

SR 3 OVER PRAIRIE CREEK BRIDGE REPLACEMENT - DES. 1800051

PROJECT DETAILS

The purpose of this project is to have a hydraulically adequate and structurally sufficient long-term asset. The project involves the replacement of the existing bridge with a 90 foot long, single span prestressed concrete girder bridge. The new structure will include 11 foot wide travel lanes along with 6 foot wide shoulders. Outside the limits of structure, the shoulder widths will be 6 feet 4 inches. The scope of work includes raising the grade by 1 foot at the structure to maintain the existing structure freeboard. Guardrail runs will be updated to current standards in all quadrants. Scour protection will be placed on the slope walls of the new structure. Construction of the project may require approximately 0.68 acre of new permanent right-of-way and no temporary right-of-way. No relocations are anticipated. The Maintenance of Traffic for the project will require the closing of SR 3 during construction. The official detour route will be signed to maintain traffic. The official detour is expected to be in place no more than 9 months and will use SR 18, SR 5 and SR 218. Access to all properties will be maintained throughout construction.

PROJECT NUMBER: 1800051

PROJECT STATUS: In Design

ANTICIPATED CONSTRUCTION START:
Spring 2023

ESTIMATED CONSTRUCTION COST:
Approx. \$1M
