2023-18	SSAP No. 5R SSAP No. 92 SSAP No. 102 SSAP No. 103R	ASU 2016-19, Technical Corrections and Improvements *SAP Clarification* Effective immediately October 23, 2023	Adoption includes revisions to adopt with modification ASU 2016-19 in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, *SSAP No. 92—Postretirement Benefits Other Than Pensions*, and *SSAP No. 102—Pensions and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* to update statutory accounting guidance for changes made to GAAP and standardize the terminology used for insurance contracts in SSAP No. 92 and SSAP No. 102.
2023-19	Appendix D	ASU 2018-09, Codification Improvements *SAP Clarification* Effective immediately October 23, 2023	Adoption rejects ASU 2018-09 as not applicable for statutory accounting.
2023-20	Appendix D	ASU 2020-10, Codification Improvements *SAP Clarification* Effective immediately October 23, 2023	Adoption rejects ASU 2020-10 as not applicable for statutory accounting

Ref #	SSAP/ Appendix	Title	Summary
2023-21	SSAP No. 92 SSAP No. 102	Removal of Transition Guidance from SSAP No. 92 and SSAP No. 102 *SAP Clarification* Effective immediately October 23, 2023	Adoption includes revisions to *SSAP No. 92—Postretirement Benefits Other Than Pensions and SSAP No. 102—Pensions* to remove the initial transition guidance as the 10-year effective period of the guidance has expired.

Statistory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: Collateral for Loans

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:

This agenda item has been drafted to address an inconsistency regarding the collateral loan guidance in *SSAP No. 20—Nonadmitted Assets* and *SSAP No. 21—Other Admitted Assets* (See excerpts in Authoritative Literature). These two statements contain guidance about unsecured and secured loans which is complementary.

SSAP No. 20 details the **nonadmitted assets status** of unsecured loans and loans secured by assets which do not qualify as investments. SSAP No. 20 also references write off and impairment guidance in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* for impaired and uncollectible loans. SSAP No. 20 provides that improperly collateralized loans include loans that do not have underlying assets that would otherwise qualify as **admitted assets** and stated that such loans are nonadmitted assets because the collateral would be of questionable economic value if needed to fulfill policyholder obligations. SSAP No. 20 includes similar nonadmission guidance regarding loans on personal security, cash advances to officers or agents and for travel advances.

SSAP No. 21 details the requirements for collateral loans which **can qualify to be admitted assets.** It provides that the collateral loan must be secured by the pledge of an investment. A footnote further describes that investment collateral would be of a type that would be in Section 3 of *Appendix A-001—Investments of Reporting Entities*. **SSAP No. 21 also references the nonadmission guidance in SSAP No. 20 for** collateral loans secured by assets that do not qualify as investments. The referenced guidance in SSAP No. 20 notes that the underlying assets must qualify as admitted assets.

Both SSAP No. 20 and SSAP No. 21 identify the need for adequate collateral that qualifies as an invested asset. SSAP No. 20 is explicit that the investment asset collateral must qualify as an admitted asset. Recent discussions with state regulators have highlighted that although SSAP No. 21 references the guidance in SSAP No. 20, that it would be beneficial to also note the need for the collateral to qualify as an admitted invested asset. This agenda item recommends a clarification to SSAP No. 21 that the acceptable invested asset collateral, for collateral loans must qualify as admissible invested assets.

Existing Authoritative Literature:

***SSAP No. 20—Nonadmitted Assets* (Bolding added for emphasis):**

4. Consistent with paragraph 2, the following assets shall be nonadmitted:

   a. Deposits in Suspended Depositories—Amounts on deposit with suspended depositories may not be fully recoverable. Any amounts not reasonably expected to be recovered shall be written off in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. Amounts in excess of that written off shall be nonadmitted as they are not available to satisfy obligations to policyholders;

   b. **Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments**—In accordance with SSAP No. 5R, amounts determined

to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized **as there are no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Receivables arising from working capital finance programs designated by the Securities Valuation Office are subject to the guidance in *SSAP No. 105R—Working Capital Finance Investments*;**

c. **Loans on Personal Security, Cash Advances To, Or In The Hands Of, Officers Or Agents And Travel Advances**—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off typically are **unsecured and as such have no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Some of these items may also be considered prepaid expenses which, per *SSAP No. 29—Prepaid Expenses*, are nonadmitted;**

d. All "Non-Bankable" Checks—Examples of "non-bankable" checks are NSF (non-sufficient funds) checks, post-dated checks, or checks for which payment has been stopped. Although these checks may still maintain probable future benefits (and thus meet the definition of assets), at the date on which they are non-bankable they are not available for policyholder obligations and shall be nonadmitted until the uncertainty related to the probable future benefit is resolved and the checks are converted to available funds;

e. Trade Names And Other Intangible Assets[1]—These assets, by their nature, are not readily marketable and available to satisfy policyholder obligations and shall be nonadmitted;

f. Automobiles, Airplanes and Other Vehicles—Automobiles, airplanes and other vehicles meet the definition of assets established in SSAP No. 4. However, they are not readily available to satisfy policyholder obligations and as a result the undepreciated portion shall be nonadmitted. The accounting for these assets shall be consistent with the accounting for equipment provided in *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements* or for commercial airplane leveraged leases, refer to the guidance in *SSAP No. 22R–Leases*;

g. Company's Stock as Collateral for Loan—When a reporting entity lends money and accepts its own stock as collateral for the loan, it shall report the amount of the loan receivable and any related accrued interest on the loan as a nonadmitted asset. The asset is nonadmitted as the collateral could not be used to satisfy the obligation in the event of default.

Footnote 1: Defensible intangible assets are defined as an intangible asset acquired in a business combination or an asset acquisition that an entity does not intend to actively use but does intend to prevent others from using. These may also be referred to as a "locked-up asset" because while the asset is not being actively used, it is likely contributing to an increase in the value of other assets owned by the entity. These assets are not readily available to satisfy policyholder obligations and shall be nonadmitted.

© 2023 National Association of Insurance Commissioners

SSAP No. 21 – Revised—Other Admitted Assets **(Bolding added for emphasis)**

Collateral Loans

4. Collateral loans are unconditional obligations[1] for the payment of money secured by the pledge of an investment[2] and meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:

a. Loan Impairment—Determination as to the impairment of a collateral loan shall be based on current information and events. When it is considered probable that any portion of amounts due under the contractual terms of the loan will not be collected the loan is considered impaired. The impairment shall be measured based on the fair value of the collateral less estimated costs to obtain and sell the collateral. The difference between the net value of the collateral and the recorded asset shall be written off in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*;

b. **Nonadmitted Asset—In accordance with *SSAP No. 20—Nonadmitted Assets*, collateral loans secured by assets that do not qualify as investments shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset.**

Footnote 1: For purposes of determining a collateral loan in scope of this statement, a collateral loan does not include investments captured in scope of other statements. For example, *SSAP No. 26R—Bonds* includes securities (as defined in that statement) representing a creditor relationship whereby there is a fixed schedule for one or more future payments. Investments captured in SSAP No. 26R that are also secured with collateral shall continue to be captured within scope of SSAP No. 26R.

Footnote 2: Investment defined as those assets listed in Section 3 of *Appendix A-001—Investments of Reporting Entities*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): Not applicable.

Staff Review Completed by: Robin Marcotte – NAIC Staff – July 2022

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose the revisions to SSAP No. 21R, illustrated below, which clarify that the invested assets pledged as collateral for admitted collateral loans must qualify as admitted invested assets.

Proposed revisions to ***SSAP No. 21 – Revised—Other Admitted Assets***

Collateral Loans

4. Collateral loans are unconditional obligations[1] for the payment of money secured by the pledge of a~~n~~ qualifying investment[2] and meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:

a. Loan Impairment—Determination as to the impairment of a collateral loan shall be based on current information and events. When it is considered probable that any portion of amounts due under the contractual terms of the loan will not be collected the loan is considered impaired. The impairment shall be measured based on the fair value of the collateral less estimated costs to obtain and sell the collateral. The difference between the net value of the collateral and the recorded asset shall be written off in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*;

b. Nonadmitted Asset—In accordance with *SSAP No. 20—Nonadmitted Assets*, collateral loans secured by assets that do not qualify as investments which would otherwise be admitted shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset.

Footnote 1: For purposes of determining a collateral loan in scope of this statement, a collateral loan does not include investments captured in scope of other statements. For example, *SSAP No. 26R—Bonds* includes securities (as defined in that statement) representing a creditor relationship whereby there is a fixed schedule for one or more future payments. Investments captured in SSAP No. 26R that are also secured with collateral shall continue to be captured within scope of SSAP No. 26R.

Footnote 2: A qualifying ~~I~~investment defined as those assets listed in Section 3 of *Appendix A-001—Investments of Reporting Entities* which would ~~.~~if held by the insurer would qualify for admittance. For example, if the collateral would not qualify for admittance under SSAP No. 4 due to encumbrances or other third-party interests, then it does not meet the definition of "qualifying" and the collateral loan, or any portion thereof which is not adequately collateralized, is not permitted to be admitted.

Status:

On August 10, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 21R to clarify that invested assets pledged as collateral for admitted collateral loans must qualify as admitted invested assets.

On December 13, 2022, the Working Group re-exposed revisions to SSAP No. 21R to clarify that invested assets pledged as collateral for admitted collateral loans must qualify as admitted invested assets.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 21R which clarify that the invested assets pledged as collateral for admitted collateral loans must qualify as admitted invested assets. These revisions clarify that for specific investments, the comparison for admittance is between the net equity audited value of the pledged collateral to the collateral loan balance. In addition, a consistency revision to *SSAP No. 20—Nonadmitted Assets*, paragraph 4.b. was exposed.

On August 13, 2023, the Statutory Accounting Principles (E) Working Group re-exposed this agenda item to allow additional time to submit additional comments regarding the measurement of collateral pledged from SSAP No. 48 and SSAP No. 97 entities, as requested by industry.

March and August 2023 exposed revisions to *SSAP No. 20—Nonadmitted Assets:*

4. Consistent with paragraph 2, the following assets shall be nonadmitted:

b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Admitted Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets which would otherwise be admitted invested assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Receivables arising from working capital finance programs designated by the Securities Valuation Office are subject to the guidance in *SSAP No. 105R—Working Capital Finance Investments*;

March and August 2023 exposed revisions to *SSAP No. 21 – Revised—Other Admitted Assets* with new wording shown tracked and shaded below.

Collateral Loans

4. Collateral loans are unconditional obligations[1] for the payment of money secured by the pledge of an qualifying investment[2] and meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:

a. Loan Impairment—Determination as to the impairment of a collateral loan shall be based on current information and events. When it is considered probable that any portion of amounts due under the contractual terms of the loan will not be collected the loan is considered impaired. The impairment shall be measured based on the fair value of the collateral less estimated costs to obtain and sell the collateral. The difference between the net value of the collateral and the recorded asset shall be written off in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*;

b. Nonadmitted Asset—In accordance with *SSAP No. 20—Nonadmitted Assets*, collateral loans secured by assets that do not qualify as investments which would otherwise be admitted shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset. For qualifying investments which are pledged as collateral that would be in the scope of SSAP No. 48 or SSAP No. 97 if held directly by the reporting entity, such as joint ventures, partnerships and limited liability companies and investments that would qualify as SCAs if held directly, the proportionate audited equity valuation shall be used for the comparison for the adequacy of pledged collateral. If the collateral loan exceeds the audited equity valuation of these pledged investments, then the excess shall be nonadmitted.

Footnote 1: For purposes of determining a collateral loan in scope of this statement, a collateral loan does not include investments captured in scope of other statements. For example, *SSAP No. 26R—Bonds* includes securities (as defined in that statement) representing a creditor relationship whereby there is a fixed schedule for one or more future payments. Investments captured in SSAP No. 26R that are also secured with collateral shall continue to be captured within scope of SSAP No. 26R.

Footnote 2: A qualifying Iinvestment defined as those assets listed in Section 3 of *Appendix A-001—Investments of Reporting Entities* which would .if held by the insurer qualify for admittance. For example, if the collateral would not qualify for admittance under SSAP No. 4 due to encumbrances or other third-party interests, then it does not meet the definition of "qualifying" and the collateral loan, or any portion thereof which is not adequately collateralized, is not permitted to be admitted. In the cases where the collateral is an equity/unit investment in a joint venture, partnership, limited liability company, and or SCA is pledged as

collateral in a collateral loan, audited financial statements on a consistent annual basis are always required in accordance with SSAP No. 48 and or SSAP No. 97.

On October 23, 2023, the Statutory Accounting Principles (E) Working Group adopted the revisions to SSAP No. 20 and SSAP No. 21R illustrated below. The revisions to SSAP No. 20 are consistency revisions. The revisions to SSAP No. 21R provide more detail on qualifying collateral, require information to support fair value of collateral to be available on request, and provide audit transition guidance for collateral of pledged SSAP No. 48 and SSAP No. 97 entities. The shaded revisions to paragraph 4b and to paragraph 22 are different from the prior exposure.

Adopted revisions to *SSAP No. 20—Nonadmitted Assets* (unchanged from March 2023 exposure):

4. Consistent with paragraph 2, the following assets shall be nonadmitted:

b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Admitted Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets which would otherwise be admitted invested assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Receivables arising from working capital finance programs designated by the Securities Valuation Office are subject to the guidance in *SSAP No. 105R—Working Capital Finance Investments*;

Adopted revisions to ***SSAP No. 21 – Revised—Other Admitted Assets* for Collateral Loans** (new wording shown tracked and shaded)

Guidance previously exposed as shaded in paragraph 4.b. of SSAP No. 21 has been replaced with new shaded guidance. Paragraph 22 has new shaded guidance. Prior tracking was adopted by the Working Group discussion remains.

- Other tracking reflects the current exposure.

4. Collateral loans are unconditional obligations[1] for the payment of money secured by the pledge of ~~an~~ a qualifying investment[2] and meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement. The outstanding principal balance on the loan and any related accrued interest shall be recorded as an admitted asset subject to the following limitations:

a. Loan Impairment—Determination as to the impairment of a collateral loan shall be based on current information and events. When it is considered probable that any portion of amounts due under the contractual terms of the loan will not be collected the loan is considered impaired. The impairment shall be measured based on the fair value of the collateral less estimated costs to obtain and sell the collateral. The difference between the net value of the collateral and the recorded asset shall be written off in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*;

b. Nonadmitted Asset—In accordance with *SSAP No. 20—Nonadmitted Assets*, collateral loans secured by assets that do not qualify as investments which would otherwise be admitted shall be nonadmitted. Further, any amount of the loan outstanding which is in excess of the permitted relationship of fair value of the pledged investment to the collateral loan shall be treated as a nonadmitted asset. To support the admissibility of collateral loans, reporting entities shall maintain documentation sufficient to support the reasonableness of the fair value measurement of the underlying collateral, which shall be made available to the applicable domiciliary regulator and independent audit firm upon request.

Footnote 1: For purposes of determining a collateral loan in scope of this statement, a collateral loan does not include investments captured in scope of other statements. For example, *SSAP No. 26R—Bonds* includes securities (as defined in that statement) representing a creditor relationship whereby there is a fixed schedule for one or more future payments. Investments captured in SSAP No. 26R that are also secured with collateral shall continue to be captured within scope of SSAP No. 26R.

Footnote 2: A qualifying Iinvestment defined as those assets listed in Section 3 of *Appendix A-001—Investments of Reporting Entities* which would, if held by the insurer, qualify for admittance. For example, if the collateral would not qualify for admittance under SSAP No. 4 due to encumbrances or other third-party interests, then it does not meet the definition of "qualifying" and the collateral loan, or any portion thereof which is not adequately collateralized, is not permitted to be admitted. In the cases where the collateral is an equity/unit investment in a joint venture, partnership, limited liability company, and/or SCA is pledged as collateral in a collateral loan, audited financial statements on a consistent annual basis are always required in accordance with SSAP No. 48 and or SSAP No. 97.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The guidance for structured settlements when the reporting entity acquires the legal right to receive payments is effective December 31, 2018. The clarification regarding audits of qualifying collateral pledged for collateral loans in the footnote 2 to paragraph 4 requires applicable audits to be obtained for the 2023 reporting period in the subsequent year. In periods after year-end 2023, the audits of equity collateral pledged for collateral loans are required to be obtained for the reporting year in which it was pledged and annually thereafter. The annual audit lag shall be consistent from period to period.

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: In December 2016, FASB issued *ASU 2016-19, Technical Corrections and Improvements,* as part of a standing project on its agenda to address suggestions received from stakeholders on FASB Codifications and to make other incremental improvements to U.S. GAAP. This perpetual project facilitates FASB Codification updates for technical corrections, clarifications, and other minor improvements. The changes made by ASU 2016-19 included minor clarifications, corrections, addition of codification references, guidance relocations, and removal of redundant, outdated, or superseded guidance.

Existing Authoritative Literature:
The table starting on page 3 summarizes the updates in this ASU, as well as defines the recommended actions for statutory accounting, and will impact *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, *SSAP No. 92—Postretirement Benefits Other Than Pensions*, and *SSAP No. 102—Pensions* and *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None.

Convergence with International Financial Reporting Standards (IFRS):
None.

Staff Recommendation:
NAIC staff recommends that the Working Group expose revisions to adopt with modification ASU 2016-19, Technical Corrections and Improvements in SS*AP No. 5R—Liabilities, Contingencies and Impairments of Assets*, *SSAP No. 92—Postretirement Benefits Other Than Pensions*, and *SSAP No. 102—Pensions* and *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*.

Proposed Revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets

Joint and Several Liabilities

5. Joint and several liability arrangements for which the total obligation amount under the arrangement is fixed[1] at the reporting dates shall be measured and reported as the sum of:

a. The amount the reporting entity agreed to pay on the basis of the agreements among its co-obligors, and

b. Any additional amount the reporting entity expects to pay on behalf of its co-obligors. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be the additional amount included in the measurement of the obligation. If no amount within the range is a better estimate than any other amount, then the midpoint shall be used.

6. Although the total amount of the obligation of the entity and its co-obligors must be fixed at the reporting date to be within the scope of this statement, the amount that the reporting entity expects to pay on behalf of its co-obligors may be uncertain at the reporting date.

Proposed Revisions to SSAP No. 92—Postretirement Benefits Other Than Pensions

53. Plan assets are assets—usually stocks, bonds, and other investments (except certain insurance ~~contracts~~ annuities as noted in paragraph 57)—that have been segregated and restricted (usually in a trust) to be used for postretirement benefits. The amount of plan assets includes amounts contributed by the employer, and by plan participants for a contributory plan, and amounts earned from investing the contributions, less benefits, income taxes, and other expenses incurred. Plan assets ordinarily cannot be withdrawn by the employer except under certain circumstances when a plan has assets in excess of obligations and the employer has taken certain steps to satisfy existing obligations. Securities of the employer held by the plan are includable in plan assets provided they are transferable.

~~Insurance~~ Annuity Contracts

57. For purposes of this statement, an ~~insurance~~ annuity contract is defined as a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium; an ~~insurance~~ annuity contract is irrevocable and involves the transfer of significant risk from the employer (or the plan) to the insurance company. Benefits covered by ~~insurance~~ annuity contracts shall be excluded from the accumulated postretirement benefit obligation. ~~Insurance~~ Annuity contracts shall be excluded from plan assets.

58. Some ~~insurance~~ annuity contracts include participation rights (participating ~~insurance~~ annuity contracts) which provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser, the effect of which is to reduce the cost of the plan. If the participating ~~insurance~~ annuity contract causes the employer to remain subject to all or most of the risks and rewards associated with the benefit obligation covered or the assets transferred to the insurance company, that contract is not an ~~insurance~~ annuity contract for purposes of this statement, and the purchase of that contract does not constitute a settlement pursuant to paragraphs 83-88. Endorsement split-dollar life ~~insurance~~ annuity contracts do not settle a liability for a postretirement benefit obligation. For these contracts and other ~~insurance~~ annuity contracts that do not constitute settlement, reporting entities shall accrue a liability for the postretirement benefit arrangement in accordance with this statement.

[1] Examples of items within the scope of this guidance include debt arrangements, other contractual obligations, and settled judicial litigation and judicial rulings. Loss contingencies, guarantees, pension and other postretirement benefit obligations and taxes are excluded from this guidance and shall be accounted for under the statutory accounting provisions specific to those topics.

59. The purchase price of a participating ~~insurance~~ annuity contract ordinarily is higher than the price of an equivalent contract without a participation right. The difference is the cost of the participation right. The cost of the participation right shall be recognized at the date of purchase as a nonadmitted asset. In subsequent periods, the participation right shall be nonadmitted and measured at its fair value if the contract is such that fair value is reasonably estimable. Otherwise, the participation right shall be measured at its amortized cost (not in excess of its net realizable value), and the cost shall be amortized systematically over the expected dividend period under the contract.

60. To the extent that ~~insurance~~ annuity contracts are purchased during the period to cover postretirement benefits attributed to service in the current period (such as life insurance benefits), the cost of those benefits shall be the cost of purchasing the coverage under the contracts, except as provided in paragraph 59 for the cost of a participation right. If all the postretirement benefits attributed to service in the current period are covered by nonparticipating ~~insurance~~ annuity contracts purchased during that period, the cost of the contracts determines the service cost component of net postretirement benefit cost for that period. Benefits attributed to current service in excess of benefits provided by nonparticipating ~~insurance~~ annuity contracts purchased during the current period shall be accounted for according to the provisions of this statement applicable to plans not involving ~~insurance~~ annuity contracts.

61. Other contracts with insurance companies may not meet the definition of an ~~insurance~~ annuity contract because the insurance company does not unconditionally undertake a legal obligation to provide specified benefits to specified individuals. Those contracts shall be accounted for as investments and measured at fair value. If a contract has a determinable cash surrender value or conversion value, that is presumed to be its fair value. For some contracts, the best available estimate of fair value may be contract value.

62. The measurements of plan assets and benefit obligations required by this statement shall be as of the date of the employer's fiscal year-end statement of financial position. Even though the postretirement benefit measurements are required as of a particular date, all procedures are not required to be performed after that date. As with other financial statement items requiring estimates, much of the information can be prepared as of an earlier date and projected forward to account for ~~subsequent~~ events occurring between the most recent valuation date and the plan's year end (for example, employee service and benefit payments).

Accounting for Settlement of a Postretirement Benefit Obligation

83. For purposes of this statement, a settlement is defined as a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a postretirement benefit obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement. Examples of transactions that constitute a settlement include making lump-sum cash payments to plan participants in exchange for their rights to receive specified postretirement benefits and purchasing long-term nonparticipating ~~insurance~~annuity contracts for the accumulated postretirement benefit obligation for some or all of the plan participants.

87. If the purchase of a participating ~~insurance~~annuity contract constitutes a settlement, the maximum gain (but not the maximum loss) shall be reduced by the cost of the participation right before determining the amount to be recognized in income. As detailed in paragraph 58, the purchase of an endorsement split-dollar life ~~insurance~~annuity contract does not settle a liability for a postretirement benefit obligation.

Accounting for a Plan Curtailment

93. A settlement and a curtailment may occur separately or together. If benefits expected to be paid in future periods are eliminated for some plan participants (for example, because a significant portion of the work force is dismissed or a plant is closed) but the plan remains in existence and continues to pay benefits, to invest assets, and to receive contributions, a curtailment has occurred but not a settlement. If an employer purchases nonparticipating

~~insurance~~annuity contracts for the accumulated postretirement benefit obligation and continues to provide defined benefits for future service, either in the same plan or in a successor plan, a settlement has occurred but not a curtailment. If a plan termination occurs (that is, the obligation is settled and the plan ceases to exist) and the plan is not replaced by a successor defined benefit plan, both a settlement and a curtailment have occurred (whether or not the employees continue to work for the employer).

Proposed Revisions to SSAP No. 102—Pensions

Measurement of Plan Assets

45. The measurements of plan assets and benefit obligations shall be as of the date of the employer's fiscal year-end statement of financial position. Requiring that the pension measurements be as of a particular date is not intended to require that all procedures be performed after that date. As with other financial statement items requiring estimates, much of the information can be prepared as of an earlier date and projected forward to account for ~~subsequent~~ events occurring between the most recent valuation date and the plan's year end (for example, employee service and benefit payments). Unless a business entity remeasures both its plan assets and benefit obligations during the fiscal year, the funded status it reports in its interim-period statement of financial position shall be the same asset or liability recognized in the previous year-end statement of financial position adjusted for (1) subsequent accruals of net periodic pension cost that exclude the amortization of amounts previously recognized in other unassigned funds (surplus) (for example, subsequent accruals of service cost, interest cost, and return on plan assets) and (2) contributions to a funded plan, or benefit payments. Sometimes, a business entity remeasures both plan assets and benefit obligations during the fiscal year. That is the case, for example, when a significant event such as a plan amendment, settlement, or curtailment occurs that calls for a remeasurement. Upon remeasurement, a business entity shall adjust its statement of financial position in a subsequent interim period to reflect the overfunded or underfunded status of the plan consistent with that measurement date.

Annuity Contracts

50. An annuity contract is a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium. An annuity contract is irrevocable and involves the transfer of significant risk from the employer to the insurance company. Some annuity contracts ~~(participating annuity contracts)~~include participation rights (participating annuity contract) which provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser. If the substance of a participating annuity contract is such that the employer remains subject to all or most of the risks and rewards associated with the benefit obligation covered and the assets transferred to the insurance company, that contract is not an annuity contract for purposes of this statement.

Proposed Revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

SCOPE OF STATEMENT

1. Transfers of financial assets take many forms. Accounting for transfers in which the transferor has no continuing involvement with the transferred financial assets or with the transferee are generally straightforward. However, transfers of financial assets often occur in which the transferor has some continuing involvement either with the assets transferred or with the transferee. Examples of continuing involvement include, but are not limited to, servicing arrangements, recourse or guarantee arrangements, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into contemporaneously with, or in contemplation of the transfer, arrangements to provide financial support, pledges of collateral, and the transferor's beneficial interests in the transferred financial assets. Transfers of financial assets with continuing involvement raise issues about the circumstances under which the transfers should be considered as sales of all or part of the assets or as secured borrowings. An objective in accounting for transfers of financial assets is for each

reporting entity that is a party to the transaction to recognize only assets it controls and liabilities it has incurred, to derecognize assets only when control has been surrendered, and to derecognize liabilities only when they have been extinguished. Sales and other transfers may frequently result in a disaggregation of financial assets and liabilities into components, which become separate assets and liabilities. The guidance in this statement also applies to transactions in which servicing assets are transferred with loans retained by the transferor.

Disclosures

24. Disclosures required by this statement may be reported in the aggregate for similar transfers if separate reporting of each transfer would not provide more useful information to financial statement users. A transferor shall disclose how similar transfers are aggregated. A transferor shall distinguish transfers that are accounted for as sales from transfers that are accounted for as secured borrowings. If specific disclosures are required for a particular form of a transferor's continuing involvement by other SSAPs, the transferor shall provide the information required in (a) through (c) with a cross-reference to the separate notes to financial statements so a financial statement user can understand the risks retained in the transfer. In determining whether to aggregate the disclosures for multiple transfers, the reporting entity shall consider quantitative and qualitative information about the characteristics of the transferred financial assets. For example, consideration should be given, but not limited, to the following:

a. The nature of the transferor's continuing involvement.

b. The types of financial assets transferred.

c. Risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the change in the transferor's risk profile as a result of the transfer.

Staff Review Completed by:
NAIC Staff – William Oden, July 2023

Status:
On August 13, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification and exposed revisions to adopt, with modification, *ASU 2016-19, Technical Corrections and Improvements* for statutory accounting in SSAP Nos. 5R, 92, 102, and 103R as illustrated above.

On October 23, 2023, the Statutory Accounting Principles (E) Working Group adopted with modification, ASU 2016-19, as illustrated above, to SSAP No. 5R, SSAP No. 92, SSAP No. 102, and SSAP No. 103R.

https://naiconline.sharepoint.com/teams/FRSStatutoryAccounting/National Meetings/A. National Meeting Materials/2023/10-23-23/Adoptions/23-18 - ASU 2016-19 - Technical Corrections and Improvements.docx

The last column lists the status of the GAAP source literature for statutory accounting and the recommended action.

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
Balance Sheet—Offsetting	210-20	Amendment aligns the wording in the Example with paragraph 815-210-50-4D by replacing the term underlying risk with the term type of contract.	55-22	Statutory guidance does not include amended example problem. **This update is not applicable – no action required.**
Risks and Uncertainties—Overall	275-10	Amendment simplifies the Codification by removing the explanation of reasonably possible in paragraph 275-10-50-8 and replacing it with a link to the Master Glossary term reasonably possible. There are consequential amendments for paragraphs 275-10-50-6 and 275-10-55-9.	50-8	Master glossary is not utilized by the Accounting Practices and Procedures (AP&P) Manual and the definition for 'reasonably possible' is properly included within the manual. **This update is not applicable – no action required.**
Troubled Debt Restructurings by Creditors & Debt—Troubled Debt Restructurings by Debtors	310-40 470-60	This amendment removes the definition from the Master Glossary and includes the definition in Scope and Scope Exceptions paragraphs 310-40-15-4A and 470-60-15-4A. Consequential amendments also remove links to the Master Glossary term from other Subtopics that are not related to troubled debt restructuring.	15-4A 15-4A	Master glossary is not utilized by the AP&P manual and the definition of debt is already included within the manual. **This update is not applicable – no action required.**
Intangibles—Goodwill and Other—Goodwill	350-20	Paragraph 350-20-45-3 provides guidance on the presentation of a goodwill impairment loss that is associated with discontinued operations. This amendment adds a reference to Subtopic 205-20,	45-3	Statutory accounting does not provide separate guidance on goodwill impairments from discontinued operations, as such adding a guidance reference between *SSAP No. 24–*

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		Presentation of Financial Statements—Discontinued Operations, in that paragraph.		*Discontinued Operations and Extraordinary Items* and *SSAP No. 68–Business Combinations and Goodwill* is not considered necessary. **This update is not applicable – no action required.**
Intangibles—Goodwill and Other—Internal-Use Software	350-40	This amendment addresses stakeholder concern that the accounting for software licenses acquired for internal use following the adoption of the amendments in ASU 2015-05 is not clear because paragraph 350-40-25-16 was superseded, and no new guidance was added in its place. The new paragraphs provide transition guidance and clarify the Board's intent that an entity should apply the existing recognition and measurement requirements in GAAP for acquired intangible assets to a hosting arrangement that includes a license to software (as described in paragraphs 350-40-15-1 through 15-4C).	25-17 65-2	*SSAP No. 16R–Electronic Data Processing Equipment and Software* paragraph 12b already includes guidance for acquisitions which include both hosting and internal-use software components. **This update is not applicable – no action required.**
Plant, and Equipment—Real Estate Sales	360-20	When EITF Issue 87-9 was codified in Subtopic 360-20, the final paragraph in that EITF Issue that contained the reversal of the initial position of the Task Force was not codified. This amendment corrects the Accounting Standards Codification to reflect the	55-3	*SSAP No. 40R–Real Estate Investments* directs readers to apply FASB guidance for real estate sales. As such, no changes are required to update the AP&P Manual for this change.

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		final conclusions of the EITF on that Issue.		**This update is not applicable – no action required.**
Liabilities—Obligations Resulting from Joint and Several Liability Arrangements	405-40	This amendment adds an explanatory paragraph after paragraph 405-40-15- 1 to clarify that for the total amount of an obligation under a joint and several liability arrangement to be considered fixed at the reporting date, the amount that must be fixed on the obligation resulting from the joint and several liability arrangement is not the amount that is the entity's portion of the obligation, but is the obligation in its entirety.	15-2	Clarifying amendment to joint and several liabilities is considered applicable for statutory accounting. **Staff recommends adoption of the amendment with modification to SSAP No. 5R, as detailed above.**
Guarantees—Overall	460-10	This amendment clarifies the wording in paragraph 460-10-50-1 so that its scope also applies to paragraph 460-10-50-4. The unclear wording along with the structure of the heading levels in paragraphs 460-10-50-1 through 50-4 could be interpreted as if the disclosure guidance in paragraph 460-10-50-1 only applies to paragraphs 460-10-50-2 through 50-3 and those guarantees outside the scope of paragraph 460-10-50-4.	50-1	Clarification to *SSAP No. 5R* is not applicable as the changes are specific to FASB paragraph structures. **This update is not applicable – no action required.**
Equity—Overall	505-10 505-30 505-50 505-60	This amendment simplifies the guidance by removing the terms public and nonpublic from these paragraphs and stating that the guidance applies to all entities that meet the stated characteristics.	15-1 15-1 15-1 15-1	Statutory accounting does not distinguish between public and nonpublic companies. **This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
Compensation—Retirement Benefits—Defined Benefit Plans—Pension & Compensation—Retirement Benefits—Defined Benefit Plans—Other Postretirement & Financial Services—Insurance—Policyholder Dividends & Financial Services—Insurance—Business Combinations	715-30 715-60 944-50 944-805	These amendments simplify the codifications by using consistent terminology related to participating insurance. This amendment uses the term participating insurance throughout the related guidance and removes the duplicate terms participating insurance contract, participating insurance contracts, and participating contract from the Master Glossary.	25-7 35-53 35-59 35-79 35-88 55-153 35-115 35-156 25-2 05-10	Staff noted that *SSAP No. 102* uses the term 'annuity contract' instead of 'insurance contract' as annuity contracts are codified within model laws. Staff recommends that SSAP 92 be updated to also utilize the terminology "annuity contracts". **Staff recommend adoption of this amendment with modification to SSAP No. 92, as detailed above. Staff also recommend some minor editorial changes to SSAP No. 102, detailed above.**
Compensation—Retirement Benefits—Defined Benefit Plans—Other Postretirement	715-60	This amendment removes the reference to securitization of trade receivables or loan receivables in the Master Glossary. When the creditor's (transferor's) transfer satisfies the requirements for sale accounting, the creditor would have a new asset and its beneficial interests in the receivables would meet the definition of a debt security in accordance with paragraph 860-20-35-2.	35-107 35-112	Master glossary is not utilized by the Accounting Practices and Procedures (AP&P) Manual. **This update is not applicable – no action required.**
Business Combinations—Overall	805-10	This amendment replaces the reference to the guidance in Section 958-810- 25 on not-for-profit entities—consolidation—recognition in	15-4	Statutory accounting does not have separate guidance for nonprofit and for-profit companies. Additionally, business combination guidance

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		paragraph 805-10-15-4(e) to the more specific reference of paragraph 958-810-25-4. Paragraph 958-810-25-4 describes control by other means and contains criteria for consolidation. In addition, the phrase as permitted or required by is replaced by the word described in paragraph 805-10-15-4(e) to be less confusing to the users of the Accounting Standards Codification.		related to Variable Interest Entities has not yet been considered for statutory accounting purposes. **This update is not applicable – no action required.**
Derivatives and Hedging—Embedded Derivatives	815-15	This amendment simplifies the wording in paragraph 815-15-55-216 and adds a reference to Subtopic 815-10, Derivatives and Hedging—Overall, which contains guidance on the normal purchases and normal sales exception. The added reference better enables users to find this guidance.	55-216	The amended implementation example is not included in statutory accounting guidance. **This update is not applicable – no action required.**
Derivatives and Hedging—Hedging—General	815-20	This amendment removes the words "all of" from. When this guidance was codified by FASB Statement No. 133 Accounting for Derivative Instruments and Hedging Activities, the words "all of" were added, which appears to make it a list of requirements instead of circumstances to consider.	55-24 55-44 55-44A	The amended implementation guidance was not adopted for statutory accounting purposes. **This update is not applicable – no action required.**
Fair Value Measurement—Overall	820-10	This amendment changes the term 'valuation technique' to 'valuation approach' for clarity. The Master Glossary also defines each of the approaches as a technique, which is misleading. Topic 820 prescribes that,	35-16BB 35-24A 50-2 55-35 55-36 55-37	Terminology correction is not necessary as the AP&P Manual already includes the delineation between approaches and techniques within *SSAP 100R–Fair Value*.

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		at all times, the more detailed technique should be disclosed rather than the overall approach.	55-38 65-11	**This update is not applicable – no action required.**
Fair Value Measurement—Overall & Financial Services—Insurance—Insurance Activities & Financial Services—Insurance—Claim Costs and Liabilities for Future Policy Benefits & Financial Services Insurance—Balance Sheet & Financial Services—Insurance—Receivables & Financial Services—Insurance—Revenue Recognition & Financial Services—Insurance—Business Combinations &	825-10 944-20 944-40 944-210 944-310 944-605 944-805 944-825	This amendment replaces 'reinsurance receivable' with 'reinsurance recoverable'. This change resolves inconsistencies within the Accounting Standards Codification where in some instances the term reinsurance receivable is used, while in other instances the term reinsurance recoverable is used.	825-10-50-22 944-20-50-5 944-40-25-34 50-3 50-4C 50-9 55-6 944-210-55-1 944-310-05-1 05-2 25-2 35-4 45-5 45-6 50-2 944-605-25-22 25-23 35-12 55-1	Terminology correction is not necessary as the AP&P Manual already uses the terminology 'reinsurance recoverable'. All other miscellaneous changes made by the amendment were made to sections not adopted for statutory accounting purposes. **This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
Financial Services—Insurance—Financial Instruments			55-11 55-12 55-14 55-15 944-805-30-1 944-825-50-1 50-1B	
Financial Instruments—Registration Payment Arrangements	825-20	Registration payment arrangement is not a Master Glossary term, but it is defined in paragraph 825-20-15-3 and is referenced in multiple places within the Accounting Standards Codification. To avoid any confusion and maintain consistency with the definition of registration payment arrangement, this amendment defines the term in the Master Glossary and supersedes paragraph 825-20-15-3.	15-2 15-3	Master glossary is not utilized by the Accounting Practices and Procedures (AP&P) Manual. **This update is not applicable – no action required.**
Reorganizations—Income Taxes	825-740	This amendment makes the wording in paragraph 852-740-45-3 consistent with that in paragraph 852-740-55-2. The term 'ordinarily' used in FASB *Statement No. 109, Accounting for Income Taxes*, was related to one exception for enterprises that had previously adopted FASB Statement No. 96, Accounting for Income Taxes. That exception is no longer relevant,	45-3	The amended wording change affects guidance which was not adopted for statutory accounting purposes. **This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		and, therefore, the term ordinarily should be removed.		
Transfers and Servicing—Sales of Financial Assets	860-20	This amendment adds language from paragraph 16D of FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, to clarify the disclosures that are required when other Topics require disclosures about the transferor's continuing involvement.	50-2A 55-41	**Staff recommends adoption with modification to SSAP No. 103R, as detailed above.**
Transfers and Servicing—Servicing Assets and Liabilities	860-50	This amendment includes guidance from paragraph .08(h) of *AICPA Statement of Position (SOP) 01-6, Accounting by Certain Entities (Including Entities with Trade Receivables) That Lend to or Finance the Activities of Others*, on the allocation of the carrying amount of loans that have been retained, which was omitted from the Accounting Standards Codification. This amendment also includes transactions in which a transferor transfers servicing rights and retains the loans to the scope in paragraph 860-50-15-3.	15-3 40-6	**Staff recommends adoption with modification to SSAP No. 103R, as detailed above.**
Activities—Oil and Gas—Inventory	932-330	This amendment clarifies that energy trading contracts are not derivatives in accordance with the guidance in Topic 815. The modifying portion of the original sentence did not have the correct placement.	35-1	**This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
Financial Services—Broker and Dealers—Other Assets and Deferred Costs	940-340	This amendment removes the term 'ABC Agreement' from both the Master Glossary and within the Accounting Standards Codification as the New York Stock Exchange (NYSE) no longer sells seats on the exchange.	25-2	Terminology correction is not necessary as the AP&P Manual does not utilize the Master Glossary or provide reference to 'ABC Agreements' **This update is not applicable – no action required.**
Financial Services—Insurance—Separate Accounts	944-80	Separate accounts with guaranteed investment returns do not qualify for separate account accounting because they do not pass all investment performance on to the policyholder. Therefore, they must be included in the general account of the company and accounted for like other similar assets held by the company as prescribed in paragraph 944-80-25-4. This amendment corrects the reference in paragraph 944-80-35-1 to reflect that change.	35-1	**This update is not applicable – no action required.**
Financial Services—Investment Companies—Presentation of Financial Statements	946-205	This amendment adds a reference SEC Regulation S-X, Part 210, Rule 12-12 in the last sentence to footnote (a) in paragraph 946-205-45-1.	45-11	SEC guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**
Financial Services—Investment Companies—Balance Sheet	946-210	The amendment provides technical corrections to reflect changes made when investment companies guidance was codified from the AICPA Audit and Accounting Guide, Investment Companies (2008).	50-7 50-9 55-1	Investment company guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
Health Care Entities—Income Statement	954-225	This amendment simplifies the Accounting Standards Codification by removing incomplete measurement guidance from paragraph 954-225-45-2 in the Other Presentation Matters Section and providing a reference to the complete measurement guidance. Additionally, amendment also includes a cross-reference to paragraph 220-10-45-10A, which lists some examples of items that are required to be reported in or reclassified from other comprehensive income.	45-2 45-7	Amended GAAP guidance was later superseded by ASU 2017-19, which has already been addressed by the Working Group. **This update is not applicable – no action required.**
Health Care Entities—Consolidation	954-810	To aid the user in locating presentation and disclosure requirements for noncontrolling interests, this amendment adds FASB references to Sections 958-810-45 and 958-810-50 for other presentation matters and disclosure.	45-3B	**This update is not applicable – no action required.**
Not-for-Profit Entities—Presentation of Financial Statements	958-205	ASU 2016-14, Not-for-Profit Entities (Topic 958): Presentation of Financial Statements of Not-for-Profit Entities, added incorrectly the words “that contain no purpose restrictions” to paragraph 958-205-50-1B(e)(3). This amendment removes this phrase.	50-1B	**This update is not applicable – no action required.**
Not-for-Profit Entities—Revenue Recognition	958-605	This amendment adds language clarifying the scope of Subtopic 958-605 and provides a link to the Master Glossary term affiliate and corrects a minor wording error in a table.	15-13 55-8	**This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
Not-for-Profit Entities—Consolidation	958-810	This amendment adds disclosure and presentation clarifications for Not-For-Profit Entities.	45-1	**This update is not applicable – no action required.**
Plan Accounting—Health and Welfare Benefit Plans—Plan Benefit Obligations	965-30	This amendment clarifies that the subsequent events to be addressed in the rollforward of the benefits obligation valuation are those occurring between the most recent valuation date and the plan's year-end.	35-6	**Staff recommends adopting the clarification for *SSAP No. 92* and *SSAP No. 102* as detailed above.**

Issue: ASU 2018-09, Codification Improvements

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: In July 2018, FASB issued *ASU 2018-09, Codification Improvements,* as part of a standing project on its agenda to address suggestions received from stakeholders on FASB Codifications and to make other incremental improvements to U.S. GAAP. This perpetual project facilitates FASB Codification updates for technical corrections, clarifications, and other minor improvements. The changes made by ASU 2018-09 included minor clarifications, corrections, addition of codification references, guidance relocations, and removal of redundant, outdated, or superseded guidance.

Existing Authoritative Literature:
The table starting on page two summarizes the updates in this ASU, as well as defines the recommended actions for statutory accounting.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None.

Convergence with International Financial Reporting Standards (IFRS):
None.

Staff Recommendation:
NAIC staff recommends that the Working Group expose revisions to reject *ASU 2018-09 Codification Improvements* for statutory accounting on Appendix D as not applicable to statutory accounting.

Staff Review Completed by:
NAIC Staff – William Oden, July 2023

Status:
On August 13, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification and exposed revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject *ASU 2018-09 Codification Improvements* as not applicable for statutory accounting.

On October 23, 2023, the Statutory Accounting Principles (E) Working Group adopted the exposed revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject ASU 2018-09 as not applicable to statutory accounting.

The last column lists the status of the GAAP source literature for statutory accounting and the recommended action.

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
Reporting Comprehensive Income—Overall	220-10	This amendment clarifies the guidance in paragraph 220-10-45-10B by removing the generic phrase taxes not payable in cash, adds guidance that is specific to certain quasi reorganizations, and adds references to applicable guidance for each example that does not qualify as an item of comprehensive income.	45-10B	**This update is not applicable – no action required.**
Earnings Per Share—Overall	260-10	Correct reference to Earnings per Share example to specifically note that Example 6 illustrates the two-class method. Additional wording clarifications are made within Example 6 as well.	45-60B 55-62	**This update is not applicable – no action required.**
Investments—Debt and Equity Securities—Overall	320-10	These amendments simplify the Codification by removing redundant disclosure requirements in paragraphs 320-10-50-1A and 320-10-50-13. These amendments supersede paragraph 320-10-50-13 and add clarification to the disclosure requirements in paragraph 320-10-50-1A for summarized financial information.	50-1A 50-13	Summarized financial information in relation to debt and equity securities are not addressed within statutory accounting. **This update is not applicable – no action required.**
Debt—Modifications and Extinguishments	470-50	The amendment adds guidance to clarify that when the fair value option has been elected on debt that is extinguished, the net carrying amount	40-2A	*FAS 159, The Fair Value Option for Financial Assets and Financial Liabilities—Including an Amendment of FASB Statement No.*

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		of the extinguished debt equals its fair value at the reacquisition date. Additionally, the cumulative amounts of gains or losses in other comprehensive income that resulted from changes in instrument-specific credit risk must be included in the measurement of gain or loss presented in net income for the extinguished debt.		*115* was rejected for statutory accounting purposes. As such no changes are recommended. **This update is not applicable – no action required.**
Distinguishing Liabilities from Equity—Overall	480-10	Eliminates guidance conflict between codification paragraph 25-15 and paragraphs 55-55 and 55-59.	55-55 55-59	*SSAP No. 104R–Share-Based Payments* does not contain the amended language. As such no changes are recommended. **This update is not applicable – no action required.**
Compensation—Stock Compensation—Income Taxes	718-740	The amendment clarifies that an entity should recognize excess tax benefits (or tax deficiencies) in the period when the amount of the tax deduction is determined, which typically is when an award is exercised, in the case of share options, or vests, in the case of nonvested stock awards.	35-2	The relevant language was also included in ASU 2018-07 and was previously adopted with Agenda Item 2018-35. As such, no changes to the relevant SSAPs are required, **This update is not applicable – no action required.**
Other Expenses—Advertising Costs & Financial Services—Insurance—Acquisition Costs	720-35 944-30	The objective of this amendment is to align the scope of the guidance in 720-35 with the source guidance in SOP 93-7 by removing the references in the guidance and heading to 'direct response advertising'.	15-2 15-3 25-1A 25-1A 25-1DD	Direct-response advertising and related advertising specific guidance are not addressed within statutory accounting. **This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		The amendment also relocates and minorly amends the guidance in paragraph 720-35-15-5 about direct-response advertising costs to paragraph 944-30-25-1DD. Direct response advertising costs can only be capitalized for insurance contracts within the scope of Topic 944 in certain circumstances.		
Income Taxes	740-10	This amendment makes corrections to Income Tax guidance on intra-entity transfers of inventory as the guidance in paragraph 25-55 contradicts paragraph 25-3(e). Additionally, a reference to intra-entity transfers was removed from example 26 as it describes a null set of transactions.	25-53 25-54 25-55 55-168 55-203 65-7	The ramification of intra-entity transfers of inventory on income tax is not addressed in statutory accounting. **This update is not applicable – no action required.**
Business Combinations—Income Taxes	805-740	The amendment updates paragraph 25-13 that provides three methods for allocating the consolidated tax provision to an acquired entity after acquisition as it is no longer consistent with the rest of Topic 740 after the issuance of EITF Issue No. 86-9.	25-13	The update is not applicable as GAAP guidance for business combinations has not yet been addressed for statutory accounting at this time, as such no changes are recommended. **This update is not applicable – no action required.**
Derivatives and Hedging—Overall	815-10	The amendment supersedes paragraph 45-4 and amends paragraph 45-5, with a link to transition paragraph 105-10-65-5. This change was made as the guidance in paragraph 45-4 is potentially misleading because it can	45-4 45-5	*SSAP No. 86–Derivatives* does not include the superseded guidance. As such, no changes are recommended.

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		be interpreted as conflicting with the guidance in paragraph 45-5 and because it can be interpreted to mean that derivatives may only be offset when all four of the conditions in paragraph 210-20-45-1 are met.		**This update is not applicable – no action required.**
Derivatives and Hedging—Embedded Derivatives	815-15	The amendment clarifies a generic subtopic reference by replacing it with the actual FASB codification.	25-1	**This update is not applicable – no action required.**
Fair Value Measurement—Overall	820-10	The amendment clarifies items (a) and (b) with FASB codification 820-10-35-16D were not intended to substantively change how GAAP is applied. However, it is possible that they may result in a change to existing practice for some entities; therefore, transition guidance has been provided.	35-16D	As the original guidance being clarified originates from *ASU 2011-04–Fair Value Measurement*, which has not yet been addressed for statutory accounting, no changes are recommended. **This update is not applicable – no action required.**
Fair Value Measurement—Overall	820-10	When initially drafted ASU 2011-04 was intended to exclude nonfinancial derivatives from the portfolio exception. The amendments revise paragraphs 820-10-35-18D through 35-18F and 820-10-35- 18H through 35-18L to include not only financial assets and financial liabilities, but also portfolios of financial instruments and nonfinancial instruments accounted for as derivatives in accordance with Topic 815.	35-18D thru 18L	As the original guidance being clarified originates from ASU 2011-04, which has not yet been addressed for statutory accounting, no changes are recommended. **This update is not applicable – no action required.**
Fair Value Measurement—Overall	820-10	This amendment replaces an indefinite deferral in transition paragraph 820-	50-2 65-9	As the original guidance being clarified originates from ASU

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		10-65-9 from *ASU 2013-09, Fair Value Measurement,* with a disclosure exemption in paragraph 820-10-50-2(bbb). Amendment also eliminates transition guidance in paragraph 65-9.		2013-09, which has not yet been addressed for statutory accounting, no changes are recommended. **This update is not applicable – no action required.**
Fair Value Measurement—Overall	820-10	This amendment changes the term 'build-up methodology' to build-up approach' for clarity. As indicated in the guidance, a build-up methodology is a subset of a valuation technique, whereas the build-up approach is a method of applying the discount rate adjustment technique.	55-11 55-33	Neither the build-up approach nor build-up method are contained addressed by statutory accounting. No changes are recommended. **This update is not applicable – no action required.**
Fair Value Measurement—Overall	820-10	Due to an oversight, when *ASU 2016-01–Financial Instruments* amended Topic 825, a corresponding amendment was not made to Topic 820 superseding the requirement to disclose information on the methods and assumptions used to measure fair value for those financial Instruments. This amendment conforms the requirements in Topic 820 with the amendments made to Topic 825 so that the disclosure information is not required, which is consistent with the Board's intent in the amendments in Update 2016-01.	50-2E 65-4	The amendment corrects changes made by *ASU 2016-01–Financial Instruments*, which was rejected for statutory accounting. **This update is not applicable – no action required.**
Fair Value Measurement—Overall	820-10	This amendment corrects the dates used in Examples 9 to properly	55-100	The amended example is not included in statutory accounting

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		conform to the guidance provided in 820-10-50-2.		guidance. No changes are recommended. **This update is not applicable – no action required.**
Financial Services—Depository and Lending—Balance Sheet	942-210	This amendment simplifies the Codification by removing the paraphrased guidance from paragraph 942-210-45-3 so that the industry Topic guidance refers to the full guidance in Section 210-20-45.	45-3	Financial Services guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**
Financial Services—Depository and Lending—Equity	942-505	This amendment clarifies the requirements for disclosing information on regulatory capital for depository institutions. The amendment is necessary because of recent changes in the measures of regulatory capital in Basel III, with which depository institutions must comply (for example, the newly defined measure of Common Equity Tier 1).	50-1	Financial Services guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**
Financial Services—Insurance—Acquisition Costs	944-30	This amendment restores guidance about an accounting policy election to paragraph 944-30-25-1A that was originally included in the transition guidance in ASU 2010-26. This election was automatically removed with the transition guidance as the effective date had been met for all entities, however it was noted that this election should be maintained in the	25-1A	Financial Services guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**

Topic	Codification	Abbreviated Summary of Change	Related Paragraphs	SAP Status/Recommendation
		guidance for historical purposes to ensure the appropriateness of the election was not called into question at a future date.		
Financial Services—Insurance—Receivables & Property, Plant, and Equipment	944-310 944-360	This amendment includes a correct to these paragraphs as the original references should have been superseded with the adoption of ASU 2016-01and replaced with references to transition guidance.	45-1 45-2 50-1 45-3 45-4 50-1	Financial Services guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**
Financial Services—Insurance—Property, Plant, and Equipment	944-360	This amendment adds references to the applicable guidance for determining the subsequent measurement of real estate acquired by insurance companies in settling certain claims.	35-1	Financial Services guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**
Not-for-Profit Entities—Other Expenses	958-720	This amendment improves the description of the items in paragraph 958-720-45-15 that would be considered gains and losses for a not-for-profit entity. This amendment also changes the term for-profit entity to the term business entity in Subtopic 958-720.	45-15	Not-for-profit guidance is not applicable for statutory accounting. **This update is not applicable – no action required.**
Plan Accounting—Defined Contribution Pension Plans—Presentation of Financial Statements & Property, Plant, and Equipment	962-205 962-360	To make the Topic structure consistent with related Topics and the guidance easier to find, this amendment moves the property, plant, and equipment guidance in 962-205 to Subtopic 962-360.	45-5 35-1	**This update is not applicable – no action required.**

© 2023 National Association of Insurance Commissioners

Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**	**SAP Status/Recommendation**
Plan Accounting—Defined Contribution Pension Plans—Investments—Other	962-325	This amendment removes the stable value common collective trust fund from the illustrative example in paragraph 962-325-55-17 to avoid the interpretation that such an investment would not have a readily determinable fair value and should always use the net asset value per share practical expedient.	55-17	The amended example is not included in *SSAP No. 102–Pensions*. **This update is not applicable – no action required.**

New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: In October 2020, FASB issued *ASU 2020-10 Codification Improvements,* that improve the consistency of the Codification by ensuring that all guidance that requires or provides an option for an entity to provide information in the notes to financial statements is codified in the Disclosure Section of the Codification. The changes made by the ASU either move disclosure guidance to the Disclosure Section of the codification or add codification references to direct readers to the disclosure section, and this ASU does not provide any relevant new guidance.

Existing Authoritative Literature:
All changes detailed in ASU 2020-10 were either editorial changes that have no bearing on the presentation of the *Accounting Practices and Procedures Manual* or minor wording changes to guidance that has not been adopted for statutory accounting.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None.

Convergence with International Financial Reporting Standards (IFRS):
None.

Staff Recommendation:
NAIC staff recommends that the Working Group expose revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject *ASU 2020-10, Codification Improvements* as not applicable to statutory accounting.

Staff Review Completed by:
NAIC Staff – William Oden, July 2023

Status:
On August 13, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification and exposed revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject *ASU 2020-10, Codification Improvements* as not applicable for statutory accounting.

On October 23, 2023, the Statutory Accounting Principles (E) Working Group adopted the revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject ASU 2020-10 as not applicable to statutory accounting.

Issue: Removal of Transition Guidance from SSAP No. 92 and SSAP No. 102

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
On December 18, 2012, the Statutory Accounting Principles (E) Working Group adopted *SSAP No. 92—Postretirement Benefits Other Than Pensions* and *SSAP No. 102—Pensions*, which replaced *SSAP No. 14—Postretirement Benefits Other Than Pensions* and *SSAP No. 89—Pensions*. The adopted SSAPs included transition guidance that expired after 10 years. This agenda item intends to remove the unneeded transition guidance from SSAP No. 92 and SSAP No. 102.

Existing Authoritative Literature:
The current guidance is in *SSAP No. 92—Postretirement Benefits Other Than Pensions* and *SSAP No. 102—Pensions*, and the transition guidance recommended for deletion is included in the Staff Recommendation section.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS):

Staff Recommendation:
NAIC staff recommends that the Working Group expose revisions to *SSAP No. 92—Postretirement Benefits Other Than Pensions* and *SSAP No. 102—Pensions* to remove the transition guidance that was included in the initial adoption of SSAP No. 92 and SSAP No. 102, as it is past the ten-year effective period for that transition.

SSAP No. 92—Postretirement Benefits Other Than Pensions

~~107. Gains or losses, prior service costs or credits (including prior service costs for non-vested participants pursuant to paragraph 37), and remaining transition assets or obligations (collectively referred to as "unrecognized items") from prior application of SSAP No. 14 that have not yet been included in net periodic benefit cost as of December 31, 2012 shall be recognized as components of the ending balance of unassigned funds (surplus), net of tax, as of January 1, 2013 (provided that alternative transition is not elected per paragraph 108.b.). The offset to unassigned funds is reported separately as an "Aggregate Write-In for Other Than Invested Assets" or as an "Aggregate Write-In for Other Liabilities." After recognition, the full unfunded or overfunded status or the plan shall be reflected within the financial statements. Any prepaid asset resulting from an overfunded plan shall be nonadmitted.~~

~~108. Due to the potential impact to surplus as a result of immediately applying the accounting guidance in paragraph 107, reporting entities may elect one of the following two methods, on an individual plan basis, to recognize the transition surplus impact:~~

a. Reporting entities may elect to recognize the entire transition surplus impact calculated from applying paragraph 107, on an individual plan basis, as of January 1, 2013.

b. Alternatively, reporting entities may elect to recognize the entire surplus impact from applying paragraph 07, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

i. Ten percent of the calculated surplus impact as of the transition date; and

ii. Amortization of the "unrecognized items" (defined in paragraph 107) into net periodic benefit cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of both components in paragraph 108.b.) is subsequently determined to be less than what is amortized for the year (paragraph 108.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.)

109. If the surplus deferral (paragraph 108.b.) is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact (collectively referred to as the "transition liability") on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions within paragraph 108.b. Reporting entities that elect the transition option in paragraph 108.b. are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date.

110. Reporting entities that elect the transition option in paragraph 108.b. must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) The transition guidance in paragraph 108.b. is not intended (on a net basis for each plan) to result in more favorable subsequent surplus OPEB positions when there are remaining unrecognized liabilities as a result of the reporting entity's initial election for surplus deferral. Therefore, if there is a plan curtailment, settlement, or other plan amendment resulting in a reduction of benefit obligations, or net benefit obligation gains due to revisions in assumptions (e.g., discount rates) or plan experience differing from assumptions, or plan asset gains due to the actual return on plan assets exceeding the expected return on plan assets, a corresponding amount of unrecognized liability from the surplus deferral shall be recognized. For this purpose, net gains, if any, are the net aggregation of all gains and losses (excluding plan amendments that increase benefit obligations) from factors such as those listed above, determined as of a measurement or remeasurement date. This shall occur regardless if the impact from the change results with the plan being in an overfunded state, or whether the gain is recognized in earnings. The transition guidance was to provide surplus relief from the immediate surplus impact from adopting this statement, but in no instance should changes (on a net basis for each plan) attributed to OPEB plans result in more favorable, subsequent surplus positions when there are unrecognized liabilities remaining as a result of the reporting entity's initial election for surplus deferral. (The guidance in this paragraph was originally contained within INT 13-03: Clarification of Surplus Deferral in SSAP No. 92 & SSAP No. 102 and was effective December 15, 2013.)

111. The transition guidance in paragraphs 107-110 is specific to the transition surplus impact from initially applying this statement on January 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the accumulated benefit obligation, or the impact of subsequent plan amendments.

~~112. Reporting entities electing to apply the transition guidance in paragraph 108.b. must disclose the full transition surplus impact calculated from applying paragraph 107 in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated under paragraph 107 and the annual amortization amount of the "unrecognized items" into net periodic benefit cost. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.~~

~~113. The requirement to measure plan assets and benefit obligations as of the date of the reporting entity's financial statement year-end is effective for financial statement years beginning January 1, 2014. (The measurement date change will be initially reflected in the December 31, 2014, financial statements.)~~

~~114. In order to transition to a fiscal year-end measurement date, the reporting entity shall remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. The reporting entity shall use those new measurements to determine the effects of the measurement date change as of the beginning of the fiscal year that the measurement date provisions are applied.~~

~~115. The reporting entity shall measure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. This would result with the following:~~

~~a. Net periodic benefit cost for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied, exclusive of any curtailment or settlement gain or loss, shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus). That is, the pretax amount recognized as an adjustment to unassigned funds (surplus) is the net periodic benefit cost that without a change in measurement date otherwise would have been recognized on a delayed basis during the first interim period for the fiscal year that the measurement date provisions are applied.~~

~~b. Any gain or loss arising from a curtailment or settlement between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized in earnings in that period and not as an adjustment to unassigned funds (surplus). This provision prohibits a reporting entity from early application of the measurement date provisions when the reporting entity has issued financial statements for the prior year without recognition of such a settlement or curtailment.~~

~~c. Other changes in the fair value of plan assets and the benefit obligations (for example, gains or losses) for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus) for the fiscal year that the measurement date provisions are applied.~~

~~116. Earlier application of the recognition or measurement date provisions is encouraged, however, early applications must be for all of the reporting entity's benefit plans. If early application is elected, the transition date shall reflect the January 1st of the year in which this standard is initially applied. Retrospective application is not permitted.~~

SSAP No. 102—Pensions

~~92. Gains or losses, prior service costs or credits (including prior service costs for non-vested participants pursuant to paragraph 11), and remaining transition assets or obligations from prior application of SSAP No. 89 (collectively referred to as "unrecognized items") that have not yet been included in net periodic benefit cost as of December 31, 2012 shall be recognized as components of the balance of unassigned funds (surplus), net of tax, as of January 1, 2013 (provided that alternative transition is not elected per paragraph 93.b.). The offset to unassigned funds is reported separately as an "Aggregate Write-In for Other-Than-Invested Assets" or as an "Aggregate Write-~~

~~In for Other Liabilities." After recognition, the full unfunded or overfunded status of the plan shall be reflected within the financial statements. Any prepaid asset resulting from an overfunded plan shall be nonadmitted.~~

~~93. Due to the potential impact to surplus as a result of immediately applying the accounting guidance in paragraph 92, reporting entities may elect one of the following two methods, on an individual plan basis, to recognize the transition surplus impact:~~

~~a. Reporting entities may elect to recognize the entire transition surplus impact calculated from applying paragraph 92, on an individual plan basis, as of January 1, 2013.~~

~~b. Alternatively, reporting entities may elect to recognize the entire surplus impact from applying paragraph 92, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:~~

~~i. Ten percent of the calculated surplus impact as of the transition date;~~

~~ii. Amortization of the "unrecognized items" (defined in paragraph 92) into net periodic pension cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of all three components in paragraph 93.b.) is subsequently determined to be less than what is amortized for the year (paragraph 93.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds (surplus);~~

~~iii. Amount necessary to establish a total liability that is equal to any unfunded accumulated benefit obligation (the accumulated benefit obligation less the fair value of plan assets).~~

~~94. If the surplus deferral (paragraph 93.b.) is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact (collectively referred to as the "transition liability") on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions within paragraph 93.b. Reporting entities that elect the transition option in paragraph 93.b. are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date.~~

~~95. Reporting entities that elect the transition option in paragraph 93.b. must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) The transition guidance in paragraph 93.b. is not intended (on a net basis for each plan) to result in more favorable, subsequent surplus pension positions when there are remaining unrecognized liabilities as a result of the reporting entity's initial election for surplus deferral. Therefore, if there is a plan curtailment, settlement, or other plan amendment resulting in a reduction of benefit obligations, or net benefit obligation gains due to revisions in assumptions (e.g., discount rates) or plan experience differing from assumptions, or plan asset gains due to the actual return on plan assets exceeding the expected return on plan assets, a corresponding amount of unrecognized liability from the surplus deferral shall be recognized. For this purpose, net gains, if any, are the net aggregation of all gains and losses (excluding plan amendments that increase benefit obligations) from factors such as those listed above, determined as of a measurement or remeasurement date. This shall occur regardless if the impact from the change results with the plan being in an overfunded state, or whether the gain is recognized in earnings. The transition guidance was to provide surplus relief from the immediate surplus impact from adopting SSAP No. 102, but in no instance should changes (on a net basis for each plan) attributed to pension plans result in more favorable, subsequent surplus positions when there are unrecognized liabilities remaining as a result of the reporting entity's initial election for surplus deferral. The guidance in this paragraph~~

© 2023 National Association of Insurance Commissioners

was originally contained within INT 13-03: Clarification of Surplus Deferral in SSAP No. 92 & SSAP No. 102 and was effective December 15, 2013.

96. The transition guidance in paragraphs 92-95 is specific to the transition surplus impact from initially applying this statement on January 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the projected benefit obligation, or the impact of subsequent plan amendments.

97. Reporting entities electing to apply the transition guidance in paragraph 93.b. must disclose the full transition surplus impact calculated from applying paragraph 92 in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated under paragraph 92, the annual amortization amount of the "unrecognized items" into net periodic pension cost, the amount of the unfunded accumulated benefit obligation, and the remaining unrecognized transition impact. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

EXHIBIT A - IMPLEMENTATION GUIDE

Note: After transition, new "unrecognized" amounts will be reflected in the year-end funded status, but not yet reflected in unassigned funds. Therefore, additional entries will be needed at the end of each year to recognize these new "unrecognized" amounts in unassigned funds. (An example includes gains and losses that will be included in unassigned funds (surplus), but not recognized in net periodic pension cost if they do not exceed 10% of the greater of the projected benefit obligation or the fair value of plan assets.) The entries in the implementation guide focus on the transition impact, and subsequent entries for "unrecognized" items have not been included within the illustrations.

Transition Implementation

1. Overfunded Plan with Prepaid Benefit Cost

Consideration of contributions or tax effects are not reflected in this example.

Example 1	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(6,240)	$(6,240)
Plus: Non-Vested Liability	(100)*	(100)
Total Accumulated Benefit Obligation	$(6,340)	$(6,340)
Projected Benefit Obligation	$(6,437)	$(6,437)
Plus: Non-Vested Liability	(100)	(100)
Total PBO	$(6,537)	$(6,537)
Plan Assets at Fair Value	$9,268	$9,268
Funded Status	$2,731	$2,731
Transition Obligation / (Asset)	$36	
Prior Service Cost	214	
Prior Service Cost (Non-Vested)	100	
Unrecognized Losses / (Gains)	2,465	
Total Unrecognized Items	$2,815	–
Net Overfunded Plan Asset / (Liability for Benefits)	$5,546	$2,731

~~*The amount shown for December 31, 2012 reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.~~

~~Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and unfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.~~

~~1a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"~~

~~1. Unassigned Funds – Transition Obligation 36~~
~~Unassigned Funds – Prior Service Cost 214~~
~~Unassigned Funds – Prior Service Cost (Nonvested) 100~~
~~Unassigned Funds – Unrecognized Losses 2,465~~
~~Overfunded Plan Asset 2,815~~
~~*(Aggregate Write-Ins for Other-Than-Invested Assets)*~~

~~*For this plan, which is overfunded by more than the unrecognized liabilities, the entry at transition will be netted against the existing prepaid with an offset to unassigned funds.*~~

~~2. Change in Nonadmitted – Overfunded Plan Asset 2,815~~
~~*(Aggregate Write-Ins for Other-Than-Invested Assets)*~~
~~Unassigned Funds 2,815~~

~~*This entry illustrates the impact to the "change in nonadmitted" as a result of the decline in overfunded plan assets. For this particular example, with the transition entry to unassigned funds and the impact to nonadmitted assets, there is no surplus impact at transition.*~~

~~1b. December 31, 2013 – Recognition of Periodic Pension Cost~~

~~After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.~~

~~*(Per paragraph 93, if surplus deferral is elected at transition, beginning with 2014 annual financials, the entity shall recognize the remaining surplus impact on a systematic basis over a period not to exceed the remaining nine years. As, this illustration is in an overfunded status, there is no surplus deferral. Recognition of net periodic cost, including amortization of the "unrecognized items" will occur each year regardless if surplus deferral is elected.)*~~

~~**Components of Net Periodic Cost**~~	~~**Dec. 31, 2013**~~
~~Service Cost~~	~~550~~
~~Interest Cost~~	~~150~~
~~Expected Return on Plan Assets~~	~~(250)~~
~~*Total*~~	~~*450*~~
~~Amortization of:~~	
~~o Transition Obligation~~	~~7.2~~
~~o Prior Service Cost~~	~~42.8~~
~~o Prior Service Cost (nonvested)~~	~~20~~
~~o Unrecognized Losses~~	~~493~~
~~*Total*~~	~~*563*~~

Total Net Periodic Pension Cost	**1,013**

1. Net Periodic Pension Cost 1,013
    Prepaid Benefit Cost 1,013
    (Aggregate Write-Ins for Other-Than-Invested Assets)

This entry recognizes the periodic pension cost with an offset to the prepaid pension asset. (A prepaid benefit cost is created when cumulative contributions to a pension plan exceed cumulative net periodic pension costs. Thus, a prepaid benefit cost can only be reduced through the recognition of pension cost.)

2. Overfunded Plan Asset 563
    (Aggregate Write-Ins for Other-Than-Invested Assets)
    Unassigned Funds – Transition Obligation 7.2
    Unassigned Funds – Prior Service Cost 42.8
    Unassigned Funds – Prior Service Cost (Nonvested) 20
    Unassigned Funds – Unrecognized Losses 493

This entry recognizes the transition amounts amortized through net periodic pension cost. The offset is to unassigned funds (as unassigned funds was used for the initial recognition of the unrecognized items). As this plan continues to be overfunded, these amounts are offset to overfunded plan assets.

3. Change in Nonadmitted - Prepaid Benefit Cost 1,013
    (Aggregate Write-Ins for Other-Than-Invested Assets)
    Unassigned Funds 1,013

This entry illustrates the impact of the change in nonadmitted prepaid benefit cost to unassigned funds.

4. Unassigned Funds 563
    Change in Nonadmitted – Overfunded Plan Asset 563
    (Aggregate Write-Ins for Other-Than-Invested Assets)

This entry illustrates the impact of the change in nonadmitted overfunded plan asset to unassigned funds.

1c. December 31, 2014 – Recognition of Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	2500
Interest Cost	1000
Expected Return on Plan Assets	(500)
Total	*3000*
Amortization of:	
o Transition Obligation	7.2
o Prior Service Cost	42.8
o Prior Service Cost (nonvested)	20
o Unrecognized Losses	493
Total	*563*
Total Net Periodic Pension Cost	**3,563**

Note – This example was purposely completed to show a significant amount of periodic pension cost to create an underfunded plan status. This was done strictly for illustration purposes and is not intended to indicate that such significant changes would be expected, although they could occur.

~~1. Net Periodic Pension Cost 3,563~~
~~Prepaid Benefit Cost 3,563~~
~~*(Aggregate Write-In for Other-Than-Invested Assets)*~~

~~2. Overfunded Plan Asset 1,282~~
~~Unassigned Funds – Transition Obligation 7.2~~
~~Unassigned Funds – Prior Service Cost 42.8~~
~~Unassigned Funds – Prior Service Cost (Nonvested) 20~~
~~Unassigned Funds – Unrecognized Losses 493~~
~~Liability for Pension Benefits 719~~
~~*(Aggregate Write-In for Other Liabilities)*~~

~~*This entry recognizes the transition amounts that have been recognized through net periodic pension cost, with an offset to unassigned funds. The overfunded plan asset is initially offset, until the plan reaches an unfunded status, which is then reflected through a liability for pension benefits (aggregate write-in for other liabilities).*~~

~~3. Change in Nonadmitted - Prepaid Benefit Cost 3,563~~
~~Unassigned Funds 3,563~~

~~4. Unassigned Funds 1,282~~
~~Change in Nonadmitted - Overfunded Plan Asset 1,282~~

~~*These entries illustrate the impact of the change in nonadmitted to unassigned funds.*~~

~~**Illustration 1 – Example Paragraph 97 Note Disclosure:**~~

~~SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. The adoption of SSAP No. 102 did not have a surplus impact on ABC entity as the pension plan was overfunded by more than the transition liabilities. At transition, ABC entity recognized $2,815 in unrecognized transition obligations, prior service costs, and unrecognized losses as components of the ending balance of unassigned funds as of January 1, 2013. This recognition resulted in a financial presentation which reflects the actual $2,731 overfunded status of the plan (fair value of plan assets exceeds the projected benefit obligation) as of January 1, 2013. As required under SSAP No. 102, overfunded plan assets are nonadmitted.~~

~~***For purposes of this example, tax effects are not reflected. However, the amount recognized at transition as components of the unassigned funds shall be net of tax.*~~

The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):

Example 1	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(6,240)	$(6,240)
Plus: Non-Vested Liability	(100)	(100)
Total Accumulated Benefit Obligation	$(6,340)	$(6,340)
Projected Benefit Obligation	$(6,437)	$(6,437)
Plus: Non-Vested liability	(100)	(100)
Total PBO	$(6,537)	$(6,537)
Plan Assets at Fair Value	$9,268	$9,268
Funded Status	$2,731	$2,731
Transition Obligation / (Asset)	$36	
Prior Service Cost	214	
Prior Service Cost (Non-Vested)	100	
Unrecognized Losses / (Gains)	2,465	
Total Unrecognized Items	$2,815	–
Net Overfunded Plan Asset / (Liability for Benefits)	$5,546	$2,731

In the March 31, 2013, financial statements, the $2,731 overfunded plan assets was reflected as follows:

- Prepaid Benefit Cost $5,546 (nonadmitted)
- Overfunded Plan Asset $(2,815) (nonadmitted)

These amounts are reported net in Aggregate Write-Ins for Other-Than-Invested Assets: $2,731

Illustration of Example 1 – Overfunded Plan with Prepaid Benefit Cost

	Aggregate Write-In for Other-Than-Invested Assets		Nonadmitted Assets	Unassigned Funds	Periodic Pension Cost	Aggregate Write-In for Other Liabilities
	Prepaid Benefit Cost	Overfunded Plan Asset				
Existing Balances 12/31/2012	5,546DR		5,546CR			
Transition Entries – 1/1/2013						
A B		2,815CR	 2,815DR	2,815DR 2,815CR		
After Transition	**5,546DR**	**2,815CR**	**2,731CR**	–		
After Transition - Net	**2,731DR**		**2,731CR**	–		
A – Recognize "unrecognized items" existing at 1/1/13 transition date (gains or losses, prior service costs or credits, and transition assets or obligations). For this plan, which is overfunded by more than the unrecognized liabilities, the entry at transition will be netted against the existing overfunded plan asset with an offset to unassigned funds. B – Illustrates the impact to the "change in nonadmitted" as a result of the decline in overfunded plan assets. For this particular example, with the transition entry to unassigned funds and the impact to nonadmitted assets, there is no surplus impact at transition. At transition, the net balance in aggregate write-ins reflects the overfunded state of the plan.						
Recognition of Net Periodic Pension Cost – 12/31/2013						
C D E F	1,013CR 	 563DR 	 1,013DR 563CR	 563CR 1,013CR 563DR	1,013DR 	———
Net Impact	450CR		450DR	1,013CR	1,013DR	
Ending Balances	**4,533 DR**	**2,252CR**	**2,281CR**	**1,013CR**	**1,013DR**	
Ending Balances-Net	**2,281DR**		**2,281CR**	–		
C – Reflects the periodic pension cost with an offset to the prepaid pension asset. D – Recognizes the transition amounts amortized through net periodic pension cost. The offset it to unassigned funds (as that was how the "unrecognized items" were recognized at transition). E/F – Reflects the change in nonadmitted assets to unassigned funds.						
Recognition of Net Periodic Pension Cost – 12/31/2014						
G H I J	3,563CR 	 1,282DR 	 3,563DR 1,282CR	 563CR 3,563CR 1,282DR	3,563DR 	 719CR
Net Impact		2,281CR	2,281DR	2,844CR	3,563DR	719CR
Ending Balances	**970 DR**	**970 CR**	–	**2,844CR**	**3,563DR**	
Ending Balances - Net	–		–	**719DR**		**719CR**
G/H – Reflects the periodic pension cost with an offset to the prepaid pension asset. As no contributions have been made, the 2014 pension cost moves the plan from an overfunded to underfunded state. The overfunded plan asset credit is reduced to equally offset the remaining prepaid benefit cost of $970. The underfunded status is then reflected through a liability for pension benefits (aggregate write-in for other liabilities). I/J – Reflects the change in nonadmitted assets to unassigned funds.						

2. Underfunded Plan with Accrued Benefit Cost

Consideration of contributions or tax effects are not reflected in this example.

Example 2	Dec. 31, 2012	Jan. 1, 2013
Accumulated Benefit Obligation	$(2,015)	$(2,015)
Plus: Non-Vested Liability	(60)*	(60)
Total Accumulated Benefit Obligation	$(2,075)	$(2,075)
Projected Benefit Obligation	$(2,268)	$(2,268)
Plus: Non-Vested Liability	(60)	(60)
Total PBO	$(2,328)	$(2,328)
Plan Assets at Fair Value	$1,992	$1,992
Funded Status	$(336)	$(336)
Transition Obligation / (Asset)	$(544)	
Prior Service Cost / (Credit)	(494)	
Prior Service Cost (Non-Vested)	60	
Unrecognized Losses / (Gains)	926	
Total Unrecognized Items	$(52)	–
Net Overfunded Plan Asset / (Liability for Benefits)	$(388)	$(336)

*The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and underfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reported within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reported within Aggregate Write-Ins for Liabilities.

2a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"

	Debit	Credit
1. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	52	
Unassigned Funds – Prior Service Cost (Nonvested)	60	
Unassigned Funds – Unrecognized Losses	926	
Unassigned Funds – Transition Asset		544
Unassigned Funds – Prior Service Credit		494

For this plan, which is underfunded but has a net unrecognized asset, at transition the entity will improve their surplus presentation by $52 through a contra-liability. Use of the contra-liability is necessary, as if the item were recorded as an asset, it would be nonadmitted and result in a surplus reduction. Although there is a net unrecognized asset, this plan is in an underfunded state.

2b. December 31, 2013 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	Dec. 31, 2012
Service Cost	250
Interest Cost	100

Expected Return on Plan Assets	(50)
Total	*300*
Amortization of:	
o Transition Obligation (Asset)	(272)
o Prior Service Cost / (Credit)	(247)
o Prior Service Cost (nonvested)	30
o Unrecognized Losses	463
Total	*(26)*
Total Net Periodic Pension Cost	**274**

1. Unassigned Funds – Transition Asset 272
   Unassigned Funds – Prior Service Credit 247
   Unassigned Funds – Prior Service Cost (Nonvested) 30
   Unassigned Funds – Unrecognized Losses 463
   Liability for Pension Benefits 26
   (Aggregate Write-In for Liabilities)

This entry occurs to amortize the transition items. Due to the nature of the unrecognized items (net asset recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost 274
   Accrued Benefit Cost 274

This entry recognizes the net periodic pension cost for the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.

Note: All references to "accrued benefit cost" represent an unpaid expense liability, these amounts wills be reflected within general expenses due and accrued (life) or LAE/Other Underwriting expenses (p/c).

Note: This example uses a 2-year amortization period of the "unrecognized items." In actuality, amortization periods of each item will vary. Disclosures shall continue to separately present these items.

2c. December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	2500
Interest Cost	1000
Expected Return on Plan Assets	(500)
Total	*3,000*
Amortization of:	
o Transition Obligation / (Asset)	(272)
o Prior Service Cost / (Credit)	(247)
o Prior Service Cost (nonvested)	30
o Unrecognized Losses	463
Total	*(26)*
Total Net Periodic Pension Cost	**2,974**

1. Unassigned Funds – Transition Asset 272
   Unassigned Funds – Prior Service Credit 247
   Unassigned Funds – Prior Service Cost (Nonvested) 30
   Unassigned Funds – Unrecognized Losses 463
   Liability for Pension Benefits 26
   (Aggregate Write-In for Liabilities)

~~*This entry occurs to amortize the transition items. Due to the nature of the unrecognized items (net asset – recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into periodic pension cost for the current period.*~~

~~2. Net Periodic Pension Cost 2,974~~
~~Accrued Benefit Cost 2,974~~

~~*This entry recognizes the net periodic pension cost for the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.*~~

~~Illustration 2 – Paragraph 97 Example Note Disclosure:~~

~~SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. At transition, ABC entity recognized a net $52 asset from unrecognized transition obligations/assets, prior service costs/credits, and unrecognized gains/losses as a component of the ending balance of unassigned funds as of January 1, 2013. This net impact was reflected as a contra-liability as the plan is in an underfunded state.~~

~~***For purposes of this example, tax effects are not reflected. However, the amount recognized at transition as components of the unassigned funds shall be net of tax.*~~

~~The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):~~

~~**Example 2**~~	~~**Dec. 31, 2012**~~	~~**Jan. 1, 2013**~~
~~Accumulated Benefit Obligation~~	~~$(2,015)~~	~~$(2,015)~~
~~Plus: Non-Vested Liability~~	~~(60)~~	~~(60)~~
~~Total Accumulated Benefit Obligation~~	~~$(2,075)~~	~~$(2,075)~~
~~Projected Benefit Obligation~~	~~$(2,268)~~	~~$(2,268)~~
~~Plus: Non-Vested Liability~~	~~(60)~~	~~(60)~~
~~Total PBO~~	~~$(2,328)~~	~~$(2,328)~~
~~Plan Assets at Fair Value~~	~~$1,992~~	~~$1,992~~
~~Funded Status~~	~~$(336)~~	~~$(336)~~
~~Transition Obligation / (Asset)~~	~~$(544)~~	
~~Prior Service Cost / (Credit)~~	~~(494)~~	
~~Prior Service Cost (Non-Vested)~~	~~60~~	
~~Unrecognized Losses / (Gains)~~	~~926~~	
~~Total Unrecognized Items~~	~~$(52)~~	–
~~Net Overfunded Plan Asset / (Liability for Benefits)~~	~~$(388)~~	~~$(336)~~

~~In the March 31, 2013, financial statements, underfunded pension obligations were reflected as follows:~~

- ~~Accrued Benefit Cost - $388~~
- ~~Liability for Pension Benefits (Aggregate Write-In for Liabilities) - ($52)~~

~~Illustration of Example 2 – Underfunded Plan with Accrued Benefit Cost~~

	Net Periodic Cost (Expense Recognition)	Unassigned Funds	Aggregate Write-In for Liabilities	Accrued Benefit Cost
Existing Balance – 12/31/2012		388DR		388CR
Transition Entries – 1/1/2013				
A		52CR	52DR	
After Transition		**336DR**	**52DR**	**388CR**
A. Recognize "unrecognized" items at transition. The above entry reflects the "net" impact, resulting with an unrecognized net asset (contra-liability) and an increase to the surplus presentation. (This unrecognized net asset is reflected as a contra-liability as it does not reflect a prepaid for the overfunding of plan assets. If this was reflected as an asset, it would be nonadmitted.)				
Recognition of Net Periodic Pension Cost – 12/31/2013				
B		26 DR	26 CR	
C	274 DR			274 CR
B. Entry amortizes the transition items (entry is shown net.) Due to the nature of the unrecognized items, (net asset, recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into net periodic pension cost for the current period. C. Entry recognizes the net periodic pension cost, interest cost, expected return on plan assets, and the amortization of the unrecognized items.				
Recognition of Net Periodic Pension Cost – 12/31/2014				
D		26 DR	26 CR	
E	2,974 DR			2,974 CR
D. Entry occurs to amortize the transition items (entry is shown net). Due to the nature of the unrecognized items, (net asset, recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into net periodic pension cost for the current period. E. Entry recognizes net periodic pension cost the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.				

~~3. Underfunded Plan with Accrued Benefit Cost with Surplus Deferral Elected~~

~~Consideration of contributions or tax effects are not reflected in this example.~~

~~Example 3~~	~~Dec. 31, 2012~~	~~Jan. 1, 2013~~
~~Accumulated Benefit Obligation~~	~~$(1,819)~~	~~$(1,819)~~
~~Plus: Non-Vested Liability~~	~~(103)*~~	~~(103)~~
~~Total Accumulated Benefit Obligation~~	~~$(1,922)~~	~~$(1,922)~~
~~Projected Benefit Obligation~~	~~$(2,099)~~	~~$(2,099)~~
~~Plus: Non-Vested Liability~~	~~(103)~~	~~(103)~~
~~Total PBO as of January 1, 2012~~	~~$(2,202)~~	~~$(2,202)~~
~~Plan Assets at Fair Value~~	~~$0~~	~~$0~~
~~Funded Status~~	~~$(2,202)~~	~~$(2,202)~~
~~Transition Obligation / (Asset)~~	~~$0~~	
~~Prior Service Cost~~	~~0~~	
~~Prior Service Cost (Non-Vested)~~	~~103~~	
~~Unrecognized Losses / (Gains)~~	~~440~~	
~~Total Unrecognized Items~~	~~543~~	–
~~Net Overfunded Plan Asset / (Liability for Benefits)~~	~~$(1,659)~~	~~$(1,922)~~

~~* The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.~~

~~Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and underfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.~~

~~As illustrated above, the liability for pension benefits as of January 1, 2013, does not equal the underfunded plan status as the entity elected the transition deferral. Rather, the liability for pension benefits equals, at a minimum, the accumulated benefit obligation (ABO) less the plan asset at fair value. (Minimum transition liability that equals the ABO is required in accordance with paragraph 93.) After the transition period, the net overfunded plan asset / (liability for benefits) should equal the funded status of the plan.~~

~~3a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"~~

~~In accordance with paragraph 93, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the greater of:~~

	~~Minimum Transition Liability~~	
~~93.b.i.~~	~~10% of Calculated Surplus Impact~~	~~54.3~~
~~93.b.ii.~~	~~Anticipated Annual Amortization of "Unrecognized Items" (Assumes 5-year Uniform Amortization)~~	~~108.6~~
~~93.b.iii.~~	~~Difference Between ABO and Accrued Benefit Cost~~	~~263~~
	~~Transition Liability~~	**~~263~~**

~~Note: Amortization of the unrecognized items (paragraph 93.b.ii.) may not be determinable at transition. If the amortization amount that will be recognized year-end 2013 is unknown at the transition date, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for the component in paragraph 93.b.ii. of the minimum transition liability. If the amount recognized for transition (greater of all three components in paragraph 93.b.) is subsequently determined to be less than what is amortized for the year (paragraph 93.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.)~~

~~January 1, 2013 – Transition Date:~~

~~*Reversal of Additional Minimum Liabilities/Intangible Plan Assets*: As this plan has an unfunded ABO, following the guidance under SSAP No. 89, the entity had recognized an additional minimum liability and corresponding admitted intangible asset. As the concept of an additional minimum liability has been eliminated from SSAP No. 102, at transition these amounts are eliminated, with the determination of the overfunded/unfunded projected benefit obligation calculated subsequent to the elimination.~~

~~Balances as of 12/31/2012 under SSAP No. 89:~~
~~Accumulated Benefit Obligation: $1,819~~
~~Accrued Liability: $1,659~~
~~SSAP No. 89 Additional Minimum Liability: $160~~
~~SSAP No. 89 Admitted Intangible Asset: $160~~

~~Unassigned Funds 160~~
~~Intangible Asset 160~~

~~Additional Minimum Liability 160~~
~~Unassigned Funds 160~~

~~Application of SSAP No. 102 – Recognition of Unfunded Status with Surplus Deferral:~~

~~1. Unassigned Funds – Transition Liability 263~~
~~Liability for Pension Benefits 263~~
~~(Aggregate Write-In for Liabilities)~~

~~This entry represents the minimum transition liability required to be recognized at the transition date. As noted within the transition guidance, an entity may elect to transition the surplus impact over a period not to exceed 10 years. Paragraph 93 provides the specifications on the minimum liability recognized at transition. As this transition liability amount has yet to be recognized through expense (periodic cost), the liability is reflected through "aggregate write-ins for liabilities."~~

3b. December 31, 2013 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	*300*
Amortization of:	
o Prior Service Cost (nonvested)	20.6
o Unrecognized Losses	88
Total	*108.6*
Total Net Periodic Pension Cost	**408.6**

1. Liability for Pension Benefits 108.6
   (Aggregate Write-In for Liabilities)
   Unassigned Funds – Prior Service Cost (Nonvested) 20.6
   Unassigned Funds – Unrecognized Losses 88

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost 408.6
   Accrued Benefit Cost 408.6

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items.

Note: Although the entity elected the transition option for surplus deferral, and the guidance allows up to 10 years for deferral, an entity must continue to recognize a minimum amount of the transition liability as determined in accordance with paragraph 93.b. This requires the entity to recognize an amount that is at the greater of either 10% of the initial surplus impact or the amortization of the unrecognized items in effect at transition.

In this example, the entity will only receive a 3-year deferral – This illustration assumes 5-year uniform amortization of the transition amounts into expense for illustration purposes only. In practice, the minimum transition liability amounts may not be determinable until the expense is calculated in each future year:

Surplus Impact at Transition		**Prior Service Cost**	**Unrealized Losses**	
Transition Liability:	543	103	440	
Amount Recognized Jan. 1, 2013	(263)			
Remaining Transition Liability	**280**			
				Remaining Transition Liability
Minimum Transition Liability:		Anticipated Amortization:		
2014	**108.6**	20.6	88	171.4
2015	**108.6**	20.6	88	62.8
2016	**62.8**	12	50.8	–

3c. December 31, 2014 – Recognition of Transition Liability:

1. Unassigned Funds – Transition Liability 108.6
   Liability for Pension Benefits 108.6
   (Aggregate Write-In for Liabilities)

~~*This entry represents the minimum transition liability required to be recognized at the subsequent date.*~~

~~3d. December 31, 2014 – Recognition of Net Periodic Benefit Cost~~

~~**Components of Net Periodic Cost**~~	~~**Dec. 31, 2014**~~
~~Service Cost~~	~~50~~
~~Interest Cost~~	~~30~~
~~Expected Return on Plan Assets~~	~~(35)~~
~~*Total*~~	~~*45*~~
~~Amortization of:~~	
~~o Prior Service Cost (nonvested)~~	~~20.6~~
~~o Unrecognized Losses~~	~~88~~
~~*Total*~~	~~*108.6*~~
~~**Total Net Periodic Pension Cost**~~	~~**153.6**~~

~~1. Liability for Pension Benefits 108.6~~
~~*(Aggregate Write-In for Liabilities)*~~
~~Unassigned Funds – Prior Service Cost (Nonvested) 20.6~~
~~Unassigned Funds – Unrecognized Losses 88~~

~~2. Net Periodic Pension Cost 153.6~~
~~Accrued Benefit Cost 153.6~~

~~*This entry illustrates the December 2014 entries. The first removes the liability recognized for transition so that it could be recycled through expense, with the second recognizing net periodic cost (including the amortization of the unrecognized items.)*~~

~~3e. December 31, 2015 – Activity within the pension plan has resulted with an overfunded plan.~~

~~As required under paragraph 93, if the fair value of plan assets had changed so that the plan was in an overfunded status, the transition liability would also be impacted with accelerated recognition to the extent the plan is in an overfunded status:~~

~~**Components of Net Periodic Cost**~~	~~**Dec. 31, 2015**~~
~~Service Cost~~	~~100~~
~~Interest Cost~~	~~75~~
~~Expected Return on Plan Assets~~	~~(50)~~
~~*Total*~~	~~*125*~~
~~Amortization of:~~	
~~o Prior Service Cost (nonvested)~~	~~20.6~~
~~o Unrecognized Losses~~	~~88~~
~~*Total*~~	~~*108.6*~~
~~**Total Net Periodic Pension Cost**~~	~~**233.6**~~

~~Recognition of Remaining Transition Liability and Net Periodic Pension Cost:~~

~~1. Unassigned Funds – Transition Liability 171.40~~
~~Liability for Pension Benefits 171.40~~
~~*(Aggregate Write-In for Liabilities)*~~

~~*This entry illustrates the immediate recognition of the remaining transition liability*~~

~~2. Liability for Pension Benefits 108.6~~
~~*(Aggregate Write-In for Liabilities)*~~
~~Unassigned Funds – Prior Service Cost (Nonvested) 20.6~~
~~Unassigned Funds – Unrecognized Losses 88~~

~~*This entry reflects the amortization into net periodic pension cost of the "unrecognized items" within unassigned funds. Amortization has not changed with the recognition of the remaining transition liability.*~~

~~3. Net Periodic Pension Cost 233.60~~
~~Accrued Benefit Cost 233.60~~

~~*Recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets, and the amortization of unrecognized items.*~~

~~4. Accrued Benefit Cost 2,456~~
~~Prepaid Benefit Cost 844~~
~~*(Aggregate Write-In – Assets)*~~
~~Cash – Contribution 3,300~~

~~*This entry recognizes the cash contribution, the elimination of the accrued benefit cost and the establishment of the prepaid benefit cost from the contribution.*~~

~~5. Liability for Pension Benefits 217~~
~~Overfunded Plan Asset 217~~
~~*Since the plan is now in a net overfunded status, the liability for pension benefits is reduced to zero, and offset to the overfunded pension asset (contra-asset).*~~

~~6. Unassigned Funds (Change in Nonadmitted) 844~~
~~Prepaid Benefit Cost (Nonadmitted) 844~~

~~*This entry recognizes the prepaid benefit cost that is nonadmitted and the underlying impact on unassigned funds.*~~

~~7. Overfunded Plan Asset (Nonadmitted) 217~~
~~Unassigned Funds (Change in Nonadmitted) 217~~

~~*This entry illustrates the impact of the change in nonadmitted overfunded plan asset to unassigned funds.*~~

Example 3 - Comprehensive Illustration

Consideration of contributions or tax effects are not reflected in the example.

Underfunded Plan With Accrued Benefit Cost - Surplus Deferral Elected

~~**Illustration 3 – Paragraph 97 Example Note Disclosure – March 31, 2013:**~~

~~SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. ABC entity elected to utilize the minimum transition option reflected in paragraph 93 of SSAP No. 102. The SSAP requires initial transition liability to be the greater of paragraphs 93.b.i, 93.b.ii., and 93.b.iii.:~~

	~~Minimum Transition Liability~~	
~~93.b.i.~~	~~10% of Calculated Surplus Impact~~	~~54.3~~
~~93.b.ii.~~	~~Annual Amortization of "Unrecognized Items" (Assumes 5-year Uniform Amortization)~~	~~108.6~~
~~93.b.iii.~~	~~Difference Between ABO and Accrued Benefit Cost~~	~~263~~
	~~Minimum Transition Liability~~	**~~263~~**

~~*Note – Amortization of the unrecognized items (paragraph 93.b.ii.) may not be determinable at transition. If the amortization amount that will be recognized year-end 2013 is unknown at the transition date, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for the component in paragraph 93.b.ii. of the minimum transition liability. If the amount recognized for transition (greater of all three components in paragraph 93.b.) is subsequently determined to be less than what is amortized for the year (paragraph 93.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.*~~

~~Although the entity elected the transition option for surplus deferral, and SSAP No. 102 allows up to 10 years for deferral, an entity must continue to recognize a minimum amount of the transition liability as determined in accordance with paragraph 93.b. This requires the entity to recognize each year an amount that is at least equal to the amortization of the unrecognized items in effect at transition. Although the amortization of the transition items into future expenses (paragraph 93.b.ii.) may not be fully determinable at the time of transition (as they are dependent on the future expense calculations), the reporting entity anticipates that the remaining $280 surplus impact from the election of the transition deferral in SSAP No. 102 will be recognized over a 3-year* period.~~

~~* This is a reporting entity projection and may be revised based on future expenses and activity.~~

~~Recognized Surplus Impact at Transition & Remaining Transition Liability~~		**~~Prior Service Cost~~**	**~~Unrealized Losses~~**
~~Transition Liability:~~	~~543~~	~~103~~	~~440~~
~~Amount Recognized Jan. 1, 2013~~	~~(263)~~		
~~Remaining Transition Liability~~	**~~280~~**		

~~The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):~~

~~Example 3~~	**~~Dec. 31, 2012~~**	**~~Jan. 1, 2013~~**
~~Accumulated Benefit Obligation~~	~~$(1,922)~~	~~$(1,922)~~
~~Projected Benefit Obligation~~	~~$(2,099)~~	~~$(2,099)~~
~~Plus: Non-Vested Liability~~	~~(103)~~	~~(103)~~
~~Total PBO~~	~~$(2,202)~~	~~$(2,202)~~
~~Plan Assets at Fair Value~~	~~0~~	~~0~~
~~Funded Status~~	~~($2,202)~~	~~($2,202)~~

~~Transition Obligation / (Asset)~~	~~0~~	
~~Prior Service Cost~~	~~0~~	
~~Prior Service Cost (Non-Vested)~~	~~103~~	
~~Unrecognized Losses / (Gains)~~	~~440~~	
~~Total Unrecognized Items~~	~~543~~	–
~~Overfunded Plan Asset / (Liability for Benefits)~~	~~(1,659)~~	~~(1,922)~~

~~In the March 31, 2013, financial statements, the $1,922 liability for pension benefits was reflected in the financial statements as follows:~~

- ~~Aggregate Write-Ins for Liabilities: $263~~
- ~~Accrued Benefit Cost: $1,659~~
- ~~Surplus Deferral - Unrecognized Transition Liability - $280~~

~~*(Note – This disclosure shall be completed on a quarterly and annual basis, with updated financial information reflecting the current and prior reporting periods, until the plan is fully funded without any transition liability remaining.)*~~

~~**Illustration 3 – Paragraph 97 Example Note Disclosure – December 31, 2015 – After Overfunded Contribution:**~~

~~At December 31, 2015, ABC entity contributed $3,300 towards the pension plan. This contribution resulted in the plan being in an overfunded status. Pursuant to the requirements of SSAP No. 102, ABC immediately recognized the remaining transition liability ($171.40). Although the transition liability has been fully-recognized to unassigned funds, the amortization of the liability into net periodic pension cost has not changed.~~

~~Although the entity elected the transition option for surplus deferral, and SSAP No. 102 allows up to 10 years for deferral, with the contribution resulting in an overfunded-plan status, ABC entity was restricted to a 3-year transition schedule as follows:~~

~~January 1, 2013 (Transition)~~	~~$263.00~~
~~December 31, 2014~~	~~$108.60~~
~~December 31, 2015~~	~~$171.40~~
~~Total Transition Liability~~	~~$543.00~~

~~In the December 31, 2015, annual financial statements, pension obligations were reflected as follows:~~

- ~~Prepaid Benefit Cost - $844 (Nonadmitted)~~
- ~~Overfunded Plan Asset - $(217) (Nonadmitted)~~

~~These amounts are both reported as Aggregate Write-Ins for Other-Than-Invested Assets resulting in a net $628.~~

4. Underfunded Plan with Prepaid Benefit Cost – No Surplus Deferral Elected

Consideration of contributions or tax effects are not reflected in this example.

Example 4	**Dec. 31, 2012**[1]	**Jan. 1, 2013**	**Dec. 31, 2013**	**Jan. 1, 2014**	**Dec. 31, 2014**
Accumulated Benefit Obligation	(1,532)	(1,532)	(1,732)	(1,732)	(1,957)
Plus: Non-Vested Liability	(100)	(100)	(100)	(100)	(100)
Total Accumulated Benefit Obligation	$ (1,632)	$ (1,632)	(1,832)	(1,832)	(2,057)
Projected Benefit Obligation	$(1,752)	$(1,752)	(2,052)	(2,052)	(2,277)
Plus: Non-Vested liability	(100)	(100)	(100)	(100)	(100)
Total PBO	$(1,852)	$(1,852)	(2,152)	(2,152)	(2,377)
Plan Assets at Fair Value	1,600	1,600	1,600	2,500	2,500
Funded Status	($252)	($252)	(552)	348	123
Transition Obligation / (Asset)	0	**0**	**0**	**0**	**0**
Prior Service Cost	48	**0**	**0**	**0**	**0**
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**
Unrecognized Losses / (Gains)	600	**0**	**0**	**0**	**0**
Total Unrecognized Items	748	**0**	**0**	**0**	**0**
Net Overfunded Plan Asset / (Liability for Benefits)	**496**	**(252)**	**(552)**	**348**	**123**

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and unfunded status of the plan. For the amounts shown as of December 31, 2012 immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.

January 1, 2013 – Transition Date, Recognize "Unrecognized Items"

A. Unassigned Funds – Prior Service Cost 48
Unassigned Funds – Prior Service Cost (Non-vested) 100
Unassigned Funds – Unrecognized Losses 600
Liability for Plan Benefits 252
(Aggregate Write-In for Liabilities)
Overfunded Plan Asset 496
(Aggregate Write-In for Other-Than-Invested Assets)

B. Change in Nonadmitted – Overfunded Plan Asset 496
Unassigned Funds 496

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact.

[1] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

~~Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan and establishes the appropriate liability to reflect the unfunded status. (Reporting entities will need to continue to track these categories separately.)~~

~~December 31, 2013 – Recognition of Net Periodic Pension Cost~~
~~After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses and 6) amortization of any transition asset or obligation remaining in unassigned funds.~~

~~**Components of Net Periodic Cost**~~	~~**Dec. 31, 2013**~~
~~Service Cost~~	~~250~~
~~Interest Cost~~	~~100~~
~~Expected Return on Plan Assets~~	~~(50)~~
~~Total~~	~~300~~
~~Amortization of:~~	
~~o Prior Service Cost~~	~~1.20~~
~~o Prior Service Cost (nonvested)~~	~~2.50~~
~~o Unrecognized Losses~~	~~15.00~~
~~Total~~	~~18.70~~
~~**Total Net Periodic Pension Cost**~~	~~**318.70**~~

~~C. Liability for Pension Benefits 18.70~~
~~*(Aggregate Write-In for Liabilities)*~~
~~Unassigned Funds – Transition Liability 18.70~~

~~This entry occurs prior to amortization of the items recognized at transition. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.~~

~~D. Net Periodic Pension Cost 318.70~~
~~Prepaid Benefit Cost 318.70~~
~~*(Aggregate Write-In for Other-Than-Invested Assets)*~~

~~This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, the prepaid benefit cost will be reduced with the recognition of periodic cost.~~

~~E. Overfunded Plan Asset 318.70~~
~~*(Aggregate Write-In for Other-Than-Invested Assets)*~~
~~Unassigned Funds 318.70~~

~~Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.~~

~~F. Change in Nonadmitted – Prepaid Benefit Cost 318.70~~
~~Unassigned Funds 318.70~~

~~G. Unassigned Funds 318.70~~
~~Change in Nonadmitted – Overfunded Plan Asset 318.70~~

~~Entries to reflect the change in nonadmitted assets for both entries “D” and “E.” These entries offset.~~

~~H. Unassigned Funds 318.70~~

Liability for Pension Benefits ——— 318.70
(Aggregate Write-In for Liabilities)

Entry recognizes the unfunded liability from the 2013 net periodic costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is actual return on plan assets different from expected return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "H" at year-end.

January 1, 2014 – Contribution

	Jan. 1, 2014
Contribution	$900

I. Prepaid Benefit Cost ——— 900
(Aggregate Write-In for Other-Than-Invested Assets)
Cash ——— 900

J. Liability for Pension Benefits ——— 552
(Aggregate Write-In for Liabilities)
Overfunded Plan Asset ——— 552

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $348.

K. Unassigned Funds ——— 900
Change in Nonadmitted - Prepaid Benefit Cost ——— 900

L. Change in Nonadmitted- Overfunded Plan Asset ——— 552
Unassigned Funds ——— 552

Entries recognize the impact as a result of the nonadmitted overfunded plan asset from entry "I" and "J."

December 31, 2014 – Recognition of Net Periodic Pension Cost

After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.

Components of Net Periodic Cost	Dec. 31, 2014
Service Cost	200
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	225
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**243.70**

This example assumes no changes in the amortization timeframe. As noted in footnote 6 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date.

Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

M. Overfunded Plan Assets 18.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds – Transition Liability 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry made to unassigned funds for the amount that will be amortized into periodic pension cost for the current period. Since the plan is currently overfunded, this is offset by overfunded plan asset.

N. Unassigned Funds 18.70
Change in Nonadmitted - Overfunded Plan Asset 18.70

This entry reflects the change in nonadmitted from entry "M."

O. Net Periodic Pension Cost 243.70
Prepaid Benefit Cost 243.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost. Once that amount is exhausted, an accrued liability would be recorded.

P. Change in Nonadmitted - Prepaid Benefit Cost 243.70
Unassigned Funds 243.70

Entries to reflect the change in nonadmitted assets for entry "O."

Example 4 - Underfunded Plan with Prepaid Benefit Cost – No Surplus Deferral Elected:

	Aggregate Write-In For Other-Than-Invested Assets		Change in Nonadmitted Assets	Net Periodic Cost	Unassigned Funds	Liability for Pension Benefits	Cash
	Overfunded Plan Asset	Prepaid Benefit Cost					
Existing Balance 12/31/2012		496 DR	496 CR[2]	–	496 CR 496 DR	–	

[2] This reflects the change reported in prior years.

~~5. Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Funded ABO~~

~~Consideration of contributions or tax effects are not reflected in this example.~~

~~**Example 5**~~	~~**Dec. 31, 2012**~~[4]	~~**Jan. 1, 2013**~~	~~**Dec. 31, 2013**~~	~~**Dec. 31, 2014**~~	~~**Jan, 1, 2015**~~	~~**Dec. 31, 2015**~~
~~Accumulated Benefit Obligation~~	~~$(1,032)~~	~~$(1,032)~~	~~$(1,232)~~	~~$(1,457)~~	~~$(1,457)~~	~~$(1,657)~~
~~Plus: Non-Vested Liability~~	~~(100)~~	~~(100)~~	~~(100)~~	~~(100)~~	~~(100)~~	~~(100)~~
~~Total Accumulated Benefit Obligation~~	~~$(1,132)~~	~~$ (1,132)~~	~~(1,332)~~	~~(1,557)~~	~~(1,557)~~	~~(1,757)~~
~~Projected Benefit Obligation~~	~~$(1,752)~~	~~$(1,752)~~	~~(2,052)~~	~~(2,177)~~	~~(2,177)~~	~~(2,377)~~
~~Plus: Non-Vested liability~~	~~(100)~~	~~(100)~~	~~(100)~~	~~(100)~~	~~(100)~~	~~100~~
~~Total PBO~~	~~$(1,852)~~	~~$(1,852)~~	~~(2,152)~~	~~(2,277)~~	~~(2,277)~~	~~(2,477)~~
~~Plan Assets at Fair Value~~	~~1,600~~	~~1,600~~	~~1,600~~	~~1,600~~	~~2,500~~	~~2,500~~

[3] ~~Since Net Periodic Cost closes to unassigned funds at the end of each year, the balance does not carry forward.~~

[4] ~~The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.~~

Funded Status	($252)	($252)	(552)	(677)	223	23
Transition Obligation/(Asset)	0	**0**	**0**	**0**	**0**	
Prior Service Cost	48	**0**	**0**	**0**	**0**	
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**	
Unrecognized Losses/(Gains)	600	**0**	**0**	**0**	**0**	
Total Unrecognized Items	748	**0**	**0**	**0**	**0**	
Net Overfunded Plan Asset/ (Liability for Benefits)	**496**	**(25.20)**	**(325.20)**	**(475.40)**	**223**	**23**
Surplus Impact Deferred		**(226.80)**	**(226.80)**	**(201.60)**	**-**	**-**

Surplus Impact – The transition guidance in SSAP No. 92 and SSAP No. 102 requires a minimum of 10% of the surplus impact on the transition date. If a systematic 10-year allocation was applied to the total "unrecognized items" rather than the surplus impact, there would be a number of years in which a prepaid asset would still be reflected without any impact to surplus even though the plan is underfunded. This is because a reduction in overfunded plan assets alone has a corresponding change to nonadmitted assets, resulting in a net zero surplus impact.

Determine the initial transition surplus impact under the deferral election:

In accordance with paragraph 93.b. of SSAP No. 102, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the **greater of**:

	Minimum Transition Liability	
93.b.i.	10% of Calculated Surplus Impact	25.20
93.b.ii.	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
93.b.iii.	Difference Between unfunded ABO and Accrued Benefit Cost. (In this example, ABO is fully funded.)	–
	Transition Liability	**25.20**

93.b.ii. Note: If the amortization cannot be determined at transition, at a minimum, the amount amortized for unrecognized items during the prior year shall be utilized for this calculation. If the amount recognized for transition (greater of all three components) is subsequently determined to be less than what was amortized for the year, the difference between what was recognized for transition and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.

January 1, 2013 – Transition Date

2. Unassigned Funds ———— 496
   Overfunded Plan Asset ———— 496
   (Aggregate Write-In for Other-Than-Invested Assets)

3. Change in Nonadmitted – Overfunded Plan Asset ———— 496
   Unassigned Funds ———— 496

4. Unassigned Funds – Transition Liability ———— 25.20
   Liability for Plan Benefits ———— 25.20
   (Aggregate for Write-In Liability)

~~Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan. (Reporting entities will need to continue to track these categories separately.) The first two entries (Entry A & B) have a **ZERO surplus impact** and the third entry recognizes a liability for 10% of the surplus impact calculated at transition as that is the greatest element from paragraph 93.b.~~

~~December 31, 2013 – Recognition of Net Periodic Pension Cost~~
~~After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.~~

~~As noted in paragraph 93.b., if surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact. As such, unless the entity elects to recognize the remaining surplus impact early (which is permitted under SSAP No. 102), there is no additional surplus impact from transition recognized as of December 31, 2013.~~

~~**Components of Net Periodic Cost**~~	~~**Dec. 31, 2013**~~
~~Service Cost~~	~~250~~
~~Interest Cost~~	~~100~~
~~Expected Return on Plan Assets~~	~~(50)~~
~~Total~~	~~300~~
~~Amortization of:~~	
~~o Prior Service Cost~~	~~1.20~~
~~o Prior Service Cost (nonvested)~~	~~2.50~~
~~o Unrecognized Losses~~	~~15.00~~
~~Total~~	~~18.70~~
~~**Total Net Periodic Pension Cost**~~	~~**318.70**~~

~~Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP No. 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.~~

~~D. Liability for Pension Benefits 18.70~~
~~*(Aggregate Write-In for Liabilities)*~~
~~Unassigned Funds – Transition Liability 18.70~~

~~This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.~~

~~E. Net Periodic Pension Cost 318.70~~
~~Prepaid Benefit Cost 318.70~~

~~*(Aggregate Write-In for Other-Than-Invested Assets)*~~

~~This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)~~

~~F. Overfunded Plan Asset~~	~~318.70~~	
~~*(Aggregate Write-In for Other-Than-Invested Assets)*~~		
~~Unassigned Funds~~		~~318.70~~

~~Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.~~

~~G. Change in Nonadmitted – Prepaid Benefit Cost~~	~~318.70~~	
~~Unassigned Funds~~		~~318.70~~

~~H. Unassigned Funds~~	~~318.70~~	
~~Change in Nonadmitted – Overfunded Plan Asset~~		~~318.70~~

~~Entries to reflect the change in nonadmitted assets for both entries "E" and "F." These entries offset.~~

~~I. Unassigned Funds~~	~~318.70~~	
~~Liability for Pension Benefits~~		~~318.70~~
~~*(Aggregate Write-In for Liabilities)*~~		

~~Entry reflects the unfunded liability from the 2013 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "I" at year-end.~~

~~December 31, 2014 – Recognition of Deferred Transition Impact~~

~~J. Unassigned Funds – Transition Liability~~	~~25.20~~	
~~Liability for Pension Benefits~~		~~25.20~~
~~*(Aggregate Write-In for Liabilities)*~~		

~~Per paragraph 93, if surplus deferral is elected at transition, beginning with 2014 annual financials, the entity shall recognize the remaining surplus impact on a systematic basis over a period not to exceed the remaining nine years. This entry represents the minimum transition liability to be recognized subsequent to transition. Since it is assumed that there is no change in the amortization expectations, and ABO is still funded, this entry reflects 10% of the transition surplus impact.~~

~~December 31, 2014 – Recognition of Net Periodic Pension Cost~~

~~**Components of Net Periodic Cost**~~	~~**Dec. 31, 2014**~~
~~Service Cost~~	~~100~~
~~Interest Cost~~	~~75~~
~~Expected Return on Plan Assets~~	~~(50)~~
~~Total~~	~~125~~
~~Amortization of:~~	
~~o Prior Service Cost~~	~~1.20~~

~~o Prior Service Cost (nonvested)~~	~~2.50~~
~~o Unrecognized Losses~~	~~15.00~~
~~Total~~	~~18.70~~
~~Total Net Periodic Pension Cost~~	**~~143.70~~**

~~Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP No. 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.~~

~~K. Liability for Pension Benefits 18.70~~
~~*(Aggregate Write-In for Liabilities)*~~
~~Unassigned Funds – Transition Liability 18.70~~

~~This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.~~

~~L. Net Periodic Pension Cost 143.70~~
~~Prepaid Benefit Cost 143.70~~
~~*(Aggregate Write-In for Other-Than-Invested Assets)*~~

~~This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)~~

~~M. Overfunded Plan Asset 143.70~~
~~*(Aggregate Write-In for Other-Than-Invested Assets)*~~
~~Unassigned Funds 143.70~~

~~Entry reflects the change in overfunded plan assets as a reduction in the contra-asset from initial transition.~~

~~N. Change in Nonadmitted – Prepaid Benefit Cost 143.70~~
~~Unassigned Funds 143.70~~

~~O. Unassigned Funds 143.70~~
~~Change in Nonadmitted – Overfunded Plan Asset 143.70~~

~~Entries reflect the change in nonadmitted assets for both entries "L" and "M." These entries offset.~~

~~P. Unassigned Funds 143.70~~
~~Liability for Pension Benefits 143.70~~
~~*(Aggregate Write-In for Liabilities)*~~

Entry reflects the unfunded liability from the 2014 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status and will also need to be recorded as part of entry "P" at year-end.

January 1, 2015 – Recognition of Cash Contribution

	Jan. 1, 2015
Contribution	$900

Q. Prepaid Benefit Cost — 900.00
(Aggregate Write-In for Other-Than-Invested Assets)
Cash — 900.00

R. Liability for Pension Benefits — 475.40
(Aggregate Write-In for Liabilities)
Overfunded Plan Asset — 475.40
(Aggregate Write-In for Other-Than-Invested Assets)

S. Unassigned Funds — 900.00
Change in Nonadmitted – Prepaid Benefit Cost — 900.00

T. Change in Nonadmitted – Overfunded Plan Asset — 475.40
Unassigned Funds — 475.40

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $223.

U. Unassigned Funds — 201.60
Overfunded Plan Asset — 201.60

Since the plan is in an overfunded status, per paragraph 93.b. of SSAP No. 102, the entity is required to recognize the deferred surplus impact from initial transition to the extent that the plan is overfunded. As the plan is overfunded by more than the remaining transition surplus impact, this entry recognizes the full remaining surplus impact deferred at transition.

V. Change in Nonadmitted – Overfunded Plan Assets — 201.60
Unassigned Funds — 201.60

Entry reflects the change in nonadmitted assets from entry "U."

December 31, 2015 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2015**
Service Cost	100
Interest Cost	175
Expected Return on Plan Assets	(75)
Total	200
Amortization of:	
o Prior Service Cost	1.20

o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**218.70**

(Previous notes on amortization continue to apply.)

W. Overfunded Plan Asset 18.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the unrecognized items recognized to unassigned funds as part of the transition guidance (even if recognized subsequent to initial recognition under the deferral option) for the amount that will be amortized into periodic pension cost for the current period.

X. Unassigned Funds 18.70
Change in Nonadmitted – Overfunded Plan Asset 18.70

Entry reflects the change in nonadmitted assets from entry "W."

Y. Net Periodic Pension Cost 218.70
Prepaid Benefit Cost 218.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.

Z. Change in Nonadmitted – Prepaid Benefit Cost 218.70
Unassigned Funds 218.70

Entry reflects the change in nonadmitted assets from entry "Y." This example assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded at year-end in an **additional entry** impacting the Overfunded Plan Asset. If the plan became underfunded due to these changes, then the amount of the underfunding would then be recorded as a Liability for Pension Benefits.

Example: Assume the PBO increased by $100 at year-end due to discount rate changes, etc. This would cause the plan to be underfunded by $77.00.

1. Unassigned Funds 100.00
Overfunded Plan Asset 23.00
Liability for Pension Benefits 77.00

2. Change in Nonadmitted – Overfunded Plan Asset 23.00
Unassigned Funds 23.00

Example 5 - Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Funded ABO:

	Aggregate Write-In For Other-Than-Invested Assets		Change in Nonadmitted Assets	Net Periodic Cost	Unassigned Funds	Liability for Pension Benefits	Cash
	Overfunded Plan Asset	Prepaid Benefit Cost					
Existing Balance 12/31/2012 (This reflects pre-2012 Entries)		**496 DR**	**496 CR**[5]	–	**496 CR** **496 DR**	–

Net Overfunded Plan Asset / (Liability for Benefits)	**496**	**(132)**	**(432)**	**(582.20)**	**223**	**23**
Additional Minimum Liability (Unfunded ABO)	(32)	0	The concept of an additional minimum liability and related intangible asset for plans with an unfunded ABO is eliminated in SSAP No. 102.			
Intangible Asset	32	0				
Surplus Impact Deferred		**(120)**	**(120)**	**(94.80)**	–	–

Surplus Impact – The transition guidance in SSAP No. 92 and SSAP No. 102 requires a minimum of 10% of the surplus impact on the transition date. If a systematic 10-year allocation was applied to the total "unrecognized items" rather than the surplus impact, there would be a number of years in which a prepaid asset would still be reflected, without any impact to surplus, even though the plan is underfunded. This is because a reduced in overfunded plan assets alone has a corresponding change to nonadmitted assets, resulting in a net zero surplus impact.

Determine the initial transition surplus impact under the deferral election:

In accordance with paragraph 93.b. of SSAP No. 102, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the **greater of**:

	Minimum Transition Liability	
93.b.i	10% of Calculated Surplus Impact at Transition	25.20

[7] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

93.b.ii	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
93.b.iii	Difference Between unfunded ABO and Accrued Benefit Cost.	132.00
	Transition Liability	**132.00**

93.b.ii. Note: If the amortization cannot be determined at transition, at a minimum, the amount amortized for unrecognized items during the prior year shall be utilized for this calculation. If the amount recognized for transition (greater of all three components) is subsequently determined to be less than what was amortized for the year, the difference between what was recognized for transition and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.

January 1, 2013 – Transition Date

Reversal of Additional Minimum Liabilities/Intangible Plan Assets: As this plan has an unfunded ABO, following the guidance under SSAP No. 89, the entity had recognized an additional minimum liability and corresponding admitted intangible asset. As the concept of an additional minimum liability has been eliminated from SSAP No. 102, at transition these amounts are eliminated, with the determination of the overfunded/unfunded projected benefit obligation calculated subsequent to the elimination.

	Debit	Credit
Unassigned Funds	32	
Intangible Asset		32
Additional Minimum Liability	32	
Unassigned Funds		32

Application of SSAP No. 102 – Recognition of Unfunded Status with Surplus Deferral:

	Debit	Credit
A. Unassigned Funds	496	
Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*		496
B. Change in Nonadmitted – Overfunded Plan Asset	496	
Unassigned Funds		496
C. Unassigned Funds – Transition Liability	132	
Liability for Pension Benefits		132

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan. (Reporting entities will need to continue to track these categories separately.) Entries A & B have a **ZERO surplus impact** and the third entry recognizes a liability for the unfunded ABO per the requirements of paragraph 93.b.

December 31, 2013 – Recognition of Net Periodic Pension Cost

After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses, and 6) amortization of any transition asset or obligation remaining in unassigned funds.

As noted in paragraph 93.b., if surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact. As such,

unless the entity elects to recognize the remaining surplus impact early (which is permitted under SSAP No. 102), there is no additional surplus impact from transition recognized as of December 31, 2013.

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	300
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**318.70**

Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

D. Liability for Pension Benefits 18.70
(Aggregate Write-In for Liabilities)
Unassigned Funds – Transition Liability 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

E. Net Periodic Pension Cost 318.70
Prepaid Benefit Cost 318.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

F. Overfunded Plan Asset 318.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 318.70

Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.

G. Change in Nonadmitted – Prepaid Benefit Cost 318.70
Unassigned Funds 318.70

H. Unassigned Funds 318.70
Change in Nonadmitted – Overfunded Plan Asset 318.70

Entries to reflect the change in nonadmitted assets for both entries "E" and "F." These entries offset.

I. Unassigned Funds 318.70
Liability for Pension Benefits 318.70
(Aggregate Write-In for Liabilities)

Entry reflects the unfunded liability from the 2013 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status and will also need to be recorded as part of entry "I" at year-end.

December 31, 2014 – Recognition of Deferred Transition Impact

In accordance with paragraph 93 of SSAP No. 102, the minimum amount recognized each subsequent year shall be an amount that reflects the conditions of paragraph 93.b. As such, the surplus recognized shall be the **greater of:**

	Minimum Transition Liability	
93.b.i.	10% of Calculated Surplus Impact at Transition	25.20
93.b.ii.	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
93.b.iii.	Difference Between unfunded ABO and Accrued Benefit Cost/Fair Value of Plan Assets. (Dec. 31, 2014 - Fair value of plan assets together with the Liability for Pension Benefits exceed the ABO.)	–
	Transition Liability	**25.20**

(Previous note on amortization continues to apply.)

J. Unassigned Funds – Transition Liability 25.20
Liability for Pension Benefits 25.20
(Aggregate Write-In for Liabilities)

Entry represents the minimum transition liability to be recognized subsequent to transition. (10% of the transition surplus impact is the greatest component of paragraph 93.b. as of Dec. 31, 2014.)

December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	100
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	125
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70

Total Net Periodic Pension Cost	143.70

(Previous note on amortization continues to apply.)

K. Liability for Pension Benefits 18.70
(Aggregate Write-In for Liabilities)
Unassigned Funds – Transition Liability 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the unrecognized items recognized to unassigned funds as part of the transition guidance (even if recognized subsequent to initial recognition under the deferral option) for the amount that will be amortized into periodic pension cost for the current period.

L. Net Periodic Pension Cost 143.70
Prepaid Benefit Cost 143.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

M. Overfunded Plan Asset 143.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 143.70

Entry reflects the change in overfunded plan assets as a reduction in the contra-asset to correspond with the change in net periodic pension cost. With this entry, the Prepaid Benefit Cost and Overfunded Plan Assets net to zero. This is appropriate as the plan is underfunded and a liability is reflected.

N. Change in Nonadmitted – Prepaid Benefit Cost 143.70
Unassigned Funds 143.70

O. Unassigned Funds 143.70
Change in Nonadmitted – Overfunded Plan Asset 143.70

Entries to reflect the change in nonadmitted assets for both entries "L" and "M." These entries offset.

P. Unassigned Funds 143.70
Liability for Pension Benefits 143.70
(Aggregate Write-In for Liabilities)

Entry reflects the full unfunded liability, including impact from the 2014 plan-related costs.

Note - This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status and will also need to be recorded as part of entry "P" at year-end.

January 1, 2015 – Recognition of Cash Contribution

	Jan. 1, 2015
Contribution	$900

Q. Prepaid Benefit Costs 900.00
(Aggregate Write-In for Other-Than-Invested Assets)
Cash 900.00

R. Liability for Pension Benefits 582.20
(Aggregate Write-In for Liabilities)
Overfunded Plan Asset 582.20
(Aggregate Write-In for Other-Than-Invested Assets)

S. Unassigned Funds 900.00
Change in Nonadmitted – Prepaid Benefit Cost 900.00

T. Change in Nonadmitted – Overfunded Plan Asset 582.20
Unassigned Funds 582.20

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $223.

U. Unassigned Funds 94.80
Overfunded Plan Assets 94.80

As the surplus deferral was elected, with the overfunded status, per paragraph 93.b. of SSAP No. 102, the entity is required to recognize the deferred surplus impact from initial transition to the extent that the plan is overfunded. As the plan is overfunded by more than the remaining transition surplus impact, this entry recognizes the full remaining surplus impact deferred at transition.

V. Change in Nonadmitted – Overfunded Plan Assets 94.80
Unassigned Funds 94.80

Entry reflects the change in nonadmitted assets from entry U.

December 31, 2015 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2015**
Service Cost	100
Interest Cost	175
Expected Return on Plan Assets	(75)
Total	200
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**218.70**

(Prior amortization note continues to apply.)

W. Overfunded Plan Asset 18.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

X. Unassigned Funds 18.70
Change in Nonadmitted – Overfunded Plan Asset 18.70

Entry reflects the change in nonadmitted assets from entry "W."

Y. Net Periodic Pension Cost 218.70
Prepaid Benefit Cost 218.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.

Z. Change in Nonadmitted – Prepaid Benefit Cost 218.70
Unassigned Funds 218.70

Entry reflects the change in nonadmitted assets from entry "Y."

Example 6 - Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Unfunded ABO:

	Aggregate Write-In For Other-Than-Invested Assets		Change in Nonadmitted Assets	Net Periodic Cost	Unassigned Funds	Liability for Pension Benefits	Cash
	Overfunded Plan Asset	Prepaid Benefit Cost

Staff Review Completed by: Jake Stultz, July 2023

Status:
On August 13, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 92 and SSAP No. 102 to remove the transition guidance that was no longer applicable as the ten-year effective period for that transition has ended.

On October 23, 2023, the Statutory Accounting Principles (E) Working Group adopted the exposed revisions, as illustrated above, to SSAP No. 92 and SSAP No.102 to remove the transition guidance that is no longer applicable as the ten-year effective period for that transition has ended.

https://naiconline.sharepoint.com/teams/FRSStatutoryAccounting/National Meetings/A. National Meeting Materials/2023/10-23-23/Adoptions/23-21 - Remove Transition Language SSAP 92, 102.docx

Revisions to the
As of March 2023, Accounting Practices and Procedures Manual

On **December 1, 2023**, the Statutory Accounting Principles (E) Working Group adopted the following revisions to the *As of March 2023 Accounting Practices and Procedures Manual*. Documents associated with these revisions are linked to the reference items in bold text.

Ref #	SSAP/ Appendix	Title	Summary
2023-15	Annual Statement Instructions	IMR / AVR Specific Allocations *SAP Clarification* Effective January 1, 2024	Adopted revisions address guidance that has permitted allocation of non-interest-related losses to the interest maintenance reserve (IMR) for mortgage loans with valuation allowances and debt securities with known credit events.
2023-17	SSAP No. 2R	Short-Term Investments *New SAP Concept* Effective January 1, 2025	Adopted revisions further restrict the investments that are permitted for cash equivalent and short-term reporting. Revisions exclude all Schedule BA: Other Long-Term Investments and mortgage loans.
2023-22	SSAP No. 54R	Actuarial Guideline 51 and Appendix A-010 Interaction *SAP Clarification* Effective Immediately December 1, 2023	Adopted revisions clarify that gross premium valuation (under *A-010, Minimum Reserve Standards for Individual and Group Health*) and cash-flow testing (under *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves*) are both required if indicated.
2023-23	SSAP No. 30R SSAP No. 32R	Residuals in Preferred Stock and Common Stock Structures *SAP Clarification* Effective December 31, 2023	Adopted revisions clarify that investments that are in-substance residual interests shall be reported on Schedule BA on the dedicated reporting line for residuals.

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: IMR / AVR Specific Allocations

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☐	☒	☐
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: This agenda item has been developed to update guidance for IMR / AVR in the Annual Statement (A/S) Instructions that currently establish specific allocation guidance. The principal concept of the IMR and AVR is that interest-related losses go to IMR, and non-interest-related losses go to AVR. This agenda is to correct instructions that appear to direct an entity to allocate non-interest-related losses to IMR rather than correctly to the AVR.

Although the presence of examples for illustration or guiding purposes are beneficial, the current annual statement instructions have permitted unintended allocations that do not reflect the intent of the principles. These have been specifically noted through inquiries to NAIC staff, particularly within the last year. NAIC staff believes these inquiries have been spurred by the discussions regarding the industry request to admit net negative IMR, therefore creating an incentive to allocate losses to IMR instead of AVR.

This agenda item will focus on the following specific allocations within the A/S instructions:

1) NAIC Designation Changes for Debt Securities (excluding LBSS)
2) Mortgage Loans

1) <u>NAIC Designation Change:</u>

IMR: Include realized capital gains (losses) on Debt securities (excluding loan-backed and structured securities) and preferred stocks whose National Association of Insurance Commissioners (NAIC)/Securities Valuation Office (SVO) designation at the end of the holding period is **NOT** different from its NAIC designation at the beginning of the holding period by more than one NAIC designation. Exclude any such gains (losses) exempt from the IMR.

AVR: Report all realized capital gains (losses), net of capital gains tax, on each debt security (excluding loan-backed and structured securities) whose NAIC/SVO designation at the end of the holding period is different from its NAIC/SVO designation at the beginning of the holding period by more than one NAIC/SVO designation. The holding period is defined as the period from the date of purchase to the date of sale. For end of period classification, the most recent available designation should be used. For bonds acquired before Jan. 1, 1991, the holding period is presumed to have begun on Dec. 31, 1990

NAIC Discussion: NAIC staff have historically been contacted on the application of this guidance, particularly when the reporting entity rushes to sell a security prior to an official credit rating or SVO designation downgrade has occurred. For 2023, this was evident from questions received with the downgrade of several regional banks. With a literal read of the guidance, if a Credit Rating Provider (CRP) downgraded banks on April 21, 2023, a reporting entity that expected such downgrades and sold the security at a loss prior to the downgrade would be permitted to report the loss through IMR as the downgrade did not occur during the reporting entity's "holding period." Similar questions have occurred in prior years in situations where it was evident that a downgrade was forthcoming (e.g., PG&E in response to the California wildfires). Although the guidance could be retained as an absolute for reporting to AVR, as a "credit loss" is presumed to occur when there has been a more-than-one

designation change, it is NAIC staff's interpretation that this guidance should not permit inappropriate allocation of non-interest related declines to IMR simply because a sale is able to occur prior to the official downgrade.

2) **Mortgage Loans:**

IMR: Include realized capital gains (losses) on: Mortgage loans where:1) Interest is NOT more than 90 days past due, or 2) The loan is NOT in process of foreclosure, or 3) The loan is NOT in course of voluntary conveyance, or 4) The terms of the loan have NOT been restructured during the prior two years.

AVR: In addition, all gains (losses), net of capital gains tax, on mortgage loans where 1) Interest is more than 90 days past due, or 2) The loan is in the process of foreclosure, or 3)The loan is in course of voluntary conveyance, or 4)The terms of the loan have been restructured during the prior two years would be classified as non-interest-related gains (losses).

NAIC Discussion: NAIC staff has recently been contacted as the current IMR / AVR guidance is specific that a mortgage loan must be 90 days past due or in process of foreclosure to report the loss to AVR. As such, if a reporting entity has established a valuation allowance under *SSAP No. 37—Mortgage Loans*, because the loan is impaired and they do not believe it is probable that they will collect all amounts due according to the contractual terms of the mortgage loan, and the reporting entity sells the mortgage loan before it is 90-days past due, a literal read of the guidance permits the loss to be fully allocated to IMR. Similar to the discussion on the NAIC designation change, such situations exist when the reporting entity has an expectation of expected credit loss (as a valuation allowance is only established when a mortgage loan is impaired), but the provisions of the A/S instructions direct to IMR.

Existing Authoritative Literature:

- **SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve (included in entirety)**

SCOPE OF STATEMENT
This statement establishes statutory accounting principles for an asset valuation reserve (AVR) and an interest maintenance reserve (IMR) for life and accident and health insurance companies, excluding separate accounts. Separate account AVR/IMR reporting is addressed in *SSAP No. 56—Separate Accounts.*

SUMMARY CONCLUSION
Life and accident and health insurance companies shall recognize liabilities for an AVR and an IMR. The AVR is intended to establish a reserve to offset potential credit-related investment losses on all invested asset categories excluding cash, policy loans, premium notes, collateral notes and income receivable. The IMR defers recognition of the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the investments sold. The IMR also applies to certain liability gains/losses related to changes in interest rates. These gains and losses shall be amortized into investment income over the expected remaining life of the liability released.

The IMR and AVR shall be calculated and reported as determined per guidance in the SSAP for the specific type of investment (e.g., SSAP No. 43R for loan-backed and structured securities), or if not specifically stated in the respective SSAP, in accordance with the NAIC *Annual Statement Instructions* for Life and Accident and Health Insurance Companies.

Effective Date and Transition
This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

- **A/S Instructions – Life, Accident and Health / Fraternal Companies**

Interest Maintenance Reserve (IMR)

Line 2 – Current Year's Realized Pre-tax Capital Gains (Losses) of $______ Transferred into the Reserve Net of Taxes of $______

Include interest-rate-related realized capital gains (losses), net of capital gains tax thereon. All realized capital gains (losses) transferred to the IMR are net of capital gains taxes thereon. Exclude non-interest-related (default) realized capital gains and (losses), realized capital gains (losses) on equity investments, and unrealized capital gains (losses).

All realized capital gains (losses), due to interest rate changes on fixed income investments, net of related capital gains tax, should be captured in the IMR and amortized into income (Column 2, Lines 1 through 31) according to Table 1 or the seriatim method. Realized capital gains (losses) must be classified as either interest (IMR) or non-interest (AVR) related, not a combination except as specified in *SSAP No. 43R—Loan-Backed and Structured Securities*. Purchase lots with the same CUSIP are treated as individual assets for IMR and Asset Valuation Reserve (AVR) purposes.

Exclude those capital gains and (losses) that, in accordance with contract terms have been used to directly increase or (decrease) contract benefit payments or reserves during the reporting period. The purpose of this exclusion is to avoid the duplicate utilization of such gains and (losses).

Capital gains tax should be determined using the method developed by the company to allocate taxes used for statutory financial reporting purposes. By capturing the realized capital gains (losses) net of tax, the capital gains tax associated with those capital gains (losses) due to an interest rate change is charged or credited to the IMR and amortized in proportion to the before-tax amortization.

Include realized capital gains (losses) on:

Debt securities (excluding loan-backed and structured securities) and preferred stocks whose National Association of Insurance Commissioners (NAIC)/Securities Valuation Office (SVO) designation at the end of the holding period is **NOT** different from its NAIC designation at the beginning of the holding period by more than one NAIC designation. Exclude any such gains (losses) exempt from the IMR.

Exchange Traded Funds (ETFs) as listed on the SVO Identified Bond ETF List (thereafter subject to bond IMR guidelines) and the SVO Identified Preferred Stock ETF List (thereafter subject to preferred stock IMR guidelines). Include any capital gains (losses) realized by the Company, whether from sale of the ETF or capital gains distributions by the ETF. If the ETF is removed from either SVO ETF list, the ETF is reported and treated as common stock, with any capital gains/(losses) excluded from the IMR.

SVO Identified Funds designated for systematic value

Called bonds, tendered bonds, and sinking fund payments.

Mortgage loans where:

- Interest is **NOT** more than 90 days past due, or
- The loan is **NOT** in process of foreclosure, or
- The loan is **NOT** in course of voluntary conveyance, or
- The terms of the loan have **NOT** been restructured during the prior two years.

Additional Provisions for Including/Excluding Gains (Losses) from IMR:

© 2023 National Association of Insurance Commissioners

Mortgage loan prepayment penalties are not included in IMR. Treat them as regular investment income.

Interest-related gains (losses) realized on directly held capital and surplus notes reported on Schedule BA should be transferred to the IMR in the same manner as similar gains and (losses) on fixed income assets held on Schedule D. A capital gain (loss) on such a note is classified as an interest rate gain if the note is eligible for amortized-value accounting at both the time of acquisition and the time of disposition.

Determination of IMR gain (loss) on multiple lots of the same securities should follow the underlying accounting treatment in determining the gain (loss). Thus, the designation, on a purchase lot basis, should be compared to the designation at the end of the holding period to determine IMR or AVR gain or (loss).

Realized capital gains (losses) on any debt security (excluding loan-backed and structured securities) that has had an NAIC/SVO designation of 6 at any time during the holding period should be excluded from the IMR and included as a non-interest-related gain (loss) in the AVR.

Realized capital gains (losses) on any preferred stock that had an NAIC/SVO designation of RP4, RP5 or RP6 or P4, P5 or P6 at any time during the holding period should be reported as non-interest-related gains (losses) in the AVR.

The holding period for debt securities (excluding loan-backed and structured securities) and preferred stocks is defined as the period from the date of purchase to the date of sale. For the end of period classification, the most recent available designation should be used. For bonds acquired before Jan. 1, 1991, the holding period is presumed to have begun on Dec. 31, 1990. For preferred stocks acquired before Jan. 1, 1993, the holding period is presumed to have begun on Dec. 31, 1992. For SVO Identified ETFs, the holding period is defined as one calendar year to expected maturity. For SVO Identified Funds designated for systematic value, the holding period is the weighted-average life of the underlying bonds.

In accordance with *SSAP No. 26R—Bonds*, securities with other-than-temporary impairment losses shall be recorded entirely to either AVR or IMR and not bifurcated between interest and non-interest components.

Asset Valuation Reserve (AVR)

Line 2 – Realized Capital Gains (Losses) Net of Taxes – General Account

Report all realized non-interest-related (default) and equity capital gains (losses), net of capital gains tax, applicable to the assets in each component and sub-component. All realized capital gains (losses) transferred to the AVR are net of capital gains taxes thereon. Exclude all interest rate-related capital gains (losses) from the AVR.

Capital gains tax should be determined using the method developed by the company to allocate taxes used for statutory financial reporting purposes.

Report all realized capital gains (losses), net of capital gains tax, on each debt security (excluding loan-backed and structured securities) whose NAIC/SVO designation at the end of the holding period is different from its NAIC/SVO designation at the beginning of the holding period by more than one NAIC/SVO designation. The holding period is defined as the period from the date of purchase to the date of sale. For end of period classification, the most recent available designation should be used. For bonds acquired before Jan. 1, 1991, the holding period is presumed to have begun on Dec. 31, 1990.

Determination of AVR gain (loss) on multiple lots of the same fixed income securities should follow the underlying accounting treatment in determining gain (loss). Thus, the designation, on a purchase lot basis, should be compared to the designation at the end of the holding period to determine IMR or AVR gain or (loss).

In accordance with *SSAP No. 26R—Bonds*, securities with other-than-temporary impairment losses shall be recorded entirely to either AVR or IMR and not bifurcated between interest and non-interest components.

In accordance with *SSAP No. 43R—Loan-Backed and Structured Securities*, for loan-backed and structured securities only:

- Other-Than-Temporary Impairment – Non-interest-related other-than-temporary impairment losses shall be recorded through the AVR. If the reporting entity wrote the security down to fair value due to the intent to sell or does not have the intent and ability to retain the investment for a period of time sufficient to recover the amortized cost basis, the non-interest-related portion of the other-than-temporary impairment losses shall be recorded through the AVR; the interest related other-than-temporary impairment losses shall be recorded through the IMR. The analysis for bifurcating impairment losses between AVR and IMR shall be completed as of the date when the other-than-temporary impairment is determined.

- Security Sold at a Loss Without Prior OTTI – An entity shall bifurcate the loss into AVR and IMR portions depending on interest- and non-interest-related declines in accordance with the analysis performed as of the date of sale. As such, an entity shall report the loss in separate AVR and IMR components as appropriate.

- Security Sold at a Loss with Prior OTTI – An entity shall bifurcate the current realized loss into AVR and IMR portions depending on interest- and non-interest-related declines in accordance with the analysis performed as of the date of sale. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

- Security Sold at a Gain with Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale. The bifurcation between AVR and IMR that occurs as of the date of sale may be different from the AVR and IMR allocation that occurred at the time of previous other-than-temporary impairments. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

- Security Sold at a Gain Without Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale.

In addition, all gains (losses), net of capital gains tax, on mortgage loans where:

- Interest is more than 90 days past due, or
- The loan is in the process of foreclosure, or
- The loan is in course of voluntary conveyance, or
- The terms of the loan have been restructured during the prior two years

Would be classified as non-interest-related gains (losses).

The gain (loss), net of capital gains tax, on any debt security (excluding loan-backed and structured securities) that has had an NAIC/SVO designation of “6” at any time during the holding period should be reported as a credit related gain (loss).

All capital gains (losses), net of capital gains tax, from preferred stock that had an NAIC/SVO designation of RP4, RP5 or RP6 or P4, P5 or P6 at any time during the holding period should be reported as on-interest-related gains (losses) in the AVR.

However, for a convertible bond or preferred stock purchased while its conversion value exceeds its par value, any gain (loss) realized from its sale before conversion must be included in the Equity Component of the AVR. Conversion Value is defined to mean the number of shares available currently or at next conversion date multiplied by the stock's current market price.

Report all realized equity capital gains (losses), net of capital gains tax, in the appropriate sub-components.

The following guidance pertains to instruments in Scope of *SSAP No. 86—Derivatives*:

- For derivative instruments used in hedging transactions, the determination of whether the capital gains (losses) are allocable to the IMR or the AVR is based on how the underlying asset is treated. Realized gains (losses), net of capital gains tax, on portfolio or general hedging instruments should be included with the hedged asset. Gains (losses), net of capital gains tax, on hedges used, as specific hedges should be included only if the specific hedged asset is sold or disposed of.

- For income generation derivative transactions, the determination of whether the capital gains (losses) are allocable to the IMR or the AVR is based on how the underlying interest (for a put) or covering asset (for a call, cap or floor) is treated. Realized gains (losses), net of capital gains tax should be included in the same sub-component where the realized gains (losses) of the underlying interest (for a put) or covering asset (for a call, cap or floor) is reported. Refer to *SSAP No. 86—Derivatives* for accounting guidance.

Realized gains (losses), net of capital gains tax, resulting from the sale of U.S. government securities and the direct or guaranteed securities of agencies which are backed by the full faith and credit of the U.S. government are exempt from the AVR. This category is described in the Investment Schedules General Instructions.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Agenda item 2022-19: Negative IMR, identified that the accounting guidance for IMR, including the provisions on negative IMR, are currently captured in the Annual Statement Instructions. *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*, points to the Annual Statement Instructions for the IMR and AVR calculation. This agenda item resulted with the issuance of INT 23-01T to provide a limited-time, optional, exception to the nonadmittance of net negative (disallowed) IMR.

- Agenda Item 2023-XX: SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve establishes a broad project to capture accounting guidance for AVR and IMR in SSAP No. 7.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): N/A

Recommendation:
NAIC staff recommend that the Working Group include this item on their maintenance agenda as a new SAP concept and expose this agenda item with proposed revisions to the A/S instructions to remove the guidance that permits the allocation of non-interest related losses to IMR. (Although NAIC staff believes this

guidance is clarifying the original intent of IMR/AVR allocation, the revisions reflect a distinct change in practice to reduce the allocation of non-interest-related losses to the IMR.)

This agenda item is focusing solely on the specific allocation "absolutes" that currently exists in the A/S instructions to ensure that the guidance does not inadvertently permit the allocation of non-interest-related changes to the IMR. This agenda item is addressing one of the specific discussion topics noted in agenda item 2023-XX. Further revisions and assessment on other aspects of the IMR/AVR allocation, including whether gains and losses from bonds (and other investments) should be bifurcated between IMR/AVR, will be addressed in subsequent agenda items. (Revisions will subsequently captured in the SSAPs as part of the long-term project, but these revisions are proposed for immediate clarification edits in the A/S instructions as that is where guidance currently resides.)

Interest Maintenance Reserve (IMR)

Line 2 – Current Year's Realized Pre-tax Capital Gains (Losses) of $______ Transferred into the Reserve Net of Taxes of $______

Include interest-rate-related realized capital gains (losses), net of capital gains tax thereon. All realized capital gains (losses) transferred to the IMR are net of capital gains taxes thereon. Exclude non-interest-related (default) realized capital gains and (losses), realized capital gains (losses) on equity investments, and unrealized capital gains (losses).

All realized capital gains (losses), due to interest rate changes on fixed income investments, net of related capital gains tax, should be captured in the IMR and amortized into income (Column 2, Lines 1 through 31) according to Table 1 or the seriatim method. Realized capital gains (losses) must be classified as either interest (IMR) or non-interest (AVR) related, not a combination except as specified in *SSAP No. 43R—Loan-Backed and Structured Securities*. Purchase lots with the same CUSIP are treated as individual assets for IMR and Asset Valuation Reserve (AVR) purposes.

Exclude those capital gains and (losses) that, in accordance with contract terms have been used to directly increase or (decrease) contract benefit payments or reserves during the reporting period. The purpose of this exclusion is to avoid the duplicate utilization of such gains and (losses).

Capital gains tax should be determined using the method developed by the company to allocate taxes used for statutory financial reporting purposes. By capturing the realized capital gains (losses) net of tax, the capital gains tax associated with those capital gains (losses) due to an interest rate change is charged or credited to the IMR and amortized in proportion to the before-tax amortization.

Include realized capital gains (losses) on:

Debt securities (excluding loan-backed and structured securities) and preferred stocks where the realized capital gains (losses) more predominantly reflect interest-related changes. By default, debt instruments whose National Association of Insurance Commissioners (NAIC)/Securities Valuation Office (SVO) designation at the end of the holding period, or within a reasonable amount of time after the reporting entity has sold/disposed of the instrument, areis ~~**NOT**~~ different from its NAIC designation at the beginning of the holding period by more than one NAIC designation or NAIC designation category shall not be considered to reflect interest-related changes. Gains (losses) from those debt instruments shall NOT be reported in the IMR and shall be reported in the AVR ~~Exclude any such gains (losses) exempt from the IMR.~~

Exchange Traded Funds (ETFs) as listed on the SVO Identified Bond ETF List (thereafter subject to bond IMR guidelines) and the SVO Identified Preferred Stock ETF List (thereafter subject to preferred stock IMR guidelines). Include any capital gains (losses) realized by

the Company, whether from sale of the ETF or capital gains distributions by the ETF. If the ETF is removed from either SVO ETF list, the ETF is reported and treated as common stock, with any capital gains/(losses) excluded from the IMR.

SVO Identified Funds designated for systematic value

Called bonds, tendered bonds, and sinking fund payments.

Mortgage loans where the realized gains (losses) more predominantly reflect interest-related changes. By default, mortgage loans that meet any of the following criteria shall not be considered to reflect interest-related losses. Realized gains (losses) from mortgage loans with these characteristics shall be reported in the AVR:

- Any mortgage loan sold/disposed with an established valuation allowance under SSAP No. 37, or

- Interest is ~~NOT~~ more than 90 days past due, or

- The loan is ~~NOT~~ in process of foreclosure, or

- The loan is ~~NOT~~ in course of voluntary conveyance, or

- The terms of the loan have ~~NOT~~ been restructured during the prior two years.

Additional Provisions for Including/Excluding Gains (Losses) from IMR:

Mortgage loan prepayment penalties are not included in IMR. Treat them as regular investment income.

Interest-related gains (losses) realized on directly held capital and surplus notes reported on Schedule BA should be transferred to the IMR in the same manner as similar gains and (losses) on fixed income assets held on Schedule D. A capital gain (loss) on such a note is classified as an interest rate gain if the note is eligible for amortized-value accounting at both the time of acquisition and the time of disposition.

Determination of IMR gain (loss) on multiple lots of the same securities should follow the underlying accounting treatment in determining the gain (loss). Thus, the designation, on a purchase lot basis, should be compared to the designation at the end of the holding period to determine IMR or AVR gain or (loss).

Realized capital gains (losses) on any debt security (excluding loan-backed and structured securities) that has had an NAIC/SVO designation of 6 at any time during the holding period should be excluded from the IMR and included as a non-interest-related gain (loss) in the AVR.

Realized capital gains (losses) on any preferred stock that had an NAIC/SVO designation of RP4, RP5 or RP6 or P4, P5 or P6 at any time during the holding period should be reported as non-interest-related gains (losses) in the AVR.

The holding period for debt securities (excluding loan-backed and structured securities) and preferred stocks is defined as the period from the date of purchase to the date of sale. For the end of period classification, the most recent available designation should be used. For bonds acquired before Jan. 1, 1991, the holding period is presumed to have begun on Dec. 31, 1990. For preferred stocks acquired before Jan. 1, 1993, the holding period is presumed to have begun on Dec. 31, 1992. For SVO Identified ETFs, the holding period is defined as one calendar year to expected maturity. For SVO Identified Funds designated for systematic value, the holding period is the weighted-average life of the underlying bonds.

© 2023 National Association of Insurance Commissioners

In accordance with *SSAP No. 26R—Bonds*, securities with other-than-temporary impairment losses shall be recorded entirely to either AVR or IMR and not bifurcated between interest and non-interest components.

Asset Valuation Reserve (AVR)

Line 2 – Realized Capital Gains (Losses) Net of Taxes – General Account

Report all realized non-interest-related (default) and equity capital gains (losses), net of capital gains tax, applicable to the assets in each component and sub-component. All realized capital gains (losses) transferred to the AVR are net of capital gains taxes thereon. Exclude all interest rate-related capital gains (losses) from the AVR.

Capital gains tax should be determined using the method developed by the company to allocate taxes used for statutory financial reporting purposes.

Report all realized capital gains (losses), net of capital gains tax, on each debt security (excluding loan-backed and structured securities) where the realized capital gains (losses) more predominantly reflect non-interest-related changes. By default, debt instruments whose NAIC/SVO designation at the end of the holding period, or within a reasonable amount of time after the reporting entity has sold/disposed of the instrument, is different from its NAIC/SVO designation at the beginning of the holding period by more than one NAIC designation or NAIC designation category shall be considered to reflect non-interest-related changes. Gains (losses) from those debt instruments shall be reported in the AVR~~by more than one NAIC/SVO designation. The holding period is defined as the period from the date of purchase to the date of sale. For end of period classification, the most recent available designation should be used. For bonds acquired before Jan. 1, 1991, the holding period is presumed to have begun on Dec. 31, 1990.~~.

Determination of AVR gain (loss) on multiple lots of the same fixed income securities should follow the underlying accounting treatment in determining gain (loss). Thus, the designation, on a purchase lot basis, should be compared to the designation at the end of the holding period to determine IMR or AVR gain or (loss).

In accordance with *SSAP No. 26R—Bonds*, securities with other-than-temporary impairment losses shall be recorded entirely to either AVR or IMR and not bifurcated between interest and non-interest components.

In accordance with *SSAP No. 43R—Loan-Backed and Structured Securities*, for loan-backed and structured securities only:

- Other-Than-Temporary Impairment – Non-interest-related other-than-temporary impairment losses shall be recorded through the AVR. If the reporting entity wrote the security down to fair value due to the intent to sell or does not have the intent and ability to retain the investment for a period of time sufficient to recover the amortized cost basis, the non-interest-related portion of the other-than-temporary impairment losses shall be recorded through the AVR; the interest related other-than-temporary impairment losses shall be recorded through the IMR. The analysis for bifurcating impairment losses between AVR and IMR shall be completed as of the date when the other-than-temporary impairment is determined.

- Security Sold at a Loss Without Prior OTTI – An entity shall bifurcate the loss into AVR and IMR portions depending on interest- and non-interest-related declines in accordance with the analysis performed as of the date of sale. As such, an entity shall report the loss in separate AVR and IMR components as appropriate.

- Security Sold at a Loss with Prior OTTI – An entity shall bifurcate the current realized loss into AVR and IMR portions depending on interest- and non-interest-related declines in accordance with the analysis performed as of the date of sale. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

- Security Sold at a Gain with Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale. The bifurcation between AVR and IMR that occurs as of the date of sale may be different from the AVR and IMR allocation that occurred at the time of previous other-than-temporary impairments. An entity shall not adjust previous allocations to AVR and IMR that resulted from previous recognition of other-than-temporary impairments.

- Security Sold at a Gain Without Prior OTTI – An entity shall bifurcate the gain into AVR and IMR portions depending on interest and non-interest factors in accordance with the analysis performed as of the date of sale.

In addition, all gains (losses), net of capital gains tax, on mortgage loans where the realized gains (losses) more predominantly reflect non-interest-related changes. By default, mortgage loans that meet any of the following criteria shall be considered to reflect non-interest-related changes and realized gains (losses) from mortgage loans with these characteristics shall be reported in the AVR:

- Any mortgage loan sold/disposed with an established valuation allowance under SSAP No. 37, or
- Interest is more than 90 days past due, or
- The loan is in the process of foreclosure, or
- The loan is in course of voluntary conveyance, or
- The terms of the loan have been restructured during the prior two years

~~Would be classified as non-interest-related gains (losses).~~

The gain (loss), net of capital gains tax, on any debt security (excluding loan-backed and structured securities) that has had an NAIC/SVO designation of "6" at any time during the holding period should be reported as a credit related gain (loss).

All capital gains (losses), net of capital gains tax, from preferred stock that had an NAIC/SVO designation of RP4, RP5 or RP6 or P4, P5 or P6 at any time during the holding period should be reported as on-interest-related gains (losses) in the AVR.

However, for a convertible bond or preferred stock purchased while its conversion value exceeds its par value, any gain (loss) realized from its sale before conversion must be included in the Equity Component of the AVR. Conversion Value is defined to mean the number of shares available currently or at next conversion date multiplied by the stock's current market price.

Report all realized equity capital gains (losses), net of capital gains tax, in the appropriate sub-components.

The following guidance pertains to instruments in Scope of *SSAP No. 86—Derivatives*:

- For derivative instruments used in hedging transactions, the determination of whether the capital gains (losses) are allocable to the IMR or the AVR is based on how the underlying asset is treated. Realized gains (losses), net of capital gains tax, on portfolio or general hedging instruments should be included with the hedged asset. Gains (losses), net of

capital gains tax, on hedges used, as specific hedges should be included only if the specific hedged asset is sold or disposed of.

- For income generation derivative transactions, the determination of whether the capital gains (losses) are allocable to the IMR or the AVR is based on how the underlying interest (for a put) or covering asset (for a call, cap or floor) is treated. Realized gains (losses), net of capital gains tax should be included in the same sub-component where the realized gains (losses) of the underlying interest (for a put) or covering asset (for a call, cap or floor) is reported. Refer to *SSAP No. 86—Derivatives* for accounting guidance.

Realized gains (losses), net of capital gains tax, resulting from the sale of U.S. government securities and the direct or guaranteed securities of agencies which are backed by the full faith and credit of the U.S. government are exempt from the AVR. This category is described in the Investment Schedules General Instructions.

Staff Review Completed by: Julie Gann - NAIC Staff, July 2023

Status:
On August 13, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a new SAP concept, and exposed proposed revisions to the annual statement instructions to remove the guidance that permits the specific allocation of non-interest related losses to IMR.

On December 1, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to the annual statement instructions to remove the guidance that permits the specific allocation of non-interest related losses to IMR with an effective date of January 1, 2024. The revisions from the exposure incorporate interested parties' comments on debt securities. This agenda item does not result in revisions to a SSAP. As this agenda item proposes revisions to the annual statement instructions, the adoption will be communicated via a memo to the Blanks (E) Working Group. The adoption incorporates the mortgage loan revisions as exposed and incorporates guidance for debt securities that directs AVR reporting if there is an acute credit event that negatively impacts the price of the security that has not yet been reflected in the CRP ratings/SVO feed at the time of the sale where the resulting gain/loss was predominantly credit related.

Adopted Revisions to the Annual Statement Instructions:

1) **Mortgage Loans – Adoption as Exposed:**

IMR:
Mortgage loans where the realized gains (losses) more predominantly reflect interest-related changes. By default, mortgage loans that meet any of the following criteria shall not be considered to reflect interest-related losses. Realized gains (losses) from mortgage loans with these characteristics shall be reported in the AVR:

- Any mortgage loan sold/disposed with an established valuation allowance under SSAP No. 37, or
- Interest is ~~NOT~~ more than 90 days past due, or
- The loan is ~~NOT~~ in process of foreclosure, or
- The loan is ~~NOT~~ in course of voluntary conveyance, or
- The terms of the loan have ~~NOT~~ been restructured during the prior two years.

AVR:
In addition, all gains (losses), net of capital gains tax, on mortgage loans where the realized gains (losses) more predominantly reflect non-interest-related changes. By default, mortgage loans that meet any of the

following criteria shall be considered to reflect non-interest-related changes and realized gains (losses) from mortgage loans with these characteristics shall be reported in the AVR:

- Any mortgage loan sold/disposed with an established valuation allowance under SSAP No. 37, or
- Interest is more than 90 days past due, or
- The loan is in the process of foreclosure, or
- The loan is in course of voluntary conveyance, or
- The terms of the loan have been restructured during the prior two years

Would be classified as non-interest related gains (losses).

2) Debt Securities – Modified with IP Comments: (Changes from Exposure are Shaded.)

IMR:

Include realized capital gains (losses) on:

Debt securities (excluding loan-backed and structured securities) and preferred stocks where the realized capital gains (losses) more predominantly reflect interest-related changes. By default, debt instruments whose National Association of Insurance Commissioners (NAIC)/Securities Valuation Office (SVO) designation at the end of the holding period, or within a reasonable amount of time after the reporting entity has sold/disposed of the instrument, – areis is **NOT** different from its NAIC designation at the beginning of the holding period by one or less more than one NAIC designations. or NAIC designation category shall not be considered to reflect interest-related changes. – Gains (losses) from those debt instruments shall NOT be reported in the IMR and shall be reported in the AVR Exclude any such gains (losses) exempt from the IMR. However, if the security sold also includes the following, it should not be included in IMR:

- Between the purchase and sale date there was an acute credit event (a known event that significantly negatively impacts the price of the security), that was not yet reflected in CRP ratings and/or the SVO feed at the time of the sale, where the resulting gain/loss from the sale was predominantly credit related.

Shown Clean for Ease of Review:

Debt securities (excluding loan-backed and structured securities) and preferred stocks whose National Association of Insurance Commissioners (NAIC)/Securities Valuation Office (SVO) designation at the end of the holding period is different from its NAIC designation at the beginning of the holding period by one or less NAIC designations. However, if the security sold also includes the following, it should not be included in IMR:

- Between the purchase and sale date there was an acute credit event (a known event that significantly negatively impacts the price of the security), that was not yet reflected in CRP ratings and/or the SVO feed at the time of the sale, where the resulting gain/loss from the sale was predominantly credit related.

AVR:

Report all realized capital gains (losses), net of capital gains tax, on each debt security (excluding loan-backed and structured securities) where the realized capital gains (losses) more predominantly reflect non-interest-related changes. By default, debt instruments whose NAIC/SVO designation at the end of the holding period, or within a reasonable amount of time after the reporting entity has sold/disposed of the instrument, is different from its NAIC/SVO designation at the beginning of the holding period by more than one NAIC designation or NAIC designation category shall be considered to reflect non-interest-related changes. Gains (losses) from those debt instruments shall be reported in the AVR by more than one NAIC/SVO designation. The holding period is defined as the period from the date of purchase to the date of sale. For end of period classification, the most recent available designation should

~~be used. For bonds acquired before Jan. 1, 1991, the holding period is presumed to have begun on Dec. 31, 1990.~~. However, securities without more than one designation change shall be included in the AVR if it includes the following:

- Between the purchase and sale date there was an acute credit event (a known event that significantly negatively impacts the price of the security), that was not yet reflected in CRP ratings and/or the SVO feed at the time of the sale, where the resulting gain/loss from the sale was predominantly credit related.

Shown Clean for Ease of Review:

AVR:
Report all realized capital gains (losses), net of capital gains tax, on each debt security (excluding loan-backed and structured securities) whose NAIC/SVO designation at the end of the holding period is different from its NAIC/SVO designation at the beginning of the holding period by more than one NAIC designation shall be considered to reflect non-interest-related changes. Gains (losses) from those debt instruments shall be reported in the AVR. However, securities without more than one designation change shall be included in the AVR if it includes the following:

- Between the purchase and sale date there was an acute credit event (a known event that significantly negatively impacts the price of the security), that was not yet reflected in CRP ratings and/or the SVO feed at the time of the sale, where the resulting gain/loss from the sale was predominantly credit related.

Issue: Short-Term Investments

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: This agenda item has been developed to review the guidance in *SSAP No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term investments* and establish principal concepts for the types of investments that should be permitted for reporting as either cash equivalents or short-term investments. This agenda item is in response to noted situations in which certain types of investments, particularly collateral loans or other Schedule BA items, are being designed specifically to meet the parameters for short-term reporting. Although revisions were previously incorporated to prevent the "rolling" of short-term items, information has been shared that some reporting entities are now effectively ending short-term collateral loan investments, only to reissue those collateral loans from other lenders in the same group (same ultimately owners) so that they can continue to qualify as short-term for reporting on Schedule DA. The effect is a continuously reporting short-term collateral loan investments in a way so that the investment in appearance is not considered 'substantially similar' to the investment previously held, although in effect the borrower is the same holding company group. This approach permits the company to report these investments as "Other Short-Term Investments" on Schedule DA, rather than in the designated reporting line for collateral loans. This allows companies to reduce the appearance of the collateral loans, not provide the detail that would be required for the loan is reported on Schedule BA, and potentially result in non-compliance with the SSAP No. 21 admittance requirements due to the Schedule DA reporting. Under SSAP No. 2R, paragraph 16, short-term investments are to be accounted for in the same manner as similar long-term investments. However, paragraph 17 indicates that short-term investments are admitted to the extent that they conform to the requirements of SSAP No. 2R. Although the intent of paragraph 16 is to require the same valuation and admittance requirements for short-term that exist for long-term, some reporting entities may be valuing collateral loans similar to the requirements of SSAP No. 21 but may interpret the guidance to indicate that the collateral requirements for admittance in SSAP No. 21 are not required if the investment has a short-term maturity.

In evaluating the current situation, the prior situations in which short-term investments were being continuously rolled, as well as the SSAP No. 2R guidance, it has been questioned why collateral loans and mortgage loans are included in the SSAP No. 2R guidance as named examples and whether Schedule BA investments should be permitted to be reported as wither cash equivalents (on Schedule E2) or short-term investments (on Schedule DA). For these investments, the main benefit of reporting as short-term (or cash equivalent) is the reduced RBC charge and/or potential exclusions from state investment limitations. Although NAIC designations are not required to be reported for cash equivalent or short-term investments, such designations are not required for collateral loans, mortgage loans or any Schedule BA investment. As such, excluding those items from Schedule DA will not impose a requirement for any reporting entity to obtain an NAIC designation. Considering this assessment, this agenda item proposes the exclusion of additional investment types from being reported as cash equivalents or short-term investments regardless of the maturity date of the investment at the date of acquisition.

Effectively, this agenda item and the prior revisions to exclude certain investments from SSAP No. 2R discussed as part of the bond project, will eliminate investments (except money market mutual funds and cash pooling dynamics) from being reported as cash equivalents or short-term investments unless they would qualify under *SSAP No. 26R—Bonds* as an issuer credit obligation. Such investments will then only qualify as a cash equivalent or short-term investment if they have a maturity date within 3-months (cash equivalents) or 12-months (short-term) from the date of acquisition or meet the specifics requirements for money market mutual funds or cash pooling arrangements. NAIC staff believes this scope is appropriate as investments that qualify as issuer credit obligations

tend to reflect the more "traditional" investments, for which a short duration holding timeframe will most often have limited valuation swings caused from interest rate risk as well as other unknowns. Furthermore, as investments captured as issuer credit obligations in SSAP No. 26R are permitted as admitted assets without other qualifications (such as collateral or audit requirements), the ability to report as cash equivalent or short-term will not cause confusion on the applicability of such requirements in determining whether the investment should qualify as an admitted asset because it qualifies to be in scope of SSAP No. 2R.

This agenda item proposes to retain the guidance in SSAP No. 2R that prevents cash equivalent or short-term reporting for related party investments if the reporting entity does not reasonably expect to terminate the investment, the original maturity time as passed, and if the reporting entity reacquired a substantially similar investment. Investments with those characteristics will be required to be reported as long-term assets. With the limitation of eligible assets to issuer credit obligations in scope of SSAP No. 26R, NAIC staff anticipates the need for the guidance to be reduced but it could still be applicable.

The agenda item also proposes to retain the clarification that certificates of deposit do not qualify as cash equivalents or short-term deposits. This is because certificates of deposit that are less than 12 months in duration are classified as cash. Certificates of deposits that go beyond 12 months are reported as long-term bonds on Schedule D.

Existing Authoritative Literature:

- **SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments**

Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities[1] of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 8, and cash pooling, as detailed in paragraph 9. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Regardless of maturity date, related party or affiliated investments that would be in scope of *SSAP No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities,* or that would be reported as "Other Invested Assets" shall be reported as long-term investments if any of the following conditions apply,[2] unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial 90-day timeframe.

b. The investment was previously reported as a cash equivalent investment and the initial maturity timeframe has passed. If an investment is reported as a cash equivalent and it is unexpectedly renewed/rolled, the reporting entity is not permitted to continue to report the held security as a

---

[1] Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.

[2] Cash equivalents subject to the provisions of paragraph 7 are not permitted to be subsequently reported as short-term investments, even if the updated/reacquired maturity date is within one year. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition, regardless of the initial maturity date.

cash equivalent, regardless of the updated maturity date, and shall report the security as a long-term investment. An investment is only permitted to be reported as a cash equivalent for one quarter reporting period. Meaning, if an investment was reported as a cash equivalent in the first quarter, it is not permitted to be reported as a cash equivalent in the second quarter.

c. The reporting entity reacquired the investment (or a substantially similar investment) within one year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as short-term investments, regardless of the maturity date of the reacquired investment.)

8. Money market mutual funds registered under the Investment Company Act of 1940 and regulated under rule 2a-7 of the Act shall be accounted for and reported as cash equivalents for statutory accounting. Investments in money market mutual funds shall be valued at fair value or net asset value (NAV) as a practical expedient. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus. Sales/reinvestments in money market mutual funds are excluded from the wash sale disclosure in SSAP No. 103R.

9. Cash pooling is a technique utilized by some companies under common control by which several entities' cash accounts are aggregated for numerous purposes, including liquidity management, optimizing interest or investment returns and reducing investment or banking transaction fees. Cash pools can have numerous functions and structures; however, only those that have obtained domiciliary regulator approval and meet the following requirements are in scope of this statement.

a. Members or participants in the pool are limited to affiliated entities as defined in *SSAP No. 25—Affiliates and Other Related Parties*.

b. Investments held by the pool are limited to non-affiliated entities investments (non-affiliated to the insurance reporting entity).

c. The pool must permit each participant to withdraw, at any time, cash up to the amount it has contributed to the pool. Each participant must own an undivided interest in the underlying assets of the pool in proportion to the aggregate amount of cash contributed. All affiliates' interests in the pool shall be of the same class, with equal rights, preferences, and privileges. All membership interests shall be fully paid and non-assessable and shall have no preemptive, conversion or exchange rights. The liability of a participant's debts and obligations of the pool shall be limited to the amount of its contributions and no participant shall be obligated to contribute money to the pool for any reason other than to participate in the pool's investments. Additionally, participants shall not cover the debits or credits of another participant (commonly referred to as notional cash pooling).

d. A reporting entity shall receive monthly reports from the pool manager, which identifies the participant's investment (share) in the cash pool and the dollar value of its share of cash, cash equivalents and short-term investments. The reporting entity shall report their total balances in the cash pool on Schedule E – Part 2, utilizing the line number as specified in the annual statement instructions. The reporting entity shall independently if the investments would have qualified as cash, cash equivalents or short-term investments had the entity independently acquired the investments. To the extent the pool holds investments that do not meet the definition of cash, cash equivalents, short-term investments, the pool does not qualify within scope of this statement.

e. Valuation of assets in the pool shall remain consistent with the valuations required by reported asset type as stipulated in this statement.

Short-Term Investments

14. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under reverse repurchase agreements) of one year or less at the time of

© 2023 National Association of Insurance Commissioners

acquisition. Short-term investments can include, but are not limited to bonds, commercial paper, reverse repurchase agreements, and collateral and mortgage loans which meet the noted criteria. Short-term investments shall not include investments specifically classified as cash equivalents as defined in this statement, certificates of deposit, or derivatives. Regardless of maturity date, derivative instruments shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

15. Regardless of maturity date, related party or affiliated investments in scope of *SSAP No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities,* or that would be reported as "Other Invested Assets" shall be reported as long-term investments if any of the following conditions apply,[3, 4] unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial "less than one year" timeframe.

b. The investment was previously reported as a short-term investment and the initial maturity timeframe has passed. If an investment is reported as a short-term investment and it is unexpectedly renewed/rolled, the reporting entity is not permitted to continue to report the held security as a short-term investment (or as a cash equivalent) regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a short-term investment for one annual reporting period. Meaning, if an investment was reported as a short-term investment as of December 31, 2018, it is not permitted to be reported as short-term investment as of December 31, 2019.

c. The reporting entity reacquired the investment (or a substantially similar investment) within one year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as cash equivalent investments regardless of the maturity date of the reacquired investment.)

16. All short-term investments shall be accounted for in the same manner as similar long-term investments.

17. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.

- **Proposed Revisions under the Bond Project – Potential Adoption 2023 Summer National Meeting**

(These revisions are shaded to separate them from what is proposed as new edits under this agenda item.)

Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because

[3] Reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant *to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities.*

[4] Short-term investments subject to the provisions of paragraph 15 are not permitted to be subsequently reported as cash equivalents, even if the updated/reacquired maturity date is within 90 days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition, regardless of the initial maturity date.

of changes in interest rates. Only investments with original maturities[5] of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 8, and cash pooling, as detailed in paragraph 9. Regardless of maturity date, dDerivative instruments in scope of SSAP No. 86 or SSAP No. 108shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB.

a. Working capital finance investments in scope of SSAP No. 105R.

a.b. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

Short-Term Investments

14. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under reverse repurchase agreements) of one year or less at the time of acquisition. Short-term investments can include, but are not limited to bonds, commercial paper, reverse repurchase agreements, and collateral and mortgage loans which meet the noted criteria. Short-term investments shall not include investments specifically classified as cash equivalents as defined in this statement, certificates of deposit, or derivatives. Regardless of maturity date, the following investments are not permitted to be reported as cash equivalents and shall be reported on the investment schedule that corresponds to the SSAP for which the investment is applicable:

a. Asset-backed securities captured in scope of SSAP No. 43R.

b. All debt securities that do not qualify as bonds, which are in scope of SSAP No. 21R.

c. dDerivative instruments in scope of SSAP No. 86 or SSAP No. 108shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

d. Working capital finance investments in scope of SSAP No. 105R.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Agenda item 2019-21: Principles-Based Bond Definition, proposes revisions to revise the definition of a bond, and establishes guidance separating between investments captured in *SSAP No. 26—Bonds* as issuer credit obligations for reporting on Schedule D-1-1 and investments captured in *SSAP No. 43R—Asset-Backed Securities* for reporting on Schedule D-1-2. With the requirements to assess ABS in determining whether they qualify for Schedule D-1-2 reporting as a "bond", revisions have been proposed to exclude ABS, as well as debt securities that do not qualify as bonds captured in SSAP No. 21R, from reporting on Schedule DA as cash equivalents or short-term investments. (These revisions are above with an anticipated adoption at the 2023 Summer National Meeting with a planned effective date of January 1, 2025.)

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): N/A

[5] Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.

Recommendation:
NAIC staff recommend that the Working Group include this item on their maintenance agenda as a new SAP concept and expose this agenda item with proposed revisions to further restrict the investments that are permitted for cash equivalent or short-term investment reporting. These revisions are proposed to ensure that certain investment types are captured on designated Schedule BA reporting lines and to eliminate the potential to design investments to specifically qualify for short-term reporting and perhaps mask the extent of investments held or to obtain favorable reporting such as with reduced RBC, exceptions for state investment limits, admittance requirements etc., (NAIC staff notes that NAIC designations are not required for cash equivalents or short-term investments, however, the investments proposed to be excluded from cash equivalents and short-term reporting in this agenda item are not required to obtain NAIC designations.)

With the adoption consideration of the bond definition, including the edits to exclude ABS and debt securities that do not qualify as bonds from SSAP No. 2R at the 2023 Summer National Meeting, this agenda item proposes edits after reflection of the bond project changes. To be consistent with the effective date of the bond project, this agenda item proposes an effective date of January 1, 2025. Additionally, subsequent blanks reporting changes will be considered to modify the cash equivalent and short-term reporting lines accordingly.

Proposed revisions to SSAP No. 2R:

Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities[6] of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 8, and cash pooling, as detailed in paragraph 9. Certificates of deposit with a maturity of less than 12 months at the time of acquisition are reported as cash pursuant to paragraph 5. Regardless of maturity date, the following investments are not permitted to be reported as cash equivalents and shall be reported on the investment schedule that corresponds to the SSAP for which the investment is applicable:

a. Asset-backed securities captured in scope of SSAP No. 43R.

b. All investments that are reported on Schedule BA, including but not limited to:

i. All debt securities that do not qualify as bonds which are in scope of SSAP No. 21R.

ii. Collateral/Non-Collateral loans captured in scope of SSAP No. 21R.

iii. Working capital finance investments in scope of SSAP No. 105R.

i. iv. Surplus notes in scope of SSAP No. 41R.

c. Mortgage loans captured in scope of SSAP No. 37.

b. d. Derivative instruments in scope of SSAP No. 86 or SSAP No. 108.

~~c. a. Working capital finance investments in scope of SSAP No. 105R.~~

d. e. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other

[6] Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.

features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

Short-Term Investments

14. Short-term investments are investments that do not qualify as cash equivalents, but that are still considered highly liquid as they have ~~with~~ remaining maturities (or repurchase dates under reverse repurchase agreements) of one year or less at the time of acquisition. ~~Short-term investments can include, but are not limited to bonds, commercial paper, reverse repurchase agreements, and collateral and mortgage loans which meet the noted criteria. Regardless of maturity date, the following investments are not permitted to be reported as ~~cash equivalents~~ short-term investments and shall be reported on the investment schedule that corresponds to the SSAP for which the investment is applicable:

a. Asset-backed securities captured in scope of SSAP No. 43R.

b. All investments that are reported on Schedule BA, including but not limited to:

i. All debt securities that do not qualify as bonds in scope of SSAP No. 21R.

ii. Collateral/Non-Collateral loans captured in scope of SSAP No. 20R or 21R.

iii. Working capital finance investments in scope of SSAP No. 105R.

iv. Surplus notes in scope of SSAP No. 41R.

~~b. All debt securities that do not qualify as bonds which are in scope of SSAP No. 21R.~~

c. Mortgage loans captured in scope of SSAP No. 37.

~~c.~~d. Derivative instruments in scope of SSAP No. 86 or SSAP No. 108.

~~d. Working capital finance investments in scope of SSAP No. 105R.~~

Staff Review Completed by: Julie Gann - NAIC Staff, July 2023

Status:

On August 13, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a new SAP concept, and exposed revisions to SSAP No. 2R to further restrict the investments that are permitted for cash equivalent or short-term investment reporting. To correspond with the bond project, this agenda item proposes an effective date of January 1, 2025. Additionally, subsequent blanks reporting changes will be considered to modify the cash equivalent and short-term reporting lines accordingly.

On December 1, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 2R to further restrict the investments that are permitted for cash equivalent or short-term investment reporting. To correspond with the bond project, this agenda item is effective January 1, 2025. In addition, NAIC staff were directed to sponsor a blanks proposal to revise the reporting lines accordingly and to draft an issue paper to detail the revisions for historical reference.

Issue: Actuarial Guideline 51 and Appendix A-010 Interaction

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue:
In 2017, the National Association of Insurance Commissioners (NAIC) adopted Actuarial Guideline 51, *The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51). Subsequent to the adoption of AG 51, American Academy of Actuaries, Health Practice Council, Financial Reporting and Solvency Committee have observed some diversity in practice across issuers of long-term care insurance with regard to how the new guidance in AG 51, and specifically Section 4.C thereof, interacts with existing guidance on accident & health (A&H) insurance reserve adequacy, as found in paragraph 24 of Statement *of Statutory Accounting Principles (SSAP) No. 54R—Individual and Group Accident and Health Contracts*, and paragraph 26 of Appendix A-010, *Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts.*

As an illustration of the observed diversity in practice, consider the following illustrative, simplified example:

1. Company XYZ has three lines of business: long-term care insurance, Medicare Supplement (Med Sup) insurance, and whole life insurance.

2. Cash flow testing performed for the long-term care block in isolation, in accordance with AG 51, shows deficiencies in all tested scenarios.

3. Cash flow testing performed for the entity as a whole, including both the life and A&H business combined, shows significant sufficiencies at the entity level in all tested scenarios.

4. A gross premium valuation performed on the long-term care reserves, in isolation, indicates that those reserves are deficient by $250 million.

5. A gross premium valuation performed on the Medicare Supplement reserves, in isolation, indicates that those reserves contain $150 million of sufficiency.

Given these facts, does Company XYZ need to strengthen its accident and health reserves in order to comply with the requirements of the NAIC *Accounting Practices & Procedures Manual*?

Depending on how one views the intended interaction between AG 51 and Appendix A-010, in this illustrative example one could conclude either that Company XYZ's reserves are adequate, or that they are deficient by $100 million.

Argument that the reserves are adequate:

- Section 4.C of AG 51 sets out conditions for "determining whether additional reserves are necessary" for a block of long-term care insurance.

- In particular, Section 4.C.1 of AG 51 says that "a reserve deficiency in the LTC block may be aggregated

with sufficiencies in the company's other blocks of business for the purposes of developing an actuarial opinion, if cash-flow testing is used for both the LTC business and for all significant blocks of non-LTC business within a company."

- In light of point 3 above, this implies that Company XYZ does not need to establish any additional reserves for its long-term care block. In effect, here Company XYZ gets to use sufficiencies that exist in its life reserves to avoid needing to strengthen its LTC reserves.

- There had been an exposure draft of AG 51 in February 2017 that contained the following language: "Requirements for standalone analysis for a health insurance major block of contracts, per *Model Regulation #010*, still apply even if aggregation of cash-flow testing results occurs." However, this language was deleted from the version of AG 51 that was adopted later in 2017.

Argument that the reserves are deficient by $100 million:

- Combining points 4 and 5 above, a gross premium valuation performed on Company XYZ's A&H business in total shows a net deficiency of $100 million ($250 million LTC deficiency, offset by $150 million Medicare Supplement sufficiency).

- Paragraph 26 of Appendix A-010 reads, in part, "…a gross premium valuation is to be performed whenever a significant doubt exists as to reserve adequacy with respect to any major block of contracts, or with respect to the insurer's health business as a whole. In the event inadequacy is found to exist, immediate loss recognition shall be made and the reserves restored to adequacy."

- Nothing in AG 51 explicitly amends the requirement from Appendix A-010 that an entity's A&H reserves, in total, need to be adequate; nor is AG 51 explicitly referenced within the Valuation Manual Section VM-25, "Health Insurance Reserves Minimum Reserve Requirements," as a source of guidance on minimum reserve requirements.

- Thus, Company XYZ's health reserves, taken as a whole, must at a minimum exceed the reserves produced by a gross premium valuation, regardless of AG 51. This would imply that Company XYZ needs to strengthen its LTC reserves by $100 million, bringing the total deficiency in the gross premium valuation of its A&H reserves to zero.

Existing Authoritative Literature:

Excerpts from *SSAP No. 54R— Individual and Group Accident and Health Contracts* (bolding added):

11. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. **A prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date.** Statutory reserves meet the definition of liabilities as defined in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. The actuarial methodologies referred to in paragraph 12 meet the criteria required for reasonable estimates in SSAP No. 5R.

12. **The reserving methodologies and assumptions used in calculating individual and group accident and health reserves shall meet the provisions of Appendices A-010, A-641, A-820, A-822 (as applicable), the *Valuation Manual* and the actuarial guidelines found in Appendix C of this Manual (as applicable).** Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

© 2023 National Association of Insurance Commissioners

Reserve Adequacy

24. As discussed in Appendix A-010, a prospective gross premium valuation is the ultimate test of the adequacy of a reporting entity's accident and health reserves as of a given valuation date and shall be determined on the basis of unearned premium reserves, contract reserves, additional reserves, claim reserves (including claim liabilities), and miscellaneous reserves combined; however, each component shall be computed separately.

Excerpts from Appendix A-010, *Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts* (bolding added)**:**

23. These standards apply to all individual and group health and accident and sickness insurance coverages, including single premium credit disability insurance. All other credit insurance is not subject to Appendix A-010.

24. When an insurer determines that adequacy of its health insurance reserves requires reserves in excess of the minimum standards specified herein, such increased reserves shall be held and shall be considered the minimum reserves for that insurer.

25. With respect to any block of contracts, or with respect to an insurer's health business as a whole**, a prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date.** Such a gross premium valuation will take into account, for contract in force, in a claims status, or in a continuation of benefits status on the valuation date, the present value as of the valuation date of all expected benefits unpaid, all expected expenses unpaid, and all unearned or expected premiums, adjusted for future premium increases reasonably expected to be put into effect.

26. Such a gross premium valuation is to be performed whenever a significant doubt exists as to reserve adequacy with respect to any major block of contracts, or with respect to the insurer's health business as a whole. In the event inadequacy is found to exist, immediate loss recognition shall be made and the reserves restored to adequacy. Adequate reserves (inclusive of claim, premium and contract reserves, if any) shall be held with respect to all contracts, regardless of whether contract reserves are required for such contracts under these standards.

40. This statement incorporates the requirements of Appendices **A-010,** A-225, A-641, A-820, A-822 (as applicable), the *Valuation Manual,* the Actuarial Standards Board *Actuarial Standards of Practice* and **the actuarial guidelines found in Appendix C** of this manual (as applicable).

Excerpts from NAIC Valuation Manual, Section VM-25:

VM-25: HEALTH INSURANCE RESERVES MINIMUM RESERVE REQUIREMENTS A. Purpose 1. Reserve requirements for individual A&H insurance policies issued on and after the Valuation Manual operative date and reserve requirements for group A&H insurance certificates issued on and after the Valuation Manual operative date are applicable requirements found in the AP&P Manual; Appendix A, which includes A-10; and applicable requirements found in the AP&P Manual Appendix C, which includes Actuarial Guideline XXVIII—Statutory Claim Reserves for Group Long-Term Disability Contracts With a Survivor Income Benefit Provision (AG 28); Actuarial Guideline XLIV—Group Term Life Waiver of Premium Disabled Life Reserves (AG 44); Actuarial Guideline XLVII—The Application of Company Experience in the Calculation of Claim Reserves Under the 2012 Group Long-Term Disability Valuation Table (AG 47); and Actuarial Guideline L—2013 Individual Disability Income Valuation Table (AG 50).

Excerpts from *Actuarial Guideline 51 - The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51)*

"Background. The *Health Insurance Reserves Model Regulation (#010)* and the *NAIC Valuation Manual (VM-25)* contain requirements for the calculation of long-term care insurance (LTC) reserves. Regulators have observed a lack of uniform practice in the implementation of tests of reserve adequacy and

reasonableness of LTC reserves. The reserve adequacy testing required by Model #10 and VM-25 does not provide regulators comfort as to the reserve adequacy of companies with material blocks of LTC business. As such, regulators must rely upon asset adequacy analysis required by the *NAIC Valuation Manual* (*VM-30*) to evaluate the solvency position of companies with sizable blocks of LTC business. This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for the asset adequacy testing applied to a company's LTC block of contracts. In particular, this Guideline….

Asset adequacy analysis specific to all inforce LTC business, and without consideration of results for other block of business within the company, must be performed for valuations associated with the December 31, 2017, and subsequent annual statutory financial statements. The analysis shall comply with applicable Actuarial Standards of Practice, including standards regarding identification of key risks. Material assumptions associated with the LTC business shall be determined using moderately adverse deviations in actuarial assumptions.

4.B When determining whether additional reserves are necessary:

1. A reserve deficiency in the LTC block may be aggregated with sufficiencies in the company's other blocks of business for the purposes of developing an actuarial opinion, if cash-flow testing is used for both the LTC business and for all significant blocks of non-LTC business within a company. If a reserve deficiency in the LTC block is not offset with sufficiencies in the company's other blocks of business, then additional reserves shall be established as required by section 2.C.2. of *VM-30*.

2. If cash-flow testing is not used for testing of the LTC business, then a reserve deficiency revealed from another method, e.g., a gross premium valuation, utilized for purposes of asset adequacy analysis of the LTC block under this Guideline shall not be offset with sufficiencies in the company's other blocks of business. The additional reserves under this Guideline shall be established based only upon the adequacy of the reserves in the LTC block.

First Page of Exhibit C

The NAIC Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force, formerly known as the Life and Health Actuarial Task Force, have been asked on many occasions to assist a particular state insurance department in interpreting a statute dealing with an actuarial topic relative to an unusual policy form or situation not contemplated at the time of original drafting of a particular statute. The Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force, in developing an interpretation or guideline, must often consider the intent of the statute, the reasons for initially adopting the statute and the current situation. The Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force feel that for those situations which are sufficiently common to all states, that the publishing of actuarial guidelines on these topics would be beneficial to the regulatory officials in each state and would promote uniformity in regulation which is beneficial to everyone. To this end, the Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force have developed certain actuarial guidelines and will continue to do so as the need arises. **The guidelines are not intended to be viewed as statutory revisions but merely a guide to be used in applying a statute to a specific circumstance.**

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

Actuarial Guideline 51 was adopted by the Health Insurance and Managed Care (B) Committee in June 2017 and subsequently incorporated into Appendix C of the NAIC *Accounting Practices & Procedures Manual*.

As noted above, the February 2017 exposure draft of what was then called Actuarial Guideline LTC contained different language than the version adopted later that year as AG 51. The following are excerpts from the February 2017 exposure draft of AG LTC, with emphasis added. The bolded italicized language below does not exist, either verbatim or in modified form, within the adopted version of AG 51:

"Background The *Health Insurance Reserves Model Regulation (#010)* and the *NAIC Valuation Manual (VM-*

25) contain requirements for the calculation of long-term care insurance (LTC) reserves. Regulators have observed a lack of uniform practice in the implementation of tests of reserve adequacy and reasonableness of LTC reserves. ***For instance, the Model Regulation states, "a gross premium valuation is to be performed whenever a significant doubt exists as to reserve adequacy with respect to any major block of contracts"; however, other wording in the Model Regulation creates confusion for some on whether the test of adequacy is required at the major block of contract level. In the absence of uniform guidance, insurers may not be determining adequacy of LTC reserves in a uniform manner.*** As such, this Guideline provides uniform guidance and limits to certain assumptions for the asset adequacy testing applied to an insurer's major LTC block of contracts. …"

3.C "When determining whether additional reserves are necessary:

1. In the case where cash-flow testing is used for both LTC business and for the companywide analysis.
   a. A deficiency in the LTC segment may be offset by a projected and justified overall cash-flow testing sufficiency in non-LTC segments. The LTC-related assumptions in the companywide cash-flow testing shall be the same as with the standalone LTC cash-flow testing.
   b. To the extent projected LTC reserve sufficiency is not offset through aggregation, reserves for LTC business shall be increased by any additional reserves required to eliminate the projected reserve insufficiency.
   c. ***Requirements for standalone analysis for a health insurance major block of contracts, per Model Regulation #010, still apply even if aggregation of cash-flow testing results occurs."***

2. "In cases where cash-flow testing is not used for LTC business, reserves for LTC business shall be increased by any additional reserves required by the standalone LTC business asset adequacy analysis to eliminate a reserve insufficiency."

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:

To our knowledge the Working Group has not previously been made aware that a diversity of practice has developed, subsequent to the adoption of AG 51, regarding how AG 51 interacts with Appendix A-010.

In May 2022, the actuarial consulting firm Milliman released its seventh triennial survey on long-term care valuation practices.[1] Figure 2 of that report presents information about the approach companies use for aggregating statutory reserve adequacy testing results. The three options shown were "LTC line of business," selected by 8 out of the 20 respondents; "health or life business lines combined," selected by 2 out of the 20; and "company level," selected by 10 out of the 20. Figure 1 of that report presents information about the types of reserve adequacy testing that is performed.

The three options shown were:

1. "GPV only" ("Gross Premium Valuation only") selected by 3 out of the 20 respondents;
2. "Cash flow testing and GPV," selected by 4 out of the 20; and
3. "Cash flow testing only," selected by 13 out of the 20.

Taking these two pieces of data together, it would appear that many of the 20 companies participating in this Milliman survey believe that performing cash flow testing at the legal entity level is enough to satisfy reserve adequacy considerations in light of AG 51, and that there is not a separate requirement for the legal entity's accident and health reserves to be adequate in aggregate under a gross premium valuation.

Recommended Conclusion or Future Action on Issue:

The committee recommends that the Working Group issue an interpretation to clarify the intended interaction between AG 51 and Appendix A-010, along the lines of one of the following two statements below, depending on which statement reflects the NAIC's underlying intent:

Statement A: " With respect to an entity having a block of LTC insurance subject to Actuarial Guideline 51, even if Section 4.C of Actuarial Guideline 51 implies that the entity does not need to establish additional reserves for the LTC block, it nevertheless remains true that the entity's accident & health reserves in total must be adequate under a gross premium valuation in accordance with paragraph 26 of Appendix A-010."

Statement B: "With respect to an entity having a block of LTC insurance subject to Actuarial Guideline 51, if Section 4.C of Actuarial Guideline 51 implies that the entity does not need to establish additional reserves for the LTC block, then the reserves for the LTC block are deemed to be adequate for purposes of applying the requirements of paragraph 26 of Appendix A-010 if no other A&H blocks are deficient."

Staff Review Completed by:
Robin Marcotte, July 2023

Staff Recommendation:
This agenda item addresses the February 23 request from the Financial Reporting and Solvency Committee of the Health Practice Council of the American Academy of Actuaries, to the Long-Term Care Actuarial (B) Working Group and to the Statutory Accounting Principles (E) Working Group which requested clarifications regarding some observed diversity in practice across issuers of long-term care insurance with regard to how the guidance in *Actuarial Guideline LI: The application of Asset Adequacy Testing to Long Term Care Insurance Reserves* (AG 51), specifically Section 4.C, on determining when additional reserves may be necessary, interacts with existing guidance on accident and health insurance reserve adequacy, in *SSAP No. 54R—Individual and Group Accident and Health Contracts*, paragraphs 12 and 24 and Appendix A-010*, Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts,* paragraph 26. The fundamental question is regarding whether gross premium valuation only, cash flow testing only or both cash flow testing and gross premium valuation are required.

NAIC staff recommend that the Working Group include this item on their maintenance agenda as a SAP clarification and expose clarifying revisions and an illustration to SSAP No. 54R to clarify that gross premium valuation (under A-010) and cash flow testing (under AG 51) are both required if indicated. In addition, the Long-Term Care Actuarial (B) Working Group and the Valuation Analysis (E) Working Group should receive formal notice of the exposure.

The recommendation is based on the following key points:

1. SSAP No. 54R, paragraph 12 references both Appendix A-010 and the Actuarial Guidelines in Appendix C.

SSAP No. 54R, paragraph 24 explicitly notes the A-010 requirements for a prospective gross premium valuation as the ultimate test for reserve adequacy.

2. Appendix A-010 is based on a widely adopted NAIC model law 10 *Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts*. Appendix A-010 and Model 10 require that that an entity's A&H reserves, in total, need to be adequate. The front of Appendix C notes that the Actuarial Guidelines "The guidelines are not intended to be viewed as statutory revisions but merely a guide to be used in applying a statute to a specific circumstance."

3. The adoption of the AG -51 did not change the provisions of the Model Law 10 or Appendix A-010. The provisions of the model law and Appendix A-010 both require health insurance reserves to be sufficient from a gross premium valuation standpoint on their own.

   a. Paragraph 26 of Appendix A-010 reads, in part, "…a gross premium valuation is to be performed whenever a significant doubt exists as to reserve adequacy with respect to any major block of contracts, or with respect to the insurer's health business as a whole. In the event inadequacy is found to exist, immediate loss recognition shall be made and the reserves restored to adequacy."

   b. Nothing in AG 51 explicitly amends the requirement from Appendix A-010 that an entity's A&H reserves, in total, need to be adequate. (Note that amending the Model #10 would require going through the NAIC model law procedures, therefore, until such a process is undertaken.)

   c. AG 51is not explicitly referenced within the *Valuation Manual* Section VM- 25, "Health Insurance Reserves Minimum Reserve Requirements," as a source of guidance on minimum reserve requirements.

4. AG 51 Section 4.C. provides an additional long term care reserves adequacy cash flow test which allows aggregation. The AG 51 cash flow testing is in addition to the requirements of A-010, it does not replace the gross premium valuation requirements of A-010.

Therefore, in response to the example, in the initial illustration, additional reserves are indicated under A-010 and SSAP No. 54R. (Statement A is the correct response for the Illustration on page 1.) In the example provided, a gross premium valuation performed on Company XYZ's A&H business in total shows a net deficiency of $100 million ($250 million LTC deficiency, offset by $150 million Medicare Supplement sufficiency).Therefore, the answer is that the company would need to post an additional $100 million such that the Long-Term Care and Medicare Supplement reserves are sufficient, from a gross premium valuation standpoint, in total.

Proposed revisions to SSAP No. 54R:

12. The reserving methodologies and assumptions used in calculating individual and group accident and health reserves shall meet the provisions of Appendices A-010, A-641, A-820, A-822 (as applicable), the *Valuation Manual* and the actuarial guidelines found in Appendix C of this Manual (as applicable). Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Reserve Adequacy

24. As discussed in Appendix A-010, a prospective gross premium valuation is the ultimate test of the adequacy of a reporting entity's accident and health reserves as of a given valuation date and shall be determined on the basis of unearned premium reserves, contract reserves, additional reserves, claim reserves (including claim liabilities), and miscellaneous reserves combined; however, each component shall be computed separately. Pursuant to Appendix A-010, paragraph 26, an entity's accident and health reserves in total must be adequate under a gross premium valuation. The requirements of ***Actuarial Guideline 51—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51)*** provide a test which indicates whether reserves in addition to the requirements of A-010

are indicated. AG 51 does not change the base requirements of A-010. (See Long-Term Care Illustration in Exhibit A)

New Exhibit to SSAP No. 54R

Long-Term Care Illustration on Interaction between SSAP No. 54R, and A-010 and AG 51

This illustration is to address the interaction in long-term care reserving requirements noted in this statement, Appendix A-010, *Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts* and *Actuarial Guideline 51—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51).* At a high level, A-010 is from Model #10 of the same name which provides the minimum requirements. AG 51 is an actuarial guideline which provides a test for whether additional reserves are indicated. AG 51 does not change the base requirements of A-010.

Consider the following illustrative, simplified example:

1. Company XYZ has three lines of business: long-term care insurance, Medicare Supplement (Med Sup) insurance, and whole life insurance.

2. Cash flow testing performed for the long-term care block in isolation, in accordance with Actuarial Guideline 51 (AG 51), shows deficiencies in all tested scenarios.

3. Cash flow testing performed for the entity as a whole, including both the Life and A&H business combined, shows significant sufficiency at the entity level in all tested scenarios.

4. A gross premium valuation performed on the long-term care reserves, in isolation, indicates that those reserves are deficient by $250 million.

5. A gross premium valuation performed on the Medicare Supplement reserves, in isolation, indicates that those reserves contain $150 million of sufficiency.

Given these facts, does Company XYZ need to strengthen its accident and health reserves in order to comply with the requirements of the NAIC *Accounting Practices & Procedures Manual*?

Response: Yes, Company XYZ needs to strengthen its accident and health reserves by $100 million. This number is determined by the following:

	Millions
Long-term care GPV, reserves are deficient by	($250) million.
Medicare Supplement GPV reserves sufficiency of	$150 million.
Accident and Health GPV reserve net deficiency of	**$100 million**

Appendix A-010, paragraph 26, and SSAP No. 54R, paragraph 24, both require gross premium valuation.

Actuarial Guideline 51 is a test for additional reserves. That is, passing AG 51 does not relieve the reporting entity of the requirement of SSAP No. 54R and A-010 to have adequate accident and health reserves indicated by gross premium valuation.

Status:
On August 13, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 54R to clarify that gross premium valuation (under Appendix A-010) and cash flow testing (under AG 51) are both required, if indicated. In addition, the Working Group directed staff to provide formal notice of the exposure to the Long-Term Care Actuarial (B) Working Group and the Valuation Analysis (E) Working Group.

On December 1, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 54 which clarify that gross premium valuation (under Appendix A-010) and cash flow testing (under AG 51) are both required, if indicated.

Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A

Issue: Residuals in Preferred Stock and Common Stock Structures

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	☐	☒	☐
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: This agenda item has been developed to specifically identify in *SSAP No. 30—Unaffiliated Common Stock* and *SSAP No. 32—Preferred Stock* that structures that are in substance residual interests shall be accounted and reported as residual interests.

Common stock and preferred stock structures reflect ownership equity interests. Such structures would not ordinarily be construed to be in-substance residual interests or residual security tranches (residuals). However, information has been shared that investments are being created to repackage potential “additional interest” or “performance coupons” separately from debt instruments and are referring to these structures as preferred stock issuances.

From information received, an example of such a design has occurred to eliminate an investment structure from being classified as a principal-protected note, which will not qualify as a bond under the adopted bond definition effective January 1, 2025, and eliminate the assessment of the investment under the SVO’s principal-protected note methodology. With the repackaged structure, the debt security and ‘additional interest’ (equity) components will be separately issued. The debt structure will likely qualify as a bond and will likely have a higher credit designation that is permitted to be obtained from a credit-rating provider. (If reporting as a principal-protected note, the investment would be required to be filed with the SVO for a credit designation under the PPN methodology.)

Although the restructure of the investment design can occur, and the debt security component can be separately assessed to qualify as a bond, it is important to highlight that the equity component, which is based on the “additional interest / performance” of the dedicated pool of assets within the structure, is in substance a residual interest and is not in substance a common or preferred stock investment.

This agenda item proposes minor edits to SSAP No. 30R and SSAP No. 32R to explicitly state that structures that are in-substance residual interests shall be reported as residuals. Similar to the principal concepts detailed within the adopted bond definition, naming convention shall not direct investment classification, and the substance of the investment shall determine appropriate classification for statutory reporting. The revisions to the Annual Statement Instructions adopted in agenda item 2023-12 already identify that residual interests or residual security tranches that are not captured in *SSAP No. 43R—Loan-Backed and Structured Securities* or *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* but that reflect residuals shall be captured in the dedicated Schedule BA reporting lines for residual interests.

Existing Authoritative Literature:

- ***SSAP No. 43R—Loan-Backed and Structured Securities***

Residual Tranches or Interests

27. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures that issue one or more classes of debt securities created for the primary purpose of raising debt capital backed by collateral assets. The primary source of debt repayment is derived through

rights to the cash flows of a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. The collateral assets generate cash flows that provide interest and principal payments to debt holders through a contractually prescribed distribution methodology (e.g., waterfall dictating the order and application of all collateral cash flows). Once those contractual requirements are met, the remaining cash flows generated by (or with the sale of) the collateral assets are provided to the holder of the residual security/residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual holders in the structure continue to receive payments from the collateral so long as there are cash flows in excess of the debt obligations. The payments to the residual holder may vary significantly, both in timing and amount, based on the underlying collateral performance.

28. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive the remaining cash flows after all debt holders receive contractual interest and principal payments. Determining whether an investment in a structure reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence or absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may be structured with terms that appear to be stated principal or interest but that lack substance, and result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they are first loss positions that provide subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after debt tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual holders to the debt tranches if the structure becomes stressed.

- ***SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies***

Residual Interests and Reporting

18. Investments in scope of this statement are reported on *Schedule BA: Other Long-Term Assets*. Schedule BA includes dedicated reporting categories for joint ventures, partnerships, and limited liability company investments as well as for residual interests, both with reporting lines in accordance with underlying asset characteristics. Investments within scope of this standard shall be divided within these reporting categories, with investments that reflect residual interests, or that predominantly hold residual interests captured in the residual interest reporting category.

19. A residual interest or a residual security tranche (collectively referred to as residuals) exists in investment structures that issue one or more classes of debt securities created for the primary purpose of raising debt capital backed by collateral assets. The primary source of debt repayment is derived through rights to the cash flows of a discrete pool of collateral assets. These designs could be backed directly or indirectly through a feeder fund. The collateral assets generate cash flows that provide interest and principal payments to debt holders through a contractually prescribed distribution methodology (e.g., waterfall dictating the order and application of all collateral cash flows). Once those contractual requirements are met, the remaining cash flows generated by (or with the sale of) the collateral assets are provided to the holder of the residual security/residual interest holder. When an asset within the discrete pool of assets does not perform as expected, it impacts the extent to which cash flows will be generated and distributed. The residual holders in the structure continue to receive payments from the collateral so long as there are

cash flows in excess of the debt obligations. The payments to the residual holder may vary significantly, both in timing and amount, based on the underlying collateral performance.

20. The structural design of a residual interest or residual security tranche can vary, but the overall concept is that they receive the remaining cash flows after all debt holders receive contractual interest and principal payments. Determining whether an investment in a structure reflects a residual interest or tranche shall be based on the substance of the investment held rather than its legal form. Common characteristics of residual interests/residual security tranches include the items noted below, but the presence or absence of any of these factors should not be definitive in determination. Classification as a residual should be based on the substance of the investment and how cash flows to the holder are determined.

a. Residuals often do not have contractual principal or interest.

b. Residuals may be structured with terms that appear to be stated principal or interest but that lack substance and result in receiving the residual cash flows of the underlying collateral. The terms allow for significant variation in the timing and amount of cash flows without triggering a default of the structure.

c. Residuals do not have credit ratings or NAIC assigned designations. Rather, they are first loss positions that provide subordination to support the credit quality of the typically rated debt tranches.

d. Residuals may provide payment throughout the investment duration (and not just at maturity), but the payments received continue to reflect the residual amount permitted after debt tranche holders receive contractual principal and interest payments.

e. Frequently, there are contractual triggers that divert cash flows from the residual holders to the debt tranches if the structure becomes stressed.

Schedule BA Annual Statement Instructions:

Residual Tranches or Interests with Underlying Assets Having Characteristics of:

Investment in Residual Tranches or Interests should be assigned to the subcategory with the highest underlying asset concentration. There shouldn’t be any bifurcation of the underlying assets among the subcategories.

Include: Residual tranches or interests from securitization tranches and beneficial interests as well as other structures captured in scope of *SSAP No. 43R – Loan-Backed and Structured Securities.*

Investments in joint ventures, partnerships and limited liability companies captured in scope of *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* that represent residual interests, or that predominantly hold residual interests.

This category shall also include residual interests or residual security tranches within investment structures that are not captured in scope of SSAP No. 43R or SSAP No. 48 but that reflect, in substance, residual interests or residual security tranches.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Agenda item 2023-12: Residuals was adopted on September 21, 2023, to clarify the description of residual interests / residual security tranches (residuals) and to clarify that all residuals shall be reported on the dedicated Schedule BA reporting lines.

- Bond Project – *SSAP No. 21R—Other Admitted Assets*: The revisions being considered to SSAP No. 21R under the bond project includes guidance for the measurement method (accounting) of residual interests. These revisions are still being discussed.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Recommendation:
NAIC staff recommend that the Working Group include this item on their maintenance agenda as a SAP Clarification and expose this agenda item with proposed revisions to *SSAP No. 30R—Unaffiliated Common Stock* and *SSAP No. 32R—Preferred Stock* to explicitly state that investments that are in-substance residual interests shall be reported on the dedicated reporting lines on *Schedule BA: Other Long-Term Assets*.

The Working Group is recommended to expose this agenda item via an interim evote for a shortened comment period to allow for adoption consideration during the 2023 Fall National Meeting to ensure appropriate reporting for year-end 2023.

Proposed Revisions to *SSAP No. 30R—Unaffiliated Common Stock*

1. This statement establishes statutory accounting principles for common stocks.

2. Investments in common stock of subsidiaries, controlled or affiliated entities (investments in affiliates) are not within the scope of this statement. They are addressed in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*. Investments in the form of common stock that are in substance residual interests or a residual security tranche, as defined in SSAP No. 43R or SSAP No. 48, shall be reported on *Schedule BA: Other Long-Term Assets* in the dedicated reporting lines for residuals.

Proposed Revisions to *SSAP No. 32R—Preferred Stock*

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of entities captured in *SSAP No. 97—Investments in Subsidiaries, Controlled or Affiliated Entities* or *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*[1] as well as preferred stock interests of certified capital companies per *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)* are included within the scope of this statement. The requirement to file investments in preferred stock of certain subsidiaries, controlled or affiliated entities with the NAIC pursuant to SSAP No. 97 does not affect the application of the accounting, valuation or admissibility under this statement. In addition to the provisions of this statement, preferred stock investments in SCAs are also subject to the provisions of *SSAP No. 25—Affiliates and Other Related Parties* and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.

~~2.~~3. Investments in the form of preferred stock that are in substance residual interests or a residual security tranche, as defined in SSAP No. 43R or SSAP No. 48, shall be reported on *Schedule BA: Other Long-Term Assets* in the dedicated reporting lines for residuals.

Staff Review Completed by: Julie Gann - NAIC Staff, October 2023

---

[1] Certain legal entities captured in SSAP No. 48, such as LLCs that are corporate-like, do not issue preferred stock in legal form, but instead issue identical instruments labeled preferred units, interests, or shares. These instruments shall be captured in this statement provided they meet the structural characteristics as defined in paragraph 3. Additionally, these instruments shall not be in-substance common stock in which the holder has risk and reward characteristics that are substantially similar to common stock.

Status:
On October 31, 2023, the Statutory Accounting Principles (E) Working Group, through an e-vote, moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP Nos. 30R and 32R to specifically note that structures which are in substance residual interests shall be reported as residuals.

On December 1, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 30R and SSAP No. 32R with minor placement revisions recommended by interested parties. The adopted revisions are effective for year-end 2023 reporting, and specifically note that structures which are in substance residual interests shall be reported as residuals. In addition, the Working Group directed a year-end blanks memo and a subsequent blanks proposal to incorporate additional annual statement instructions recommended by interested parties to Schedule D-2-1: Preferred Stock and Schedule D-2-2: Common Stock.

Illustration of adopted revisions:

Proposed Revisions to *SSAP No. 30R—Unaffiliated Common Stock*
(Moving the tracked changes to a new paragraph 3 is the only edit from the exposure. All other paragraphs in SSAP No. 30R will be renumbered.)

1. This statement establishes statutory accounting principles for common stocks.

2. Investments in common stock of subsidiaries, controlled or affiliated entities (investments in affiliates) are not within the scope of this statement. They are addressed in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.

~~2.~~3. Investments in the form of common stock that are in substance residual interests or a residual security tranche, as defined in SSAP No. 43R or SSAP No. 48, shall be reported on *Schedule BA: Other Long-Term Assets* in the dedicated reporting lines for residuals.

Proposed Revisions to *SSAP No. 32R—Preferred Stock (No edits from exposure.)*

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of entities captured in *SSAP No. 97—Investments in Subsidiaries, Controlled or Affiliated Entities* or *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*[2] as well as preferred stock interests of certified capital companies per *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)* are included within the scope of this statement. The requirement to file investments in preferred stock of certain subsidiaries, controlled or affiliated entities with the NAIC pursuant to SSAP No. 97 does not affect the application of the accounting, valuation or admissibility under this statement. In addition to the provisions of this statement, preferred stock investments in SCAs are also subject to the provisions of *SSAP No. 25—Affiliates and Other Related Parties* and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.

~~2.~~3. Investments in the form of preferred stock that are in substance residual interests or a residual security tranche, as defined in SSAP No. 43R or SSAP No. 48, shall be reported on *Schedule BA: Other Long-Term Assets* in the dedicated reporting lines for residuals.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 23-04: Scottish Re Life Reinsurance Liquidation Questions

INT 23-04 Dates Discussed
October 23, 2023; October 24, 2023; December 1, 2023; January 10, 2024

INT 23-04 References

Current:
SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance

INT 23-04 Issue

Background:

1. Liquidations of U.S. licensed reinsurers are uncommon. Due to a 2023 liquidation order of a U.S.-based life reinsurer, life industry cedents have requested an interpretation to address the accounting and reporting for reinsurance receivables from the reinsurer's estate. This interpretation is intended to be applied generically; however, the following circumstances are relevant to the accounting issues identified.

   a. The recent liquidation order was for Scottish Re, a U.S. life reinsurance entity, which was in regulatory supervision for several years.

   b. The life reinsurer was not assuming new business but was receiving ongoing premium on yearly renewable contracts.

   c. The 2023 liquidation order cancelled reinsurance contracts on a cut-off basis, effective September 30, 2023.

   d. Settlement from the reinsurer's estate is expected to exceed one year.

   e. Settlement from the reinsurer's estate to the ceding entities is expected to be less than 100%. That is, cedents are expected to receive a portion of what they are owed.

   f. Some ceding insurers established trusts to hold assets backing the reserves under the reinsurance agreements.

Interpretation Discussion

2. This interpretation is applicable only to the accounting and reporting of reinsurance recoverables from Scottish Re, a U.S.-based life reinsurer in liquidation. The Statutory Accounting Principles (E) Working Group consensuses to the noted issues are included below.

Issue 1 – Commutation or Recapture of a Life Reinsurance Contract

3. If a liquidation order cancels a life reinsurance contract on a cut-off basis, should the life reinsurance commutation guidance in S*tatement of Statutory Accounting Principle*s (*SSAP) No. 61R—Life, Deposit-Type and Accident and Health Reinsurance* be used as the primary accounting guidance for the commutation?

© 2024 National Association of Insurance Commissioners

4. Yes. SSAP No. 61R, paragraph 58, provides the primary guidance for a life reinsurance commutation. The guidance provides that:

> **Recaptures and Commutations**
>
> 58. A recapture or a commutation of a reinsurance agreement is a transaction which results in the complete and final settlement and discharge of all present and future obligations between the parties arising out of the agreement or a portion of the agreement. Commuted and recaptured balances shall be accounted for by writing them off through the accounts, exhibits and schedules in which they were originally recorded. The assumed reserves and reserve credits taken are eliminated by the reinsurer and ceding entity, respectively. The reinsurer and ceding entity must also make any required IMR liability adjustment changes. Any net gain or loss is reported in the summary of operations.

Issue 2 – Impairment of Reinsurance Recoverables

5. The reinsurer that was previously in regulatory supervision and is now in liquidation was known to have financial difficulties and many ceding entities have either established valuation allowances and/or written off reinsurance recoverables as impairment losses. Questions have been received in response to the diversity in practice on whether the ceding entities were reporting impairment losses or were reporting a valuation allowance on all categories of their expected reinsurance recoverables from the reinsurer which is now in liquidation.

6. Do reporting entities have the choice of setting up a valuation allowance or applying the impairment guidance in SSAP No. 61R to the reinsurance recoverables from the life reinsurer in liquidation?

7. No. Reporting entities do not have a choice of a valuation allowance or applying impairment analysis. SSAP No. 61R, paragraph 42, requires impairment analysis of uncollectible reinsurance amounts in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Asset.* The guidance requires that impaired amounts shall be written off through a charge to the Statement of Operations utilizing the same accounts which established the reinsurance recoverables. SSAP No. 5R and SSAP No. 61R do not permit a valuation allowance.

8. The liquidation order of a reinsurer should prompt an impairment analysis of all amounts recoverable from the reinsurer with a write-off of amounts not expected to be recovered.

9. The impairment analysis shall be updated at every reporting date.

Issue 3 – Reporting of Reinsurance Recoverables

10. The liquidation order results in a commutation and recapture of business for the ceding entity. A liquidation will determine the reinsurer's estate assets, then determine payments based on liquidation priority. This will result in a delay in settlement from the estate of the reinsurer. As previously detailed, the amounts paid by the estate shall be impaired to the amount expected to be received by the ceding entities.

11. Where shall the ceding entity report the remaining receivables for the reinsurer's estate?

12. In accordance with the recapture and commutation guidance in SSAP No. 61R, paragraph 58 (quoted above), the ceding entity shall remove balances through the schedules and exhibits originally reported. No reserve credit or contra-liabilities shall be reported. The reinsurance reserve credits shall be removed. Gains or losses are reported in the summary of operations.

© 2024 National Association of Insurance Commissioners

13. Based on preliminary information received, it is expected that there will be an amount receivable for paid claims incurred before the reinsurance contract cancellation. This amount shall be reported on the asset page line 16.1 - Amounts Recoverable from Reinsurers.

14. Amounts recoverable from the reinsurer's estate for claims incurred before the reinsurance contract cancellation and unpaid as of the reporting date shall be reported on the asset page line 16.3 - Other Amounts Receivable Under Reinsurance Contracts.

15. If the ceding entity owes amounts to the reinsurer's estate, the amounts shall be reported as a liability on line 9.3 - Other Amounts Payable on Reinsurance.

16. After impairing the recoverables, any other amount expected to be recovered from the reinsurer's estate shall be reported on line 25 Aggregate Write-ins for Other Than Invested Assets.

Issue 4 – Admissibility of Reinsurance Recoverables

17. As noted above, quarterly impairment analysis of collectability is required. After evaluating for impairment, if there are remaining receivables from the reinsurer's estate, do those assets qualify as admitted reinsurance recoverable assets?

18. Reinsurance recoverables from Scottish Re in liquidation are admitted as follows:

a. The reinsurance recoverable amount from Scottish Re from paid claims incurred prior to the reinsurance contract cancellation which are reported on the asset page line 16.1 - Amounts Recoverable from Reinsurers which are not in dispute are admitted after impairment review.

b. To the extent reinsurance amounts recoverable are secured by assets in an Appendix A-785 - Credit for Reinsurance compliant trust, such recoverable amounts may be admitted to the extent the that the amounts are not in dispute and that the collateral in an Appendix A-785 compliant trust is sufficient.

19. Other reinsurance recoverables, which are not identified as admitted assets in paragraph 18 are nonadmitted until received. This includes amounts either in dispute or not secured by collateral in a trust that is compliant with Appendix A-785.

Issue 5 – Disclosures

20. Do the relevant disclosures in SSAP No. 61R and other relevant SSAPs apply to a commuted life reinsurance contract which has not been fully settled due to a liquidation?

21. Yes. The relevant disclosures in SSAP No. 61R and other relevant SSAPs continue to apply to a life reinsurance contract which is commuted and recaptured due to a liquidation. These disclosures include but are not limited to the disclosures regarding commutation, uncollectible reinsurance and anything else that is required.

22. Disclosure in the reinsurance notes to the financial statements shall include additional information necessary to obtain an understanding of the impact of Scottish Re reinsurance counterparties in liquidation, including but not limited to, reinsurance payable liabilities, reinsurance recoverables by paid claims and other amounts, information regarding the status of any collateral and its fair value. Where applicable, reporting entities should disclose any individual components (e.g., unreimbursed claims or provisions for future losses) of recoverable amounts that are presented in the aggregate on the financial statements. The

disclosure shall include measurement, impairment and collectability of any reinsurance recoverables including timing of expected payments and nonadmitted amounts.

INT 23-04 Summary

23. Although readers should refer to the detailed guidance above, a summary of the key provisions is as follows:

a. Issue 1 – Commutation or Recapture of a Life Reinsurance Contract: Follow SSAP No. 61R, paragraph 58, as it provides primary recapture and commutation guidance.

b. Issue 2 – Impairment of Reinsurance Recoverables: SSAP No. 61R paragraph 42, requires impairment of uncollectible reinsurance in accordance with SSAP No. 5R.

c. Issue 3 – Reporting of Reinsurance Recoverables: Follow the recapture and commutation guidance in SSAP No. 61R, then analyze for impairment. Report reinsurance payables separate from reinsurance recoverables. Amounts related to paid and unpaid claims incurred prior to reinsurance contract cancellation are reported on asset page line 16.1 - Amounts Recoverable from Reinsurers and asset page line 16.3 - Other Amounts Receivable Under Reinsurance Contracts, respectively. Any remaining reinsurance recoverables from the reinsurance counterparty after impairment assessment shall be reported on the asset page line 25 Aggregate Write-ins for Other than Invested Assets.

d. Issue 4 – Admissibility of Reinsurance Recoverables: Admit amounts related to claims incurred prior to contract cancellation which have been paid by the reporting entity as of the reporting date (reported on asset page line 16.1 - Amounts Recoverable from Reinsurers) which are not in dispute after impairment review. Admit reinsurance recoverables which are not in dispute, and which are secured by collateral in an A-785 compliant trust. Nonadmit all amounts recoverable from a life reinsurer in liquidation which are either in dispute or which are not secured by collateral in a trust compliant with Appendix A-785.

e. Issue 5 – Disclosures: Follow existing applicable disclosures and provide additional information sufficient to understand the nature and impact of a reinsurance counterparty in liquidation as described in paragraph 22.

INT 23-04 Status

24. The consensuses in this interpretation were adopted on January 10, 2024, with an effective date of reporting periods on or after December 31, 2023.

25. No further discussion is planned.

Issue: ASU 2016-13 Measurement of Credit Losses on Financial Instruments

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	☒	☒	☒
New Issue or SSAP	☐	☐	☐
Interpretation	☐	☐	☐

Description of Issue: In June 2016, the Financial Accounting Standards Board (FASB) issued *ASU 2016-13 Financial Instruments–Credit Losses (Topic 326), Measurement of Credit Losses on Financial Instruments* (CECL*)* to change impairment and credit loss United States generally accepted accounting principles (GAAP) guidance from an "incurred loss" methodology to an "expected loss" methodology. These changes were made primarily in response to the 2008 Great Recession in which companies were anticipating significant credit losses but were unable to record these losses as the probable threshold had not yet been met. In response to this issue, FASB established the Financial Crisis Advisory Group (FCAG) to advise FASB on improvements to financial reporting in response to the Great Recession. The main recommendation from the FCAG to FASB was to investigate improvements to impairment and credit loss guidance through the development of an alternative to the "incurred loss" methodology. Based on this recommendation FASB developed CECL which replaces the "incurred loss" methodology and provides financial statement users with more decision-useful information about the expected credit losses on financial instruments and other commitments to extend credit held by a reporting entity at each reporting date. CECL affects all entities holding financial assets that are not accounted for at fair value through net income, including loans, debt securities, trade receivables, net investments in leases, off-balance sheet credit exposures, reinsurance recoverables and any other financial assets not specifically excluded that have the contractual right to receive cash. The impact from applying CECL is anticipated to vary by reporting entity in accordance with the credit quality of assets held and how they apply current GAAP.

One significant difference between previous GAAP and CECL is that the impairment guidance for in-scope assets were superseded and replaced with credit loss guidance under *Topic 326–Financial Instruments—Credit Losses*. Beyond consolidating new credit loss guidance into a single topic, CECL fundamentally changed the methodology for calculating and recording credit losses by replacing the incurred credit loss model with the expected credit loss model, which requires expected losses to be assessed and recorded at the onset of the acquisition of in-scope assets. This requirement is applicable for all in-scope assets unless management assesses that the asset represents a zero-risk transaction, U.S. Treasuries for example. As a result, the calculation of a credit loss allowance is now required for many assets which previously would have only recorded a credit loss allowance once it has occurred, or the probable threshold had been met. The asset categories scoped into the new CECL credit loss guidance are as follows:

- Financing Receivables
- Receivables from Sales-Type or Direct Finance Leases
- Related Party Accounts and Loans Receivable, excluding related parties under common control.
- All financial instruments held at Amortized Cost (categorized as Held to Maturity under GAAP), excluding purchased financial assets with credit deterioration (PCDs).
    - Includes but is not limited to debt securities, trade and time-share receivables, contract assets, and reinsurance recoverables.
- Off-balance-sheet credit exposures not accounted for as insurance.
    - Includes but is not limited to loan commitments, forward commitments to purchase loans, letters of credit, and financial guarantees.
- Cash Equivalents

While CECL does require the accrual of an allowance on expected credit losses, it does not require a specific evaluation method but rather adopts a principles-based approach which allows for any kind of credit loss evaluation if the end product of the evaluation meets certain defined criteria. Additionally, assets with similar risk profiles may be evaluated for expected credit losses collectively but these risk profiles must be assessed annually to determine if they remain similar. Note that Available for Sale securities are excluded from the expected credit loss methodology but are instead required to utilize a modified other-than-temporary impairment (OTTI) model detailed in Topic 326-30. The following information summarizes the key information on the accounting and reporting of credit losses under Topic 326:

Overview of CECL Concepts:
Accounting guidance is divided into securities reported at amortized cost (includes investment held at Held-to-Maturity, or HTM), and debt securities reported as available for sale (AFS), which reports fair value through OCI. The following reflects high-level concepts from CECL:

Amortized Cost Securities:

1. Allowance for credit losses is a valuation accounting that is deducted from the amortized cost basis of the financial assets to present the net amount expected to be collected on the financial assets. Net income is adjusted to reflect the allowance for credit losses based on the current expected estimate. The allowance shall be reported at each reporting date. Changes from current estimates shall be compared to estimates previously reported, with adjustments reflected in net income.

2. The entity shall measure credit losses on a collective basis when similar risk characteristics exist. If a financial asset does not share risk characteristics with other assets, the entity shall evaluate the asset on an individual basis. (Should not include individual and collective assessments on the same asset.)

3. The entity shall estimate expected credit losses over the contractual terms of the financial assets, considering prepayments. However, it shall not extend the contractual term for expected extensions, renewals, and modifications unless there is a reasonable expectation of executing a troubled debt restructuring.

4. When developing an estimate, the entity shall consider available information relevant to assessing collectability of cash flows. This may include internal information, external information, or a combination of past events, current conditions and reasonable and supportable forecasts. (Internal information may be determined sufficient.)

5. Historical credit loss information for assets with similar characteristics generally provides a basis for expected losses, but entities shall not rely solely on past events to estimate expected credit losses. When using historical information, the entity shall consider the need to adjust for management expectations about current conditions and reasonable and supported forecasts that differ from the historical period.

6. Estimate of expected credit losses shall include a measure of the expected risk of credit loss even if that risk is remote. However, entities are not required to measure expected credit losses when the expectation of nonpayment of the amortized cost basis is zero.

7. Estimate of expected credit losses shall reflect how credit enhancements (other than freestanding contracts) mitigate expected credit losses. However, freestanding contracts shall not be used to offset expected losses.

8. Assets purchased with existing credit deterioration are initially reported at the purchase price plus the allowance for credit losses to determine the initial amortized cost basis. Any noncredit discount or premium shall be allocated to each individual asset. At the acquisition date, the initial allowance for credits losses determined on a collective basis shall be allocated to individual assets to appropriately allocate any noncredit discount or premium.

9. For collateral-dependent financial assets, entities shall measure expected credit losses based on the fair value of the collateral when the entity determines that foreclosure is probable. The entity may expect credit losses of zero when the fair value (less costs to sell) of the collateral at the reporting date is equal to or exceeds the amortized cost basis of the financial asset. If the collateral is less than the amortized cost basis, an entity shall recognize an allowance for credit losses as the difference between the collateral fair value and the amortized cost of the asset.

10. In the period when financial assets are deemed uncollectible, they shall be written off with a deduction from the allowance.

11. Detailed disclosures are included to enable users to understand: 1) credit risk inherent in a portfolio and how management monitors credit quality of a portfolio; 2) management's estimate of expected credit losses; and 3) changes in the estimate of expected credit losses that have occurred during the period. These disclosures include a rollforward of the allowance for credit losses and a reconciliation of the purchase price for assets purchased with credit deterioration.

12. Noted examples are included for collateral-dependent financial assets (real estate loans), assets with collateral maintenance provisions (reverse-repurchase agreements), and HTM debt securities when potential default is greater than zero, but expected nonpayment is zero (Treasury Securities).

<u>Available-for-Sale Debt Securities</u>

13. Investment is impaired if the fair value of the investment is less than amortized cost basis.

14. For individual AFS debt securities, the entity shall determine whether a decline in fair value below the amortized cost basis has resulted from a credit loss or other factors. Impairments related to credit losses shall be recorded through an allowance for credit losses. However, the allowance shall be limited by the amount that the fair value is less than the amortized cost basis.

15. At each reporting date, the entity shall record an allowance for credit losses that reflects the amount of impairment related to credit losses, limited by the fair value floor. Changes in the allowance shall be recorded in the period of the change as a credit loss expense (or reversal of credit loss expense).

16. <u>Impairment shall be assessed at the individual security level</u>. For example, debt securities bearing the same CUSIP – even if purchased in separate lots – may be aggregated by a reporting entity on an average cost basis if that corresponds to the basis used to measure realized or unrealized gains and losses for the debt securities. <u>Providing a general allowance for an unidentified investment in a portfolio of debt securities is not appropriate.</u>

17. In assessing whether a credit loss exists, an entity shall compare the present value of cash flows expected to be collected from the security with the amortized cost basis of the security. If the present value of cash flows expected to be collected is less than the amortized cost basis of the security, a credit loss exists and an allowance for credit losses shall be recorded for the credit loss, limited by the amount that the fair value is less than amortized cost basis. Credit losses on an impaired security shall continue to be measured using the present value of expected future cash flows. (Entity would discount the expected cash flows at the effective interest risk implicit in the security at the date of acquisition.)

18. Estimates of expected future cash flows shall be on the entity's best estimate based on past events, current conditions and on reasonable and supportable forecasts.

19. If the entity intends to sell, or if more-likely-than-not will be required to sell before recovery of the amortized cost basis, any allowance for credit losses shall be written off and the amortized cost basis shall

be written down to the debt security's fair value at the reporting date with any incremental impairment reflected in earnings.

20. Entities shall reassess the credit losses each reporting period when there is an allowance for credit losses. Subsequent changes shall be recorded in the allowance for credit losses, with a corresponding adjustment in the credit loss expense. Entities are not permitted to reverse a previously recorded allowance for credit losses to an amount below zero.

21. Once an AFS debt security has been written down, the previous amortized cost basis less write-offs, including noncredit related impairment reported in earnings, shall become the new amortized cost basis, and shall not be adjusted for subsequent recoveries in fair value.

22. For AFS debt securities for which impairments were reported in earnings as a write-off because of an intent to sell or a more-likely-than-not requirement to sell, the difference between the new amortized cost basis and the cash flows expected to be collected shall be accreted as interest income. Over the life of the security, continue to estimate the present value of cash flows expected to be collected. For all other AFS debt securities, if there is a significant increase in the cash flows expected to be collected or if actual cash flows are significantly greater than cash flows previously expected, those changes shall be accounted for as a prospective adjustment to the yield. Subsequent increases in fair value after the write-down shall be included in other comprehensive income.

23. These AFS debt securities shall be presented on the balance sheet at fair value, with parenthetical presentation of the amortized cost and the allowance for credit losses. The allowance for credit losses shall be separately presented as a component of accumulated other comprehensive income.

24. Detailed disclosures are included to allow users to understand: 1) credit risk inherent in AFS debt securities; 2) management's estimate of credit losses; and 3) changes in the estimate of credit losses that have taken place during the period. These disclosures include detailed information for situations in which AFS securities are in an unrealized loss position, but the entity has reached a conclusion that an allowance for credit losses is unnecessary. Other key disclosures include the methodology and significant inputs used to measure credit loss, a rollforward of the allowance for credit losses, and a reconciliation of purchased financial assets with credit deterioration.

25. Noted examples are included for AFS debt securities in an unrealized loss position for which no credit losses are reported (situations include Treasury Securities, Federal Agency MBS, and Corporate Bonds).

Additionally, CECL would make changes to how companies account for off-balance sheet credit exposures. Traditionally, most credit exposures have had no financial impact outside of disclosures until the probable threshold has been met. However, as credit exposures are within the scope of CECL entities will likely be required to assess and accrue a credit loss allowance at the inception of the credit exposure.

CECL also includes revisions to various other elements of the FASB Codification – Contingencies, Guarantees, Troubled Debt Restructuring, Revenue, Business Combinations, Consolidation, Derivatives, Fair Value Measurement, Foreign Currency Transactions, Leases, Transfer and Servicing, Insurance, Financial Guarantee Contracts, & Health Care Entities. Staff will evaluate these changes in detail, and if these revisions are applicable to SAP, as CECL is considered.

Subsequent Revisions:

Several ASUs have been issued after CECL to provide clarification and improvements to the guidance in ASC Topic 326. Note that references to CECL are inclusive of these subsequent revisions. For the discussion at the 2023 Fall National Meeting, NAIC staff will include the following ASUs:

- *ASU 2018-19, Codification Improvements to Topic 326, Financial Instruments—Credit Losses*, amends CECL guidance by providing clarification on two specific issues.
    - Issue 1 amended the transition date effective for nonpublic entities from 2020 to 2021 year-end.
    - Issue 2 clarifies that receivables from operating leases are not within the scope of CECL and should be accounted for in accordance with Topic 820.
- *ASU 2019-04, Codification Improvements to Topics 326, 815, 825*, addresses several topics, which are further disaggregated by issue, intended to clarify or correct the original CECL guidance. The Topics are numbered from 1-5 with several individual issues addressed within each Topic.
    - Topic 1 provides clarifications on accrued interest, transfers between categories/classifications of loans and debt securities, and recoveries on previously written off financial assets.
    - Topic 2 corrects cross-references, clarifies that reinsurance recoverables are within the scope of CECL, and provides methodological clarifications in several areas involving the calculation of credit loss reserves (see Issues 2D through 2F).
    - Topic 3 provides clarifications and corrections on several issues involving Fair Value Hedges and Hedge Accounting and clarifies that non-profit organizations that do not separately report earnings may not adopt the amortization approach as detailed for fair value hedging.
    - Topic 4 clarifies that Health and Welfare Benefit plans are not within the scope of CECL, that the scope of certain disclosures is limited to only public entities and clarifies guidance on alternative to fair value valuations.
    - Topic 5 clarifies the presentation of line of credit converted to debt items and whether entities should consider extension or renewals when calculating contract terms.
- *ASU 2019-10 Financial Instruments—Credit Losses (Topic 326), Derivatives and Hedging (Topic 815), and Leases (Topic 842)*, amends the effective date for various ASUs. The transition date for CECL was moved to December 15, 2022, for all entities other than public SEC filers.
- *ASU 2019-11 Codification Improvements to Topic 326, Financial Instruments—Credit Losses*, addresses five issues identified with CECL.
    - Issues 1 and 2 involve clarifications and additional guidance on assets purchased with credit deterioration.
    - Issue 3 extends the disclosure relief detailed in ASU 2019-04 to additional disclosures on accrued interest receivables.
    - Issue 4 provides clarifications on CECL assessments which involve financial assets secured by collateral maintenance provisions.
    - Issue 5 corrects a cross-reference error.
- *ASU 2020-03 Codification Improvements to Financial Instruments* addresses several issues identified with CECL.
    - Issue 1 clarifies that all entities are required to provide the fair value option disclosures.
    - Issue 2 corrects certain paragraphs in Topic 820 to include the phrase nonfinancial items accounted for as derivatives under Topic 815 to be consistent with the previous amendments.
    - Issue 3 clarifies that the disclosure requirements in Topic 320 apply to the disclosure requirements in Topic 942 for depository and lending institutions.
    - Issues 4 and 5 correct and enhance various cross-references.
    - Issue 6 clarifies the correct contractual term used to measure the net investment in a lease.
    - Issue 7 clarifies that when an entity regains control of financial assets sold, an allowance for credit losses should be recorded in accordance with Topic 326.

Staff Analysis:

The main purpose of statutory accounting principles (SAP) is to address the concerns of regulators, primarily as it relates to assessing solvency, who are the primary users of statutory financial statements. To do so, SAP stresses measurement of a company's ability to pay claims in the future and adopts reasonably conservative principles of accounting to ensure that insurance companies' capital and surplus is reflective of funds in excess of policyholder

liabilities which are available to pay claims should the assets backing reserves become insufficient. Risk-based capital then provides a basis for evaluating the sufficiency of this capital and surplus amount in the context of a particular company's risk-taking activities, including its exposure to credit risk. Capital requirements are calibrated to ensure sufficiency of capital even during periods of economic uncertainty and distress, within the intended level of statistical safety.

The statutory framework has long incorporated concepts that incorporate a prospective view of future credit risk that historical GAAP has not. The first is the Asset Valuation Reserve (AVR). AVR requires life insurance companies to establish a reserve to account for future impairment losses on all assets (with some minor exceptions). While this is much more formulaic than the allowance required under CECL, it is intended to accomplish the same objective. The second is that *SSAP No. 26R—Bonds* requires insurance companies that do not maintain AVR to report bonds at fair value if the bond is not considered high-quality (NAIC designations 3 to 6). While this requirement does not result in credit loss reserves, it does have a similar effect by requiring non-life companies to report lower quality bonds at fair value or convert previously highest or high-quality bonds to fair value in the event of credit quality degradation. Further, the RBC formula factors in the credit risk of each individual asset in calculating the amount of capital required to be held. These mechanisms incorporate an expectation of future credit losses. Therefore, while GAAP has just begun recognizing an expectation of future credit losses with the advent of CECL, the statutory framework has recognized and incorporated future credit loss potential for decades.

Although the statutory framework has long considered future credit losses, it is worth assessing CECL to determine whether it could introduce any improvements to the existing statutory framework if adopted. Based on the review performed, Staff does not recommend adoption of CECL for the following reasons:

- CECL is a framework that incorporates significant judgement and forecasting by the company to establish credit reserves. The assumptions and data that go into these estimates are required to be company-specific, reflecting the company's reasonable and supportable forecasts of future economic conditions. It also is required to consider current economic conditions, which results in sensitivity in the reserve to changing economic conditions. The statutory framework has historically limited insurer judgment in estimating reserves. Where judgment has been allowed, there are typically mechanisms in place to closely regulate and assess those assumptions for reasonableness. Further, loss reserves and RBC are generally set to already incorporate downside risk within a desire level of statistical safety. As the framework already incorporates an expectation of adverse experience, it is not particularly volatile with changes in economic conditions. It is intended to reflect risk through the economic cycle, not at a point in time. As a result of both the volatility and judgment involved, the CECL standard does not fit the overall design of the statutory accounting and solvency monitoring framework.
- CECL does not provide a specific method that companies must use to make expected loss estimates but is instead defined by several results-oriented principles. While this does allow companies the flexibility to adopt the forecasting process that best fits their investments and company, it also means that there will be a significant diversity in the methods used to calculate expected credit losses under CECL. Such optionality is generally not considered compatible with SAP and would also place a significant burden on regulators and examiners to assess the variety of forecasting methods utilized by insurance companies.
- The majority of insurance company investments are debt securities which are generally classified as Available for Sale (AFS) for GAAP reporting. Investments classified as AFS are held at fair value with changes in fair value recorded through other comprehensive income. The portion of the CECL standard that applies to AFS securities is markedly different than what applies to debt securities held at amortized cost. Unlike GAAP, statutory accounting requires the majority of debt securities to be held at amortized cost. As a result, using a CECL standard for statutory accounting would be significantly more expansive and impactful to a statutory balance sheet than under GAAP and would result in a significantly different application of CECL between statutory accounting and GAAP, even if the identical standard were adopted.
- CECL is a complex standard that requires companies to either develop internal models or to contract an external solution to support calculating a reserve. GAAP does allow companies to elect to hold their investments under the fair value option, in which case CECL is not required. This may be an appealing option for some insurers, particularly smaller ones that wish to avoid the operational cost of CECL. The

fair value option does not exist for statutory accounting. As such, adopting CECL would likely force insurers to incur the cost of CECL that would not otherwise be necessary for their GAAP financial statements.

- Similarly, many insurance companies do not prepare GAAP financial statements. This means that they would need to learn about and adopt CECL for the first time for their statutory financial statements if CECL were to be adopted.
- As RBC has its own methodology for incorporating credit risk, any CECL allowance would need to be reversed in the RBC formula in order to avoid double counting expected losses. This would largely eliminate any benefit of CECL to regulators' solvency monitoring efforts.

As a result of these factors, NAIC Staff does not recommend adopting CECL for statutory accounting.

Existing Authoritative Literature:

Existing SAP guidance has predominantly adopted (or adopted with modification) GAAP guidance pertaining to other-than-temporary impairment. However, the adopted guidance, although coming from GAAP, does not reflect GAAP concepts for similar securities. For example, the guidance in SSAP No. 26R reflects concepts from GAAP applicable for receivables and loans (e.g., it is probable that the entity will be unable to collect all amounts due accordingly to the contractual terms.) The guidance in *SSAP No. 43R—Loan-Backed and Structured Securities* is more comparable to current GAAP concepts applicable for both HTM and AFS debt securities (e.g., assessment of whether an entity will recover the amortized cost basis based on a review of the present value of cash flows.)

The GAAP categories for debt securities have previously been rejected for statutory accounting. As such, SAP does not include the classifications of "Held-to-Maturity," "Available-for-Sale" or "Trading" for debt securities. All debt securities are captured within SSAP No. 26R or SSAP No. 43R and reported at either amortized cost, or the lower of amortized cost or fair value, based on NAIC designation.

Existing Authoritative Literature:

INT 06-07: Definition of the Phrase "Other Than Temporary" – This INT reflects the adoption with modification of *FSP FAS 115-1/124-1: The Meaning of Other Them Temporary Impairment and Its Application to Certain Investments*. **This FSP was subsequently included in the FASB Codification in ASC 320-10 and ASC 326-30 and this ASC guidance has been deleted (or significantly revised) with the issuance of ASU 2016-13**. (This INT has not been duplicated in this agenda item.)

Preamble – This guidance reflects some of the core principles of statutory accounting as it pertains to the Staff Analysis detailed above:

> 19. SAP is conservative in some respects but not unreasonably conservative over the span of economic cycles, or in recognition of the primary statutory responsibility to regulate for financial solvency. SAP attempts to determine at the financial statement date an insurer's ability to satisfy its obligations to its policyholders and creditors.
>
> 33. Conservative valuation procedures provide protection to policyholders against adverse fluctuations in financial condition or operating results. Statutory accounting should be reasonably conservative over the span of economic cycles and in recognition of the primary responsibility to regulate for financial solvency. Valuation procedures should, to the extent possible, prevent sharp fluctuations in surplus.

SSAP No. 26R, Paragraphs 12-13 – This guidance reflects adoption of *FSP FAS 115-1/124-1: The Meaning of Other Them Temporary Impairment and Its Application to Certain Investments.* **This FSP was subsequently included in the FASB Codification in ASC 320-10 and ASC 326-30 and this ASC guidance has been deleted (or significantly revised) with the issuance of ASU 2016-13**.

13. An other-than-temporary(INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition.[1] A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bond's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with SSAP No. 7. The other-than-temporary impairment loss shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

14. In periods subsequent to the recognition of an other-than-temporary impairment loss for a bond, the reporting entity shall account for the other-than-temporarily impaired security as if the security had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the bond on the measurement date shall become the new cost basis of the bond and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the security, based on the new cost basis, shall be amortized over the remaining life of the security in the prospective manner based on the amount and timing of future estimated cash flows. The security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than temporary shall be recorded as realized losses.

SSAP No. 43R, Paragraphs 12-13 – This guidance reflects concepts included within *FSP FAS 115-1/124-1: The Meaning of Other Them Temporary Impairment and Its Application to Certain Investments,* as well the adoption of *EITF 99-20, Exchange of Interest-Only and Principal-Only Securities for a Mortgage-Backed Security,* and *FSP ETIF 99-20-1, Amendments to the Impairment Guidance of ETIF Issue 99-20.* **The guidance reflected from this FSP was included in ASC 310-20, 325-40, and 326-30 and has been deleted or significantly revised with the issuance of ASU 2016-13:**

Collection of All Contractual Cashflows is Not Probable

19. The following guidance applies to loan-backed and structured securities with evidence of deterioration of credit quality since origination for which it is probable, either known at acquisition or identified during the holding period, that the investor will be unable to collect all contractually required payments receivable, except for those beneficial interests that are not of high credit quality or can contractually be prepaid or otherwise settled in such a way that the reporting entity would not recover substantially all of its recorded amount determined at acquisition (see paragraphs 22-25).

20. The reporting entity shall recognize the excess of all cash flows expected at acquisition over the investor's initial investment in the loan-backed or structured security as interest income on an effective-yield basis over the life of the loan-backed or structured security (accretable yield). Any excess of contractually required cash flows over the cash flows expected to be collected is the nonaccretable difference. Expected prepayments shall be treated consistently for determining cash flows expected to be collected and projections of contractual cash flows such that the nonaccretable difference is not affected. Similarly, the difference between actual prepayments and expected prepayments shall not affect the nonaccretable difference.

21. An investor shall continue to estimate cash flows expected to be collected over the life of the loan-backed or structured security. If, upon subsequent evaluation:

[1] If a bond has been modified from original acquisition, the guidance in *SSAP No. 36—Troubled Debt Restructuring* and paragraph 22 of *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* shall be followed, as applicable. After modification of original terms, future assessments to determine other-than-temporary impairment shall be based on the modified contractual terms of the debt instrument.

a. The fair value of the loan-backed or structured security has declined below its amortized cost basis, an entity shall determine whether the decline is other than temporary (INT 06-07). For example, if, based on current information and events, there is a decrease in cash flows expected to be collected (that is, the investor is unable to collect all cash flows expected at acquisition plus any additional cash flows expected to be collected arising from changes in estimate after acquisition (in accordance with paragraph 19.b.), an other-than-temporary impairment shall be considered to have occurred. The investor shall consider both the timing and amount of cash flows expected to be collected in making a determination about whether there has been a decrease in cash flows expected to be collected.

b. Based on current information and events, if there is a significant increase in cash flows previously expected to be collected or if actual cash flows are significantly greater than cash flows previously expected, the investor shall recalculate the amount of accretable yield for the loan-backed or structured security as the excess of the revised cash flows expected to be collected over the sum of (1) the initial investment less (2) cash collected less (3) other-than-temporary impairments plus (4) amount of yield accreted to date. The investor shall adjust the amount of accretable yield by reclassification from nonaccretable difference. The adjustment shall be accounted for as a change in estimate in conformity with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3), with the amount of periodic accretion adjusted over the remaining life of the loan-backed or structured security (prospective method).

Unrealized Gains and Losses and Impairment Guidance

29. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with paragraph 36 of this statement. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

30. The application of this reporting requirement resulting from NAIC designation (i.e., lower of cost or fair value) is not a substitute for other-than-temporary impairment recognition (paragraphs 33-37). For securities reported at fair value where an other-than-temporary impairment has been determined to have occurred, the realized loss recognized from the other-than-temporary impairment shall first be applied towards the realization of any unrealized losses previously recorded as a result of fluctuations in the security's fair value due to the reporting requirements. After the recognition of the other-than-temporary impairment, the security shall continue to report unrealized gains and losses as a result of fluctuations in fair value.

31. If the fair value of a loan-backed or structured security is less than its amortized cost basis at the balance sheet date, an entity shall assess whether the impairment is other than temporary. Amortized cost basis includes adjustments made to the cost of an investment for accretion, amortization, collection of cash, previous other-than-temporary impairments recognized as a realized loss.

32. If an entity intends to sell the loan-backed or structured security (that is, it has decided to sell the security), an other-than-temporary impairment shall be considered to have occurred.

33. If an entity does not intend to sell the loan-backed or structured security, the entity shall assess whether it has the intent and ability[2] to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an other-than-temporary impairment shall be considered to have occurred.

34. If the entity does not expect to recover the entire amortized cost basis of the security, the entity would be unable to assert that it will recover its amortized cost basis even if it does not intend to sell the

[2] This assessment shall be considered a high standard due to the accounting measurement method established for the securities within the scope of this statement (amortized cost).

security and the entity has the intent and ability to hold. Therefore, in those situations, an other-than temporary impairment shall be considered to have occurred. (For mortgage-referenced securities, an OTTI is considered to have occurred when there has been a delinquency or other credit event in the referenced pool of mortgages such that the entity does not expect to recover the entire amortized cost basis of the security.) In assessing whether the entire amortized cost basis of the security will be recovered, an entity shall compare the present value of cash flows expected to be collected from the security with the amortized cost basis of the security. If present value of cash flows expected to be collected is less than the amortized cost basis of the security, the entire amortized cost basis of the security will not be recovered (that is, a non-interest related decline[3] exists), and an other-than-temporary impairment shall be considered to have occurred. A decrease in cashflows expected to be collected on a loaned-backed or structured security that results from an increase in prepayments on the underlying assets shall be considered in the estimate of the present value of cashflows expected to be collected.

35. In determining whether a non-interest related decline exists, an entity shall calculate the present value of cash flows expected to be collected based on an estimate of the expected future cash flows of the impaired loan-backed or structured security, discounted at the security's effective interest rate.

a. For securities accounted for under paragraphs 14-18 – the effective interest rate of the loan-backed or structured security is the rate of return implicit in the security (that is, the contractual interest rate adjusted for any net deferred fees or costs, premium, or discount existing at the origination or acquisition of the security).

b. For securities accounted for under paragraphs 19-21 – the effective interest rate is the rate implicit immediately prior to the recognition of the other-than-temporary impairment.

c. For securities accounted for under paragraphs 22-25 – the reporting entity shall apply the guidance in paragraph 24.b.

36. When an other-than-temporary impairment has occurred because the entity intends to sell the security or has assessed that that they do not have the intent and ability to retain the investments in the security for a period of time sufficient to recover the amortized cost basis, the amount of the other-than-temporary impairment recognized in earnings as a realized loss shall equal the entire difference between the investment's amortized cost basis and its fair value at the balance sheet date. (This guidance includes loan-backed and structured securities previously held at lower of cost or market. For these securities, upon recognition of an other-than-temporary impairment, unrealized losses would be considered realized.)

37. When an other-than-temporary impairment has occurred because the entity does not expect to recover the entire amortized cost basis of the security even if the entity has no intent to sell and the entity has the intent and ability to hold, the amount of the other-than-temporary impairment recognized as a realized loss shall equal the difference between the investment's amortized cost basis and the present value of cash flows expected to be collected, discounted at the loan-backed or structured security's effective interest rate in accordance with paragraph 35. (This guidance includes loan-backed and structured securities previously held at lower of cost or market. For these securities, upon recognition of an other-than-temporary impairment, unrealized losses would be considered realized for the non-interest related decline. Hence, unrealized losses could continue to be reflected for these securities due to the reporting requirements.)

Reinsurance recoverables are explicitly included in the scope of the new CECL guidance, but only for "*expected losses related to the credit risk of the reinsurer/assuming company"* (326-20-55-82). The current existing statutory accounting guidance does not include the concept of reserving for expected credit losses. It should be noted that while not related to creditworthiness, *SSAP No. 62R—Property and Casualty Reinsurance* does include the concept

[3] A non-interest related decline is a decline in value due to fundamental credit problems of the issuer. Fundamental credit problems exist with the issuer when there is evidence of financial difficulty that may result in the issuer being unable to pay principal or interest when due. An interest related decline in value may be due to both increases in the risk-free interest rate and general credit spread widening.

© 2023 National Association of Insurance Commissioners

of the provision for reinsurance, which is more focused on known overdue/uncollectible reinsurance and does not take the creditworthiness of the reinsurer into the calculation. However, impairment analysis is required for reinsurance balances in both *SSAP No. 61R—Life, Deposit -Type and Accident and Health Reinsurance* and SSAP No. 62R.

Multiple other SSAPs are impacted by the updated guidance, and NAIC Staff has prepared tables in Exhibit 1 which provide detailed summarizations of the updates made by CECL.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

The following ASUs were issued after CECL as clarifications and improvements to the guidance in ASC Topic 326 but have already been addressed for statutory accounting purposes by the Working Group:

- *ASU 2019-05 Financial Instruments—Credit Losses (Topic 326)—Targeted Transition Relief* was assessed and rejected for statutory accounting purposes by the Working Group. For further details see Agenda Item 2019-28.
- *ASU 2022-02 Financial Instruments—Credit Losses (Topic 326) Troubled Debt Restructurings and Vintage Disclosures* was assessed and rejected for statutory accounting purposes by the Working Group. For further details see Agenda Item 2022-10.
- *ASU 2022-01 Derivatives and Hedging (Topic 815) Fair Value Hedging—Portfolio Layer Method* was assessed and adopted with modification for statutory accounting purposes by the Working Group. For further details see Agenda Item 2022-09.

Agenda item 2016-20 was started on CECL and last exposed for comment on August 4, 2018.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None.

Convergence with International Financial Reporting Standards (IFRS):
The credit losses project began as a joint project with the IASB, but the Boards determined that convergence was not possible in 2012 due to the differing needs of their respective stakeholder groups. The IASB issued *IFRS 9, Financial Instruments* in July 2014. The FASB and IASB both sought to respond to concerns identified pertaining to the delayed recognition of credit losses; however, the IASB's stakeholders strongly preferred an impairment model that uses a dual measurement approach, while U.S. stakeholders strongly preferred the current expected credit loss model.

The main difference between ASU 2016-13 and IFRS 9 relates to the timing of recognition of expected losses. The ASU requires that the full amount of expected credit losses be recorded for all financial assets measured at amortized cost, whereas IFRS 9 requires an allowance for credit losses equal to 12 months of expected credit losses until there is a significant increase in credit risk, at which point lifetime expected losses are recognized. Consequently, the allowance for credit losses as measured and recorded under the ASU will be accounted for differently under GAAP than under IFRS and will have a different effect on the financial statements.

Staff Recommendation:
Based on the Staff Analysis detailed on Pages 6-7, Staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to reject *ASU 2016-13 Measurement of Credit Losses on Financial Instruments* and other related ASUs (see "Subsequent Revisions" on page 5) within the following SSAPs:

- *SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments*
- *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*
- *SSAP No. 22R—Leases*

- *SSAP No. 26R—Bonds*
- *SSAP No. 32R—Preferred Stock*
- *SSAP No. 34—Investment Income Due and Accrued*
- *SSAP No. 37—Mortgage Loans*
- *SSAP No. 39—Reverse Mortgages*
- *SSAP No. 41R—Surplus Notes*
- *SSAP No. 43R—Loan and Asset Backed Securities*
- *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance*
- *SSAP No. 62R—Property and Casualty Reinsurance*
- *SSAP No. 86—Derivatives*
- *SSAP No. 103R—Transfer/Service of Financial Assets*
- *SSAP No. 105R—Working Capital Finance Investments*
- *INT 06-07: Definition of the Phrase "Other Than Temporary*

Staff also recommends modifying *INT 06-07: Definition of Phrase "Other Than Temporary"* to clarify that companies should adhere to the impairment guidance detailed within the SSAPs, which may reflect U.S. GAAP guidance prior to the FASB's issuance of ASU 2016-13.

Agenda item 2016-20 was started on CECL and last exposed for comment on August 4, 2018. Agenda item 2016-20 was reviewed by NAIC Staff, and we recommend it be formally disposed and replaced by this new agenda item.

Proposed Revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments

Proposed Revisions to INT 06-07: Definition of Phrase "Other Than Temporary"

INT 06-07 Discussion

13. On xx/xx/2024, the Working Group rejected *ASU 2016-13 Measurement of Credit Losses on Financial Instruments* and other related ASUs. As a result, companies should continue to apply the relevant statutory accounting impairment guidance, which may reflect prior U.S. GAAP guidance.

Staff Review Completed by:
NAIC Staff – William Oden, September 2023

Status:
On December 1, 2023, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification and exposed this agenda item to reject ASU 2016-13, *ASU 2018-19, Codification Improvements to Topic 326, Financial Instruments—Credit Losses*, *ASU 2019-04, Codification Improvements to Topics 326, 815, 825*, *ASU 2019-10 Financial Instruments—Credit Losses (Topic 326), Derivatives and Hedging (Topic 815), and Leases (Topic 842)*, *ASU 2019-11 Codification Improvements to Topic 326, Financial Instruments—Credit Losses*, and *ASU 2020-03 Codification Improvements to Financial Instruments*, within INT 06-07: Definition of Phrase "Other Than Temporary" and fifteen applicable SSAPs which are detailed above. The Working Group also moved agenda item 2026-20, which was started to address CECL, to the disposed listing. The Working Group directed NAIC staff to research how best to maintain pre-CECL GAAP impairment guidance for posterity.

On December 11, 2023, the Working Group chair approved an accelerated comment deadline that was requested by industry after the December 1, 2023 meeting. As a result, the comment deadline for the Fall National Meeting exposure of agenda item 2023-24 was shortened from February 4, 2024 to December 29, 2023, to allow the Working Group the ability to formally reject CECL and other related ASUs in January 2024.

On January 10, 2024, the Working adopted, as final, the exposed revisions, as detailed below, to INT 06-07 and SSAP Nos. 2R, 5R, 22R, 26R, 32R, 34, 37, 39, 41R, 61R, 62R, 86, 103R, and 105R to reject ASUs 2016-13, 2018-19, 2019-04, 2019-10, 2019-11, and 2020-03 as not applicable to statutory accounting. The Working Group also reiterated its direction to NAIC staff to research and prepare a document to maintain pre-CECL GAAP impairment guidance for posterity.

Note on January 10, 2024, Exposed Revisions: Subsequent to the Fall National Meeting Exposure, additional consistency revisions were made to the proposed revisions and are shown highlighted grey below for January 10, 2024, discussion. The sentence directing companies to continue applying the relevant statutory accounting impairment guidance was originally excluded from any revised SSAPs which was within scope of INT 06-07 as the INT already had this sentence. Staff later determined that it would be clearer and cleaner to have this sentence within all revised SSAPs. Additionally, Staff adjusted each of the revised SSAPs to specifically denote the effective date of the rejection.

Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
Financial Instruments—Credit Losses—Available-for-Sale Debt Securities		considering recoveries when estimating expected credit losses on financial assets measured at amortized cost basis. Additionally, the amendments clarify that expected recoveries of amounts previously written off and expected to be written off should be included in the valuation account and should not exceed the aggregate of amounts previously written off and expected to be written off by the entity.	50-13 55-52 35-12 35-13
Receivables—Troubled Debt Restructurings by Creditors	310-40	The amendment clarifies paragraph 310-40-55-14 by removing the incorrect cross-reference to paragraph 326-20-35-2 and, instead, properly cross-referencing paragraphs 326-20-35-4 through 35-5, which require that an entity use 41 the fair value	55-14
Investments—Equity Method and Joint Ventures—Overall	323-10	The amendment to paragraph 323-10-35-26 clarifies the guidance by including references to both Subtopic 326-20, Financial Instruments—Credit Losses—Measured at Amortized Cost, and Subtopic 326-30, Financial Instruments—Credit Losses—Available-for-Sale Debt Securities, to require the subsequent measurement of credit losses on financial assets after the guidance on equity method losses is applied.	35-24 35-26
Financial Instruments—Credit Losses—Measured at Amortized Cost	326-20	The amendments clarify that reinsurance recoverables that result from insurance transactions that are within the scope of Topic 944, Financial Services—Insurance, are within the scope of Subtopic 326-20 even if those reinsurance recoverables are measured on a net present value basis in accordance with Topic 944.	05-1 15-2
Financial Instruments—Credit	326-20 &	The amendments clarify the Board's intent for how an entity should determine the effective	30-4

Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
Losses—Measured at Amortized Cost & Financial Instruments—Credit Losses—Available-for-Sale Debt Securities	326-30	interest rate and estimated expected future cash flows by removing the prohibition in the guidance and requiring that the projections used for determining the effective interest rate also be used in determining the estimated expected future cash flows. The amendments also clarify that if an entity projects future interest rate environments when using a discounted cash flow method to measure expected credit losses on variable-rate financial instruments, then the entity should adjust the effective interest rate to consider the timing (and changes in the timing) of expected cash flows resulting from expected prepayments.	35-11
Financial Instruments—Credit Losses—Measured at Amortized Cost & Financial Instruments—Credit Losses—Available-for-Sale Debt Securities	326-20 & 326-30	The amendments in paragraph 326-20-30-4A permit an entity to make an accounting policy election to adjust the effective interest rate used to discount expected cash flows of a financial asset. The amendments also clarify that an entity should not adjust the effective interest rate used to discount expected cash flows for subsequent changes in expected prepayments if the financial asset is restructured in a troubled debt restructuring. Paragraph 326-30-35-7A was also amended to allow an entity to make an accounting policy election to adjust the effective interest rate used to discount expected cash flows of a debt security classified as available-for-sale	30-4A 35-7A
Financial Instruments—Credit Losses—Measured at Amortized Cost	326-20	The amendments clarify the guidance and align the measurement of credit losses using fair value of collateral when foreclosure is probable and when an entity elects the collateral-dependent	35-4 35-5

		practical expedient by adding a requirement to adjust the fair value of the collateral for estimated costs to sell in paragraph 326- 20-35-4. Additionally, the amendments clarify the guidance that when an entity adjusts the fair value of the collateral for the estimated costs to sell, the estimated costs to sell should be undiscounted if the entity intends to sell rather than operate the collateral.	
Derivatives and Hedging—Hedging—General & Derivatives and Hedging—Fair Value Hedges	815-20 & 815-25	The amendments clarify that an entity may measure the change in fair value of a hedged item using an assumed term only for changes attributable to interest rate risk. They also clarify that an entity may measure the change in the fair value of the hedged item attributable to interest rate risk using an assumed term when the hedged item is designated in a hedge of both interest rate risk and foreign exchange risk. In addition, the amendments clarify that one or more separately designated partial term fair value hedging relationships of a single financial instrument can be outstanding at the same time.	25-12 35-13B 55-99
Derivatives and Hedging—Fair Value Hedges	815-25	The amendments clarify that an entity may, but is not required to, begin to amortize a fair value hedge basis adjustment before the fair value hedging relationship is discontinued. They also clarify that if an entity elects to amortize the basis adjustment during an outstanding partial-term hedge, the basis adjustment should be fully amortized by the hedged item's assumed maturity date in accordance with paragraph 815-25-35-13B.	35-9A

ASU 2019-04 Codification Improvements to Topics 326, 815, and 825			
Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
Derivative and Hedging—Overall	815-10	The amendments clarify that an entity should disclose available-for-sale debt securities at their amortized cost and that fair value hedge basis adjustments related to foreign exchange risk should be excluded from the disclosures required by paragraph 815-10-50-4EE.	4EE
Derivatives and Hedging—Cash Flow Hedges	815-30	The amendment clarifies that an entity should consider the contractually specified interest rate being hedged when applying the hypothetical derivative method.	35-26
Derivative and Hedging—Overall & Derivatives and Hedging—Hedging—General	815-10 & 815-20	The amendments clarify that a not-for-profit entity that does not separately report earnings is not permitted to elect the amortization approach for amounts excluded from the assessment of effectiveness under fair value hedge accounting. The amendments also update the cross-references in paragraph 815-10-15-1 to further clarify the scope of Topic 815, Derivatives and Hedging, for entities that do not report earnings separately.	15-1 15-1 25-12
Derivatives and Hedging—Hedging—General	815-20	The amendments clarify that a private company that is not a financial institution as described in paragraph 942-320-50-1 should document the analysis supporting a last-of-layer designation concurrently with hedge inception. The amendments also clarify that not-for-profit entities (except for not-for-profit entities that have issued, or are a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market) qualify for the same 60 subsequent quarterly hedge effectiveness assessment timing relief for which certain private companies qualify in accordance with paragraph 815-20-25-142.	25-139 25-143

ASU 2019-04 Codification Improvements to Topics 326, 815, and 825			
Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
Derivatives and Hedging—Hedging—General	815-20	The amendments clarify that the application of the first payments-received cash flow hedging technique to changes in overall cash flows on a group of variable interest payments continues to be permitted under Topic 815, Derivatives and Hedging.	55-33G
Derivatives and Hedging—Hedging—General	815-20	The amendments clarify various provisions to the amendments in Update 2017-12.	65-3 65-5
Investments—Debt Securities—Overall & Investments—Equity Securities—Overall	320-10 & 321-10	The amendments clarify the guidance in paragraphs 320-10-15-3 and 321-10-15-3, including adding health and welfare plans to the list of entities for which Topic 320, Investments—Debt Securities, does not apply.	15-3 15-3
Investments—Debt Securities—Overall & Financial Services—Depository and Lending—Investments—Debt and Equity Securities	320-10 & 942-320	The Board intended to eliminate all fair value disclosures for financial assets measured at amortized cost basis for entities other than public business entities through the amendments in Update 2016-01. The amendments clarify the guidance in paragraph 320-10-50-5 by eliminating the requirement for entities other than public business entities to disclose aggregate fair value of held-to maturity debt securities.	50-5 50-5A 50-3 50-3A
Investments—Equity Securities—Overall	321-10	The amendments clarify that all adjustments made under the measurement alternative upon the identified remeasurement events should be accounted for in accordance with Topic 820.	35-2 50-2B
Foreign Currency Matters—Overall & Financial Instruments—Overall	830-10 & 825-10	The amendments clarify that an entity is required to follow paragraph 830-10-45-18 for equity securities without readily determinable fair values accounted for under the measurement alternative in accordance with paragraph 321-10-35-2. Paragraph 830-10-45-18 requires remeasurement	45-18 65-5

ASU 2019-04 Codification Improvements to Topics 326, 815, and 825			
Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
		at historical exchange rates. The amendments to paragraph 830-10-45-18(a)(1) and (a)(2) are not intended to change items that should be remeasured at historical exchange rates.	
Financial Instruments—Credit Losses—Measured at Amortized Cost	326-20	The amendments require an entity to present the amortized cost basis of line-of-credit arrangements that are converted to term loans in a separate column, as illustrated in Example 15.	50-6A 50-7 55-79
Financial Instruments—Credit Losses—Measured at Amortized Cost & Financial Instruments—Credit Losses—Overall	326-20 & 326-10	The amendments clarify that an entity should consider extension or renewal options (excluding those that are accounted for as a derivative in Topic 815) that are included in the original or modified contract at the reporting date and are not unconditionally cancellable by the entity.	30-6 65-1 65-2

ASU 2019-11 Codification Improvements to Topic 326, Financial Instruments—Credit Losses			
Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
Financial Instruments—Credit Losses—Measured at Amortized Cost	326-20	The amendment intends to clarify that expected recoveries of amounts previously written off and expected to be written off should be included in the valuation account and should not exceed the aggregate of amounts previously written off and expected to be written off by an entity. In addition, the amendments clarify that when a method other than a discounted cash flow method is used to estimate credit losses, expected recoveries should not include any amounts that result in an acceleration of the noncredit discount; however, an entity may include increases in expected cash flows after acquisition	30-13 and 30-13A 55-86 thru 90
Financial Instruments—Credit Losses—Overall	326-10	The Board did not intend to introduce significant operational complexities when measuring expected credit losses on preexisting troubled debt restructurings. As a result. the amendment allows entities an accounting policy election to calculate the prepayment-adjusted effective interest rate on preexisting troubled debt restructurings using the prepayment assumptions that exist as of the date that an entity adopts the amendments in Update 2016-13, instead of the prepayment-adjusted effective interest rate immediately before the restructuring date.	65-1
Investments—Debt and Equity Securities—Overall	320-10	The amendment provides a practical expedient that allows an entity to exclude accrued interest receivable balances from the disclosure requirements in paragraphs 326-20-50-4 through 50-22 and 326-30-50-4	50-2A 50-5C

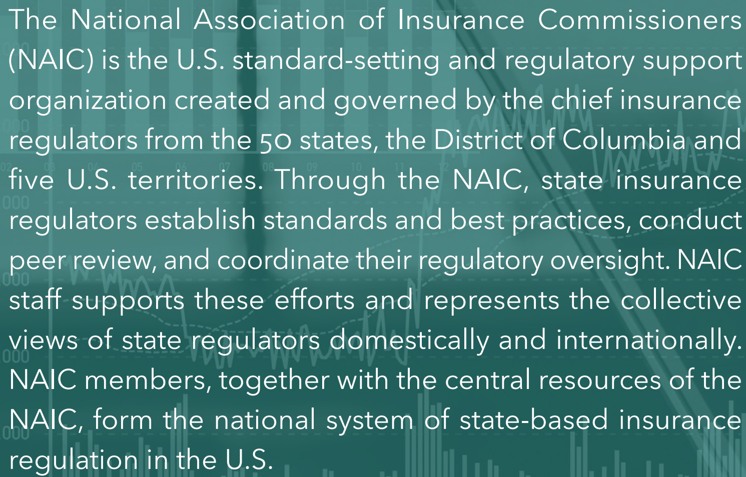
ASU 2019-11 Codification Improvements to Topic 326, Financial Instruments—Credit Losses			
Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
		through 50-10. The amendments in this Update extend the disclosure relief for accrued interest receivable balances as permitted in Update 2019-04 to certain other Topics in the Codification.	
Financial Instruments—Credit Losses—Measured at Amortized Cost	326-20	The amendment clarifies that an entity should reasonably expect the borrower to continually replenish collateral securing the financial asset(s) in accordance with the contractual terms of the financial asset to apply the practical 15 expedient. An entity is not required to consider remote scenarios in making this determination.	35-6
Business Combinations—Identifiable Assets and Liabilities, and Any Noncontrolling Interest & Financial Instruments—Credit Losses—Overall	805-20 & 326-10	The amendment clarifies paragraph 805-20-50-1 by removing the cross reference to Subtopic 310-30, Receivables—Loans and Debt Securities Acquired with Deteriorated Credit Quality, which was superseded by Update 2016-13. The amendment instead correctly cross-references the guidance for purchased financial assets with credit deterioration in Subtopic 326-20.	50-1 65-4

ASU 2020-03 Codification Improvements to Financial Instruments			
Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
Financial Instruments—Overall	825-10	Amendment clarifies that because financial assets and financial liabilities on which the fair value option have been elected are measured at fair value and not at amortized cost basis, all entities are subject to the fair value option disclosures in paragraphs 825-10-50-24 through 50-32.	50-23A 65-7
Fair Value Measurement—Overall	820-10	The amendments clarify the applicability of the portfolio exception in Subtopic 820-10, Fair Value Measurement—Overall, to nonfinancial items accounted for as derivatives under Topic 815, Derivatives and Hedging.	35-2A 35-18L
Financial Services—Depository and Lending—Investments—Debt and Equity Securities & Financial Instruments—Overall	942-320 & 825-10	The amendments on certain disclosures for depository and lending institutions clarify that the disclosure requirements in paragraphs 320-10-50-3 and 320-10-50-5 through 50-5C apply to the disclosure requirements in paragraphs 942-320-50-3 through 50-3A.	50-1 50-3 50-3A 65-5
Debt—Modifications and Extinguishments	470-50	The amendments clarify that paragraphs 470-50-40-17 through 40-18, which describe the accounting for fees between the debtor and creditor and third-party costs, respectively, directly related to exchanges or modifications of debt instruments, reference paragraph 470-50-40-21 for the accounting for modifications to or exchanges of line-of-credit or revolving-debt arrangements.	40-17 40-18 40-21
Fair Value Measurement—Overall	820-10	The amendment clarifies that the disclosure requirements in paragraph 820-10-50-2 do not	50-2

ASU 2020-03 Codification Improvements to Financial Instruments			
Topic	**Codification**	**Abbreviated Summary of Change**	**Related Paragraphs**
		apply to entities using the net asset value per share (or its equivalent) practical expedient.	
Financial Instruments—Credit Losses—Measured at Amortized Cost & Financial Instruments—Credit Losses—Overall	326-20 & 326-10	The amendments align the contractual term to measure expected credit losses for a net investment in a lease under Topic 326 to be consistent with the lease term determined under Topic 842.	30-6A 55-8 65-4
Transfers and Servicing—Sales of Financial Assets	860-20	The amendments relate to the interaction of the guidance in Topic 326 and Subtopic 860-20, Transfers and Servicing—Sales of Financial Assets. The amendments to Subtopic 860-20 clarify that when an entity regains control of financial assets sold, an allowance for credit losses should be recorded in accordance with Topic 326.	25-13



The National Association of Insurance Commissioners (NAIC) is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators from the 50 states, the District of Columbia and five U.S. territories. Through the NAIC, state insurance regulators establish standards and best practices, conduct peer review, and coordinate their regulatory oversight. NAIC staff supports these efforts and represents the collective views of state regulators domestically and internationally. NAIC members, together with the central resources of the NAIC, form the national system of state-based insurance regulation in the U.S.
